TotalAdjustedFeeAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total, including item-level adjustments but not order-level adjustments or tax, of all OrderItemSummaries of type Fee belonging to this OrderSummary. This field is available in API version 56.0 and later.
TotalAdjusted FeeTaxAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalAdjustedFeeAmount. This field is available in API version 56.0 and later.
TotalAdjustedProduct Amount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total, including item-level adjustments but not order-level adjustments or tax, of all OrderItemSummaries of type code Product belonging to this OrderSummary.
TotalAdjustedProduct TaxAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalAdjustedProductAmount.
TotalAmount	**Type** currency

Field	Details
	Properties Filter, Nillable, Sort **Description** Total, including adjustments but not tax, of all OrderItemSummaries belonging to this OrderSummary. Equal to TotalAdjustedProductAmount plus TotalAdjustedFeeAmount plus TotalAdjustedDeliveryAmount.
`TotalDeliveryAdjDistAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of all order-level price adjustments applied to OrderItemSummaries of type Delivery Charge belonging to this OrderSummary. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header.
`TotalDeliveryAdjDistAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of all order-level price adjustments applied to OrderItemSummaries of type Delivery Charge belonging to this OrderSummary, inclusive of tax. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header. It is equal to TotalDeliveryAdjDistAmount + TotalDeliveryAdjDistTaxAmount. This field is available in API version 49.0 and later.
`TotalDeliveryAdjDistTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalDeliveryAdjDistAmount.
`TotalDeliveryAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Sum of the Total Line Amounts of all OrderItemSummaries of type Delivery Charge belonging to this OrderSummary, not including adjustments or tax.

Field	Details
	This field is available in API version 54.0 and later.
TotalDeliveryAmount WithTax	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of all OrderItemSummaries of type Delivery Charge belonging to this OrderSummary, including tax but not including adjustments. It is equal to TotalDeliveryAmount + TotalDeliveryTaxAmount. This field is available in API version 54.0 and later.
TotalDeliveryTaxAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalDeliveryAmount. This field is available in API version 54.0 and later.
TotalFeeAdjDistAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of all order-level price adjustments applied to OrderItemSummaries of type Fee belonging to this OrderSummary. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header. This field is available in API version 56.0 and later.
TotalFeeAdj DistAmtWithTax	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of all order-level price adjustments applied to OrderItemSummaries of type Fee belonging to this OrderSummary, inclusive of tax. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header. It is equal to TotalFeeAdjDistAmount + TotalFeeAdjDistTaxAmount. This field is available in API version 56.0 and later.

Field	Details
TotalFeeAdj DistTaxAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalFeeAdjDistAmount. This field is available in API version 56.0 and later.
TotalFeeAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Sum of the Total Line Amounts of all OrderItemSummaries of type Fee belonging to this OrderSummary, not including adjustments or tax. This field is available in API version 56.0 and later.
TotalFeeAmountWithTax	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of all OrderItemSummaries of type Fee belonging to this OrderSummary, including tax but not including adjustments. It is equal to TotalFeeAmount + TotalFeeTaxAmount. This field is available in API version 56.0 and later.
TotalFeeTaxAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalFeeAmount. This field is available in API version 56.0 and later.
TotalProductAdj DistAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of all order-level price adjustments applied to OrderItemSummaries of type code Product belonging to this OrderSummary. This value includes

Field	Details
	OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header.
TotalProductAdjDistAmtWithTax	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of all order-level price adjustments applied to OrderItemSummaries of type code Product belonging to this OrderSummary, inclusive of tax. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header. It is equal to TotalProductAdjDistAmount + TotalProductAdjDistTaxAmount. This field is available in API version 49.0 and later.
TotalProductAdjDistTaxAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalProductAdjDistAmount.
TotalProductAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Sum of the Total Line Amounts of all OrderItemSummaries of type code Product belonging to this OrderSummary, not including adjustments or tax. This field is available in API version 54.0 and later.
TotalProductAmountWithTax	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of all OrderItemSummaries of type code Product belonging to this OrderSummary, including tax but not including adjustments. It is equal to TotalProductAmount + TotalProductTaxAmount. This field is available in API version 54.0 and later.
TotalProductTaxAmount	**Type** currency

Field	Details
	Properties Filter, Nillable, Sort **Description** Tax on the TotalProductAmount. This field is available in API version 54.0 and later.
TotalTaxAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total tax on all OrderItemSummaries belonging to this OrderSummary. Equal to TotalAdjustedDeliveryTaxAmount plus TotalAdjustedFeeTaxAmount plus TotalAdjustedProductTaxAmount.

SalesChannel

OrderSummaryAdditionalInfo

Stores information related to OrderSummary including context around the order, such as inventory reservation details, order origination, and other values that Einstein uses to perform order analysis. Only reservation details can be stored in this object. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

Fields

Field	Details
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** ISO code for the currency of the OrderSummary associated with the OrderSummaryAdditionalInfo. Possible values are: • `GBP`—British Pound • `USD`—U.S. Dollar The default value is `USD`.
InventoryReservationExtRef	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Holds an external reference identifier for tracking the inventory reservation.
InventoryReservationIdentifier	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Inventory reservation identifier for the order, if available. Since this value can come from external systems, the value type has no lookup or enforcement.
InventoryReservationMessage	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Holds any details or other relevant information that can further explain the status of the reservation.
InventoryReservationState	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The status of the reservation, if available. Possible values are: • DEFERRED • NOT_APPLICABLE • PERMANENT • TEMPORARY
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the OrderSummaryAdditionalInfo record.
OrderId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** Unique ID of the order associated with this record. This field is a relationship field. **Relationship Name** Order **Relationship Type** Lookup **Refers To** Order
OrderSummaryId	**Type** reference

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** Unique ID of the associated OrderSummary to which the specific OrderSummaryAdditionalInfo applies. This field is a relationship field. **Relationship Name** OrderSummary **Relationship Type** Lookup **Refers To** OrderSummary
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user who currently owns this record. Default value is the ID of the user who created the record. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User

OrderSummary

OrderSummaryRoutingSchedule

Represents an attempt to route an order summary to one or more inventory locations for fulfillment. You can use it to schedule future attempts and to record completed attempts. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

Fields

Field	Details
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it’s possible that this record was referenced (`LastReferencedDate`) and not viewed.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description The name of the order summary routing schedule.
OrderSummaryId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** (Master-Detail) The order summary associated with the routing schedule.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the User who currently owns this order summary routing schedule. Default value is the User logged in to the API to perform the create.
Reason	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Reason for the routing attempt. You can customize this list. The list has one default value: • Unknown
ScheduleStatus	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Identifies whether this routing attempt has already run or is scheduled to run. Possible values are: • ABANDONED • COMPLETED • SCHEDULED
ScheduledDatetime	**Type** dateTime

Field	Details
	Properties Create, Filter, Sort, Update **Description** Identifies when this routing attempt was run or is scheduled to run. If the `ScheduleStatus` is ABANDONED or COMPLETED, then you can't modify this value.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

OrderSummaryRoutingScheduleOwnerSharingRule
Sharing rules are available for the object.

OrderSummaryRoutingScheduleShare
Sharing is available for the object.

OrderSummary

Organization

Represents key configuration information for an organization.

Executing a SOQL SELECT query returns the value of fields in this object, but no value is visible for some of the fields.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
`Address` (beta)	**Type** address **Properties** Filter, Nillable

Field	Details
	Description The compound form of the address. Read-only. See Address Compound Fields for details on compound address fields.
AllowsSelfServiceLogin	**Type** boolean **Properties** Defaulted on create, Filter, Update **Description** Indicates whether the organization allows Self-Service login (`true`) or not (`false`).
City	**Type** string **Properties** Filter, Group, Nillable, Sort, Update **Description** Name of the city for the organization's address.
ComplianceBccEmail	**Type** email **Properties** Filter, Group, Nillable, Sort **Description** Email address for compliance blind carbon copies. Limit: 80 characters.
Country	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Name of the country for the organization's address. Limit: 80 characters.
CountryCode	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ISO country code for the organization's address. Enable state and country/territory picklists to use this field. For more information,

Field	Details
	see Enable and Disable State and Country/Territory Picklists in Salesforce Help.
`DailyWebToCaseCount`	**Type** int **Properties** Filter, Nillable **Description** The number of web form submissions that have been converted to cases for the day.
`DailyWebToCaseLimit`	**Type** int **Properties** Filter, Nillable **Description** The maximum number of web form submissions that can be converted to cases per day.
`DailyWebToLeadCount`	**Type** int **Properties** Filter, Nillable **Description** The number of web form submission that have been converted to leads for the day
`DailyWebToLeadLimit`	**Type** int **Properties** Filter, Nillable **Description** The maximum number of web form submissions that can be converted to leads per day.
`DefaultAccountAccess`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** In API version 10.0 and later, represents the default access level for accounts, contracts, and assets. The possible values are:

Field	Details
	• `None` • `Read` • `Edit` • `ControlledByLeadOrContact` • `ControlledByCampaign` In versions before 10.0, `DefaultAccountAndContactAccess` represented this value.
`DefaultAccountAndContactAccess`	**Type** picklist **Properties** Filter, Nillable, Restricted picklist **Description** Default access level for accounts, contacts, contracts, and assets. This field is supported for backward compatibility only and is not available in API version 10.0 or later. In version 10.0 and later, use either `DefaultAccountAccess` or `DefaultContactAccess`.
`DefaultCalendarAccess`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Default access level for calendars. The possible values are listed, followed by the user interface labels in parentheses: • `HideDetails` (Hide Details) • `HideDetailsInsert` (Hide Details and Add Events) • `ShowDetails` (Show Details) • `ShowDetailsInsert` (Show Details and Add Events) • `AllowEdits` (Full Access)
`DefaultCampaignAccess`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Default access level for campaigns. The possible values are: • `None` • `Read`

Field	Details
	• `Edit` • `All`
`DefaultCaseAccess`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Default access level for cases. The possible values are: • `None` • `Read` • `Edit` • `ReadEditTransfer`
`DefaultContactAccess`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Default access level for contacts. The possible values are: • `None` • `Read` • `Edit` • `ControlledByParent` In versions before 10.0, `DefaultAccountAndContactAccess` represented this value. Note: When `DefaultContactAccess` is set to “Controlled by Parent,” you can’t update the `ContactAccessLevel` field.
`DefaultLeadAccess`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Default access level for leads. The possible values are: • `NoneRead` • `Edit` • `ReadEditTransfer`

Field	Details
DefaultLocaleSidKey	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort, Update **Description** Default locale SID key.
DefaultOpportunityAccess	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Default access level for opportunities. The possible values are: • None • Read • Edit • ControlledByLeadOrContact • ControlledByCampaign
DefaultPricebookAccess	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Default access level for price books. The possible values are listed, followed by the user interface labels in parentheses: • None (No access) • Read (Read only) • ReadSelect (Use)
DefaultTerritoryCaseAccess	**Type** picklist **Properties** Filter, Group, Nillable, Sort **Description** Default access level for cases associated with accounts in territories. The possible values are: • None • Read • Edit

Field	Details
	• `ControlledByLeadOrContact` • `ControlledByCampaign`
`DefaultTerritoryContactAccess`	**Type** picklist **Properties** Filter, Group, Nillable, Sort **Description** Default access level for contacts associated with accounts in territories. The possible values are: • `NoneRead` • `Edit` • `ControlledByLeadOrContact` • `ControlledByCampaign` Note: When `DefaultContactAccess` is set to "Controlled by Parent" you can't update this field.
`DefaultTerritoryOppAccess`	**Type** picklist **Properties** Filter, Group, Nillable, Sort **Description** Default access level for opportunities in territories. Valid values: • `NoneRead` • `Edit` • `ControlledByLeadOrContact` • `ControlledByCampaign`
`Division`	**Type** string **Properties** Filter, Group, Nillable, Sort, Update **Description** The name of the division for this organization. This field is not related to the Division object.
`Fax`	**Type** phone

Field	Details
	Properties Filter, Group, Nillable, Sort, Update **Description** Fax number. Limit: 40 characters.
`FiscalYearStartMonth`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Number that corresponds to the month that this organization's fiscal year starts.
`HomepageHtml`	**Type** textarea **Properties** Nillable, Update **Description** The Home tab custom links and company message for this organization.
`InstanceName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Read-only. The name of the instance. Available in API version 31.0 or later.
`IsSandbox`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Read-only. Indicates whether the current organization is a sandbox (`true`) or production (`false`) instance. Available in API version 31.0 or later.
`LanguageLocaleKey`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description The same as `Language`, the two-to-five character code which represents the language and locale ISO code. This controls the language for labels displayed in an application.
`LastWebToCaseDate`	**Type** dateTime **Properties** Filter, Nillable **Description** The last date that a web form submission was converted to a case.
`LastWebToLeadDate`	**Type** dateTime **Properties** Filter, Nillable **Description** The last date that a web form submission was converted to a lead.
`Latitude`	**Type** double **Properties** Filter, Nillable, Sort, Update **Description** Used with `Longitude` to specify the precise geolocation of an address. Acceptable values are numbers between –90 and 90 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
`Longitude`	**Type** double **Properties** Filter, Nillable, Sort, Update **Description** Used with `Latitude` to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
`MaxActionsPerRule`	**Type** int

Field	Details
	Properties Filter, Nillable **Description** Maximum number of actions per workflow, assignment, escalation, and auto-response rules. This field is unavailable in version 15.0 and later.
MaxRulesPerEntity	**Type** int **Properties** Filter, Nillable **Description** Maximum number of rules per object, inclusive of workflow, assignment, escalation, and auto-response rules. This field is unavailable in version 15.0 and later.
MonthlyPageViewsEntitlement	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of page views allowed for the current calendar month for the sites in your organization. To access this field, Salesforce Sites must be enabled for your organization. This field is generally available in API versions 18.0 and later.
MonthlyPageViewsUsed	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of page views used in the current calendar month for the sites in your organization. To access this field, Salesforce Sites must be enabled for your organization. This field is generally available in API versions 18.0 and later.
Name	**Type** string **Properties** Filter, Group, idLookup, Sort, Update **Description** The name of the organization.

Field	Details
NamespacePrefix	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
OrganizationType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Edition of the organization, for example Enterprise Edition or Unlimited Edition.
Phone	**Type** phone **Properties** Filter, Group, Nillable, Sort, Update **Description** Phone number for the organization.
PostalCode	**Type** string **Properties** Filter, Group, Nillable, Sort, Update

Field	Details
	Description Postal code for the address of the organization. Limit: 20 characters.
`PreferencesAutoSelectIndividualOnMerge`	**Type** boolean **Properties** Filter, Update
`PreferencesEventScheduler`	**Type** boolean **Properties** Update **Description** Indicates whether opportunities require products (`true`) or not (`false`).
`PreferencesRequireOpportunityProducts`	**Type** boolean **Properties** Filter, Update **Description** Indicates whether opportunities require products (`true`) or not (`false`).
`PreferencesS1BrowserEnabled`	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the Salesforce mobile web is enabled for all users in your organization (`true`) or is disabled for all users (`false`). This field is available in API version 29.0 or later.
`PreferencesTerminateOldestSession`	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the oldest login session is automatically closed when a policy specifying the maximum number of sessions is triggered. This field is available in API version 35.0 or later.

Field	Details
	Note: As of API version 50.0, this field is removed.
`PreferencesTransactionSecurityPolicy`	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the Transaction Security feature has been enabled. This field is available in API version 35.0 or later. **Note:** As of API version 50.0, this field is removed.
`PrimaryContact`	**Type** string **Properties** Filter, Group, Nillable, Sort, Update **Description** Name of the primary contact for the organization. Limit: 80 characters.
`ReceivesAdminInfoEmails`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the organization receives administrator emails (`true`) or not (`false`).
`ReceivesInfoEmails`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the organization receives informational email from Salesforce (`true`) or not (`false`).
`SelfServiceCasePlural`	**Type** string **Properties** Filter, Nillable, Update

Field	Details
	Description The plural version of the term used to represent the Case object in the Self-Service portal.
`SelfServiceCaseSingle`	**Type** string **Properties** Filter, Nillable, Update **Description** The singular version of the term used to represent the Case object in the Self-Service portal.
`SelfServiceCaseSubmitRecordTypeId`	**Type** reference **Properties** Filter, Nillable, Update **Description** The ID of the record type associated with a case submitted via the Self-Service portal.
`SelfServicDefaultCaseOrigin`	**Type** string **Properties** Filter, Nillable, Update **Description** The default origin of a case submitted via the Self-Service portal.
`SelfServiceEmailSenderAddress`	**Type** email **Properties** Filter, Nillable, Update **Description** The Self-Service email address from which new Self-Service user and password email messages are sent, such as `support@acme.com`.
`SelfServiceEmailSenderName`	**Type** string **Properties** Filter, Nillable, Update

Field	Details
	Description The name associated with the email address in the `SelfServiceEmailSenderAddress` field, such as `Acme Customer Support`.
SelfServiceEmailUserOnCaseCreationTemplateId	**Type** reference **Properties** Filter, Nillable, Update **Description** The ID of the email template used when email is sent to a Self-Service user when he or she creates a case.
SelfServiceEnabledForResponseRules	**Type** boolean **Properties** Filter, Nillable, Update **Description** Indicates whether the Self-Service portal is enabled for auto-response rules (`true`) or not (`false`).
SelfServiceFeatureConfig	**Type** int **Properties** Filter, Nillable, Update **Description** An integer representing the active Self-Service feature configuration for this organization.
SelfServiceLogoutUrl	**Type** url **Properties** Filter, Nillable, Update **Description** The Web page that displays when a Self-Service user logs out of the Self-Service portal.
SelfServiceMaxNumSuggestions	**Type** int **Properties** Filter, Nillable, Update

Field	Details
	Description The maximum number of suggested solutions allowed for a Self-Service case.
`SelfServiceNewCommentCheckedByDefault`	**Type** boolean **Properties** Defaulted on create, Filter, Update **Description** If `true`, When a customer notification is automatically sent when a new comment is added to a case.
`SelfServiceNewCommentTemplateId`	**Type** reference **Properties** Filter, Nillable, Update **Description** The ID of the email template used to send a notification to Self-Service users when a public comment is added to one of their cases.
`SelfServiceNewPassTemplateId`	**Type** reference **Properties** Filter, Nillable, Update **Description** The ID of the email template used when new passwords are generated for Self-Service users.
`SelfServiceNewUserTemplateId`	**Type** reference **Properties** Filter, Nillable, Update **Description** The ID of the email template used when new Self-Service users are enabled.
`SelfServicePageHeight`	**Type** int **Properties** Filter, Nillable, Update

Field	Details
	Description The maximum height in pixels of Self-Service pages.
`SelfServicePageWidth`	**Type** int **Properties** Filter, Nillable, Update **Description** The maximum width in pixels of Self-Service pages.
`SelfServiceSelfClosedCaseStatus`	**Type** picklist **Properties** Filter, Nillable, Update **Description** The default status for cases closed by Self-Service users.
`SelfServiceSolutionCategoryAvailable`	**Type** boolean **Properties** Defaulted on create, Filter, Update **Description** Indicates whether solution categories are available in the Self-Service portal (`true`) or not (`false`).
`SelfServiceSolutionCategoryStartNodeId`	**Type** reference **Properties** Filter, Nillable, Update **Description** The ID of the top-level category in the Self-Service portal.
`SelfServiceSolutionPlural`	**Type** string **Properties** Filter, Nillable, Update **Description** The plural version of the term used to represent the Solution object in the Self-Service portal.
`SelfServiceSolutionSingle`	**Type** string

Field	Details
	Properties Filter, Nillable, Update **Description** The singular version of the term used to represent the Solution object in the Self-Service portal.
`SelfServiceStyleSheetUrl`	**Type** url **Properties** Filter, Nillable, Update **Description** The public URL of your organization's Self-Service portal stylesheet.
`SelfServiceWelcomePageConfig`	**Type** int **Properties** Filter, Nillable, Update **Description** Integer that represents the welcome page configuration for the Self-Service portal.
`SelfServiceWelcomeText`	**Type** string **Properties** Filter, Nillable, Update **Description** The custom welcome message displayed at the top of the Self-Service home page when Self-Service users log in. Limit: 32,000 characters.
`SignupCountryIsoCode`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ISO country code specified by the user for a sign-up request.
`State`	**Type** string **Properties** Filter, Group, Nillable, Sort, Update

Field	Details
	Description State of the address of the organization. Limit: 80 characters.
StateCode	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ISO state code for the organization’s address.
Street	**Type** textarea **Properties** Filter, Group, Nillable, Sort, Update **Description** Street address for the organization. Limit: 255 characters.
TrialExpirationDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date that this organization's trial license expires.
TimeZoneSidKey	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort, Update **Description** Identifies the default time zone of the organization.
UiSkin	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The user interface theme selected for the organization.
UsesStartDateAsFiscalYearName	**Type** boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort **Description** Indicates whether the calendar year when the fiscal year begins is referred to as the year of the company's fiscal year (`true`) or not (`false`). For example, if the fiscal year begins in February 2006, a `true` value means the fiscal year is FY2006, and a `false` value means the fiscal year is FY2007.
`UsesWebToCase`	**Type** boolean **Properties** Filter, Nillable, Update **Description** Indicates whether this organization can use Web-to-Case (`true`) or not (`false`).
`UsesWebToLead`	**Type** boolean **Properties** Filter, Nillable, Update **Description** Indicates whether this organization can use Web-to-Lead (`true`) or not (`false`).
`WebToCaseAssignedEmailTemplateId`	**Type** reference **Properties** Filter, Nillable, Update **Description** The ID of the email template used when a new case is assigned to a user via Web-to-Case.
`WebToCaseCreatedEmailTemplateId`	**Type** reference **Properties** Filter, Nillable, Update **Description** The ID of the email template used when a new case is created via Web-to-Case.

Field	Details
`WebToCaseDefaultCreatorId`	**Type** reference **Properties** Filter, Nillable, Update **Description** The ID of the user specified as the default creator of cases created via Web-to-Case.
`WebToCaseDefaultOrigin`	**Type** string **Properties** Filter, Group, Nillable, Sort, Update **Description** The default value for the **Case Origin** field on cases submitted via Web-to-Case. Limit: 40 characters.

Usage

Query this object to obtain information about an organization's settings. Only one organization object exists per organization.

SEE ALSO:

Overview of Salesforce Objects and Fields

OrgDeleteRequest

Represents a request to delete a developer edition (DE) org. This object is available in API version 42.0 and later. It is available only in Developer and Database.com editions.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field Name	Details
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort

Field Name	Details
	Description The auto-generated ID of this OrgDeleteRequest object.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** The ID of the user who initiated the org delete request.
`RequestType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Specifies whether you want to deactivate or reactivate the org. When you deactivate an org, you have 30 days to change your mind and reactivate it. After 30 days, the org is locked, and you must contact Salesforce Customer Support to reactivate it. After 60 days, the org is permanently deleted from Salesforce servers. Valid values: • `Deactivate` • `Reactivate`

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

OrgDeleteRequestOwnerSharingRule
Sharing rules are available for the object.

OrgDeleteRequestShare
Sharing is available for the object.

OrgEmailAddressSecurity

Defines the assignment of a user profile to an org-wide email address. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Only authenticated users with the View Setup and Configuration permission can access this object.

Fields

Field	Details
`OrgWideEmailAddressId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of an organization-wide email address. This field is a relationship field. **Relationship Name** OrgWideEmailAddress **Relationship Type** Lookup **Refers To** OrgWideEmailAddress
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The profile ID that's allowed to use an organization-wide email address. This field is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** Profile

Usage

You can use this object with OrgWideEmailAddress and Profile objects to retrieve user profiles that have access to a specific org-wide email address. To find specific users, use the `ProfileId` field on the User object.

You can also retrieve the org-wide email addresses that a specific user can access. Note that any users assigned to those org-wide email addresses via permission set aren't returned.

OrgWideEmailAddress

Represents an organization-wide email address for user profiles.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Only authenticated users with the View Setup and Configuration permission can access this object.

Fields

Field	Details
`Address`	**Type** email **Properties** Create, Filter, Sort, Update **Description** An email alias that can be used by users of your org.
`DisplayName`	**Type** string **Properties** Create, Filter, Sort, Update **Description** The name used to identify the sender of the email.
`IsAllowAllProfiles`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** If `true`, any user profile in your organization can use this object. If `false`, only specified user profiles can use this object when sending email. If you do not have the appropriate user profile, you can't use this object. The default value is `false`..
`IsVerified`	**Type** boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the email address has been verified by its owner. The default value is false. This field is available in API version 58.0 and later. **Purpose** Picklist Possible values are DefaultNoreply, UserSelection, UserSelectionAndDefaultNoReply
`Purpose`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates how an email address can be used. `UserSelection` allows users with the correct profile to select the address as the From address for an email. Possible values are `DefaultNoreply`, `UserSelection`, `UserSelectionAndDefaultNoReply`.

Usage

This object represents an email alias to use as the From address for an email, which can be selected by users with a user profile. You can pass in the OrgWideEmailAddress ID when calling `sendEmail()` for a SingleEmailMessage.

OutOfOffice

Represents a user-set value on a profile that shows when the user intends to be out of the office. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `undelete()`, `upsert()`, `update()`

Special Access Rules

In Lightning Experience, lets users set a message next to their name in Chatter to show when they plan to be out of the office. The message appears in Lightning Experience, Salesforce Classic, and mobile views. Messages expire automatically after their end date. You can control whether out-of-office functionality is available to your users. Set it up in the Out of Office section in **Setup** > **Chatter Settings**.

Only internal users can set an out-of-office message.

Fields

Field Name	Details
`EndDate`	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The date of the last day a person is out of the office. After the message expires, it goes away automatically.
`IsEnabled`	**Type** boolean **Properties** Create, Defaulted on create **Description** Indicates whether an out-of-office message can be displayed for a user. The default value is `true`.
`Message`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The message portion of the out-of-office message. This text, along with start and end dates, is appended to the user's name in the Salesforce user interface. The maximum length of this string is 40 characters.
`StartDate`	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The date of the first day a person is out of the office.
`UserId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the user associated with the out-of-office message.

Usage

- Maximum message length is 60 characters.
- Users can set only their own out-of-office message. An admin can set an out-of-office message for any user.
- The out-of-office message can be set only for internal users.

OutgoingEmail

For internal use only.

OutgoingEmailRelation

For internal use only.

OwnedContentDocument

Represents a file owned by a user. This object is available in version 30.0 and later.

Supported Calls

`describeSObjects()`

Fields

Field Name	Details
`ContentDocumentId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the document. This is a relationship field. **Relationship Name** ContentDocument **Relationship Type** Lookup **Refers To** ContentDocument
`ContentSize`	**Type** int

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** Size of the document in bytes.
ContentUrl	**Type** url **Properties** Filter, Group, Nillable, Sort **Description** URL for links and Google Docs. This field is set only for links and Google Docs, and is one of the fields that determine the FileType. This field is available in API version 31.0 and later.
ExternalDataSourceName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Name of the external data source in which the document is stored. This field is set only for external documents that are connected to Salesforce. This field is available in API version 32.0 and later.
ExternalDataSourceType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Type of external data source in which the document is stored. This field is set only for external documents that are connected to Salesforce. This field is available in API version 35.0 and later.
FileExtension	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** File extension of the document. This field is available in API version 31.0 and later.

Field Name	Details
FileType	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Type of document, determined by the file extension.
OwnerId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the owner of the document. This is a relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** User
Title	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Title of the document.

OwnerChangeOptionInfo

Represents default and optional actions that can be performed when a record's owner is changed. Available in API version 35.0 and later, but to query for change owner metadata, use the OwnerChangeOptionInfo object in Tooling API instead. For more information, see OwnerChangeOptionInfo in the Tooling API.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Use `EntityId` or `DurableId` when querying this object.

PackageLicense

Represents a license for an installed managed package. This object is available in API version 31.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field Name	Details
`AllowedLicenses`	**Type** int **Properties** Filter, Group, Sort **Description** The number of users allowed to use the package.
`ExpirationDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the package license expires.
`IsAvailableForIntegrations`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Reserved for future use.
`IsProvisioned`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Reserved for internal use.

Field Name	Details
NamespacePrefix	**Type** string **Properties** Filter, Group, Sort **Description** The namespace prefix associated with the package.
Status	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The status of the license. Possible values are: `Active`, `Expired`, `Free`, and `Trial`.
UsedLicenses	**Type** int **Properties** Filter, Group, Sort **Description** The number of users who have a license to the package.

Usage

Use this object to determine the number of licenses allowed and in use for a managed package installed in your organization.

The following example demonstrates the use of the API to manage licenses for a package. The example defines an Apex class that does the following.

- Retrieves the PackageLicense record for the specified package (identified by its namespace prefix).
- Defines a function that returns a list of all users with the specified profile.
- Creates a UserPackageLicense record for each user with that profile, which has the effect of assigning a license for the package to all users with that profile.
- Returns an error message if the number of users exceeds the number of available licenses.

```
public class AssignPackageLicense {

    static String PACKAGE_NAMESPACE_PREFIX = 'acme_101';
    static String PROFILE_ID = '00exx000000jz1SAAQ';
    public static String exceptionText {get; set;}

    public AssignPackageLicense() {
         exceptionText = 'Initialized';
    }

   static List<User> getUsersWithProfile(){
```

```
      String userQuery = 'SELECT Id FROM User WHERE ProfileId = :PROFILE_ID';
      List<User> matchingUsers = new List<User>();
      matchingUsers = [SELECT Id FROM User WHERE ProfileId = :PROFILE_ID];
      return matchingUsers;
    }

    public static void assignLicenseByProfile() {
        //find the PackageLicense Id
        PackageLicense pl = [SELECT Id, NamespacePrefix, AllowedLicenses, UsedLicenses,
              ExpirationDate,Status FROM PackageLicense WHERE
              NamespacePrefix = :PACKAGE_NAMESPACE_PREFIX];
        System.assert(pl != null, 'PackageLicense cannot be null.');
        List<User> usersToAssignLicenses = getUsersWithProfile();
        List<UserPackageLicense> firstUPLs = new List<UserPackageLicense>();

        //create a new UserPackageLicense record for each user with the specified profile

        for (Integer i = 0; i< usersToAssignLicenses.size(); i++){
              UserPackageLicense upl = new UserPackageLicense();
              upl.PackageLicenseId = pl.Id;
              upl.UserId = usersToAssignLicenses[i].Id;
              firstUPLs.add(upl);
        }

        try {
          //bulk insert
          insert(firstUPLs);
          } catch(DmlException e) {
             for (Integer i = 0; i < e.getNumDml(); i++) {
             // process exception here
               System.debug(e.getDmlMessage(i));
               String status = e.getDmlStatusCode(i);
               System.debug(status + ' ' + e.getDmlMessage(i));
               if(status.equals('LICENSE_LIMIT_EXCEEDED')){
                exceptionText = 'You tried to assign more licenses than available. '
                +' You tried to create '+ firstUPLs.size()+' licenses but only have '
                + (pl.AllowedLicenses - pl.UsedLicenses) + ' licenses free.';
                System.debug(exceptionText);
               }
             }
         }
    }
}
```

PackagePushError

Represents an error encountered during a push request. The number of PackagePushError records created depends on the number of push jobs in the request that result in an error.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To initiate a push upgrade for a first-generation managed package, the Upload AppExchange Packages user permission is required.

To initiate a push upgrade for an unlocked or second-generation managed package, the Create and Update Second-Generation Packages user permission is required.

The push upgrade feature is only available to first- and second-generation managed packages that have passed AppExchange security review. To enable push upgrades for your managed package, log a support case in the Salesforce Partner Community.

For unlocked packages, push upgrades are enabled by default.

Fields

Field Name	Details
`ErrorDetails`	**Type** string **Properties** Nillable, Sort **Description** Explanation of the error.
`ErrorMessage`	**Type** string **Properties** Nillable, Sort **Description** The error code that appears in the API.
`ErrorSeverity`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Valid values are: • Error • Warning
`ErrorTitle`	**Type** string **Properties** Nillable, Sort **Description** The error message title that appears in the API.

Field Name	Details
ErrorType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Valid values are: • ApexTestFailure • DeployError • FeatureMissing • IneligibleUpgrade • LimitExceeded • LockingFailure • PACError • UnclassifiedError
PackagePushJobId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Required. The parent push job record ID.

Usage

Suppose that your push upgrade request wasn't successful due to some of its jobs failing. Let's write some code to find out what those errors were.

This code sample uses the Web Services Connector (WSC).

```
// Retrieves all PackagePushError objects associated with the PackagePushJob with the given
// ID
final String PACKAGE_PUSH_ERROR_QUERY = "Select ErrorMessage, ErrorDetails, ErrorTitle,"

+ " ErrorSeverity, ErrorType from PackagePushError where PackagePushJobId = '%s'";

// job is a PackagePushJob instance
QueryResult queryResult = conn.query(String.format(PACKAGE_PUSH_ERROR_QUERY, job.getId()));

StringBuilder errorMessages = new StringBuilder();
errorMessages.append("Errors for PackagePushJob [").append(job.getId()).append("]:")
 .append("\n");

// There can be multiple PackagePushErrors for a given PackagePushJob
for(SObject r : queryResult.getRecords()) {
 PackagePushError e = (PackagePushError) r;
```

```
    errorMessages.append("Title: ").append(e.getErrorTitle()).append("\n");
    errorMessages.append("Severity: ").append(e.getErrorSeverity()).append("\n");
    errorMessages.append("Type: ").append(e.getErrorType()).append("\n");
    errorMessages.append("Message: ").append(e.getErrorMessage()).append("\n");
    errorMessages.append("Details: ").append(e.getErrorDetails()).append("\n");
    errorMessages.append("\n");
}

String errors errorMessages.toString();
```

PackagePushJob

Represents an individual push job for upgrading a package in an org from one version to another version. There can be multiple push jobs created for one push request. For example, if you want to upgrade five orgs as part of one push, you have one PackagePushRequest record and five PackagePushJob records.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To initiate a push upgrade for a first-generation managed package, the Upload AppExchange Packages user permission is required.

To initiate a push upgrade for an unlocked or second-generation managed package, the Create and Update Second-Generation Packages user permission is required.

The push upgrade feature is only available to first- and second-generation managed packages that have passed AppExchange security review. To enable push upgrades for your managed package, log a support case in the Salesforce Partner Community.

For unlocked packages, push upgrades are enabled by default.

Fields

Field Name	Details
`DurationSeconds`	**Type** int **Properties** Group, Nillable **Description** The length of time in seconds, that the push upgrade took to complete. This field is new in API version 51.0.
`EndTime`	**Type** dateTime **Properties** Create, Nillable, Update

Field Name	Details
	Description The date and time (UTC) at which the push upgrade ended, in ISO 8601 format. This field is new in API version 51.0.
`PackagePushRequestId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Required. The ID of the parent push request record that must have been created.
`StartTime`	**Type** dateTime **Properties** Create, Nillable, Update **Description** The date and time (UTC) at which the push upgrade started, in ISO 8601 format. This field is new in API version 51.0.
`Status`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The status of the job. Valid values are: • Canceled • Created (default) • Failed • In Progress • Pending • Succeeded Don’t specify this value when you create the push job. The default value of `Created` is used.
`SubscriberOrganizationKey`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Required. The organization key of the org where the package is upgraded. This references `orgKey` in PackageSubscriber.

Usage

Suppose that you want to push version 3.4.6 of your package to all orgs. You've already identified the orgs eligible for the upgrade by using MetadataPackageVersion and created the push request using PackagePushRequest. Now let's write some code to create a push job for each eligible org.

This code sample uses the Web Services Connector (WSC).

```
PackageSubscriber[] subscribers = new PackageSubscriber[];

// ... populate eligible and desired subscribers

// Create the PackagePushJob array
PackagePushJob[] jobs = new PackagePushJob[subscribers.length];

for (int i = 0; i < subscribers.length; i++) {
 // create a job for each subscriber...
 PackagePushJob job = new PackagePushJob();
 // ... associate it to the PackagePushRequest ppr...
 job.setPackagePushRequestId(ppr.getId());
 // ... and add the orgKey
 job.setSubscriberOrganizationKey(subscribers[i].getOrgKey());
 jobs[i] = job;
}

// Save the jobs
SaveResult[] saveResults = conn.create(jobs);

// Add the newly generated id's to the PackagePushJob objects
for (int i = 0; i < saveResults.length; i++) {
 if (saveResults[i].isSuccess()) {
  jobs[i].setId(saveResults[i].getId());
 }
}
```

Or, if you're using REST API, submit a POST request to the PackagePushJob sObject endpoint, as in the following example. SOAP API is also supported. This example returns the push job ID (starting with 0DX) that is required to query the status of the job.

```
POST
/services/data/v38.0/sobjects/packagepushjob/
{
   "PackagePushRequestId" : "0DV...",
   "SubscriberOrganizationKey" : "00DR00..."
}
```

Checking the Status of a Push Job

To check the job status, simply query the `Status` field. For example:

```
SELECT Id, Status FROM PackagePushJob WHERE PackagePushRequestId ='0DV...'
```

Here's an example in Java.

```
// Finds the status of the PackagePushJob with the given id
String PACKAGE_PUSH_JOB_STATUS_QUERY = "Select status from PackagePushJob where Id = '%s'";

// job is a PackagePushJob instance
```

```
QueryResult queryResult = conn.query(String.format(PACKAGE_PUSH_JOB_STATUS_QUERY,
job.getId()));

// extract the status from the QueryResult
String status = ((PackagePushJob) queryResult.getRecords()[0]).getStatus();

// optionally, update the PackagePushJob instance with the latest status
job.setStatus(status);
```

You can also continuously poll the job status until the job is done. The following Java example polls the status every 10 seconds.

```
// The set of states that indicate a PackagePushJob has completed
final Set<String> TERMINAL_STATES = new HashSet<>();
TERMINAL_STATES.add("Succeeded");
TERMINAL_STATES.add("Failed");
TERMINAL_STATES.add("Canceled");

String status = queryJobStatus(job); // this method returns the status as retrieved in the
 previous code sample

// If the status is not one of the completed statuses...
while(!TERMINAL_STATES.contains(status)) {
 Thread.sleep(10 * 1000); // ... wait 10 seconds and try again
 status = queryJobStatus(job);
}
```

PackagePushRequest

Represents the push request for upgrading a package in one or many orgs from one version to another version.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To initiate a push upgrade for a first-generation managed package, the Upload AppExchange Packages user permission is required.

To initiate a push upgrade for an unlocked or second-generation managed package, the Create and Update Second-Generation Packages user permission is required.

The push upgrade feature is only available to first- and second-generation managed packages that have passed AppExchange security review. To enable push upgrades for your managed package, log a support case in the Salesforce Partner Community.

For unlocked packages, push upgrades are enabled by default.

Fields

Field Name	Details
`DurationSeconds`	**Type** int **Properties** Group, Nillable **Description** The length of time in seconds, that the push upgrade took to complete. This field is new in API version 51.0.
`EndTime`	**Type** dateTime **Properties** Create, Nillable, Update **Description** The date and time (UTC) at which the push upgrade ended, in ISO 8601 format. This field is new in API version 51.0.
`PackageVersionId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Required. The non-beta, non-deprecated package version that the package is being upgraded to.
`ScheduledStartTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time (UTC) at which the push request is processed, in ISO 8601 format. Set this value to the earliest time that you want Salesforce to attempt to start the push. As a best practice, schedule pushes at off-peak hours like 1:00 AM Saturday. If you don't specify a value, the push starts when the package push request's Status is set to `Pending`.
`StartTime`	**Type** dateTime **Properties** Create, Nillable, Update

Field Name	Details
	Description The date and time (UTC) at which the push upgrade actually started, in ISO 8601 format. This field is new in API version 51.0.
`Status`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The status of the push. Valid values are: • Canceled • Created (default) • Failed • In Progress • Pending • Succeeded Don't specify this value when you create the push request. The default value of Created is used. Later, change the status to Pending to schedule the push upgrade.

Usage

Suppose that you want to push version 3.4.6 of your package to all orgs. You've already identified the orgs eligible for the upgrade by using MetadataPackageVersion. Now let's write some code to create a push request, which holds a push job for each eligible org.

This code sample uses the Web Services Connector (WSC).

```
// Create a new PackagePushRequest for the versionId to upgrade to
// (for example, versionId is the "04t..." id of version
// 3.4.6 of the package
PackagePushRequest ppr = new PackagePushRequest();
ppr.setPackageVersionId(versionId);

// Optionally, set the start time of the PackagePushRequest to schedule it to begin
// automatically; scheduledStartTime is a java.util.Calendar instance
ppr.setScheduledStartTime(scheduledStartTime);

// Save the PackagePushRequest
SaveResult[] saveResults = conn.create(new SObject[] { ppr });
if (saveResults[0].isSuccess()) {
 // Add the newly generated Id to the object
 ppr.setId(saveResults[0].getId());
} else {
 for (Error error : saveResults[0].getErrors()) {
  System.out.println(error.getMessage());
 }
}
```

Or, if you're using REST API, submit a POST request to the PackagePushRequest sObject endpoint, as in the following example. SOAP API is also supported.

This example returns the push request ID (starting with 0DV) that's required to create push jobs.

```
POST
/services/data/v38.0/sobjects/packagepushrequest/
{
   "PackageVersionId" : "04t...",
   "ScheduledStartTime" : "2016-08-24T21:00:00"
}
```

As your next step, create a push job for each eligible subscriber you want to upgrade using PackagePushJob.

Scheduling the Push Upgrade

To signal that the push upgrade is ready to be processed, change the status of the push request to Pending. If you didn't set a `ScheduledStartTime`, the push upgrade starts immediately after you change the status.

See the following Java example.

```
// ppr is the PackagePushRequest instance
ppr.setStatus("Pending");
conn.update(new SObject[] { ppr });
```

If you're using REST API, submit a PATCH request to the PackagePushRequest sObject endpoint, as in the following example. SOAP API is also supported.

```
PATCH
/services/data/v38.0/sobjects/packagepushrequest/0DV...
{
   "Status" : "Pending"
}
```

Checking the Status of a Push Request

The PackagePushRequest status is `Succeeded` if all its associated jobs are successful; it's `Failed` if at least one job failed.

```
// Finds the status of the PackagePushRequest for a given Id
final String PACKAGE_PUSH_REQUEST_STATUS_QUERY = "Select status from PackagePushRequest"
+
 " where Id = '%s'";

// ppr is a PackagePushRequest instance
QueryResult queryResult = conn.query(String.format(PACKAGE_PUSH_REQUEST_STATUS_QUERY,
 ppr.getId()));

// extract the status from the QueryResult
String status = ((PackagePushRequest) queryResult.getRecords()[0]).getStatus();

// optionally, update the PackagePushRequest instance with the latest status
ppr.setStatus(status);
```

You can also check the status of a job by querying the PackagePushJob's `Status` field.

Aborting a Push Request

You can abort a package push request by changing its status to Canceled.

For example, if you're using the REST API, submit a PATCH request to the PackagePushRequest sObject endpoint.

```
PATCH
/services/data/v38.0/sobjects/packagepushrequest/0DV...
{
   "Status" : "Canceled"
}
```

The following example is for Java.

```
// ppr is the PackagePushRequest instance
ppr.setStatus("Canceled");
```

You can abort a package push request only if its status is Created or Pending. If the abort succeeds, all associated push jobs are also canceled. If you try to abort when the current PackagePushRequest status is Canceled, Succeeded, Failed, or In Progress, the abort doesn't occur, and an error message is returned.

PackageSubscriber

Represents an installation of a package in an org. This object contains installation information for managed or unlocked packages developed in the org you're logged in to.

One record is created per installation. For example, if 5 orgs installed 2 packages, 10 records are created.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To initiate a push upgrade for a first-generation managed package, the Upload AppExchange Packages user permission is required.

To initiate a push upgrade for an unlocked or second-generation managed package, the Create and Update Second-Generation Packages user permission is required.

The push upgrade feature is only available to first- and second-generation managed packages that have passed AppExchange security review. To enable push upgrades for your managed package, log a support case in the Salesforce Partner Community.

For unlocked packages, push upgrades are enabled by default.

Fields

Field Name	Details
`InstalledStatus`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** If the package is installed in the org, the value is `i`.

Field Name	Details
InstanceName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The instance that hosts the subscriber org.
MetadataPackageId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The package ID. Package Ids have a prefix of `033`. This field is available in API version 49.0 and later.
MetadataPackageVersionId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The 18-character package version ID starting with `04t`.
OrgKey	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The 15-character ID that represents the Salesforce org.
OrgName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the org where the package is installed.
OrgStatus	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort

Field Name	Details
	Description Valid values are: • `Active` • `Demo` • `Free` • `Inactive` • `Trial` Orgs with an `OrgStatus` of `Inactive` can't receive push upgrades.
`OrgType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Valid values are: • `Production` • `Sandbox`
`ParentOrg`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The production org from which a sandbox was created.

Usage

Here are examples of the types of API queries you can perform.

Query	String
Get all package subscriber orgs with a specific package ID	`SELECT Id, OrgKey, OrgStatus, OrgName, OrgType FROM PackageSubscriber WHERE MetadataPackageVersionId = '04t...'`
Get all package subscriber orgs that have an installed package created by the org you're logged in to	`SELECT Id, OrgKey, OrgStatus, OrgName, OrgType FROM PackageSubscriber WHERE InstalledStatus = 'i'`

Filter PackageSubscriber Objects by Instance

If you have packages with many subscribers, querying PackageSubscriber objects can take a while. To improve query performance, add filters to your PackageSubscriber queries, such as an `InstanceName` filter. `InstanceName` is a field that represents the instance that the subscriber org is hosted on.

1. Get the org's package and the latest released version of the package.

```
/**
* Get the MetadataPackage object corresponding to this org's managed package
*/
public MetadataPackage getMetadataPackage() throws ConnectionException {
 // retrieve the managed package, which won't have an empty namespace
 QueryResult result = conn.query("select id from  MetadataPackage where namespaceprefix
 <> ''");

 return (MetadataPackage) result.getRecords()[0];
}

/**
* Get the latest MetadataPackageVersion object of the given MetadataPackage
*/
public MetadataPackageVersion getLatestMetadataPackageVersion(MetadataPackage
metadataPackage)
throws ConnectionException {
 // get the latest released version of the given package
 String query = "Select id, ReleaseState, MajorVersion, MinorVersion, PatchVersion,
MetadataPackageId"
   + " From MetadataPackageVersion"
   + " Where MetadataPackageId = '%s' and ReleaseState = 'Released'"
   + " Order by majorversion desc, minorversion desc, patchversion desc";

 QueryResult result = conn.query(String.format(query, metadataPackage.getId()));

 return (MetadataPackageVersion) result.getRecords()[0];
}
```

2. Get eligible subscribers. The following query strings and methods are modified to allow querying for PackageSubscribers filtered by an instance.

```
static final String PACKAGE_SUBSCRIBER_ORG_KEY_QUERY = "Select OrgKey from
PackageSubscribers where OrgStatus = 'Active'"
 + " and InstalledStatus = 'I'"
 + " and InstanceName = '%s'"; // placeholder for instance values

static final String METADATA_PACKAGE_VERSION_QUERY = "Select Id, Name, ReleaseState,
(%s) from MetadataPackageVersion"
 + " where MetadataPackageId = '%s' AND ReleaseState = 'Released'"
 + " AND (MajorVersion < %s OR (MajorVersion = %s and MinorVersion < %s)"
 + " OR (MajorVersion = %s and MinorVersion = %s and PatchVersion < %s))";

/**
* Get all PackageSubscribers on the given instance that are eligible to upgrade to the
 given
* MetadataPackageVersion
*/
public PackageSubscriber[] getEligibleSubscriberIds(MetadataPackageVersion version,
```

```
String instanceName) throws ConnectionException {
 String allPackageId = version.getMetadataPackageId();
 Integer major = version.getMajorVersion();
 Integer minor = version.getMinorVersion();
 Integer patch = version.getPatchVersion();

 return getEligibleSubscriberIds(major, minor, patch, allPackageId, instanceName);
}
```

```
public PackageSubscriber[] getEligibleSubscriberIds(Integer major, Integer minor, Integer
 patch, String packageId, String instanceName) throws ConnectionException {
 String subscriberQuery = String.format(PACKAGE_SUBSCRIBER_ORG_KEY_QUERY, instanceName);
QueryResult results = conn.query(String.format(METADATA_PACKAGE_VERSION_QUERY,
subscriberQuery, packageId, major, major, minor, major, minor, patch));

 return Arrays.stream(results.getRecords()).map(MetadataPackageVersion.class::cast)
  .filter(mpv -> mpv.getPackageSubscribers() != null)
  .flatMap(mpv -> Arrays.stream(mpv.getPackageSubscribers().getRecords()))
  .map(PackageSubscriber.class::cast)
  .toArray(PackageSubscriber[]::new);
}
```

3. Put it all together. The following code sample shows how to use the previous methods to modify the workflow to perform package pushes by instance.

```
String[] instances = { "NA4" }; // Here we list the instances we would like to push to
MetadataPackage metadataPackage = api.getMetadataPackage();
MetadataPackageVersion version = api.getLatestMetadataPackageVersion(metadataPackage);

// do pushes by instance to avoid API timeouts retrieving PackageSubscribers
for (String instanceName : instances) {
PackageSubscriber[] eligibleSubscribers = api.getEligibleSubscriberIds(version,
instanceName);

// ... proceed with creating PushRequests and PushJobs as before
```

Participant

Represents a participant in a ConversationParticipant. An existing or new Participant is referenced each time a new ConversationParticipant is created. This object is available in API version 57.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
`ParticipantAppType`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The type of app used by the participant, such as messaging, chatbot, live_message, agent.
`ParticipantRole`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The role of this participant in the conversation, such as System, Agent, Chatbot, EndUser, Supervisor, or Router.
`ParticipantSubject`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The subject of this participant in the conversation.

Partner

Represents a partner relationship between two Account records or between an Opportunity record and an Account record.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
AccountFromId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** Required if `OpportunityId` is null. ID of the main account in a partner relationship between two accounts. Specifying this field when creating a Partner record creates two AccountPartner records, one for each direction of the relationship. If you specify the `OpportunityId` field, you can't specify this field as well. This is a relationship field. **Relationship Name** AccountFrom **Relationship Type** Lookup **Refers To** Account
AccountToId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the Partner Account related to either an opportunity or an account. You must specify this field when creating an Opportunity Partner or an Account Partner record. This is a relationship field. **Relationship Name** AccountTo **Relationship Type** Lookup **Refers To** Account
IsPrimary	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Valid for Opportunity Partners only.

Field	Details
	Indicates that the account is the primary partner for the opportunity. Only one account can be marked as primary for an opportunity. If you set this field to 1 (`true`) upon insert of a new opportunity partner, this field is automatically set to 0 (`false`) for any other primary partners for that opportunity. Label is **Primary**.
`OpportunityId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** Required if `AccountFromId` is null. ID of the opportunity in a partner relationship between an account and an opportunity. Specifying this field when creating a record creates an OpportunityPartner record. If you specify the `AccountFromId` field, you can't also specify this field. This is a relationship field. **Relationship Name** Opportunity **Relationship Type** Lookup **Refers To** Opportunity
`ReversePartnerId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the account in a partner relationship.
`Role`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort **Description** UserRole that the account has toward the related opportunity or account, such as consultant or distributor.

Roles

In the Salesforce user interface, system administrators can set up the valid role values and their corresponding reverse role values in the PartnerRole object. Each account in the relationship is assigned a `Role` (such as `Consultant` or `Distributor`) designating that account's role toward the related account or opportunity.

Creating an Account-Opportunity Partner Relationship

When you create a partner relationship between an account and an opportunity (when you create a Partner record and specify the `OpportunityId` field), the API automatically creates an OpportunityPartner record with the corresponding values:

- The value of the Partner field `AccountToId` maps to the value of the OpportunityPartner field `AccountToId`.
- The values of the `OpportunityId`, `Role`, and `IsPrimary` fields in both records are the same.
- If you set the `IsPrimary` value to 1 (`true`) upon insert of a new OpportunityPartner, the `IsPrimary` value is automatically set to 0 (`false`) for any existing primary partners for that opportunity.

This mapping allows the API to manage the records and their relationships efficiently.

Creating an Account-Account Partner Relationship

When you create a partner relationship between two accounts (when you create a Partner record and specify the `AccountFromId`), the API automatically creates two AccountPartner records, one for the forward relationship and one for the reverse. For example, if you create a Partner relationship with "Acme, Inc." as the `AccountFromId` and "Acme Consulting" as the `AccountToId`, the API automatically creates two AccountPartner records:

- The forward relationship AccountPartner with "Acme, Inc." as the `AccountFromId` and "Acme Consulting" as the `AccountToId`.
- The reverse relationship AccountPartner with "Acme Consulting" as the `AccountFromId` and "Acme, Inc." as the `AccountToId`.
- The value of the `Role` field in the reverse relationship AccountPartner is set to the PartnerRole record `ReverseRole` value associated with the value of the `Role` field in the forward relationship AccountPartner.

This mapping allows the API to manage the records and their relationships efficiently.

PartnerRole

PartnerFundAllocation

Represents allocated funds from a partner marketing budget for channel partners. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field Name	Details
Amount	**Type** currency **Properties** Create, Filter, Sort, Update **Description** Total amount of the allocation.
BudgetId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the partner marketing budget.
ChannelPartnerId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the channel partner.
Description	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the allocation.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort

Field Name	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, it’s possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of the allocation.
`Title`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The title of the allocation.
`TotalApprovedFcs`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of approved fund claims.
`TotalApprovedFrs`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of approved fund requests.
`TotalReimbursedFcs`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of reimbursed fund claims.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

PartnerFundAllocationFeed
Feed tracking is available for the object.

PartnerFundAllocationHistory
History is available for tracked fields of the object.

PartnerFundAllocationOwnerSharingRule
Sharing rules are available for the object.

PartnerFundAllocationShare
Sharing is available for the object.

PartnerFundClaim

Represents a claim of funds from the partner marketing budget by a channel partner. This object is available in API version 41.0 and later.

Supported Calls

`create()` `delete()` `describeLayout()` `describeSObjects()` `getDeleted()` `getUpdated()` `query()` `retrieve()` `search()` `update()`, `upsert()`

Fields

Field Name	Details
`AllocationId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the partner fund allocation.
`Amount`	**Type** currency **Properties** Create, Filter, Sort, Update **Description** Amount of the claim.
`BudgetId`	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description ID of the partner marketing budget.
ChannelPartnerId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the channel partner.
Description	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the fund claim.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of the fund claim.

Field Name	Details
RequestId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the partner fund request.
Status	**Type** picklist **Properties** Create, Filter, Group, Nillable Restricted picklist, Sort, Update **Description** Status of the fund claim. Values are: • Draft • Approved • Rejected • Paid
Title	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Title of the fund claim.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

PartnerFundClaimFeed
Feed tracking is available for the object.

PartnerFundClaimHistory
History is available for tracked fields of the object.

PartnerFundClaimOwnerSharingRule
Sharing rules are available for the object.

PartnerFundClaimShare
Sharing is available for the object.

PartnerFundRequest

Represents a request for funds from the partner marketing budget by a channel partner. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()` `describeLayout()` `describeSObjects()` `getDeleted()` `getUpdated()` `query()` `retrieve()` `search()` `update()`, `upsert()`

Fields

Field Name	Details
`Activity`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Activity that is covered by the funds, for example, a trade show or seminar.
`AllocationId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the partner fund allocation.
`Amount`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** Approved amount of request.
`BudgetId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the partner marketing budget.

Field Name	Details
ChannelPartnerId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the channel partner.
Description	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the fund request.
DesiredOutcome	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Desired outcome if requested funds are used.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it’s possible that the user only accessed this record or list view (LastReferencedDate), but not viewed it.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description ID of the owner of the fund request.
`RequestedAmount`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** Amount of the fund request.
`Status`	**Type** picklist **Properties** Create, Filter, Nillable, Group, Restricted picklist, Sort, Update **Description** Status of the fund request. Values are: • `Draft` • `Approved` • `Rejected`
`Title`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Title of the fund request.
`TotalApprovedFcs`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of approved fund claims.
`TotalReimbursedFcs`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of reimbursed fund claims.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

PartnerFundRequestFeed
    Feed tracking is available for the object.

PartnerFundRequestHistory
    History is available for tracked fields of the object.

PartnerFundRequestOwnerSharingRule
    Sharing rules are available for the object.

PartnerFundRequestShare
    Sharing is available for the object.

PartnerMarketingBudget

Represents a budget that provides funds to channel partners for selling and marketing products and services. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field Name	Details
`Amount`	**Type** currency **Properties** Create, Filter, Sort, Update **Description** Total amount of the budget.
`ChannelPartnerId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the channel partner. This field is available in API version 45.0 and later.
`Description`	**Type** textarea

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Description of the budget.
`EndDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Date when the budget is no longer available.
`IsIgnoreValidation`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** When enabled, ignores restrictions related to the child objects connected to the budget. Note that individual totals for allocation amounts, request amounts, and claims amounts cannot exceed the total of their parent budget. Field is default off (false) on create. Once enabled (true), this field cannot be disabled. This field is available in API version 44.0 and later.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it’s possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.
`OwnerId`	**Type** reference

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of the budget.
StartDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Date when the budget becomes available.
Title	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Title of the budget.
TotalAllocatedAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total funds allocated to channel partners or as a fund pool.
TotalApprovedFcs	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of approved fund claims.
TotalApprovedFrs	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of approved fund requests.
TotalReimbursedFcs	**Type** currency

Field Name	Details
	Properties Filter, Nillable, Sort **Description** Total amount of reimbursed fund claims.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Type of budget. Values are: • `Co-Operated Budget`—Funds accrue based on a percentage of partner sales. The funds are available based on previous activity. • `Marketing Funds`—Funds are issued to partners in advance of sales. The funds are awarded based on predicted or expected behavior.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

PartnerMarketingBudgetFeed
Feed tracking is available for the object.

PartnerMarketingBudgetHistory
History is available for tracked fields of the object.

PartnerMarketingBudgetOwnerSharingRule
Sharing rules are available for the object.

PartnerMarketingBudgetShare
Sharing is available for the object.

PartnerNetworkConnection

Represents a Salesforce to Salesforce connection between Salesforce organizations.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Winter '21 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
`AccountId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the Account associated with this connection.
`ConnectionName`	**Type** string **Properties** Filter, idLookup, Sort **Description** A descriptive name for the connection. Limit: 295 characters.
`ConnectionStatus`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The status of the Salesforce to Salesforce connection. The picklist includes the following values: • `Sent` • `Received` • `Pending` • `Accepted` • `Rejected` • `Inactive` • `Disconnecting` • `ConnectionSuspended` • `SubscribeInProgress` • `UsersInitialSync` • `BulkSyncMetadata`
`ConnectionType`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description The type of Salesforce to Salesforce connection. The picklist includes the following values: • `Standard` • `Replication` This field is available in API version 30.0 and later.
`ContactId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the Contact associated with this connection.
`IsSyncAuditFields`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Specifies whether audit fields are synced between the primary and secondary organization in a replication connection. This field is available in API version 32.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled.
`IsSyncMetadata`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Specifies whether supported types of metadata are synced from the primary to the secondary organization in a replication connection. This field is available in API version 33.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled.
`IsSyncUsers`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Specifies whether users with standard Salesforce user licenses are synced between the primary and secondary organization in a replication connection. This field is

Field	Details
	available in API version 35.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled.
PrimaryContactId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the User associated with this connection.
ReplicationRole	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The role of this Salesforce organization in the replication connection. The picklist includes the following values: • Primary • Secondary This field is available in API version 30.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled.
ResponseDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the connection was accepted or rejected.

Usage

Represents Salesforce to Salesforce standard and replication connections. This object is referenced by all objects that have been shared with other organizations, enabling you to determine which connections shared a record with you. If the organization does not have Salesforce to Salesforce enabled, the PartnerNetworkConnection object is not available, and you can't access it via the API.

SEE ALSO:

PartnerNetworkRecordConnection

PartnerNetworkRecordConnection

Represents a record shared between Salesforce organizations using Salesforce to Salesforce.

