CHAPTER 1 Introduction to Nonprofit Cloud

Use Nonprofit Cloud to fund, deliver, and measure impact with one integrated platform. Nurture your most important relationships, and break down silos between teams with a single source of truth about your donors, stakeholders, and constituents.

EDITIONS

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** Editions.

CHAPTER 2 Nonprofit Cloud Data Model

In this chapter ...

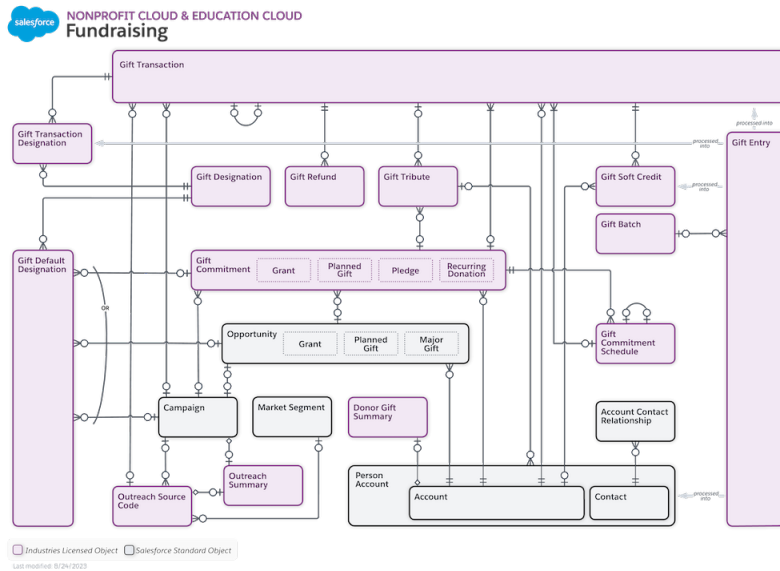

- Fundraising Data Model
- Program Management Data Model
- Case Management Data Model
- Outcome Management Data Model
- Grantmaking and Budget Management Data Model

Learn about the objects and relationships within Nonprofit Cloud

Fundraising Data Model

Learn about the objects and relationships within the Fundraising data model.

The Fundraising data model provides a set of objects and fields that you can use to store and manage information about programs and benefits.

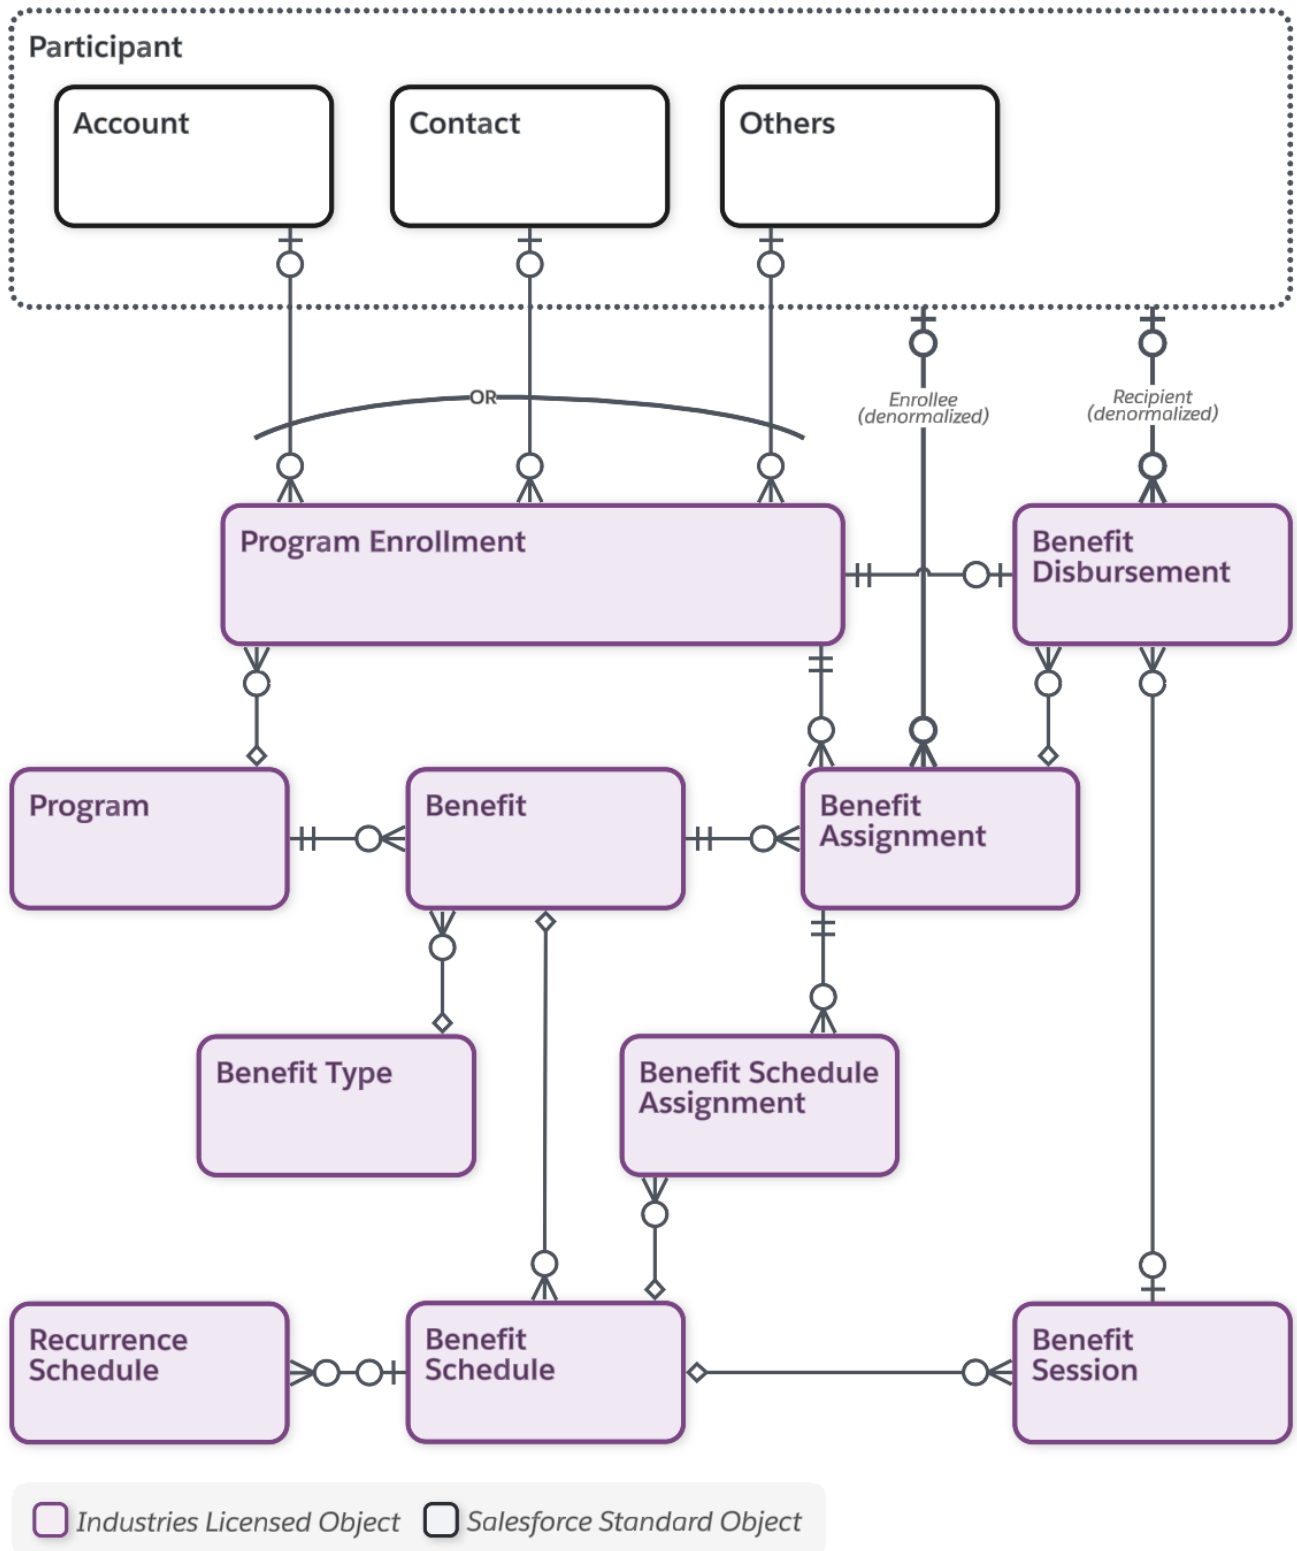

To view a larger version, right-click or Ctrl+click the image and select **Open Image in New Tab**, or view the [Fundraising data model](#).

Program Management Data Model

Learn about the objects and relationships within the Program Management data model.

The Program Management data model provides a set of objects and fields that you can use to store and manage information about programs and benefits.