Supported Calls

`create()`, `query()`

Special Access Rules

As of Winter '21 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
ConnectionId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** Required. ID of the connection a record is shared with.
EndDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date that sharing of the record was stopped.
LocalRecordId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the shared record.
ParentRecordId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the parent record of the shared record.
PartnerRecordId	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description ID of the shared record in the connection's organization.
RelatedRecords	**Type** string **Properties** Create, Filter, Nillable, Sort **Description** A comma-separated list of API names for child records to be shared with a parent record.
SendClosedTasks	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Forwards closed tasks related to the shared record.
SendEmails	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Sends an email notifying the connection's representative that you have forwarded the record to them. Only new recipients of a record will receive a notification email.
SendOpenTasks	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Forwards open tasks related to the shared record.
StartDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date that the shared record was accepted.
Status	**Type** picklist

Field	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort **Description** The status of the shared record. One of the following values: • `Active (received)` • `Active (sent)` • `Connected` • `Inactive` • `Inactive (converted)` • `Inactive (deleted)` • `Pending (sent)`

Usage

When you create a PartnerNetworkRecordConnection, you forward a record to a connection.

> **Note:** Attempting to forward a record from an object to which the connection is not subscribed results in an `Invalid Partner Network Status` error.

When you delete a PartnerNetworkRecordConnection, you stop sharing a record with a connection.

- To share a record, use the following fields: `LocalRecordID` and `ConnectionId`
- To share a child of a parent record, use the following fields: `LocalRecordID`, `ConnectionId`, and `ParentRecordID`
- To share a child of a parent record and its child records, use the following fields: `LocalRecordID`, `ConnectionId`, `ParentRecordID`, and `RelatedRecords`

If the organization does not have Salesforce to Salesforce enabled, the PartnerNetworkRecordConnection object is not available, and you can't access it using the API.

SEE ALSO:

PartnerNetworkConnection

PartnerNetworkSyncLog

Represents the Org Sync Log tab in Salesforce, where Salesforce administrators can track the replication of record inserts and updates being performed in Organization Sync. The Connection Detail page for the replication connection also displays the Org Sync Log's twenty most recent entries, and provides a link to the log.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Special Access Rules

The Org Sync Log tab can only be added in organizations where Organization Sync has been enabled. To add the tab to the Salesforce user interface, users must also have the “Manage Connections” user permission.

Fields

Field Name	Details
`ConnectionEvent`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The action being replicated to the partner organization, such as a record insertion.
`ConnectionId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the Salesforce to Salesforce replication connection in which the replication event succeeded or failed.
`Description`	**Type** textarea **Properties** Nillable **Description** A description of the replication event.
`EntityType`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The type of record being inserted or updated.
`Error`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The code used to describe the replication failure or success.

Field Name	Details
LocalRecord	**Type** string **Properties** Filter, Group, Sort **Description** The record being inserted or updated.
Status	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** An item is added to the Organization Sync Log if it failed to be replicated to the linked organization. This picklist includes the following values: • `Failed`: The replication continued to fail after multiple retries, and won't be retried further. • `Resolved`: The replication succeeded after retrying. • `Retrying`: Salesforce is retrying the replication. This field is available in API version 35.0 and later.

PartnerRole

Represents a role for an account Partner, such as consultant, supplier, and so on.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
ApiName	**Type** string **Properties** Filter, Group, idLookup, Sort

Field	Details
	Description Uniquely identifies a picklist value so it can be retrieved without using an id or master label.
`MasterLabel`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Master label for this partner role value. This display value is the internal label that does not get translated. Limit: 255 characters.
`ReverseRole`	**Type** picklist **Properties** Filter, Group, Nillable, Sort **Description** Name of the reverse role that corresponds to this partner role. For example, if the role is “subcontractor,” then the reverse role might be “general contractor.” In the user interface, assigning a partner role to an account creates a reverse partner relationship so that both accounts list the other as a partner.
`SortOrder`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Number used to sort this value in the partner role picklist. These numbers are not guaranteed to be sequential, as some previous partner role values might have been deleted.

Usage

This object represents a value in the partner role picklist. In the user interface, the partner role picklist provides additional information about the role of a Partner, such as their corresponding reverse role. Query this object to retrieve the set of values in the partner role picklist, and then use that information while processing PartnerRole records to determine more information about a given partner role. For example, the application could determine the reverse role of a given Partner `Role` value and the value of the `ReverseRole` property in the associated PartnerRole object.

Overview of Salesforce Objects and Fields

PartyConsent

Represents consent preferences for an individual. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`Action`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The action that the Individual is consenting to. Possible values are: • `CrossDevice` • `DataCollection` • `Reidentification` • `Segment` • `ShareData` • `Target`
`CaptureContactPointType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Required. Indicates how you captured consent. Possible values are: • `Email` • `MailingAddress` • `Phone` • `Social` • `Web`
`CaptureDate`	**Type** dateTime

Field	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** Required. Date when consent was captured.
`CaptureSource`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Required. Indicates how you captured consent. For example, a website or online form.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the party consent record.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the account owner associated with this customer. This is a polymorphic relationship field.

Field	Details
	Relationship Name Owner **Relationship Type** Lookup **Refers To** Group, User
`PartyId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Required. Represents the record based on the Individual object you want to associate consent with. This is a relationship field. **Relationship Name** Party **Relationship Type** Lookup **Refers To** Individual
`PrivacyConsentStatus`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. Identifies whether the individual associated with this record agrees to this form of contact. Possible values are: • `NotSeen` • `OptIn` • `OptInPending`—Available in API version 58.0 and later. • `OptOut` • `OptOutPending`—Available in API version 58.0 and later. • `Seen`

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PartyConsentChangeEvent
: Change events are available for the object.

PartyConsentFeed
: Feed tracking is available for the object.

PartyConsentHistory
: History is available for tracked fields of the object.

PartyConsentOwnerSharingRule
: Sharing rules are available for the object.

PartyConsentShare
: Sharing is available for the object.

Payment

Represents a single event when a shopper makes a payment. For credit cards, this event is a payment capture or payment sale, but it doesn't appear on the shopper's credit card statement. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Note: You can edit or delete a payment only in draft state, which you specify with the **Status** field.

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
`AccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The account of the customer who made the payment. This field is a relationship field.

Field	Details
	Relationship Name Account **Relationship Type** Lookup **Refers To** Account
`Amount`	**Type** currency **Properties** Create, Filter, Sort, Update **Description** The amount to be debited or captured.
`Balance`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The total amount – the net applied amount.
`CancellationDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date that the payment was voided.
`CancellationEffectiveDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date when the cancellation of this payment takes effect.
`CancellationGatewayDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The gateway provides this date following a successful cancellation request.

Field	Details
CancellationGatewayRefNumber	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** System-provided unique transaction ID from the payment gateway.
CancellationGatewayResultCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Gateway-specific result code. Must be mapped to a Salesforce-specific result code.
CancellationSfResultCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A Salesforce result code that can be mapped to one or more gateway result codes. We recommend that the payment gateway adapter layer maps gateway-specific codes to the Salesforce result code.
ClientContext	**Type** textarea **Properties** Nillable **Description** Contains caller context for payment APIs. Useful for re-establishing context during an asynchronous payment transaction.
Comments	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Users can provide additional details about the payment record. Supports a maximum of 1000 characters.
CurrencyIsoCode	**Type** picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Three-letter ISO 4217 currency code associated with the payment group record.
`Date`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date when this payment record was created.
`EffectiveDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date that this payment takes effect.
`Email`	**Type** email **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Email address of the user who initiated the payment.
`GatewayDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The gateway provides this date for reference following a successful gateway communication.
`GatewayRefDetails`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Additional data that can't be stored in other fields on the payment record. You can use this field for transactions following the initial transaction that creates the payment record. You can use any data that isn't normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.

Field	Details
GatewayRefNumber	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Unique transaction ID created by the payment gateway.
GatewayResultCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Gateway-specific result code that must map to a Salesforce-specific result code. One Salesforce result code can map to multiple gateway result codes.
GatewayResultCodeDescription	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the gateway's result code.
ImpactAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Shows the payment's financial impact against the customer's accounts receivable. If the payment is valid, this value is the negative of the payment amount. If the payment is voided, this value is 0.
IpAddress	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The IP address of the user who initiated the payment.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record is possibly referenced (LastReferencedDate) but not viewed.
`MacAddress`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The MAC address of the person who initiated the payment.
`NetApplied`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total payment amount of that has been applied, including adjustments.
`NetRefundApplied`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total refund amount that has been applied to the payment, including adjustments.
`OrderPaymentSummaryId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Order payment summaries show the balances of each authorization, capture, and refund made against an order.
`PaymentAuthorizationId`	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The authorization record for this payment. If there's a delayed capture (when the capture occurs after the authorization), all captures must be made against a previously successful authorization transaction. This field is a relationship field. **Relationship Name** PaymentAuthorization **Relationship Type** Lookup **Refers To** PaymentAuthorization
PaymentGatewayId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the payment gateway that processed the payment. If there’s a delayed payment, the field is populated from the authorization record. This field is a relationship field. **Relationship Name** PaymentGateway **Relationship Type** Lookup **Refers To** PaymentGateway
PaymentGroupId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Payment groups organize all the payment transactions that have been made against a record such as an account or contract. If there’s a delayed payment, the field is populated from the authorization record. This field is a relationship field. **Relationship Name** PaymentGroup

Field	Details
	Relationship Type Lookup **Refers To** PaymentGroup
`PaymentIntentGuid`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort **Description** Unique ID of the payment sent to Stripe or PayPal. Links the Payments Merchant Account record with the payment at the payment provider.
`PaymentIntentID`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the payment intent record. This field is a relationship field. **Relationship Name** PaymentIntent **Relationship Type** Lookup **Refers To** PaymentIntent
`PaymentMethodId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The payment method that the customer used to provide this payment information. This field is a relationship field. **Relationship Name** PaymentMethod **Relationship Type** Lookup **Refers To** PaymentMethod

Field	Details
PaymentNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** System-created unique ID for this payment record.
Phone	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Phone number of the customer who initiated the payment.
ProcessingMode	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Defines whether the payment has been made outside of the payment platform. Possible values are: • `External`: Transactions happened outside of the Salesforce payments platform. • `Salesforce`: Salesforce made and recorded an external call to the payment gateway.
SfResultCode	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code. Possible values are: • `Decline`: The gateway call failed, but if the problem is fixed and the transaction is retried, it can work. For example, the customer had insufficient funds or briefly lost their connection. • `Indeterminate`: The gateway didn’t respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway. • `PermanentFail`: The gateway call failed. If tried again, it still doesn't work. Gateway calls fail permanently for one of two reasons: – Hard Decline: The customer’s payment account has been closed or terminated.

Field	Details
	– Fraud: The gateway recognized the payment or payment method as known fraud. • `RequiresReview`: The customer bank requires more information before completing the payment. • `Success`: The gateway call succeeded. • `SystemError`: Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes. • `ValidationError`: Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV.
`Status`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Defines the state of this payment. Possible values are: • `Canceled`: This payment has been unapplied from its target and can no longer be allocated. • `Draft`: The payment can be edited before posting it and allocating it to a target. The payment can also be deleted. • `Processed`: This payment has been finalized and can be allocated against a target. Users can manually change the Status field's values as follows: • Draft to Processed • Processed to Canceled • Draft to Canceled
`TotalApplied`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The total amount of this payment's balance that has been applied against an invoice.
`TotalRefundApplied`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The total amount of a refund that has been applied against this payment.

Field	Details
`TotalRefundUnapplied`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The total amount of a previously applied refund that has since been unapplied from this payment.
`TotalUnapplied`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The total amount of this payment that was previously applied and then unapplied.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Defines how the customer used this payment. Possible values are: • `Capture` • `Sale`

OrderPaymentSummary

PaymentAuthAdjustment

Shows information about an adjustment made to an authorized transaction. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Note: You can only delete a payment in draft state, which you specify in the **Status** field.

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
AccountId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The account for the payment authorization adjustment. Inherited from the payment authorization. This is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
Amount	**Type** currency **Properties** Create, Filter, Sort, Update **Description** Amount of adjustment applied to the parent payment authorization.
Comments	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Users can add comments to provide additional details about a record. Maximum of 1000 characters.
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Three-letter ISO 4217 currency code associated with the payment authorization adjustment record.
`Date`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date that the adjustment occurred.
`EffectiveDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date that the adjustment takes effect on the authorization.
`Email`	**Type** email **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Email address of the parent payment authorization owner.
`GatewayDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time that the reversal transaction occurred in the payment gateway.
`GatewayRefDetails`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Additional data that can’t be stored in other fields on the payment record. You can use this field for transactions following the initial transaction that creates the payment record. You can use any data that isn’t normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.

Field	Details
GatewayRefNumber	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Unique transaction ID created by the payment gateway.
GatewayResultCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Gateway-specific result code. Must be mapped to a Salesforce-specific result code
GatewayResultCodeDescription	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the gateway’s result code. This field is useful for providing more information around why the gateway returned a certain result code.
IpAddress	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The IP address of the user who initiated the payment adjustment.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed.
`MacAddress`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The MAC address of the person who initiated the payment.
`PaymentAuthAdjustmentNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** System-provided unique ID for a payment authorization adjustment record.
`PaymentAuthorizationId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the payment authorization on which the adjustment occurred. This is a relationship field. **Relationship Name** PaymentAuthorization **Relationship Type** Lookup **Refers To** PaymentAuthorization
`PaymentIntentId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the payment intent record. This field is a relationship field. **Relationship Name** PaymentIntent

Field	Details
	Relationship Type Lookup **Refers To** PaymentIntent
`Phone`	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Phone number of the customer who initiated the authorization adjustment.
`ProcessingMode`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Defines whether the payment has been made outside of the payment platform. Possible values are: • `External`—Transactions happened outside of the Salesforce payments platform. • `Salesforce`—Salesforce made and recorded an external call to the payment gateway.

`SfResultCode`	**Type**
	picklist
	Properties
	Create, Filter, Group, Nillable, Restricted picklist, Sort, Update
	Description
	Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code.
	Possible values are:
	• `Decline`—The gateway call failed, but it might work if the transaction is attempted again. For example, the customer had insufficient funds or briefly lost their connection.
	• `Indeterminate`—The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway.
	• `PermanentFail`—The gateway call failed and won't work even if tried again. Gateway calls fail permanently for one of two reasons:
	  – Hard Decline: The customer's payment account has been closed or terminated.
	  – Fraud: The gateway recognized the payment or payment method as known fraud.

Field	Details
	• `RequiresReview`—The customer bank requires more information before completing the payment. • `Success`—The gateway call succeeded. • `SystemError`—Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes. • `ValidationError`—Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV.
`Status`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Defines the state of the payment authorization reversal. Possible values are: • `Canceled`—The payment authorization reversal has been canceled. The parent authorization has returned to its pre-reversal balance. • `Draft`: The payment authorization reversal can be edited before applying it against the parent authorization. • `Processed`—The payment authorization reversal has been finalized. Users can manually change the Status field's values as follows: • Draft to Processed • Processed to Canceled • Draft to Canceled
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Defines how the customer used the reversal. Possible values are: • `Capture` • `Reversal` • `Sale`

PaymentAuthorization

Represents a single payment authorization event where users can capture or reverse a payment against a reserve of funds. This object is available in API version 48.0 and later.

A common type of payment authorization occurs when a user sees a pending transaction against their credit card account.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Note: You can only delete a payment in draft state, which you specify in the **Status** field.

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
`AccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Customer account. This is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
`Amount`	**Type** currency **Properties** Create, Filter, Sort, Update **Description** The amount authorized for the payment event.

Field	Details
Balance	**Type** currency **Properties** Filter, Nillable, Sort **Description** Authorized amount – total processed captured amount – total processed authorization reversal amount. Balance can be positive or negative.
Comments	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Users can enter comments to provide additional details about the authorization.
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Three-letter ISO 4217 currency code associated with the payment authorization record.
Date	**Type** dateTime **Properties** Create, Defaulted on create, Filter, Nillable, Sort, Update **Description** By default, the day the authorization record was created. Users can also enter a different date. Editable only when the payment authorization's status is Draft.
EffectiveDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date on which the authorization takes effect. Editable only when the payment authorization's status is Draft.
Email	**Type** email **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Email address of the person who initiated the payment.
ExpirationDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Authorizations can't be captured after their expiration dates.
GatewayAuthCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Authorization approval code from the payment gateway.
GatewayDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time that of the gateway communication that leads to the successful payment authorization.
GatewayRefDetails	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Additional data that can't be stored in other fields on the payment record. You can use this field for transactions following the initial transaction that creates the payment record. You can use any data that isn't normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.
GatewayRefNumber	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Unique transaction ID from the payment gateway.

Field	Details
GatewayResultCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Gateway-specific result code. Must be mapped to a Salesforce-specific result code.
GatewayResultCodeDescription	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the gateway's result code. This field is useful for providing more information around why the gateway returned a certain result code.
IpAddress	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The IP address of the user who initiated the payment authorization.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
MacAddress	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The MAC address of the person who initiated the payment.
`OrderPaymentSummaryId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Order payment summaries show the balances of each authorization, capture, and refund made against an order.
`PaymentAuthorizationNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** System-provided unique ID for a payment authorization record.
`PaymentGatewayId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The Salesforce payment gateway record that created this authorization. This gateway will be used for subsequent captures. This is a relationship field. **Relationship Name** PaymentGateway **Relationship Type** Lookup **Refers To** PaymentGateway
`PaymentGroupId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Payment groups organize all the payment transactions that have been made against a record such as an account or contract. Populated from the authorization record if there is delayed payment.

Field	Details
	This is a relationship field. **Relationship Name** PaymentGroup **Relationship Type** Lookup **Refers To** PaymentGroup
PaymentIntentGuid	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort **Description** Unique ID of the payment sent to Stripe or PayPal. Links the Payments Merchant Account record with the payment at the payment provider.
PaymentMethodId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The customer payment method provided during this authorization. This is a relationship field. **Relationship Name** PaymentMethod **Relationship Type** Lookup **Refers To** PaymentMethod
Phone	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Phone number of the person who initiated the payment.
ProcessingMode	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description Defines whether the payment has been made outside of the payment platform. Possible values are: • `External`—Transactions happened outside of the Salesforce payments platform. • `Salesforce`—Salesforce made and recorded an external call to the payment gateway.
`SfResultCode`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code. Possible values are: • `Decline`—The gateway call failed, but it may still work if the transaction is attempted again. For example, the customer had insufficient funds or briefly lost their connection. • `Indeterminate`—The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway. • `PermanentFail`—The gateway call failed and won't work even if tried again. Gateway calls fail permanently for one of two reasons: – Hard Decline: The customer's payment account has been closed or terminated. – Fraud: The gateway recognized the payment or payment method as known fraud. • `RequiresReview`—The customer bank requires more information before completing the payment. • `Success`—The gateway call succeeded. • `SystemError`—Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes. • `ValidationError`—Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV.
`Status`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Defines the state of this payment. Possible values are:

Field	Details
	• `Canceled`—This payment has been unapplied from its target and can to longer be allocated. • `Draft`—The payment can be edited before posting it and allocating it to a target. • `Failed`—Authorization for the payment failed. • `Pending`— • `Processed`—This payment has been finalized and can be allocated against a target. Users can manually change the Status field's values as follows: • Draft to Processed • Processed to Canceled • Draft to Canceled
`TotalAuthReversalAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of all processed authorization reversals against the payment authorization. This is a calculated field.
`TotalPaymentCaptureAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of all authorization captures related to this payment authorization.

SEE ALSO:

OrderPaymentSummary

PaymentGateway

Platform object that represents the connection to an external payment gateway. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
`Comments`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Admin-provided details about a record. Maximum of 1000 characters.
`ExternalReference`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** Identifier of an external payment gateway. This field is unique within your organization.
`GatewayMode`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The operational mode of the payment gateway. This field determines the payment gateway's ability to accept payments. For production orgs, the gateway must be in Live mode. Possible values are: • `Connected`– Payment gateway is active but it can't accept payments. This option is only valid in production orgs. • `Live`– Payment gateway is active and can accept payments. This option is only valid in production orgs. • `Test` –Payment gateway is active but not able to accept payments. This option is only valid in sandbox orgs, and the account can accept only test transactions.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.

Field	Details
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it's possible this record is only referenced (LastReferencedDate) but not viewed.
MerchantAccountId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the merchant account used by the payment gateway. This merchant account links to a merchant account at a payment processor. This field is a relationship field. **Relationship Name** MerchantAccount **Relationship Type** Lookup **Refers To** MerchantAccount
MerchantCredentialId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the merchant credential setup entity to reference merchant information. This field is a relationship field. **Relationship Name** MerchantCredential **Relationship Type** Lookup **Refers To** NamedCredential
PaymentGatewayName	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description Admin-defined name for the payment gateway.
PaymentProcessor	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Name of payment gateway provider. Possible values are: • Paypal • Stripe
PaymentStatus	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Payment gateway is active and can accept payments. Possible values are: • Enabled • Disabled The default value is Disabled.
PayoutStatus	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Money can be moved from the payment provider account to the merchant bank account linked to it. Possible values are: • Enabled • Disabled The default value is Disabled.
PaymentGatewayProviderId	**Type** reference **Properties** Create, Filter, Group, Sort, Update

Field	Details
	Description ID of the payment gateway that handles transactions between the merchant account and the payment processor. This field is a relationship field. **Relationship Name** PaymentGatewayProvider **Relationship Type** Lookup **Refers To** PaymentGatewayProvider
`ProviderAccount`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Account ID assigned by the payment provider that identifies the linked Salesforce Payments account.
`Status`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Defines whether Salesforce Payments can use this payment gateway for calls to the external payment gateway. Inactive payment gateways can't be used. Possible values are: • `Active` - the merchant account can accept payments. • `Complete` – `PaymentStatus` and `DepositStatus` are enabled and the account provided all the required information. • `Enabled` – `PaymentStatus` and `PayoutStatus` are enabled, but the payment provider can require more information later. If the merchant doesn't provide the information then the account can become restricted. The time limit that the merchant has to provide the information is longer than the RestrictedSoon state. • `Pending`–The merchant account exists but it can't accept payments. This option maintains backward compatibility for accounts that were created with API version 55.0 and earlier. Pending is no longer in use for API version 57.0 and higher. • `Rejected` – The payment provider has rejected the merchant account with an explanation. • `Restricted` – merchant account functionality is limited. This state is only applicable if `PaymentStatus`, `PayoutStatus`, or both are disabled.

Field	Details
	• `RestrictedSoon` – `PaymentStatus` and `PayoutStatus` are enabled, but the payment provider requires more information. If the merchant doesn't provide the information in a specific time period, then the merchant account becomes restricted.

PaymentGatewayLog

Stores information exchanged between the Salesforce payments platform and external payment gateways. Gateway logs can also record payloads from external payment entities. This object is available in API version 48.0 and later.

Deleting or archiving a payment gateway log doesn't impact financial data on other payment entities.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
`GatewayAuthCode`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Authorization approval code from the gateway.
`GatewayAVSCode`	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Code sent by gateways that use an address verification system.
`GatewayDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time that of the gateway communication that leads to the creation of this gateway log.
`GatewayMessage`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Information or error messages sent from the gateway.
`GatewayRefNumber`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Unique transaction ID created by the payment gateway.
`GatewayResultCode`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Gateway-specific result code. Must be mapped to a Salesforce-specific result code.
`GatewayResultCodeDescription`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the gateway's result code. This field is useful for providing more information around why the gateway returned a certain result code.

Field	Details
`InteractionStatus`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Describes the result of communication between the payments platform and a payment gateway. Possible values are: • `Failed` • `Initiated` • `NoOp` • `Success` • `Timeout`
`InteractionType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Describes the type of interaction with the gateway. This field is required for logs created in Salesforce. Possible values are: • `Authorization` • `AuthorizationReversal` • `Avs` • `Capture` • `CheckGiftCardBalance` • `PostAuth` • `ReferencedRefund` • `Sale` • `Tokenize` • `Void`
`IsNotification`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** For asynchronous transactions, shows whether the gateway log belongs to the notification (`yes`) or the initial transaction (`no`).

Field	Details
	Possible values are: • No • Yes
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
OrderPaymentSummaryId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Order payment summaries show the balances of each authorization, capture, and refund made against an order.
PaymentGatewayId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The Payments Platform payment gateway record used for communication with the external payment gateway. This field is a relationship field. **Relationship Name** PaymentGateway **Relationship Type** Lookup **Refers To** PaymentGateway

Field	Details
PaymentGatewayLogNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** System-generated unique ID for this payment gateway log record.
ReferencedEntityId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Foreign key with DomainSet of PaymentAuth and Payment. This field is a polymorphic relationship field. **Relationship Name** ReferencedEntity **Relationship Type** Lookup **Refers To** CardPaymentMethod, Payment, PaymentAuthAdjustment, PaymentAuthorization, Refund
Request	**Type** textarea **Properties** Create, Nillable, Update **Description** Raw payload. No sensitive attributes are stored.
Response	**Type** textarea **Properties** Create, Nillable, Update **Description** Raw payload.
SfRefNumber	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** If an IdempotencyKey was passed in the API request, its value is stored here in text format.

Field	Details
SfResultCode	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code. Possible values are: • `Decline`: The gateway call failed. If the transaction is attempted again, it can still work. For example, the customer has insufficient funds or briefly lost their connection. • `Indeterminate`: The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway. • `PermanentFail`: The gateway call failed and can't work. Gateway calls fail permanently for one of two reasons: – Hard Decline: The customer's payment account has been closed or terminated. – Fraud: The gateway recognized the payment or payment method as known fraud. • `RequiresReview`: The customer bank requires more information before completing the payment. • `Success`: The gateway call succeeded. • `SystemError`: Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes. • `ValidationError`: Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV.

PaymentGatewayProvider

Setup entity for payment gateways. Defines the connection to a payment gateway Apex adapter. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
ApexAdapterId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of an APEX adapter class. The adapter interacts with your payment gateway to complete transactions. This field is unique within your organization. This field is a relationship field. **Relationship Name** ApexAdapter **Relationship Type** Lookup **Refers To** ApexClass
Comments	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Additional details about a record. Maximum of 1000 characters.
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** (Optional) An internal name you assign the adapter. For reference only. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
IdempotencySupported	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** If the same payment request is made in rapid succession, this field defines whether the Payments platform charges the customer or merchant's card multiple times for the same transaction. This situation can occur when a user clicks a Pay button twice, or the gateway's

Field	Details
	server goes down after fulfilling a payment request and the client immediately tries making another payment. If this field has a value of Yes, the Payments platform ignores identical payment requests made immediately after an original request. Different payment gateways have varying levels of idempotency support. When configuring a new payment gateway integration, plan accordingly. Possible values are: • `No` • `Yes`
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Customer language used for the payment gateway.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** User-friendly name of the payment gateway provider.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Namespace for the payment gateway platform.

PaymentGroup

Top-level object that groups all payment transactions that are processed for an order or invoice. PaymentGroup is a standalone object, so it isn't required for users to execute payment transactions (authorizations, captures, refunds, and sales). This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated. Commerce Payments entities are available only in Lightning Experience.

Fields

Field	Details
`PaymentGroupNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** System-defined unique ID for the payment group.
`SourceObjectId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The order or invoice related to all the payment transactions in the payment group. This is a relationship field. **Relationship Name** SourceObject **Relationship Type** Lookup **Refers To** Order

PaymentIntent

Represents data temporarily stored during a transaction's lifecycle that can identify the buyer, the merchant, and the amount the buyer is sending to the merchant. Data such as timestamp and amount returned can also be stored in PaymentIntent. This object is available in API version 58.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license with the Payments permission enabled for your org. Salesforce Payments entities are available only in Lightning Experience.

Fields

Field	Details
`AccountId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Displays the account record of the buyer. This field is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
`AmountCapturable`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Payment amount that a merchant can collect after the fulfillment of an order.
`AmountRefundable`	**Type** currency

Field	Details
	Properties Filter, Nillable, Sort **Description** Payment amount that a merchant can refund.
AuthorizationReversalAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Amount canceled before completing the transfer of funds from buyer to merchant.
AuthorizedAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Amount authorized by the payer's bank.
CapturedAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount that a merchant secured from a buyer.
CurrencyIsoCode	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** ISO code for any currency allowed by the organization. Available only for orgs with the multicurrency feature enabled. Possible values are: • Euro • USD The default is USD.
Guid	**Type** string

Field	Details
	Properties Filter, Group, idLookup, Nillable, Sort **Description** Unique ID of the payment sent to Stripe or PayPal. This ID links the Payments Merchant Account record with the payment at the payment provider.
`IntentAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount that a merchant expects to receive from a buyer.
`IsCaptureComplete`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates that the funds for a given payment are paid. The default value is `false`.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it’s possible that this record was referenced but not viewed.
`MerchantAccountId`	**Type** reference **Properties** Filter, Group, Sort

Field	Details
	Description Required field that represents the association of the merchant account record with a payment intent record. This field is a relationship field. **Relationship Name** MerchantAccount **Relationship Type** Lookup **Refers To** MerchantAccount
`PaymentGatewayId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the payment gateway that processed the payment. **Relationship Name** PaymentGateway **Relationship Type** Lookup **Refers To** PaymentGateway
`PaymentIntentNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Autogenerated number assigned to the payment record, for example `PI-000000001`.
`PaymentLinkGmvDate`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Date the payment is captured from a payment link transaction. The total amount paid is expressed as the Gross Merchandise Value (GMV).
`PaymentLinkId`	**Type** reference

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** Auto-assigned number identifying the payment link. This field is a relationship field. **Relationship Name** PaymentLink **Relationship Type** Lookup **Refers To** PaymentLink
`PaymentMethodDetails`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Additional information about the payment method type such as the four last digits of a card number.
`PaymentMethodId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Refers to the record for the payment method implementation: card payment method, digital wallet, or alternative payment method. This field is a polymorphic relationship field. **Relationship Name** PaymentMethod **Relationship Type** Lookup **Refers To** PaymentMethod
`PaymentMethodSubType`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description A payment method that exists as a subtype of a payment method type. For example, Visa, Mastercard, and American Express exist as subtypes of payment method types such as Apple Pay and Google Pay.
`PaymentMethodType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Payment method used for the transaction. Possible values are: • `ACH` • `AfterpayClearpay` • `AmericanExpress` • `ApplePay` • `BACS` • `BECS` • `BanContact` • `DinersClub` • `Discover` • `EPS` • `GooglePay` • `Jcb` • `Klarna` • `Maestro` • `MasterCard` • `Other` • `PayPal` • `SepaDebit` • `UnionPay` • `Venmo` • `Visa` • `iDeal`
`ProviderReference`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description Identifies a payment record by the payment provider at the payment gateway.
`RefundedAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total or partial amount refunded to the buyer due to product return, merchant's lack of inventory, or shipping and delivering problems.
`Status`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Status of the payment record. Possible values are: • `Authorized` • `Canceled` • `Created` • `Expired` • `Failed` • `PartiallyCaptured` • `PartiallyRefunded` • `Pending` • `Refunded` • `Succeeded`

PaymentIntentEvent

Represents a payment intent platform event. Subscribe to these events so you can listen and respond to them when they're published. For example, create a Salesforce Flow that is triggered when one of these events is published. This object is available in API version 59.0 and later.

For more information about platform events, see the Platform Events Developer Guide.

Supported Calls

`describeSObjects()`

Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license and Payments must be enabled for your org. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
`ChangeType`	**Type** picklist **Properties** Restricted picklist **Description** Type of payment intent event that triggers an event notification. You can write code to operate conditionally on the value of this field. For example, you can ignore an authorization but get notified of captures. Possible values are: • `Authorize`—Payment is authorized. • `AuthorizeFailure`—There's an error preventing the payment authorization • `Capture`—Payment is captured. • `CaptureFailure`— An error prevented the payment capture. • `Refund`—Payment is refunded. • `RefundFailure`—An error prevented the payment refund.
`PaymentIntentId`	**Type** reference **Properties** Nillable **Description** Identifies the PaymentIntent record for which the event occurs. This field is a relationship field. **Relationship Name** PaymentIntent **Relationship Type** Lookup **Refers To** PaymentIntent

PaymentLineInvoice

Represents a payment allocated to or unallocated from an invoice. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated. Commerce Payments entities are available only in Lightning Experience.

Fields

Field	Details
`Amount`	**Type** currency **Properties** Create, Filter, Sort **Description** Total amount applied or unapplied by this payment line.
`AppliedDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort **Description** The date that this line was applied to an invoice or payment. If this field is null, it inherits the value of the payment line invoice's Date field.
`AssociatedAccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The account for this payment line's target invoice. This is a relationship field. **Relationship Name** AssociatedAccount

Field	Details
	Relationship Type Lookup **Refers To** Account
AssociatedPaymentLineId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The paymentLine that was unapplied. Populated only when PaymentLineInvoice's Type field has a value of Unapplied. This is a relationship field. **Relationship Name** AssociatedPaymentLine **Relationship Type** Lookup **Refers To** PaymentLineInvoice
Comments	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Users can add comments to provide additional details about a record. Maximum of 1000 characters.
Date	**Type** dateTime **Properties** Create, Filter, Nillable, Sort **Description** The date and time that this payment line was created.
EffectiveDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort

Field	Details
	Description Defines the date and time when the payment line application or unapplication becomes effective.
`EffectiveImpactAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Shows how this payment invoice line impacts a customer's accounts receivable. This value is positive when PaymentLineInvoice's Type field is Applied, and negative when PaymentLineInvoice's Type is Unapplied. If there's an unapplied line related to this record, EffectiveImpactAmount has a value of 0. Note: EffectiveImpactAmount evaluates only the applied and unapplied line pair. Therefore, the effective impact amount could be different for different lines within the same payment.
`HasBeenUnapplied`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Defines whether this payment line has been unapplied from the target invoice. Has a value of NA when PaymentInvoiceLine's Type field has a value of Unapplied. Can be No or Yes if Type has a value of Applied. Possible values are: • `NA` • `No` • `Yes`
`ImpactAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Shows the payment's financial impact against the customer's accounts receivable. If PaymentLineInvoice has a Type of Applied, the ImpactAmount is the negative equivalent of the line's Amount field. Otherwise, ImpactAmount equals Amount.
`InvoiceId`	**Type** reference

Field	Details
	Properties Create, Filter, Group, Sort **Description** Target invoice for this payment line. This is a relationship field. **Relationship Name** Invoice **Relationship Type** Lookup **Refers To** Invoice
PaymentBalance	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total balance of this line's parent payment record following the application or unapplication of this payment line.
PaymentId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Parent payment for this payment line. This is a relationship field. **Relationship Name** Payment **Relationship Type** Lookup **Refers To** Payment
PaymentLineInvoiceNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** System-defined unique ID for this payment line.

Field	Details
Type	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Defines whether this payment line has been applied or unapplied to the target invoice. Possible values are: • Applied • Unapplied
UnappliedDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort **Description** The date that this payment line was unapplied from the target invoice. Populated only when the Type field equals Unapplied. Inherits the value of the Date field.

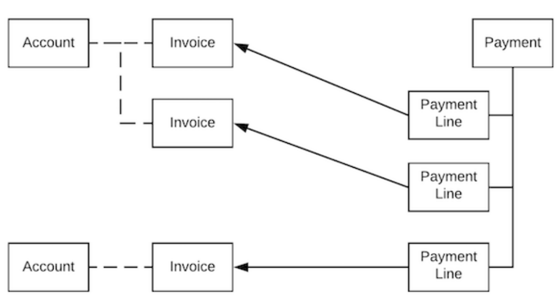
Usage

Use a payment line to apply all or part of a payment's balance to an invoice. The PaymentLineInvoice object represents the balance taken from the payment and applied toward the invoice. You can apply a payment's balance when you create the payment record or afterward. The payment line must have the same currency as the parent payment.

A payment line has an amount, which represents the total amount taken from the payment, and balance, which represents the remaining amount after the payment line has been applied to an invoice. A payment's amount can't be less than the sum of all of its payment line amounts.

One payment can have multiple payment lines. A payment line must be related to only payment.

You can create multiple payment lines on a payment apply each line to different invoices on the same account, or to invoices on different accounts.



Here's one way you could use Salesforce API to apply a payment to an invoice using a payment line.

PaymentLink

A payment link that a merchant can embed into a Salesforce app. The link directs payers to a Pay Now page that shows what's being paid for, in the payers currency, and lets payers enter their payment data. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Commerce PaymentLink, your org must have a Salesforce Payments license.

Fields

Field	Details
`AccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Payer account. This field is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
`Amount`	**Type** currency **Properties** Create, Filter, Sort, Update **Description** Amount the payer is paying for.
`CartId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description The ID of the cart record. **Relationship Name** Cart **Relationship Type** Lookup **Refers To** Webcart
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** 3-digit ISO code for the payment currency that is shown on the Pay Now page. Possible values are: • EUR – Euro • GBP – British Pound • USD – US Dollar The default value is `USD`.
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description on the Pay Now page explaining what is being paid.
`Expiry Time`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time that the payment link expires. The time is based on the user's time zone, not the org's time zone.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only be referenced and not viewed directly.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user who owns this record. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
PaymentLinkNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Auto-generated number that identifies the payment link.
PaymentMethodSetId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Reference to the PaymentMethodSet object, which determines what payment methods are shown to the payer. This field is a relationship field. **Relationship Name** PaymentMethodSet

Field	Details
	Relationship Type Lookup **Refers To** MerchAccPaymentMethodSet
PaymentUrl	**Type** url **Properties** Filter, Group, Sort **Description** Unique URL of the Pay Now page. This URL IS auto-generated, and not editable.
QrCodeImageId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Reference to the QR code image included in the payment link record. This field is a relationship field. **Relationship Name** QrCodeImage **Relationship Type** Lookup **Refers To** ContentVersion
Status	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates whether the payment link is active and can be used. Possible values are: • `Active` • `Disabled` The default value is `Active`.
TaxAmount	**Type** currency

Field	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** Amount of the tax included on the Pay Now page.
Title	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Title of the Pay Now page, indicating what is being paid.
Type	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Indicates the type of payment link created. The payment link also determines what is shown on the resulting Pay Now page that merchants share with customers to get paid. Possible values are: • `CheckoutWithOrder`—includes the amount owed, based on the products you select, itemizes physical and subscription products purchased, and calculates tax using the billing address and selected shipping options. After a customer makes a payment, this link type creates an order record. • `PredefinedAmount`—shows only an amount due. The merchant enters the amount due when creating the payment link. • `WithProducts`—includes the amount owed, and itemizes only physical products. Subscriptions aren't included. The merchant can't edit the cart with this link type. The default value is `PredefinedAmount`.
UsageType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Determines whether the payment link is used one time or multiple times before the configured expiration date and time. Possible values are: • `MultiUse`—Multiple Uses • `SingleUse` The default value is `MultiUse`.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PaymentLinkOwnerSharingRule on page 48
: Sharing rules are available for the object.

PaymentLinkShare on page 50
: Sharing is available for the object.

PaymentLinkEvent

Represents a payment link platform event. Subscribe to these events so you can listen and respond to them when they're published. For example, create a Salesforce Flow that is triggered when one of these events is published. This object is available in API version 59.0 and later.

For more information about platform events, see the Platform Events Developer Guide.

Supported Calls

`describeSObjects()`

Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license and Payments must be enabled for your org. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
`ChangeType`	**Type** picklist **Properties** Restricted picklist **Description** Type of payment link event, which triggers and event notification. Possible values are: • `Create`—Payment link created. • `Delete`—Payment link deleted. • `Update`—Payment link property changed.
`PaymentLinkId`	**Type** reference

Field	Details
	Properties Nillable **Description** Type of payment link event. You can write code to operate conditionally on the value of this field. For example, you can ignore a create change but get notified of updates. This field is a relationship field. **Relationship Name** PaymentLink **Relationship Type** Lookup **Refers To** PaymentLink

PaymentMethod

Represents the method that a buyer uses to compensate the seller of a good or service. Common payment methods include cash, checks, credit or debit cards, money orders, bank transfers, and online payment services. This object is available in API version 48.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
`AccountId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The account entity linked to this payment method. This field is a relationship field. **Relationship Name** Account

Field	Details
	Relationship Type Lookup **Refers To** Account
`Comments`	**Type** textarea **Properties** Nillable **Description** Users can add comments to provide additional details about a record. Maximum of 1000 characters.
`CompanyName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Company name for this payment method. Part of the payment method's address.
`ImplementorType`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Shows the type of payment method.
`IsAutoPayEnabled`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the payment method can be used for recurring payments (True) or not (False). The default value is False. This field is available in API v55.0 and later. For orgs that upgraded from v54.0, you must add this field to the Payment Method page layout in the UI. It isn't automatically added.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort

Field	Details
	Description A unique number assigned to the payment method. Numbers start at 1000 and are read only, but administrators can change the format.
NickName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** User-defined nickname for this payment method.
PaymentMethodAddress	**Type** address **Properties** Filter, Nillable **Description** Full address related to the alternative payment method. For more information about address fields, see Address Compound Fields.
PaymentMethodCity	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Payment method address details.
PaymentMethodCountry	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Payment method address details.
PaymentMethodDetails	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Optional information about the payment method type. This field is available in API version 57.0 and later.

Field	Details
PaymentMethodGeocodeAccuracy	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Accuracy level of the geocode for the payment method address. An accuracy level contains information about the location of a latitude and longitude. For more information about geolocation fields, see Geolocation Compound Field. Possible values are: • Address • Block • City • County • ExtendedZip • NearAddress • Neighborhood • State • Street • Unknown • Zip
PaymentMethodLatitude	**Type** double **Properties** Filter, Nillable, Sort **Description** Latitude of the payment method address. Used with the PaymentMethodLongitude to specify the precise geolocation of the address. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
PaymentMethodLongitude	**Type** double **Properties** Filter, Nillable, Sort **Description** Longitude of the payment method address. Used with the PaymentMethodLatitude to specify the precise geolocation of the address. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
PaymentMethodPostalCode	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** Part of the address for this payment method.
PaymentMethodState	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Payment method address details.
PaymentMethodStreet	**Type** textarea **Properties** Filter, Group, Nillable, Sort **Description** Payment method address details.
PaymentMethodSubType	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** More information about the payment method. For example, if the PaymentMethodType is Visa, this field can be a digital wallet. This field is available in API version 57.0 and later.
PaymentMethodType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The payment method used for the transaction, such as Visa, Mastercard, EPS, SepaDebit, UnionPay, and Klarna. Method types can also be direct debit payments like ACH, Becs, and BACS. This field is available in API version 57.0 and later.
SavedPaymentMethodId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the saved payment method record.

Field	Details
	Relationship Name SavedPaymentMethod **Relationship Type** Lookup **Refers To** SavedPaymentMethod
Status	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The state of the payment method. Possible values are: • `Active`—The Payments platform can use the payment method to make payments. • `Canceled`—The Payments platform can no longer use the payment method to make payments. • `InActive`—The Payments platform currently can't use the payment method to make payments. Admins can change this value to Active when needed.

PymtSchdDistributionMethod

Indicates how the total payment is divided into partial payments. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Subscription Management.

Fields

Field	Details
Description	**Type** textarea

Field	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** User-entered description of the payment schedule distribution method.
DistributionCount	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The number of payment schedule items for the payment schedule. The payment schedule items are used to distribute the payment schedule's total payment into partial payments. Possible values are: • 1—Full distribution. Currently, each payment schedule must have exactly one payment schedule item.
DistributionMethodType	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Distribution method time interval. Possible values are: • FullDistribution—The the full amount on the payment schedule is distributed to a single payment schedule item.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** User-entered name for the payment schedule distribution method.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of this object. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User

PaymentScheduleTreatmentDtl

Contains configuration information for the payment schedule treatment detail. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Subscription Management.

Fields

Field	Details
DateOffset	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** A number equal to or less than 0. The date offset is subtracted from the processing date reference to determine the processing date. For example, suppose that the invoice due date is 01/17/2022 and offset is -7. In this case, the payment schedule item is processed by the jobs that run on or before 01/10/2022.
Description	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** The user-entered description of the payment schedule treatment detail.
InstallmentPaymentType	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates how the payment amount is divided into multiple payments. Possible values are: • Percentage
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.
`PaymentMethodSelectionType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates how the payment method is specified. Possible values are: • `Manual`—the payment method is entered by a user • `MostRecentAutopay`—the payment method is the most recent automatic payment method used
`PaymentRunMatchingValue`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Possible values are: • `AMER` • `APAC` • `EMEA`
`PaymentScheduleTreatmentDetailNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** System-generated unique identifier for this payment schedule treatment detail.
`PaymentScheduleTreatmentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the related payment schedule treatment. This field is a relationship field.

Field	Details
	Relationship Name PaymentScheduleTreatment **Relationship Type** Lookup **Refers To** PaymentScheduleTreatment
Percentage	**Type** percent **Properties** Create, Filter, Nillable, Sort, Update **Description** Indicates the percentage of the source amount that is used to create the payment schedule.
ProcessingDateReference	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates the source of the reference date. Possible values are: • InvoiceDueDate—use the invoice's due date as the date reference
PymtSchdDistributionMethodId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The distribution method that contains the information on how to create the payment schedule items. This field is a relationship field. **Relationship Name** PymtSchdDistributionMethod **Relationship Type** Lookup **Refers To** PymtSchdDistributionMethod

PaymentTerm

Defines your company's method and expectations for receiving payment. This object is available in API version 55.0 and later.

Timely payment helps your company maintain cash flow. Payment terms are used to determine the payment due date on invoices. Use with the PaymentTermItem object.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available when Subscription Management is enabled.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** User-defined field that describes the payment term. For example, use *`Net 30`* to describe a payment term where the payment is due within 30 days of the billing date.
`IsDefault`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether this payment term is the default term for your org. A default payment term must be defined in your org. The default value is `false`.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.

Field	Details
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the payment term. For example, *Net 30* or *Cash on delivery (COD)*. This name appears on the invoice.
Status	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates whether the payment term is available for use on invoices. Possible values are: • Active—The payment term is available for use and can be applied to an order. Only active payment terms can be applied to transactions or orders. • Draft—The payment term exists but isn't activated yet. • Inactive—The payment term exists but can't be applied to new transactions or orders. The default value is Draft.

Usage

A payment term is applied to an order or transaction, and is passed on to the billing schedule that's used to generate the invoice. The due date on the invoice is derived from the payment.

For example, a Net 30 payment term means that the customer has 30 days to pay from the invoice date. Suppose that an invoice with a Net 30 payment term is generated on January 1. The invoice date is January 1, and the due date is January 31 (1 + 30 days = 31).

PaymentTermItem

Defines the attributes of a payment term that your company uses. The PaymentTermItem is used to determine the due date on invoices. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available when Subscription Management is enabled.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** User-defined field that describes the details of the payment term item.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`Name`	**Type** string

Field	Details
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An auto-generated sequential number, such as PTI-000001.
`PaymentTermId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the payment term that this payment term item is associated with. This field is a relationship field. **Relationship Name** PaymentTerm **Relationship Type** Lookup **Refers To** PaymentTerm
`PaymentTimeframe`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates the time period when the payment is expected. Possible values are: • `Standard`—Indicates that payment is expected by the date specified in the payment term. If payment isn't received by the due date, the payment becomes overdue. The default value is `Standard`.
`Period`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Specifies the number of units in the payment period. Used with the `PeriodUnit` field. For example, to define a payment term of Net 30, enter *`30`* as the `Period` and select *`Days`* as the `PeriodUnit`.
`PeriodUnit`	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Specifies the unit of time for the payment period. Used with the `Period` field. For example, to define a payment term of Net 30, enter *`30`* as the `Period` and select *`Days`* as the `PeriodUnit`. Possible values are: • `Days`
`Type`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Specifies how the payment term and invoice due date are derived. Possible values are: • `Period-Based`—Tells the system to use the `Period` and `PeriodUnit` fields to calculate the invoice due date. The default value is `Period-Based`.

PaymentSchedule

The payment schedule represents a collection of payments that a customer wants to collect at different times for a certain record. A schedule contains one or more payment schedule items, where each item represents one payment to be processed. Each of a schedule's items can have different payment configuration fields, such as payment methods, payment dates, and payment accounts. When a payment scheduler launches a payment run, the run evaluates active payment schedule items, and picks them up for payment processing if they align with the scheduler's payment criteria. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Subscription Management.

Fields

Field	Details
`AvailableRequestedAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The payment schedule's remaining amount available for the creation of payment schedule items. Equals `TotalRequestedAmount–TotalLineRequestedAmount`.
`Comments`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Optional user-defined comments.
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Three-letter ISO 4217 currency code associated with the payment group record.
`DefaultPaymentAccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** When a payment run creates payments from a payment schedule item, it sets the payment's account to the item's `PaymentAccountId`. Upon payment schedule item creation, the item's `PaymentAccountId` inherits the schedule's `DefaultPaymentAccountId`. However, you can override the `PaymentAccountId` with a different account as needed. If you do, future payments made from the item use the new account. This is a relationship field. **Relationship Name** DefaultPaymentAccount **Relationship Type** Lookup **Refers To** Account

Field	Details
DefaultPaymentMethodId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** When a payment run creates payments from a payment schedule ID, it sets the payment's account to the item's `PaymentMethodId`. Upon payment schedule item creation, the item's `PaymentMethoId` inherits the schedule's `DefaultPaymentMethodId`. However, you can override the `PaymentMethodId` with a different account as needed. If you do, future payments made from the item will use the new account. **Relationship Name** DefaultPaymentMethod **Relationship Type** Lookup **Refers To** CardPaymentMethod, DigitalWallet
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The user who created the payment schedule. This is a polymorphic relationship field. **Relationship Name** Owner

Field	Details
	Relationship Type Lookup **Refers To** Group, User
PaymentScheduleNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** System-generated reference number for the payment schedule.
ReferenceEntityId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The object that receives payments as a result of payment schedule items processed from the payment schedule. This is a polymorphic relationship field. **Relationship Name** ReferenceEntity **Relationship Type** Lookup **Refers To** Contract, Invoice, Order
RemainingAmountToBeProcessed	**Type** currency **Properties** Filter, Nillable, Sort **Description** The total pending amount of payment schedule items that haven't yet been processed for payment. Equals `TotalLineRequestedAmount – TotalProcessedAmount`.
Status	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The status of the payment schedule.

Field	Details
	Possible values are: • `Canceled`: Payment runs can't evaluate payment schedules or use them to create payments. • `Completed`: All of the payment schedule's payment schedule items have been processed for payments. • `Draft`: The payment schedule can be edited and configured. Payment runs don't evaluate draft payment schedules. • `Open`: The payment schedule is available for payment run evaluation.
`TotalAppliedAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The amount of all payment schedule items that have been applied to payments. This is a calculated field.
`TotalCanceledAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of all `RequestedAmount` values on payment schedule items with a status of Canceled.
`TotalPaymentScheduleItemAmount`	**Type** currency **Properties** Filter, Nillable, Sort\ **Description** The total amount allocated from the payment schedule to its payment schedule items. Equals the sum of each payment schedule item's `RequestedAmount` – the sum of each payment schedule item's `Canceled Amount`.
`TotalProcessedAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of `ProcessedAmount` values on payment schedule items with a status of Processed.

Field	Details
TotalRequestedAmount	**Type** currency **Properties** Create, Filter, Sort, Update **Description** The total amount available for a payment schedule to distribute to its payment schedule items. The sum of payment schedule items can't be greater than the TotalLineRequestedAmount of the parent payment schedule.

PaymentScheduleItem

A payment schedule contains one or more payment schedule items, where each item represents one payment to be processed. Each of a schedule's items can have different payment configuration fields, such as payment methods, payment dates, and payment accounts. When a payment scheduler launches a payment run, the run evaluates active payment schedule items, and picks them up for payment processing if they align with the scheduler's payment criteria. This object is available in API version 55.0 and later.

Supported Calls

create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(), undelete(), update(), upsert()

Special Access Rules

This object is available with Subscription Management.

Fields

Field	Details
Comments	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Optional user-defined comments.
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Three-letter ISO 4217 currency code associated with the payment schedule item record.
LastPaymentGatewayLogId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The most recent payment gateway log created following a payment gateway request to make a payment based on the payment schedule item. This is a relationship field. **Relationship Name** LastPaymentGatewayLog **Relationship Type** Lookup **Refers To** PaymentGatewayLog
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
PaymentAccountId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The account assigned to payments made from the payment schedule item. When a payment schedule item is created, its `PaymentAccountId` inherits the payment schedule's `DefaultPaymentAccountId`. However, you can provide a new

Field	Details
	`PaymentAccountId` at any time. If you change the `PaymentAccountId`, only payments made after the change use the new account. This is a relationship field. **Relationship Name** PaymentAccount **Relationship Type** Lookup **Refers To** Account
PaymentBatchRunId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The payment batch run that evaluated the payment schedule item for payment processing. This is a relationship field. **Relationship Name** PaymentBatchRun **Relationship Type** Lookup **Refers To** PaymentBatchRun
PaymentId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The payment that a payment run created for the payment schedule item after picking up the parent payment schedule. This field is unique within your organization This is a relationship field. **Relationship Name** Payment **Relationship Type** Lookup **Refers To** Payment
PaymentMethodId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The payment method assigned to payments created from the payment schedule item. When a payment schedule item is created, its `PaymentMethodId` inherits the payment schedule's `DefaultPaymentMethodId`. However, you can provide a new `PaymentMethodId` at any time. If you change the `PaymentMethodId`, only payments made after the change use the new account. **Relationship Name** PaymentMethod **Relationship Type** Lookup **Refers To** CardPaymentMethod, DigitalWallet
`PaymentProcessingMessage`	**Type** string **Properties** Filter, Nillable, Sort **Description** Shows information about whether the payment creation process has completed.
`PaymentRunMatchingValue`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The value used to match a payment schedule item to a payment run based on the payment run's matching criteria.
`PaymentScheduleId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The parent payment schedule for the payment schedule item. This is a relationship field. **Relationship Name** PaymentSchedule **Relationship Type** Lookup

Field	Details
	Refers To PaymentSchedule
`PaymentScheduleItemNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** User-defined reference number for the payment schedule item.
`PaymentSource`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The feature that caused a payment to be created from the payment schedule item. Possible values are: • `PaymentRun`
`ProcessedAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The amount of the payment schedule item that has been processed for payment and converted to a payment record.
`RequestedAmount`	**Type** currency **Properties** Create, Filter, Sort, Update **Description** The initial amount of the payment schedule item upon creation.
`Status`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The status of the payment schedule item. Possible values are:

Field	Details
	• `Canceled`: The payment schedule item can't be picked up by payment runs for processing. When a user or process changes the item's status to Canceled, the item's `CanceledAmount` becomes `RequestedAmount – ProcessedAmount`. • `Apply Failed`: The payment run encountered an error when attempting to process the payment schedule item for payment. For more information, review the payment run's revenue transaction error log. • `Applied`: The payment schedule item has been successfully applied.
`TargetPaymentProcessingDate`	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** The date after picking up a payment schedule item that the payment run makes a payment request to the payment gateway.

PaymentSchedulePolicy

Contains configuration information for the payment schedule policy. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Subscription Management and the PaymentScheduleAutomation permission.

Fields

Field	Details
`DefaultTreatmentId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The default payment schedule treatment. This field is a relationship field.

Field	Details
	Relationship Name DefaultTreatment **Relationship Type** Lookup **Refers To** PaymentScheduleTreatment
`Description`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** User-entered description of the payment schedule policy.
`IsOrgDefault`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** `true` if the payment schedule policy is the default policy for the org, otherwise `false`. An org can have a maximum of one default payment policy. The default value is `false`.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.
`Name`	**Type** string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update **Description** The user-entered name of the payment policy.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the creator of this object. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
Status	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The payment schedule policy's status. Possible values are: • Active • Canceled • Draft • Inactive
TreatmentSelection	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates the payment schedule treatment. Possible values are: • Default—use the payment schedule treatment indicated by DefaultTreatmentId.

PaymentScheduleTreatment

Contains configuration information for the payment schedule. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Subscription Management.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** The user-entered description of the payment schedule treatment.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.
`Name`	**Type** string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update **Description** The user-entered name of the payment schedule treatment.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of this object. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
PaymentSchedulePolicyId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the related payment schedule policy. This field is a relationship field. **Relationship Name** PaymentSchedulePolicy **Relationship Type** Lookup **Refers To** PaymentSchedulePolicy
Status	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The payment schedule treatment's status. Possible values are:

Field	Details
	• Active • Canceled • Draft • Inactive
TriggerSource	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates the action that caused the payment schedule treatment to be created. Possible values are: • InvoicePosted—an invoice is posted

PendingOrderSummary

Object representing a B2C Commerce order ingested via High Scale Orders before an OrderSummary is created for it. Optimized for online transaction processing (OLTP). This object is available in API version 56.0 and later.

Supported Calls

`describeLayout(), query()`

Special Access Rules

This object is only available in Salesforce Order Management orgs where the High Scale Orders feature is enabled.

Fields

Field	Details
AccountId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the account or person account associated with the PendingOrderSummary. It represents the shopper in the storefront. This field is a relationship field.

Field	Details
	Relationship Name Account **Relationship Type** Lookup **Refers To** Account
BillToContactId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the Contact associated with the PendingOrderSummary. It represents the shopper in the storefront when not using person accounts. This field is a relationship field. **Relationship Name** BillToContact **Relationship Type** Lookup **Refers To** Contact
BillingEmailAddress	**Type** email **Properties** Filter, Group, Sort **Description** Email address on the billing address.
BillingPhoneNumber	**Type** phone **Properties** Filter, Group, Nillable, Sort **Description** Phone number of the billing address.
CurrencyIsoCode	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for the currency of the original Order associated with the PendingOrderSummary. Possible values are: • `DKK`—Danish Krone • `EUR`—Euro • `GBP`—British Pound • `USD`—U.S. Dollar The default value is `USD`.
`Description`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Description of the PendingOrderSummary.
`ExternalId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** This field is used internally. This field isn't synced with ZOS, so you can't use it in a query or insert operation.
`ExternalReferenceIdentifier`	**Type** string **Properties** Filter, Group, Sort **Description** Used internally to prevent duplicate records. This value is case-sensitive. On creation, this value is set to *`B2C realm ID`* + "_" + *`B2C instance ID`* + "@" + *`B2C Commerce catalog/domain ID`* + "@" + *`B2C Commerce order number`*. When the OrderSummary is created, this value is copied to its ExternalReferenceIdentifier field. If you ingest orders from multiple sources, you can maintain uniqueness by including a prefix based on the source.
`GrandTotalAmount`	**Type** currency **Properties** Filter, Sort

Field	Details
	Description Total amount, including adjustments and tax, of the PendingOrderSummary.
`OrderNumber`	**Type** string **Properties** Filter, Group, Sort **Description** Name of the PendingOrderSummary.
`OrderedDate`	**Type** dateTime **Properties** Filter, Sort **Description** Date of the original order associated with this PendingOrderSummary.
`Payload`	**Type** textarea **Properties** **Description** The order data payload.
`PayloadType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The datatype of the Payload. Possible values are: • `JSON_GZIP` • `JSON_RAW`
`SalesChannelId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the SalesChannel associated with this PendingOrderSummary. The SalesChannel Name matches the B2C Commerce catalog/domain ID. This field is a relationship field.

Field	Details
	Relationship Name SalesChannel **Relationship Type** Lookup **Refers To** SalesChannel
SalesStoreId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the RetailStore or WebStore associated with this PendingOrderSummary. This field is a relationship field. **Relationship Name** SalesStore **Relationship Type** Lookup **Refers To** WebStore
ShopperName	**Type** string **Properties** Filter, Group, Sort **Description** The first name and last name of the shopper that placed the original order.

Usage

If you need to view or service an ingested B2C Commerce order before the automated High Scale Orders process has created an OrderSummary for it, you can manually trigger creation of the OrderSummary. In Salesforce, open the PendingOrderSummaries list, find the record, and click **Import**.

PendingOrderSummary only supports certain methods and queries. It doesn't support Apex triggers.