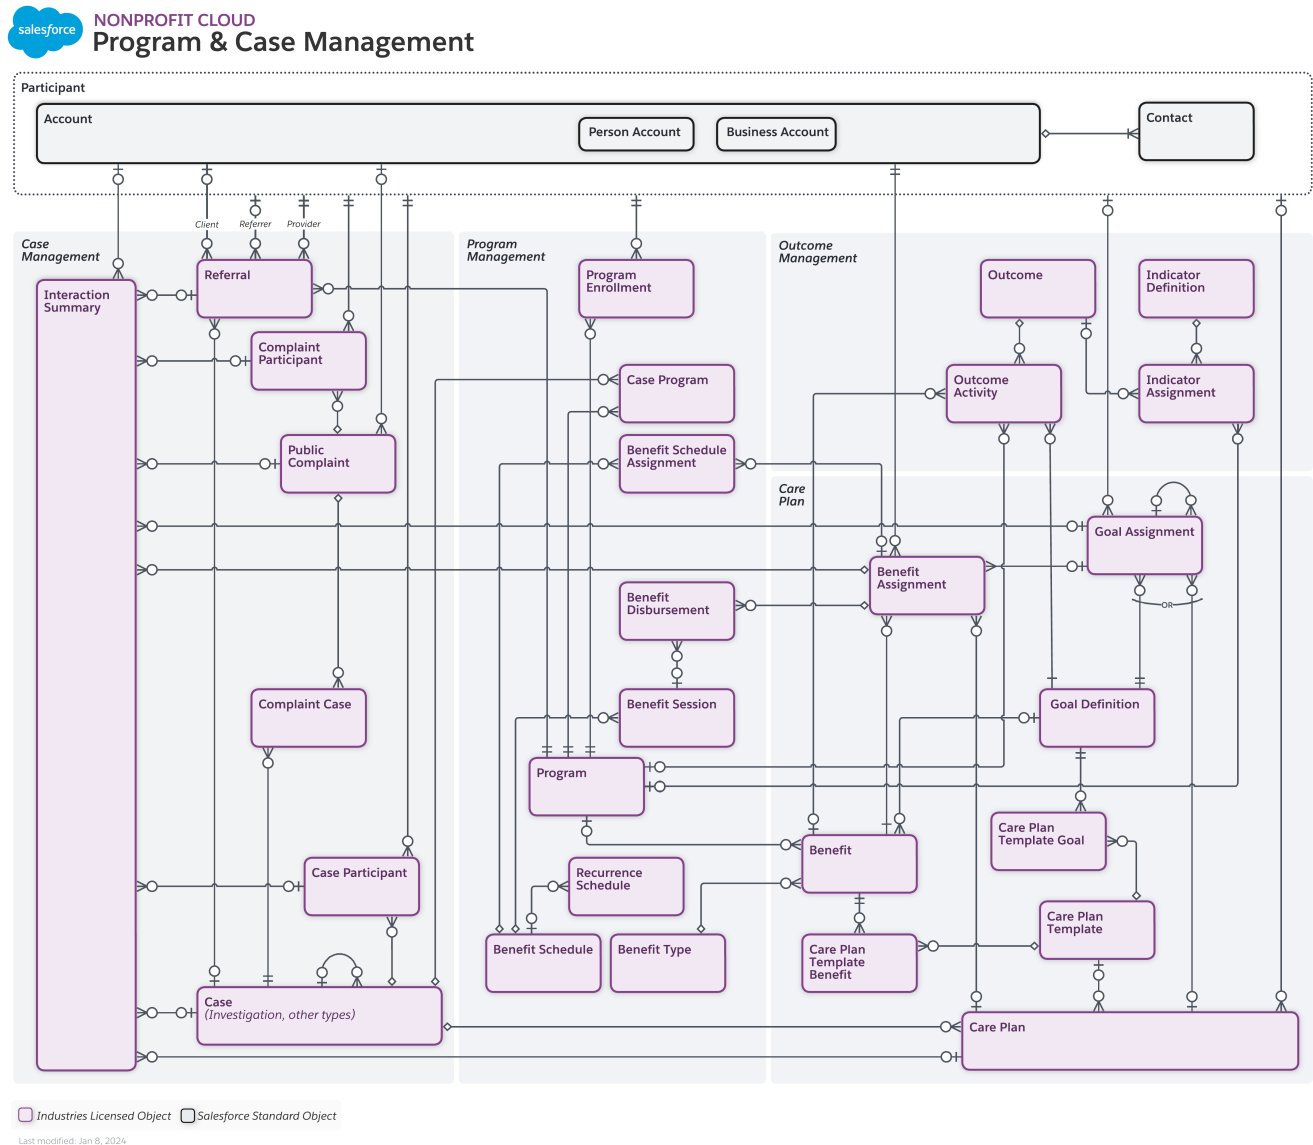

To view a larger version, right-click or Ctrl+click the image and select **Open Image in New Tab**.

Case Management Data Model

Learn about the objects and relationships within the Case Management data model.

The Case Management data model provides a set of objects and fields that you can use to store and manage information about cases and care plans.

To view a larger version, right-click or Ctrl+click the image and select **Open Image in New Tab**, or view the [Program & Case Management data model](#).

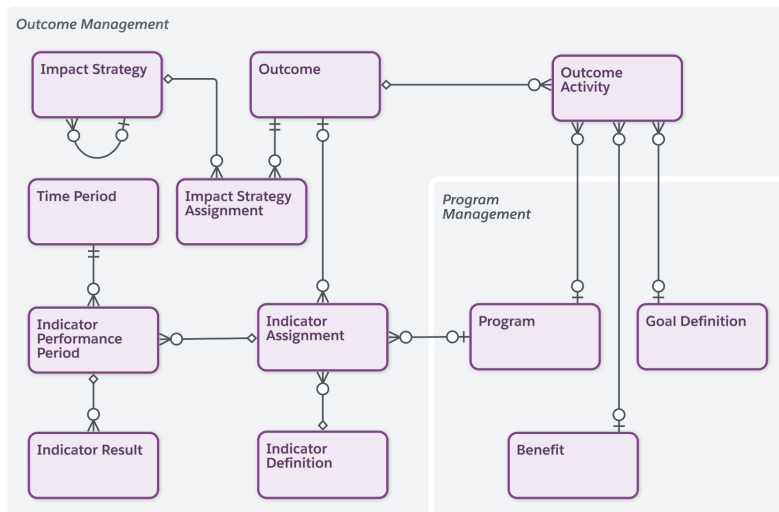

Outcome Management Data Model

Learn about the objects and relationships in the Outcome Management data model.

EDITIONS

Available in: Lightning Experience

Available in: Education Cloud, Energy and Utilities Cloud, Nonprofit Cloud, Nonprofit Cloud for Grantmaking, and Public Sector Solutions. [View edition availability.](#)

CHAPTER 3 Case Management

In this chapter ...

- [Case Management Standard Objects](#)

This guide provides objects and API information about Case Management for Nonprofits. Built on the platform, Case Management helps case managers assist participants in achieving their goals through individualized plans, collaborative tools, and full participant data.

EDITIONS

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** Editions.

Case Management Standard Objects

Case Management data model provides objects and fields to manage cases and care plans for your nonprofit organization.

[AccountAccountRelation](#)

Represents a relationship between accounts, such as a relationship between a business account and a household account. This object is available in API version 57.0 and later.

[CarePlan](#)

Represents an instantiation of a care plan template for a particular individual in order to reach specific goals. This object is available in API version 55.0 and later.

[CarePlanTemplate](#)

Represents the template for a type of care plan that can be offered for a household scenario. This object is available in API version 55.0 and later.

[CarePlanTemplateBenefit](#)

Represents a junction between a care plan template and a benefit. This object stores the benefit details of a care plan. This object is available in API version 55.0 and later.

[CarePlanTemplateGoal](#)

Represents a junction between a care plan template and a goal definition. This object stores the goal details of a care plan template. This object is available in API version 55.0 and later.

[CaseParticipant](#)

Represents a junction between a case, and an account or a contact. This object stores the details of the participant associated with a case. This participant could be the applicant, co-applicant, a household, or even a business account. This object is available in API version 54.0 and later.

[ComplaintCase](#)

Represents the association between a public complaint and its corresponding case. This object is available in API version 52.0 and later.

[ComplaintParticipant](#)

Represents a junction between a public complaint, and an account or a contact. This object stores the details of the participant who registers a complaint with the authorities. This participant could be the applicant, co-applicant, a household, or even a business account. This object is available in API version 54.0 and later.

Fundraising Metadata API Types

Metadata API enables you to access some types and feature settings that you can customize in the user interface.

For more information about Metadata API and to find a complete reference of existing metadata types, see [Metadata API Developer Guide](#).

[Flow for Fundraising](#)

Represents the metadata associated with a flow. With Flow, you can create an application that navigates users through a series of screens to query and update records in the database. You can also execute logic and provide branching capability based on user input to build dynamic applications.

FlowActionCall

Fundraising exposes additional `actionType` values for the `FlowActionCall` Metadata type. For more information on Flow and `FlowActionCall` metadata type, see [Flow](#).

Field Name	Field Type	Description
<code>actionType</code>	InvokableActionType (enumeration of type string)	<p>Required. The action type. Additional valid values only for Business Rules Engine include:</p> <ul style="list-style-type: none"> <code>closeGiftCommitment</code>—Updates the status of a gift commitment to closed and updates the status for each of its unpaid and failed gift transactions. This value is available in API version 59.0 and later. <code>manageCustomGiftCmtSchds</code>—Creates or updates up to 15 custom gift commitment schedule records and their associated gift transaction records. This value is available in API version 59.0 and later. <code>manageGiftDefaultDesignations</code>—Creates and manages Gift Default Designation records for a gift entry associated with a

This value is available in API version 59.0 and later. • <code>manageRcrGiftCmtSchd</code>—Creates or updates a recurring type of gift commitment schedule record and creates the first upcoming gift commitment transaction record. This value is available in API version 59.0 and later. • <code>processGiftEntries</code>—Processes, singly or as part of a batch, a specified gift entry ID, creating related donor, gift transaction, gift transaction designation, and gift soft credit records. This value is available in API version 59.0 and later. • <code>pauseGiftCommitmentSchedule</code>—Pauses a gift commitment schedule for a specified period of time. This value is available in API version 59.0 and later. • <code>processGiftCommitment</code>—Updates the status and other relevant fields for a gift commitment based on the statuses of the associated gift transactions and the current gift commitment schedule. This value is available in API version 59.0 and later. • <code>resumeGiftCommitmentSchedule</code>—Resumes a paused gift commitment schedule on a specified date. This value is available in API version 59.0 and later. • <code>updateProcessedGiftEntries</code>—Updates the status of a specified gift entry record that is already processed. If the processing fails, the failure reason is updated. This value is available in API version 59.0 and later.

Fundraising Tooling API Objects

Tooling API exposes metadata used in developer tooling that you can access through REST or SOAP. Tooling API's SOQL capabilities for many metadata types allow you to retrieve smaller pieces of metadata.

For more information about Tooling API objects and to find a complete reference of all the supported objects, see [Introducing Tooling API](#).

[FundraisingConfig](#)

Represents a collection of settings to configure Fundraising. This object is available in API version 59.0 and later.

CHAPTER 5 Program Management

In this chapter ...

- [Program Management Standard Objects](#)
- [Program Management Business APIs](#)

This guide provides information about the objects and APIs that Program Management uses. You can also find developer resources for features that can be used to extend Program Management.

EDITIONS

Available in: **Lightning Experience**

Available in: **Enterprise** and **Unlimited** Editions.

Program Management Standard Objects

Program Management data model provides objects and fields to manage programs and benefits for your nonprofit organization.

EDITIONS

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** Editions.

[Benefit](#)

Represents information about benefits associated with a program. This object is available with Program Management in API version 57.0 and later.

[BenefitAssignment](#)

Represents the enrollment information of an individual to a benefit. This object is available with Program Management in API version 57.0 and later.

[BenefitDisbursement](#)

Represents the allocation of an enrollee's benefit that can be made as monetary or non-monetary with different frequencies. This object is available with Program Management in API version 57.0 and later.

[BenefitSchedule](#)

Represents information about the plan for delivering the benefit. This object is available in API version 57.0 and later.

[BenefitScheduleAssignment](#)

Represents the junction between Benefit Schedule and Benefit Assignment objects. This object is available in API version 59.0 and later.

[BenefitSession](#)

Represents information about an instance of a planned benefit delivery. This object is available in API version 57.0 and later.

[BenefitType](#)

Represents information about the type of benefits such as Participatory Services available to the program manager. This object is available with Program Management in API version 57.0 and later.

[CaseProgram](#)

Represents the junction between Case and Program objects. This object is available in API version 57.0 and later.

[Program](#)

Represents information about the enrollment and disbursement of benefits in a program. This object is available in API version 57.0 and later.

[ProgramEnrollment](#)

Represents details of enrollment for benefits in a program. This object is available in API version 57.0 and later.

[RecurrenceSchedule](#)

For internal use only.

Benefit

Represents information about benefits associated with a program. This object is available with Program Management in API version 57.0 and later.

Program Management Business APIs

Program Management Business APIs are RESTful APIs that are sometimes available as Apex classes and methods.

Program Management has these resources.