Supported Apex Methods:

- `Database.query(`***`queryString`***`)`
- `Database.query(`***`queryString`***`, `***`accessLevel`***`)`

Supported SOAP API Methods:

- `create()`
- `delete()`

- `describeLayout()`
- `query()`
- `queryMore()`

Supported REST API Methods:

- `/services/data/vXX.X/subjects/sObject/ GET`
- `/services/data/vXX.X/subjects/sObject/id/ GET`
- `/services/data/vXX.X/subjects/sObject/id/ DELETE`
- `/services/data/vXX.X/subjects/sObject/id/ POST`
- `/services/data/vXX.X/subjects/sObject/describe/compactLayouts/ GET`
- `/services/data/vXX.X/subjects/sObject/quickActions/ GET`

Supported Queries:

convertCurrency() function

Example: `SELECT Id, convertCurrency(AnnualRevenue) FROM Account`

Child-to-Parent subquery

Example: `SELECT ExternalReferenceIdentifier, Account.Name FROM PendingOrderSummary WHERE ExternalReferenceIdentifier = 'a'`

Limit clause

Example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary WHERE ExternalReferenceIdentifier = 'a' LIMIT 1`

Filter by index

Example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary WHERE ExternalReferenceIdentifier = 'a'`

Filter by secondary index

Example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary WHERE AccountId = 'xxx'`

ORDER BY clause

When using ORDER BY, you don't need to specify a direction. However, if you sort ASC, you can't use NULLS LAST. If you sort DESC, you can only use NULLS LAST.

Example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary ORDER BY ExternalReferenceIdentifier`

Example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary ORDER BY ExternalReferenceIdentifier ASC NULLS FIRST`

Example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary ORDER BY ExternalReferenceIdentifier DESC NULLS LAST`

Equality filter

Range filters aren't supported.

Example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary WHERE ExternalReferenceIdentifier = 'realm_tenant@storesite@0000001'`

Invalid example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary WHERE ExternalReferenceIdentifier < 'a'`

SEE ALSO:

OrderSummary

Order

PendingServiceRouting

Represents the routing details of a work item that's waiting to be routed or assigned. This object is available in API version 40.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

Fields

Field	Details
`BotId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** Bot ID the work item is assigned to. You can only use enhanced bots. This field is available in API version 55.0 and later. This field is a relationship field. **Relationship Name** Bot **Relationship Type** Lookup **Refers To** BotDefinition
`CapacityPercentage`	**Type** percent **Properties** Create, Filter, Nillable, Sort, Update

Field	Details
	Description Indicates the amount of work that this work item represents as a percentage. Valid values are from 0 to 100.
CapacityWeight	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Indicates the amount of work that this work item represents as a whole number.
CustomRequestedDateTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Retains the datetime of this work item's initial request, so work items are rerouted using the datetime of the initial work request. When left blank, work items are rerouted using the datetime when they're rerouted.
DropAdditionalSkillsTimeout	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Time to wait before a skill marked as additional is dropped from Omni-Channel routing. The case is then routed to the best-matched agent even if they don't have all the skills.
GroupId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the Omni-Channel queue.
IsInterruptible	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether a work item consumes interruptible or primary capacity. The default value is false. Available in version 57.0 and later when the Interruptible Capacity feature is enabled.
`IsOwnerChangeInitiated`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether a work item owner change triggered the direct assignment of this work item to the agent. The default value is `false`.
`IsPreferredUserRequired`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Indicates whether this work item stays with the preferred user even when the user isn't available. The default value is `false`. This field is available in API version 50.0 and later.
`IsPushAttempted`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether a push has been attempted. `true` if this work item was pushed to an agent at least one time and `false` otherwise.
`IsPushed`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether this work item is pushed to an agent.
`IsReadyForRouting`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether this work item is ready to be routed to an agent. If `true`, you can't edit this PendingServiceRouting record.

Field	Details
IsStatusChangeInitiated	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether a work item status change triggered the direct assignment of this work item to the agent. The default value is `false`. This field is available in API version 50.0 and later.
IsTransfer	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether this work item routing is a transfer request.
LastDeclinedAgentSession	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Chat session ID of the agent who last declined this work item.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Name of the PendingServiceRouting record.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of this PendingServiceRouting record.
PreferredUserId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description ID of the preferred user to handle the work item.
`PushTimeout`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The time limit set for an agent to respond to an item before it's pushed to another agent. The time limit is measured in seconds. This field is available in API version 36.0 and later. Effective API version 57.0, for inbound Voice calls, this field represents the time limit set for an agent to respond to a call before it's declined. The value must be from 0 through 20. The value is capped at 20, so any number greater than that is treated as 20 seconds. This applies to the following telephony models: • Service Cloud Voice with Amazon Connect • Service Cloud Voice with Partner Telephony from Amazon Connect
`QueueId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the Omni-Channel queue. Due to API changes, `QueueId` is no longer recommended. Use `GroupId` instead.
`RoutingModel`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Type of routing model. Possible values are: • `ExternalRouting` • `LeastActive` • `MostAvailable`
`RoutingPriority`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Order in which work items are routed to agents. This field is considered with skills-based routing only. Queue-based routing sets a work item's priority from the routing configuration.
RoutingType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates whether the work item is routed by queue or by skills-based routing. Possible values are: • QueueBased • SkillsBased
SecondaryRoutingPriority	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the secondary routing priority.
Serial	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Serial number of the PendingServiceRouting record. The serial number is automatically incremented each time the PendingServiceRouting record is modified.
ServiceChannelId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the service channel.
WorkItemId	**Type** reference **Properties** Create, Filter, Group, Sort

Field	Details
	Description ID of the work item. **Refers To** Custom objects and these standard objects: Case, Account, Lead, Contact, Activity, Opportunity, CustomEntityData, SocialPost, Order, ContactRequest, LiveChatTranscript, MessagingSession, VoiceCall, PersonTraining, SwarmMember, Incident, Claim, ClaimRecovery, ClaimCoverage, PaymentRequest, and Referral. WorkOrder is available in version 58.0 and later.

Usage

When you use the PendingServiceRouting object for queue-based routing, the object doesn't invoke triggers before or after insert, or any action (trigger, workflow rule, validation) that could interfere with the creation of the record.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

PendingServiceRoutingOwnerSharingRule
Sharing rules are available for the object.

PendingServiceRoutingShare
Sharing is available for the object.

Limits

You can view the number of Pending Service Routing records that are currently in use in your org, as well as the current hourly use rate. From Setup, enter `Omni-Channel` in the Quick Find box and select **Limits**. The Limits page also displays the current Pending Service Routing record usage percentage and the Pending Service Routing record limits for your org.

PendingServiceRoutingInteractionInfo

Represents PendingServiceRouting interaction information that's used when work is routed to an agent. For a screen pop, it specifies which records to open when work is routed to an agent from a specific channel. PendingServiceRoutingInteractionInfo is read-only. This object is available in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To access this object, Omni-Channel must be enabled. To view this object, you must have the "Manage Flow" user permission.

Fields

Field	Details
IsFocused	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether this record shows on the agent's screen when multiple records open at the same time.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the PendingServiceRoutingInteractionInfo.
PendingServiceRoutingId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the PendingServiceRouting on page 3276 from which the AgentWork on page 447 is created. This is a relationship field. **Relationship Name** PendingServiceRouting **Relationship Type** Lookup **Refers To** PendingServiceRouting
PrimaryRecordId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the object that's routed to the agent through Omni-Channel. **Relationship Name** PrimaryRecord

Field	Details
	Relationship Type Lookup
`TargetFlowName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The API name and namespace prefix, if any, of the screen flow to open when work is routed to the agent. This field and the `TargetFlowId` field can't be populated at the same time. Available in API version 57.0 and later.
`TargetObjectId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The record to open when work is routed to the agent. This field is required in API version 56.0 and earlier. In API version 57.0 and later, this field is optional and can’t be populated at the same time as the `TargetFlowName` field. **Relationship Name** TargetObject **Relationship Type** Lookup

Period

Represents a fiscal period defined in FiscalYearSettings.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Spring ’20 and later, only Chatter Free users and standard users can access this object.

Fields

Field	Details
EndDate	**Type** date **Properties** Filter, Group, Sort **Description** The last date of the fiscal period.
FiscalYearSettingsId	**Type** reference **Properties** Filter, Nillable, Group, Sort **Description** The parent record for this period. This is a relationship field. **Relationship Name** FiscalYearSettings **Relationship Type** Lookup **Refers To** FiscalYearSettings
FullyQualifiedLabel	**Type** string **Properties** Group, Nillable **Description** Represents the period's complete name in the UI. For example, "September FY 2016".
IsForecastPeriod	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the period is associated with Collaborative Forecasts (`true`) or not (`false`).
Number	**Type** int

Field	Details
	Properties Filter, Nillable, Group, Sort **Description** If the labeling scheme of your fiscal year's quarters or months is numbered, this field indicates the relative number of the row.
PeriodLabel	**Type** picklist **Properties** Filter, Group, Nillable, Sort **Description** If the months in your fiscal year use custom names, then this field contains the appropriate name for rows of type Month.
QuarterLabel	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** If the quarters in your fiscal year use custom names, then this field contains the appropriate name for rows of type Quarter.
StartDate	**Type** date **Properties** Filter, Group, Sort **Description** The first date of the fiscal period.
Type	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates whether the period is of type Month, Quarter, Week, or Year. Label is the field value.

Usage

In API version 36.0 and earlier, querying the Period object yields no results. In API version 37.0 and later, a query returns period records.

SEE ALSO:

FiscalYearSettings

PermissionSet

Represents a set of permissions that's used to grant more access to one or more users without changing their profile or reassigning profiles. This object is available in API version 22.0 and later.

PermissionSet has a read-only child relationship with PermissionSetGroup. PermissionSet contains the aggregated permissions for the group.

You can use permission sets to grant access, but not to deny access.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Manage Session Permission Set Activations
- Assign Permission Sets
- Manage Profiles and Permission Sets

To view the following settings, assignments, and permissions for standard and custom objects in a specified permission set, the View Setup and Configuration permission is required.

- Client settings
- Field permissions
- Layout assignments
- Object permissions
- Permission dependencies
- Permission set tab settings
- Permission set group components
- Record types

Fields

Field Name	Details
`Description`	**Type** string **Properties** Create, Filter, Nillable, Group, Sort, Update **Description** A description of the permission set. Limit: 255 characters.
`HasActivationRequired`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the permission set requires an associated active session (`true`) or not (`false`).
`IsCustom`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, the permission set is custom (created by an admin); if `false`, the permission set is standard and related to a specific permission set license.
`IsOwnedByProfile`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, the permission set is owned by a profile. Available in API version 25.0 and later.
`Label`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The permission set label, which corresponds to **Label** in the user interface. Limit: 80 characters.
`LicenseId`	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort **Description** The ID of either the related PermissionSetLicense or UserLicense associated with this permission set. Available in API version 38.0 and later. Use this field instead of `UserLicenseId`, which is deprecated and only available up to API Version 37.0. This is a polymorphic relationship field. **Relationship Name** License **Relationship Type** Lookup **Refers To** PermissionSetLicense, UserLicense
`Name`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. Corresponds to **API Name** in the user interface. Limit: 80 characters.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix for a permission set that's been installed as part of a managed package. If the permission set isn't packaged or is part of an unmanaged package, this value is empty. Available in API version 23.0 and later.
`Permissions`*`PermissionName`*	**Type** boolean **Properties** Create, Filter, Update **Description** One field for each permission. If `true`, users assigned to this permission set have the named permission. The number of fields varies depending on the permissions for the organization and license type.

Field Name	Details
	Tip: To get a list of available permissions in the SOAP API, use `describeSObjects()`.
`PermissionSetGroupId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** If the permission set is owned by a permission set group, this field returns the ID of the permission set group. If the permission set isn't owned by a permission set group, this field returns a null value. Available in API version 45.0 and later. This is a relationship field. **Relationship Name** PermissionSetGroup **Relationship Type** Lookup **Refers To** PermissionSetGroup
`ProfileId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** If the permission set is owned by a profile, this field returns the ID of the Profile. If the permission set isn't owned by a profile, this field returns a null value. Available in API version 25.0 and later. This is a relationship field. **Relationship Name** Profile **Relationship Type** Lookup **Refers To** Profile
`Type`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Available in API version 46.0 and later.

Field Name	Details
UserLicenseId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the UserLicense associated with this permission set. This field is nillable in API version 26.0 and later and available up to API version 37.0 In API version 38.0 and later, use `LicenseId`.

Usage

Use the PermissionSet object to query existing permission sets.

For example, to search for all permission sets that contain the "Modify All Data" permission:

```
SELECT Name, PermissionsModifyAllData
FROM PermissionSet
WHERE PermissionsModifyAllData=true
```

When combined with the PermissionSetAssignment object, you can create a nested query that returns all users assigned to a particular permission like "Modify All Data":

```
SELECT Name, (SELECT AssigneeId FROM Assignments)
FROM PermissionSet
WHERE PermissionsModifyAllData=true
```

If the permission set isn't assigned to a user, you can also create or delete a permission set.

User Licenses

The user license controls the permissions that are available in a permission set.

Every permission set can be associated with a user license or permission set license. If you plan to assign a permission set to multiple users with different user and permission set licenses, leave `LicenseId` empty. If only users with one type of license use this permission set, set the `LicenseId` to that single user or permission set license. If you want a permission set associated with a permission set license, then set `LicenseId` to the permission set license. To get the `LicenseId`, run this query:

```
SELECT Id, Name
FROM UserLicense
```

Alternatively, to query a user or profile for the `LicenseId`.

```
SELECT Id, Profile.UserLicenseId
FROM User
```

Child Objects

When using the API, think of each permission set or related set of access controls as an empty container that you fill with permission records.

In the API, a permission set can contain user, object, and field permissions, and setup entity access settings for other settings, such as Apex classes.

- ObjectPermissions and FieldPermissions objects are available in API version 24.0 and later.
- The SetupEntityAccess object is available in API version 25.0 and later.
- The PermissionSetGroupComponent object is available in API version 45 and later.

Only user permissions are managed in the PermissionSet API object; all other permission types are managed in child API objects.

In these child objects, access is stored in a record, while the absence of a record indicates no access. To return a record in a SOQL query, a minimum permission or setting is required for each child object.

Because permissions are stored in related objects, it's important to understand what questions to ask when using SOQL. For example, let's say you want to know which permission sets have "Delete" on an object. You also want to know which ones include permissions that allow approval of a return merchandise authorization (where the approval checkbox is controlled with field permissions). Asking the right questions when using SOQL with permission sets ensures that you get the information you need, such as whether to migrate permissions or assign a permission set to a user.

For example, the following returns all permission sets where the "Read" permission is enabled for the Merchandise__c object.

```
SELECT SobjectType, ParentId, PermissionsRead
FROM ObjectPermissions
WHERE PermissionsRead = True AND SobjectType = 'Merchandise__c'
```

You can query for all permission sets that have "Read" on an object. However, you can't query for permission sets that have no access on an object, because no records exist for that object. For example, the following returns no records because the object must have at least "Read" to return any records.

```
SELECT SobjectType, ParentId, PermissionsRead
FROM ObjectPermissions
WHERE PermissionsRead = False AND SobjectType = 'Merchandise__c'
```

If you have at least the "Read" permission on an object, you can create a conditional query on other permissions in the same object. For example, the following returns any records where the object has at least the "Read" permission but not the "Edit" permission.

```
SELECT ParentId, PermissionsRead, PermissionsEdit
FROM ObjectPermissions
WHERE PermissionsEdit = False AND SobjectType = 'Merchandise__c'
```

To set an object or field permission to no access, delete the record that contains the permission. For example, to disable all object permissions in the Merchandise__c object for a particular permission set, first query to retrieve the ID of the object permission record.

```
SELECT Id
FROM ObjectPermissions
WHERE SobjectType = 'Merchandise__c'
```

Then delete the IDs returned from the query.

Note: If you try to update the object or field permissions by setting all permissions to false, the permission record is automatically deleted. Any subsequent queries for the record ID won't return results and you must add a new permission record to grant access.

View a Permission Set with Nested Queries

You can build on the PermissionSet object using child relationships that show all of the permissions in a single permission set. For example, the following returns all permission sets and displays the "Transfer Leads" permission, as well as any "Read" permissions on any objects and fields.

```
SELECT Label, PermissionsTransferAnyLead,
(SELECT SobjectType, PermissionsRead FROM ObjectPerms),
(SELECT SobjectType, Field, PermissionsRead FROM FieldPerms)
FROM PermissionSet
```

Associated Profiles

In API version 25.0 and later, every profile is associated with a permission set that stores the profile's user, object, and field permissions, as well as setup entity access settings. You can query permission sets that are owned by profiles but not modify them.

The following example returns all permission sets, including those owned by a profile.

```
SELECT Id, Label, ProfileId, Profile.Name
FROM PermissionSet
```

The following returns all permission sets except those permissions owned by profiles.

```
SELECT Id, Label, ProfileId, Profile.Name, IsOwnedByProfile
FROM PermissionSet
WHERE IsOwnedByProfile = FALSE
```

Because permission sets have child objects in the API, you can query their values on permission sets owned by a profile. For example, the following returns all enabled object permission records for profiles only.

```
SELECT Id,ParentId, PermissionsRead, SobjectType, Parent.ProfileId
FROM ObjectPermissions
WHERE Parent.IsOwnedByProfile = TRUE
```

Once you have the IDs for permission sets that are owned and not owned by profiles, use the PermissionSetAssignment object to see if users can access objects or fields via their profile permissions or their permission sets. For example, the following SOQL query returns all users who have the "Read" permission on the Merchandise__c object. It also specifies whether the permission is granted through a profile or permission set.

```
SELECT Assignee.Name, PermissionSet.Id, PermissionSet.isOwnedByProfile
FROM PermissionSetAssignment
WHERE PermissionSetId
IN (SELECT ParentId
FROM ObjectPermissions
WHERE SObjectType = 'Merchandise__c' AND PermissionsRead = true)
```

Note: For permission sets that are owned by profiles, don't use Name and Label values that are returned in a query. Name and Label values from queries can change.

SEE ALSO:

- ObjectPermissions
- FieldPermissions
- SetupEntityAccess
- PermissionSetAssignment
- Profile

PermissionSetAssignment

Represents a user's assignment to a permission set or permission set group. This object is available in API version 22.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Assign Permission Sets
- Manage User

Fields

Field Name	Details
`AssigneeId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the user that is assigned the permission set indicated in `PermissionSetId` or the permission set group indicated in `PermissionSetGroupId`. This is a relationship field. **Relationship Name** Assignee **Relationship Type** Lookup

Field Name	Details
	Refers To User
`ExpirationDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date that the assignment of the permission set or permission set group expires for the specified user. This field is available in API version 52.0 and later.
`IsActive`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the assignment is active (`true`) or not (`false`). Defaults to `false`. This field is available in API version 52.0 and later.
`IsRevoked` (Beta)	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the assignment was revoked (`true`) or not (`false`). Defaults to `false`. This field is available in API version 57.0 and later. Note: This feature is a Beta Service. Customer may opt to try such Beta Service in its sole discretion. Any use of the Beta Service is subject to the applicable Beta Services Terms provided at Agreements and Terms.
`LastCreatedByChangeId` (Beta)	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user access change record related to this permission set or permission set group assignment. This field is available in API version 57.0 and later. This field is a relationship field. **Relationship Name** LastCreatedByChange

Field Name	Details
	Relationship Type Lookup **Refers To** UserAccessChange Note: This feature is a Beta Service. Customer may opt to try such Beta Service in its sole discretion. Any use of the Beta Service is subject to the applicable Beta Services Terms provided at Agreements and Terms.
`LastDeletedByChangeId` (Beta)	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the user access change record related to this permission set or permission set group assignment being revoked. This field is available in API version 57.0 and later. This field is a relationship field. **Relationship Name** LastCreatedByChange **Relationship Type** Lookup **Refers To** UserAccessChange Note: This feature is a Beta Service. Customer may opt to try such Beta Service in its sole discretion. Any use of the Beta Service is subject to the applicable Beta Services Terms provided at Agreements and Terms.
`PermissionSetGroupId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the permission set group assigned to the user specified in `AssigneeId`. This field is available in API version 45.0 and later. This is a relationship field. **Relationship Name** PermissionSetGroup **Relationship Type** Lookup **Refers To** PermissionSetGroup

Field Name	Details
PermissionSetId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the permission set assigned to the user specified in `AssigneeId`. This is a relationship field. **Relationship Name** PermissionSet **Relationship Type** Lookup **Refers To** PermissionSet

Usage

Finding Permission Set Assignments

Use the PermissionSetAssignment object to query permission set assignments to find out which permission sets are assigned to which users. Because each user can be assigned to many permission sets and each permission set can be assigned to many users, each PermissionSetAssignment ID represents the association of a single user and single permission set.

For example, to search for all permission sets assigned to a particular user:

```
SELECT Id, PermissionSetId
FROM PermissionSetAssignment
WHERE AssigneeId = '005600000017cKt'
```

To search for all users assigned to a particular permission set:

```
SELECT Id, AssigneeId
FROM PermissionSetAssignment
WHERE PermissionSetId = '0PS30000000000e'
```

You can also create a new permission set assignment, or use delete to remove a permission set that's assigned to a user. To update an assignment, delete an existing assignment and insert a new one.

User Licenses

When assigning a permission set, if the PermissionSet has a `UserLicenseId`, its `UserLicenseId` and the Profile `UserLicenseId` must match. To determine a user's license assignment, query the user's profile and then query the profile's license.

For example, to find a user's profile ID:

```
SELECT Id, ProfileId
FROM User
WHERE Id = '005D0000001GMAT'
```

To find a permission set's `UserLicenseId`:

```
SELECT Id, LicenseId
FROM PermissionSet
WHERE Id = '0PS30000000000e'
```

If the IDs match, the assignment succeeds.

To find all the permission sets with no license that are assigned to any user:

```
SELECT Id, Assignee.Name, PermissionSet.Name
FROM PermissionSetAssignment
WHERE PermissionSet.LicenseId = null
```

SEE ALSO:

PermissionSet

PermissionSetGroup

Represents a group of permission sets and the permissions within them. Use permission set groups to organize permissions based on job functions or tasks. Then, you can package the groups as needed. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeObject()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer ’20 and later, to view this object, users must have one of these permissions:

- View Setup and Configuration
- Manage Session Permission Set Activations
- Assign Permission Sets

To edit this object, users must have the Manage Profiles and Permission Sets permission.

Fields

Field Name	Details
`Description`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The Permission Set Group description.

Field Name	Details
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The permission set group name used in the API.
HasActivationRequired	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the permission set group requires an associated active session (`true`) or not (`false`). The default value is `false`. This field is available in API version 53.0 and later.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The Permission Set Group language. Possible values are: • `da` (Danish) • `de` (German) • `en_US` (English) • `es` (Spanish) • `es_MX` (Spanish - Mexican) • `fi` (Finnish) • `fr` (French) • `it` (Italian) • `ja` (Japanese) • `ko` (Korean) • `nl_NL` (Dutch) • `no` (Norwegian) • `pt_BR` (Portuguese - Brazilian) • `ru` (Russian) • `sv` (Swedish) • `th` (Thai) • `zh_CN` (Chinese - Simplified)

Field Name	Details
	• zh_TW (Chinese - Traditional)
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The permission set group label for the aggregated permissions.
NamespacePrefix	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The permission set group namespace prefix.
Status	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Indicates permission set group recalculation status. • Updated. The group is current. • Outdated. The group requires recalculation. • Updating. The group is in recalculation mode. • Failed. The group recalculation failed.

Usage

Use the PermissionSetGroup object to query existing permission set groups and to find which aggregated permissions are included in the group.

For example, to search for all object permissions in a permission set group named StandardAccountingUsers:

```
SELECT SObjectType
FROM ObjectPermissions
WHERE Parent.PermissionSetGroup.DeveloperName = 'StandardAccountingUsers'
```

To create a permission set group using REST API, you can submit a POST request.

```
POST
/services/data/v45.0/tooling/sobjects/PermissionSetGroup/

{
```

```
    "DeveloperName":"Sales", "MasterLabel": "sales_label"
}
```

PermissionSetGroupComponent

A junction object that relates the PermissionSetGroup and PermissionSet objects via their respective IDs; enables permission set group recalculation to determine the aggregated permissions for the group. This object is available in API version 45.0 and later.

PermissionSetGroupComponent is a child object of PermissionSet and PermissionSetGroup.

Supported Calls

`create()`, `delete()`, `describeSObject()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only users with the "View Setup and Configuration" permission can access this object.

Fields

Field Name	Details
`PermissionSetGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The unique permission set group ID. This is a relationship field. **Relationship Name** PermissionSetGroup **Relationship Type** Lookup **Refers To** PermissionSetGroup
`PermissionSetId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The unique permission set ID of a permission set in a permission set group. This is a relationship field.

Field Name	Details
	Relationship Name PermissionSet **Relationship Type** Lookup **Refers To** PermissionSet

Usage

Use the PermissionSetGroupComponent object to add members to or delete members from a permission set group, or to query for group members.

PermissionSetLicense

Represents a license that's used to enable one or more users to receive a specified permission without changing their profile or reassigning profiles. You can use permission set licenses to grant access, but not to deny access. This object is available in API version 29.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
`DeveloperName`	**Type** string **Properties** Filter, Group, Sort **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is

Field Name	Details
	specified, performance slows down while Salesforce generates one for each record. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`ExpirationDate`	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** The date at which the permission set license expires.
`IsAvailableForIntegrations`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the permission set license is enabled for integrations (`true`) or not (`false`). When this field is set to `true`, Salesforce integration features can access data. The default value is `false`. This field is read-only in the API and can be edited only in Setup. If integrations are required for feature functionality and the license isn't enabled for integrations, you receive an error when setting up the session-based permission set or executing the feature. Only enable integrations if necessary for the feature.
`IsSupplementLicense` (Developer Preview)	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether a custom permission set license is a supplement license (`true`) or a foundation license (`false`). The default value is `false`. This field is only available if the Partner Licensing Platform developer preview is enabled. This field is available in API version 55.0 and later. Note: The Partner Licensing Platform is available as a developer preview. The Partner Licensing Platform isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. All commands, parameters, and other features are subject to change or deprecation at any time, with or without notice. Don't implement functionality developed with these commands or tools in your production package.

Field Name	Details
`Language`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The language of the permission set license.
`MasterLabel`	**Type** string **Properties** Filter, Group, Sort **Description** The label of the permission set license. Label is **Permission Set License Label**.
`MaximumPermissions`*`PermissionName`*	**Type** boolean **Properties** Filter **Description** One field for each permission. For example, `MaximumPermissionsIdentityConnect` corresponds to the "Use Identity Connect" permission. If *`true`*, this PermissionSetLicense grants the specified permission. The number of fields varies depending on the permissions available for the organization.
`PermissionSetLicenseKey`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** A string that uniquely identifies a particular permission set license.
`Status`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The status of a permission set license. If `Active`, the permission set license is available. If `Disabled`, the permission set license has expired.

Field Name	Details
`TotalLicenses`	**Type** int **Properties** Filter, Group, Sort **Description** The total number of this permission set license that are available to your organization.
`UsedLicenses`	**Type** int **Properties** Filter, Group, Sort **Description** The number of this permission set license that are currently assigned to users.

Usage

Users with the "View Setup and Configuration" permission can use the PermissionSetLicense object to view the set of currently defined permission set licenses in your organization.

Use the PermissionSetLicense object to query existing permission licenses.

For example, to return a list of all active permission set licenses:

```
SELECT MasterLabel
FROM PermissionSetLicense
WHERE Status = 'Active'
```

When combined with the PermissionSetLicenseAssign object, you can create a nested query that returns all users assigned to a particular permission set license like "Identity Connect":

```
SELECT MasterLabel, (SELECT AssigneeId FROM PermissionSetLicenseAssign)
FROM PermissionSetLicense
WHERE MaximumPermissionsIdentityConnect=true
```

SEE ALSO:

PermissionSetLicenseAssign

PermissionSetLicenseAssign

Represents the association between a User and a PermissionSetLicense. This object is available in API version 29.0 and later.

Note: The relationship name for PermissionSetLicenseAssign is *`PermissionSetLicenseAssignments`*.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Assign Permission Sets

Fields

Field Name	Details
`AssigneeId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the User to assign the permission set license specified in `PermissionSetLicenseId`. This is a relationship field. **Relationship Name** Assignee **Relationship Type** Lookup **Refers To** User
`IsRevoked` (Beta)	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the permission set license assignment was revoked (`true`) or not (`false`). Defaults to `false`. This field is available in API version 58.0 and later. Note: This feature is a Beta Service. Customer may opt to try such Beta Service in its sole discretion. Any use of the Beta Service is subject to the applicable Beta Services Terms provided at Agreements and Terms.
`LastCreatedByChangeId` (Beta)	**Type** reference

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** ID of the user access change record related to this permission set license assignment. This field is available in API version 58.0 and later. This field is a relationship field. **Relationship Name** LastCreatedByChange **Relationship Type** Lookup **Refers To** UserAccessChange Note: This feature is a Beta Service. Customer may opt to try such Beta Service in its sole discretion. Any use of the Beta Service is subject to the applicable Beta Services Terms provided at Agreements and Terms.
`LastDeletedByChangeId` (Beta)	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the user access change record related to this permission set license assignment being revoked. This field is available in API version 58.0 and later. This field is a relationship field. **Relationship Name** LastCreatedByChange **Relationship Type** Lookup **Refers To** UserAccessChange Note: This feature is a Beta Service. Customer may opt to try such Beta Service in its sole discretion. Any use of the Beta Service is subject to the applicable Beta Services Terms provided at Agreements and Terms.
`PermissionSetLicenseId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the permission set license the user is assigned to.

Field Name	Details
	This is a relationship field. **Relationship Name** PermissionSetLicense **Relationship Type** Lookup **Refers To** PermissionSetLicense

Usage

Use the PermissionSetLicenseAssign object for querying permission set license assignments to find out which permission set licenses are assigned to which users. Because each user can be assigned to many permission set licenses, each PermissionSetLicenseAssign ID represents the association of a single user and single permission set license.

For example, to search for all of the permission sets assigned to a particular user:

```
SELECT Id, PermissionSetLicenseId
FROM PermissionSetLicenseAssign
WHERE AssigneeId = '005D0000001RFek'
```

To search for all users assigned to a particular permission set license:

```
SELECT AssigneeId
FROM PermissionSetLicenseAssign
WHERE PermissionSetLicenseId = '0PLD000000003mwOAA'
```

You can also create a new permission set license assignment, or use delete to remove a permission set license that's been assigned to a user. To update an assignment, delete an existing assignment and insert a new one.

SEE ALSO:

PermissionSetLicense

PermissionSetLicenseDefinition (Developer Preview)

Represents the definition of a custom permission set license, which entitles specified features in a package. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access PermissionSetLicenseDefinition, you must have the Partner Licensing Platform developer preview enabled. To participate in this developer preview, submit a participation request via the Partner Licensing Platform Developer Preview Partner Community group.

Note: The Partner Licensing Platform is available as a developer preview. The Partner Licensing Platform isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. All commands, parameters, and other features are subject to change or deprecation at any time, with or without notice. Don't implement functionality developed with these commands or tools in your production package.

Fields

Field	Details
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
IsSupplementLicense	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the custom permission set license is a supplement license (`true`) or a foundation license (`false`). The default value is `false`. This field is available in API version 55.0 and later.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The two- to five-character code that represents the language and locale ISO. This code controls the language for labels displayed in an application.
LicenseExpirationPolicy	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description The license expiration policy of the custom permission set license. Possible values are: • `BlockNamespaceAccess`—Package access is blocked for existing users when all custom permission set licenses expire. This is the default value. • `AllowNamespaceAccess`—Package access isn't blocked for existing users when all custom permission set licenses expire. This field is available in API version 55.0 and later.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Label for this PermissionSetLicenseDefinition value. This display value is the internal label that does not get translated.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
`UserLicenseRestrictions`	**Type** textarea **Properties** Create, Nillable, Update

Field	Details
	Description The user license categories that can be assigned the custom permission set license. If no user license categories are specified, all users can be assigned the license. Possible values include: • `${communities}` • `${communitiesLogin}` • `${customerCommunities}` • `${customerCommunitiesLogin}` • `${internal}` • `${partnerCommunity}` • `${partnerCommunityLogin}` • `${platform}` For more information, see User License Restriction Categories (Developer Preview). This field is available in API version 55.0 and later.

Usage

After the PermissionSetLicenseDefinition is created, it must be referenced in LicenseDefinitonCustomPermission.

For more information, see the Partner Licensing Platform Developer Guide (Developer Preview).

PermissionSetTabSetting

Represents a permission set tab setting. Requires the View Setup permission. Use this object to query all tab settings of the permission set. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only users with "View Setup and Configuration" permission can access this object.

Fields

Field Name	Details
`Name`	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Sort **Description** The tab name.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The permission set Id. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** PermissionSet
`Visibility`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates whether the tab is visible by default. Possible values are: • `DefaultOff` • `DefaultOn`

Usage

Use the PermissionSetTabSetting object to find tab setting visibility settings, parent permission sets, and so forth.

For example, to find the visibility setting of a tab named "standard-Lead," do something like the following.

```
SELECT Visibility
FROM PermissionSetTabSetting
WHERE Name = 'standard-Lead'
```

PersonAccountOwnerPowerUser

Represents a user who can own more than 50,000 customer or partner portal accounts. Person account owner power users can own a large number of either customer or partner users. Their role can't be changed and they must be at the root of the role hierarchy. Person account owner power user objects can't be created if deferred sharing is turned on for your org. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Create a PersonAccountOwnerPowerUser object. Enter the user ID of the power user and the type of users that they can own, `Customer Portal` or `Partner`.

Note: Only users at the highest level of a hierarchy can be added to the PersonAccountOwnerPowerUser object.

Fields

Field	Details
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language that the user's account is set to. The user is specified using the `UserId` field. See Salesforce Help for a full list of languages.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The label entered when the person account owner power user is created.

Field	Details
PortalType	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The type of portal user account that the person account owner power user can own. Possible value is: • CustomerPortal—Customer Portal
UserId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The unique ID associated with the person account owner power user. This field is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

PersonalizationTargetInfo

Represents a target for an audience. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ContainerId	**Type** reference **Properties** Filter, Group, Sort

Field	Details
	Description ID of the Experience Cloud site or org that contains the target.
DraftRowId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the draft PersonalizationTargetInfo.
GroupName	**Type** string **Properties** Filter, Group, Sort **Description** Group name of the target. Groups bundle related targets.You can have up to 2,000 groups and 500 targets per group.
PublishStatus	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Publish status of the target. Possible values are: • Draft • Live
TargetType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of the target. Possible values are: • ExperienceVariation • NavigationLinkSet • Topic • CollaborationGroup • KnowledgeArticle

Field	Details
	• `ContentDocument` • `ManagedContent` • `Report` • `Dashboard` • Custom objects You can have up to 2,500 `ExperienceVariation` targets and 25,000 record targets.
`TargetValue`	**Type** string **Properties** Filter, Group, Sort **Description** Value of the target. For ExperienceVariation, this is the developer name of the Experience Variation or the record ID for the object.

PersonTraining

Represents an assignment of a learning module in Workforce Engagement. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org requires a Workforce Engagement license and an Enablement Sites (myTrailhead) license. The user requires at least one Workforce Engagement permission set assigned to them: Workforce Engagement Admin, Workforce Engagement Analyst, Workforce Engagement Planner, or Workforce Engagement Agent.

Workforce Engagement Management uses this object to route training to agents. To assign modules to agents, users with the Learning Manager profile require Read, Create, and View All access to this object. To receive routed modules, users with the Learner profile require Read access to this object.

Fields

Field	Details
`AssigneeId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description A valid user ID for the user who's assigned the training. `AssigneeId` can't be empty if the `Status` field is Assigned. We recommend that you set `AssigneeId` to the value in `OwnerId`. This is a relationship field. **Relationship Name** Assignee **Relationship Type** Lookup **Refers To** User
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the learning module.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The user who owns the person training. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The status of the training. Possible values are: • `A`—Assigned; when the `Status` is assigned, the `AssigneeId` field can't be empty.

Field	Details
	• `C`—Completed • `I`—In Progress • `N`—New • `P`—Paused The default value is 'N'.
`TrainingId`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the learning module. This is a relationship field. **Relationship Name** Training **Relationship Type** Lookup **Refers To** LearningContent
`TrainingType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of training. Possible values are: • `T`—Trailhead

Usage

In version 54.0 and later releases, Workforce Engagement uses this object instead of the AgentTraining object to route learning modules to agents. If you set up agent engagement in your org in an earlier release, we rename AgentTraining records as PersonTraining records.

PicklistValueInfo

Represents the active picklist values for a given picklist field. This object is available in API version 40.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
`DurableId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Unique identifier for the field.
`EntityParticleId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Represents the picklist field to which this value is related. **Relationship Name** EntityParticle **Relationship Type** Lookup **Refers To** EntityParticle
`IsActive`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the picklist value is active or not.
`IsDefaultValue`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether this value is the default for the picklist field. Only one value can be the default value.

Field	Details
`Label`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The label for the picklist value.
`ValidFor`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** A set of bits where each bit indicates a controlling value for which this picklist value is valid.
`Value`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The API name of the picklist value.

PickTicket

A PickTicket represents quantities of one or more products to be picked for fulfillment at a location. It can include products belonging to one or more fulfillment orders. This object is available in API version 57.0 and later.

A PickTicket is associated with one or more PickTicketAssignments and one or more PickTicketProducts. Each PickTicketAssignment represents the relationship between the PickTicket and a FulfillmentOrder. Each PickTicketProduct represents the quantity of a product to be picked as part of the PickTicket. If multiple FulfillmentOrders associated with the PickTicket include the same product, one PickTicketProduct can represent the total quantity of that product to be picked for all of those FulfillmentOrders.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with an Order Management Growth license.

Fields

Field	Details
`AssignedToId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The user assigned to pick the items associated with the PickTicket. This field is a relationship field. **Relationship Name** AssignedTo **Relationship Type** Lookup **Refers To** User
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed data in this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it's possible the user accessed data in this record or list view but didn't view it directly.
`LocationId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The location fulfilling the items to be picked. This field is a relationship field. **Relationship Name** Location

Field	Details
	Relationship Type Lookup **Refers To** Location
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the PickTicket record. By default, the asset owner is the user who created the record. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
PickTicketNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Name of the PickTicket.
Status	**Type** picklist **Properties** Create, Filter, Group, Printed, Sort, Update **Description** Status of the PickTicket. Each status corresponds to one status category, shown here in parentheses. You can customize the status picklist to represent your business processes, but the status category picklist is fixed because processing is based on those values. If you customize the status picklist, include at least one status value for each status category. Default values are: • Assigned (Active) • Canceled (Canceled) • Completed (Completed) • Created (Active)

Field	Details
	• `Draft` (Draft) • `Picked` (Active) • `Picking` (Active)
`StatusCategory`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Status category of the PickTicket. Processing of the PickTicket depends on this value. Each status category corresponds to one or more status values. Possible values are: • `ACTIVE` • `CANCELED` • `COMPLETED` • `DRAFT` The default value is `DRAFT`.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PickTicketFeed on page 39
Feed tracking is available for the object.

PickTicketShare on page 50
Sharing is available for the object.

SEE ALSO:
PickTicketAssignment
PickTicketProduct

PickTicketAssignment

Represents the association of a FulfillmentOrder with a PickTicket. A PickTicket has one PickTicketAssignment for each FulfillmentOrder containing products to be picked as part of that PickTicket. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with an Order Management Growth license.

Fields

Field	Details
`AttachedToId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the FulfillmentOrder to associate with a PickTicket. This field is a relationship field. **Relationship Name** AttachedTo **Relationship Type** Lookup **Refers To** FulfillmentOrder
`PickTicketAssignmentNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Name of the PickTicketAssignment.
`PickTicketId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the PickTicket to associate with a FulfillmentOrder. This field is a relationship field. **Relationship Name** PickTicket **Relationship Type** Lookup

Field	Details
	Refers To PickTicket

SEE ALSO:

PickTicket

FulfillmentOrder

PickTicketProduct

PickTicketProduct

Represents a quantity of a product to be picked as part of a PickTicket. It can include quantities for multiple FulfillmentOrders. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with an Order Management Growth license.

Fields

Field	Details
`PickTicketId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the PickTicket associated with the PickTicketProduct. This field is a relationship field. **Relationship Name** PickTicket **Relationship Type** Lookup **Refers To** PickTicket

Field	Details
PickTicketProductNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Name of the PickTicketProduct.
PickedQuantity	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Quantity of the PickTicketProduct that has been picked.
Product2Id	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the product associated with the PickTicketProduct. This field is a relationship field. **Relationship Name** Product2 **Relationship Type** Lookup **Refers To** Product2
ProductCode	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Product code of the product associated with the PickTicketProduct.
Quantity	**Type** double **Properties** Create, Filter, Sort, Update **Description** Total quantity that’s requested to be picked of the associated product.

Field	Details
RejectReason	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The reason why some or all of the requested quantity isn't being picked. Possible values are: • Defected • Other • Out of stock
RejectedQuantity	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The requested quantity that hasn't been picked. When the status category of the associated PickTicket is set to `Completed`, this value is automatically calculated as `Quantity` - `PickedQuantity`.
StockKeepingUnit	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The stock keeping unit (SKU) of the associated product.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PickTicketProductFeed on page 39
Feed tracking is available for the object.

PipelineInspectionListView

Represents a pipeline view or saved filter. A pipeline view specifies a set of opportunity records, based on specific criteria. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, enable the Pipeline Inspection user permission and the Pipeline Inspection setting. To create and modify list views, users must have the Create and Customize List Views permission. To create and modify public list views, users must have the Manage Public List Views permission.

Fields

Field	Details
ChangePeriodLiteralType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The date literal associated with the pipeline changes metrics group, used for filtering by a custom time period. Possible values are: • CUSTOM_DATE • FOUR_WEEKS_AGO • ONE_MONTH_AGO • ONE_WEEK_AGO • START_OF_THE_PERIOD • THIS_MONTH • THIS_WEEK • THREE_MONTHS_AGO • THREE_WEEKS_AGO • TWO_MONTHS_AGO • TWO_WEEKS_AGO
ChangePeriodStartDate	**Type** date

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The start date used when filtering by a custom time period for pipeline changes metrics and forecast category metrics groups.
DateLiteralType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The date literal associated with the pipeline and intelligence views, used for filtering by the close date, created date, or activity date. Possible values are: • ALL_TIME • CUSTOM_DATE • DATE_NONE—Available in API version 60.0 and later. • LAST_180_DAYS—Available in API version 60.0 and later. • LAST_365_DAYS—Available in API version 60.0 and later. • LAST_90_DAYS—Available in API version 60.0 and later. • LAST_MONTH • NEXT_FISCAL_QUARTER • NEXT_MONTH • NEXT_WEEK • THIS_FISCAL_QUARTER • THIS_MONTH • THIS_WEEK
EndDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The end date used when filtering by a custom time period for close dates.
IsSystemManaged	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether the system is managing changes to visibility and delete of a pipeline view (`true`) or not (`false`). The default value is `false`.
`ListViewId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The foreign key to the ListView record. This field is unique within your organization. This is a relationship field. **Relationship Name** ListView **Relationship Type** Lookup **Refers To** ListView
`StartDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The start date used when filtering by a custom time period for close dates.
`SummaryField`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The opportunity field specified in a pipeline view to summarize pipeline inspection metrics. Possible values are standard field names or custom field IDs for custom currency and number fields. • `Amount` • `ExpectedRevenue` • `TotalOpportunityQuantity` • ***`custom_field_ID`*** This field is available in API version 56.0 and later.

Field	Details
UserId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The user ID of the user whose opportunities you want to see by default in the Pipeline Inspection list view. This field is a relationship field. This field is available in API version 58.0 and later. **Relationship Name** User **Relationship Type** Lookup **Refers To** User
ViewType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The corresponding API name for the pipeline or intelligence view type. Possible values are: • MY_ACCOUNTS—Available in API version 60.0 and later. • MY_CONTACTS • MY_IMPORTANT_ACCOUNTS—Available in API version 60.0 and later. • MY_IMPORTANT_CONTACTS • MY_IMPORTANT_LEADS • MY_IMPORTANT_OPPORTUNITIES • MY_LEADS • MY_PIPELINE

PipelineInspectionSumField

Use this object to learn which field from the opportunity object is used to aggregate Pipeline Inspection metrics on a pipeline view. This object is available in API version 56.0 and later.

Supported Calls

create(), delete(), describeSObjects(), query(), retrieve(), update(), upsert()

Special Access Rules

To use PipelineInspectionSumField, enable Pipeline Inspection. Users with a Pipeline Inspection user permission, the Customize Application permission or the Modify All Data permission can access this object. To create and modify records, users must have either the Customize Application permission or the Modify All Data permission.

Fields

Field	Details
`SobjectType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The object that stores the summary fields. Possible values are: • `Opportunity`
`SummaryField`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The field used to summarize Pipeline Inspection metrics. Possible values are standard field names or custom field IDs for custom currency and number fields. • `Amount` • `ExpectedRevenue` • `TotalOpportunityQuantity` • custom_field_ID

PipelineInspMetricConfig

Represents the configuration of a forecast category metric that appears in the Pipeline Inspection view. This object is available in API version 55.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Read only. The unique name of a Pipeline Inspection metric configuration in the API.
IsCumulative	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Read only. Whether the metric is cumulative.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Read only. The language of the Pipeline Inspection metric.
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Customized label of the Pipeline Inspection metric. Limit: 50 characters.
Metric	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The Pipeline Inspection metric. Possible values are: • BestCase • ClosedLost • ClosedWon • Commit

Field	Details
	• `MostLikely` • `OpenPipeline` • `TotalPipeline`

PipelineInspMetricConfigLocalization

Represents the translated label of a Pipeline Inspection metric. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`Language`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The language of the Pipeline Inspection metric.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix of the Pipeline Inspection metric language.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the related Pipeline Inspection metric. This field is a relationship field. **Relationship Name** Parent

Field	Details
	Relationship Type Lookup **Refers To** PipelineInspMetricConfig
`Value`	**Type** textarea **Properties** Create, Filter, Sort, Update **Description** The value of the Pipeline Inspection metric.

PlatformAction

PlatformAction is a virtual read-only object. It enables you to query for actions displayed in the UI, given a user, a context, device format, and a record ID. Examples include standard and custom buttons, quick actions, and productivity actions.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
`ActionListContext`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Required. The list context this action applies to. Valid values are: • `Assistant` • `BannerPhoto` • `Chatter` • `Dockable` • `FeedElement` • `Flexipage` • `Global` • `ListView`

Field	Details
	• `ListViewDefinition` • `ListViewRecord` • `Lookup` • `MruList` • `MruRow` • `ObjectHomeChart` • `Photo` • `Record` • `RecordEdit` • `RelatedList` • `RelatedListRecord`
`ActionTarget`	**Type** textarea **Properties** Nillable **Description** The URL to invoke or describe the action when the action is invoked. If the action is a standard button overridden by a Visualforce page, the ActionTarget returns the URL of the Visualforce page, such as `/apex/`*`pagename`*. This field is available in API version 35.0 and later.
`ActionTargetType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of the target when this action is triggered. Valid values are: • `Describe`—applies to actions with a user interface, such as quick actions • `Invoke`—applies to actions with no user interface, such as action links or invocable actions • `Visualforce`—applies to standard buttons overridden by a Visualforce page
`ActionTargetUrl`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** URL to invoke or describe the action when the action is invoked. This field is deprecated in API version 35.0 and later. Use `ActionTarget` instead.

Field	Details
`Category`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Applies only to action links. Denotes whether the action link shows up in the feed item list of actions or the overflow list of actions. Valid values are: • `Primary` • `Overflow`
`ConfirmationMessage`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Applies only to action links. The message to display before the action is invoked. Field is null if no confirmation is required before invoking the action.
`DeviceFormat`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Specifies which action icon the PlatformAction query returns. If this field isn’t specified, it defaults to Phone. Valid values are: • `Aloha` • `Desktop` • `Phone` • `Tablet`
`ExternalId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The unique ID for the PlatformAction. If the action doesn’t have an ID, its API name is used.
`GroupId`	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The unique ID of a group of action links.
`IconContentType`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The content type—such as .jpg, .gif, or .png—of the icon for this action. Applies to both custom and standard icons assigned to actions.
`IconHeight`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The height of the icon for this action. Applies only to standard icons.
`IconUrl`	**Type** url **Properties** Filter, Group, Nillable, Sort **Description** The URL of the icon for this action.
`IconWidth`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The width of the icon for this action. Applies only to standard icons.
`InvocationStatus`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The status of the action within the feed item. Applies to action links only. Valid values are: • `Failed` • `New` • `Pending`

Field	Details
	• `Successful`
`InvokedByUserId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user who most recently invoked this action within the current feed item. Applies to action links only. This is a relationship field. **Relationship Name** InvokedByUser **Relationship Type** Lookup **Refers To** User
`IsGroupDefault`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Denotes whether this action is the default in an action link group. False for other action types. Applies to action links only.
`IsMassAction`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the action can be performed on multiple records. This field is available in API version 38.0 and later.
`Label`	**Type** string **Properties** Filter, Group, Sort **Description** The label to display for this action.

Field	Details
PrimaryColor	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The primary color of the icon for this action.
RelatedListRecordId	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Represents the ID of a record in an object's related list. This field is available in API version 38.0 and later.
RelatedSourceEntity	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** When the `ActionListContext` is RelatedList or RelatedListRecord, this field represents the API name of the related list to which the action belongs.
Section	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The section of the user interface the action resides in. Applicable only to Lightning Experience. Valid values are: • ActivityComposer • CollaborateComposer • NotesComposer • Page • SingleActionLinks This field is available in API version 35.0 and later.
SourceEntity	**Type** string **Properties** Filter, Group, Sort

Field	Details
	Description Required. The object or record with which this action is associated.
`Subtype`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The subtype of the action. For quick actions, the subtype is `QuickActionType`. For custom buttons, the subtype is `WebLinkTypeEnum`. For action links, subtypes are `Api`, `ApiAsync`, `Download`, and `Ui`. Standard buttons and productivity actions have no subtype.
`TargetObject`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The type of object record the action creates, such as a contact or opportunity. This field is available in API version 41.0 and later.
`TargetUrl`	**Type** string **Properties** Filter, Nillable, Sort **Description** The URL that a custom button or link points to. This field is available in API version 41.0 and later.
`Type`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of the action. Valid values are: • `ActionLink`—An indicator on a feed element that targets an API, a web page, or a file, represented by a button in the Salesforce Chatter feed UI. • `CustomButton`—When clicked, opens a URL or a Visualforce page in a window or executes JavaScript. • `InvocableAction`

Field	Details
	• `ProductivityAction`—Productivity actions are predefined and attached to a limited set of objects. Productivity actions include Send Email, Call, Map, View Website, and Read News. Except for the Call action, you can't edit productivity actions. • `QuickAction`—A global or object-specific action. • `StandardButton`—A predefined Salesforce button such as New, Edit, and Delete.

Usage

PlatformAction can be described using describeSObject().

You can directly query for PlatformAction. For example, this query returns all fields for actions associated with each of the records of the listed objects:

```
SELECT ExternalId, ActionTargetType, ActionTargetUrl, ApiName, Category,
      ConfirmationMessage, ExternalId, GroupId, UiTheme, IconUrl, IconContentType,
      IconHeight, IconWidth, PrimaryColor, InvocationStatus, InvokedByUserId,
      IsGroupDefault, Label, LastModifiedDate, Subtype, SourceEntity, Type
FROM PlatformAction
WHERE SourceEntity IN ('001xx000003DGsH', '001xx000003DHBq', 'Task') AND
      ActionListContext = 'Record';
```

Note: To query PlatformAction, provide the `ActionListContext` and `SourceEntity`. If you query for `ActionListContext` with a value of `RelatedList`, and don't specify a `RelatedSourceEntity`, the query returns the API name of the related list. In API v43.0 and before, `SourceEntity = '`***`Object API Name`***`'` and `ActionListContext = 'ListView'` is an invalid combination to fetch quick actions in a SOQL query. Use `SourceEntity = '`***`Object ID`***`'` and `ActionListContext = 'ListView'` instead.

This query uses multiple `ActionListContext` values in its `WHERE` clause to return all actions in the Lightning Experience user interface (`DeviceFormat = 'Desktop'`) for the specified object:

```
SELECT ActionListContext, Label, Type, Subtype, Section, SourceEntity,
     RelatedSourceEntity, ActionTarget, ActionTargetType, ApiName, Category,
     ConfirmationMessage, DeviceFormat, ExternalId, GroupId, IconContentType,
     IconHeight, IconUrl, IconWidth, Id, InvocationStatus, InvokedByUserId,
     IsGroupDefault, LastModifiedDate, PrimaryColor
FROM PlatformAction
WHERE ActionListContext IN ('Record','Chatter','RelatedList') AND
      SourceEntity = '001xx000003DlvX' AND
      DeviceFormat = 'Desktop'
```

PlatformEventUsageMetric

Contains usage data for event publishing and delivery to CometD and Pub/Sub API clients, `empApi` Lightning components, and event relays. If Enhanced Usage Metrics isn't enabled, usage data is available for the last 24 hours, ending at the last hour, and for historical daily usage. In API 58.0 and later, you can enable Enhanced Usage Metrics to get usage data by event name and client for granular time intervals. PlatformEventUsageMetric contains separate usage metrics for platform events and change data capture events. This object is available in API version 50.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
`Client`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** This field is available only when Enhanced Usage Metrics is enabled. The ID of the client. The `Client` field is populated for subscriber clients for event delivery usage. For publisher clients, the `Client` field is populated if the client ID is available; it is empty otherwise. The `Client` field can be one of these values. • For a Streaming API (CometD) client and the empApi Lightning component, the client ID is the ID of the CometD session. • For a Pub/Sub API client, the client ID is in this format: `pub-sub-api-`*`timestamp`*. The timestamp is the current UTC time in milliseconds when the client connection started. • For an event relay, the client ID is in this format: `relay-client-`*`timestamp`*. The timestamp is the current UTC time in milliseconds when the client connection started.
`EndDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The end date and time in UTC used for querying usage metrics. The date granularity is hourly. To get usage data for the last 24 hours, the end date is the current date in UTC. The time is the current time in UTC rounded down to the previous hour. For example, 11:23 is 11:00 and the date format is: 2020-08-04T11:00:00.000Z To get historical data, the end date in UTC is the end of the date range with hours specified as 0. For example: 2020-08-04T00:00:00.000Z. To query a date range, you can use the < or <= operators. For the date format to use, see Date Formats and Date Literals in the *SOQL and SOSL Reference*.
`EventName`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description This field is available only when Enhanced Usage Metrics is enabled. The API name of a custom platform event or a change event. • Custom platform event with the label My Event: `My_Event__e` • Change event example: `AccountChangeEvent` When you query usage metrics for `EventName`, specify the `UsageType` field in the `SELECT` or `WHERE` clause.
`EventType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** This field is available when Enhanced Usage Metrics is enabled. The type of event you would like to query usage metrics for, such as a change event or a custom platform event. Possible values are: • `CHANGE_EVENT`—A Change Data Capture event. • `CUSTOM_PLATFORM_EVENT`—A platform event that an admin defined in your Salesforce org. When you query usage metrics for `EventType`, specify the `UsageType` field in the `SELECT` or `WHERE` clause.
`ExternalId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** This field is not in use.
`Name`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The name of the metric to get usage for. Possible values are: • `CHANGE_EVENTS_DELIVERED`—Number of change data capture events delivered to CometD and Pub/Sub API clients, `empApi` Lightning components, and event relays • `CHANGE_EVENTS_PUBLISHED`—Number of change data capture events published • `PLATFORM_EVENTS_DELIVERED`—Number of platform events delivered to CometD and Pub/Sub API clients, `empApi` Lightning components, and event relays

Field	Details
	• `PLATFORM_EVENTS_PUBLISHED`—Number of platform events published
`StartDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The start date and time in UTC used for querying usage metrics. The date granularity is hourly. To get usage data for the last 24 hours, the start date is the previous day in UTC. The time is the current time in UTC rounded down to the previous hour. For example, 11:23 is 11:00 and the date format is: 2020-08-03T11:00:00.000Z To get historical data, the start date is the start of the date range with hours specified as 0. For example: 2020-08-03T00:00:00.000Z. To specify a date range, you can use the > or >= operators. If Enhanced Usage Metrics is enabled, keep in mind these tips. • Make sure the time span between `StartDate` and `EndDate` is valid for the `TimeSegment` value chosen. • The maximum date range that you can specify between `StartDate` and `EndDate` is 60 days. For the date format to use, see Date Formats and Date Literals in the *SOQL and SOSL Reference*.
`TimeSegment`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** This field is available when Enhanced Usage Metrics is enabled. The time interval used for aggregating usage data returned in the query results. Valid `TimeSegment` values depend on the time range specified with `StartDate` and `EndDate`. Possible values are: <table><tr><th></th><th></th><th></th></tr><tr><td>`Daily`</td><td>Usage data is aggregated for each day within the specified time range.</td><td>Valid only if the time range specified with `StartDate` and `EndDate` in the query is at least 24 hours.</td></tr><tr><td>`Hourly`</td><td>Usage data is aggregated for each hour within the specified time range.</td><td>Valid only if the time range specified with `StartDate` and `EndDate` in the query is between one hour and 24 hours.</td></tr></table>

FifteenMinutes	Usage data is aggregated for each 15-minute period within the specified time range.	Valid only if the time range specified with `StartDate` and `EndDate` in the query is between 15 minutes and one hour.

Field	Details
UsageType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** This field is available when Enhanced Usage Metrics is enabled. The type of event usage metrics to query for, such as event publishing or event delivery. Use this field with the `EventName` or `EventType` fields. Possible values are: • `PUBLISH`—Usage metrics for published events. • `DELIVERY`—Usage metrics for events that were delivered to subscribers.
Value	**Type** long **Properties** Filter, Group, Nillable, Sort **Description** The usage value for the specified metric and date range.

Usage

For more information, see Monitor Platform Event Publishing and Delivery Usage in the *Platform Events Developer Guide*.

PlatformStatusAlertEvent

The documentation has moved to PlatformStatusAlertEvent in the *Platform Events Developer Guide*.

PortalDelegablePermissionSet

PortalDelegablePermissionSet is a base platform object used to store permission sets that can be assigned by a delegated portal/external user admin (DPUA) to portal users. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. The unique string used to identify the record. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language used in the org.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. The unique string to identify the record.
`PermissionSetId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The unique ID of the permission set the DPUA profile can assign to other portal users.
`ProfileId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update

Field	Details
	Description The ID of the DPUA profile.

PresenceConfigDeclineReason

Represents the settings for a decline reason that a presence user provides when declining work. This object is available in API version 37.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `update()`, `query()`, `retrieve()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
`PresenceDeclineReasonId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the PresenceDeclineReason record.
`PresenceUserConfigId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the PresenceUserConfig record where the decline reasons are added.

PresenceDeclineReason

Represents an Omni-Channel decline reason that agents can select when declining work requests. This object is available in API version 37.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `update()`, `query()`, `retrieve()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. **Note:** When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. **Note:** Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`Language`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The language of the PresenceDeclineReason.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort

Field	Details
	Description The label for the PresenceDeclineReason.

PresenceUserConfig

Represents a configuration that determines a presence user's settings. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `update()`, `query()`, `retrieve()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
`AcwExtensionDuration`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The maximum length of time, measured in seconds, an agent can spend on After Conversation Work (ACW) each time they extend the timer. You must set this field if `HasAcwExtensionEnabled` is set to `true`. Specify a value from 10 through 3600. This field is available in API version 56.0 and later.
`AfterConvoWorkMaxTime`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The maximum length of time, measured in seconds, an agent has to complete After Conversation Work (ACW). You must set this field if `HasAfterConvoWorkTimer` is set to `true`. Specify a value from 10 through 3600. This field is available in API version 56.0 and later.

Field	Details
`Capacity`	**Type** int **Properties** Create, Filter, Group, Sort **Description** The maximum number of work units an agent can be assigned at one time.

`CustomSoundId`	**Type**
	reference
	Properties
	Create, Filter, Group, Nillable, Sort, Update
	Relationship Name
	`CustomSound`
	Relationship Type
	Lookup
	Refers To
	`StaticResource`
	Description
	The ID of the static resource for the custom sound selected to play for the `PresenceUserConfig` object.