Resource	Description
/connect/program-mgmt/programs/{programId}/enrollments	Enroll participants in a program. An enrollee can either be a contact or an account.
/connect/program-mgmt/programs/{programId}/enrollments	Update program enrollments.
/connect/program-mgmt/benefit-schedules	Create a preview of the benefit scheduling session.
/connect/program-mgmt/benefit-schedules/{benefitScheduleId}/sessions	Create a benefit schedule for a benefit session.
/connect/program-mgmt/benefit-schedules/{benefitScheduleId}/participants	Add participants to a benefit schedule.
/connect/program-mgmt/benefit-schedules/{benefitScheduleId}/benefit-sessions/{benefitSessionId}/participants	Add participants to a benefit session.
/connect/program-mgmt/benefit/{benefitId}/benefit-disbursements	Create benefit disbursements for ad hoc walk-in participants.
/connect/program-mgmt/case-programs/{caseId}	Create case programs.

[Benefit Disbursements \(POST\)](#)

Create benefit disbursements for ad hoc walk-in participants.

[Benefit Session Participants \(POST\)](#)

Add participants to a benefit session.

[Benefit Schedule Participants \(POST\)](#)

Asynchronously add participants to a benefit schedule.

[Benefit Schedule Participants \(DELETE\)](#)

Remove participants from a benefit schedule asynchronously.

[Benefit Schedule Sessions \(POST\)](#)

Create a benefit schedule for a benefit session.

[Benefit Schedule Sessions Preview \(POST\)](#)

Create a preview of the benefit scheduling session. Users can preview the benefit sessions before they are created.

[Benefit Disbursement Field Set API Names](#)

Retrieve the API names of the field sets associated with a benefit disbursement object.

[Case Programs \(POST\)](#)

Create case programs.

[Gift Transactions](#)

Get gift transactions associated with a gift commitment record.

[Gift Transaction Designations](#)

Get designations associated with a gift transaction, campaign, commitment, or opportunity.

[Gift Commitment Transactions](#)

Get a list of gift transactions associated with a gift commitment for a donor account.

[Gift Commitment Default Designations](#)

Get default designations associated with a gift commitment.

[Gift Campaign Default Designations](#)

Get default designations associated with a gift campaign.

[Program Enrollments \(POST\)](#)

Enroll participants in a program.

[Program Enrollments \(PUT\)](#)

Update program enrollments.

Benefit Disbursements (POST)

Create benefit disbursements for ad hoc walk-in participants.

The Outcome Management data model provides objects and fields to define, measure, and evaluate an organization's outcome strategy.

ImpactStrategy

Represents a high-level strategy to affect change in an individual, population, stakeholder, or the environment. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available in products that include the Outcome Management license where Outcome Management is enabled and the Manage Outcomes system permission is assigned to users.

Fields

ParentImpactStrategyId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The associated parent impact strategy. This field is a relationship field.</p> <p>Relationship Name ParentImpactStrategy</p> <p>Relationship Type Lookup</p>

Field	Details
	<p>Refers To ImpactStrategy</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Specifies the status of the impact strategy. Possible values are:</p> <ul style="list-style-type: none"> • Active • Canceled • Completed • Planned
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Specifies the type of the impact strategy. Possible values are:</p> <ul style="list-style-type: none"> • External Requirement • Logic Model • Strategic Plan • Theory of Change

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ImpactStrategyFeed](#)

Feed tracking is available for the object.

[ImpactStrategyHistory](#)

History is available for tracked fields of the object.

[ImpactStrategyOwnerSharingRule](#)

Sharing rules are available for the object.

[ImpactStrategyShare](#)

Sharing is available for the object.

ImpactStrategyAssignment

Represents the connection between the impact strategy and the outcome or other object related to the impact strategy. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available in products that include the Outcome Management license where Outcome Management is enabled and the Manage Outcomes system permission is assigned to users.

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ImpactStrategyAssignmentFeed](#)

Feed tracking is available for the object.

[ImpactStrategyAssignmentHistory](#)

History is available for tracked fields of the object.

IndicatorAssignment

Represents the assignment of an indicator definition that's used to measure the performance of an outcome or a related activity. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- This object is available in products that include the Outcome Management license where Outcome Management is enabled and the Manage Outcomes system permission is assigned to users.
- This object is available in Net Zero Cloud with a Growth license where the Manage Environmental, Social, and Governance Programs system permission is assigned to users.

Fields

Field	Details

Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Specifies the status of the indicator assignment. Possible values are:</p> <ul style="list-style-type: none"> • Active • Canceled • Completed • Planned

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

IndicatorAssignmentFeed

Feed tracking is available for the object.

IndicatorAssignmentHistory

History is available for tracked fields of the object.

IndicatorDefinition

Represents information about the indicator assignment and the process of measuring and calculating the indicator results. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- This object is available in products that include the Outcome Management license where Outcome Management is enabled and the Manage Outcomes system permission is assigned to users.

History is available for tracked fields of the object.

IndicatorDefinitionOwnerSharingRule

Sharing rules are available for the object.

IndicatorDefinitionShare

Sharing is available for the object.

IndicatorPerformancePeriod

Represents information about a specified time period including the frequency at which indicator results should be calculated and the baseline value of the indicator. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

IndicatorPerformancePeriodFeed

Feed tracking is available for the object.

IndicatorPerformancePeriodHistory

History is available for tracked fields of the object.

IndicatorResult

Represents the result of an indicator assignment for the specified time period that can be used to track the performance of the indicator. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

CHAPTER 7 Grantmaking

In this chapter ...

- [Grantmaking Object Reference](#)
- [Grantmaking Tooling API Object](#)
- [Grantmaking Metadata API Types](#)

This guide provides information about the objects and APIs that Grantmaking uses.

EDITIONS

Available in: Lightning Experience

Available in:
Enterprise, Unlimited,
and **Developer** Editions

Grantmaking Object Reference

The Grantmaking data model provides objects and fields to calculate and manage grants for your organization.

[ApplicationDecision](#)

Represents a final decision performed for the specified Application. This object is available in API version 56.0 and later.