`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`HasAcwExtensionEnabled`	**Type** boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** If set to `true`, agents can extend their After Conversation Work (ACW) time. Available only if `HasAfterConvoWorkTimer` is set to `true`. If set to `true`, you must also set the `AcwExtensionDuration` and `MaxExtensions` fields. The default value is `true`. This field is available in API version 56.0 and later.
`HasAfterConvoWorkTimer`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** If set to `true`, After Conversation Work (ACW) time can be configured for the channel. If set to `true`, you must also set the `AfterConvoWorkMaxTime` field. The default value is `false`. This field is available in API version 56.0 and later.
`Language`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The language of the presence configuration.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort **Description** The label of the presence configuration.
`MaxExtensions`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The maximum number of times an agent can extend their After Work Conversation (ACW) time. Specify a value from 1 through 10. You must set this field if `HasAcwExtensionEnabled` is set to `true`. This field is available in API version 56.0 and later.

Field	Details
OptionsIsAutoAcceptEnabled	**Type** boolean **Properties** Create, Filter **Description** Indicates whether work items that are routed to agents are automatically accepted (`true`) or not (`false`). Available only if `OptionsIsDeclineEnabled` is set to `false`.
OptionsIsDeclineEnabled	**Type** boolean **Properties** Create, Filter **Description** Indicates whether agents can decline work items that are routed to them (`true`) or not (`false`). Available only if `OptionsIsAutoAcceptEnabled` is set to `false`.
OptionsIsDeclineReasonEnabled	**Type** boolean **Properties** Create, Filter **Description** Indicates whether agents can select a reason for declining work requests (`true`) or not (`false`). This can be selected only if decline reasons are enabled.
OptionsIsDisconnectSoundEnabled	**Type** boolean **Properties** Create, Filter **Description** Indicates whether a sound is played when agents are disconnected from Omni-Channel (`true`) or not (`false`).
OptionsIsRequestSoundEnabled	**Type** boolean **Properties** Create, Filter **Description** Indicates whether a sound plays with incoming work requests (`true`) or not (`false`). Set to `true` by default.
PresenceStatusOnDeclineId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort **Description** The ID of the presence status that's automatically assigned to the agent when the agent declines a work item. Available only if `OptionsIsDeclineEnabled` is set to `true`.
`PresenceStatusOnPushTimeoutId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the presence status that's automatically assigned to the agent when the agent doesn't respond to a work item before push timeout occurs. Available in API version 36.0 and later.
`SoundLength`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The length of time that a sound plays when new work is assigned to an agent.

PresenceUserConfigProfile

Represents a configuration that determines the settings that are assigned to presence users who are assigned to a specific profile. User-level configurations override profile-level configurations. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
PresenceUserConfigId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** If an individual user is also assigned a presence configuration through the PresenceUserConfigProfile, this configuration will override that.
ProfileId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the profile that's associated with this presence configuration. A profile can be associated with only one presence configuration.

PresenceUserConfigUser

Represents a configuration that determines the settings that are assigned to a presence user. These user-level configurations override profile-level configurations. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
PresenceUserConfigId	**Type** reference **Properties** Create, Filter, Group, Sort

Field	Details
	Description The ID of the presence configuration.
UserId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the user who's associated with this presence configuration. A user can be associated with only one presence configuration.

PriceAdjustmentGroupShape

Defines the business logic for a top-level price adjustment, for example, a discount applied to an entire order. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()` `query()`, `retrieve()`

Special Access Rules

This object is available with Subscription Management, B2B Commerce, or B2C Commerce.

Fields

Field	Details
AdjustmentSource	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates the source of the adjustment. This field is available with B2B Commerce. Possible values are: • `Discretionary`—The adjustment is entered manually, for example, by a sales rep. • `Promotion`—The adjustment is part of a promotion. • `Rule`—Reserved for future use. • `System`—The adjustment is configured by the system data, for example, as part of a pricing rule or discount schedule.

Field	Details
AdjustmentType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates whether the adjustment is a percentage, an amount, or an override. Possible values are: • AdjustmentAmount—Reserved for future use. The adjustment value is a numerical amount. • AdjustmentPercentage— The adjustment value is a percentage. • OverrideAmount— The override value is a numerical amount.
AdjustmentValue	**Type** double **Properties** Create, Filter, Nillable, Sort **Description** The value of the adjustment. To indicate a discount, use a negative number.
Description	**Type** textarea **Properties** Create, Nillable **Description** User-entered description of the price adjustment group. Available in API versions 57.0.
PriceAdjustmentCauseId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the record that is the source of the adjustment. For example, if the price adjustment is due to a promotion, this field contains the ID of the promotion record. If the price adjustment is due to a price adjustment tier, this field contains the ID of the price adjustment tier record. This field is a polymorphic relationship field. **Relationship Name** PriceAdjustmentCause **Relationship Type** Lookup

Field	Details
	Refers To PriceAdjustmentTier
PriceAdjustmentGroupShapeName	**Type** string **Properties** Create, Filter, Group, idLookup, Sort **Description** Name of the price adjustment group shape.
Priority	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** A positive integer indicating the order in which this price adjustment group is applied, relative to other price adjustment groups. A `Priority` of `1` indicates this price adjustment group is applied first. Price adjustments with a null priority are applied after price adjustments with a specified priority. If two or more price adjustments have a null priority, percentage adjustments are applied **before** amount adjustments. Applying a percentage adjustment before an amount adjustment results in a larger total adjustment. Note: The value of `Priority` must be unique among price adjustment groups in the same sales transaction.
SalesTransactionShapeId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the sales transaction that the price adjustment group belongs to. This field is a relationship field. **Relationship Name** SalesTransactionShape **Relationship Type** Lookup **Refers To** SalesTransactionShape
TotalAmount	**Type** currency

Field	Details
	Properties Create, Filter, Nillable, Sort **Description** The total amount of adjustments of all related price adjustment items, inclusive of quantity, prorated for the duration of the subscription. This field is a calculated field equal to the sum of the `TotalAmount` fields in the related price adjustment items.

PriceAdjustmentItemShape

Defines the business logic for an item-level price adjustment, for example, a discount on an order item. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available with Subscription Management, B2B Commerce, or B2C Commerce.

Fields

Field	Details
`AdjustmentAmountScope`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Used with `AdjustmentValue` to determine the amount of the adjustment. Possible values are: • `Total`—The adjustment applies to the line item's total and isn't multiplied by the quantity. For example, let's say a sales transaction item quantity is `10` and the `TotalLineAmount` is `1000`. If the price adjustment item has an `AdjustmentValue` of `-10`, an `AdjustmentType` of `AdjustmentAmount`, and an `AdjustmentAmountScope` of `Total`, the $10 discount is applied to the total line amount. The `TotalAmount` of the price adjustment item is $1000 + (-$10) = $990. • `Unit`—The adjustment is multiplied by the line item's quantity.

Field	Details
	For example, let's say a sales transaction item quantity is `5` and the `TotalLineAmount` is `1000`. If the price adjustment item has an `AdjustmentValue` of `-10`, an `AdjustmentType` of `AdjustmentAmount`, and an `AdjustmentAmountScope` of `Unit`, the $10 discount is applied to each line amount. The TotalAmount of the price adjustment item is $1000 + (-$10 x 5) = $950. • `UnproratedTotal`—No adjustment is applied to the line items.
`AdjustmentSource`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates the source of the adjustment. Possible values are: • `Discretionary`— The adjustment is entered manually; for example, by a sales rep. • `Promotion`— The adjustment is a promotion. • `Rule`— Reserved for future use. • `System`— The adjustment is determined by the pricing configuration for the product; for example, as part of a discount schedule.
`AdjustmentType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates whether the adjustment is a percentage, an amount, or an override. Possible values are: • `AdjustmentAmount`—The adjustment value is a numerical amount. • `AdjustmentPercentage`— The adjustment value is a percentage. • `OverrideAmount`— The override value is a numerical amount.
`AdjustmentValue`	**Type** double **Properties** Create, Filter, Nillable, Sort **Description** The value of the adjustment. Used together with `AdjustmentAmountScope` to determine the amount of the adjustment.
`Description`	**Type** textarea

Field	Details
	Properties Create, Nillable **Description** The user-entered description of the price adjustment item. Available in API version 57.0.
`PriceAdjustmentCauseId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the record that caused the adjustment. For example, if the price adjustment is due to a promotion, this field contains the ID of the Promotion record. If the price adjustment is due to a price adjustment tier, this field contains the ID of the `PriceAdjustmentTier` record. This field is a polymorphic relationship field. **Relationship Name** PriceAdjustmentCause **Relationship Type** Lookup **Refers To** PriceAdjustmentTier
`PriceAdjustmentGroupShapeId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** A reference to the object interface or object that summarizes the values from multiple price adjustment items. If the related entity is an object, the object must implement the `PriceAdjustmentGroupShape` object. This field is a relationship field. **Relationship Name** PriceAdjustmentGroupShape **Relationship Type** Lookup **Refers To** PriceAdjustmentGroupShape
`PriceAdjustmentItemShapeName`	**Type** string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort **Description** The name of the price adjustment item shape.
`Priority`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** A positive integer indicating the order in which this price adjustment item is applied, relative to other price adjustment items. A `Priority` of `1` indicates this price adjustment item is applied first. Price adjustments with a null priority are applied after price adjustments with a specified priority. If two or more price adjustments have a null priority, percentage adjustments are applied **before** amount adjustments. Applying a percentage adjustment before an amount adjustment results in a larger total adjustment. Note: The value of `Priority` must be unique among price adjustment items related to the same price adjustment group. For example, you can't have two price adjustment items with a priority of `1`. For example, let's say that two price adjustment items apply to the same item to be priced. The first price adjustment, Spring_Promotion, defines a 10% discount and has `Priority` of `1`. The second price adjustment, Early_Renewal_Discount, defines a $2,000 discount and has a `Priority` of `2`. In this case, the Spring_Promotion price adjustment is applied before the Early_Renewal_Discount price adjustment.
`SalesTransactionItemShapeId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the sales transaction shape item that the price adjustment item applies to. This field is a relationship field. **Relationship Name** SalesTransactionItemShape **Relationship Type** Lookup **Refers To** SalesTransactionItemShape
`TotalAmount`	**Type** currency

Field	Details
	Properties Create, Filter, Nillable, Sort **Description** The total amount of the adjustment that applies to the item to be priced, inclusive of quantity, prorated for the duration of the subscription. For example, let's say the price adjustment item has an `AdjustmentAmountScope` of `Unit`, an `AdjustmentType` of `AdjustmentAmount`, and an `AdjustmentValue` of `-10`. This configuration indicates a $10 per-unit discount. If the subscription is priced for 12 months and the pricing term is `1`, the `PricingTermCount` on the sales transaction item is 12. If the quantity is 5, the value of `TotalAmount` is 5 x 12 x -10 = -600

PriceAdjustmentSchedule

Represents a series of discounts offered depending on your product's configuration, quantity, and when they're purchased in combination with other products. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available when the B2B Commerce license is enabled or when Subscription Management is enabled.

Fields

Field	Details
`AdjustmentMethod`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The method for applying tiered pricing. Possible values are: • `Range`—All items receive the discount of the highest tier the quantity falls in. • `Slab`—Items receive the discount defined for the tier they fall in. The default value is `Range`. Term-based discounts can't be of type `Slab`. This field is available in API version 51.0 and later. The `Slab` method functions in the same way as the `Range` method.

Field	Details
Description	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Text description of the price adjustment schedule.
IsActive	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the price adjustment schedule is active (`true`) or not (`false`). You can change this field's value as often as necessary. Label is **Active**. The default value is `False`.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Indicates whether the price adjustment schedule has been archived (`true`) or not (`false`). This field is read-only.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. The name of the price adjustment schedule. This field is read-only. Label is **Price Adjustment Schedule Name**.
OwnerId	**Type** reference

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** The Salesforce ID of the sales representative who owns the price adjustment schedule.
`ScheduleType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates how the price adjustment is determined. This field is available when Subscription Management is enabled. This field is available in API version 55.0 and later. Possible values are: • `Attribute`—The characteristics or properties of a product determine the price adjustment. • `Bundle`—The price adjustment that is determined when you want to sell a group of products or services as a unit. • `Custom`—The price adjustment that can be customized for the user's needs. • `Term`—The length of the subscription determines the price adjustment. Available in API version 58.0 and later. • `Volume`—The quantity purchased determines the price adjustment. The default value is `Volume`.

Usage

When you create a PriceAdjustmentSchedule, you associate PriceAdjustmentTiers with it. A PriceAdjustmentSchedule is inactive until at least one PriceAdjustmentTier is added to it. A PriceAdjustmentSchedule comprises all related PriceAdjustmentTiers, with a maximum limit of 25 PriceAdjustmentTiers.

To use PriceAdjustmentSchedule, associate it with a PriceBookEntry.

- You can associate a PriceBookEntry with up to five PriceAdjustmentSchedules, but only one PriceAdjustmentSchedule can be associated with a PriceBookEntry.
- When you activate or deactivate a PriceAdjustmentSchedule, its PriceBookEntry association is also activated or deactivated.
- An adjustment to a PriceBookEntry is applied only if the associated PriceAdjustmentSchedule is active.
- After a PriceAdjustmentSchedule is associated with a PriceBookEntry, if multicurrency is enabled, the currencyIsoCode field can't be modified.
- When you associate a PriceAdjustmentSchedule with a PricebookEntry, a junction object PricebookEntryAdjustment is created.

You can modify the PriceAdjustmentTier object, and the `ScheduleType` and `AdjustmentMethod` fields, only when a PriceAdjustmentSchedule is inactive.

Code Sample

```
public void priceAdjustmentScheduleSample()
                {try
                  /* This code snippet will do the following:
   *
   * 1. Create a new Price Adjustment Schedule
   * 2. Create and attach a Price Adjustment Tier to the Schedule
   * 3. Activate the Schedule
   * 4. Create a new PricebookEntry Adjustment. This will associate the Schedule to a
Pricebook Entry. */

  //Create a Price Adjustment Schedule
  PriceAdjustmentSchedule pas = new PriceAdjustmentSchedule();
  pas.Name = 'Sample PAS';
  pas.Description = 'Sample Price Adjustment Schedule';
  pas.AdjustmentMethod = 'Range';
  insert pas;

  //Attach a valid Price Adjustment Tier
  PriceAdjustmentTier pat = new PriceAdjustmentTier();
  pat.PriceAdjustmentScheduleId = pas.Id;
  pat.LowerBound = 1.0;
  pat.UpperBound = 100.0;
  pat.TierType = 'AdjustmentPercentage';
  pat.TierValue = 5.0;
  insert pat;

  //Activate the Schedule
  pas.IsActive = true;
  upsert pas;

  //Create a new PricebookEntry Adjustment
  PricebookEntryAdjustment pbea = new PricebookEntryAdjustment();
  pbea.PricebookEntryId = '01uRM0000007Hb5YAE';
  pbea.PriceAdjustmentScheduleId = pas.Id;
  insert pbea;

 } catch (ConnectionException ce) {
  ce.printStackTrace();
 }
}
```

SEE ALSO:

PriceAdjustmentTier

PricebookEntryAdjustment

PriceAdjustmentTier

Represents a discount tier in a price adjustment schedule. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
`LowerBound`	**Type** double **Properties** Create, Filter, Sort, Update **Description** The minimum quantity the discount can be applied to. It must be a positive integer and less than or equal to the upper bound of the tier.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** For internal use only.
`PriceAdjustmentScheduleId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the price adjustment schedule that the discount is applied to.
`TierType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The unit of the discount. Possible values are: • `AdjustmentAmount`—An amount discounted from an item's list price. Label is Amount.

Field	Details
	• `AdjustmentPercentage`—A percentage discounted from an item's list price. Label is Percentage. • `AdjustmentOverride`—An override of an item's list price. Label is Override.
`TierValue`	**Type** double **Properties** Create, Filter, Sort, Update **Description** The value of the discount.
`UpperBound`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The maximum quantity the discount can be applied to. The quantity must be a positive integer. Not inclusive. Set this value one digit higher than the quantity you want the tier to include. For example, if a tier's upper bound is 99, set the value of `UpperBound` to 100. For the last tier, the value is optional.

Usage

To use PriceAdjustmentTiers, associate them with a PriceAdjustmentSchedule.

Tiers can't overlap, and no gaps are allowed between tiers.

SEE ALSO:

PriceAdjustmentSchedule

Pricebook2

Represents a price book that contains the list of products that your org sells.

Note: Price books are represented by Pricebook2 objects. As of API version 8.0, the Pricebook object is no longer available. Requests containing Pricebook are refused, and responses don't contain the Pricebook object.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Text description of the price book.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the price book is active (`true`) or not (`false`). Inactive price books are hidden in many areas in the user interface. You can change this field's value as often as necessary. Label is **Active**.
`IsArchived`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the price book has been archived (true) or not (false). This field is read only.
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the price book has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
`IsStandard`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the price book is the standard price book for the org (`true`) or not (`false`). Every org has one standard price book—all other price books are custom price books.

Field	Details
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. Name of this object. This field is read-only for the standard price book. Label is **Price Book Name**.
ValidFrom	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time when a Commerce price book is initially valid. If this field is `null`, the price book is valid immediately when active. Available in API version 48.0 and later.
ValidTo	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time when a Commerce price book is valid to. If this field is `null`, the price book is valid until it's deactivated. Available in API version 48.0 and later.

Usage

A price book is a list of products that your org sells.

- Each org has one standard price book that defines the standard or generic list price for each product or service that it sells.
- An org can have multiple custom price books to use for specialized purposes, such as for discounts, different channels or markets, or select accounts or opportunities. While your client application can create, delete, and update custom price books, your client application can only update the standard price book.
- For some orgs, the standard price book is the only price needed. If you set up other price books, you can reference the standard price book when setting up list prices in custom price books.

Use this object to query standard and custom price books that have been configured for your org. A common use of this object is to allow your client application to obtain valid Pricebook2 object IDs for use when configuring PricebookEntry records via the API.

Your client application can perform the following tasks on PricebookEntry objects:

- Query
- Create for the standard price book or custom price books.
- Update
- Delete
- Change the `IsActive` field when creating or updating records

PriceBook2, Product2, and PricebookEntry Relationships

In the API:

- Price books are represented by Pricebook2 records (as of version 8.0, the Pricebook object is no longer available).
- Products are represented by Product2 records (as of version 8.0, the Product object is no longer available).
- Each price book contains zero or more entries (represented by PricebookEntry records) that specify the products that are associated with the price book. A price book entry defines the price for which you sell a product at a particular currency.

These objects are defined only for those orgs that have products enabled as a feature. If the org doesn't have the products feature enabled, the Pricebook2 object doesn't appear in the `describeGlobal()` call, and you can't access it via the API.

If you delete a Pricebook2 while a line item references PricebookEntry in the price book, the line item is unaffected, but the Pricebook2 is archived and unavailable from the API.

For a visual diagram of the relationships between Pricebook2 and other objects, see Product and Schedule Objects.

Price Book Setup

The process of setting up a price book via the API usually means:

1. Load product data into Product2 records (creating one Product2 record for each product that you want to add).
2. For each Product2 record, create a PricebookEntry that links the Product2 record to the standard Pricebook2. Define a standard price for a product at a given currency (if you have multicurrency enabled) before defining a price for that product in the same currency in a custom price book.
3. Create a Pricebook2 record to represent a custom price book.
4. For each Pricebook2 record, creating a PricebookEntry for every Product2 that you want to add, specifying unique properties for each PricebookEntry (such as the `UnitPrice` and `CurrencyIsoCode`) as needed.

Code Sample—Java

```
public void pricebookSample() {
  try {
    //Create a custom pricebook
    Pricebook2 pb = new Pricebook2();
    pb.setName("Custom Pricebok");
    pb.setIsActive(true);
    SaveResult[] saveResults = connection.create(new SObject[]{pb});
    pb.setId(saveResults[0].getId());

    // Create a new product
    Product2 product = new Product2();
    product.setIsActive(true);
    product.setName("Product");
    saveResults = connection.create(new SObject[]{product});
    product.setId(saveResults[0].getId());

    // Add product to standard pricebook
    QueryResult result = connection.query(
        "select Id from Pricebook2 where isStandard=true"
    );
    SObject[] records = result.getRecords();
    String stdPbId = records[0].getId();

    // Create a pricebook entry for standard pricebook
    PricebookEntry pbe = new PricebookEntry();
    pbe.setPricebook2Id(stdPbId);
    pbe.setProduct2Id(product.getId());
    pbe.setIsActive(true);
    pbe.setUnitPrice(100.0);
    saveResults = connection.create(new SObject[]{pbe});

    // Create a pricebook entry for custom pricebook
    pbe = new PricebookEntry();
    pbe.setPricebook2Id(pb.getId());
    pbe.setProduct2Id(product.getId());
    pbe.setIsActive(true);
    pbe.setUnitPrice(100.0);
    saveResults = connection.create(new SObject[]{pbe});
  } catch (ConnectionException ce) {
    ce.printStackTrace();
  }
}
```

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

Pricebook2ChangeEvent (API version 48.0)

Change events are available for the object.

Pricebook2History

History is available for tracked fields of the object.

SEE ALSO:

Product and Price Book Objects

Pricebook2History

Represents historical information about changes that have been made to the standard fields of the associated Pricebook2, or to any custom fields with history tracking enabled. This object is available in API version 60.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Special Access Rules

This object is always read-only.

Fields

Field	Details
`Pricebook2Id`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the Pricebook2 associated with this record. This is a relationship field. **Relationship Name** Pricebook2 **Relationship Type** Lookup **Refers To** Pricebook2
`DataType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Data type of the field that was changed.
`Field`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Name of the price book field that was modified, or a special value to indicate some other modification to the price book.
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). This is a standard system field. Label is **Deleted**.
`NewValue`	**Type** anyType **Properties** Nillable, Sort **Description** New value of the modified price book field. Maximum of 255 characters.
`OldValue`	**Type** anyType **Properties** Nillable, Sort **Description** Previous value of the modified price book field. Maximum of 255 characters.

Usage

Price book history entries are indirectly created each time a price book is modified.

Two rows are added to this record when foreign key fields change. One row contains the foreign key object names that display in the online application. For example, `Jane Doe` is recorded as the name of a Contact. The other row contains the actual foreign key ID that is only returned to and visible from the API.

This object respects field level security on the parent object.

SEE ALSO:

Pricebook2

PricebookEntry

Represents a product entry (an association between a Pricebook2 and Product2) in a price book.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`ActivePriceAdjustmentQuantity`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The count of active price adjustment schedules associated with the price book entry. This field is available in API version 49.0 and later.
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether this price book entry is active (`true`) or not (`false`). Although you can never delete PricebookEntry records, your client application can set this flag to `false`. Inactive PricebookEntry records are hidden in many areas in the user interface. You can change this flag on a PricebookEntry record as often as necessary.

Field	Details
`IsArchived`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the PricebookEntry has been archived (true) or not (false). This field is set to `true` when the Product2 record it's associated with is archived, or when the Pricebook2 record is archived. This field is read only. Available in API version 45.0 and later. Label is **Archived**.
`Name`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Name of this PricebookEntry record. This read-only field references the value in the Name field of the Product2 record. Label is **Product Name**.
`Pricebook2Id`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the Pricebook2 record with which this record is associated. This field must be specified when creating Pricebook2 records. It can't be changed in an update. This field is a relationship field. **Relationship Name** Pricebook2 **Relationship Type** Lookup **Refers To** Pricebook2
`Product2Id`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the Product2 record with which this record is associated. This field must be specified when creating Product2 records. It can't be changed in an update. This is a relationship field.

Field	Details
	Relationship Name Product2 **Relationship Type** Lookup **Refers To** Product2
ProductCode	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Product code for this record. This read-only field references the value in the **ProductCode** field of the associated Product2 record.
ProductSellingModelId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the related product selling model. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled. **Relationship Name** ProductSellingModel **Relationship Type** Lookup **Refers To** ProductSellingModel
UnitPrice	**Type** currency **Properties** Create, Filter, Sort, Update **Description** Required. Unit price for this price book entry. You can specify a value only if `UseStandardPrice` is set to `false`. Label is **List Price**.
UseStandardPrice	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether this price book entry uses the standard price defined in the standard Pricebook2 record (`true`) or not (`false`). If set to `true`, then the `UnitPrice` field is read-only, and the value is the same as the `UnitPrice` value in the corresponding PricebookEntry in the standard price book (that is, the PricebookEntry record whose `Pricebook2Id` refers to the standard price book and whose `Product2Id` and `CurrencyIsoCode` are the same as this record). For PricebookEntry records associated with the standard Pricebook2 record, this field must be set to `true`.

Usage

Use this object to define the association between your organization's products (Product2) and your organization's standard price book or to custom price books (Pricebook2). Create one PricebookEntry record for each standard or custom price and currency combination for a product in a Pricebook2.

When creating these records, you must specify the IDs of the associated Pricebook2 record and Product2 record. Once these records are created, your client application can't update these IDs.

This object is defined only for those organizations that have products enabled as a feature. If the organization doesn't have the products feature enabled, then the PricebookEntry object doesn't appear in the describeGlobal call, and you can't access it.

If you delete a PriceBookEntry that is referenced by a line item, the line item is unaffected, but the PriceBookEntry is archived and unavailable from the API. Deleted PriceBookEntry records can't be recovered.

You must load the standard price for a product before you're permitted to load its custom prices.

Associated Objects

This object has the following associated objects. Unless otherwise noted, they're available in the same API version as this object.

PricebookEntryChangeEvent(API version 57.0)
Change events are available for the object.

PricebookEntryHistory
History is available for tracked fields of the object.

SEE ALSO:

Overview of Salesforce Objects and Fields

PricebookEntryAdjustment

Read-only junction object created when you associate a price adjustment schedule with a price book entry. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** For internal use only.
`PriceAdjustmentScheduleId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the price book entry adjustment.
`PricebookEntryId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the price book entry that this price book entry adjustment is associated with.

SEE ALSO:

PriceAdjustmentSchedule

PrivacyHold

Represents a Privacy Hold that indicates that a record should be preserved from masking or deletion by Data Management policies in Privacy Center. This object is available in API version 59.0 and later.

Use Privacy Hold with Data Management policies in Privacy Center. Add a condition to your policy to exclude records with an active Privacy Hold status from masking or deletion actions.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available for users with the Privacy Center license and the Manage Privacy Hold user permission.

Fields

Field	Details
`EndDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The date the Privacy Hold ends.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if Privacy Hold is active on the record. The default value is `false`.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed.

Field	Details
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the Privacy Hold.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner of the account associated with this customer. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
PrivacyHoldReasonId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the associated Privacy Hold Reason. This field is a relationship field. **Relationship Name** PrivacyHoldReason **Relationship Type** Lookup **Refers To** PrivacyHoldReason
ReferenceRecordId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the record marked for the Privacy Hold.

Field	Details
	This field is a polymorphic relationship field. **Relationship Name** ReferenceRecord **Relationship Type** Lookup **Refers To** Account, Contact, Individual, Lead, User
`ReferenceRecordType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of object the record with the Privacy Hold is associated with. Possible values are: • `Account` • `Contact` • `Individual` • `Lead` • `User`
`RegisteredDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The date the Privacy Hold was added to the record.

PrivacyHoldReason

Represents the business or legal purpose for why a record has a Privacy Hold. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available for users with the Privacy Center license and the Manage Privacy Hold user permission.

Fields

Field	Details
Detail	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The details of the Privacy Hold Reason, such as the business or legal purpose for the hold.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the Privacy Hold Reason.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner of the account associated with this customer. This field is a polymorphic relationship field. **Relationship Name** Owner

Field	Details
	Relationship Type Lookup **Refers To** Group, User

PrivacyJobSession

Represents the status of past, ongoing, and scheduled policy jobs in Privacy Center. This object is available in API version 59.0 and later.

This object is Read-only.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available for users with the Privacy Center license and the Manage Privacy Center Policies user permission.

Fields

Field	Details
`CreationDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time the policy job was created.
`CurrentObject`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the object that the policy job is currently processing.
`EndTime`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The date and time the policy job finished executing.
`FailureLog`	**Type** textarea **Properties** Nillable **Description** The description of why the policy job failed to execute.
`JobStartType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** How the policy job session was started. Possible values are: • `manual` • `scheduled`
`JobStatus`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Represents the status of the policy job session. Possible values are: • `cancelled` • `completed` • `failures` • `inactive` • `running` • `running_next` • `scheduled` • `suspended`
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description Represents the job session record. This is a serialized, automatically generated number field.
OptionsProcessingFailed	**Type** boolean **Properties** Filter **Description** Indicates that the policy job session failed to process the records with the deletion or masking rules in the policy.
OptionsTraversalComplete	**Type** boolean **Properties** Filter **Description** Indicates that the policy job session successfully captured the records targeted by the filters in the policy.
OptionsTraversalFailed	**Type** boolean **Properties** Filter **Description** Indicates that the policy job session failed to capture the records targeted by the filters in the policy.
OwnerId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the owner of the account associated with this customer. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User

Field	Details
PolicyDescription	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The description of the policy the job session is associated with.
PolicyName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the policy the job session is associated with.
PolicyType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of policy the job session is associated with. Possible values are: • `datamanagement`—Data Management. • `datamask`—This policy type is reserved for future use. • `rtbf`— Right to Be Forgotten.
PrivacyPolicyDefinitionId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the policy the job session is executing for. This field is a relationship field. **Relationship Name** PrivacyPolicyDefinition **Relationship Type** Lookup **Refers To** PrivacyPolicyDefinition
PrivacyRtbfRequestId	**Type** reference

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The ID of the Right to Be Forgotten request the policy job is executing for. This field is a relationship field. **Relationship Name** PrivacyRtbfRequest **Relationship Type** Lookup **Refers To** PrivacyRTBFRequest
`ScheduledTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time the policy job session is scheduled to run.
`SerializedPolicy`	**Type** textarea **Properties** Nillable **Description** The serial ID of a snapshot of the policy the job session is for. A snapshot of the policy is taken to maintain consistent metadata for the policy the job is for, in case changes are made to the policy while the job is executing.
`StartTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time the policy job session started executing.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PrivacyJobSessionOwnerSharingRule on page 48
Sharing rules are available for the object.

PrivacyJobSessionShare on page 50
Sharing is available for the object.

PrivacyObjectSession

Represents the status of each object being processed in past, ongoing, and scheduled policy jobs in Privacy Center. This object is available in API version 59.0 and later.

See the status of each object as a policy executes. For example, if a Data Management policy includes an Account object and a Contact object, then a PrivacyObjectSession record is created for each object.

Each object in a policy has five potential queues to enter. The first queue captures and stores records targeted by the policy filters. If the first queue run fails to capture every record, then the object goes through three retry attempts to capture the remaining records. The fifth queue stores the record IDs of any records that weren't captured in any of the four attempts.

This object is Read-only.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available for users with the Privacy Center license and the Manage Privacy Center Policies user permission.

Fields

Field	Details
`CurrentEntity`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the object in the policy.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Represents the job session record. This is a serialized, automatically generated number field.
`ObjectFailureLog`	**Type** textarea

Field	Details
	Properties Nillable **Description** This field is reserved for later use.
ObjectStatus	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The policy execution status for the object. Possible values are: • processing_completed • processing_failed • processing_ongoing • processing_pending • traversal_completed • traversal_failed • traversal_ongoing
OwnerId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the owner of the account associated with the customer that the policy was executed for. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
PolicyNode	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The ID of the object in the serialized policy. This field associates the object session in the policy execution with the coordinating object in the Privacy Center policy.
Position	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Represents a record's position in the batch queue for the object being processed.
PrivacyJobSessionObjectId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the policy job session. This field is a relationship field. **Relationship Name** PrivacyJobSessionObject **Relationship Type** Lookup **Refers To** PrivacyJobSession
ProcessType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of action being executed on the object in the policy. Possible values are: • `delete` • `mask` • `retry_delete` • `retry_mask`
ProcessedFailures	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The number of records the policy execution failed to process.
ProcessedSuccesses	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of records the policy execution successfully processed.
ProcessedTotal	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of records processed in the policy job.
Processor	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the deletion, masking, or traversal processor executing the policy job.
Queue	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** This field is reserved for later use.
QueueLength	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of records in the queue to be processed by the policy job.
RecordsAffected	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The number of records processed by the policy job.
`Retry`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The queue number of the retry session after a failed policy execution attempt. Each attempt to retry the policy execution is put into a retry queue.
`TraversalEndTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The end time of the record-capturing phase for the object session.
`TraversalStartTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The start time of the record-capturing phase for the object session.
`UniqueConstraint`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** For internal use only.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

Sharing rules are available for the object.

PrivacyObjectSessionShare on page 50
Sharing is available for the object.

PrivacyRequest

See details and monitor the status of Data Subject Access Requests made in Privacy Center. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is for Privacy Center customers with the ReadAllData or PrivacyDataAccess permissions.

Fields

Field	Details
`CompletedDateTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time when the request was completed.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it’s possible that this record was referenced (LastReferencedDate) and not viewed.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description The name of the Privacy Request.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner of the account associated with this customer. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
RelatedRecord	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The Data Subject Access Request (DSAR) or Right to Be Forgotten request (RTBF) record related to the request.
StartedDateTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time when the request was started.
Status	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Represents the status of the request. Possible values are: • Approved • Cancelled

Field	Details
	• `Completed` • `Created` • `In Progress` • `Rejected`
`TargetRecord`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The record that is listed in the request.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Represents the type of request that was made. Possible values are: • `DSAR` • `GlobalOptOut` • `RTBF`

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PrivacyRequestFeed on page 39
Feed tracking is available for the object.

PrivacyRequestHistory on page 47
History is available for tracked fields of the object.

PrivacyRequestOwnerSharingRule on page 48
Sharing rules are available for the object.

PrivacyRequestShare on page 50
Sharing is available for the object.

PrivacyRTBFRequest

Represents a Right to Be Forgotten Request made in Privacy Center. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available for users with the Privacy Center license and the Manage Privacy Center Policies user permission.

Fields

Field	Details
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the customer's Right to Be Forgotten request.
`JobRecord`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The record ID that is processed by the Right to Be Forgotten request.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed.
`Name`	**Type** string

Field	Details
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the Right to Be Forgotten request.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner of the account associated with this customer. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`PolicyNameId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The name of the Right to Be Forgotten policy applied to this request. This field is a relationship field. **Relationship Name** PolicyName **Relationship Type** Lookup **Refers To** PrivacyPolicyDefinition
`Status`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Represents the status of the request. Possible values are:

Field	Details
	• `Cancelled` • `Complete` • `Error` • `Pending` • `Scheduled`

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PrivacyRTBFRequestHistory on page 47
History is available for tracked fields of the object.

PrivacyRTBFRequestOwnerSharingRule on page 48
Sharing rules are available for the object.

PrivacyRTBFRequestShare on page 50
Sharing is available for the object.

PrivacySessionRecordFailure

Represents error messages encountered during policy job executions in Privacy Center. This object is available in API version 59.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available for users with the Privacy Center license and the Manage Privacy Center Policies user permission.

Fields

Field	Details
`ErrorMessage`	**Type** textarea **Properties** Nillable **Description** The description of the error encountered during the policy job execution.

Field	Details
ErrorType	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The type of error encountered during the policy job execution.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Represents the job session record. This is a serialized, automatically generated number field.
OwnerId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the owner of the account associated with the customer that the policy was executed for. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
PrivacyObjectSessionId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the object in the policy job session. This field is a relationship field. **Relationship Name** PrivacyObjectSession **Relationship Type** Lookup

Field	Details
	Refers To PrivacyObjectSession
`RecordIdNumber`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID of the record that failed to be processed by the policy job.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PrivacySessionRecordFailureOwnerSharingRule on page 48
Sharing rules are available for the object.

PrivacySessionRecordFailureShare on page 50
Sharing is available for the object.

Problem

Problems represent the root cause data of one or more incidents. This object contains all the details of a problem, documenting the history of the problem from detection to closure. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`Category`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The type of problem. Administrators set field values.

Field	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** A description of the problem. This field can store up to 32 KB of data, but only the first 255 characters appear in reports.
`Impact`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The problem's impact. Possible values are: • `High` • `Low` • `Medium` The default value is 'High'.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time (in UTC) when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time (in UTC) when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view. (`LastReferencedDate`) but not viewed it.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description This is a polymorphic relationship field that represents the user or group assigned to resolve the problem. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`ParentProblemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of a problem above one or more related problems in a problem hierarchy. This is a relationship field. **Relationship Name** ParentProblem **Relationship Type** Lookup **Refers To** Problem
`Priority`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The impact and urgency of the problem. Possible values are: • `Critical` • `High` • `Low` • `Moderate` The default value is 'Critical'.
`PriorityOverrideReason`	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The reason why the priority should be changed or edited.
`ProblemNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The unique, system-generated problem number.
`ResolutionDateTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time (in UTC) when the problem was resolved.
`ResolutionSummary`	**Type** textarea **Properties** Create, Nillable, Update **Description** A description of the steps needed to resolve the incident.
`ResolvedById`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the user who resolved the problem. This is a relationship field. **Relationship Name** ResolvedBy **Relationship Type** Lookup **Refers To** User

Field	Details
RootCauseSummary	**Type** textarea **Properties** Create, Nillable, Update **Description** A description of the problem resolution or root cause. This field can store up to 32 KB of data, but only the first 255 characters display in reports.
Status	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Any custom or granular stages customers wants to track. This will be a dependent picklist. Possible values are: • Closed • Fix in Progress • Known Error • New • Open • Pending Change • Resolved • Root Cause Analysis • Work In Progress The default value is 'New'.
StatusCode	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The status of the problem. Possible values are: • Closed • FixInProgress • KnownError • New • Open • PendingChange

Field	Details
	• `Resolved` • `RootCauseAnalysis` • `WorkInProgress` The default value is 'New'.
`SubCategory`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The type of problem. One level deeper than Category. Administrators set field values.
`Subject`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** A brief description of the problem.
`Urgency`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** A measure of how long a resolution can be delayed until an incident, problem, or change has a significant business impact. Possible values are: • `High` • `Low` • `Medium` The default value is 'High'.

ProblemIncident

Represents a junction object that relates a Problem to an Incident. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
IssueId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** A polymorphic relationship field that represents a related Problem or Incident. This field is a polymorphic relationship field. **Relationship Name** Issue **Relationship Type** Lookup **Refers To** Incident, Problem
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The auto-generated ID of the incident that's related to the problem.
RelatedEntityType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The object type of the related entity. Possible values are: • Incident • Problem
RelatedIssueId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** A polymorphic relationship field that represents a related Problem or Incident. This field is a polymorphic relationship field.

Field	Details
	Relationship Name RelatedIssue **Relationship Type** Lookup **Refers To** Incident, Problem
`RelationshipType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Shows how the Problem and Incident records relate to each other. Possible values are: • `Caused By` • `Similar` The default value is `Caused By`.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProblemIncidentChangeEvent on page 52
Change events are available for the object.

ProblemIncidentFeed on page 39
Feed tracking is available for the object.

ProblemIncidentHistory on page 47
History is available for tracked fields of the object.

ProblemRelatedItem

Represents a junction object that relates a Problem to an Asset. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AssetId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The Asset ID that's linked to the Problem. This field is a relationship field. **Relationship Name** Asset **Relationship Type** Lookup **Refers To** Asset
Comment	**Type** textarea **Properties** Create, Nillable, Update **Description** A description of the problem as it relates to the item.
ImpactLevel	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The related item's impact on the problem. Possible values are: • `High` • `Low` • `Medium` The default value is `High`.
ImpactType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description The effect of the problem-related item on business operations. Possible values are: • `Business-Blocking` • `Not Business-Blocking` • `Partially Business-Blocking` The default value is `Business-Blocking`.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The auto-generated ID of the problem-related item.
`ProblemId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The Problem ID that's related to the Asset. This field is a relationship field. **Relationship Name** Problem **Relationship Type** Lookup **Refers To** Problem

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProblemRelatedItemChangeEvent on page 52
Change events are available for the object.

ProblemRelatedItemFeed on page 39
Feed tracking is available for the object.

ProblemRelatedItemHistory on page 47
History is available for tracked fields of the object.

ProcessDefinition

Represents the definition of a single approval process.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

Portal and communities users with the Customer Community Plus and Partner Community licenses can access this object. All users in org with approvals enabled have read access to ProcessDefinition.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Filter, Nillable, Sort **Description** A description of this process, with a maximum of 3,000 characters.
`DeveloperName`	**Type** string **Properties** Filter, Group, Sort **Description** The external name of the process; the name seen by users.
`LockType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of lock applied to the record being approved. When a record is in the approval process, it's always locked, and only an administrator can edit it. However, the currently assigned approver can also be allowed to edit the record. • Total • Admin • Owner • Workitem • Node • none

Field	Details
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The unique process name, used internally.
State	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The current state of this process. • Active • Inactive • Obsolete
TableEnumOrId	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Specifies the object associated with the approval process, such as Account or Contact.
Type	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The type of this process. • Approval Process—Used to control the action taken for a record. • State-based Process—Used internally to track various control processes, such as for developing Salesforce Knowledge articles.

Usage

Use this object to read the description of an approval process. The definition is read-only.

ProcessException

Represents a business exception, such as a processing failure on an order summary. A separate process is required to resolve the failure that caused the process exception before processing can continue. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`AttachedToId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the object associated with the ProcessException. This field is a polymorphic relationship field. **Relationship Name** AttachedTo **Relationship Type** Lookup **Refers To** CreditMemo, FulfillmentOrder, Invoice, Order, OrderItem, OrderItemSummary, OrderPaymentSummary, OrderSummary, Payment, PaymentAuthorization, Refund, ReturnOrder
`CaseId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the case associated with the ProcessException. This field is a relationship field. **Relationship Name** Case **Relationship Type** Lookup **Refers To** Case

Field	Details
Category	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** ProcessingException type. You can customize the category picklist to represent your business processes. Possible values are: • `Fulfillment` • `Invoicing` • `Order Activation` • `Order Approval` • `Payment` The default value is `Order Activation`.
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only for orgs with the multicurrency feature enabled. Contains the ISO code for the currency of the OrderSummary associated with the ProcessException. Possible values are: • `DKK`—Danish Krone • `EUR`—Euro • `GBP`—British Pound • `USD`—U.S. Dollar The default value is `USD`.
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** Detailed description of the ProcessException.
ExternalReference	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Description of external entities associated with the ProcessException.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.
`Message`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Short description of the ProcessException
`OrderSummaryId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the OrderSummary associated with the ProcessException. The ProcessException component is displayed on this OrderSummary. This field is a relationship field. **Relationship Name** OrderSummary **Relationship Type** Lookup **Refers To** OrderSummary

Field	Details
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the User who currently owns this ProcessException. Default value is the User who created the record. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
Priority	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Resolution priority for the ProcessException. You can customize the priority picklist to represent your business processes. Possible values are: • `High` • `Low` The default value is `Low`.
ProcessExceptionNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The unique name of the ProcessException, formatted as PE-(00000000).
Severity	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Severity of the ProcessException. Each severity value corresponds to one severity category. You can customize the severity picklist to represent your business processes. If you customize the severity picklist, include at least one severity value for each severity category. Possible values are: • `High` • `Low` The default value is `High`.
`SeverityCategory`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Severity category of the ProcessException. Each severity category corresponds to one or more severity values. The severity category is used to show the severity icon in the ProcessException list view. Possible values are: • `HIGH` • `LOW` • `MEDIUM`
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Status of the ProcessException. Each status corresponds to one status category, shown here in parentheses. You can customize the status picklist to represent your business processes. If you customize the status picklist, include at least one status value for each status category. Possible values are: • `Ignored` (Inactive) • `New` (Active) • `Paused` (Inactive) • `Resolved` (Resolved) • `Triaged` (Active) • `Voided` (Inactive) The default value is `New`.

Field	Details
StatusCategory	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Status category of the ProcessException. Each status category corresponds to one or more statuses. Possible values are: • ACTIVE • INACTIVE • RESOLVED

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProcessExceptionOwnerSharingRule
Sharing rules are available for the object.

ProcessExceptionOwnerSharingRule
Sharing rules are available for the object.

ProcessFlowMigration

Represents a process's migrated criteria and the resulting migrated flow. This object is available in API version 58.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
DeveloperName	**Type** string **Properties** Filter, Group, Sort

Field	Details
	Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores.
`Language`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Lanaguage of the `MasterLabel`. Possible values are: • `af`—Afrikaans • `am`—Amharic • `ar`—Arabic • `ar_AE`—Arabic (United Arab Emirates) • `ar_BH`—Arabic (Bahrain) • `ar_DZ`—Arabic (Algeria) • `ar_EG`—Arabic (Egypt) • `ar_IQ`—Arabic (Iraq) • `ar_JO`—Arabic (Jordan) • `ar_KW`—Arabic (Kuwait) • `ar_LB`—Arabic (Lebanon) • `ar_LY`—Arabic (Libya) • `ar_MA`—Arabic (Morocco) • `ar_OM`—Arabic (Oman) • `ar_QA`—Arabic (Qatar) • `ar_SA`—Arabic (Saudi Arabia) • `ar_SD`—Arabic (Sudan) • `ar_SY`—Arabic (Syria) • `ar_TN`—Arabic (Tunisia) • `ar_YE`—Arabic (Yemen) • `bg`—Bulgarian • `bn`—Bengali • `bs`—Bosnian • `ca`—Catalan • `cs`—Czech • `cy`—Welsh • `da`—Danish

Field	Details
	• de—German • de_AT—German (Austria) • de_BE—German (Belgium) • de_CH—German (Switzerland) • de_LU—German (Luxembourg) • el—Greek • el_CY—Greek (Cyprus) • en_AE—English (United Arab Emirates) • en_AU—English (Australian) • en_BE—English (Belgium) • en_CA—English (Canadian) • en_CY—English (Cyprus) • en_DE—English (Germany) • en_GB—English (UK) • en_HK—English (Hong Kong) • en_IE—English (Ireland) • en_IL—English (Israel) • en_IN—English (Indian) • en_MT—English (Malta) • en_MY—English (Malaysian) • en_NL—English (Netherlands) • en_NZ—English (New Zealand) • en_PH—English (Phillipines) • en_SG—English (Singapore) • en_US—English • en_ZA—English (South Africa) • es—Spanish • es_AR—Spanish (Argentina) • es_BO—Spanish (Bolivia) • es_CL—Spanish (Chile) • es_CO—Spanish (Colombia) • es_CR—Spanish (Costa Rica) • es_DO—Spanish (Dominican Republic) • es_EC—Spanish (Ecuador) • es_GT—Spanish (Guatemala) • es_HN—Spanish (Honduras) • es_MX—Spanish (Mexico) • es_NI—Spanish (Nicaragua)

Field	Details
	• es_PA—Spanish (Panama) • es_PE—Spanish (Peru) • es_PR—Spanish (Puerto Rico) • es_PY—Spanish (Paraguay) • es_SV—Spanish (El Salvador) • es_US—Spanish (United States) • es_UY—Spanish (Uruguay) • es_VE—Spanish (Venezuela) • et—Estonian • eu—Basque • fa—Farsi • fi—Finnish • fr—French • fr_BE—French (Belgium) • fr_CA—French (Canadian) • fr_CH—French (Switzerland) • fr_LU—French (Luxembourg) • fr_MA—French (Morocco) • ga—Irish • gu—Gujarati • haw—Hawaiian • hi—Hindi • hmn—Hmong • hr—Croatian • ht—Haitian Creole • hu—Hungarian • hy—Armenian • in—Indonesian • is—Icelandic • it—Italian • it_CH—Italian (Switzerland) • iw—Hebrew • ja—Japanese • ji—Yiddish • ka—Georgian • kk—Kazakh • kl—Greenlandic • km—Khmer

Field	Details
	• kn—Kannada • ko—Korean • lb—Luxembourgish • lt—Lithuanian • lv—Latvian • mi—Te reo • mk—Macedonian • ml—Malayalam • mr—Marathi • ms—Malay • mt—Maltese • my—Burmese • nl_BE—Dutch (Belgium) • nl_NL—Dutch • no—Norwegian • pa—Punjabi • pl—Polish • pt_BR—Portuguese (Brazil) • pt_PT—Portuguese (European) • rm—Romansh • ro—Romanian • ro_MD—Romanian (Moldova) • ru—Russian • ru_AM—Russian (Armenia) • ru_BY—Russian (Belarus) • ru_KG—Russian (Kyrgyzstan) • ru_KZ—Russian (Kazakhstan) • ru_LT—Russian (Lithuania) • ru_MD—Russian (Moldova) • ru_PL—Russian (Poland) • ru_UA—Russian (Ukraine) • sh—Serbian (Latin) • sh_ME—Montenegrin • sk—Slovak • sl—Slovene • sm—Samoan • sq—Albanian • sr—Serbian (Cyrillic)

Field	Details
	• `sv`—Swedish • `sw`—Swahili • `ta`—Tamil • `te`—Telugu • `th`—Thai • `tl`—Tagalog • `tr`—Turkish • `uk`—Ukrainian • `ur`—Urdu • `vi`—Vietnamese • `xh`—Xhosa • `zh_CN`—Chinese (Simplified) • `zh_HK`—Chinese (Hong Kong) • `zh_MY`—Chinese (Malaysia) • `zh_SG`—Chinese (Singapore) • `zh_TW`—Chinese (Traditional) • `zu`—Zulu
`MasterLabel`	**Type** string **Properties** Filter, Group, Sort **Description** The label for the ProcessFlowMigration.
`MigratedCriteriaLabel`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The label of the criteria that was migrated.
`MigratedCriteriaName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the criteria that was migrated.

Field	Details
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace of the package containing the process flow migration object.

ProcessInstance

Represents an instance of a single, end-to-end approval process. Use this and the node, step, and workitem process instance objects to create approval history reports.

Note: Exceptions apply to approval history data retrieved with this object and are available only via SOAP API. For each approval process instance that was pending when Summer '14 became available for your organization, some field values are never populated or are populated only after the rollout. Other fields are populated only after the approval process instance is next acted upon—such as when a user approves, rejects, or reassigns an approval request—after the Summer '14 rollout.

For approval process instances that were completed before the Summer '14 rollout, all Process Instance fields are automatically populated, with one exception: `CompletedDate` is never populated for approval process instances that were completed before January 1, 2013. For approval process instances that were pending during the Summer '14 rollout, all ProcessInstance fields are automatically populated, with two exceptions: `CompletedDate` and `LastActorId` are populated only after the approval process instance is complete.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
`CompletedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The completion date and time of the approval process. The `ElapsedTimeDay`, `ElapsedTimeHours`, and `ElapsedTimeMinutes` field values are calculated using `CompletedDate`.
`ElapsedTimeInDays`	**Type** double **Properties** Filter, Nillable, Sort

Field	Details
	Description The total elapsed time in days between when the approval process instance was started and now.
ElapsedTimeInHours	**Type** double **Properties** Filter, Nillable, Sort **Description** The total elapsed time in hours between when the approval process instance was started and now.
ElapsedTimeInMinutes	**Type** double **Properties** Filter, Nillable, Sort **Description** The total elapsed time in minutes between when the approval process instance was started and now.
LastActorId	**Type** reference **Properties** Group, Filter, Nillable, Sort **Description** The last actor that approved, rejected, or recalled the process. This is a relationship field. **Relationship Name** LastActor **Relationship Type** Lookup **Refers To** User
ProcessDefinitionId	**Type** reference **Properties** Group, Filter, Sort **Description** The ID of this approval process instance. This is a relationship field.

Field	Details
	Relationship Name ProcessDefinition **Relationship Type** Lookup **Refers To** ProcessDefinition
Status	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The status of this approval process instance, for example Started, Pending, or Approved.
SubmittedById	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user who submitted the approval process. This is a relationship field. **Relationship Name** SubmittedBy **Relationship Type** Lookup **Refers To** User
TargetObjectId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the object affected by this approval process instance. This is a polymorphic relationship field. **Relationship Name** TargetObject **Relationship Type** Lookup

Field	Details
	Refers To Account, Accreditation, ActivationTarget, Address, AlternativePaymentMethod, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, AuthorizationForm, AuthorizationFormConsent, AuthorizationFormDataUse, AuthorizationFormText, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CodeSet, CodeSetBundle, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConsumptionRate, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContactPointAddress, ContactPointConsent, ContactPointEmail, ContactPointPhone, ContactPointTypeConsent, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, CreditMemoLine, DataStream, DataUseLegalBasis, DataUsePurpose, DelegatedAccount, DigitalSignature, DocumentChecklistItem, DuplicateRecordItem, DuplicateRecordSet, EmailMessage, EngagementChannelType, EnrollmentEligibilityCriteria, ExternalEventMapping, HealthCareDiagnosis, HealthCareProcedure, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Identifier, IdentityDocument, Image, IndividualApplication, Invoice, InvoiceLine, Lead, Location, LocationTrustMeasure, MarketSegment, MarketSegmentActivation, MemberPlan, MessagingEndUser, MessagingSession, MktCalculatedInsight, Opportunity, Order, OrgMetricScanResult, OrgMetricScanSummary, OtherComponentTask, PartyConsent, PaymentAuthAdjustment, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, PromptAction, PurchaserPlan, PurchaserPlanAssn, QuickTextUsage, Quote, ReceivedDocument, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderItemAdjustment, ReturnOrderItemTax, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SharingRecordCollection, SharingRecordCollectionItem, SharingRecordCollectionMember, Shift, Shipment, ShipmentItem, SkillRequirement, SocialPost, Solution, StreamingChannel, UnitOfMeasure, UserProvisioningRequest, VideoCall, VideoCallParticipant, VideoCallRecording, Visit, VisitedParty, Visitor, VolunteerProject, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup, WorkTypeGroupMember

Usage

Use this object to query or retrieve an approval process.

The following SOQL query returns details for all the ProcessInstanceStep records related to individual ProcessInstance records. The nested query references `Steps`, which is the child `relationshipName` for ProcessInstanceStep in the ProcessInstance object.

```
SELECT Id, (SELECT Id, StepStatus, Comments FROM Steps)
FROM ProcessInstance
```

The following SOQL query returns details for all the ProcessInstanceWorkitem records related to individual ProcessInstance records. The nested query references `Workitems`, which is the child `relationshipName` for ProcessInstanceWorkitem in the ProcessInstance object.

```
SELECT Id, (SELECT Id, ActorId, ProcessInstanceId FROM Workitems)
FROM ProcessInstance
```

ProcessInstanceHistory can help provide a unified read-only view of the ProcessInstanceStep and ProcessInstanceWorkitem objects.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProcessInstanceHistory
History is available for tracked fields of the object.

ProcessInstanceChangeEvent (API Version 58.0)
Change events are available for the object.

SEE ALSO:

ProcessInstanceHistory

ProcessInstanceStep

ProcessInstanceWorkitem

ProcessInstanceHistory

This read-only object shows all steps and pending approval requests associated with an approval process (ProcessInstance).

Supported Calls

`describeSObjects()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Fields

Field	Details
ActorId	**Type** reference

Field	Details
	Properties Filter, Group, Sort **Description** ID of the user who is currently assigned to this ProcessInstance. This is a polymorphic relationship field. **Relationship Name** Actor **Relationship Type** Lookup **Refers To** Group, User
`Comments`	**Type** string **Properties** Filter, Nillable, Sort **Description** Comments for a ProcessInstanceStep. This field doesn't apply to ProcessInstanceWorkitem records.
`ElapsedTimeInDays`	**Type** double **Properties** Filter, Nillable, Sort **Description** The total time in days between when the approval process instance was started and when it was completed.
`ElapsedTimeInHours`	**Type** double **Properties** Filter, Nillable, Sort **Description** The total time in hours between when the approval process instance was started and when it was completed.
`ElapsedTimeInMinutes`	**Type** double **Properties** Filter, Nillable, Sort

Field	Details
	Description The total time in minutes between when the approval process instance was started and when it was completed.
`IsPending`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the ProcessInstance is pending (`true`) or not (`false`).
`OriginalActorId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the user who was originally assigned this ProcessInstance. This is a polymorphic relationship field. **Relationship Name** OriginalActor **Relationship Type** Lookup **Refers To** Group, User
`ProcessInstanceId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the ProcessInstance. This is a relationship field. **Relationship Name** ProcessInstance **Relationship Type** Lookup **Refers To** ProcessInstance
`ProcessNodeId`	**Type** reference

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** ID of this step. This is a relationship field. **Relationship Name** ProcessNode **Relationship Type** Lookup **Refers To** ProcessNode
RemindersSent	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Number of reminders that have been sent. Default is 0 (zero).
StepStatus	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates the current status of the ProcessInstanceStep.
TargetObjectId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the object being approved. This is a polymorphic relationship field. **Relationship Name** TargetObject **Relationship Type** Lookup **Refers To** Account, Accreditation, ActivationTarget, Address, AlternativePaymentMethod, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset,

Field	Details
	AssetRelationship, AssignedResource, AuthorizationForm, AuthorizationFormConsent, AuthorizationFormDataUse, AuthorizationFormText, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CodeSet, CodeSetBundle, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConsumptionRate, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContactPointAddress, ContactPointConsent, ContactPointEmail, ContactPointPhone, ContactPointTypeConsent, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, CreditMemoLine, DataStream, DataUseLegalBasis, DataUsePurpose, DelegatedAccount, DigitalSignature, DocumentChecklistItem, DuplicateRecordItem, DuplicateRecordSet, EmailMessage, EngagementChannelType, EnrollmentEligibilityCriteria, ExternalEventMapping, HealthCareDiagnosis, HealthCareProcedure, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Identifier, IdentityDocument, Image, IndividualApplication, Invoice, InvoiceLine, Lead, Location, LocationTrustMeasure, MarketSegment, MarketSegmentActivation, MemberPlan, MessagingEndUser, MessagingSession, MktCalculatedInsight, Opportunity, Order, OrgMetricScanResult, OrgMetricScanSummary, OtherComponentTask, PartyConsent, PaymentAuthAdjustment, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, PromptAction, PurchaserPlan, PurchaserPlanAssn, QuickTextUsage, ReceivedDocument, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderItemAdjustment, ReturnOrderItemTax, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SharingRecordCollection, SharingRecordCollectionItem, SharingRecordCollectionMember, Shift, Shipment, ShipmentItem, SkillRequirement, SocialPost, Solution, StreamingChannel, UnitOfMeasure, UserProvisioningRequest, VideoCall, VideoCallParticipant, VideoCallRecording, Visit, VisitedParty, Visitor, VolunteerProject, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup, WorkTypeGroupMember

Usage

This object helps you replicate the related list functionality of the Salesforce user interface for approval processes. Use ProcessInstanceHistory for a unified read-only view of the ProcessInstanceStep and ProcessInstanceWorkitem objects. You can't queryProcessInstanceHistory. Instead, you can query ProcessInstanceHistory by including it in a nested query on the parent ProcessInstance object. For example, the following SOQL query returns all the ProcessInstanceHistory records related to individual ProcessInstance records. The nested query references `StepsAndWorkitems`, which is the child `relationshipName` for ProcessInstanceHistory in the ProcessInstance object.

```
SELECT Id, (SELECT Id, StepStatus, Comments FROM StepsAndWorkitems)
FROM ProcessInstance
```

This object respects field-level security on the parent object.

SEE ALSO:

ProcessInstance

ProcessInstanceStep

ProcessInstanceWorkitem

ProcessInstanceNode

Represents a step in an instance of an approval process. Compare to ProcessNode, which describes the step in a process definition. Use this object to retrieve approval history.

Note: Exceptions apply to approval history data retrieved with this object and are available only via SOAP API. For each approval process instance that was pending when Summer '14 became available for your organization, some field values are never populated or are populated only after the rollout. Other fields are populated only after the approval process instance is next acted upon—such as when a user approves, rejects, or reassigns an approval request—after the Summer '14 rollout.

ProcessInstanceNode fields are never populated for approval process instances that were completed before the Summer '14 rollout. For approval process instances that were pending during the Summer '14 rollout, all ProcessInstanceNode fields are populated only after the approval process instance is next acted upon after the Summer '14 rollout.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
`CompletedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The completion date and time of this step in the approval process. The `ElapsedTimeDay`, `ElapsedTimeHours`, and `ElapsedTimeMinutes` field values are calculated using `CompletedDate`.
`ElapsedTimeInDays`	**Type** double

Field	Details
	Properties Filter, Nillable, Sort **Description** The total time in days since this step was started.
ElapsedTimeInHours	**Type** double **Properties** Filter, Nillable, Sort **Description** The total time in hours since this step was started.
ElapsedTimeInMinutes	**Type** double **Properties** Filter, Nillable, Sort **Description** The total time in minutes since this step was started.
LastActorId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The last actor that approved or rejected this step. This is a relationship field. **Relationship Name** LastActor **Relationship Type** Lookup **Refers To** User
NodeStatus	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The status of this approval instance, for example Started, Pending, or Approved.

Field	Details
ProcessInstanceId	**Type** reference **Properties** Filter, Group, Sort **Description** The approval process this step is part of. This is a relationship field. **Relationship Name** ProcessInstance **Relationship Type** Lookup **Refers To** ProcessInstance
ProcessNodeId	**Type** reference **Properties** Filter, Group, Sort **Description** The identifier for this step. This is a relationship field. **Relationship Name** ProcessNode **Relationship Type** Lookup **Refers To** ProcessNode
ProcessNodeName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of this step. Important: The contents of this field can be publicly viewed.

ProcessInstanceStep

Represents one work item in an approval process (ProcessInstance).

Note: Exceptions apply to approval history data retrieved with this object and are available only via SOAP API. For each approval process instance that was pending when Summer '14 became available for your organization, some field values are never populated or are populated only after the rollout. Other fields are populated only after the approval process instance is next acted upon—such as when a user approves, rejects, or reassigns an approval request—after the Summer '14 rollout.

ProcessInstanceStep fields are never populated for approval process instances that were completed before the Summer '14 rollout. For approval process instances that were pending during the Summer '14 rollout, all ProcessInstanceStep fields are populated only after the approval process instance is next acted upon after the Summer '14 rollout.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
`ActorId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the user who is currently assigned to this approval step. This is a polymorphic relationship field. **Relationship Name** Actor **Relationship Type** Lookup **Refers To** Group, User
`Comments`	**Type** string **Properties** Filter, Nillable, Sort **Description** Limit: 4,000 bytes. Important: The contents of this field can be publicly viewed.
`ElapsedTimeInDays`	**Type** double **Properties** Filter, Nillable, Sort

Field	Details
	Description The total time in days since this step was started.
ElapsedTimeInHours	**Type** double **Properties** Filter, Nillable, Sort **Description** The total time in hours since this step was started.
ElapsedTimeInMinutes	**Type** double **Properties** Filter, Nillable, Sort **Description** The total time in minutes since this step was started.
OriginalActorId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the user who was originally assigned to this approval step. This is a polymorphic relationship field. **Relationship Name** OriginalActor **Relationship Type** Lookup **Refers To** Group, User
ProcessInstanceId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the ProcessInstance that this approval step belongs to. This is a relationship field. **Relationship Name** ProcessInstance

Field	Details
	Relationship Type Lookup **Refers To** ProcessInstance
`StepNodeId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the node currently assigned to this approval step.
`StepStatus`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The current status of this approval step. • Approved • Fault • Held • NoResponse • Pending • Reassigned • Rejected • Removed • Started If the approval step requires unanimous approval and one approver rejects the request, the value of this field for the other approvers changes to NoResponse. Likewise, if approval is based on the first response and an approver responds, the value of this field for the other approvers changes to NoResponse.

Usage

Query or retrieve a new step in an approval process (ProcessInstance).

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProcessInstanceStepChangeEvent (API Version 58.0)
Change events are available for the object.

SEE ALSO:
ProcessInstance
ProcessInstanceHistory
ProcessInstanceWorkitem

ProcessInstanceWorkitem

Represents a user's pending approval request.

Note: Exceptions apply to approval history data retrieved with this object and are available only via SOAP API. For each approval process instance that was pending when Summer '14 became available for your organization, some field values are never populated or are populated only after the rollout. Other fields are populated only after the approval process instance is next acted upon—such as when a user approves, rejects, or reassigns an approval request—after the Summer '14 rollout.

ProcessInstanceWorkitem fields are never populated for approval process instances that were completed before the Summer '14 rollout. For approval process instances that were pending during the Summer '14 rollout, all ProcessInstanceWorkitem fields are populated after the approval process instance is next acted upon after the Summer '14 rollout, with three exceptions. The `ElapsedTimeInDays`, `ElapsedTimeInHours`, and `ElapsedTimeInMinutes` fields are never populated in ProcessInstanceWorkitem records for which equivalent ProcessInstanceStep records were created before the Summer '14 rollout.

For all other ProcessInstanceWorkitem records, these three fields are populated after the approval process instance is next acted upon after the Summer '14 rollout.

ProcessInstanceHistory combines fields from ProcessInstanceStep and ProcessInstanceWorkitem. As a result, incorrect elapsed times of 0 can appear in ProcessInstanceHistory records because the elapsed time fields were never populated in the related ProcessInstanceWorkitem record.

Note: Knowledge articles use ProcessInstanceWorkitem records to track the article history, so ProcessInstanceWorkitems records associated with Knowledge articles can't be deleted.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

Fields

Field	Details
`ActorId`	**Type** reference **Properties** Filter, Group, Sort, Update **Description** ID of the user responsible for approving an approval request.

Field	Details
	This field is a polymorphic relationship field. **Relationship Name** Actor **Relationship Type** Lookup **Refers To** Group, User
ElapsedTimeInDays	**Type** double **Properties** Filter, Nillable, Sort **Description** The total time in days since this approval request was started.
ElapsedTimeInHours	**Type** double **Properties** Filter, Nillable, Sort **Description** The total time in hours since this approval request was started.
ElapsedTimeInMinutes	**Type** double **Properties** Filter, Nillable, Sort **Description** The total time in minutes since this approval request was started.
OriginalActorId	**Type** reference **Properties** Filter, Group, Sort, Update **Description** ID of the user originally assigned this approval request. This field is a polymorphic relationship field. **Relationship Name** OriginalActor **Relationship Type** Lookup

Field	Details
	Refers To Group, User
ProcessInstanceId	**Type** reference **Properties** Filter, Group, Sort, Update **Description** ID of the ProcessInstance associated with this approval request. This field is a relationship field. **Relationship Name** ProcessInstance **Relationship Type** Lookup **Refers To** ProcessInstance

Usage

Use this object to manage a pending approval request for a user.

SEE ALSO:

ProcessInstance

ProcessInstanceHistory

ProcessInstanceStep

ProcessNode

Describes a step in a process definition. Compare to ProcessInstanceNode, which describes the step in a running process. This object is available in API version 31.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
`Description`	**Type** textarea **Properties** Filter, Nillable, Sort **Description** A description of this node, no longer than 3,000 bytes.
`DeveloperName`	**Type** string **Properties** Filter, Group, Sort **Description** The external name of the node that's seen by users.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The unique node name.
`ProcessDefinitionId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the object affected by this approval instance. A relationship field. **Relationship Name** ProcessDefinition **Relationship Type** Lookup **Refers To** ProcessDefinition

Usage

Use this object to get the description of a process definition.

This SOQL query returns details for all the ProcessInstanceStep records related to individual ProcessInstance records. The nested query references `Steps`, which is the child `relationshipName` for ProcessInstanceStep in the ProcessInstance object.

```
SELECT Id, (SELECT Id, StepStatus, Comments FROM Steps)
   FROM ProcessInstance
```

This SOQL query returns details for all the ProcessInstanceWorkitem records related to individual ProcessInstance records. The nested query references `Workitems`, which is the child `relationshipName` for ProcessInstanceWorkitem in the ProcessInstance object.

```
SELECT Id, (SELECT Id, ActorId, ProcessInstanceId FROM Workitems)
   FROM ProcessInstance
```

ProcessInstanceHistory can help provide a unified read-only view of the ProcessInstanceStep and ProcessInstanceWorkitem objects.

ProducerCommission

Represents a producer's commission for an insurance policy. The commission can be calculated from the commissionable transactions or can be populated from an external system. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`CommissionableAmount`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** The amount on which the commission is applied. This can be a transaction amount or a portion of the premium.
`CommissionAmount`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** The calculated commission amount for the insurance policy transaction.
`CommissionScheduleId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The ID of the associated Commission Schedule, which is the commission calculation tied to the product or producer. This is a relationship field. **Relationship Name** CommissionSchedule **Relationship Type** Lookup **Refers To** CommissionSchedule
`InsurancePolicyAssetId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The insured item for which the commission was calculated. This is a relationship field. **Relationship Name** InsurancePolicyAsset **Relationship Type** Lookup **Refers To** InsurancePolicyAsset
`InsurancePolicyCoverageId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the policy coverage for which the commission was calculated. This is a relationship field. **Relationship Name** InsurancePolicyCoverage **Relationship Type** Lookup **Refers To** InsurancePolicyCoverage
`InsurancePolicyId`	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The insurance policy for which the commission was calculated. This is a relationship field. **Relationship Name** InsurancePolicy **Relationship Type** Lookup **Refers To** InsurancePolicy
`InsurancePolicyTransactionId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The transaction for which the commission record was created. This is a relationship field. **Relationship Name** InsurancePolicyTransaction **Relationship Type** Lookup **Refers To** InsurancePolicyTransaction
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.

Field	Details
MaxCommissionAmount	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** The maximum commission calculated for the product or producer for a commissionable event. Constrains the output from the commission schedule.
MinCommissionAmount	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** The minimum commission calculated for the product or producer for a commissionable event. Constrains the output from the commission schedule.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the producer commission.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the record owner. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
ParentProducerCommissionId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The original commission record that was adjusted or modified. This is a relationship field. **Relationship Name** ParentProducerCommission **Relationship Type** Lookup **Refers To** ProducerCommission
PaymentDatetime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date on which the commission was paid.
ProcessingProducerId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The producer who performed the commissionable event. This is a relationship field. **Relationship Name** ProcessingProducer **Relationship Type** Lookup **Refers To** Producer
ProducerId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The producer, broker, brokerage, or other user who receives the commission. This is a polymorphic relationship field. **Relationship Name** Producer

Field	Details
	Relationship Type Lookup **Refers To** Account, Contact, Producer
ProducerProductionCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The production code for the producer who performs the commissionable event.
SourceSystem	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The system from which the producer commission record was sourced.
SourceSystemIdentifier	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The ID of the producer commission record in the source system. This field is unique within your organization.
Status	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Specifies the status of the commission payment. Possible values are: • Disputed • Paid • Pending • Reversed
Type	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Specifies the type of commission paid to a producer, account, or contact for a commissionable transaction. Possible values are: • `Advance` • `Bonus` • `Chargeback` • `Commission` • `Contingent Commission`

Product2

Represents a product that your company sells.

This object has several fields that are used only for quantity and revenue schedules (for example, annuities). Schedules are available only for orgs that have enabled the products and schedules features. If these features aren't enabled, the schedule fields don't appear , and you can't query, create, or update the fields.

Note: Product2 objects represent products. As of API version 8.0, the Product object is no longer available. Requests that contain Product are refused, and responses don't contain the Product object.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The ConfigureDuringSale and IsSoldOnlyWithOtherProds fields are available in version 58.0 and later when Industry Automotive or Subscription Management is enabled.

Fields

Field	Details
`BillingPolicyId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The ID of the related billing policy. This field is available when Subscription Management is enabled. This field is available in API version 55.0 and later. This field is a relationship field. **Relationship Name** BillingPolicy **Relationship Type** Lookup **Refers To** BillingPolicy
`CanUseQuantitySchedule`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the product can have a quantity schedule (`true`) or not (`false`). Label is **Quantity Scheduling Enabled**.
`CanUseRevenueSchedule`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the product can have a revenue schedule (`true`) or not (`false`). Label is **Revenue Scheduling Enabled**.
`ConnectionReceivedId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.
`ConnectionSentId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than

Field	Details
	15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.
`ConfigureDuringSale`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Determines whether a user can edit a configuration when creating a bundle order or quote. This field is available in API version 58.0 and later. This field is available when Industries Automotive or Subscription Management is enabled. Possible values are: • `Allowed`— Changes are allowed while adding line items to a bundle; for example, when adding products or editing quantity. • `NotAllowed`—Changes are not allowed.
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the org.
`Description`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** A text description of this record. Label is **Product Description**.
`DisplayUrl`	**Type** url **Properties** Create, Filter, Nillable, Sort, Update **Description** URL leading to a specific version of a record in the linked external data source.
`ExternalDataSourceId`	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** ID of the related external data source.
`ExternalId`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The unique identifier of a record in the linked external data source. For example, *`ID #123`*.
`Family`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Name of the product family associated with this record. Product families are configured as picklists in the user interface. To obtain a list of valid values, call `describeSObjects()` and process the result for the values associated with the `Family` field. Label is **Product Family**.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether this record is active (`true`) or not (`false`). Inactive Product2 records are hidden in many areas in the user interface. You can change the `IsActive` flag on a Product2 object as often as necessary. Label is **Active**.
`IsArchived`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Describes whether the product is archived. The default value is `false`.
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter

Field	Details
	Description Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
`IsSerialized`	**Type** boolean **Properties** Create, Filter, Group, Sort, Update **Description** Indicates if a product is a serialized product (`true`) or not (`false`). Label is **Serialized**.
`IsSoldOnlyWithOtherProds`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Determines whether the product can be sold independently or only as part of a bundle. This field is available in API version 58.0 and later. This field is available when Industries Automotive or Subscription Management is enabled. The default value is `false`, which means that the product can be sold independently.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it’s possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.
`Name`	**Type** string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update **Description** Required. Default name of this record. Label is **Product Name**.
NumberOfQuantityInstallments	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** If the product has a quantity schedule, the number of installments.
NumberOfRevenueInstallments	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** If the product has a revenue schedule, the number of installments.
ProductClass	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** This field is read-only. Its value is determined by the value of the `Type` field and whether the product is associated with a `ProductAttribute` record. It describes whether a product is a simple product, a variation parent, or a product variation. Possible values are: • `Simple`—This product has no variations • `VariationParent`—This product is a variation parent. It's the base product for one or more product variations and, though it has its own stock-keeping unit (SKU), isn't a sellable entity. Instead, it's the parent of sellable entities—its variations. • `Variation`—This product is a variation of a parent product. Each variation has its own SKU. When the value of `ProductClass = VariationParent`, it never changes. The value of `ProductClass` changes between `Simple` and `Variation` when you attach or detach a `ProductAttribute` record to the product. If you attach a `ProductAttribute` record to a product, then the product's `ProductClass` value changes to `Variation`. Conversely, when you detach all `ProductAttribute` records from a product, the `ProductClass` value changes to `Simple`. The default value is `Simple`.

Field	Details
	This field is available in API version 50.0 and later. It was introduced to support of B2B and B2C Commerce implementations.
`ProductCode`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Default product code for this record. Your org defines the product's code-naming pattern.
`QuantityInstallmentPeriod`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** If the product has a quantity schedule, the amount of time covered by the schedule.
`QuantityScheduleType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The type of the quantity schedule, if the product has one.
`QuantityUnitOfMeasure`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Unit of the product; for example, kilograms, liters, or cases. This field comes with only one value, Each, so consider creating your own. The `QuantityUnitOfMeasure` field on ProductItem inherits this field's values.
`RecalculateTotalPrice`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Changes behavior of OpportunityLineItem calculations when a line item has child schedule rows for the `Quantity` value. When enabled, if the rollup quantity changes, then the quantity rollup value is multiplied against the sales price to change the total price.

Field	Details
RevenueInstallmentPeriod	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** If the product has a revenue schedule, the time period covered by the schedule.
RevenueScheduleType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The type of the revenue schedule, if the product has one.
StockKeepingUnit	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The SKU for the product. Use in tandem with or instead of the `ProductCode` field. For example, you can track the manufacturer's identifying code in the Product Code field and assign the product a SKU when you resell it.
TaxPolicyId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the related tax policy. This field is available when Subscription Management is enabled. This field is available in API version 55.0 and later. This field is a relationship field. **Relationship Name** TaxPolicy **Relationship Type** Lookup **Refers To** TaxPolicy
TransferRecordMode	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** If serialized, indicates when the serial number is recorded. This field is visible based on field-level security. The value affects the read-only value of the `Product2TransferMode` field on the `ProductTransfer` object. Possible values are: • `SendAndReceive` —The serial number is recorded when sending or receiving. • `ReceiveOnly` —The serial number is recorded when receiving only.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of product. This field's value affects the read-only value of the `ProductClass`field on the `Product2` object. field. • `Base`—When `Type` = `Base`, then `ProductClass` = `VariationParent`. • `Null`—When `Type` = `Null`, then `ProductClass` = `Simple`. This field is available when B2B or B2C Commerce is enabled. This field is available in API version 50.0 and later.

Schedule Enabled Flags

When enabling the schedules feature, you can decide whether to enable quantity schedules, revenue schedules, or both. In addition, you can use the API to control quantity and revenue scheduling at the product level via the `CanUseQuantitySchedule` and `CanUseRevenueSchedule` flags. A value of `true` for either flag indicates that the product and any `OpportunityLineItems` can have a schedule of that type. These flags can be set when creating or updating Product2 records.

Default Schedule Fields

The remaining schedule fields for this object define default schedules. Default schedule values are used to create an OpportunityLineItemSchedule when an OpportunityLineItem is created for the Product.

The default schedule fields support the following valid values (all fields are also nillable).

Field	Valid Values
`RevenueScheduleType`	Divide, Repeat
`RevenueInstallmentPeriod`	Daily, Weekly, Monthly, Quarterly, Yearly

Field	Valid Values
`NumberOfRevenueInstallments`	Integer from 1 to 150, inclusive.
`QuantityScheduleType`	Divide, Repeat
`QuantityInstallmentPeriod`	Daily, Weekly, Monthly, Quarterly, Yearly
`NumberOfQuantityInstallments`	Integer from 1 to 150, inclusive

When you attempt to set the schedule fields when creating or updating, the API applies cross-field integrity checks. The integrity requirements are:

- If the schedule type is nil, the installment period and number of installments must be nil.
- If the schedule type is set to any value, then the installment period and number of installments must be non-nil.

Any create or update that fails these integrity checks is rejected with an error.

These default schedule fields, `CanUseQuantitySchedule`, and `CanUseRevenueSchedule`, are restricted picklist fields and are available only if the org has the schedules feature enabled.

Usage

Use this object to define the default product information for your org. This object is associated by reference with Pricebook2 objects via PricebookEntry objects. The same product can be represented in different price books as price book entries. In fact, the same product can be represented multiple times (as separate PricebookEntry records) in the same price book with different prices or currencies. A product can only have one price for a given currency within the same price book. To be used in custom price books, all standard prices must be added as price book entries to the standard price book.

You can query the products that have been configured for your org. For example, you can allow your client application to obtain valid product IDs for use when configuring PricebookEntry records via the API. Your client application can perform the following tasks on PricebookEntry objects:

- Query
- Create for the standard price book or custom price books.
- Update
- Delete
- Change the `IsActive` field when creating or updating records

This object is defined only for those orgs that have products enabled as a feature. If the org doesn't have the products feature, this object doesn't appear in the describeGlobal call, and you can't describe or query this object.

If you try to delete a product via the API but there's an opportunity that uses that product, the delete fails. The workaround is to delete the product in the user interface, which gives you an option to archive the product.

Note: On opportunities and opportunity products, the workflow rules, validation rules, and Apex triggers fire when an update to a child opportunity product or schedule causes an update to the parent record. This means your custom application logic is enforced when there are updates to the parent record, ensuring higher data quality and compliance with your organization's business policies.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

Product2ChangeEvent (API version 44.0)
Change events are available for the object.

Product2Feed (API version 18.0)
Feed tracking is available for the object.

Product2History
History is available for tracked fields of the object.

Product2OwnerSharingRule (API version 50.0)
Sharing rules are available for the object.

SEE ALSO:

Overview of Salesforce Objects and Fields

Product2DataTranslation

Represents the translated values of the data stored within a Product2 record's fields. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Enterprise, Performance, Unlimited, or Developer edition.
- Translation Workbench and data translation must be enabled in your org.
- To view this object, you must have the "View Setup and Configuration" permission

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** The translated value for the Product2 description.

Field	Details
IsOutOfDate	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the translation is out-of-date (`true`) or current (`false`). A translation is out-of-date if the parent Product2 record is updated after the last translation was filed.
Language	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The language for these translated values.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The translated value for the Product2 record name. This field is required to translate the text in other fields.
ParentId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The record ID of the Product2 associated with the data that is being translated.

Usage

Use this object to translate the data stored in a Product2 record into the different languages supported by Salesforce. If data translation is enabled for custom fields on the Product2 object, additional Product2DataTranslation fields exist for translating the data contained within those fields.

You can't use a custom external id field in an upsert call for a Product2DataTranslation object.

ProductAttribute

Represents the attributes that can be associated with a product. This object is available in API version 50.0 and later.

Supported Calls

create, delete, describeLayout(), describeSObjects(), getDeleted, getUpdated, query(), retrieve(), undelete, update, upsert

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access products.

Fields

Field	Details
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The default value is USD. Possible values are: • USD—U.S. Dollar
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Name of the product attribute set.
ProductId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the product that the attribute is associated with. This field is unique within your organization.
Sequence	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The order that product attributes appear in.

Field	Details
`VariantParentId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the variation parent record associated with the product attribute.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductAttributeEvent (API version 55.0)
Change events are available for the object.

ProductAttributeSet

Represents a group of attributes that can be associated with a product. This object is available in API version 50.0 and later.

Supported Calls

`create`, `delete`, `describeSObjects()`, `query()`, `retrieve()`, `update`, `upsert`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access products.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Text description of the product attribute set.
`DeveloperName`	**Type** string

Field	Details
	Properties Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Possible values are: • da—Danish • de—German • en_US—English • esSpanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean • nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified) • zh_TW—Chinese (Traditional)
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Label of the product attribute set.

ProductAttributeSetItem

Represents a set of attributes that can be associated with a product. This object is available in API version 50.0 and later.

Supported Calls

`create`, `delete`, `describeSObjects()`, `query()`, `retrieve()`, `update`, `upsert`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access products.

Fields

Field	Details
`Field`	**Type** reference **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The field's API name.
`ProductAttributeSetId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the product attribute set.
`Sequence`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The order that product attributes appear in.

ProductAttributeSetProduct

Represents the product associated with a set of attributes. This object is available in API version 50.0 and later.

Supported Calls

`create`, `delete`, `describeLayout()`, `describeSObjects()`, `getDeleted`, `getUpdated`, `query()`, `retrieve()`, `undelete`, `update`, `upsert`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access products.

Fields

Field	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The default value is `USD`. Possible values are: • `USD`—U.S. Dollar
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the product associated with the product attribute set.
`ProductAttributeSetId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the product attribute set.
`ProductId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the product associated with the product attribute set.

ProductCatalog

The container that holds a Product Category hierarchy. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have the Industries, Retail, or B2B Commerce license.

Fields

Field	Details
`CatalogCode`	**Type** text **Properties** Create, Filter, Nillable, Sort, Update **Description** A unique ID associated with the catalog. Maximum size is 80 alphanumeric characters.
`CatalogType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The category of an entry in the catalog. These categories can be customized. Examples include: sellable products, services, parts, technical services, or technical resources.
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Possible values are: • `EUR`—Euro • `USD`—U.S. Dollar The default value is `USD`.

Field	Details
Description	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the category.
EffectiveEndDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date after which the catalog is unavailable to end users.
EffectiveStartDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date on which the catalog is available to end users.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description Name of the ProductCatlog record.
NumberOfCategories	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Number of ProductCategory records assigned to this ProductCatalog record.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
Status	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The lifecycle state of the catalog. Possible values include: Draft, Active, Inactive

ProductCategory

Represents the category that products are organized in.This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access product media.

Fields

Field	Details
`CatalogId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the catalog.
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The default value is `USD`.
`Description`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the category.
`IsNavigational`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The default value is `false`.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.

Field	Details
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the category.
NumberOfProducts	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of products in a category.
ProductCategoryId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the category.
SortOrder	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Order that the category is displayed in.

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

ProductCategoryEvent (API version 55.0)
Change events are available for the object.

ProductCategoryProduct

Holds the relation between product and product category to assign products to a category. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have the Industries, Retail, or B2B Commerce license.

Fields

Field	Details
`Catalog`	**Type** reference **Properties** Filter, Group, Sort **Description** The foreign key to the ProductCatalog ID of the Category.
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Possible values are: • EUR—Euro • USD—U.S. Dollar The default value is `USD`.
`EffectiveEndDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The date after which the catalog is unavailable to end users.
EffectiveStartDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date on which the catalog is available to end users.
IsPrimaryCategory	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if the ProductCategory is the primaryProductCategory for a given product in a ProductCatalog. The default value is `false`.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Name of the ProductCategoryProduct record.
ProductCategory	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Foreign key to the ProductCategory ID.
Product	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the product.
ProductToCategory	**Type** string

Field	Details
	Properties Filter, Group, Sort **Description** Concatenated Product ID and Category ID.
Status	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The lifecycle state of the catalog. Possible values include: Draft, Active, Inactive

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductCategoryProductEvent (API version 55.0)
Change events are available for the object.

ProductCategoryDataTranslation

Represents the translated values for the data stored within a ProductCategory record's fields. This object is available in API version 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Enterprise, Performance, Unlimited, or Developer edition.
- Translation Workbench and data translation must be enabled in your org.
- To view this object, you must have the "View Setup and Configuration" permission

Fields

Field	Details
Description	**Type** textarea

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The translated value for the Product Category description.
IsOutOfDate	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the translation is out-of-date (`true`) or current (`false`). A translation is out-of-date if the parent ProductCategory record is updated after the last translation was filed.
Language	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The language for these translated values.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The translated value for the Product Category name.
ParentId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the category being translated.

Usage

Use this object to translate the data stored in a Product Category record into the different languages supported by Salesforce. If data translation is enabled for custom fields on the ProductCategory object, additional ProductCategoryDataTranslation fields exist for translating the data contained within those fields.

ProductComponentGroup

Represents the logical grouping of associated products in a bundle and the products' arrangement policy (group cardinality). This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available when Industries EPC or Subscription Management is enabled.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** Describes the group items of a product bundle feature. For example, a group's contents can be the associated products that accompany a main product in a bundle.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a related record or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user indirectly accessed this record (`LastReferencedDate`), but not viewed it.

Field	Details
MaxBundleComponents	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The maximum number of associated products allowed in a group.
MinBundleComponents	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The minimum number of associated products allowed in a group.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the product component group. Maximum length is 255 characters (of any type).
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The unique identifier of the owner of this object. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
ParentProductId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The unique identifier associated with the main product record.

Field	Details
	This field is a relationship field. **Relationship Name** ParentProduct **Relationship Type** Lookup **Refers To** Product2
`Sequence`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Determines the arrangement of the order products when configuring a bundle or set.

ProductConsumed

Represents an item from your inventory that was used to complete a work order or work order line item in field service.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Note: To create products consumed, you need Read permission on product items.

Note: To delete products consumed, you need Edit, Create, and Read permission on product items.

Fields

Field Name	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update

Field Name	Details
	Description Notes and context about the product consumed.
Discount	**Type** percent **Properties** Create, Filter, Nillable, Sort, Update **Description** The discount provided.
IsConsumed	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates that a product consumed has been processed if the Product2 it refers to has IsSerialized=true selected. The default is false.
IsProduct2Serialized	**Type** boolean **Properties** Create, Filter, Nillable, Sort, Update **Description** Indicates if a product is a serialized product. The default is false.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the product consumed was last modified. Its label in the user interface is Last Modified Date.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the product consumed was last viewed.
ListPrice	**Type** currency

Field Name	Details
	Properties Filter, Nillable, Sort **Description** The list price of the product.
`PricebookEntryId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Price book associated with the product consumed. If the work order and the product item's associated product are related to the same price book, the Price Book Entry auto-populates based on the product item.
`Product2Id`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Product associated with the product consumed.
`ProductConsumedNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort **Description** (Read Only) Auto-generated number identifying the product consumed.
`ProductItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** Product item associated with the product consumed. Creating a product consumed record subtracts the quantity consumed from the linked product item's quantity.
`ProductName`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description Name for the product consumed.
QuantityConsumed	**Type** double **Properties** Create, Filter, Sort, Update **Description** The quantity of products consumed.
QuantityUnitOfMeasure	**Type** picklist **Properties** Filter, Group, Nillable, Sort **Description** Units of the consumed item; for example, kilograms or liters. Quantity Unit of Measure picklist values are inherited from the Quantity Unit of Measure field on products.
Subtotal	**Type** currency **Properties** Filter, Nillable, Sort **Description** The total price of the product items before discount.
TotalPrice	**Type** currency **Properties** Filter, Nillable, Sort **Description** The total price paid for the product items.
UnitPrice	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** The price per unit of the product consumed.
WorkOrderId	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Sort **Description** Work order that the product was consumed for.
`WorkOrderLineItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Work order line item that the product was consumed for.

Usage

When a product is consumed during the completion of a work order, create a product consumed record to track its consumption. You can add products consumed to work orders or work order line items. Track product consumption at the line item level if you want to know which products were used for each line item's tasks.

The way you use products consumed depends on how closely you want to track the state of your inventory in Salesforce. If you want to track the entire lifecycle of items in your inventory, including their storage, transfer, and consumption, link your products consumed records to product items. This approach ensures that your inventory numbers auto-update to reflect the consumption of products from your inventory. If you want to track product consumption only, however, specify a Price Book Entry on each product consumed record and leave the Product Item field blank.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductConsumedChangeEvent (API version 48.0)
Change events are available for the object.

ProductConsumedFeed
Feed tracking is available for the object.

ProductConsumedHistory
History is available for tracked fields of the object.

ProductEntitlementTemplate

Represents predefined terms of customer support (Entitlement) that users can add to products (Product2).

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only Salesforce admins, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.

Fields

Field	Details
`EntitlementTemplateId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the entitlement template. Must be a valid ID.
`Product2Id`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the Product2 associated with the entitlement template. Must be a valid ID.

Usage

Use to query and manage entitlement templates.

SEE ALSO:

Entitlement

ProductItem

Represents the stock of a particular product at a particular location in field service, such as all bolts stored in your main warehouse.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the product item was last modified. Its label in the user interface is Last Modified Date.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the product item was last viewed.
LocationId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Location associated with the product item. This usually indicates where the product item is stored. This is a relationship field. **Relationship Name** Location **Relationship Type** Lookup **Refers To** Location
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The product item's owner. This is a polymorphic relationship field. **Relationship Name** Owner

Field Name	Details
	Relationship Type Lookup **Refers To** Group, User
`Product2Id`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Product associated with the product item, which represents the type of product in your inventory. This is a relationship field. **Relationship Name** Product2 **Relationship Type** Lookup **Refers To** Product2
`ProductItemNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** (Read Only) Auto-generated number identifying the product item.
`ProductName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** A name for the product item. Try to select a name that indicates what is being stored where; for example, Batteries in Warehouse A.
`QuantityOnHand`	**Type** double **Properties** Create, Filter, Sort, Update

Field Name	Details
	Description The quantity at the location. If you want to add a serial number, this value must be 1.
`QuantityUnitOfMeasure`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Units of the product item; for example, kilograms or liters. Quantity Unit of Measure picklist values are inherited from the Quantity Unit of Measure field on products.
`SerialNumber`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A unique number for identification purposes. If you want to enter a serial number, the Quantity on Hand must be 1.

Usage

Each product item is associated with a product and a location in Salesforce. If a product is stored at multiple locations, the product will be tracked in a different product item for each location.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductItemChangeEvent (API version 48.0)
Change events are available for the object.

ProductItemFeed
Feed tracking is available for the object.

ProductItemHistory
History is available for tracked fields of the object.

ProductItemOwnerSharingRule
Sharing rules are available for the object.

ProductItemShare
Sharing is available for the object.

ProductItemTransaction

Represents an action taken on a product item in field service. Product item transactions are auto-generated records that help you track when a product item is replenished, consumed, or adjusted.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `undelete()`, `upsert()`

Special Access Rules

- Field Service must be enabled.
- Only users with Modify All Data or Modify All Records permissions can delete this object.

Fields

Field Name	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** A description of the transaction. The description is blank when the transaction record is created, but can be updated.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.

Field Name	Details
ProductItemId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The associated product item. This is a relationship field. **Relationship Name** ProductItem **Relationship Type** Lookup **Refers To** ProductItem
ProductItemTransactionNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** (Read Only) Auto-generated number identifying the product item transaction.
Quantity	**Type** double **Properties** Create, Filter, Sort **Description** The quantity of the product item involved in the transaction. If inventory was consumed, the quantity is negative.
RelatedRecordId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** (Read Only) The product consumed or product transfer related to the action. If the action wasn't related to consumption or transfer, the related record is blank. This is a polymorphic relationship field. **Relationship Name** RelatedRecord **Relationship Type** Lookup

Field Name	Details
	Refers To ProductTransfer, Visit
`TransactionType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The action that the transaction tracks. • Replenished: When a part is stocked at a location. A Replenished transaction is created when a product item is created. • Consumed: When parts are consumed to complete a work order. A Consumed transaction is created when a record is added to the Products Consumed related list on a work order or work order line item. • Adjusted: When there's a discrepancy or a change in consumption. An Adjusted transaction is created when a product item's Quantity on Hand is edited, a product consumed is updated or delete, or a product transfer is deleted. • Transferred: When parts are transferred between locations.

Associated Objects

This object has these associated objects. Unless noted, they're available in the same API version as this object.

ProductItemTransactionChangeEvent
Change events are available for the object.

ProductItemTransactionFeed
Feed tracking is available for the object.

ProductItemTransactionHistory
History is available for tracked fields of the object.

ProductMedia

Represents the rich media, including images and attachments, that can be added to products.This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access product media.

Fields

Field	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The default value is `USD`. Possible values are: • `USD`—U.S. Dollar
`ElectronicMediaGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Unique ID of the media group. This field is a relationship field. **Relationship Name** ElectronicMediaGroup **Relationship Type** Lookup **Refers To** ElectronicMediaGroup
`ElectronicMediaId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Unique ID of the media record. This field is a polymorphic relationship field. **Relationship Name** ElectronicMedia **Relationship Type** Lookup

Field	Details
	Refers To ManagedContent, ManagedContentInfo
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Name of the media.
`ProductId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the product that the media is associated with. This field is a relationship field. **Relationship Name** Product **Relationship Type** Lookup **Refers To** Product2
`SortOrder`	**Type** int

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The order that product media is displayed in.

Associated Objects

ProductMediaChangeEvent (API version 57.0)
Change events are available for the object.

ProductMediaHistory **on page 47**
History is available for tracked fields of the object.

ProductMediaOwnerSharingRule **on page 48**
Sharing rules are available for the object.

ProductMediaShare **on page 50**
Sharing is available for the object.

ProgramProduct

Represents a junction between Program and Product2. This will hold Product2 values related to a Program. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only with the EAndU Cloud Program Access permission set.

Fields

Field	Details
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the ProgramProduct object.

Field	Details
`ProductId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The Product2 object associated with the Program. This field is a relationship field. **Relationship Name** Product **Relationship Type** Lookup **Refers To** Product2
`ProgramId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The Program parent object associated with the record. This field is a relationship field. **Relationship Name** Program **Relationship Type** Lookup **Refers To** Program
`Status`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Specifies the status of the ProgramProduct object. Possible values are: • `Active` • `Inactive` • `Pending For Approval`

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProgramProductChangeEvent
Change events are available for the object.

ProgramProductFeed
Feed tracking is available for the object.

ProgramProductHistory
History is available for tracked fields of the object.

ProgramProductOwnerSharingRule
Sharing rules are available for the object.

ProgramProductShare
Sharing is available for the object.

ProductRelatedComponent

Represents a product that is included in a product bundle, a set, or a product and an add-on. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

In version 58.0 and later, this object is available when B2B Commerce, B2C Commerce, Industries Automotive, Industries EPC, or Subscription Management is enabled.

In version 57.0, this object is available when B2B Commerce, B2C Commerce, or Industries Automotive is enabled.

Fields

	Details
`ChildProductId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The unique identifier of the associated product. This field is a relationship field. In a bundle relationship, this item is the child product.

Field	Details
	Relationship Name ChildProduct **Relationship Type** Lookup **Refers To** Product2
ChildProductRole	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The position of the associated product in the relationship. Possible values are: • AddOnComponent—The child product is an add-on to another product. Available in API version 58.0 and later. • BundleComponent—The child product is a component in a bundle. • SetComponent—The child product is a component in a set.
ChildSellingModelId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The unique identifier of the associated product's sales model. This field is a relationship field. **Relationship Name** ChildSellingModel **Relationship Type** Lookup **Refers To** ProductSellingModel
DoesBundlePriceIncludeChild	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the bundle price includes the associated product's price. UI label is Price includes component.

	Details
IsComponentRequired	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the associated product is required for configuring a bundle or set. The default value is `false`.
IsDefaultComponent	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the associated product is part of the product bundle or set automatically, or can be added after the bundle's or set's creation. The default value is `false`.
IsQuantityEditable	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether you can edit the component's quantity in the bundle or set after the bundle's or set's creation. The default value is `false`.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible the user accessed this record or list view (`LastReferencedDate`) without viewing it.
`MaxQuantity`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The associated product's allowed maximum quantity.
`MinQuantity`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The associated product's allowed minimum quantity.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the associated product.
`ParentProductId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The unique identifier of the main product around which the bundle or set is built. This field is a relationship field. **Relationship Name** ParentProduct **Relationship Type** Lookup **Refers To** Product2

	Details
ParentProductRole	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Indicates the position of the main product in the relationship. Possible values are: • `AddOn`—The main product is the add-on parent. Available in API version 58.0 and later. • `Bundle`—The main product is the bundle parent. • `Set`— The main product is the set parent.
ParentSellingModelId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The unique identifier of the main product's sales model. This field is a relationship field. **Relationship Name** ParentSellingModel **Relationship Type** Lookup **Refers To** ProductSellingModel
ProductComponentGroupId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The unique identifier of the group of a product bundle or set. This group contains the associated products that can be included in the main product's bundle or set. This field is a relationship field. **Relationship Name** ProductComponentGroup **Relationship Type** Lookup **Refers To** ProductComponentGroup

	Details
`ProductRelationshipTypeId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The unique identifier of the record that describes the relationship between the main and associated products. This field is a relationship field. **Relationship Name** ProductRelationshipType **Relationship Type** Lookup **Refers To** ProductRelationshipType
`Quantity`	**Type** double **Properties** Create, Defaulted on create, Filter, Nillable, Sort, Update **Description** The unit count of the associated product.
`QuantityScaleMethod`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The scaling method used to calculate the associated product's quantity based on changes made to the main product's quantity in a transaction. Possible values are: • `Constant` —The associated product's quantity remains the same in relation to the main product's quantity. For example, the main product has a quantity of one and the associated component has a quantity of one. If you increase the quantity of the main product to two, the associated component's quantity remains at one. • `Proportional` —The associated product's quantity increases or decreases based on the main product's quantity. For example, the main component has a quantity of one and the associated product has a quantity of two. If you increase the quantity of the main product to two, the associated product's quantity increases to four. The default value is `Proportional`.

Field	Details
Sequence	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Determines the arrangement of the order products when configuring a bundle or set.

ProductRelationshipType

Defines the relationship between two sales transaction items. For example, defines a relationship between a bundle and a bundle component. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

In version 58.0 and later, this object is available when B2B Commerce, B2C Commerce, or Subscription Management is enabled.

In version 57.0, this object is available when B2B Commerce or B2C Commerce is enabled.

Fields

Field	Details
AssociatedProductRoleCat	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The position category that the associated product plays in the relationship. Possible values are: • `AddOnComponent`—The associated product is an add-on. • `BundleComponent` — The associated product is part of a bundle. • `SetComponent` — The associated product is part of a set.
LastReferencedDate	**Type** dateTime

Field	Details
	Properties Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate), but not viewed it.
MainProductRoleCat	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The position category that the main product plays in the relationship. Possible values are: • AddOn—The parent of the add-on. • Bundle—The bundle parent. • Set—The set parent.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the relationship between two product items.

ProductRequest

Represents an order for a part or parts in field service.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Authenticated external users can create and update ProductRequest objects.

Fields

Field Name	Details
`AccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The account associated with the product request. This is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
`CaseId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The case associated with the product request. This is a relationship field. **Relationship Name** Case **Relationship Type** Lookup **Refers To** Case

Field Name	Details
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization. The label in the user interface is `Currency ISO Code`.
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** A text field for details not recorded in the provided fields.
DestinationLocationId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Where the product is delivered. This is a relationship field. **Relationship Name** DestinationLocation **Relationship Type** Lookup **Refers To** Location
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the product request was last modified. Its label in the user interface is Last Modified Date.
LastViewedDate	**Type** dateTime

Field Name	Details
	Properties Filter, Nillable, Sort **Description** The date when the product request was last viewed.
NeedByDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Date the product must be delivered by.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the shipment. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
ProductRequestNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An auto-assigned number that identifies the shipment.
ShipToAddress	**Type** address **Properties** Filter, Nillable **Description** The address that the product is to be delivered to.

Field Name	Details
ShipToCity	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The city that the product is to be delivered to.
ShipToCountry	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The country that the product is to be delivered to.
ShipToGeocodeAccuracy	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The accuracy of the geocode for the shipping address.
ShipToLatitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The latitude of the location where the product is to be delivered to.
ShipToLongitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The longitude of the location where the product is to be delivered to.
ShipToPostalCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The postal code of the address where the product is to be delivered to.

Field Name	Details
ShipToState	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The name of the state where the product is to be delivered to.
ShipToStreet	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The street address where the product is to be delivered to.
ShipmentType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The type of shipment. The picklist includes the following values by default: • None • Rush • Overnight • Next Business Day • Pick Up
SourceLocationId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The location the product is shipped from. This is a relationship field. **Relationship Name** SourceLocation **Relationship Type** Lookup **Refers To** Location

Field Name	Details
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Status of the product transfer.
`WorkOrderId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The work order that the product request is related to. This is a relationship field. **Relationship Name** WorkOrder **Relationship Type** Lookup **Refers To** WorkOrder
`WorkOrderLineItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The work order line item that the product request is related to. This is a relationship field. **Relationship Name** WorkOrderLineItem **Relationship Type** Lookup **Refers To** WorkOrderLineItem

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductRequestChangeEvent (API version 48.0)
Change events are available for the object.

ProductRequestFeed
Feed tracking is available for the object.

ProductRequestHistory
History is available for tracked fields of the object.

ProductRequestOwnerSharingRule
Sharing rules are available for the object.

ProductRequestShare
Sharing is available for the object.

ProductRequestLineItem

Represents a request for a part in field service. Product request line items are components of product requests.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
`AccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The account associated with the product request line item. This is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account

Field Name	Details
CareProgramEnrolleeId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the care program enrollee associated with the product request line item. This field is available from API version 49.0 and later. This is a relationship field. **Relationship Name** CareProgramEnrollee **Relationship Type** Lookup **Refers To** CareProgramEnrollee
CaseId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The case associated with the product request line item. This is a relationship field. **Relationship Name** Case **Relationship Type** Lookup **Refers To** Case
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** Details not recorded in the provided fields.
DestinationLocationId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description Where the product is delivered. This is a relationship field. **Relationship Name** DestinationLocation **Relationship Type** Lookup **Refers To** Location
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.
`NeedByDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Date the product must be delivered by.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The product request that the line item belongs to. This is a relationship field.

Field Name	Details
	Relationship Name Parent **Relationship Type** Lookup **Refers To** ProductRequest
`Product2Id`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The product associated with the product request line item. This is a relationship field. **Relationship Name** Product2 **Relationship Type** Lookup **Refers To** Product2
`ProductRequestLineItemNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** (Read Only) An auto-assigned number that identifies the product request line item.
`QuantityRequested`	**Type** double **Properties** Create, Filter, Sort, Update **Description** The amount requested.
`QuantityUnitOfMeasure`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description Units of the requested product; for example, grams, liters, or units. The picklist values can be customized.
ShipToAddress	**Type** address **Properties** Filter, Nillable **Description** The physical address where the product is needed.
ShipToCity	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The city of the address where the product is needed.
ShipToCountry	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The country of the address where the product is needed.
ShipToGeocodeAccuracy	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Accuracy level of the geocode for the address where the product is needed. See Compound Field Considerations and Limitations for details on geolocation compound fields. Note: This field is available in the API only.
ShipToLatitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update

Field Name	Details
	Description Used with Longitude to specify the precise geolocation of the address where the product is needed. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields. Note: This field is available in the API only.
ShipToLongitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with Latitude to specify the precise geolocation of the address where the product is needed. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields. Note: This field is available in the API only.
ShipToPostalCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The postal code of the address where the product is needed.
ShipToState	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The state of the address where the product is needed.
ShipToStreet	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The street of the address where the product is needed.
ShipmentType	**Type** picklist

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The type of shipment. The picklist includes the following values, which can be customized: • `Rush` • `Overnight` • `Next Business Day` • `Pick Up`
`SourceLocationId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Where the product is at the time of the request. This is a relationship field. **Relationship Name** SourceLocation **Relationship Type** Lookup **Refers To** Location
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The status of the shipment. The picklist includes the following values, which can be customized: • `Draft` • `Submitted` • `Received`
`WorkOrderId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The work order for which the product is needed. This is a relationship field. **Relationship Name** WorkOrder **Relationship Type** Lookup **Refers To** WorkOrder
`WorkOrderLineItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The work order line item for which the product is needed. This is a relationship field. **Relationship Name** WorkOrderLineItem **Relationship Type** Lookup **Refers To** WorkOrderLineItem

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductRequestLineItemChangeEvent (API version 48.0)
Change events are available for the object.

ProductRequestLineItemFeed
Feed tracking is available for the object.

ProductRequestLineItemHistory
History is available for tracked fields of the object.

ProductRequired

Represents a product that is needed to complete a work order or work order line item in field service.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the product required was last modified. Its label in the user interface is Last Modified Date.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the product required was last viewed.
ParentRecordId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The work order or work order line item that the product is required for. This is a polymorphic relationship field. **Relationship Name** ParentRecord **Relationship Type** Lookup **Refers To** Visit, WorkOrder, WorkOrderLineItem, WorkType
ParentRecordType	**Type** string

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** Indicates whether the parent record is a work order or a work order line item.
`Product2Id`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The required product. This is a relationship field. **Relationship Name** Product2 **Relationship Type** Lookup **Refers To** Product2
`ProductName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the product required.
`ProductRequiredNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** (Read only) Auto-generated number identifying the product required.
`QuantityRequired`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Quantity required of the product.

Field Name	Details
QuantityUnitOfMeasure	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Units of the required product; for example, kilograms or liters. Quantity Unit of Measure picklist values are inherited from the Quantity Unit of Measure field on products.

Usage

Required products can be added to work types, work orders, and work order line items to ensure that the assigned service resource arrives with the right equipment.

Adding required products to work types saves you time and keeps your business processes consistent. Work orders and work order line items inherit their work type's required products. For example, if all light bulb replacement jobs require a ladder and a light bulb, add the ladder and light bulb as required products to your Light Bulb Replacement work type. When it's time to create a work order for a customer's light bulb replacement, applying that work type to the work order adds the required products.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProductRequiredChangeEvent
Change events are available for the object.

ProductRequiredFeed
Feed tracking is available for the object.

ProductRequiredHistory
History is available for tracked fields of the object.

ProductSellingModelOption

A junction object between Product Selling Model and Product2. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available when Subscription Management is enabled.

Fields

Field	Details
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view but not viewed it.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the product selling model option.
Product2Id	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the Product2 record associated with this ProductSellingModelOption record. This is a relationship field. **Relationship Name** Product2 **Relationship Type** Lookup **Refers To** Product2
ProductSellingModelId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Sort **Description** The ID of the ProductSellingModel record associated with this ProductSellingModelOption record. This is a relationship field. **Relationship Name** ProductSellingModel **Relationship Type** Lookup **Refers To** ProductSellingModel
`ProrationPolicyId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the ProrationPolicy record associated with this ProductSellingModelOption record. This is a relationship field. **Relationship Name** ProrationPolicy **Relationship Type** Lookup **Refers To** ProrationPolicy

ProductServiceCampaign

Represents a set of activities to be performed on a product service campaign asset, such as a product recall for safety issues or product defects. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the product service campaign.
EndDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The date on which the product service campaign ends.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the asset was last modified. The UI label is Last Modified Date.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the asset was last viewed.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The product service campaign's owner. By default, the product service campaign owner is the user who created the product service campaign record. The UI label is Product Service Campaign Owner.
Priority	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The priority of the product service campaign. Possible values are: • `Critical` • `High` • `Low` • `Medium`
`Product2Id`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the Product2 associated with this campaign. The UI label is Product.
`ProductServiceCampaignName`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the product service campaign.
`StartDate`	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** The date on which the product service campaign starts.
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The status of the product service campaign. The picklist includes the following values, which can be customized: • `New`—Product service campaign created, but there hasn't yet been any activity. • `In Progress`—Product service campaign has begun.

Field	Details
	• `On Hold`—Work is paused. • `Completed`—Work is complete. • `Cannot Complete`—Work couldn't be completed. • `Closed`—All work and associated activity is complete. • `Canceled`—Work is canceled, typically before any work began.
`StatusCategory`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The category that each `Status` value falls into. The `StatusCategory` field has eight default values: seven values that are identical to the default `Status` values, and `None` for statuses without a status category. If you create custom `Status` values, you must indicate which category it belongs to. For example, if you create a *`Waiting for Response`* value, add it the *`On Hold`* category. To learn which processes reference `StatusCategory`, see How are Status Categories Used?
`Type`	**Type** picklist **Properties** Create, Filter, Group, Sort, Update **Description** The type of the product service campaign. The picklist includes the following values, which can be customized: • `Modification`—The asset requires an on-site alteration. • `Recall`—The asset must be returned to the manufacturer for modification or upgrade. • `Service`—The asset needs to be serviced. • `Upgrade`—The asset needs updating.
`WorkTypeId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The work type associated with the product service campaign. A customer uses this field as a guide when setting work type for work orders for the product service campaign. `Duration`, `Duration Type`, and required skills.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProductServiceCampaignFeed
Feed tracking is available for the object.

ProductServiceCampaignHistory
History is available for tracked fields of the object.

ProductServiceCampaignOwnerSharingRule
Sharing rules are available for the object.

ProductServiceCampaignShare
Sharing is available for the object.

ProductServiceCampaignItem

Represents a product service campaign's asset. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
`AssetId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The asset associated with the product service campaign. Must be present if `Product2Id` is not present.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the asset was last modified. Its UI label is Last Modified Date.

Field	Details
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the asset was last viewed.
Product2Id	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the Product2 associated with this campaign. The UI label is Product. Must be present if AssetID is not present.
ProductServiceCampaignId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. The item's parent product service campaign record.
ProductServiceCampaignItemNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The ID of the product service campaign item.
Status	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The status of the product service campaign item. The picklist includes the following values, which can be customized: • New—Product service campaign item created, but there hasn't yet been any activity. • In Progress—Product service campaign item has begun. • On Hold—Product service campaign item is paused. • Completed—Product service campaign item is complete. • Cannot Complete—Product service campaign item couldn't be completed.

Field	Details
	• `Closed`—All product service campaign item and associated activity is complete. • `Canceled`—Product service campaign item is canceled, typically before any work began.
`StatusCategory`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The category that each `Status` value falls into. The `StatusCategory` field has eight default values: seven values that are identical to the default `Status` values, and `None` for statuses without a status category. If you create custom `Status` values, you must indicate which category it belongs to. For example, if you create a *`Waiting for Response`* value, add it to the *`On Hold`* category. To learn which processes reference `StatusCategory`, see How are Status Categories Used?

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProductServiceCampaignItemFeed
Feed tracking is available for the object.

ProductServiceCampaignItemHistory
History is available for tracked fields of the object.

ProductServiceCampaignItemOwnerSharingRule
Sharing rules are available for the object.

ProductServiceCampaignItemShare
Sharing is available for the object.

ProductServiceCampaignItemStatus

Represents a status for a product service campaign item in field service. This object is available in API version 51.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
ApiName	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The API name of the status value.
IsDefault	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates that the status value is the default status on product service campaign items when `true`. Only one status value can be the default.
MasterLabel	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The label for the picklist value in the UI.
SortOrder	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The value's position in the dropdown list in the UI.
StatusCode	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The status category that the value corresponds to. The Status Category field has seven values that are identical to the default Status values.

Usage

The Status field on product service campaign items comes with the following values:

- New—Product service campaign item created, but there hasn't been any activity.
- In Progress—Work has begun.
- On Hold—Work is paused.
- Completed—Work is complete.
- Cannot Complete—Work couldn't be completed.
- Closed—All work and associated activity is complete.
- Canceled—Work is canceled, typically before any work began.

The ProductServiceCampaignItemStatus object corresponds to the Status field. Adding a value to the Status field—for example, Canceled By Supplier—creates a product service campaign item status record, and vice versa.

Note: Product service campaign items also come with a Status Category field whose values are identical to the default status values. If you create custom status values, you must indicate which category it belongs to. For example, if you create a *`Customer Absent`* value, add it to the *`Cannot Complete`* category. To learn which processes reference StatusCategory, see How are Status Categories Used?

ProductServiceCampaignStatus

Represents a status for a product service campaign in field service. This object is available in API version 51.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
`ApiName`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The API name of the status value.
`IsDefault`	**Type** boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort **Description** Indicates that the status value is the default status on product service campaigns when `true`. Only one status value can be the default.
`MasterLabel`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The label for the picklist value in the UI.
`SortOrder`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The value's position in the dropdown list in the UI.
`StatusCode`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The status category that the value corresponds to. The Status Category field has seven values that are identical to the default Status values.

Usage

The Status field on product service campaigns comes with the following values:

- New—Product service campaign created, but there hasn't been any activity.
- In Progress—Work has begun.
- On Hold—Work is paused.
- Completed—Work is complete.
- Cannot Complete—Work couldn't be completed.
- Closed—All work and associated activity is complete.
- Canceled—Work is canceled, typically before any work began.

The ProductServiceCampaignStatus object corresponds to the Status field. Adding a value to the Status field—for example, Canceled By Supplier—creates a product service campaign status record, and vice versa.

Note: Product service campaigns also come with a Status Category field whose values are identical to the default status values. If you create custom status values, you must indicate which category it belongs to. For example, if you create a *`Customer Absent`* value, add it to the *`Cannot Complete`* category. To learn which processes reference StatusCategory, see How are Status Categories Used?

ProductTransfer

Represents the transfer of inventory between locations in field service.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** Details not recorded in the provided fields.
`DestinationLocationId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The place the product is to be delivered. This is a relationship field. **Relationship Name** DestinationLocation **Relationship Type** Lookup **Refers To** Location

Field Name	Details
ExpectedPickupDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Date the product is expected to be picked up.
IsReceived	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Checkbox identifying that the product was received.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the product request was last modified. Its label in the user interface is Last Modified Date.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the product request was last viewed.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Owner of the product transfer. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup

Field Name	Details
	Refers To Group, User
Product2Id	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Lookup field for the product associated with the product transfer. This is a relationship field. **Relationship Name** Product2 **Relationship Type** Lookup **Refers To** Product2
Product2TransferRecordMode	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** If serialized, indicates when the serial number is recorded. It is visible on the product transfer as a read-only field depending on the field-level security. Possible values are: • SendAndReceive —The serial number is recorded when sending or receiving. • ReceiveOnly —The serial number is recorded when receiving only. **Relationship Name** Product2.TransferRecordMode **Relationship Type** Lookup **Refers To** Product2.TransferRecordMode
ProductRequestId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Lookup field for the product request associated with the product transfer.

Field Name	Details
	This is a relationship field. **Relationship Name** ProductRequest **Relationship Type** Lookup **Refers To** ProductRequest
`ProductRequestLineItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Lookup field for the product request line item associated with the product transfer. This is a relationship field. **Relationship Name** ProductRequestLineItem **Relationship Type** Lookup **Refers To** ProductRequestLineItem
`ProductTransferNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An auto-assigned number that identifies the product transfer.
`QuantityReceived`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Amount of product received at the destination location.
`QuantitySent`	**Type** double **Properties** Create, Filter, Sort, Update

Field Name	Details
	Description Amount of product sent from the source location.
QuantityUnitOfMeasure	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The units of the product, for example grams, liters, or units.
ReceivedById	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Lookup field for the contact who received the product at the destination location. This is a polymorphic relationship field. **Relationship Name** ReceivedBy **Relationship Type** Lookup **Refers To** Group, User
ReturnOrderId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The return order associated with the product transfer. This is a relationship field. **Relationship Name** ReturnOrder **Relationship Type** Lookup **Refers To** ReturnOrder
ReturnOrderLineItemId	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The return order line item associated with the product transfer. This is a relationship field. **Relationship Name** ReturnOrderLineItem **Relationship Type** Lookup **Refers To** ReturnOrderLineItem
`ShipmentExpectedDeliveryDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Lookup field for the shipment related to the product transfer.
`ShipmentId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Lookup field for the shipment related to the product transfer. This is a relationship field. **Relationship Name** Shipment **Relationship Type** Lookup **Refers To** Shipment
`ShipmentStatus`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** Lookup field for the shipment related to the product transfer.

Field Name	Details
ShipmentTrackingNumber	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Lookup field for the shipment related to the product transfer.
ShipmentTrackingUrl	**Type** url **Properties** Filter, Group, Nillable, Sort **Description** Lookup field for the shipment related to the product transfer.
SourceLocationId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Lookup field for the source location related to the product transfer. This is a relationship field. **Relationship Name** SourceLocation **Relationship Type** Lookup **Refers To** Location
SourceProductItemId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Lookup field for the product item related to the product transfer. **Relationship Name** SourceProductItem **Relationship Type** Lookup **Refers To** ProductItem

Field Name	Details
Status	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Status of the product transfer.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductTransferChangeEvent (API version 48.0)
Change events are available for the object.

ProductTransferFeed
Feed tracking is available for the object.

ProductTransferHistory
History is available for tracked fields of the object.

ProductTransferOwnerSharingRule
Sharing rules are available for the object.

ProductTransferShare
Sharing is available for the object.

ProductWarrantyTerm

Defines the relationship between a product or product family and warranty term. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CoveredProductFamily	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The product family that the warranty term applies to.
CoveredProductId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the product that the warranty term applies to.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the product warranty term was last modified. Its label in the user interface is `Last Modified Date`.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the product warranty term was last viewed.
ProductWarrantyTermNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The identifier for this product warranty term.
WarrantyTermId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the warranty term.

Profile

Represents a profile, which defines a set of permissions to perform different operations. Operations can include creating a custom profile or querying, adding, updating, or deleting information.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, Customer Portal and Partner Portal users *can't* access this object.

To view the following settings, assignments, and permissions for standard and custom objects in a specified profile, the View Setup and Configuration permission is required.

- Client settings
- Field permissions
- Layout assignments
- Object permissions
- Permission dependencies
- Permission set tab settings
- Permission set group components
- Record types

Starting in Winter '21, only users with correct permissions can view profile names other than their own if the Profile Filtering setting is enabled.

Important: Profile names are also exposed when users with permissions to perform the following tasks take these actions:

- Create a tab or record type with a wizard step that includes the assignment of tabs and record types to profiles.
- Configure a login flow where viewing profile lists is required to make flow associations.
- Set up delegated admins where looking up profiles is needed to identify assignable profiles.
- Administer an org as a delegated customer admin.
- Administer an org as a delegated admin to view and assign profiles of the delegated group.

Fields

Field	Details
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Description of the profile.
`IsSsoEnabled`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort, Update **Description** If `true`, users assigned to this profile can delegate username and password authentication to a corporate database instead of the user database.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this profile. Available in API version 29.0 and later.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this profile. Available in API version 29.0 and later.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the profile.
`Permissions`*`PermissionName`*	**Type** boolean **Properties** Create, Filter, Update **Description** One field for each permission. If `true`, users assigned to this profile have the named permission. The number of fields varies depending on the permissions for the org and license type.