[ApplicationReview](#)

Represents a review performed against a specified Application. This object is available in API version 56.0 and later.

[ApplicationTimeline](#)

Represents the milestone dates in the application process. This object is available in API version 57.0 and later.

[Budget](#)

Tracks an estimate of future revenue or expenses during a specific time period. This object is available in API version 53.0 and later.

[BudgetAllocation](#)

Represents a subsection of a Budget that shows where allocated resources are being applied. This object is available in API version 53.0 and later.

[BudgetCategory](#)

Represents information about the purpose of the budget that's used in understanding and reporting of budget. This object is available in API version 57.0 and later.

[BudgetCategoryValue](#)

Captures budget values for category and time period. This object is available in API version 57.0 and later.

[BudgetParticipant](#)

Represents information about a user or group of participants who have access to a budget. This object is available in API version 59.0 and later.

[BudgetPeriod](#)

Defines a distinct time interval in which the estimate applies. This object is available in API version 57.0 and later.

[FundingAward](#)

Represents an award given to an individual or organization to facilitate a goal related to the funder's mission. This object is available in API version 57.0 and later.

[FundingAwardAmendment](#)

Represents a modification to the scope or finances of a previously approved award. This object is available in API version 57.0 and later.

[FundingAwardParticipant](#)

Represents information about a user or group of participants who have access to a funding award. This object is available in API version 59.0 and later.

[FundingAwardRequirement](#)

Represents a deliverable or milestone that is needed for the award to either be approved or closed. This object is available in API version 57.0 and later.

EDITIONS

Available in: Lightning Experience

Available in: **Enterprise, Performance, and Unlimited** Editions in Nonprofit Cloud for Grantmaking

Available in: **Enterprise, Performance, Unlimited,** and **Developer** Editions in Public Sector Solutions

[FundingDisbursement](#)

Represents a payment that has been made or scheduled to be made to a funding recipient. This object is available in API version 57.0 and later.

[FundingOpportunity](#)

The pool of money available for distribution for a specific purpose. This object is available in API version 57.0 and later.

[FundingOppParticipant](#)

Represents information about a user or group of participants who have access to a funding opportunity. This object is available in API version 60.0 and later.

[IndividualApplication](#)

Represents an application form submitted by an individual. This object is available in API version 50.0 and later.

[IndividualAppInParticipant](#)

Represents information about a user or group of participants who have access to a individual application. This object is available in API version 59.0 and later.

[PreliminaryApplicationRef](#)

Represents the saved applications and pre-screening forms. This object is available in API version 49.0 and later.

[Program](#)

Represents information about the enrollment and disbursement of benefits in a program. This object is available in API version 57.0 and later.

ApplicationDecision

Represents a final decision performed for the specified Application. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only if the Grantmaking license is enabled, Grantmaking is enabled, and the Manage Application system permission is assigned to users.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProgramFeed

Feed tracking is available for the object.

ProgramHistory

History is available for tracked fields of the object.

ProgramOwnerSharingRule

Sharing rules are available for the object.

Grantmaking Tooling API Object

Tooling API exposes metadata used in developer tooling that you can access through REST or SOAP. Tooling API's SOQL capabilities for many metadata types allow you to retrieve smaller pieces of metadata.

For more information about Tooling API objects and to find a complete reference of all the supported objects, see [Introducing Tooling API](#).

ApplicationRecordTypeConfig

Represents the configuration that maps object record types to an application. This object is available in API version 57.0 and later.

ApplicationRecordTypeConfig

Represents the configuration that maps object record types to an application. This object is available in API version 57.0 and later.

EDITIONS

Available in: Lightning Experience

Available in: **Enterprise**, **Performance**, and **Unlimited** Editions in Nonprofit Cloud for Grantmaking

Available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions in Public Sector Solutions

! **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported SOAP API Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Supported REST API Methods

DELETE, GET, HEAD, PATCH, POST, Query

Special Access Rules

This object is available only if the Grantmaking license is enabled, Grantmaking is enabled, and the Manage Application system permission is assigned to users.

Fields

Field	Details
ApplicationUsageType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Count of application records used by Grantmaking. Possible values are:</p> <ul style="list-style-type: none"> • BA—Benefit Assistance • CCM—Composable Case Management • EDU—Education Cloud • Grantmaking • HC—Health Cloud • ERM—Others • LPI—Public Sector Solutions
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The unqique name for ApplicationRecordTypeConfig. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores.</p>

Field	Details
	<p>In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is Record Type Name. This field is automatically generated, but you can supply your own value if you create the record using the API.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The language of the ApplicationRecordTypeConfig. Possible values are:</p> <ul style="list-style-type: none"> • The language of the account record type configuration. • <code>da</code>—Danish • <code>de</code>—German • <code>en_US</code>—English • <code>es</code>—Spanish • <code>es_MX</code>—Spanish (Mexico) • <code>fi</code>—Finnish • <code>fr</code>—French • <code>it</code>—Italian • <code>ja</code>—Japanese • <code>ko</code>—Korean • <code>nl_NL</code>—Dutch • <code>no</code>—Norwegian • <code>pt_BR</code>—Portuguese (Brazil) • <code>ru</code>—Russian • <code>sv</code>—Swedish • <code>th</code>—Thai • <code>zh_CN</code>—Chinese (Simplified) • <code>zh_TW</code>—Chinese (Traditional)

Grantmaking Metadata API Types

Metadata API enables you to access some types and feature settings that you can customize in the user interface. For more information about Metadata API.

Find a complete reference of existing metadata types, see [Metadata API Developer Guide](#).

[IndustriesSettings](#)

Represents the settings for Grantmaking

IndustriesSettings

Represents the settings for Grantmaking

This type extends the metadata type and inherits its `fullName` field.

In the package manifest, all organization settings metadata types are accessed using the Settings name.

File Suffix and Directory Location

IndustriesSettings are stored in a single file named `Industries.settings` in the `settings` directory.

Version

Industries settings for Grantmaking are available in API version 59.0 and later.

Special Access Rules

Unless noted otherwise, these settings are available only if the Grantmaking license is enabled, Grantmaking is enabled, and the Manage Application system permission is assigned to users.

Fields

Industries settings for Grantmaking are available in API version 59.0 and later.

Field Name	Field Type	Description
<code>enableCompliantDataSharingForBudget</code>	boolean	Indicates whether the Compliant Data Sharing feature is enabled for the Budget object. The default is <code>false</code> . Available only if the Grantmaking license is enabled and Grantmaking is enabled.
<code>enableCompliantDataSharingForIndividualApplication</code>	boolean	Indicates whether the Compliant Data Sharing feature is enabled for the Individual Application object. The default is <code>false</code> . Available only if the Grantmaking license is enabled and Grantmaking is enabled.
<code>enableCompliantDataSharingForFundingAward</code>	boolean	Indicates whether the Compliant Data Sharing feature is enabled for the Funding Award object. The default is <code>false</code> . Available only if the Grantmaking license is enabled and Grantmaking is enabled.
<code>enableGrantmaking</code>	boolean	Indicates whether the Grantmaking feature is enabled. The default is <code>false</code> . This option can't be disabled (<code>false</code>) once it's enabled (<code>true</code>). Only requires that the Grantmaking license is enabled in the org.

Declarative Metadata Sample Definition

The following is an example of an Industries.Settings metadata file.

```
<?xml version="1.0" encoding="UTF-8"?>
<IndustriesSettings xmlns="http://soap.sforce.com/2006/04/metadata">
  <enableGrantmaking>true</enableGrantmaking>
  <enableCompliantDataSharingForBudget>true</enableCompliantDataSharingForBudget>

  <enableCompliantDataSharingForIndividualApplication>true</enableCompliantDataSharingForIndividualApplication>

  <enableCompliantDataSharingForFundingAward>true</enableCompliantDataSharingForFundingAward>
</IndustriesSettings>
```

The following is an example `package.xml` that references the previous definition.

```
<?xml version="1.0" encoding="UTF-8"?>
<Package xmlns="http://soap.sforce.com/2006/04/metadata">
  <types>
```

```
<members>Industries</members>  
<name>Settings</name>  
</types>  
<version>54.0</version>  
</Package>

CHAPTER 8 NonProfit Cloud Associated Objects

In this chapter ...

- [StandardObjectNameShare](#)
- [StandardObjectNameOwnershipRule](#)
- [StandardObjectNameHistory](#)
- [StandardObjectNameChangeEvent](#)
- [StandardObjectNameFeed](#)

This section provides a list of objects associated to Nonprofit Cloud standard objects with their standard fields.

Some fields may not be listed for some objects. To see the system fields for each object, see [System Fields](#) in the *Object Reference for Salesforce and Lightning Platform*.

To verify the complete list of fields for an object, use a describe call from the API or inspect with an appropriate tool. For example, inspect the WSDL or use a schema viewer.

StandardObjectNameShare

StandardObjectNameShare is the model for all share objects associated with standard objects. These objects represent a sharing entry on the standard object.

The object name is variable and uses *StandardObjectNameShare* syntax. For example, *AccountBrandShare* is a sharing entry on an account brand. We list the available associated share objects at the end of this topic. For specific version information, see the standard object documentation.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

For specific special access rules, if any, see the documentation for the standard object. For example, for *AccountBrandShare*, see the special access rules for *AccountBrand*.

Fields

Field Name	Details
<code>AccessLevel</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The level of access allowed. Values are:</p> <ul style="list-style-type: none"> • <code>All</code> (owner) • <code>Edit</code> (read/write) • <code>Read</code> (read only)
<code>ParentId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the parent record.</p>
<code>RowCause</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p>

Field Name	Details
	<p>Description Reason that the sharing entry exists.</p>
UserOrGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the user or group that has been given access to the object.</p>

StandardObjectNameOwnerSharingRule

StandardObjectNameOwnerSharingRule is the model for all owner sharing rule objects associated with standard objects. These objects represent a rule for sharing a standard object with users other than the owner.

The object name is variable and uses *StandardObjectNameOwnerSharingRule* syntax. For example, *ChannelProgramOwnerSharingRule* is a rule for sharing a channel program with users other than the channel program owner. We list the available associated owner sharing rule objects at the end of this topic. For specific version information, see the standard object documentation.

 **Note:** To enable access to this object, contact Salesforce customer support. But we recommend that you use Metadata API to programmatically update owner sharing rules instead because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

For specific special access rules, if any, see the documentation for the standard object. For example, for *ChannelProgramOwnerSharingRule*, see the special access rules for *ChannelProgram*.

Fields

Field Name	Details

Field Name	Details
	<p>Description</p> <p>Determines the level of access users have to records. Values are:</p> <ul style="list-style-type: none"> • Read (read only) • Edit (read/write)
Description	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>Description of the sharing rule. Maximum length is 1000 characters.</p>
DeveloperName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package, and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance can slow while Salesforce generates one for each record.</p>
GroupId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>ID of the source group. Records that are owned by users in the source group trigger the rule to give access.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>Label of the sharing rule as it appears in the UI. Maximum length is 80 characters.</p>

Field Name	Details
UserOrGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the user or group that you are granting access to.</p>

StandardObjectNameHistory

StandardObjectNameHistory is the model for all history objects associated with standard objects. These objects represent the history of changes to the values in the fields of a standard object.

The object name is variable and uses *StandardObjectNameHistory* syntax. For example, AccountHistory represents the history of changes to the values of an account record's fields. We list the available associated history objects at the end of this topic. For specific version information, see the documentation for the standard object.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

For specific special access rules, if any, see the documentation for the standard object. For example, for AccountHistory, see the special access rules for Account.

Fields

Field Name	Details
<i>StandardObjectNameId</i>	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the standard object.</p>
DataType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Data type of the field that was changed.</p>

Field Name	Details
Field	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Name of the field that was changed.</p>
NewValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description New value of the field that was changed.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description Old value of the field that was changed.</p>

StandardObjectNameChangeEvent

A ChangeEvent object is available for each object that supports Change Data Capture. You can subscribe to a stream of change events using Change Data Capture to receive data tied to record changes in Salesforce. Changes include record creation, updates to an existing record, deletion of a record, and undeletion of a record. A change event isn't a Salesforce object—it doesn't support CRUD operations or queries. It's included in the object reference so you can discover which Salesforce objects support change events.

Supported Calls

`describeSObjects()`

Special Access Rules

- Not all objects may be available in your org. Some objects require specific feature settings and permissions to be enabled.
- For more special access rules, if any, see the documentation for the standard object. For example, for AccountChangeEvent, see the special access rules for Account.

Change Event Name

Change events are available for all custom objects and a subset of standard objects. The name of a change event is based on the name of the corresponding object for which it captures the changes.

Standard Object Change Event Name