Field	Details
	Tip: To get a list of available permissions in SOAP API, use `describeSObjects()`.
`UserLicenseId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the UserLicense associated with this profile. This is a relationship field. **Relationship Name** UserLicense **Relationship Type** Lookup **Refers To** UserLicense
`UserType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The category of user license. Each `UserType` is associated with one or more UserLicense records. Each UserLicense is associated with one or more profiles. In API version 10.0 and later, valid values include: • Standard: user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses. Label is **Standard**. • PowerPartner: User whose access is limited because they're a partner and typically access the application through a partner portal or Experience Cloud site. Label is **Partner**. • CspLitePortal: user whose access is limited because they're an org's customer and access the application through a Customer Portal or Experience Cloud site. Label is **High Volume Portal**. • CustomerSuccess: user whose access is limited because they're an org's customer and access the application through a Customer Portal. Label is **Customer Portal User**. • PowerCustomerSuccess: user whose access is limited because they're an org's customer and access the application through a Customer Portal. Label is **Customer Portal Manager**. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the Customer Portal role hierarchy. • CsnOnly: user whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. Label is **Chatter Free**. • Guest: user whose access is limited because they're an unauthenticated user without login credentials. Label is **Guest**.

Field	Details
	`UserType` replaces `LicenseType`, which is unavailable as of API version 10.0. In API versions 8.0 and 9.0 `LicenseType` is still available with the following valid values: • AUL: Lightning Platform user license. Label is **Apex Platform**. • AUL1: Lightning Platform user license with only one user. Label is **Apex Platform One**. • Salesforce: Salesforce user license. Label is **Salesforce**. • PackageManager: user who can create and work with managed packages for AppExchange. Label is **Package Manager**. • PRM: user whose access is limited because they're a partner and typically accesses the application through a partner portal. Label is **Partner**. • CustomerUser: user whose access is limited because they're an org's customer and accesses the application through a Customer Portal. Label is **Customer Portal User**. • CustomerManager: user whose access is limited because they're an org's customer and accesses the application through a Customer Portal. Label is **Customer Portal Manager**. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the Customer Portal role hierarchy. In API version 53.0 and later, you can't set the value of `UserType` using Apex.

Usage

Use the Profile object to create custom profiles that start without any permissions enabled except for required permissions for the profile's user license. While you can use the Profile Metadata type to deploy profiles, we recommend that you use the Profile SOAP API object because it allows you to create empty profiles.

You can also query the set of currently configured user profiles in your org. Your client application can use Profile objects to obtain valid profile IDs for use when querying or modifying users through the API.

In the user interface, profiles can be used to assign user licenses from specific pools (Lightning Platform user license or Salesforce user license, for example). When users are reassigned to profiles with different license types, the number of available licenses in the old license type pool increases, one per user assignment updated. Also, the number of available licenses decreases by the same amount in the new license type pool.

Overview of Salesforce Objects and Fields

PermissionSet

ProductSellingModel

Defines one method by which a product can be sold; for example, as a one-time sale, an evergreen subscription, or a term-defined subscription. If the product is sold on subscription, this object defines the subscription's term. A product can have multiple product selling models. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Subscription Management.

Fields

Field	Details
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name given to the product selling model.
`PricingTerm`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the duration of the pricing term for a given selling model. Used with `PricingTermUnit`. For example, if this field's value is 1 and the `PricingTermUnit` is `Months`, the subscription is priced monthly. If the selling model is one-time, this field must be null. Possible value is: • `1`
`PricingTermUnit`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The unit of time used to define the pricing term. Used with `PricingTerm` to define the length of the pricing term. For example, if this field is `Months` and `PricingTerm` is 1, the subscription is priced monthly. If the selling model is one-time, this field must be null. Possible values are: • `Annual`—UI label is `Years` • `Months`

Field	Details
SellingModelType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates whether the product is sold as a one-time sale, an evergreen subscription, or a subscription with a defined term. Possible values are: • `Evergreen`—A subscription without an end date. An evergreen subscription continues until the customer affirmatively cancels it. • `OneTime`—A product that isn't sold as a subscription. • `TermDefined`—A subscription with a defined end date. The subscription continues for a specified time period. When the term ends, the subscription ends. The default value is `OneTime`.
Status	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The status of the product selling model. Possible values are: • `Active`—An active product selling model can't be deleted, and only the `Name` and `Status` fields can be modified. An active product selling model can't be changed back to draft. • `Draft`—A draft product selling model can be modified and deleted. • `Inactive`—An inactive product selling model can't be deleted, and only the `Name` and `Status` fields can be modified. An inactive product selling model can't be changed back to draft. The default value is `Draft`.

ProfileSkill

Represents a profile skill, which describes a user's professional knowledge. This is a global record for the organization, and users are associated through the ProfileSkillUser object.

Note: For information about Live Agent skills, see the Skill topic.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the profile skill.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp indicating when the current user last viewed a record related to this profile skill. Available in API version 29.0 and later.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp indicating when the current user last viewed this profile skill. Available in API version 29.0 and later.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the profile skill.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description The owner of the profile skill. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`UserCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of users with the profile skill.

Usage

Use the ProfileSkill object to look up the attributes of a skill that can be assigned to a user. This is a global object and is not owned by any specific user.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProfileSkillFeed (API version 34.0)
Feed tracking is available for the object.

ProfileSkillHistory
History is available for tracked fields of the object.

ProfileSkillOwnerSharingRule
Sharing rules are available for the object.

ProfileSkillShare
Sharing is available for the object.

ProfileSkillEndorsement

Represents a detail relationship of ProfileSkillUser. An endorsement of a profile skill shows approval and support of another user's publicly declared skill.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the profile skill being endorsed.
`ProfileSkillUserId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the ProfileSkillUser record that is being endorsed. This is a relationship field. **Relationship Name** ProfileSkillUser **Relationship Type** Lookup **Refers To** ProfileSkillUser
`UserId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The user ID of the person giving the endorsement. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

Usage

Use the ProfileSkillEndorsement object to query about a single endorsement given to a user about a specific skill. Users can't endorse themselves, they can only be endorsed by others unless they are administrators with the "Modify All Data" permission.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProfileSkillEndorsementFeed (API version 34.0)
: Feed tracking is available for the object.

ProfileSkillEndorsementHistory
: History is available for tracked fields of the object.

ProfileSkillShare

Represents a sharing entry on a ProfileSkill.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field Name	Details
`AccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Level of access that the User or Group has to the ProfileSkill. The possible values are: • `Read` • `Edit` • `All` (This value is not valid for `create()` or `update()` calls.)

Field Name	Details
	This value must be set to an access level that is higher than the organization's default access level for ProfileSkill objects.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the parent object, if any. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** ProfileSkill
`RowCause`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited. Values may include: • `Manual`—The User or Group has access because a user with "All" access manually shared the ProfileSkill with them. • `Owner`—The User is the owner of the ProfileSkill or is in a role above the ProfileSkill owner in the role hierarchy.
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the User or Group that has been given access to the ProfileSkill. This is a polymorphic relationship field. **Relationship Name** UserOrGroup

Field Name	Details
	Relationship Type Lookup **Refers To** Group, User

Usage

This object is read only. It is visible because of constraints to the ProfileSkill object, but it is ignored and does not control which users and groups can view and edit ProfileSkill records owned by other users.

ProfileSkillUser

Represents a detail relationship of User. The object connects profile skills with users.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`EndorsementCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of endorsements.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the skill user.
`ProfileSkillId`	**Type** reference **Properties** Create, Filter, Group, Sort

Field Name	Details
	Description The ID of the ProfileSkill. This is a relationship field. **Relationship Name** ProfileSkill **Relationship Type** Lookup **Refers To** ProfileSkill
`UserId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the user. This field can't be changed once it is created. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

Usage

Use this object to assign specific skills to specific users. ProfileSkillUser appears on the Overview tab on the Chatter profile page. Users can only create a skill mapping for themselves, they can't create skill mappings for others unless they are administrators with the "Modify All Data" permission. Additionally, users can only edit this object if they are the context user and are not editing the `UserId` field.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProfileSkillUserFeed (API version 34.0)
Feed tracking is available for the object.

ProfileSkillUserHistory
History is available for tracked fields of the object.

Promotion

Represents a promotion for B2B or B2C stores. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Some of the fields on the Promotion object are available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
AreQualItemsExclFromDiscounts	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Exclude qualifying items from discount. You can use this field to create buy-one-get-one promotions. The default value is false. This field is available in API version 56.0 and later.
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
Description	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Description of the promotion.
DiscountOrder	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Indicates whether to apply discounts first to the least expensive products or to the most expensive products. Possible values are: • `LeastExpensive` • `MostExpensive` The default value is `MostExpensive`. This field is available in API version 56.0 and later.
`DiscountRestriction`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates whether to restrict the products that can be discounted based on the least expensive qualifying product. Possible values are: • `LeastExpensive` • `None` The default value is `None`. This field is available in API version 56.0 and later.
`DisplayName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Display name of the promotion.
`EndDateTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Date and time when the promotion ends.
`ExclusivityType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Determines whether a promotion is non-exclusive (can be combined with other promotions) or exclusive (can only combine with promotions of the same class). Possible values are: • `No` - No exclusions. Can be combined with other promotions. • `Class` - Can only combine with a promotion of the same class. • `Global` - Can be applied to an entire order. The default value is `Class`. This field is available in API version 58.0 and later.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the promotion is active (true) or inactive (false). The default value is false.
`IsAutomatic`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Determines whether the promotion is automatic or manual. If the promotion is automatic, it automatically applies to eligible carts with no buyer action required. if the promotion is manual, the buyer applies a coupon to redeem the promotion. The default value is false.
`IsCommercePromotion`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if the promotion is a B2B Commerce promotion (true) or not (false). The default value is false.
`IsTiered`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether the promotion uses promotion tiers (true) or not (false). This value can't be changed. The default value is false. A tiered promotion can have up to 10 associated tiers. This field is available in API version 57.0 and later.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced and not directly accessed.
MaximumUsageCount	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Maximum number of times the promotion can be applied to a cart. If left blank, the default value is 1. This field is available in API version 56.0 and later.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the promotion.
Objective	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update

Field	Details
	Description More information, if any, about the purpose of the promotion.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user who created the promotion. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
PriorityNumber	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Priority for the promotion. The priority determines which promotions apply first. The lower the number, the higher the priority.
QualifierCriteria	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** If a promotion has multiple qualifiers, this field determines whether all qualifiers must be met or whether any must be met for the promotion to apply. Possible values are: • `All` • `Any` The default value is 'All'. This field is available in API version 53.0 and later.
StartDateTime	**Type** dateTime

Field	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** Date and time when the promotion begins.
TargetCriteria	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** If a promotion has multiple targets, indicates whether a cart must meet the criteria for any target or the criteria for all targets. Possible values are: • All • Any This field is available in API version 56.0 and later.
TermsAndConditions	**Type** textarea **Properties** Create, Nillable, Update **Description** Terms and conditions the buyer accepts before applying the promotion. This field is available in API version 53.0 and later.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PromotionFeed **on page 39**
Feed tracking is available for the object.

PromotionHistory **on page 47**
History is available for tracked fields of the object.

PromotionShare on page 50
Sharing is available for the object.

PromotionLineItemRule

Lists compound conditions about a promotion. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`AssociatedReferenceId`	**Type** Reference **Properties** Create, Filter, Group, Sort **Description** ID of the associated reference. **Relationship Name** AssociatedReference **Relationship Type** Lookup **Refers To** PromotionQualifier, PromotionTarget
`AssociatedType`	**Type** Picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort **Description** Specifies the type of object the rule is associated with. Possible values are: • `PromotionQualifier` • `PromotionTarget`
`Name`	**Type** String **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Name of the promotion rule.
`OperatorType`	**Type** Picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Operator type for promotion line item rule. Possible values are: • `EQUAL_TO` • `GREATER_THAN` • `GREATER_THAN_OR_EQUAL_TO` • `LESS_THAN` • `LESS_THAN_OR_EQUAL_TO` • `NOT_EQUAL_TO` The default value is `EQUAL_TO`.
`OwnerId`	**Type** Reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner. **Relationship Name** Owner **Relationship Type** Lookup

Field	Details
	Refers To Group, User
Type	**Type** Picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Specifies the type on which the rule is being applied. Possible values are: • Price • Product • ProductCategory
TypeReferenceId	**Type** Reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the type. **Relationship Name** TypeReference **Relationship Type** Lookup **Refers To** Product2, ProductCategory
TypeValue	**Type** String **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Value of the type selected.

PromotionMarketSegment

Represents a market segment within B2B Commerce that promotions can be assigned to. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The PromotionMarketSegment object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the promotion segment.

Field	Details
PromotionId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the promotion that you want to associate with your promotion segment. This is a relationship field. **Relationship Name** Promotion **Relationship Type** Lookup **Refers To** Promotion
PromotionSegmentId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the promotion segment that you want to associate with. This is a relationship field. **Relationship Name** PromotionSegment **Relationship Type** Lookup **Refers To** PromotionSegment

PromotionTarget

PromotionTier

PromotionQualifier

Represents the product, product category, or order that you want to target with your promotion qualifier in a B2B or B2C store. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The PromotionQualifier object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
`ExternalQualifier`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A qualifying product or product category stored outside of Salesforce. This field is available in API version 56.0 and later. Note: This field is available through the API only.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.

Field	Details
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
MinimumAmount	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** The minimum dollar amount that a buyer must purchase to qualify for the promotion.
MinimumQuantity	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The minimum quantity that a buyer must purchase to qualify for the promotion.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Name of the promotion qualifier.
PromotionId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the promotion that you want to associate with your promotion qualifier. This is a relationship field. **Relationship Name** Promotion **Relationship Type** Lookup

Field	Details
	Refers To Promotion
PromotionTierId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the promotion tier associated with the qualifier. Only used with tiered promotions. This is a relationship field. This field is available in API version 57.0 and later. **Relationship Name** PromotionTier **Relationship Type** Lookup **Refers To** PromotionTier
QualifierId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the qualifier. This is a polymorphic relationship field. **Relationship Name** Qualifier **Relationship Type** Lookup **Refers To** Product2, ProductCategory
QualifierOperator	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Possible values are: • EQUAL_TO • NONE

Field	Details
	• `NOT_EQUAL_TO`
`QualifierProductCategoryName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the product category referenced in the qualifier. This field is available in API version 55.0 and later.
`QualifierProductName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the product referenced in the qualifier. This field is available in API version 55.0 and later.
`QualifierProductSku`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The stock keeping unit of the product referenced in the qualifier. This field is available in API version 55.0 and later.
`QualifierRuleCriteriaType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of qualifier rule criteria. Possible values are: • `All` • `Any`
`QualifierType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description The type of qualifier that you want to add to the promotion. `Product` applies the qualifier to a single product, `ProductCategory` to a predetermined group of products, and `TransactionTotal` to the entire order. Possible values are: • `Product` • `ProductCategory` • `TransactionTotal`

PromotionTarget

Represents the product, product category, or order that you want to target with your promotion in a B2B Store or D2C store. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The PromotionTarget object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
`AdjustmentAmount`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** The promotion discount expressed as an amount, not as a percentage.
`AdjustmentPercent`	**Type** percent **Properties** Create, Filter, Nillable, Sort, Update

Field	Details
	Description The percentage discount of the promotion. Valid values include numbers from 1 through 100.
AdjustmentType	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of adjustment discount applied to the product or group of products. Possible values are: • FixedAmountOffLineItemTotal—Fixed amount off the total of all line items. • FixedAmountOffTransaction—Fixed amount off the entire transaction. This value is available in API version 56.0 and later. • FixedAmountOffUnitPrice—Fixed amount off the unit price. • FixedPrice—Fixed price for a product. This value is available in API version 56.0 and later. • TotalFixedPrice—Fixed price for a set number of products. Requires a quantity limit. This value is available in API version 56.0 and later. • FixedAmountOffUnitPrice—Fixed amount off the unit price. • PercentageDiscount—Percentage discount.
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
ExternalTarget	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A target product or product category stored outside of Salesforce. This field is available in API version 56.0 and later. Note: This field is available through the API only.

Field	Details
IsMinItemCountRequired	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** If `true`, the max value in the `RestrictionQuantity` field must be met before the promotion is applied. The default value is `false`. This field is available in API version 56.0 and later.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the promotion target.
PromotionId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the promotion that you want to reference. This is a relationship field. **Relationship Name** Promotion

Field	Details
	Relationship Type Lookup **Refers To** Promotion
PromotionTierId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the promotion tier associated with the target. Only used with tiered promotions. This is a relationship field. This field is available in API version 57.0 and later. **Relationship Name** PromotionTier **Relationship Type** Lookup **Refers To** PromotionTier
RestrictionQuantity	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Maximum number of times the discount can be applied to the target. This field is available in API version 56.0 and later.
TargetId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the product or product category that you want to target. This is a polymorphic relationship field. **Relationship Name** Target **Relationship Type** Lookup **Refers To** Product2, ProductCategory

Field	Details
TargetProductCategoryName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the product category referenced in the target. This field is available in API version 55.0 and later.
TargetProductName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the product referenced in the target. This field is available in API version 55.0 and later.
TargetProductSku	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The stock keeping unit of the product referenced in the target. This field is available in API version 55.0 and later.
TargetType	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The target of the promotion. `Product` applies the promotion to a single product, `ProductCategory` to a predetermined group of products, and `Transaction` to the entire order. Possible values are: • `Product` • `ProductCategory`

Field	Details
	• `Transaction`

PromotionTier

Represents a tier of a promotion that includes multiple tiers. A promotion can have up to 10 tiers. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, it can mean that the user accessed this record or list view (`LastReferencedDate`) but didn't view it.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the promotion tier.
`PromotionId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the promotion associated with the promotion tier. This field is a relationship field. **Relationship Name** Promotion **Relationship Type** Lookup **Refers To** Promotion
`Rank`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Priority of the tier among the associated promotion's tiers. Tiers are evaluated in order from lowest to highest rank. Each tier in a promotion must have a unique rank.

Usage

Use promotion tiers with promotion qualifiers and promotion targets to create tiered promotions. Instead of associating one promotion qualifier and one promotion target with each promotion, associate one promotion qualifier and one promotion target with each promotion tier.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PromotionTierFeed on page 39
: Feed tracking is available for the object.

PromotionTierHistory on page 47
: History is available for tracked fields of the object.

Prompt

Represents record details about an in-app guidance prompt or walkthrough. Available in API version 46.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Prompts and walkthroughs help users discover your products and services, adopt your processes, or learn how to use a new feature. Add prompts and walkthroughs in Lightning Experience pages or apps or in supported Experience Cloud site pages. Add an optional action button or link that goes to a URL. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To add, edit, manage, and view prompts and walkthroughs in Lightning Experience or in Experience Cloud sites, multiple permissions are required. See Permissions for Creating and Accessing In-App Guidance in Salesforce Help.

Prompts and Walkthroughs in Managed Packages

For considerations about including in-app guidance in a managed package, see Guidelines for In-App Guidance in Managed Packages in Salesforce Help.

For more information about creating managed packages, see Create a First-Generation Managed Package.

Unmanaged packages must contain a namespace prefix. For more information, see Register a Namespace for a First-Generation Managed Packages and What happens to my namespace prefix when I install a package?.

Fields

Field	Details
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance slows down while Salesforce generates one for each record.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the language used in the org where the in-app guidance was created.
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The label. Maximum of 80 characters.
NamespacePrefix	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can

Field	Details
	refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that aren't Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

PromptAction

Represents how the user interacted with the in-app guidance prompt or walkthrough. Available in API version 46.0 and later.

Prompts and walkthroughs help users discover your products and services, adopt your processes, or learn how to use a new feature. Add prompts and walkthroughs in Lightning Experience pages or apps or in supported Experience Cloud site pages. Add an optional action button or link that goes to a URL. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To add, edit, manage, and view prompts and walkthroughs in Lightning Experience or in Experience Cloud sites, multiple permissions are required. See Permissions for Creating and Accessing In-App Guidance in Salesforce Help.

Fields

Field	Details
`LastDisplayDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Indicates the date the in-app guidance was last displayed to the user.

Field	Details
LastResult	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the last user interaction. Valid values are: • CustomAction • Dismiss • Error • Finish—(walkthroughs only) • NoAction • NotSeen • Snooze
LastResultDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Indicates the date the in-app guidance was last interacted with.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the in-app guidance.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup

Field	Details
	Refers To Group, User
PromptVersionId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the PromptVersion object. This is a relationship field. **Relationship Name** PromptVersion **Relationship Type** Lookup **Refers To** PromptVersion
SnoozeUntil	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The timestamp for when the user's snooze request expires. The user won't see the prompt again until they navigate to the page after the snooze time expires.
StepCount	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the total number of steps in the walkthrough. Available in API version 49.0 and later.
StepNumber	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the number of the last step the user viewed or interacted with in a walkthrough. Maximum value is 10. Available in API version 49.0 and later.

Field	Details
TimesActionTaken	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Number of times that the user took action on the in-app guidance.
TimesDismissed	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Number of times that the user dismissed the in-app guidance.
TimesDisplayed	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Number of times that the in-app guidance was displayed to the user.
TimesSnoozed	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The total number of times the user snoozes the prompt.
UserId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the user. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

Associated Objects

This object has the following associated objects. They are available in API version 46.0 and later.

PromptActionOwnerSharingRule
Sharing rules are available for the object.

PromptActionShare
Sharing is available for the object.

PromptError

Represents the error or warning associated with the PromptAction. Available in API version 52.0 and later.

Prompts and walkthroughs help users discover your products and services, adopt your processes, or learn how to use a new feature. Add prompts and walkthroughs in Lightning Experience pages or apps or in supported Experience Cloud site pages. Add an optional action button or link that goes to a URL. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To add, edit, manage, and view prompts and walkthroughs in Lightning Experience or in Experience Cloud sites, multiple permissions are required. See Permissions for Creating and Accessing In-App Guidance in Salesforce Help.

Fields

Field	Details
`IsError`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if the in-app guidance had an error `true` or a warning `false`. The default is `false`.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the PromptError record.

Field	Details
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the User or Group.
`PromptActionId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the PromptAction that the PromptError is related to.
`StepNumber`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the step number that the user encountered an error or warning in a walkthrough.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates the type of error or warning. Possible values are: • `NoAccessToApp`—A step on this walkthrough is on an app that some of your users don’t have access to. • `NoAccessToPage`—A step on the walkthrough is on a page that some of your users don’t have access to. • `ReferenceElementNotFound`—The target element has moved or is no longer on your page. Targeted prompts attached to unavailable elements convert to floating prompts. Check your access to the element, or enter targeting mode and reassign the targeted prompt. • `Unavailable`—Users tried to open this walkthrough using its URL, but it's inactive or the users aren’t licensed to see it. To make it accessible to users, check its settings or activate it.

Associated Objects

This object has the following associated objects. They are available in API version 52.0 and later.

PromptErrorOwnerSharingRule
Sharing rules are available for the object.

PromptErrorShare
Sharing is available for the object.

PromptActionOwnerSharingRule

Represents a rule which determines `PromptAction` sharing access for the owners. Available in API version 46.0 and later.

Prompts and walkthroughs help users discover your products and services, adopt your processes, or learn how to use a new feature. Add prompts and walkthroughs in Lightning Experience pages or apps or in supported Experience Cloud site pages. Add an optional action button or link that goes to a URL. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To add, edit, manage, and view prompts and walkthroughs in Lightning Experience or in Experience Cloud sites, multiple permissions are required. See Permissions for Creating and Accessing In-App Guidance in Salesforce Help.

Fields

Field	Details
`AccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates the access level of users for in-app guidance. Valid values are `Read` and `Edit`.
`Description`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Description of the in-app guidance. Maximum of 255 characters.

Field	Details
DeveloperName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
GroupId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the group whose `PromptAction` are shared.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the in-app guidance.
UserOrGroupID	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the user or group with whom `PromptAction` access is shared.

PromptActionShare

Represents a sharing entry on a prompt action record. Available in API version 46.0 and later.

Prompts and walkthroughs help users discover your products and services, adopt your processes, or learn how to use a new feature. Add prompts and walkthroughs in Lightning Experience pages or apps or in supported Experience Cloud site pages. Add an optional action button or link that goes to a URL. Track views, action button clicks, and walkthrough completions.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To add, edit, manage, and view prompts and walkthroughs in Lightning Experience or in Experience Cloud sites, multiple permissions are required. See Permissions for Creating and Accessing In-App Guidance in Salesforce Help.

Fields

Field	Details
`AccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates the access level of users for in-app guidance. Valid values are `Read`, `Edit`, and `All`.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the parent.
`RowCause`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited. Valid values include: • `Rule`—The User or Group has access via a sharing rule. • `GuestRule`—The User or Group has access via a guest user sharing rule. • `Manual`—The User or Group has access because a User with "All" access manually shared the prompt action with them. • `Owner`—The User is the owner of the prompt action.
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the User or Group.

PromptLocalization

Represents the translated value of a label for record details about in-app guidance when the Translation Workbench is enabled for your org. Available in API version 48.0 and later.

Prompts and walkthroughs help users discover your products and services, adopt your processes, or learn how to use a new feature. Add prompts and walkthroughs in Lightning Experience pages or apps or in supported Experience Cloud site pages. Add an optional action button or link that goes to a URL. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To add, edit, manage, and view prompts and walkthroughs in Lightning Experience or in Experience Cloud sites, multiple permissions are required. See Permissions for Creating and Accessing In-App Guidance in Salesforce Help.

Prompts and Walkthroughs in Managed Packages

For considerations about including in-app guidance in a managed package, see Guidelines for In-App Guidance in Managed Packages in Salesforce Help.

For more information about creating managed packages, see Create a First-Generation Managed Package.

Unmanaged packages must contain a namespace prefix. For more information, see Register a Namespace for a First-Generation Managed Packages and What happens to my namespace prefix when I install a package?.

Fields

Field	Details
Language	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Indicates the language used in the org where the in-app guidance was created.
NamespacePrefix	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that aren't Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
ParentId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the in-app guidance.
Value	**Type** textarea **Properties** Create, Filter, Sort, Update

Field	Details
	Description The actual translated record details for the in-app guidance.

PromptVersion

Represents an in-app guidance prompt or walkthrough. Available in API version 46.0 and later.

Prompts and walkthroughs help users discover your products and services, adopt your processes, or learn how to use a new feature. Add prompts and walkthroughs in Lightning Experience pages or apps or in supported Experience Cloud site pages. Add an optional action button or link that goes to a URL. Track views, action button clicks, and walkthrough completions.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To add, edit, manage, and view prompts and walkthroughs in Lightning Experience or in Experience Cloud sites, multiple permissions are required. See Permissions for Creating and Accessing In-App Guidance in Salesforce Help.

Prompts and Walkthroughs in Managed Packages

For considerations about including in-app guidance in a managed package, see Guidelines for In-App Guidance in Managed Packages in Salesforce Help.

For more information about creating managed packages, see Create a First-Generation Managed Package.

Unmanaged packages must contain a namespace prefix. For more information, see Register a Namespace for a First-Generation Managed Packages and What happens to my namespace prefix when I install a package?.

Fields

Field	Details
`ActionButtonLabel`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Label for the action button. Maximum of 25 characters. For walkthroughs, this field can only be specified on the last step.

Field	Details
ActionButtonLink	**Type** url **Properties** Create, Filter, Nillable, Sort, Update **Description** URL for the action button. Maximum of 1,000 characters. You can't use the `GROUP BY` option in a SOQL query for this field. For walkthroughs, this field can only be specified on the last step.
Body	**Type** textarea **Properties** Create, Update **Description** Body content. For floating prompts, there's a maximum of 240 characters. For docked prompts, there's a maximum of 4000 characters. However, docked prompts use a rich text editor, so the maximum refers to the HTML markup, not the readable text.
DelayDays	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Number of days between occurrences. For walkthroughs, this field can only be specified on the first step.
Description	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the in-app guidance. Maximum of 255 characters.
DismissButtonLabel	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Label for the dismiss button of a floating prompt. Maximum of 15 characters.
DisplayPosition	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the position of the floating prompt on the page. Valid values are: • `TopLeft` • `TopCenter` • `TopRight` • `MiddleLeft` • `MiddleCenter` • `MiddleRight` • `BottomLeft` • `BottomCenter` • `BottomRight`
`DisplayType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates the type of prompt. Valid values are: • `DockedComposer`—the docked prompt • `FloatingPanel`—the floating prompt • `Targeted`—the targeted prompt. Available in API version 52.0 and later.
`ElementRelativePosition`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the location of the prompt relative to the element. This field is available in API version 52.0 and later. Valid values are: • `BottomCenter` • `BottomLeft` • `BottomRight` • `LeftBottom` • `LeftCenter` • `LeftTop` • `RightBottom` • `RightCenter`

Field	Details
	• `RightTop` • `TopCenter` • `TopLeft` • `TopRight`
`EndDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the date to stop showing the in-app guidance. For walkthroughs, this field can only be specified on the first step.
`Header`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Label for the header of the docked prompt, which appears in the window's browser bar. Maximum of 36 characters.
`ImageAltText`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the alt text of an image. Required if `ImageLocation` or `ImageID` is specified.
`ImageId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the ContentAsset that holds the image. Required if `ImageLocation` or `ImageAltText` is specified. This is a relationship field. **Relationship Name** Image **Relationship Type** Lookup

Field	Details
	Refers To ContentAsset
`ImageLocation`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the location of the image in relation to the body text. Required if `ImageID` or `ImageAltText` is specified. Valid values are: • `Top` • `Bottom` • `Right`—for floating prompts only • `Left`—for floating prompts only
`IndexWithIsPublished`	**Type** string **Properties** Filter, idLookup, Nillable, Sort **Description** Used by Salesforce for efficient querying.
`IndexWithoutIsPublished`	**Type** string **Properties** Filter, idLookup, Nillable, Sort **Description** Used by Salesforce for efficient querying.
`IsPublished`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if the in-app guidance is active `yes` or not `no`.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update

Field	Details
	Description The label. Maximum of 80 characters.
ParentId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the in-app guidance. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** Prompt
PublishedByUserId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the user who activated the in-app guidance. If the in-app guidance is part of a package, this is the user who installed the package. This is a relationship field. **Relationship Name** PublishedByUser **Relationship Type** Lookup **Refers To** User
PublishedDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the date the in-app guidance was activated. If the in-app guidance is part of a package, this is the date when the package was installed. For walkthroughs, this field can only be specified on the first step.

Field	Details
ReferenceElementContext	**Type** textarea **Properties** Create, Nillable, Update **Description** Used by Salesforce to identify the element that the targeted prompt is associated with. This field is available in API version 52.0 and later.
ShouldDisplayActionButton	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if an action button or link is included in the in-app guidance `yes` or not `no`.
ShouldIgnoreGlobalDelay	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if the prompt ignores the global time delay between in-app guidance and instead shows on page load `yes` or not `no`. The default is `no`.
StartDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the date to start showing. For walkthroughs, this field can only be specified on the first step.
StepNumber	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the number of the last step the user viewed or interacted with in a walkthrough. Maximum value is 10.
TargetAppDeveloperName	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The app's developer name where the in-app guidance appears. Deprecated in API version 51.0.
`TargetAppNamespacePrefix`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The app's namespace prefix where the in-app guidance appears. Must match the target app's `NamespacePrefix` in the org that the package is being installed into. Maximum of 15 characters. Deprecated in API version of 51.0.
`TargetPageKey1`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Required. Used by Salesforce to identify the page location along with `TargetPageKey2`, `TargetPageKey3`, `TargetPageKey4`, and `TargetPageType`.
`TargetPageKey1Ref`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Used by Salesforce to identify the prompt's page location along with `TargetPageKey2`, `TargetPageKey3`, `TargetPageKey4`, and `TargetPageType`.
`TargetPageKey2`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Used by Salesforce to identify the prompt's page location along with `TargetPageKey1`, `TargetPageKey3`, `TargetPageKey4`, and `TargetPageType`.
`TargetPageKey3`	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Used by Salesforce to identify the prompt's page location along with `TargetPageKey1`, `TargetPageKey2`, `TargetPageKey4`, and `TargetPageType`.
`TargetPageKey4`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Used by Salesforce to identify the page location along with `TargetPageKey1`, `TargetPageKey2`, `TargetPageKey3`, and `TargetPageType`. This field is available in API version 53.0 and later.
`TargetPageType`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The type of page where the in-app guidance appears.
`TargetRecordType`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Used by Salesforce to determine if in-app guidance is specific to a record type. This field is available in API version 52.0 and later. **Relationship Name** TargetRecordType **Relationship Type** Lookup **Refers To** RecordType
`ThemeColor`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Indicates which custom theme color is applied to in-app guidance. Required if `ThemeSaturation` is specified. Specify on the first step of the walkthrough to apply to the entire walkthrough. Valid values are: • `Theme1`—derived from the current brand color • `Theme2`—derived from the current page background color • `Theme3`—derived from the current global header color • `Theme4`—derived from the current app theme color
`ThemeSaturation`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates which color value, or saturation, is applied to in-app guidance that has a custom theme color applied. Required if `ThemeColor` is specified. Specify on the first step of the walkthrough to apply to the entire walkthrough. Valid values are: • `Dark` • `Light`
`TimesToDisplay`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Maximum number of times to display the in-app guidance (that is, the number of occurrences). Salesforce detects if the user interacts with (or ignores) the in-app guidance to determine if we should show the in-app guidance again or cancel scheduled recurrences. This can run counter to the number of occurrences scheduled. Maximum value of 30. For walkthroughs, this field can only be specified on the first step.
`Title`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The label for the title of the in-app guidance. Maximum of 36 characters.
`UserAccess`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Indicates which permissions can see the in-app guidance. Valid values are: • `Everyone`—there are no restrictions on who can see • `SpecificPermissions`—only users with all the specific user permissions specified can see the in-app guidance
`UserProfileAccess`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates which profiles can see the in-app guidance. Valid values are: • `Everyone`—there are no permission restrictions on who can see • `SpecificProfiles`—users with any of the specific user profiles specified can see the in-app guidance
`VersionNumber`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The number remains `1` since multiple versions aren't saved in the org.
`VideoLink`	**Type** url **Properties** Create, Filter, Nillable, Sort, Update **Description** URL for the video in a docked prompt. Maximum of 1,000 characters. You can only specify this field or the `ImageId` field, not both. To find the embed code for a video, follow the instructions from the video host website. Usually the steps can be found by searching for the name of the website and "embed video." For example, here's what the embed code looks like for YouTube: `<iframe width="560" height="315" src="https://www.youtube.com/embed/di6iwHhrH6s" frameborder="0" allow="accelerometer; autoplay; encrypted-media; gyroscope; picture-in-picture" allowfullscreen></iframe>` Then, you would enter the URL found in the `src` attribute. For the example used, enter *https://www.youtube.com/embed/di6iwHhrH6s*.

PromptVersionLocalization

Represents the translated value of a label for-app guidance when the Translation Workbench is enabled for your org. Available in API version 48.0 and later.

Use prompts and walkthroughs to display announcements, training, or news to users within the app. Choose to add an action button or link that links to a URL of your choice. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To add, edit, manage, and view prompts and walkthroughs in Lightning Experience or in Experience Cloud sites, multiple permissions are required. See Permissions for Creating and Accessing In-App Guidance in Salesforce Help.

Prompts and Walkthroughs in Managed Packages

For considerations about including in-app guidance in a managed package, see Guidelines for In-App Guidance in Managed Packages in Salesforce Help.

For more information about creating managed packages, see Create a First-Generation Managed Package.

Unmanaged packages must contain a namespace prefix. For more information, see Register a Namespace for a First-Generation Managed Packages and What happens to my namespace prefix when I install a package?.

Fields

Field	Details
`Language`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Indicates the language used in the org where the in-app guidance was created.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can

Field	Details
	refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that aren't Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the in-app guidance.
`Value`	**Type** textarea **Properties** Create, Filter, Sort, Update **Description** The actual translated label of the in-app guidance.

ProrationPolicy

Defines how the price of a subscription is divided into time periods and how the price is calculated for each time period. This object is available in API version 55.0 and later.

The proration policy defines whether partial periods are allowed and how remainder amounts are handled.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Special Access Rules

This object is available when Subscription Management is enabled.

Fields

Field	Details
ArePartialPeriodsAllowed	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Indicates whether a subscription can be canceled partway through a period. Set the value to `True` if a subscription can be canceled partway through a period. Otherwise, set the value to `false`. For example, if the proration period is monthly and this field is `true`, then customers can cancel a subscription partway through the month. If the proration period is monthly and this field is `false`, then the subscription is canceled at the end of the current month. The default value is `false`.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list `viewLastReferencedDate` but not viewed it.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort **Description** The name of the proration policy.
ProrationPolicyType	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort **Description** The type of proration policy. Possible values are: • `StandardTimePeriods`—Indicates that the proration policy divides the subscription into similar time periods, and prorates the subscription using the time periods. For example, a monthly subscription that's subscribed to for 12 months for a total amount of $120 is prorated as $10 per month.
`RemainderStrategy`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Indicates how the leftover amount from the price calculation is allocated. For example, if the total amount is $100 and the subscription has 12 periods, the price per period is $8.33, with $0.04 remaining. To indicate that the $0.04 is included in the first period, use the value `AddToFirst`. To indicate that the $0.04 is included in the final period, use the value `AddToLast`. Possible values are: • `AddToFirst`—Add the remaining amount to the first period. • `AddToLast`—Add the remaining amount to the last period.

PublicComplaint

Represents the complaints submitted by public users. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Fields added in API version 58.0 are available if the add-on license for Financial Services Cloud is enabled.

Fields

Field	Details
AccountId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the Account associated with this complaint. This field is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
BusinessAddress	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** The address of the business.
BusinessName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The name of the business.
CauseSubtype	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The subtype of complaint cause. This field is available in API version 58.0 and later. Possible values are: • `Misleading advertisement or documentation`
CauseType	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The type of complaint cause. This field is available in API version 58.0 and later. Possible values are: • `Product Communication`
`Comments`	**Type** textarea **Properties** Create, Nillable, Update **Description** Additional details about the complaint. This field is available in API version 51.0 and later.
`CompensationAmount`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** Any amount of money offered to resolve the complaint. This field is available in API version 58.0 and later.
`ComplaintCaseId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the related Case. This field is available in API version 58.0 and later. This field is a relationship field. **Relationship Name** ComplaintCase **Relationship Type** Lookup **Refers To** Case
`ComplaintCaseStatus`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Sort

Field	Details
	Description The status of the related Case. This field is available in API version 58.0 and later. Possible values are: • `Closed` • `Escalated` • `In Progress` • `Merged` • `New` • `On Hold` • `Response Received` • `Waiting for Customer` • `Working` The default value is `New`.
`ComplaintSubType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The subtype of complaint. All values except `Fire Safety` are available in API version 58.0 and later. Possible values are: • `Account Opening/Closure` • `Amount Not Dispensed` • `Attempts to Collect Debt not Owed` • `Auto Debit Mandate` • `Communication Tactics` • `Credit Limit Changed` • `Credit Report / Credit Score` • `Delays / Timescales` • `Disputes over sums/charges` • `Errors / not following instructions` • `Fire Safety` • `Fraud Handling` • `Inaccessible ATMs` • `Inaccessible Branch Entrances` • `Inaccessible Mobile banking features` • `Inaccessible Website`

Field	Details
	• `Misleading Advertising` • `Mobile Banking - Features or Functionality` • `No Written Notification About Debt` • `Online Banking - Features or Functionality` • `Other General Admin/Customer Service` • `Others` • `Problem when Making Payments` • `Product Disclosure Information` • `Product Performance/Features` • `Unauthorised Transaction(s)` • `Unclear Arrangement` • `Unclear Guidance` • `Unsuitable Advice`
`ComplaintType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The type of complaint. All values except `Safety` are available in API version 58.0 and later. Possible values are: • `Accessibility Issues` • `Advising, Selling and Arranging` • `Digital or Technology` • `Financial Hardship or Collections` • `General Admin/ Customer Service` • `Information, sums/ charges or Product Performance` • `Lending / Credit` • `Marketing or Corporate Communications` • `Others` • `Safety` • `Transaction Related`
`Description`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** A description of the complaint.

Field	Details
`Email`	**Type** email **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The email of the complainant.
`EscalationCause`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The reason the complaint was escalated. This field is available in API version 58.0 and later. Possible values are: • `Alleged ADA Violation` • `Alleged Discrimination` • `Alleged MLA Violation` • `Alleged SCRA Violation` • `Alleged UDAAP Violation` • `Consumer Protection Agency Involvement` • `Lawsuit Filed` • `Media Involvement` • `None` • `Received by Executive Leadership` The default is `None`.
`FirstName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The given name of the complainant.
`IncidentDate`	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** The date of the incident. The default is the date this record was created, but this field is editable.

Field	Details
IsComplainantAuthorized	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Whether the person who filed the complaint is an authorized representative of the Account. This field is available in API version 58.0 and later. The default value is `false`.
IsReporterConfidential	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The reporter's request for confidentiality. The default value is `false`.
LastName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The family name of the complainant.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, possibly the user only accessed this record or list view (`LastReferencedDate`) but didn't view it.

Field	Details
MobileNumber	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The mobile number of the complainant.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the complaint.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the complaint owner. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
Priority	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The priority of the complaint. Possible values are: • `Critical` • `High` • `Low` • `Medium` The default value is `Medium`.

Field	Details
`ProductType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The product that the complaint is about. This field is available in API version 58.0 and later. Possible values are: • `ATM / debit card` • `Credit Card or Prepaid Card` • `Insurance` • `Investments` • `Merchant Services` • `Mobile / electronic banking` • `Money transfers, virtual currency, and money services` • `Mortgage / Home Finance` • `Other` • `Personal Loan / other loans` • `Vehicle loan or lease`
`ReceivedDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The date the complaint was received. This field is available in API version 58.0 and later.
`ReporterAddress`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** The address of the reporter for further communication.
`ReporterCategory`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Role of the reporter in the organization. Possible values are:

Field	Details
	• Childcare Providers • Healthcare worker • Law Enforcement • Medical Examiners • Mental Health Professionals • Other • School Personnel • Social Worker The default value is School Personnel.
ReporterOrganization	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The organization the reporter is part of.
ShouldInclInRegulatoryRpt	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Whether this complaint must be included in a regulatory report. This field is available in API version 58.0 and later. The default value is false.
SourceType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The source of the complaint. This field is available in API version 58.0 and later. Possible values are: • Branch • Consumer Protection Agency • Contact Centre • Mobile App • Regulatory Agency • Social Media • Web Chat

Field	Details
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The status of the complaint. Possible values are: • `In Review` • `Resolved` • `Submitted` The default value is `Submitted`.
`Subject`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Subject of the complaint. This field is available in API version 51.0 and later.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PublicComplaintFeed **on page 39**
Feed tracking is available for the object.

PublicComplaintHistory **on page 47**
History is available for tracked fields of the object.

PublicComplaintOwnerSharingRule **on page 48**
Sharing rules are available for the object.

PublicComplaintShare **on page 50**
Sharing is available for the object.

PushTopic

Represents a query that is the basis for notifying Streaming API clients of changes to records in an org. This object is available in API version 21.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- This object is available only if Streaming API is enabled for your org.
- Users with the Create permission can create this record.
- To receive notifications, users must have read access on both the object in the PushTopic query and the PushTopic itself.

Fields

Field	Details
`ApiVersion`	**Type** double **Properties** Create, Filter, Sort, Update **Description** Required. API version to use for executing the query specified in `Query`. It must be an API version greater than 20.0. If your query applies to a custom object from a package, this value must match the package's `ApiVersion`. Example value:
`Description`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** Description of the PushTopic. Limit: 400 characters
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the record currently counts towards the organization's allocation.
`Name`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. Descriptive name of the PushTopic, such as `MyNewCases` or `TeamUpdatedContacts`. Limit: 25 characters. This value identifies the channel and must be unique.

Field	Details
`NotifyForFields`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Specifies which fields are evaluated to generate a notification. Possible values are: • `All` • `Referenced` (default) • `Select` • `Where`
`NotifyForOperationCreate`	**Type** boolean **Properties** Create, Filter, Update **Description** `true` if a create operation should generate a notification, otherwise, `false`. Defaults to `true`. This field is available in API version 29.0 and later.
`NotifyForOperationDelete`	**Type** boolean **Properties** Create, Filter, Update **Description** `true` if a delete operation should generate a notification, otherwise, `false`. Defaults to `true`. Clients must connect using the `cometd/29.0` (or later) Streaming API endpoint to receive delete and undelete event notifications. This field is available in API version 29.0 and later.
`NotifyForOperationUndelete`	**Type** boolean **Properties** Create, Filter, Update **Description** `true` if an undelete operation should generate a notification, otherwise, `false`. Defaults to `true`. Clients must connect using the `cometd/29.0` (or later) Streaming API endpoint to receive delete and undelete event notifications. This field is available in API version 29.0 and later.
`NotifyForOperationUpdate`	**Type** boolean

Field	Details
	Properties Create, Filter, Update **Description** `true` if an update operation should generate a notification, otherwise, `false`. Defaults to `true`. This field is available in API version 29.0 and later.
`NotifyForOperations`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Specifies which record events may generate a notification. In API version 29.0 and later, this field is read-only, and doesn't contain information about delete and undelete events. Use `NotifyForOperationCreate`, `NotifyForOperationDelete`, `NotifyForOperationUndelete` and `NotifyForOperationUpdate` to specify which record events should generate a notification. Possible values are: • `All` (default) • `Create` • `Extended` • `Update` A value of `Extended` means that neither create or update operations are set to generate events.
`Query`	**Type** string **Properties** Create, Filter, Sort, Update **Description** Required. The SOQL query statement that determines which record changes trigger events to be sent to the channel. Limit: 1,300 characters

Usage

The PushTopic defines when notifications are generated in the channel. Determine which fields to configure by checking out these links in the *Streaming API Developer Guide*.

- PushTopic Queries
- Events

- Notifications

SEE ALSO:

Streaming API Developer Guide

QueueRoutingConfig

Represents the settings that determine how work items are routed to agents. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`, `update()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
`CapacityPercentage`	**Type** percent **Properties** Create, Filter, Nillable, Sort, Update **Description** The percentage of an agent's capacity for work items that's consumed by a specific type of work item from this service channel. For example, you might give phone calls a capacity percentage of *`100`*. If an agent receives a phone call, the agent won't receive new work items until the call ends, because at that point the agent's capacity will have reached 100%. This field is available in API version 33.0 and later.
`CapacityWeight`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The amount of an agent's capacity for work items that's consumed by a work item from this service channel.

Field	Details
	For example, if an agent has a capacity of `6`, and cases are assigned a capacity weight of `2`, an agent can be assigned up to 3 cases before the agent is at capacity and can't receive new work items. This field is available in API version 33.0 and later.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`DropAdditionalSkillsTimeout`	**Type** int **Properties** Create, Filter, Group Nillable, Sort, Update **Description** The number of seconds to wait before a skill marked as **Additional Skill** is dropped from Omni-Channel routing. The case is then routed to the best-matched agent even if they don't have all the skills.
`IsAttributeBased`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether this routing is attribute-based. Available in API version 45.0 and later.
`Language`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description The language of the presence status.
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The label of the presence status.
OverflowAssigneeId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the user or queue that's set as the Overflow Assignee.
PausedCapacityPercentage	**Type** percent **Properties** Create, Filter, Nillable, Sort, Update **Description** The percentage of an agent's capacity for work items that's consumed by a paused work item from this service channel.
PausedCapacityWeight	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The amount of an agent's capacity for work items that's consumed by a paused work item from this service channel.
PushTimeout	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of seconds set for push timeout. **0** is returned when push timeout isn't enabled. Available in API version 36.0 and later.

Field	Details
RoutingModel	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The routing type that determines how work items are routed (pushed) to agents. Possible values are `Least Active` and `Most Available`.
RoutingPriority	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The priority in which work items from the service channels that are related to this routing configuration are routed to agents. Work items from routing configurations that have lower priority values (for example, *0*) are routed to agents first.
ServiceChannelId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the service channel that's associated with this configuration. This field is available in API version 32.0 and earlier.

Question

Represents a question in a zone that users can view and reply to.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available if the Answers permission and AnswersEnabled preference or PortalFeed permission and PortalFeedEnabled preference are enabled in your org.

Fields

Field	Details
BestReplyId	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** The ID of the reply that has been identified as the best answer to the question. Use the user interface to identify the best answer for a question.
BestReplySelectedById	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user who selected the best answer to the question. This field is available in API version 24.0 and later. In API version 24.0 through version 29.0, you must update this field using the UI. In API version 30.0 and later, you can update this field using the API.
Body	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the question.
CommunityId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The zone ID associated with the question. After you create a question, you can't change the zone ID associated with that question.
CreatorFullPhotoUrl	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description URL of the user's profile photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.
`CreatorName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Name of the user who posted the question or reply. Only the first name of internal users (agents) appears to portal users in the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.
`CreatorSmallPhotoUrl`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** URL of the user's thumbnail photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.
`HasSingleFieldForContent`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the content of a Chatter Answers question is: • Included in only one field: `Title` if the content is unformatted and less than 255 characters; or `Body` if the content is formatted or more than 255 characters (`true`) • Included in two fields: `Title` and `Body` (`false`) This field also determines if content displays in one or two fields in Chatter Answers question feeds. This field is available in API version 25.0 and later.
`LastReferencedDate`	**Type** date **Properties** Filter, Nillable, Sort, Update **Description** The timestamp for when the current user last viewed a record related to this record.

Field	Details
LastReplyDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time the last reply (child Reply object) was posted.
LastReplyId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Read only. The ID of the last reply (child Reply object) posted to the question.
LastViewedDate	**Type** date **Properties** Filter, Nillable, Sort, Update **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
MostReportAbusesOnReply	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The most number of user-reported abuses on a Reply associated with the question. This field is available in API version 24.0 and later.
NumReplies	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of replies (child Reply object) that users have submitted for the question.
NumReportAbuses	**Type** int

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** Represents the number of user-reported abuses on the question. This field is available in API version 24.0 and later.
`NumSubscriptions`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Represents the number of users following the question. This field is available in API version 24.0 and later.
`Origin`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The source of the question, such as `Chatter Answers`. This field is available in API version 24.0 and later.
`Title`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The descriptive title of the question.
`UpVotes`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of up votes for the question.
`VoteScore`	**Type** double **Properties** Filter, Nillable, Sort

Field	Details
	Description The internal score of the question, used to sort questions and articles on the Popular tab in the application user interface. The internal algorithm that determines the score gives older votes less weight than newer votes, simulating exponential decay. The score itself doesn't display in the application user interface. Note: Unlike other fields of type double, you can't use a SOQL aggregate function with this field.

Usage

Use this object to track questions in a zone.

QuestionDataCategorySelection

A data category selection represents a data category that classifies a question.

This object can be used to associate a question with a data category from a data category group or to query the categorization for a question.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To create, read or update data category selection, you must have create, read or update permission on the categorized question. Users who can update question can also delete its category selection. Users who can create questions can only select categories visible to their role.

Fields

Field Name	Details
`DataCategoryGroupName`	**Type** DataCategoryGroupReference **Properties** Create **Description** Unique name of the data category group which has a category associated with the question.

Field Name	Details
DataCategoryName	**Type** DataCategoryGroupReference **Properties** Create **Description** Unique name of the data category associated with the question.
ParentId	**Type** reference **Properties** Create, Filter **Description** ID of the question associated with the data category selection.

Usage

Every question can be categorized in a data category. You can use the QuestionDataCategorySelection object to query and manage question categorization. Client applications can create categorization for a question. They can also delete, query, and retrieve question categorization.

Warning: Even though the API lets you select more than one category for QuestionDataCategorySelection, the Answers tab only supports one data category selection for questions. Selecting multiple categories through QuestionDataCategorySelection may result in unexpected behavior in the Answers tab, such as losing your multiple selections. You should only select one data category when using QuestionDataCategorySelection.

Sample Code—Java

In the following example, the `selectCategory` method adds a category to a question data category selection. The `retrieveCategorySelections` method returns all the categories from a question data category selection.

```
public void selectCategory(ID parentId, String categoryGroupName, String categoryName) {
    try {
        QuestionDataCategorySelection categorySelection = new
QuestionDataCategorySelection();

        categorySelection.setParentId(parentId);
        categorySelection.setDataCategoryGroupName(categoryGroupName);
        categorySelection.setDataCategoryName(categoryName);
        binding.create(new SObject[]{categorySelection});
    } catch (RemoteException e) {
        System.out.println("An unexpected error has occurred." + e.getMessage());
    }
}

public String[] retrieveCategorySelections(String parentId) {
    QueryResult qr = null;
```

```
    try {
        qr = binding.query("SELECT DataCategoryName FROM QuestionDataCategorySelection
WHERE Id = '" + parentId + "'");
    } catch (RemoteException e) {
        System.out.println("An unexpected error has occurred." + e.getMessage());
    }

    String[] categoryNames = new String[qr.getRecords().length];
    for (int index = 0; index < qr.getRecords().length; index++) {
        categoryNames[index] =
((QuestionDataCategorySelection)qr.getRecords()[index]).getDataCategoryName();
    }

    return categoryNames;
}
```

Salesforce Knowledge uses a similar object for article data category selection. See `Article Type`__DataCategorySelection for SOQL examples using this object.

Article Type__DataCategorySelection

QuestionReportAbuse

Represents a user-reported abuse on a Question in a Chatter Answers zone. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the Question from which the user reported abuse.
`QuestionId`	**Type** reference **Properties** Create, Filter, Group, Sort

Field	Details
	Description The ID of the Question from which the user reported abuse.
`Reason`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The reason the user reported abuse on the Question, such as `Spam`, `Hateful`, or `Inappropriate`.

Usage

Use this object to track user-reported abuse on questions created in a Chatter Answers zone.

QuestionSubscription

Represents a subscription for a user following a Question. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`CommunityId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Required. ID of the zone associated with the Question the user is following. This field can’t be updated.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort

Field	Details
	Description The name of the question subscription.
QuestionCreatedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Required. Creation date of the Question which the user is following. This field can't be updated.
QuestionId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Required. ID of the Question which the user is following. This field can't be updated.
SubscriberId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Required. ID of the User who is following the Question. This field can't be updated.

Usage

Things to consider when following a Question:

- A user can only follow questions that they have permission to view.
- Administrators and users with the "Modify All Data" permission can configure other users to follow questions that the other user has read access to.
- Administrators and users with the "Modify All Data" permission can configure users to stop following questions.

Queries on QuestionSubscription:

- Users with the "Read" permission on Question can see which questions other users are following.
- A query must include a LIMIT clause and the limit can't exceed 1,000.
- A query using a `WHERE` clause can only filter by fields on Question.

QueueSobject

Represents the mapping between a queue Group and the types associated with the queue, including custom objects.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

A queue is a Group whose `Type` is `Queue`. To create a Group, you must have the Manage Users permission.

Fields

Field	Details
`QueueId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of a queue. This field is a relationship field. **Relationship Name** Queue **Relationship Type** Lookup **Refers To** Group
`SobjectType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** A list of object types that can be associated with the queue specified by the `QueueId`.

Usage

Use this object to associate a queue with the sObject that can be associated with the queue, including custom objects.

Warning: You can't update or insert more than 18 queues at once when using the Bulk API.

Overview of Salesforce Objects and Fields

QuickText

This object stores a snippet of text that allows users to send a quick response to a customer. Use quick text to create greetings, answers to common questions, short notes, and more. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`Category`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** A customizable picklist that can be used to group multiple related quick text records together
`Channel`	**Type** multipicklist **Properties** Create, Defaulted on create, Filter, Nillable, Update **Description** A multi-select picklist that can be used to specify where specific quick text messages are available, such as in Chat or in the Email publisher in Case Feed.
`FolderId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Returns the ID of the folder that contains the quick text. Available in API version 44.0 and later. This is a relationship field. **Relationship Name** Folder **Relationship Type** Lookup

Field Name	Details
	Refers To Folder
`FolderName`	**Type** string **Properties** Filter, Nillable, Sort **Description** Name of the folder that contains the quick text. Available in API version 44.0 and later.
`IsInsertable`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** If `true`, the quick text is available in the channels selected in the `Channel` field. If `false`, the quick text is not available. The label in the UI is **Include in selected channels**. By default: • This field is set to `true` on quick text records created from the Quick Text page or via the API. • This field is set to `false` on quick text records created during the Einstein Reply Recommendations reply publishing process.
`LastReferencedDate`	**Type** datetime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
`LastViewedDate`	**Type** datetime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.

Field Name	Details
Message	**Type** textarea **Properties** Create, Filter (unavailable in API version 25.0 and later), Sort (unavailable in API version 25.0 and later), Update **Description** The content of the quick text record
Name	**Type** string **Properties** Create, Filter (unavailable in API version 25.0 and later), Group, idLookup, Sort (unavailable in API version 25.0 and later), Update **Description** A descriptive label for the quick text record
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the User or Queue that owns the quick text record This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
ShouldPredictInRr	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** (Used with Einstein Reply Recommendations.) Indicates whether the quick text can be recommended to agents in the Einstein Replies console component. The label in the UI is **Include in reply recommendations**. By default: • This field is set to `false` on quick text records created from the Quick Text page or via the API.

Field Name	Details
	• This field is set to `true` on quick text records created during the Einstein Reply Recommendations reply publishing process.
`SourceEntityId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** (Used with Einstein Reply Recommendations.) The corresponding ReplyText record that the quick text record was created from. This field is not available in the UI. This is a relationship field. **Relationship Name** SourceEntity **Relationship Type** Lookup **Refers To** ReplyText
`SourceType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** (Used with Einstein Reply Recommendations.) Indicates how the text was composed. This field is not available in the UI. Possible values are: • `EINSTEIN_GENERATED`—Text was generated by Einstein Reply Recommendations • `USER_EDITED`—Text was generated by Einstein Reply Recommendations, and then edited by a user • `USER_GENERATED`—User wrote the text

Usage

Use this object to create and manage the quick text messages available to users. You can categorize multiple quick text records into groups using the Category field. The Category field can also be a parent to multiple custom-dependent Picklist fields to create a hierarchical structure of categories.

QuickText is also used in Einstein Reply Recommendations, a feature that recommends stock replies for support agents to use in chats in the Lightning Service Console. During setup, Einstein Reply Recommendations scans past chats to generate a list of commonly used replies. Each generated reply is a ReplyText record. The admin then publishes, or converts, the replies to quick text, creating a corresponding

QuickText record for each reply. Therefore, certain QuickText fields are used only on quick text records that originated as a ReplyText record.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

QuickTextChangeEvent (API version 48.0)
Change events are available for the object.

QuickTextHistory
History is available for tracked fields of the object.

QuickTextOwnerSharingRule
Sharing rules are available for the object.

QuickTextShare
Sharing is available for the object.

QuickTextUsage

Represents the usage of quick text on a record, including which quick text was used, who used it, and how they used it. Quick text is a snippet of text that allows users to send a quick response to a customer. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is always read-only.

Fields

Field	Details
`AppContext`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Context in which the quick text was used. Possible values are: • `Aloha`—Salesforce Classic • `Lightning`—Lightning Experience • `Unknown`

Field	Details
Channel	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The channel in which the quick text was used. Possible values are: • `Email` • `Event` • `Generic` • `Internal` • `Knowledge` • `Live Agent` • `Messaging` • `Phone` • `Portal` • `Social` • `Task`
FolderId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the folder containing the quick text at the time it was used. This is a relationship field. **Relationship Name** Folder **Relationship Type** Lookup **Refers To** Folder
LaunchSource	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** How the user started the quick text. Possible values are: • `Floater` • `Keyboard shortcut`

Field	Details
	• `Macro` • `Toolbar`
`LoggedTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time when the quick text was used.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Name of the quick text.
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the group or user that owns the quick text. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`QuickTextID`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the quick text. This is a relationship field. **Relationship Name** QuickText

Field	Details
	Relationship Type Lookup **Refers To** QuickText
`UserId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the user that used the quick text. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

QuickTextUsageOwnerSharingRule
Sharing rules are available for the object.

QuickTextUsageShare
Sharing is available for the object.

Quote

Represents a quote, which is a record showing proposed prices for products and services. Available in API version 18.0 and later.

Quotes can be created from and synced with opportunities, and emailed as PDFs to customers

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the account that’s associated with the quote.
AdditionalAddress	**Type** address **Properties** Filter, Nillable **Description** Compound form of the additional address. Read-only. See Address Compound Fields for details on compound address fields.
AdditionalCity	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** City for the quote's additional address. Up to 40 characters allowed.
AdditionalCountry	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Country for the quote's additional address. Up to 80 characters allowed.
AdditionalCountryCode	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ISO country code for the quote’s additional address.
AdditionalLatitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update

Field	Details
	Description Used with `AdditionalLongitude` to specify the precise geolocation of an additional address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
`AdditionalLongitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `AdditionalLatitude` to specify the precise geolocation of an additional address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.
`AdditionalName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Name associated with the quote's additional address. Limited: 255 characters.
`AdditionalPostalCode`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Postal Code for the quote's additional address.
`AdditionalState`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** State for the quote's additional address. Up to 80 characters allowed.
`AdditionalStateCode`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ISO state code for the quote’s additional address.

Field	Details
AdditionalStreet	**Type** textarea **Properties** Create, Filter, Nillable, Group, Sort, Update **Description** Street name for the quote's additional address.
BillToContactId	**Type** reference **Properties** Create, Filter, Nillable, Group, Sort, Update **Description** ID of the contact that the order is billed to. This field is available in API version 56.0 and later. This field is available with Subscription Management.
BillingAddress	**Type** address **Properties** Filter, Nillable **Description** Compound form of the billing address. Read-only. See Address Compound Fields for details on compound address fields.
BillingCity	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** City for the quote's billing address. Up to 40 characters allowed.
BillingCountry	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Country for the quote's billing address. Up to 80 characters allowed.
BillingCountryCode	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description ISO country code for the quote's billing address.
BillingLatitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `BillingLongitude` to specify the precise geolocation of a billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
BillingLongitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `BillingLatitude` to specify the precise geolocation of a billing address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.
BillingName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Entity that the quote is billed to.
BillingPostalCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Postal Code for the quote's billing address.
BillingState	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** State for the quote's billing address. Up to 80 characters allowed.

Field	Details
BillingStateCode	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ISO state code for the quote’s billing address.
BillingStreet	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Street name for the quote's billing address.
CalculationStatus	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Price calculations are performed by Salesforce. Tax calculations are performed by a third-party tax provider integration with Salesforce. Both of these calculations are asynchronous, and you can use this field to see the status of the asynchronous processes. Possible values are: • `CompletedWithPricing` • `CompletedWithTax`—Available in API version 58.0 and later. • `CompletedWithoutPricing` • `NotStarted` • `PriceCalculationFailed`—Available in API version 58.0 and later. • `PriceCalculationInProgress`—Available in API version 58.0 and later. • `PriceCalculationQueued`—The request is sent to the asynchronous price calculation process, but the process hasn’t started. Available in API version 58.0 and later. • `SaveFailedOrIncomplete`—Some or all of the records couldn’t be saved. For example, some of the quote line item records weren’t saved. Available in API version 58.0 and later. • `Saving` • `TaxCalculationFailed` • `TaxCalculationInProcess` • `TaxCalculationSuccess`—Available in API versions 56.0 and 57.0

Field	Details
	• `TaxCalculationWaiting` The default value is `NotStarted`.
`CanCreateQuoteLineItems`	**Type** boolean **Properties** Create, Defaulted on create, Group **Description** This field isn't used.
`ContactId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the contact that's associated with the quote.
`ContractId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the contract that's associated with the quote.
`CurrencyIsoCode`	**Type** picklist **Properties** Defaulted on create, Filter, Restricted picklist **Description** Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. If the organization has multicurrency and a `Pricebook2Id` specified on the quote, then the currency value of this field must match the currency of the PricebookEntry objects that are associated with any quote line items it has. This value is copied from the related Opportunity and can't be changed.
`Description`	**Type** textarea **Properties** Nillable

Field	Details
	Description Text description of the quote. Limit: 32,000 characters.
`Discount`	**Type** percent **Properties** Filter, Nillable, Sort **Description** Difference between the sum of the QuoteLineItem record's`Subtotal` and the sum of the QuoteLineItem record's `Discount` totals. Expressed as a percentage.
`Email`	**Type** email **Properties** Filter, Group, Nillable, Sort **Description** The email address of the contact who's associated with the quote.
`ExpirationDate`	**Type** date **Properties** Create, Filter, Nillable, Update **Description** The date when this quote is no longer valid.
`Fax`	**Type** phone **Properties** Create, Filter, Nillable, Update **Description** The fax number for the contact who's associated with the quote.
`GrandTotal`	**Type** currency **Properties** Filter, Nillable **Description** The total price of the quote plus shipping and taxes.
`IsSyncing`	**Type** boolean

Field	Details
	Properties Defaulted on create, Filter **Description** Indicates whether the quote is syncing with an opportunity.
`LastReferencedDate`	**Type** date **Properties** Filter, Nillable, Sort, Update **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** date **Properties** Filter, Nillable, Sort, Update **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view but not viewed it directly.
`LineItemCount`	**Type** int **Properties** Filter, Nillable **Description** The number of line items on the quote.
`Name`	**Type** string **Properties** Create, Filter, idLookup, Update **Description** Required. Name for the quote. Limit: 225 characters.
`OpportunityId`	**Type** reference **Properties** Create, Filter **Description** ID for the opportunity associated with the quote.

Field	Details
Phone	**Type** phone **Properties** Create, Filter, Nillable, Update **Description** The phone number of the contact who's associated with the quote.
Pricebook2Id	**Type** reference **Properties** Create, Filter, Nillable, Update **Description** ID of the price book associated with the quote.
QuoteNumber	**Type** string **Properties** Defaulted on create, Filter **Description** A system-generated number that identifies the quote.
QuoteToAddress	**Type** address **Properties** Filter, Nillable **Description** Compound form of the quote to address. Read-only. See Address Compound Fields for details on compound address fields.
QuoteToCity	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** City for the address to send the quote to for approval, such as a third party-agency representing a buyer. Up to 40 characters allowed.
QuoteToCountry	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Country for the address to send the quote to for approval. Up to 80 characters allowed.
QuoteToLatitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `QuoteToLongitude` to specify the precise geolocation of a quote to address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
QuoteToLongitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `QuoteToLatitude` to specify the precise geolocation of a quote to address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.
QuoteToName	**Type** string **Properties** Create, Filter, Nillable, Update **Description** The name of the entity (such as a person or business) that the quote is sent to for approval. Limit: 255 characters.
QuoteToPostalCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Postal code for the address to send the quote to for approval.
QuoteToState	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description State for the address to send the quote to for approval. Up to 80 characters allowed.
QuoteToStreet	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Street name for the address to send the quote to for approval.
RecordTypeID	**Type** reference **Properties** Create, Filter, Nillable, Update **Description** ID of the record type assigned to the object.
ShippingAddress	**Type** address **Properties** Filter, Nillable **Description** Compound form of the shipping address. Read-only. See Address Compound Fields for details on compound address fields.
ShippingCity	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** City for the quote's shipping address. Up to 40 characters allowed.
ShippingCountry	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Country for the quote's shipping address. Up to 80 characters allowed.
ShippingCountryCode	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** ISO country code for the quote's shipping address.
`ShippingHandling`	**Type** currency **Properties** Create, Filter, Nillable, Update **Description** The total shipping and handling costs for the quote.
`ShippingLatitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `ShippingLongitude` to specify the precise geolocation of a shipping address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
`ShippingLongitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `ShippingLatitude` to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.
`ShippingName`	**Type** string **Properties** Create, Filter, Nillable, Update **Description** The name of the entity (such as a person or business) that the quote is sent to for approval.
`ShippingPostalCode`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Postal code for the quote's shipping address.
ShippingState	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** State for the quote's shipping address. Up to 80 characters allowed.
ShippingStateCode	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ISO state code for the quote’s shipping address.
ShippingStreet	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Street name for the quote's shipping address.
Status	**Type** picklist **Properties** Create, Defaulted on create, Filter, Nillable, Update **Description** The status of the quote. The standard options are: • —None— • Draft • Needs Review • In Review • Approved • Rejected • Presented • Accepted • Denied

Field	Details
Subtotal	**Type** currency **Properties** Filter, Nillable **Description** The sum of sales price multiplied by quantity for line items, not including the discount.
Tax	**Type** currency **Properties** Create, Filter, Nillable, Update **Description** The total taxes for the quote.
TotalPrice	**Type** currency **Properties** Filter, Nillable **Description** The total of the quote line items after discounts and before taxes and shipping.
TotalPriceWithTax	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of `TotalPrice` and `TotalTaxAmount`. This field is available in API version 55.0 and later. This field is available if Subscription Management is enabled in your org.
TotalTaxAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** The total amount of all taxes. This field is available in API version 55.0 and later. This field is available if Subscription Management is enabled in your org. This field is a calculated field.

Usage

Use Quote to manage proposed product prices for customers. To update a Quote, your client application needs "Edit" permission.

- Client applications can create, update, delete, and query Attachment records associated with a quote via the API.
- You can sync a quote and its parent Opportunity.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

QuoteChangeEvent (API version 44.0)
Change events are available for the object.

QuoteFeed (API version 39.0)
Feed tracking is available for the object.

QuoteHistory (API version 57.0)
History is available for tracked fields of the object.

QuoteOwnerSharingRule (API version 41.0)
Sharing rules are available for the object.

QuoteShare (API version 41.0)
Sharing is available for the object.

SEE ALSO:
QuoteLineItem
QuoteDocument
Opportunity

QuoteAdjustmentGroup

Group containing a set of adjustments applied to a quote. This object is available in API version 58.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available with Subscription Management.

Fields

Field	Details
`AdjustmentSource`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Indicates the origin of the price adjustment. Possible values are: • `Discretionary`—The adjustment is entered manually; for example, by a sales rep. • `Promotion`—The adjustment is part of a promotion; for example, a holiday sale discount. • `Rule`—The adjustment is due to a price rule. • `System`—The adjustment originates from the system, for example, a volume discount.
`AdjustmentType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Indicates the type of mathematical adjustment to be applied to the quote. Possible values are: • `AdjustmentAmount`—The adjustment is a numerical amount, for example, a cash discount of 20. • `AdjustmentPercentage`—The adjustment is a percentage amount, for example, a 10% discount.
`AdjustmentValue`	**Type** double **Properties** Filter, Sort **Description** The specified `AdjustmentType` amount that is applied to the quote. For example, when `AdjustmentType` is `AdjustmentAmount`, `AdjustmentValue` is the cash amount of the price adjustment. When `AdjustmentType` value is `AdjustmentPercentage`, `AdjustmentValue` is the percent value of the price adjustment.
`Description`	**Type** textarea

Field	Details
	Properties Nillable **Description** User-entered information about the quote adjustment group.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The user-defined name of the quote adjustment group.
`Priority`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** A numeric value that represents the order of precedence of the quote adjustment group. It can also represent the order of precedence when applying the `AdjustmentType` values. For example, a quote can have two adjustments: a $100 discount and a 10% discount. This field indicates which adjustment to apply first.
`QuoteId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the quote related to the adjustments in this group. This field is a relationship field. **Relationship Name** Quote **Relationship Type** Lookup **Refers To** Quote
`TotalAmount`	**Type** currency **Properties** Filter, Sort

Field	Details
	Description The total of all quote adjustments in this quote adjustment group, excluding tax.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

QuoteAdjustmentGroupChangeEvent on page 52
Change events are available for the object.

QuoteAdjustmentGroupFeed on page 39
Feed tracking is available for the object.

QuoteAdjustmentGroupHistory on page 47
History is available for tracked fields of the object.

QuoteAdjustmentGroupOwnerSharingRule on page 48
Sharing rules are available for the object.

QuoteAdjustmentGroupShare on page 50
Sharing is available for the object.

QuoteDocument

Represents a quote in document format. Available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Fields

Field	Details
`ContentVersionDocumentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID for the document's version.
`CurrencyIsoCode`	**Type** picklist

Field	Details
	Properties Defaulted on create, Filter, Restricted picklist **Description** Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. If the organization has multicurrency and a `Pricebook2Id` specified on the quote, then the currency value of this field must match the currency of the PricebookEntry objects that are associated with any quote line items it has.
`Discount`	**Type** percent **Properties** Filter, Nillable, Sort **Description** The discount for the quote used in the document.
`Document`	**Type** base64 **Properties** Create, Nillable **Description** The binary data of the document stored in the QuoteDocument object.
`GrandTotal`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Grand total for the quote used in the document.
`Name`	**Type** string **Properties** Filter, idLookup, Sort **Description** Name of the quote document.
`QuoteId`	**Type** reference **Properties** Create, Filter, GroupSort

Field	Details
	Description ID for the quote used for the document.

Usage

Use the QuoteDocument object to store a document that can be used to present the quote information to the customer.

SEE ALSO:

Quote

QuoteLineItem

QuoteLineItem

Represents a quote line item, which is a member of the list of Product2 products associated with a Quote, along with other information about those line items on that quote. Available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The user must have "Edit" permissions on Quote records in order to create or update quote line items on a quote. The user must have "Edit" permissions on Quote records to delete a quote line item.

Some of the fields are available when Subscription Management is enabled.

Fields

Field	Details
`BillingFrequency`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The time period that indicates how often the quote line item is billed. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled. Possible values are: • `Annual`

Field	Details
	• `Monthly`
`CurrencyIsoCode`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Available only for organizations enabled for multiple currencies. Contains the ISO code for any currency allowed by the organization. If the organization has multicurrency and a Pricebook2 is specified on the quote (the `Pricebook2Id` field isn't blank), then the currency value of this field must match the currency of the PricebookEntry objects for any associated quote line items. This value is copied from the related Quote and can't be changed.
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Text description of the line item. Limit: 225 characters.
`Discount`	**Type** percent **Properties** Create, Filter, Nillable, Sort, Update **Description** Editable number from 0 to 100.
`Division`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.
`EndDate`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description If the quote line item is sold on subscription, this field indicates the date on which the subscription ends. This field is available in API version 55.0 and later. This field is available if Subscription Management is enabled in your org. You can indicate a subscription's length using either `StartDate` and `EndDate`, or by using `StartDate` and `SubscriptionTerm`. If you provide a value for both `EndDate` and `SubscriptionTerm`, `EndDate` is used to determine the subscription's length.
`HasQuantitySchedule`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Read-only. Indicates whether the opportunity line item that the quote line item is synced with has a quantity schedule.
`HasRevenueSchedule`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Read-only. Indicates whether the opportunity line item that the quote line item is synced with has a revenue schedule. If this object has a revenue schedule, the `GrandTotal` and `TotalPrice` fields can't be updated. In addition, the `Quantity` field can't be updated if this object has a quantity schedule. The system ignores any attempt to update this field. The update isn't rejected but the updated value is ignored.
`HasSchedule`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Read-only. Indicates whether the line item uses schedules.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.

Field	Details
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.
LineNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Read-only. Automatically generated number identifying the quote line item. In the form of `QL-XXXXX`.
ListPrice	**Type** currency **Properties** Filter, Nillable, Sort **Description** Read-only. Corresponds to the `UnitPrice` on the PricebookEntry that is associated with this line item, which can be in the standard price book or a custom price book. A client application can use this information to show whether the unit price (or sales price) of the line item differs from the price book entry list price.
ListPriceTotal	**Type** currency **Properties** Filter, Nillable, Sort **Description** The `ListPrice` times the `Quantity`. This field is a calculated field.
NetTotalPrice	**Type** currency **Properties** Filter, Nillable, Sort **Description** The price after all adjustments, inclusive of quantity, prorated for the duration of the subscription. This field is a calculated field equal to `TotalAdjustmentAmount` plus `TotalLineAmount`.

Field	Details
	This field is available in API version 56.0 and later. This field is available with Subscription Management.
NetUnitPrice	**Type** currency **Properties** Filter, Nillable, Sort **Description** The unit price after all price adjustments are applied.
OpportunityLineItemId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the related opportunity line item. This field is populated by the API during creation of the quote line item. Not editable. Available in API version 40.0 and later.
ParentQuoteLineItemId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The unique identifier of the related line item in the parent quote. This field is populated by the API during creation of the quote line item. This field is available in version 58.0 and later. This field is available when Subscription Management is enabled. This field is a relationship field. **Relationship Name** ParentQuoteLineItem **Relationship Type** Lookup **Refers To** QuoteLineItem
PeriodBoundary	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The period boundary helps determine the start and end date of the billing periods.

Field	Details
	This field is available in API version 55.0 and later. This field is available with Subscription Management. Possible values are: • `AlignToCalendar`—the period starts on the first day of the term unit; for example, the first day of the month. • `Anniversary`—The start date determines the boundary. For example, if a monthly subscription starts on September 13, the subscription starts on the 13th day of each month. • `DayOfPeriod`—the period starts on the day indicated by `PeriodBoundaryDay`. • `LastDayOfPeriod`—the period starts on the last day of the pricing term unit.
`PeriodBoundaryDay`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Required when `PeriodBoundary` is `DayOfPeriod`. Indicates day of the week or month that marks the period boundary. Must be an integer from 1 through 31. This field is available in API version 55.0 and later. This field is available with Subscription Management.
`PeriodBoundaryStartMonth`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Nillable, Sort, Update **Description** Field is populated based on input in the StartDate, PeriodBoundary, and PeriodBoundaryDay when BillingFrequency is Annual and PricingTermUnit is Annual or by manual user entry. Possible values are: • `1-January` • `2-February` • `3-March` • `4-April` • `5-May` • `6-June` • `7-July` • `8-August` • `9-September` • `10-October` • `11-November`

Field	Details
	• `12-December`
`PricebookEntryId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the associated PricebookEntry. Exists only for orgs with Products enabled. In API 38.0 and earlier, if `Product2Id` is populated with `PricebookEntryId` data, you receive an error message. In API 39.0 and later, `Product2Id` is made null, and `PricebookEntryId` is populated with the `PricebookEntryId` data.
`PricingTerm`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of terms in the subscription. For example, if a monthly subscription is priced yearly, this field is 12. This field is available in API version 55.0 and later. This field is available with Subscription Management.
`PricingTermCount`	**Type** double **Properties** Filter, Nillable, Sort **Description** A calculated field indicating the number of pricing terms in the subscription. This field is available in API version 55.0 and later. This field is available with Subscription Management.
`PricingTermUnit`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The unit of time for the pricing term. This field is available in API version 55.0 and later. This field is available with Subscription Management. Possible values are: • `Annual`—Available in API version 58.0 and later. UI label is `Years`. • `Months`.

Field	Details
Product2Id	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the Product2 associated with this QuoteLineItem. In API 38.0 and earlier, if `Product2Id` is populated with `PricebookEntryId` data, you receive an error message. In API 39.0 and later, `Product2Id` is made null, and `PricebookEntryId` is populated with the `PricebookEntryId` data.
ProductSellingModelId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the related product selling model. This field is available in API version 55.0 and later. This field is available with Subscription Management. This field is a relationship field. **Relationship Name** ProductSellingModel **Relationship Type** Lookup **Refers To** ProductSellingModel
ProrationPolicyId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the related proration policy. This field is available in API version 55.0 and later. This field is available with Subscription Management. This field is a relationship field. **Relationship Name** ProrationPolicy **Relationship Type** Lookup **Refers To** ProrationPolicy

Field	Details
`Quantity`	**Type** double **Properties** Create, Filter, Sort, Update **Description** Required. The number of units for the line item.
`QuoteId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the associated Quote.
`SellingModelType`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates whether the quote line item is sold as one-time purchase, an evergreen subscription, or as a termed subscription. This field is available in API version 55.0 and later. This field is available with Subscription Management. Possible values are: • `Evergreen` • `OneTime` • `TermDefined` The default value is `OneTime`.
`ServiceDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Date when the product revenue is recognized and the product quantity will be shipped.
`SortOrder`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The value of where the line item is in the sorted order, such as 1, 2, 3. The SortOrder value determines the order in which a quote line item displays in the Quote Line Items related list and the Quote PDF. Client applications can use this value to match the sort order in Salesforce. This field is only available in API versions 21.0 and greater.
`StartDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** If the quote line item is sold on subscription, this field indicates the date on which the subscription starts. This field is available in API version 55.0 and later. This field is available with Subscription Management.
`StartingPriceTotal`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The starting unit price times the quantity.
`StartingUnitPriceSource`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates whether the starting unit price was entered manually or calculated. This field is available in API version 55.0 and later. This field is available with Subscription Management. Possible values are: • `Manual` • `System` • `Inherited`
`SubscriptionTerm`	**Type** int **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The number of terms in the subscription.

Field	Details
	You can indicate a subscription’s length using either `StartDate` and `EndDate`, or by using `StartDate` and `SubscriptionTerm`. If you provide a value for both `EndDate` and `SubscriptionTerm`, `EndDate` is used and `SubscriptionTerm` is ignored.
`SubscriptionTermUnit`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The unit of time used to define the subscription. This field is available in API version 55.0 and later. This field is available with Subscription Management. Possible values are: • `Annual`—UI label is `Years` • `Months`
`Subtotal`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The line item's `Quantity` multiplied by the `UnitPrice`.
`TotalAdjustmentAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of the adjustments applied to the quote line item, inclusive of quantity, prorated for the duration of the subscription. This field is available in API version 56.0 and later. This field is available with Subscription Management.
`TotalLineAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The total price of the quote line item, before price adjustments, inclusive of quantity, prorated for the duration of the subscription. This price is a calculated field equal to TotalPrice times Quantity times PricingTermCount. This field is available in API version 56.0 and later. This field is available with Subscription Management.

Field	Details
`TotalPrice`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Read-only. Calculated by applying the `Discount` to the `Subtotal`. This field is nillable, but you can't set both `TotalPrice` and `UnitPrice` to null in the same update. To insert the `TotalPrice` for a quote line item via the API (given only a unit price and the quantity), calculate this field as the unit price multiplied by the quantity. This field is read-only if the quote line item has a revenue schedule.
`TotalPriceWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of `TotalPrice` and `TotalTaxAmount`. This field is available in API version 55.0 and later. This field is available with Subscription Management.
`TotalTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** the total amount of tax for the quote line item. his field is available in API version 55.0 and later. This field is available with Subscription Management. This field is a calculated field.
`UnitPrice`	**Type** currency **Properties** Create, Filter, Sort, Update **Description** Required. The price per unit for the quote line item.

Usage

A Quote record can have QuoteLineItem records only if the Quote has a Pricebook2. A QuoteLineItem must correspond to a Product2 that is listed in the quote's Pricebook2.

Note: If the multicurrency option has been enabled, the `CurrencyIsoCode` field is present. It can't be modified, it's always set to the value of the `CurrencyIsoCode` of the parent Quote.

Effects on Quotes

Quotes with related QuoteLineItem objects are affected in the following ways:

- Creating a QuoteLineItem increments the Quote value by the `TotalPrice` of the QuoteLineItem.
- When you create or update a QuoteLineItem, the API verifies that the line item corresponds to a PricebookEntry in the Pricebook2 that is associated with the quote.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

QuoteLineItemChangeEvent (API version 44.0)
Change events are available for the object.

QuoteLineItemHistory (API version 57.0)
History is available for tracked fields of the object.

SEE ALSO:

Quote
QuoteDocument
Opportunity

QuoteLinePriceAdjustment

Indicates the calculated price adjustment that is applied to the quote line, for example, a calculated volume discount or the prorated value of a manual discount. Use the quote line price adjustment to inform potential customers about the type, value, and total amount of their discounts. This object is available in API version 56.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available with Subscription Management.

Fields

Field	Details
`AdjustmentAmountScope`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Used with `AdjustmentValue` to determine the amount of the adjustment. Possible values are: • `Total`—The adjustment applies to the line item's total and isn't multiplied by the quantity. The adjustment amount is prorated for the duration of the subscription. • `Unit`—The adjustment is multiplied by the line item's quantity, prorated for the duration of the subscription. • `UnproratedTotal`—The adjustment applies to the line item's total and isn't multiplied by the quantity. The adjustment amount isn't prorated for the duration of the subscription.
`AdjustmentSource`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Indicates the source of the adjustment. Possible values are: • `Discretionary`—The adjustment is entered manually; for example, by a sales rep. • `Promotion`—Reserved for future use. • `Rule`—The adjustment results from a system rule, such as a price rule or product rule. • `System`—The adjustment is determined by the pricing configuration for the product; for example, as part of a discount schedule.
`AdjustmentType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Indicates whether the adjustment is a percentage or an amount. Possible values are: • `AdjustmentAmount` • `AdjustmentPercentage`
`AdjustmentValue`	**Type** double **Properties** Filter, Sort

Field	Details
	Description The value of the adjustment. Used together with `AdjustmentAmountScope` to determine the amount of the adjustment.
`Description`	**Type** textarea **Properties** Nillable **Description** The system-entered description of the quote line price adjustment.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The system-entered name of the quote line price adjustment.
`PriceAdjustmentCauseId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the record that caused the adjustment. `Null` if `AdjustmentSource` is `Discretionary`, indicating a manual adjustment. For example, if the price adjustment is due to a price adjustment tier, this field contains the ID of the `PriceAdjustmentTier` record. This field is a polymorphic relationship field. **Relationship Name** PriceAdjustmentCause **Relationship Type** Lookup **Refers To** PriceAdjustmentTier
`Priority`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Reserved for future use.

Field	Details
QuoteAdjustmentGroupId	**reference** int **Properties** Filter, Group, Nillable, Sort **Description** The ID of the quote adjustment group, which totals all price adjustments for the quote. This field is a relationship field. **Relationship Name** QuoteAdjustmentGroup **Relationship Type** Lookup **Refers To** QuoteAdjustmentGroup
QuoteLineItemId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the quote line item that this price adjustment applies to. This field is a relationship field. **Relationship Name** QuoteLineItem **Relationship Type** Lookup **Refers To** QuoteLineItem
TotalAmount	**Type** currency **Properties** Filter, Sort **Description** The total amount of the adjustment that applies to the quote line item, inclusive of quantity, prorated for the duration of the subscription.

QuoteLineRelationship

Describes the relationship between quote line items, such as items in a bundle. When you create a QuoteLineRelationship object, it's immutable: it can't be edited or removed. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available if Subscription Management is enabled.

Fields

Field	Details
`AssociatedQuantScaleMethod`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** How to scale the quantity of the associated quote line, relative to the main quote line. If this field has a non-null value, you can't edit the associated quote line's quantity. Possible values are: • `Constant`— The associated quote's line quantity remains the same in relation to the main quote line's quantity. For example, the main quote line has a quantity of one and the associated quote line has a quantity of one. If you increase the quantity of the main quote line to two, the associated quote line's quantity remains at one. • `Proportional`— The associated order's item quantity increases or decreases based on the main quote line's quantity. For example, the main quote line has a quantity of one and the associated quote line has a quantity of two. If you increase the quantity of the main quote line to two, the associated quote line's quantity increases to four. The default value is `Proportional`.
`AssociatedQuoteLineId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The unique identifier of the associated quote line item. This field is a relationship field. In a bundle relationship, this quote line is the bundle component. **Relationship Name** AssociatedQuoteLine **Relationship Type** Lookup

Field	Details
	Refers To QuoteLineItem
`AssociatedQuoteLinePricing`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates how the associated quote line item is priced relative to the main quote line item. Possible values are: • `IncludedInBundlePrice`— The associated quote line's cost is $0 because it's included in the bundle's price. • `NotIncludedInBundlePrice`— The associated quote line has a cost because it's not included in the bundle's price.
`AssociatedQuoteLineRole`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Describes the position of the associated quote line item in the relationship. Possible values are: • `BundleComponent`—The associated quote line item is part of a bundle. • `SetComponent`—The associated quote line item is part of a set.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`), but not viewed it.

Field	Details
MainQuoteLineId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The unique identifier of the main quote line item. This field is a relationship field. In a bundle relationship, this quote line is the bundle parent. **Relationship Name** MainQuoteLine **Relationship Type** Lookup **Refers To** QuoteLineItem
MainQuoteLineRole	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Indicates the position of the main quote line item in the relationship. Possible values are: • `Bundle`—The main quote line item is the bundle parent. • `Set`—The main quote line item is the set parent.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the quote line relationship.
ProductRelationshipTypeId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The unique identifier of record that describes the relationship between the main and associated quote lines. This field is a relationship field.

Field	Details
	Relationship Name ProductRelationshipType **Relationship Type** Lookup **Refers To** ProductRelationshipType
`QuoteId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The unique identifier of the quote to which the main and associated quote lines belong. This field is a relationship field. **Relationship Name** Quote **Relationship Type** Lookup **Refers To** Quote

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

QuoteLineRelationshipChangeEvent
Change events are available for the object.

QuoteLineRelationshipFeed
Feed tracking is available for the object.

QuoteLineRelationshipHistory
History is available for tracked fields of the object.

QuoteLineRelationshipOwnerSharingRule
Sharing rules are available for the object.

QuoteLineRelationshipShare
Sharing is available for the object.

QuoteItemTaxItem

The tax that is applied to a quote line item. This object is available in API version 55.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available if Subscription Management is enabled in your org.

Fields

Field	Details
`Amount`	**Type** currency **Properties** Filter, Sort **Description** The tax amount for the quote line item.
`CurrencyIsoCode`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the org. Possible values are: • `BHD`—Bahraini Dinar • `EUR`—Euro • `JPY`—Japanese Yen • `USD`—U.S. Dollar The default value is 'USD'.
`Description`	**Type** textarea **Properties** Nillable **Description** User-defined description of the tax. For example, state sales tax or value-added tax (VAT).
`Name`	**Type** string

Field	Details
	Properties Filter, Group, idLookup, Sort **Description** Name of the tax.
QuoteLineItemId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the related quote line item. This is a relationship field. **Relationship Name** QuoteLineItem **Relationship Type** Lookup **Refers To** QuoteLineItem
Rate	**Type** percent **Properties** Filter, Nillable, Sort **Description** If the tax is a percentage tax, then this field contains the percent value. If the tax is a fixed amount, then this field is null.
TaxEffectiveDate	**Type** date **Properties** Filter, Group, Sort **Description** The date used to calculate the tax rate.
Type	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Whether the tax is estimated or calculated by the tax provider. Possible values are:

Field	Details
	• `Actual` • `Estimated`

RecentFieldChange

Use this virtual object to see how an opportunity has changed in the past seven days. Learn the previous value of a field, who made the change, and when the change was made. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To use RecentFieldChange, set up historical trend reporting for opportunities in your org. You must also have the Pipeline Inspection user permission and the Pipeline Inspection setting enabled.

Fields

Field	Details
`ChangeDate`	**Type** dateTime **Properties** **Description** The date and time that the specified field was changed.
`CurrencyIsoCode`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The ISO code for the currency value. Must be one of the valid alphabetic, three-letter currency ISO codes defined by the ISO 4217 standard, such as USD, GBP, or JPY. The default value is 'USD'.
`FieldName`	**Type** string **Properties** Filter, Group

Field	Details
	Description The name of the opportunity field that you want the previous value of. Possible values are: • `Amount` • `CloseDate` • `StageName` • `ForecastCategory` • `NextStep`
`ParentId`	**Type** reference **Properties** Filter, Group **Description** The ID of the opportunity that you want the change history for. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** Opportunity
`PreviousCurrencyValue`	**Type** currency **Properties** Nillable **Description** The previous value of a currency field on an opportunity.
`PreviousDateOnlyValue`	**Type** date **Properties** Group, Nillable **Description** The previous value of a date field on an opportunity.
`PreviousTextValue`	**Type** string **Properties** Group, Nillable

Field	Details
	Description The previous value of a text field on an opportunity.
`ValueChangedById`	**Type** reference **Properties** Group **Description** The ID of the user who changed the specified field's value during the specified time period. This is a relationship field. **Relationship Name** ValueChangedBy **Relationship Type** Lookup **Refers To** User

Usage

One recentFieldChange record is returned for each field that was changed in the past seven days. The supported fields are Amount, Close Date, Forecast Category, Next Step, and Stage Name. Only the most recent previous value is returned.

Example: To see the most recent previous amount for an opportunity, use the following query. Replace `006R0000XXXXXXXXXX` with the ID of the opportunity.

```
select PreviousTextValue from RecentFieldChange where ParentId = '006R0000003JkHBIA0'
 and FieldName = 'StageName'
```

If the sales rep didn't change the opportunity stage name in the past seven days, no values are returned. If the sales rep changed the opportunity amount several times in the past seven days, only the most recent previous value is returned.

Example: To see the most recent previous amount, close date, forecast category, next step, and stage name for an opportunity, use the following query. Replace `006R0000XXXXXXXXXX` with the ID of the opportunity.

```
select PreviousTextValue, PreviousCurrencyValue, PreviousDateOnlyValue from
RecentFieldChange where ParentId = '006R0000XXXXXXXXXX' and FieldName IN ('StageName',
 'Amount', 'CloseDate')
```

If the opportunity amount, close date, forecast category, next step, and stage name didn't change in the past seven days, no values are returned.

RecentlyViewed

Represents records or list views that the current user has recently viewed or referenced (by viewing a related record). List views are available in API version 29.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `update()`

Special Usage Rules

The RecentlyViewed object doesn't support the Event, Task, Report, KnowledgeArticle, and Article objects.

The RecentlyViewed object supports only certain objects, and supports list views only for those supported objects. Supported objects have the fields `LastReferencedDate` and `LastViewedDate`.

Note: RecentlyViewed records for users who are members of several communities can't be retrieved automatically into a map via Apex. This is because records of a user with different networks can result in duplicate IDs that maps don't support.

Fields

Field	Details
`Alias`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The alias on the record.
`Email`	**Type** email **Properties** Filter, Group, Nillable, Sort **Description** The email address on the record.
`FirstName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The first name on the record. If the recently viewed record is a user, the value is the user's first name.
`Id`	**Type** ID **Properties** Defaulted on create, Filter, Group, Sort

Field	Details
	Description The ID of the recently viewed record or list view.
`IsActive`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the recently viewed record is an active user (`true`) or not (`false`). This field contains a value only if the recently viewed record is a user.
`LastName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The last name on the record.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort, Update **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort, Update **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.
`Name`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The name on the recently viewed record or list view. If the recently viewed record is a user, contact, or lead, the value is a concatenation of the `firstname` and `lastname` field values.
`NetworkId`	**Type** reference **Properties** Filter,Group, Nillable, Sort **Description** ID of the Experience Cloud site that this group is part of. This field is available only if digital experiences is enabled in your org. You can add a `NetworkId` only when creating a group. You can't change or add a `NetworkId` for an existing group. This field is available in API version 27.0 and later.
`Phone`	**Type** phone **Properties** Filter, Group, Nillable, Sort **Description** The phone number on the record.
`ProfileId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** If the recently viewed record is a user, this value is the user's profile ID. This field is a relationship field. **Relationship Name** Profile **Relationship Type** Lookup **Refers To** Profile
`Title`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description If the recently viewed record is a user, this value is the title of the user; for example CFO or CEO.
`Type`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The object type for this recently viewed record or list view. Valid values include any standard or custom objects that RecentlyViewed supports.
`UserRoleId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user role associated with this object. This field is a relationship field. **Relationship Name** UserRole **Relationship Type** Lookup **Refers To** UserRole

Usage

This object provides a heterogeneous list of different object types. The list consists of recently viewed records, records that were recently referenced (a related record was viewed), or recently viewed list views. A record is considered viewed when the user sees the record details, but not when the user sees the record in a list with other records. Use this object to programmatically construct a list of recently viewed items specific to the current user. For example, use this object on a custom user interface or for search auto-complete options. You can also retrieve a filtered list of records by object type (`Type`). The RecentlyViewed data is periodically truncated down to 200 records and 200 list views per object. RecentlyViewed data is retained for 90 days, after which it's removed on a periodic basis.

Use this query in your code to retrieve a list of all the records and list views that were recently viewed. The results are ordered from most to least recent.

```
SELECT Id, Name
FROM RecentlyViewed
WHERE LastViewedDate !=null
ORDER BY LastViewedDate DESC
```

Use this query to retrieve data that was either viewed or referenced, but only for a limited set of objects.

```
SELECT Id, Name
FROM RecentlyViewed
WHERE Type IN ('Account', 'Contact', 'Plan__c')
ORDER BY LastViewedDate DESC
```

This query retrieves a list of all recently viewed contacts with contact-specific fields, such as the contact's account name, and the custom website field. Records are ordered from most to least recent.

```
SELECT Account.Name, Title, Email, Phone, Website__c
FROM Contact
WHERE LastViewedDate != NULL
ORDER BY LastViewedDate DESC
```

Recommendation

Represents the recommendations surfaced as offers and actions for Einstein Next Best Action. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

You must have the Modify All Data or Manage Next Best Action Recommendations user permission to create and edit recommendations.

Fields

Field	Details
`AcceptanceLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Label that appears as the accept option on the surfaced recommendation. Maximum size is 80 characters.
`ActionReference`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Flow referenced for this recommendation. Label is **Action**.

Field	Details
Description	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Text description of the recommendation. Maximum size is 255 characters.
ExternalId	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Stores an identifier for the recommendation source, such as product, so Einstein can group all responses for a given recommendation.
ImageId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Image referenced by this recommendation. Label is **Image**. This is a relationship field. **Relationship Name** Image **Relationship Type** Lookup **Refers To** ContentAsset
IsActionActive	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the flow referenced in the Action field is active (true) or not (false). Read only.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The date and time when the recommendation was last referenced.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the recommendation was last viewed.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the recommendation. Maximum size is 80 characters.
NetworkId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the Experience Cloud site associated with the recommendation (if applicable).
RecommendationKey	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Track responses to a recommendation when it doesn't have an ID. Maximum size is 255 characters.
RejectionLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Label that appears as the reject option on the surfaced recommendation. Maximum size is 80 characters.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

RecommendationChangeEvent (API version 48.0)
Change events are available for the object.

RecommendationResponse

Represents the user responses to a presented offer or recommendation for Einstein Next Best Action. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()` `query()`, `retrieve()`,

Special Access Rules

You must have one of these user permissions to read, delete, or update recommendation responses:

- Modify All Data
- Manage Next Best Action Recommendations
- Manage Next Best Action Strategies

Fields

Field	Details
`ActionReference`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The full name of an action flow at the time of the response. The full name includes the action's namespace.
`ContextRecord`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of context record that contains the Einstein Next Best Action component. For example, if the Einstein Next Best Action component is on a case record the ContextRecord is the ID of the case record.

Field	Details
ContextRecordName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the context record.
ContextRecordType	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the object that's associated with the value stored in the ContextRecord field. For example, Account, Case, or Contact.
NetworkId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the Experience Cloud site associated with the recommendation (if applicable). This is a relationship field. **Relationship Name** Network **Relationship Type** Lookup **Refers To** Network
OnBehalfOf	**Type** string **Properties** Create, Filter, Group, idLookup, Sort **Description** The user ID or record that is indirectly reacting to the recommendation.
OnBehalfOfName	**Type** string **Properties** Filter, Group, Sort

Field	Details
	Description Name of the value stored for `OnBehalfOf` at time of response.
`OnBehalfOfType`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the object that's associated with the value stored in the OnBehalfOf field. For example, Account, Case, or Contact.
`RecommendationKey`	**Type** string **Properties** Create, Filter, Group, Sort **Description** RecommendationId if available, otherwise a generated string that represents the recommendation name.
`RecommendationName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** Name of the recommendation returned from the recommendation strategy.
`RecommendationType`	**Type** string **Properties** Create, Filter, Group, Sort **Description** Object type of the recommendation. It can be Recommendation or any object type mapped to the Recommendation object. For example, if you map Product to Recommendation, the RecommendationType is Product.
`Response`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The user's response to the recommendation. Possible values are:

Field	Details
	• `Accepted` • `Rejected`
`StrategyReference`	**Type** string **Properties** Create, Filter, Group, Sort **Description** The full name of a recommendation strategy flow at the time of the response. The response is formatted as `namespace` underscore `prefix` double underscore `flowname`, such as `namespace_prefix__flowname`.
`StrategyVersion`	**Type** string **Properties** Filter, Group, Sort **Description** The recommendation strategy version that's active at the time of the response.

Usage

The RecommendationResponse object can't be customized with additional fields.

RecordAction

Represents a relationship between a record and an action, such as a flow. Create a RecordAction for every action that you want to associate with a particular record. Available in API version 42.0 and later.

Note: Access to the RecordAction object is determined by a user's access to the associated parent record.

Supported Calls

`create()`, `delete()`,, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
ActionDefinition	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Required in Lightning Flow for Service implementations that use version 44.0 or later of the API. The API name of the action to associate with the record; for example, the API name of a flow. Use this field rather than FlowDefinition. To distinguish a quick action from a flow with the same API name, we prepend "QuickAction" to the API name of every quick action.
ActionType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Required in Lightning Flow for Service implementations that use version 46.0 or later of the API. The type of action. Possible values are: • `Flow` (default) • `QuickAction` For versions of the API prior to version 46.0, this field is set to Flow.
FlowDefinition	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Optional in Lightning Flow for Service implementations using version 42.0 or 43.0 of the API. An upgrade to Winter '19 or later, which uses API version 44.0 or later, copies FlowDefinition to ActionDefinition. For versions 42.0 and 43.0, this field is the API name of the flow that's associated with the record.
FlowInterviewId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Optional. The flow interview ID of the paused or completed flow. This field can't be set in Process Builder. This is a relationship field.

Field	Details
	Relationship Name FlowInterview **Relationship Type** Lookup **Refers To** FlowInterview
IsMandatory	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Optional. Specifies whether the action is mandatory. The default value is false. Note: At runtime, we show a reminder when the user closes a mandatory flow without completing it. We don't show the reminder for quick actions.
IsUiRemoveHidden	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Optional. Specifies whether the ability to remove the action is hidden in the UI. The default value is false. If true, the UI hides the ability to remove the action. However, actions can still be deleted using the API.
Order	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** Required. The order of the action among all actions associated with this record.
ParticipantRoleId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The participant role that's associated with the record action. This field is a polymorphic relationship field and is available in API version 58.0 and later. **Relationship Name** ParticipantRole

Field	Details
	Relationship Type Lookup **Refers To** ParticipantRole
Pinned	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Required. Specifies whether the action is pinned to the top or bottom of the component. If an action is pinned, users see the Remove option in the UI unless `IsUiRemoveHidden` is set to true. Possible values are: • None (default) • Top • Bottom
RecordId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Required. Record associated with the action. In version 46.0 and above, we support most object types. To learn about supported objects, see the Lightning Flow for Service Developer's Guide. This is a relationship field. **Relationship Name** Record **Relationship Type** Lookup **Refers To** Account, Address, Asset, AssetRelationship, AssignedResource, AssociatedLocation, Campaign, CampaignMember, CarePreauth, CarePreauthItem, Case, ChangeRequest, CollaborationGroup, Contact, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, EnhancedLetterhead, Incident, Lead, Location, MemberPlan, OperatingHours, Opportunity, Order, PlanBenefit, PlanBenefitItem, Problem, Pricebook2, PricebookEntry, Product2, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, PurchaserPlan, PurchaserPlanAssn, RebateMemberAggregateItem, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, Shipment, SkillRequirement, SocialPersona,

Field	Details
	SocialPost, TimeSlot, User, Visit, VoiceCall, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup ChangeRequest, Incident, Problem are available in API version 53.0 and later. RebateMemberAggregateItem is available in API version 54.0 and later.
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Required. The current state of the action. Possible values are: • `New` (default) • `Paused` • `Complete` • `Started` • `Unlinked`—The action was unlinked because the flow was paused and the current record for the flow interview changed. Paused and unlinked statuses do not apply to quick actions. This field can't be set in Process Builder.

Usage

The RecordAction object works with the Actions & Recommendations component in Lightning Experience. Although this junction object can be used to create relationships between records and actions in Salesforce Classic, those relationships can't be displayed in Salesforce Classic.

Note: API version 44.0 added a field, ActionDefinition, so that a RecordAction in future releases can support other types of actions in addition to flows. API version 44.0 and later maintain the FlowDefinition field to support processes that reference this field in earlier API versions. Upgrading an org to Winter '19 or later, which uses API version 44.0 or later, copies the FlowDefinition field to the ActionDefinition field. FlowDefinition will be deprecated in a future release, so use ActionDefinition instead.

When an action is deleted that's referenced in an ActionDefinition or FlowDefinition, the RecordAction object is deleted. RecordAction objects are also deleted when the associated parent record is deleted, or when a flow is paused and the current record context has changed. When an action is completed, the associated RecordAction object is also deleted.

Deleted RecordActions are removed from the list when the page is refreshed.

For more information about the Actions & Recommendations component and how it works with RecordActions, see the Lightning Flow for Service Developer Guide.

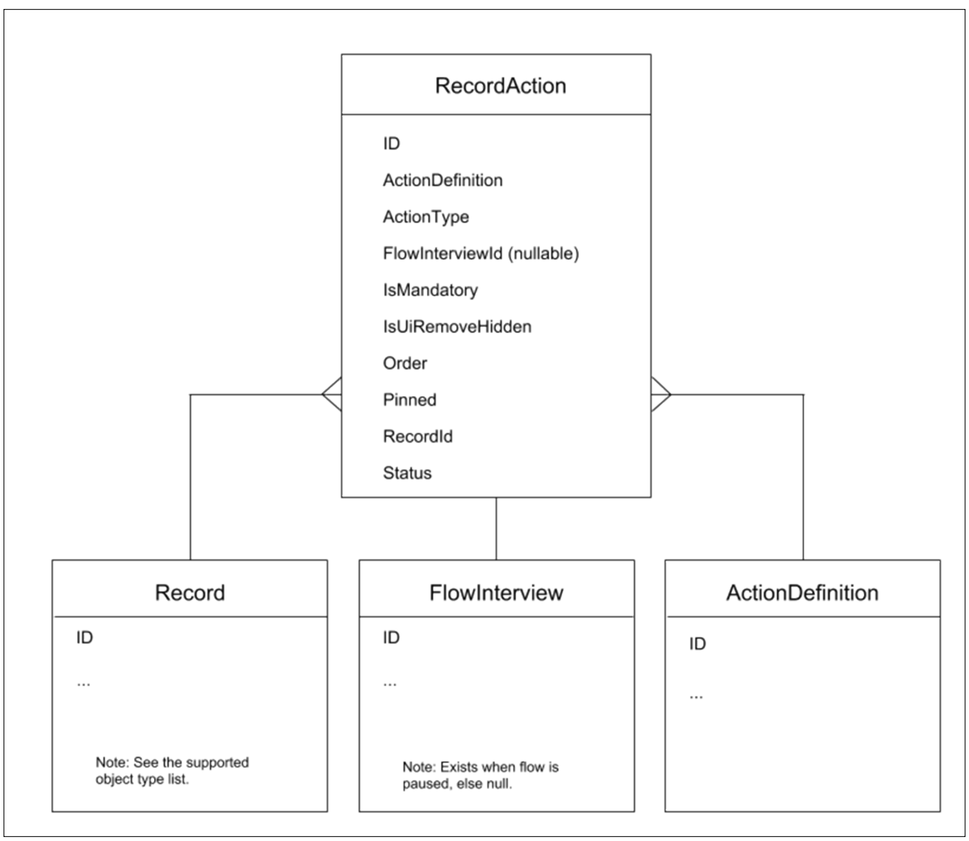
Java Example

Here's an example of how to associate flows to a record using the RecordAction object.

```
public void associateNewCustomerFlowWithAccount(Account a) {
   try {
      RecordAction newRecordAction = new RecordAction();
      newRecordAction.setRecordId(a.getId());
      newRecordAction.setActionDefinition("New_Customer_Flow");
      newRecordAction.setOrder(1);

      SaveResult[] results = connection
            .create(new SObject[] { newRecordAction });
   } catch (ConnectionException ce) {
      ce.printStackTrace();
   }
}
```

Data Model



Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

RecordActionHistory

History is available for tracked fields of the object.

RecordActionHistory

Represents the lifecycle of a RecordAction as it goes through different states. Available in API version 44.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Special Access Rules

This object is always read-only.

Fields

Field	Details
`ActionDefinitionApiName`	**Type** string **Description** Required. The API name of the action associated with the record. To distinguish a quick action from a flow with the same API name, we prepend "QuickAction" to the API name of every quick action.
`ActionDefinitionLabel`	**Type** string **Description** Required. The label of the action that took place.
`ActionType`	**Type** picklist **Properties** Defaulted on create, Restricted picklist **Description** Required. The type of action associated with the record. Possible values are: • `Flow` (default) • `QuickAction`
`IsMandatory`	**Type** boolean

Field	Details
	Properties Defaulted on create **Description** Optional. Specifies whether the action is mandatory. The default value is false.
LoggedTime	**Type** dateTime **Properties** Filter, Sort **Description** Required. The timestamp when the state change occurred.
ParentRecordId	**Type** reference **Properties** Filter, Sort **Description** Required. The parent record for the associated action. This is a relationship field. **Relationship Name** ParentRecord **Relationship Type** Lookup **Refers To** Account, Address, Asset, AssetRelationship, AssociatedLocation, Case, ChangeRequest, CollaborationGroup, Contact, ContactRequest, Contract, EnhancedLetterhead, Incident, Lead, Location, OperatingHours, Opportunity, Order, Pricebook2, PricebookEntry, Problem, Product2, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, RebateMemberAggregateItem, ResourceAbsence, Scorecard, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, Shipment, SkillRequirement, SocialPersona, SocialPost, TimeSlot, User, Visit, VoiceCall, WorkType ChangeRequest, Incident, Problem are available in API version 53.0 and later. RebateMemberAggregateItem is available in API version 54.0 and later.
Pinned	**Type** picklist **Properties** Defaulted on create, Nillable, Restricted picklist **Description** Optional. Specifies whether the action is pinned to the top or bottom, or unpinned. Possible values are:

Field	Details
	• None • Top • Bottom
RecordActionId	**Type** string **Properties** Filter, Sort **Description** Required. The ID of the RecordAction.
State	**Type** picklist **Properties** Defaulted on create, Restricted picklist **Description** Required. The state of the action. A state change triggers the logging of a history event. Possible values are: • `Started` (default) • `Paused` • `Resumed` • `Completed` • `Unlinked`—The action was unlinked because the flow was paused and the current record for the flow interview changed.
UserId	**Type** reference **Description** Required. The user that conducted the action. This is a polymorphic relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

Usage

The RecordActionHistory object represents the lifecycle of an action on a record as it goes through different states.

The RecordActionHistory object is a big object. For this reason, when you use synchronous SOQL, SOAP, REST, Bulk, or Apex APIs to read this object, queries must follow a specific pattern or they fail. Queries must match one of these patterns and use fields in this precise order when more than one field is used.

- ParentRecordId
- ParentRecordId, LoggedTime (DESC)
- ParentRecordId, LoggedTime (DESC), RecordActionId

For example, this SOQL query follows the ParentRecordId, LoggedTime (DESC) pattern.

```
SELECT ActionDefinitionApiName, User, State FROM RecordActionHistory WHERE
          ParentRecordId = {CaseId} ORDER BY ParentRecordId, LoggedTime DESC
```

Asynchronous SOQL queries do not need to follow a pattern, and can query any field.

Apex triggers cannot reference big object records. Use SOQL queries if you want to query RecordActionHistory records in Apex.

For more information about the Actions & Recommendations component and how it works with RecordActions, see the Lightning Flow for Service Developer Guide. Learn more about big objects and how to query them in the Query Big Objects module on Trailhead.

Java Example

Here's a Java example of how to query a RecordActionHistory object.

```
public void queryHBPOs(String parentRecordId) {
   try {
    SimpleDateFormat format = new SimpleDateFormat("yyyy-MM-dd");

       // query for the RecordActionHistory associated with ParentRecord
       QueryResult queryResults = connection.query("SELECT ActionDefinitionApiName,
LoggedTime, State " +
         "FROM RecordActionHistory WHERE ParentRecordId = '" + parentRecordId + "' LIMIT
50");
       if (queryResults.getSize() > 0) {
         for (int i=0;i<queryResults.getRecords().length;i++) {
           // cast the SObject to a strongly-typed RecordActionHistory
           RecordActionHistory raa = (RecordActionHistory)queryResults.getRecords()[i];
          System.out.println("ActionDefinitionApiName: " + raa.getActionDefinitionApiName()
 + " - LoggedTime: "+ format.format(raa.getLoggedTime().getTime()) + " - State: " +
               raa.getState());
         }
       }
   } catch (Exception e) {
       e.printStackTrace();
   }
  }
```

RecordsetFilterCriteria

Represents a set of filters that can be used to match service appointments or assets based on your criteria fields. For example, you can create recordset filter criteria so that only service appointments that satisfy the filter criteria are matched to the filtered shifts, and likewise only maintenance work rules that satisfy your criteria are matched to assets. This object is available in API version 50.0 and later. Assets and maintenance work rules are available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** The description of the recordset filter criteria.
`FilteredObject`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The object used to define the filter criteria. Available in API version 52.0 or later. Possible values are: • `Asset` • `ServiceAppointment`
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the recordset filter criteria is associated with shifts or maintenance work rules (`true`) or not (`false`).
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The date when the recordset filter criteria was last referenced.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the recordset filter criteria was last viewed.
LogicalOperator	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Defines the logic to evaluate multiple recordset filter criteria rules. Available in API version 53.0 and later. Possible values are: • AND • OR
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the recordset filter criteria.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the recordset filter criteria.
SourceObject	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description The source object that the filtered criteria are applied to. Shifts and maintenance work rules are available in API version 52.0 and later. Appointment bundle objects are available in API version 53.0 and later. Possible values are: • `ApptBundleAggrPolicy`—Appointment Bundle Aggregation Policy • `ApptBundleConfig`—Appointment Bundle Config • `Shift` • `ContractLineOutcome` • `MaintenanceWorkRule`
Usage Rate Field	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Stores the daily usage rate of the asset. The unit for the usage rate must be per day.
Usage Rate Unit	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Defines the rate for Usage Rate Field. Possible values are: • DAYS

Usage

Let's say an employee is open to working a 9 am to 5 pm shift on a Sunday but only for emergency appointments. In this case, the `SourceObject` is `Shift` and the `FilteredObject` is `ServiceAppointment`. The service appointments available for that shift are filtered for emergency appointments using the `RecordsetFilterCriteriaRule` object.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

RecordsetFilterCriteriaFeed
Feed tracking is available for the object.

RecordsetFilterCriteriaHistory
History is available for tracked fields of the object.

RecordsetFilterCriteriaOwnerSharingRule
Sharing rules are available for the object.

RecordsetFilterCriteriaShare
Sharing is available for the object.

RecordsetFilterCriteriaRule

Represents a rule using fields from the designated source object to create filters on the filtered, or target, object. RecordsetFilterCriteriaRule is associated with the RecordsetFilterCriteria object. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
`CriteriaField`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The field the filter rule is applied to. Asset fields are available in API version 52.0 and later. Possible values are derived from the source object's standard and custom fields. Possible standard source objects are `Asset` and `ServiceAppointment`. The format is, for example, `Asset.AccountId` or `ServiceAppointment.AccountId`. All standard and custom fields are allowed except those with these field types: • `encryptedstring` • `multipicklist` • `textarea` • `url`
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The date when the recordset filter criteria rule was last referenced.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the recordset filter criteria rule was last viewed.
NextOccurence	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** This field's value is compared to the Usage Field to determine if the rule is true. Possible values are derived from the source object's standard and custom fields. Possible standard source objects are `Asset` and `ServiceAppointment`. The format is, for example, `Asset.AccountId` or `ServiceAppointment.AccountId`. All standard and custom fields are allowed except those with these field types: • `encryptedstring` • `multipicklist` • `textarea` • `url`
Operator	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The relational operator between `CriteriaField` and `Value`. Available in API version 52.0 or later. Possible values are: • `Equals`—Default • `GreaterOrEqual` • `GreaterThan` • `LessOrEqual` • `LessThan`
RecordsetFilterCriteriaId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Sort **Description** The ID of the RecordsetFilterCriteria record to associate this rule with.
RecordsetFilterCriteriaRuleNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The automatically assigned number of the recordset filter criteria rule.
Type	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The type of criteria rule. Possible values are: • Criteria—Default • Usage • UsageCounter— Usage(Counter) • UsageDuration— Usage(Duration)
Value	**Type** textarea **Properties** Create, Nillable, Update **Description** The expected value of CriteriaField applied to the filter rule.
Usage Rate Field	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Stores the daily usage rate of the asset. The unit for the usage rate must be per day.
Usage Rate Unit	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description Defines the rate for Usage Rate Field. Possible values are: • DAYS

Usage

If you want to create a filter rule for service appointments with a dispatched status, set `CriteriaField` to `ServiceAppointment.Status` and `Value` to `Dispatched`. Then add the ID from a RecordsetFilterCriteria record to `RecordsetFilterCriteriaId` to associate this rule with a filter criteria for shifts.

RecordsetFltrCritMonitor

Monitors whether the value of an asset attribute is within the threshold of a recordset filter criteria (RFC). You can monitor one or more RFCs for an Asset. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
`AssetId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the asset to link the RFC to. This field is a relationship field. **Relationship Name** Asset **Relationship Type** Lookup

Field	Details
	Refers To Asset
Description	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the RFC associated with the recordset filter criteria monitor.
IsWithinThreshold	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the value of the asset attribute is within the threshold of the RFC. The default value is `false`.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the recordset filter criteria monitor.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date the value was last referenced.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date the value was last viewed.
RecordsetFilterCriteriaId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Sort **Description** The ID of the recordset filter criteria. This field is a relationship field. **Relationship Name** RecordsetFilterCriteria **Relationship Type** Lookup **Refers To** RecordsetFilterCriteria

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

RecordsetFltrCritMonitorChangeEvent on page 52
Change events are available for the object.

RecordsetFltrCritMonitorHistory on page 47
History is available for tracked fields of the object.

AttributePicklistValue

RecordType

Represents a record type.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Important: Don't use record types as an access control mechanism. Profile assignment governs create and edit access for an object but doesn't govern read access. For example, a user assigned to a profile that isn't enabled for a particular record type can't create records with that record type, but can access records associated with that record type. Users with access to an object can read all record type information for that object. We strongly recommend against storing sensitive information in the record type description, name, or label. Instead, store sensitive information in a separate object or fields to which you've applied appropriate access controls.

Field	Details
BusinessProcessId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Required for Opportunity and Lead record types in API version 17.0 and later. ID of an associated BusinessProcess.
Description	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A description of this record. Limit: 255 characters.
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is **Record Type Name**. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
IsActive	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether this record is active (`true`) or not (`false`). Only active record types can be applied to records. Label is **Active**.

Field	Details
`IsPersonType`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether this record has been designated as a person account (`true`) or not (`false`). Visible only if the organization has the person account feature enabled.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. Label of the record type in the user interface. Limit: 80 characters. Label is **Record Type Label**.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
`SobjectType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Object to which this record type applies, including custom objects.

Usage

Use this object to offer different BusinessProcess records and subsets of picklist values to different users based on their Profile. Your client application can describe or query RecordType records.

Client applications can create or update values in `RecordTypeId` on these objects, specifying a valid record type ID associated with these objects.

> **Note:** You can't create or update the `RecordTypeId` field on the CampaignMember records. Set the CampaignMember record type using the `CampaignMemberRecordTypeId` field on Campaign.

A client application can retrieve the list of valid record type IDs for a given object by querying the RecordType.

SEE ALSO:

Record Type Objects

RecordTypeLocalization

Represents the translated value of a label for a record type when the Translation Workbench is enabled for your organization.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Professional, Enterprise, Developer, Unlimited, or Performance Edition and be enabled for the Translation Workbench.
- To view this object, you must have the "View Setup and Configuration" permission.

Fields

Field	Details
`Language`	**Type** string **Properties** Create, Filter, Nillable, Restricted picklist **Description** The language for this translated label.
`NamespacePrefix`	**Type** string **Properties** Filter, Nillable

Field	Details
	Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
`ParentId`	**Type** reference **Properties** Create, Filter, Nillable **Description** The ID of the RecordType associated with the label that is being translated.
`Value`	**Type** string **Properties** Create, Filter, Nillable, Update **Description** The actual translated label for the record type. Label is **Translation**.