```
<Standard_Object_Name>ChangeEvent
```

Example: AccountChangeEvent

Custom Object Change Event Name

```
<Custom_Object_Name>__ChangeEvent
```

Example: MyCustomObject__ChangeEvent

Change Event Fields

The fields that a change event can include correspond to the fields on the associated parent Salesforce object, with a few exceptions. For example, AccountChangeEvent fields correspond to the fields on Account.

The fields that a change event doesn't include are:

- The `IsDeleted` system field.
- The `SystemModStamp` system field.
- Any field whose value isn't on the record and is derived from another record or from a formula, except roll-up summary fields, which are included. Examples are formula fields. Examples of fields with derived values include `LastActivityDate` and `PhotoUrl`.

Each change event also contains header fields. The header fields are included inside the `ChangeEventHeader` field. They contain information about the event, such as whether the change was an update or delete and the name of the object, like Account.

In addition to the event payload, the event schema ID is included in the `schema` field. Also included is the event-specific field, `replayId`, which is used for retrieving past events.

Event Message Example

The following example is an event message in JSON format for a new account record creation.

```
{
  "schema": "IeRuaY6cbI_HsV8Rv1Mc5g",
  "payload": {
    "ChangeEventHeader": {
      "entityName": "Account",
      "recordIds": [
        "<record_ID>"
      ],
      "changeType": "CREATE",
      "changeOrigin": "com/salesforce/api/soap/51.0;client=SfdcInternalAPI/",
      "transactionKey": "0002343d-9d90-e395-ed20-cf416ba652ad",
      "sequenceNumber": 1,
      "commitTimestamp": 1612912679000,
      "commitNumber": 10716283339728,
      "commitUser": "<User_ID>"
    },
    "Name": "Acme",
```

```

    "Description": "Everyone is talking about the cloud. But what does it mean?",
    "OwnerId": "<Owner_ID>",
    "CreateDate": "2021-02-09T23:17:59Z",
    "CreatedBy": "<User_ID>",
    "LastModifiedDate": "2021-02-09T23:17:59Z",
    "LastModifiedBy": "<User_ID>"
  },
  "event": {
    "replayId": 6
  }
}

```

API Version and Schema

When you subscribe to change events, the subscription uses the latest API version and the event messages received reflect the latest field definitions. For more information, see [API Version and Event Schema](#) in the *Change Data Capture Developer Guide*.

Usage

For more information about Change Data Capture, see [Change Data Capture Developer Guide](#).

StandardObjectNameFeed

StandardObjectNameFeed is the model for all feed objects associated with standard objects. These objects represent the posts and feed-tracked changes of a standard object.

The object name is variable and uses *StandardObjectNameFeed* syntax. For example, *AccountFeed* represents the posts and feed-tracked changes on an account record. We list the available associated feed objects at the end of this topic. For specific version information, see the documentation for the standard object.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

In the internal org, users can delete all feed items they created. This rule varies in communities where threaded discussions and delete-blocking are enabled. Community members can delete all feed items they created, provided the feed items don't have content nested under them—like a comment, answer, or reply. Where the feed item has nested content, only feed moderators and users with the Modify All Data permission can delete threads.

To delete feed items they didn't create, users must have one of these permissions:

- Modify All Data
- Modify All on the parent object, like Account for AccountFeed
- Moderate Chatter

 **Note:** Users with the Moderate Chatter permission can delete only the feed items and comments they can see.

Only users with this permission can delete items in unlisted groups.

For more special access rules, if any, see the documentation for the standard object. For example, for AccountFeed, see the special access rules for Account.

Fields

Field	Details
BestCommentId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the comment marked as best answer on a question post.</p>
Body	<p>Type textarea</p> <p>Properties Nillable, Sort</p> <p>Description The body of the post. Required when <code>Type</code> is <code>TextPost</code>. Optional when <code>Type</code> is <code>ContentPost</code> or <code>LinkPost</code>.</p>

Usage

A feed for an object is automatically created when a user enables feed tracking for the object. Use feeds to track changes to records. For example, `AccountFeed` tracks changes to an account record. Use feed objects to retrieve the content of feed fields, such as type of feed or feed ID.

Note the following SOQL restrictions. No SOQL limit if logged-in user has View All Data permission. If not, specify a `LIMIT` clause of 1,000 records or fewer. SOQL `ORDER BY` on fields using relationships is not available. Use `ORDER BY` on fields on the root object in the SOQL query.