Usage

Use this object to translate the labels of your record types into other supported languages.

RecordVisibility (Pilot)

Represents the visibility attributes that determine a record's read access. This object is read only and is available in API version 46.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you need a CRM Analytics license or to contact Salesforce to participate in the pilot program. You must also have the “View All Data” or “Enable RecordVisibility API” user permission.

Note: We provide the RecordVisibility object to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. The RecordVisibility object isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for the RecordVisibility object in the group in the Trailblazer Community.

Fields

Field Name	Details
`RecordId`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The ID of the record.
`VisibilityAttribute`	**Type** string **Properties** Filter, Nillable, Sort **Description** The visibility attributes that determine the read access of a given record. For example, a user ID, parent record ID, or group ID. The output of visibility attributes is in JSON format and must be deserialized.

Usage

Use this object to query the attributes that determine the visibility of one or more records. You can’t create, delete, or update any records using this object.

Up to 200 record IDs can be queried. You can include an `ORDER BY` clause for any field that is being selected in the query.

This sample query returns the visibility attributes for the indicated record.

```
SELECT RecordId, VisibilityAttribute
FROM RecordVisibility
WHERE RecordId=[single ID]      // or Record IN [list of IDs]
```

The `RecordId` and `VisibilityAttribute` fields must be a part of the fields that are being selected despite `RecordId` being used in the filter criteria as well.

RecordVisibility is a foreign key on the records. This query returns the visibility attributes for Account records:

```
SELECT Id, Name, RecordVisibility.VisibilityAttribute
FROM Account
```

You can't filter `RecordId` fields when using RecordVisibility as a lookup or foreign key.

You can use `RecordVisibilityContext` to filter `WITH` clauses in queries. For more information, see `WITH` *filteringExpression* in the *SOQL and SOSL Reference*.

RedirectWhitelistUrl

Represents a trusted URL for external user redirections. Users can't access a different Salesforce org, including its publicly served pages and content, from your Salesforce org unless the URL is a RedirectWhitelistUrl. For non-Salesforce URLs, a session setting controls whether redirections from pages and components built in Salesforce Classic are restricted to RedirectWhitelistUrl objects. Except for cross-org redirections, you can't restrict redirections that originate from pages and components built with Lightning Experience. This object is available in API version 48.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Only authenticated internal and external users with the View Setup and Configuration permission can access this object, and only users with the Customize Application permission can edit it.

Fields

Field	Details
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the custom help section in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The label corresponds to the section title in the user interface. Limit: 80 characters. When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.

Field	Details
	Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Language of the label. Possible values are: • da—Danish • de—German • en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean • nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified) • zh_TW—Chinese (Traditional)
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The label of the trusted URL.
NamespacePrefix	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
Url	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The trusted URL.

Usage

For non-Salesforce URLs, you can choose whether to alert users about untrusted external redirections or to block those redirections entirely via the redirectBlockModeEnabled and redirectionWarning fields on the SecuritySettings metadata API type. These restrictions apply only to redirections from pages and components built in Salesforce Classic.

For Salesforce org URLs, Salesforce always allows redirections to URLs within the same org, including redirections from previous My Domain URLs. When the enableCrossOrgRedirect field on the SecuritySettings metadata API type is false, Salesforce checks user redirections to other Salesforce orgs via a direct link, a post-action URL, or a post-login URL. If the URL isn't a RedirectWhitelistURL, the user isn't redirected. An example of a direct link is example.com. Post-action URLs and post-login URLs use a protected URL redirect parameter, such as retURL, startURL, saveURL, cancelURL, and targetURL.

Refund

Represents a refund made against a payment. This object is available in API version 48.0 and later.

Supported Calls

create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(), undelete(), update(), upsert()

Note: You can only delete a payment in draft state, which you specify in the **Status** field.

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
AccountId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The customer account containing the payment that this refund targets. This is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
Amount	**Type** currency **Properties** Create, Filter, Sort, Update **Description** Total amount of this refund.
Balance	**Type** currency **Properties** Filter, Nillable, Sort **Description** Remaining balance following refund line applications. Equal to the Amount field – the Net Applied field.
CancellationDate	**Type** dateTime

Field	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** The date that the refund was canceled. This is a required parameter for void services.
CancellationEffectiveDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date that the cancellation of this refund takes effect.
CancellationGatewayDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date when the cancellation transaction was processed in the payment gateway.
CancellationGatewayRefNumber	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Unique ID for the cancellation transaction. Generated by the payment gateway.
CancellationGatewayResultCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Gateway-specific result code for the cancellation transaction. Generated by the payment gateway. Must be mapped to a Salesforce-specific result code.
CancellationSfResultCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code.

Field	Details
ClientContext	**Type** textarea **Properties** Nillable **Description** Contains caller context for payment APIs. Useful for re-establishing context during an asynchronous payment transaction.
Comments	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Users can add comments to provide additional details about a record. Maximum of 1000 characters.
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Three-letter ISO 4217 currency code associated with the payment group record.
Date	**Type** dateTime **Properties** Create, Defaulted on create, Filter, Nillable, Sort, Update **Description** The date and time that this refund was created.
EffectiveDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Defines the date and time when the refund application becomes effective.
Email	**Type** email **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Email address of the person who initiated the refund.
GatewayDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date that a successful gateway communication caused the creation of this refund.
GatewayRefNumber	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Unique transaction ID created by the payment gateway.
GatewayResultCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Gateway-specific result code. Must be mapped to a Salesforce-specific result code.
GatewayResultCodeDescription	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the GatewayResultCode. Useful for providing additional context as to why the gateway returned a specific result code.
ImpactAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Shows the refund's financial impact against the customer's accounts receivable. If the refund amount is valid, it equals the Amount field. Equals 0 when the refund amount is void. Has a null value when the refund is canceled.

Field	Details
IpAddress	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The IP address of the person who initiated the payment.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record can have been referenced (LastReferencedDate) but not viewed.
MacAddress	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The MAC address of the person who initiated the refund.
NetApplied	**Type** currency **Properties** Filter, Nillable, Sort **Description** Equals the Total Applied field minus the Total Unapplied field.
OrderPaymentSummaryId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Order payment summary record that shows the balances of each authorization, capture, and refund made against an order.
PaymentGatewayId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The payment gateway used to process this refund. This is a relationship field. **Relationship Name** PaymentGateway **Relationship Type** Lookup **Refers To** PaymentGateway
PaymentGroupId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The payment group for the payment being refunded. This is a relationship field. **Relationship Name** PaymentGroup **Relationship Type** Lookup **Refers To** PaymentGroup
PaymentID	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the payment record. This field is a relationship field. **Relationship Name** Payment

Field	Details
	Relationship Type Lookup **Refers To** Payment
PaymentIntentID	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the payment intent record. This field is a relationship field. **Relationship Name** PaymentIntent **Relationship Type** Lookup **Refers To** PaymentIntent
PaymentMethodId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The payment method used to create the payment being refunded. This is a relationship field. **Relationship Name** PaymentMethod **Relationship Type** Lookup **Refers To** PaymentMethod
Phone	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Phone number of the customer who initiated the refund.

Field	Details
ProcessingMode	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Defines whether the payment has been made outside of the payment platform. Possible values are: • `External`: Transactions happened outside of the Salesforce payments platform. • `Salesforce`: Salesforce made and recorded an external call to the payment gateway.
RefundNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** System-created unique ID for this refund.

SfResultCode	**Type**
	picklist
	Properties
	Create, Filter, Group, Nillable, Restricted picklist, Sort, Update
	Description
	Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code.
	Possible values are:
	• `Decline`: The gateway call failed but the transaction can be attempted again. For example, the customer had insufficient funds or briefly lost their connection.
	• `Indeterminate`: The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway.
	• `PermanentFail`: The gateway call failed and can't work even if tried again. Gateway calls fail permanently for one of two reasons:
	  – Hard Decline: The customer's payment account has been closed or terminated.
	  – Fraud: The gateway recognized the payment or payment method as known fraud.
	• `RequiresReview`: The customer bank requires more information before completing the payment.
	• `Success`: The gateway call succeeded.
	• `SystemError`: Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes.

Field	Details
	• `ValidationError`: Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV.
`Status`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Defines the state of this refund. Possible values are: • `Canceled`: This refund has been voided and can no longer be allocated. • `Draft`: The refund can be edited before posting it and allocating it to a target. • `Processed`: This refund has been finalized and can be allocated against a target. Users can manually change the Status field's values as follows: • Draft to Processed • Processed to Canceled • Draft to Canceled
`TotalApplied`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of Amount fields across all of this refund's applied refund lines.
`TotalUnapplied`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of Amount fields across all of this refund's unapplied refund lines.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Defines how this refund is used. Possible values are: • `NonReferenced`: Standalone refund not linked to any payment.

Field	Details
	• `Referenced`: Refund made against a payment.

RefundLinePayment

A refund line that has been applied to a payment. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated.

Fields

Field	Details
`Amount`	**Type** currency **Properties** Create, Filter, Sort **Description** The total amount applied to or unapplied from a payment by the refund line.
`AppliedDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort **Description** The date that the refund was applied to the linked payment.
`AssociatedAccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The account for the payment that received the refund. This is a relationship field.

Field	Details
	Relationship Name AssociatedAccount **Relationship Type** Lookup **Refers To** Account
AssociatedRefundLinePaymentId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The refundLine that was unapplied. Populated only when RefundLinePayment's Type has a value of Unapplied. This is a relationship field. **Relationship Name** AssociatedRefundLinePayment **Relationship Type** Lookup **Refers To** RefundLinePayment
Comments	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Users can add comments to provide additional information on the refund line payment.
Date	**Type** dateTime **Properties** Create, Filter, Nillable, Sort **Description** By default, the day the refund line payment record was created. Users can also enter a different date.
EffectiveDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort

Field	Details
	Description Defines the date and time when the refund line application or unapplication becomes effective.
`EffectiveImpactAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Shows how this payment refund line impacts a customer's accounts receivable. This value is positive when RefundLinePayment's Type field is Applied, and negative when RefundLinePayment's Type is Unapplied. If there's an unapplied line related to this record, EffectiveImpactAmount has a value of 0. Note: EffectiveImpactAmount evaluates only the applied and unapplied line pair. Therefore, the effective impact amount could be different for different lines within the same refund.
`HasBeenUnapplied`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Shows whether this refund line has been unapplied. Possible values are: • `No`
`ImpactAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Shows how this payment refund line impacts a customer's accounts receivable. This value is positive when RefundLinePayment's Type field is Applied, and negative when RefundLinePayment's Type is Unapplied.
`PaymentBalance`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The payment record's balance following the application or unapplication of this refund line.

Field	Details
PaymentId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The payment record that this refund line targets. Refund applications and unapplications are made against this payment. This is a relationship field. **Relationship Name** Payment **Relationship Type** Lookup **Refers To** Payment
RefundBalance	**Type** currency **Properties** Filter, Nillable, Sort **Description** The refund record’s balance following the application or unapplication of this payment refund line.
RefundId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The parent refund of this refund line. This is a relationship field. **Relationship Name** Refund **Relationship Type** Lookup **Refers To** Refund
RefundLinePaymentNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort

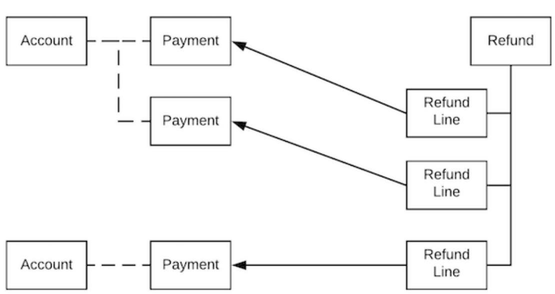
Field	Details
	Description System-created unique ID for this refund line.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Defines whether this line represents a refund that's been applied or unapplied from a payment. Possible values are: • `Applied`
`UnappliedDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort **Description** The date that this refund line was unapplied from a payment.

Usage

When you're ready to apply a refund's balance to a payment, create a refund line (`RefundLinePayment`). The refund line represents the balance taken from the payment and applied toward the invoice. You can apply a refund's balance when you create the refund record or afterward. The refund line must have the same currency as the parent refund.

A refund has an amount, which represents the total amount taken from the refund, and a balance, which represents the remaining amount after the refund line has been applied to a payment. A refund's amount can't be less than the sum of all of its refund line amounts. You can apply any portion of a refund's balance to a payment.

You can apply a refund to transactions on the same account or to different transacations across different



accounts.

RegisteredExternalService

Represents a registered external service used for checkout integrations by data integrators. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The RegisteredExternalService object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
`ConfigUrl`	**Type** url **Properties** Create, Filter, Nillable, Sort, Update **Description** Link to configuration page for the integration.
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the external service provider. This field is available in API version 59.0 and later.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.

Field	Details
	Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`DocumentationUrl`	**Type** url **Properties** Create, Filter, Nillable, Sort, Update **Description** Link to documentation for the registered external service.
`ExtensionPointName`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** This field is available in API version 55.0 and later. Name of an extension point. Possible values are: • `Checkout_CartSummary_ComputePromotions` • `Checkout_CartSummary_Inventory` • `Checkout_CartSummary_PriceCart` • `Checkout_Update_CalcCartSummary` • `Commerce_Domain_Cart_Calculate` • `Commerce_Domain_Checkout_CreateOrder` • `Commerce_Domain_Inventory_CartCalculator` • `Commerce_Domain_Inventory_Service` • `Commerce_Domain_OrderManagement_Product` • `Commerce_Domain_Pricing_CartCalculator` • `Commerce_Domain_Pricing_Service` • `Commerce_Domain_Promotions_CartCalculator` • `Commerce_Domain_Shipping_CartCalculator` • `Commerce_Domain_Shipping_SplitShipment` • `Commerce_Domain_Tax_CartCalculator` • `Commerce_Domain_Tax_Service` • `Commerce_Endpoint_Account_Address` • `Commerce_Endpoint_Account_Addresses` • `Commerce_Endpoint_Catalog_Product` • `Commerce_Endpoint_Catalog_Products` • `Commerce_Endpoint_Search_ProductSearch` • `Commerce_Endpoint_Search_Products`

Field	Details
	• `Commerce_Endpoint_Search_ProductsByCategory`
`ExternalServiceProviderId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of an Apex class functioning as a provider. The Apex class can either implement one of the following interfaces: • sfdc_checkout.CartInventoryValidation • sfdc_checkout.CartPriceCalculations • sfdc_checkout.CartShippingCharges • sfdc_checkout.CartTaxCalculations or the Apex class can extend one of the base classes for an extension point. See Available Extensions.
`ExternalServiceProviderType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The types of external service providers. Possible values are: • `Extension` (this value is available in API version 55.0 and later) • `Inventory` • `Price` • `Promotions` (this value is available in API version 53.0 and later) • `Shipment` • `Tax`
`IconUri`	**Type** url **Properties** Create, Filter, Nillable, Sort, Update **Description** URI of icon for the extension provider. This field is available in API version 59.0 and later.
`IsApplication`	**Type** boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if the extension provider is contained within a managed package. The default value is `false`. This field is available in API version 59.0 and later.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The combined language and locale ISO code, which controls the language for labels displayed in an application. Possible values are: • `da`—Danish • `de`—German • `en_US`—English • `es`—Spanish • `es_MX`—Spanish (Mexico) • `fi`—Finnish • `fr`—French • `it`—Italian • `ja`—Japanese • `ko`—Korean • `nl_NL`—Dutch • `no`—Norwegian • `pt_BR`—Portuguese (Brazil) • `ru`—Russian • `sv`—Swedish • `th`—Thai • `zh_CN`—Chinese (Simplified) • `zh_TW`—Chinese (Traditional)
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update

Field	Details
	Description The master label for the registered external service.
NamespacePrefix	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

RelatedListColumnDefinition

Represents information about a column in a related list. A related list specifies a set of records for a related object, based on specific criteria. This object is available in API version 55.0 and later.

Supported Calls

describeSObjects(), query()

Special Access Rules

This object is read-only.

Fields

Field	Details
Alias	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The unique alias of the column in the related list.
ColumnSoql	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The SOQL query string used in a SELECT clause for the column.
DataType	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The field type of the column.
DurableId	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The unique identifier for the related list. Always retrieve this value before using it, as the value can change from one release to the next. Simplify queries by using this field instead of making multiple queries.
FieldDefinitionId	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID of the FieldDefinition associated with the column, if applicable. This is a relationship field. **Relationship Name** FieldDefinition **Relationship Type** Lookup **Refers To** FieldDefinition

Field	Details
IsDefault	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the column appears on the related list by default (true) or not (false). The default value is false.
IsDescribable	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the related list can appear in describeLayout call results (true) or not (false). The default value is false.
Label	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The label for the column.
LookupId	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The lookup ID for the column.
RelatedListDefinitionId	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID of the RelatedListDefinition that contains the column. This is a relationship field. **Relationship Name** RelatedListDefinition

Field	Details
	Relationship Type Lookup **Refers To** RelatedListDefinition

Usage

Find all available columns on a related list definition.

```
SELECT Alias, ColumnSoql, DurableId FROM RelatedListColumnDefinition WHERE
RelatedListDefinitionId = 'Account.Opportunities'
```

RelatedListDefinition

Represents information about a related list. A related list specifies a set of records for a related object, based on specific criteria. This object is available in API version 55.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

This object is read-only.

Fields

Field	Details
`DefaultSort`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The default sort string for the related list.
`DurableId`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The unique identifier for the related list. Always retrieve this value before using it, as the value can change from one release to the next. Simplify queries by using this field instead of making multiple queries.
`EntityDefinitionId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID of the entity containing the related list. This is a relationship field. **Relationship Name** EntityDefinition **Relationship Type** Lookup **Refers To** EntityDefinition
`IsCustomizable`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether columns on the related list can be customized `(true)` or not `(false)`. The default value is `false`.
`IsDescribable`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the related list can appear in `describeLayout` call results `(true)` or not `(false)`. The default value is `false`.
`IsLayoutable`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether the related list can be assigned to a layout `(true)` or not `(false)`. The default value is `false`.
`Label`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The label for the related list.
`ParentEntityDefinitionId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID of the ParentEntityDefinition that's associated with the rows in the related list. This is a relationship field. **Relationship Name** ParentEntityDefinition **Relationship Type** Lookup **Refers To** EntityDefinition
`RelatedListId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID of the related list.
`RelatedListName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The unique name of the related list in the API.

Usage

Find all available related lists for a given entity, for example, an Account record.

```
SELECT DurableId, Label, RelatedListName FROM RelatedListDefinition WHERE
ParentEntityDefinitionId = 'Account'
```

RemoteKeyCalloutEvent

The documentation has moved to RemoteKeyCalloutEvent in the *Platform Events Developer Guide*.

Reply

Represents a reply that a user has submitted to a question in an answers zone.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`Body`	**Type** textarea **Properties** Create, Update **Description** Body of this reply.
`CommunityId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The zone ID associated with the question and its reply. This field is available in API version 27.0 and later.
`CreatorFullPhotoUrl`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description URL of the user’s profile photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.
`CreatorName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Name of the user who posted the question or reply. Only the first name of internal users (agents) appears to portal users in the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later
`CreatorSmallPhotoUrl`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** URL of the user’s thumbnail photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.
`DownVotes`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of down votes for a reply.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** When creating a Reply, the `Name` field is automatically populated with a truncated, plain text version of the Reply `Body` field.
`NumReportAbuses`	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description Represents the number of reported abuses on the reply by users. This field is available in API version 24.0 and later.
`QuestionId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the Question to which this reply was made.
`UpVotes`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of up votes for a reply.
`VoteTotal`	**Type** double **Properties** Filter, Nillable, Sort **Description** The total number of all votes for a reply, including up and down votes.

Usage

Use this object to track replies to a Question.

ReplyReportAbuse

Represents a user-reported abuse on a Reply in a Chatter Answers zone. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the Reply from which the user reported abuse.
`Reason`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The reason the user reported abuse on the Reply, such as `Spam`, `Hateful`, or `Inappropriate`.
`ReplyId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the Reply from which the user reported abuse.

Usage

Use this object to track user-reported abuse on replies created in a Chatter Answers zone.

ReplyText

A text reply generated by Einstein Reply Recommendations that is based on closed chat transcripts. Admins review replies and publish them to quick text, editing them as needed. Einstein recommends relevant published replies to support agents in the Lightning Service Console, and agents can insert replies into chats or messaging sessions. This object is available in API version 49.0 and later.

Important: Because the replies generated by Einstein are taken from closed chats with your customers, they may contain customer data. You can edit replies before they are recommended to agents.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Fields

Field	Details
Language	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The language used in the reply. This field is available in API version 51.0 and later. Possible values are languages supported in Einstein Reply Recommendations.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Eight-digit auto-generated number identifying the reply.
RawTextMessage	**Type** textarea **Properties** **Description** The text of the reply.
Source	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Indicates who last modified the reply. Possible values are: • EINSTEIN_GENERATED—Reply was generated by Einstein and has not been edited. • USER_EDITED—Reply was generated by Einstein and then edited by a user. • USER_GENERATED—This value is not currently in use.
Status	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The status of the reply. Possible values are:

Field	Details
	• `NEW`—Einstein has generated the reply and it hasn't yet been published. • `PUBLISHED`—The reply has been published to quick text. When the reply recommendation model is activated, the reply can be recommended to support agents. • `PUBLISH_FAILED`— An attempt to publish the reply to quick text failed. Publishing failure can be due to validation errors, access errors, or corrupted files. To hide the reply from the list of generated replies, delete it.

Usage

To get started with Einstein Reply Recommendations, create a predictive model that analyzes closed chats for frequently used text snippets. When the model is ready, Einstein generates a list of these snippets as ReplyText records for you to review and publish, or convert, to quick text. ReplyText records appear on the Einstein Reply Recommendations Setup page.

You can select one or more replies to publish at a time. If you publish a single reply, you can edit the reply text during publishing. If you publish multiple replies at once, you can edit each reply's text on the quick text page after publishing is complete. Replies aren't recommended to support agents until you activate your reply recommendation model.

When a reply is published, a corresponding QuickText record is created. During publishing, select a quick text folder to add the replies to and make sure that agents have access to the folder. To edit a reply after it is published, edit the related quick text record.

Einstein generates the list of replies only once, when your model finishes building. It's not possible to generate a new list.

Copyright

Report

Represents a report, a set of data that meets certain criteria, displayed in an organized way. Access is read-only. This object is available in API version 20.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

Fields

Field	Details
`Description`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The description of the report. Limit: 255 characters.

Field	Details
`DeveloperName`	**Type** string **Properties** Filter, Group, Sort **Description** Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is **Report Unique Name**. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
`FolderName`	**Type** string **Properties** Filter, Nillable, Sort **Description** Name of the folder that contains the report. Available in API version 35.0 and later.
`Format`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Required. Indicates the format of the report. This field is available in API version 29.0 and later. Can have one of these values: • **Tabular** for reports in that format. In the application, the label is `Tabular`. • **Summary** for reports in that format. In the application, the label is `Summary`. • **Matrix** for reports in that format. In the application, the label is `Matrix`. • **Multiblock** for reports in joined format. In the application, the label is `Joined`.
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.

Field	Details
LastReferencedDate	**Type** datetime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastRunDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Returns the date the report was last run. Label is **Last Run**.
LastViewedDate	**Type** datetime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Required. The report label used in the user interface.
NamespacePrefix	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. The namespace prefix can have one of the following values.

Field	Details
	- In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. - In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. This field can't be accessed unless the logged-in user has the Customize Application permission.
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the folder that contains the report. There are 2 special folders: - Private, where the ID is the user ID - Public, where the ID is the org ID This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Folder, Organization, User

Supported Query Scopes

Use these scopes to help specify the data your SOQL query returns.

allPrivate
Records saved in all users' private folders.

Requires the user permission "Manage All Private Reports and Dashboards" and Enhanced Analytics Folder Sharing. If your organization was created after the Summer '13 release, you already have Enhanced Analytics Folder Sharing. Available in API version 36.0 and later.

created
Records created by the user running the query.

everything
All records except records saved in other users' private folders.

mine
Records saved in the private folder of the user running the query.

organizationOwned
Records saved in Unfiled Public Reports. In Lightning Experience, the Unfiled Public Reports folder is called Public Reports.

Usage

Use the report object to get report metadata. Query, search, or retrieve specific metadata on reports. Report object fields are read-only.

Example: Reports with "Sales" in Their Name

This SOQL query returns reports that contain the name "Sales" and lists their developer names, format, ID, and report name.

```
SELECT DeveloperName,Format,Id,Name FROM Report WHERE Name LIKE '%Sales%'
```

Example: Reports in an Inactive User's Private Folder

This SOQL query returns reports saved in a specific user's private folder.

```
SELECT Id FROM Report USING SCOPE allPrivate WHERE OwnerId = '005A0000000Bc2deFG'
```

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ReportFeed
Feed tracking is available for the object.

SEE ALSO:

ReportTag
Dashboard

ReportTag

Associates a word or short phrase with a Report. This object is available in API version 20.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ItemId	**Type** reference

Field Name	Details
	Properties Create, Filter **Description** ID of the tagged item.
Name	**Type** string **Properties** Create, Filter **Description** Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
TagDefinitionId	**Type** reference **Properties** Filter **Description** ID of the parent TagDefinition object that owns the tag.
Type	**Type** picklist **Properties** Create, Filter, Restricted picklist **Description** Defines the visibility of a tag. Valid values: • `Public`—The tag can be viewed and manipulated by all users in an organization. • `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`.

Usage

ReportTag stores the relationship between its parent TagDefinition and the Report being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

Report

ReputationLevel

Represents a reputation level defined for an Experience Cloud site. This object is available in API version 32.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object is available only if digital experiences is enabled in your org. Only users with permissions to create or manage an Experience Cloud site can view the ReputationPointsRule records.

Fields

Field Name	Details
`Label`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The label for the reputation level.
`LevelNumber`	**Type** int **Properties** Filter, Group, Sort **Description** The rank of the reputation level.
`ParentId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the parent Experience Cloud site the reputation level applies to.
`Threshold`	**Type** double **Properties** Filter, Sort

Field Name	Details
	Description The lower limit of reputation points associated with this reputation level. The maximum number of reputation points a user can accrue is 999,999,999,999,999.

ReputationLevelLocalization

Represents the translated value of a reputation level. Reputation level localization only applies for reputation levels in Experience Cloud sites. This object is available in API version 35.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is available only if digital experiences is enabled in your org and reputation is enabled in your Experience Cloud site.

Fields

Field Name	Details
`Language`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The language the reputation level is translated into. The picklist contains the following fully-supported languages: • Chinese (Simplified): `zh_CN` • Chinese (Traditional): `zh_TW` • Danish: `da` • Dutch: `nl_NL` • English: `en_US` • Finnish: `fi` • French: `fr` • German: `de` • Italian: `it` • Japanese: `ja`

Field Name	Details
	• Korean: `ko` • Norwegian: `no` • Portuguese (Brazil): `pt_BR` • Russian: `ru` • Spanish: `es` • Spanish (Mexico): `es_MX` Spanish (Mexico) defaults to Spanish for customer-defined translations. • Swedish: `sv` • Thai: `th` The Salesforce user interface is fully translated to Thai, but Help is in English.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the reputation level this translated value applies to.
`Value`	**Type** string **Properties** Create, Filter, Sort, Update

Field Name	Details
	Description The translated text for the reputation level. Label is **Translation Text**.

ReputationPointsRule

Represents the reputation point rules for an Experience Cloud site. Each rule specifies an action that members can earn points from and the points associated with those actions in a particular site. This object is available in API version 32.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object is available only if digital experiences is enabled in your org. Only users with permissions to create or manage an Experience Cloud site can view the ReputationPointsRule records.

Fields

Field Name	Details
`ParentId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the parent Experience Cloud site that the point rule applies to.
`Points`	**Type** int **Properties** Filter, Group, Sort **Description** The reputation points associated with the member action this rule is for. The maximum value this field can contain is 999,999.
`Type`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort

Field Name	Details
	Description The member action associated with this rule, limited to one of these actions: • Write a post (`FeedItemWriteAPost`) • Write a comment (`FeedItemWriteAComment`) • Receive a comment (`FeedItemReceiveAComment`) • Like something (`FeedItemLikeSomething`) • Receive a like (`FeedItemReceiveALike`) • Share a post (`FeedItemShareAPost`) • Someone shares your post (`FeedItemSomeoneSharesYourPost`) • Mention someone (`FeedItemMentionSomeone`) • Receive a mention (`FeedItemReceiveAMention`) • Ask a question (`FeedItemPostQuestion`) • Answer a question (`FeedItemAnswerAQuestion`) • Receive an answer (`FeedItemReceiveAnAnswer`) • Mark an answer as best (`FeedItemMarkAnswerAsBest`) • Someone marks your answer as best (`FeedItemYourAnswerMarkedBest`) • Endorse someone for knowledge on a topic (`EndorseSomeoneForKnowledgeOnATopic`) • Someone endorses you for knowledge on a topic (`EndorsedForKnowledgeOnATopic`) • Upload a profile picture (`ProfilePhotoUpload`) This action is available in API version 45.0 and later.

ResourceAbsence

Represents a time period in which a service resource is unavailable to work in Field Service, Salesforce Scheduler, or Workforce Engagement. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Field Service or Workforce Engagement must be enabled.

Fields

Field Name	Details
AbsenceNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** (Read only) An auto-generated number identifying the absence.
Address	**Type** address **Properties** Filter **Description** The compound form of the address associated with the absence.
City	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The city of the address associated with the absence. Maximum length is 40 characters.
Country	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The country of the address associated with the absence. Maximum length is 80 characters.
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** The description of the absence.
End	**Type** dateTime

Field Name	Details
	Properties Create, Filter, Sort, Update **Description** The date and time when the absence ends.
GeocodeAccuracy	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The level of accuracy of a location's geographical coordinates compared with its physical address. Usually provided by a geocoding service based on the address's latitude and longitude coordinates. Note: This field is available in the API only.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the resource absence was last modified. Its label in the user interface is `Last Modified Date`.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the resource absence was last viewed.
Latitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `Longitude` to specify the precise geolocation of the address associated with the absence. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. Note: This field is available in the API only.

Field Name	Details
Longitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `Latitude` to specify the precise geolocation of the address associated with the absence. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. Note: This field is available in the API only.
Postal Code	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The postal code of the address associated with the absence. Maximum length is 20 characters.
ResourceId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The absent service resource. This is a relationship field. **Relationship Name** Resource **Relationship Type** Lookup **Refers To** ServiceResource
Start	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The date and time when the absence begins.
State	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The state of the address associated with the absence. Maximum length is 80 characters.
`Street`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The street number and name of the address associated with the absence.
`Type`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The type of absence: *Meeting*, *Training*, *Medical*, or *Vacation*. The default value is *Vacation*. You can add custom values if needed, but the name *Break* is reserved for the Field Service managed package.

Usage

Resource absences you define periods of time when a service resource is unavailable to work. Unless you're using the Field Service managed package, service resources can still be assigned to appointments that conflict with their absences.

Tip: Create a trigger that sends an approval request to a supervisor when a service resource creates an absence.

If you're not using the Field Service managed package, a calendar view isn't available for individual service resources.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ResourceAbsenceChangeEvent (API version 48.0)
Change events are available for the object.

ResourceAbsenceFeed
Feed tracking is available for the object.

ResourceAbsenceHistory
History is available for tracked fields of the object.

ResourcePreference

Represents an account's preference for a specified service resource on field service work.

Resource preferences indicate which service resources can be assigned to field service work. You can designate service resources as preferred, required, or excluded on specific accounts, assets, locations, work orders, or work order line items. Work orders inherit their associated account's resource preferences.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the resource preference was last modified.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the resource preference was last viewed.
`PreferenceType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Resource preference type. Values include: • Preferred: Indicates that the customer would like their field service work assigned to the resource.

Field Name	Details
	• Required: Indicates that the resource must be assigned to the customer's field service work. • Excluded: Indicates that the customer doesn't want their field service work assigned to the resource. Resource preferences serve more as a suggestion than a requirement. You can still assign a service appointment to any resource regardless of the related work order's resource preferences.
RelatedRecordId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The work order or account with the resource preference. This field is a polymorphic relationship. **Relationship Name** RelatedRecord **Relationship Type** Lookup **Refers To** Accounts, Assets, Locations, Work Orders, or Work Order Line Items
ResourcePreferenceNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort **Description** An auto-generated number identifying the resource preference.
ServiceResourceId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The service resource that is preferred, required, or excluded. This is a relationship field. **Relationship Name** ServiceResource **Relationship Type** Lookup

Field Name	Details
	Refers To ServiceResource

Associated Objects

This object has these associated objects. Unless noted, they're available in the same API version as this object.

ResourcePreferenceChangeEvent (API version 54.0)
Change events are available for the object.

ResourcePreferenceFeed
Feed tracking is available for the object.

ResourcePreferenceHistory
History is available for tracked fields of the object.

ReturnOrder

Represents the return or repair of inventory or products in Field Service, or the return of order products in Order Management. This object is available in API version 42.0 and later.

Return orders are available in Lightning Experience, Salesforce Classic, the Salesforce mobile app, the Field Service mobile app for Android and iOS, and communities built using Salesforce Tabs + Visualforce.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service or Order Management must be enabled. If return orders are enabled by a Salesforce Order Management license, they must be created with a Status corresponding to the Status Category Activated. The default Statuses corresponding to Activated are Submitted and Approved.

Fields

Field Name	Details
`AccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The account associated with the return order.

Field Name	Details
	This is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
CaseId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The case associated with the return order. This is a relationship field. **Relationship Name** Case **Relationship Type** Lookup **Refers To** Case
ContactId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The contact associated with the return order. This is a relationship field. **Relationship Name** Contact **Relationship Type** Lookup **Refers To** Contact
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field Name	Details
	Description Available only for orgs with the multicurrency feature enabled. ISO code for the currency of the OrderSummary associated with the ReturnOrder. Possible values are: • `DKK`—Danish Krone • `EUR`—Euro • `GBP`—British Pound • `USD`—U.S. Dollar The default value is `USD`. This field is available in API version 49.0 and later.
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** Notes or context about the return order.
`DestinationLocationId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The location where the items are being returned to. For example, if the return order tracks the return of products from a technician's van to a warehouse, the warehouse is the destination location. This is a relationship field. **Relationship Name** DestinationLocation **Relationship Type** Lookup **Refers To** Location
`ExpectedArrivalDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date when the items are expected to arrive at the destination location.

Field Name	Details
ExpirationDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Authorizations can't be captured after their expiration dates. This field is available in API version 50.0 and later.
GrandTotalAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total, including adjustments and tax, of the products, fees, and delivery charges on the return order. This includes all return order line items associated with the return order. This amount is equal to TotalAmount + TotalTaxAmount. This is a calculated field. This field is available in API version 50.0 and later.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the return order was last modified. Its label in the user interface is `Last Modified Date`.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the return order was last viewed.
LifeCycleType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort

Field Name	Details
	Description Specifies whether the order summary is managed by Salesforce Order Management (MANAGED) or by an external system (UNMANAGED). An unmanaged order summary is stored in Salesforce for reference purposes. • Some Order Management APIs reject input records that are associated with unmanaged order summaries. • Order Management does not update financial bucket fields on some records that are associated with unmanaged order summaries. • A user with the EditUnmanagedOrderSummaries or B2BCommerceIntegrator permission can edit certain fields on objects related to unmanaged order summaries that are normally only accessible via APIs. Possible values are: • `MANAGED`—Managed • `UNMANAGED`—Unmanaged This field is available in API version 50.0 and later.
`OrderId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The order associated with the return order. When you associated a return order with an order, you can associate the return order's line items with order products. This is a relationship field. **Relationship Name** Order **Relationship Type** Lookup **Refers To** Order
`OrderSummaryId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the order summary associated with the return order. This field is available in API version 50.0 and later.
`OwnerId`	**Type** reference

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the return order. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
ProductRequestId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The product request associated with the return order. When you associated a return order with a product request, you can associate the return order's line items with the product request's line items. A return order might be related to a product request if the return order tracks the return of unused products or products to be repaired or replaced. For example, a technician creates a product request for three motors to prepare for a field visit. If the technician finds that only two motors are needed, they can create a return order to return the third to the original location, and list the product request in this field. This is a relationship field. **Relationship Name** ProductRequest **Relationship Type** Lookup **Refers To** ProductRequest This field is available only if Field Service or Health Cloud is enabled.
ProductServiceCampaignId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The product service campaign associated with the return order

Field Name	Details
	This field is available only if Field Service is enabled.
ReturnOrderNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** (Read only) Auto-generated number identifying the return order.
ReturnedById	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the user returning the items. This is a relationship field. **Relationship Name** ReturnedBy **Relationship Type** Lookup **Refers To** User
ShipFromAddress	**Type** address **Properties** Filter, Nillable **Description** The return shipping address. This address tracks the location of the items at the start of the return or repair. For example, if a customer is returning an item, the Ship From address is the customer's address.
ShipFromCity	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The city of the return shipping address. This address tracks the location of the items at the start of the return or repair. For example, if a customer is returning an item, the Ship From address is the customer's address.

Field Name	Details
ShipFromCountry	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The country of the return shipping address. This address tracks the location of the items at the start of the return or repair. For example, if a customer is returning an item, the Ship From address is the customer's address.
ShipFromGeocodeAccuracy	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Accuracy level of the geocode for the return shipping address. See Compound Field Considerations and Limitations for details on geolocation compound fields. Note: This field is available in the API only.
ShipFromLatitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with Longitude to specify the precise geolocation of the return shipping address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields. Note: This field is available in the API only.
ShipFromLongitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with Latitude to specify the precise geolocation of the return shipping address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields. Note: This field is available in the API only.

Field Name	Details
ShipFromPostalCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The postal code of the return shipping address. This address tracks the location of the items at the start of the return or repair. For example, if a customer is returning an item, the Ship From address is the customer’s address.
ShipFromState	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The state of the return shipping address. This address tracks the location of the items at the start of the return or repair. For example, if a customer is returning an item, the Ship From address is the customer’s address.
ShipFromStreet	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The street of the return shipping address. This address tracks the location of the items at the start of the return or repair. For example, if a customer is returning an item, the Ship From address is the customer’s address.
ShipmentType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The type of shipment associated with the return order. Available values are: • `Standard` (default value) • `Rush` • `Overnight` • `Next Business Day` • `Pick Up`
SourceLocationId	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The items' location at the start of the return or repair. For example, if the return order tracks the return of products from a technician's service vehicle to a warehouse, the service vehicle is the source location. This is a relationship field. **Relationship Name** SourceLocation **Relationship Type** Lookup **Refers To** Location
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The status of the return order. Available values are: • `Draft` • `Submitted` • `Approved` • `Canceled` • `Closed` If return orders are enabled by a Salesforce Order Management license, they must be created with a Status corresponding to the Status Category `Activated`. The default Statuses corresponding to Activated are Submitted and Approved.
`StatusCategory`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Status category of the return order. Processing of the return order depends on this value. Each status category corresponds to one or more statuses. Possible values are: • `Activated` • `Canceled` • `Closed`

Field Name	Details
	• `Draft` This field is available in API version 50.0 and later.
`TaxLocaleType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The system used to handle tax on the original order associated with the return order. Gross usually applies to taxes like value-added tax (VAT), and Net usually applies to taxes like sales tax. Possible values are: • `Gross` (displays most prices and taxes as combined values) • `Net` (displays most prices and taxes as separate values) This field is available in API version 50.0 and later.
`TotalAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Adjusted total, not including tax, of the return order line items, including products, fees, and delivery charges, on the ReturnOrder. This is a calculated field. This field is available in API version 50.0 and later.
`TotalDeliveryAdjustAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the price adjustments applied to the delivery charges on the return order. This value only includes adjustments to return order line items of type code Charge. This is a calculated field. This field is available in API version 50.0 and later.
`TotalDeliveryAdjustAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort

Field Name	Details
	Description Total amount of the price adjustments applied to the delivery charges on the return order, inclusive of tax. This value only includes adjustments to return order line items of type code Charge. This amount is equal to TotalDeliveryAdjustAmount + TotalDeliveryAdjustTaxAmount. This is a calculated field. This field is available in API version 50.0 and later.
`TotalDeliveryAdjustTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalDeliveryAdjustAmount. This is a calculated field. This field is available in API version 50.0 and later.
`TotalDeliveryAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of the delivery charges on the return order. This value only includes return order line items of type code Charge. This is a calculated field. This field is available in API version 50.0 and later.
`TotalDeliveryAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the delivery charges on the return order, inclusive of tax. This value only includes return order line items of type code Charge. This amount is equal to TotalDeliveryAmount + TotalDeliveryTaxAmount. This is a calculated field. This field is available in API version 50.0 and later.
`TotalDeliveryTaxAmount`	**Type** currency

Field Name	Details
	Properties Filter, Nillable, Sort **Description** Tax on the TotalDeliveryAmount. This is a calculated field. This field is available in API version 50.0 and later.
`TotalFeeAdjustAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the price adjustments applied to the fees on the return order. This value only includes adjustments to return order line items of type Fee. This is a calculated field. This field is available in API version 56.0 and later.
`TotalFeeAdjustAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the price adjustments applied to the fees on the return order, inclusive of tax. This value only includes adjustments to return order line items of type Fee. This amount is equal to TotalFeeAdjustAmount + TotalFeeAdjustTaxAmount. This is a calculated field. This field is available in API version 56.0 and later.
`TotalFeeAdjustTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalFeeAdjustAmount. This is a calculated field. This field is available in API version 56.0 and later.
`TotalFeeAmount`	**Type** currency

Field Name	Details
	Properties Filter, Nillable, Sort **Description** Total of the fees on the return order. This value only includes return order line items of type Fee. This is a calculated field. This field is available in API version 56.0 and later.
`TotalFeeAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the fees on the return order, inclusive of tax. This value only includes return order line items of type Fee. This amount is equal to TotalFeeAmount + TotalFeeTaxAmount. This is a calculated field. This field is available in API version 56.0 and later.
`TotalFeeTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalFeeAmount. This is a calculated field. This field is available in API version 56.0 and later.
`TotalProductAdjustAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the price adjustments applied to the products on the return order. This value only includes adjustments to return order line items of type code Product. This is a calculated field. This field is available in API version 50.0 and later.
`TotalProductAdjustAmtWithTax`	**Type** currency

Field Name	Details
	Properties Filter, Nillable, Sort **Description** Total amount of the price adjustments applied to the products on the return order, inclusive of tax. This value only includes adjustments to return order line items of type code Product. This amount is equal to TotalProductAdjustAmount + TotalProductAdjustTaxAmount. This is a calculated field. This field is available in API version 50.0 and later.
`TotalProductAdjustTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalProductAdjustmentAmount. This is a calculated field. This field is available in API version 50.0 and later.
`TotalProductAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of the product charges on the return order. This value only includes return order line items of type code Product. This is a calculated field. This field is available in API version 50.0 and later.
`TotalProductAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the product charges on the return order, inclusive of tax. This value only includes return order line items of type code Product. This amount is equal to TotalProductAmount + TotalProductTaxAmount. This is a calculated field. This field is available in API version 50.0 and later.

Field Name	Details
`TotalProductTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalProductAmount. This is a calculated field. This field is available in API version 50.0 and later.
`TotalTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalAmount. This is a calculated field. This field is available in API version 50.0 and later.

Usage

You can use return orders to track customer returns, customer repairs, or the return of inventory from a technician's van stock to a warehouse or supplier. Customers can initiate a return from a community, or agents can create return orders in response to a customer call or technician request.

Return orders are composed of return order line items, which allow you to add details about the items being returned. To represent the returned items, each line item must list one or more of the following: product, product item, asset, product request line item, and order product. Return orders can be associated with a product request, case, account, contact, and order if needed. This versatility lets you use return orders to track a wide range of return scenarios.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ReturnOrderChangeEvent (API version 48.0)
Change events are available for the object.

ReturnOrderFeed
Feed tracking is available for the object.

ReturnOrderHistory
History is available for tracked fields of the object.

ReturnOrderOwnerSharingRule
Sharing rules are available for the object.

ReturnOrderShare
Sharing is available for the object.

ReturnOrderItemAdjustment

Represents a price adjustment on a return order line item. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Order Management must be enabled.

Fields

Field	Details
`Amount`	**Type** currency **Properties** Create, Filter, Sort **Description** Amount, not including tax, of the adjustment.
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the adjustment.
`OrderItemAdjustLineSummaryId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the order item adjustment line summary associated with the adjustment.
`ReturnOrderId`	**Type** reference

Field	Details
	Properties Create, Filter, Group, Sort **Description** ID of the return order associated with the return order line item to which the adjustment applies. This is a relationship field. **Relationship Name** ReturnOrder **Relationship Type** Lookup **Refers To** ReturnOrder
ReturnOrderItemAdjustmentNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** ID of the return order item adjustment.
ReturnOrderLineItemId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the return order line item to which this adjustment applies. This is a relationship field. **Relationship Name** ReturnOrderLineItem **Relationship Type** Lookup **Refers To** ReturnOrderLineItem
TotalAmtWithTax	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the adjustment, inclusive of tax. This amount is equal to Amount + TotalTaxAmount.

Field	Details
TotalTaxAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the Amount.

ReturnOrderItemTax

Represents the tax on a return order line item or return order item adjustment. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Order Management must be enabled.

Fields

Field	Details
Amount	**Type** currency **Properties** Create, Filter, Sort **Description** Amount of tax represented by the return order item tax.
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the return order item tax.
OrderItemTaxLineItemSummaryId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort **Description** ID of the order item tax line item summary associated with the order item summary that corresponds to the return order line item to which the tax applies.
Rate	**Type** percent **Properties** Filter, Nillable, Sort **Description** Tax rate used to calculate the Amount.
ReturnOrderId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the associated return order. This is a relationship field. **Relationship Name** ReturnOrder **Relationship Type** Lookup **Refers To** ReturnOrder
ReturnOrderItemAdjustmentId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** If this object represents a tax on an adjustment, this value is the ID of the return order item adjustment to which the tax applies. If this value is null, the adjustment applies to a return order line item. This is a relationship field. **Relationship Name** ReturnOrderItemAdjustment **Relationship Type** Lookup

Field	Details
	Refers To ReturnOrderItemAdjustment
`ReturnOrderItemTaxNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** ID of the return order item tax.
`ReturnOrderLineItemId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** If this object represents a tax on a return order line item, this value is the ID of that return order line item. If this object represents a tax on an adjustment, this value is the ID of the return order line item to which the adjustment applies. This is a relationship field. **Relationship Name** ReturnOrderLineItem **Relationship Type** Lookup **Refers To** ReturnOrderLineItem
`TaxEffectiveDate`	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** Date on which the Amount was calculated. Important due to tax rate changes over time.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Shows whether the amount on the tax line is an estimate or the final calculated amount. Doesn’t set a value by default. Users can define automation to set and change the value as needed.

Field	Details
	Possible values are: • `Actual` • `Estimated`

ReturnOrderLineItem

Represents a specific product that is returned or repaired as part of a return order in Field service, or a specific order item that is returned as part of a return order in Order Management. This object is available in API version 42.0 and later.

Return orders are available in Lightning Experience, Salesforce Classic, the Salesforce mobile app, the Field Service mobile app for Android and iOS, and communities built using Salesforce Tabs + Visualforce.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service or Order Management must be enabled.

Fields

Field Name	Details
`AssetId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The asset associated with the return order line item. One or more of the following fields must be filled out: AssetId, OrderItemId, Product2Id, ProductItemId, and ProductRequestLineItemId. This is a relationship field. **Relationship Name** Asset **Relationship Type** Lookup **Refers To** Asset

Field Name	Details
`ChangeOrderItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the change order item associated with the return order line item. This field is available in API version 50.0 and later. This is a relationship field. **Relationship Name** ChangeOrderItem **Relationship Type** Lookup **Refers To** OrderItem
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Available only for orgs with the multicurrency feature enabled. Contains the ISO code for the currency of the original Order associated with the ReturnOrderLineItem. Possible values are: • `DKK`—Danish Krone • `EUR`—Euro • `GBP`—British Pound • `USD`—U.S. Dollar The default value is `USD`. This field is available in API version 49.0 and later.
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** Notes or context about the return order line item.
`DestinationLocationId`	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The location where the items are being returned to. For example, if the return order tracks the return of products from a technician's van to a warehouse, the warehouse is the destination location. This is a relationship field. **Relationship Name** DestinationLocation **Relationship Type** Lookup **Refers To** Location
`GrossUnitPrice`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** Unit price, including tax, of the product represented by the associated order item summary. This field is available in API version 50.0 and later.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the return order line item was last modified. Its label in the user interface is `Last Modified Date`.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the return order line item was last viewed.
`OrderItemId`	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The order product associated with the return order line item. One or more of the following fields must be filled out: AssetId, OrderItemId, Product2Id, ProductItemId, and ProductRequestLineItemId. This is a relationship field. **Relationship Name** OrderItem **Relationship Type** Lookup **Refers To** OrderItem
`OrderItemSummaryId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the order item summary associated with the return order line item. This field is available in API version 50.0 and later.
`ProcessingPlan`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Indicates the preferred fate of the items following their return. Available values are: • `Repair`—Repair the items and return them to the owner • `Discard`—Discard the items • `Salvage`—Salvage the items' working parts • `Restock`—Return the items to your inventory
`Product2Id`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The product associated with the return order line item. One or more of the following fields must be filled out: AssetId, OrderItemId, Product2Id, ProductItemId, and ProductRequestLineItemId. This is a relationship field. **Relationship Name** Product2 **Relationship Type** Lookup **Refers To** Product2
`ProductItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The product item representing the location of the product at the start of the return. One or more of the following fields must be filled out: AssetId, OrderItemId, Product2Id, ProductItemId, and ProductRequestLineItemId. This is a relationship field. **Relationship Name** ProductItem **Relationship Type** Lookup **Refers To** ProductItem
`ProductRequestLineItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The product request line item associated with the return order line item. One or more of the following fields must be filled out: AssetId, OrderItemId, Product2Id, ProductItemId, and ProductRequestLineItemId. This is a relationship field. **Relationship Name** ProductRequestLineItem **Relationship Type** Lookup

Field Name	Details
	Refers To ProductRequestLineItem
`ProductServiceCampaignId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The product service campaign associated with the return order line item.
`ProductServiceCampaignItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The product service campaign item associated with the return order line item.
`QuantityExpected`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The quantity of items expected to be returned. This field is available in API version 50.0 and later.
`QuantityReceived`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The actual quantity of items received for return. This field is available in API version 50.0 and later.
`QuantityRejected`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The quantity of items rejected for return. This field is available in API version 50.0 and later.

Field Name	Details
QuantityReturned	**Type** double **Properties** Create, Filter, Sort, Update **Description** The quantity of items being returned. If multiple types of products are being returned, track each product in a different return order line item.
QuantityUnitOfMeasure	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Units of the returned items; for example, kilograms or liters. Quantity Unit of Measure picklist values are inherited from the Quantity Unit of Measure field on products.
ReasonForRejection	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Reason for rejecting returned items on this return order line item. Possible values are: • `Damaged Item` • `Expired Warranty` • `Missing Item or Part` • `Wrong Item` The default value is `Missing Item or Part`. This field is available in API version 50.0 and later.
ReasonForReturn	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The reason the items are being returned. Available values are: • `Damaged` • `Defective` • `Duplicate Order`

Field Name	Details
	• `Wrong Item` • `Wrong Quantity` • `Not Satisfied` • `Outdated` • `Other` The default value is `Damaged`.
`ReasonForChangeText`	**Type** string **Properties** Filter, Group, Sort **Description** Details about the reason for return change
`RepaymentMethod`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The method by which the customer or owner will be reimbursed for the items being returned. Available values are: • `Replace`—The items will be replaced • `Refund`—The items will be returned and the owner will be refunded • `Credit`—The items will be returned and the owner will receive credit for them • `Return`—The items will be returned to the owner (for example, following their repair)
`ReturnOrderId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The return order that the return order line item belongs to. This is a relationship field. **Relationship Name** ReturnOrder **Relationship Type** Lookup **Refers To** ReturnOrder

Field Name	Details
ReturnOrderLineItemNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** (Read only) Auto-generated number that identifies the return order line item.
SourceLocationId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The items' location at the start of the return or repair. For example, if the return order tracks the return of products from a technician's service vehicle to a warehouse, the service vehicle is the source location. This is a relationship field. **Relationship Name** SourceLocation **Relationship Type** Lookup **Refers To** Location
TotalAdjustmentAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of all price adjustments applied to the return order line item. This is a calculated field. This field is available in API version 50.0 and later.
TotalAdjustmentAmountWithTax	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the price adjustments applied to the return order line item, inclusive of tax. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount. This is a calculated field.

Field Name	Details
	This field is available in API version 50.0 and later.
TotalAdjustmentTaxAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalAdjustmentAmount. This is a calculated field. This field is available in API version 50.0 and later.
TotalAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total, including adjustments and tax, of the return order line item. This is a calculated field. This field is available in API version 50.0 and later.
TotalLineAmount	**Type** currency **Properties** Create, Defaulted on create, Filter, Nillable, Sort, Update **Description** Total, not including adjustments or tax, of the return order line item. This field is available in API version 50.0 and later.
TotalLineAmountWithTax	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total price of the return order line item, inclusive of tax. This amount is equal to TotalLineAmount + TotalLineTaxAmount. This is a calculated field. This field is available in API version 50.0 and later.
TotalLineTaxAmount	**Type** currency

Field Name	Details
	Properties Filter, Nillable, Sort **Description** Tax on the TotalLineAmount. This is a calculated field. This field is available in API version 50.0 and later.
`TotalPrice`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total, including adjustments but not tax, of the return order line item. Equal to UnitPrice times Quantity. This is a calculated field.
`TotalTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalAmount. This is a calculated field. This field is available in API version 50.0 and later.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Type of the return order line item. Matches the type of the associated order item summary. Delivery Charge indicates that the return order line item represents a delivery charge. Fee indicates that it represents another type of fee, such as a return fee. Order Product indicates that it represents any other type of product, service, or charge. Each type corresponds to one type code, shown here in parentheses. Possible values are: • `Delivery Charge (Charge)` • `Fee (Charge)` This value is available in API v56.0 and later. • `Order Product (Product)`

Field Name	Details
	This field is available in API version 50.0 and later.
`TypeCode`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Type code of the return order line item. Matches the type code of the associated order item summary. Processing depends on this value. Charge indicates that the return order line item represents a delivery charge. Product indicates that it represents an other type of product, service, or charge. Each type category corresponds to one or more types. Possible values are: • `Charge` • `Product` This field is available in API version 50.0 and later.
`UnitPrice`	**Type** currency **Properties** Create, Defaulted on create, Filter, Nillable, Sort, Update **Description** Unit price of the return order line item. This field is available in API version 50.0 and later.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ReturnOrderLineItemChangeEvent (API version 48.0)
Change events are available for the object.

ReturnOrderLineItemFeed
Feed tracking is available for the object.

ReturnOrderLineItemHistory
History is available for tracked fields of the object.

ReturnOrderOwnerSharingRule

Represents the rules for sharing a return order with user records other than the owner or anyone above the owner in the role hierarchy. This object is available in API version 42.0 and later.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The SharingRules Metadata API type is enabled for all orgs.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** A description of the sharing rule. Maximum size is 1000 characters.
`DeveloperName`	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
`GroupId`	**Type** reference **Properties** Create, Filter, Group, Sort

Field	Details
	Description The ID representing the source group. A return order owned by a User in the source Group triggers the rule to give access.
Name	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface.
ServiceResourceAccessLevel	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** A value that represents the type of access granted to the target Group, or UserRole. The possible values are: • `Read` • `Edit` • `All`
UserOrGroupId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID representing the User or Group being granted access.

RevenueAsyncOperation

Represents the status of an asynchronous process initiated by a REST request. This object is available in API version 57.0 and later.

For example, `asset-management/assets/collection/actions/initiate-amend-quantity` creates a RevenueAsyncOperation record when it initiates an asynchronous process. The ID of the record is returned in the REST response.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available with Subscription Management.

Fields

Field	Details
AsyncOperationNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** A unique identifier for this revenue async operation record.
ExpiresAt	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp indicating when this record will be deleted.
FinishedAt	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp indicating when the asynchronous process completed.
JobType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The REST request that initiated the asynchronous process. Possible values are: • AutomatedNegativeInvoiceLineConversion • AutomaticRefunds • PearAmendQtyAssets • PearCancelAssets • PearRenewAssets

Field	Details
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
ParentOperationId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Reserved for future use. This field is a relationship field. **Relationship Name** ParentOperation **Relationship Type** Lookup **Refers To** RevenueAsyncOperation
ReferenceEntityId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Contains the ID of a record associated with the asynchronous request. For example, if the asynchronous request is associated with a credit memo, this field contains the ID of the credit memo. This field is a relationship field.

Field	Details
	Relationship Name ReferenceEntity **Relationship Type** Lookup **Refers To** CreditMemo
StartedAt	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp indicating when Salesforce started the asynchronous process.
Status	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The status of the asynchronous process. Possible values are: • `Completed` • `CompletedWithFailures` • `Failure` • `InProgress` • `Submitted`
SubmittedAt	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp indicating when the asynchronous process was submitted by the REST request.

RevenueTransactionErrorLog

Contains information about errors that occurred while processing a request. The error record persists until another error with the same category, primary record, and (optionally) related record occurs. This object is available in API version 55.0 and later.

Supported Calls

describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

Special Access Rules

This object is available with Subscription Management.

Fields

Field	Details
Category	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Provides context about the source of error. For example, if an error occurs while processing an /assets/collection/actions/initiate-cancellation request, the category is InitiateCancel. Possible values are: • ApplyAPI • AutomatedNegativeInvoiceLineConversion • AutomaticRefunds • ConvertNegativeInvoiceLineToCredit—available in API version 56.0 and later. • Core Invoice Generation Failure • CreditInvoiceAPI • CreditTaxIntegrationAPI • InitiateAmendment—available in API version 56.0 and later. • InitiateCancel • InitiateRenewal • InsufficientAccess—Insufficient Access to start Invoice run • InvoiceBatchRun • InvoiceBatchRunInvoiceGeneration • InvoiceBatchRunPostProcessor • InvoiceBatchRunPreProcessor • InvoiceBatchRunRecovery • InvoiceBatchRunSelectionStep • InvoiceBatchRunSummarizer • InvoiceBatchRunTaxProcessor • MaterialLineGeneration—available in API version 58.0 and later.

Field	Details
	• `Invalid Tax API Input` • `Invalid Tax Integration Input` • `OrderToAsset` • `OrderToBillingSchedule` • `PaymentSale` • `PaymentScheduleGeneration`—available in API version 56.0 and later. • `QuoteToOrder`—available in API version 56.0 and later. • `Post Tax API Failure` • `Post-Credit Tax Failure` • `Pre-Credit Tax Failure` • `StandaloneCreditAPI` • `Tax API Failure` • `Unknown Failure`—available in API version 56.0 and later. • `VoidPostedInvoiceAPI`
`ErrorCode`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The error code; for example, INVALID_INPUT.
`ErrorLogNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An auto generated unique ID that identifies the error.
`ErrorMessage`	**Type** textarea **Description** Contains information about the error and how to resolve it.
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the user who made the request that resulted in the creation of the error log.

Field	Details
	This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`PrimaryRecordId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the record that's associated with this error. For example, if the error occurred while creating an invoice from an order, the primary ID is the ID of the order. This is a polymorphic relationship field. **Relationship Name** PrimaryRecord **Relationship Type** Lookup **Refers To** Asset, BillingBatchScheduler, BillingSchedule, CardPaymentMethod, CreditMemo, Invoice, InvoiceBatchRun, InvoiceBatchRunRecovery, Order, Payment, PaymentBatchRun, PaymentGateway, Quote, Refund
`RelatedRecordId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Optional. The ID of a record that can provide additional context about the error. For example, if `PrimaryRecordId` is the ID of an order, this field could be the ID of an order item. This is a polymorphic relationship field. **Relationship Name** RelatedRecord **Relationship Type** Lookup **Refers To** BillingBatchScheduler, BillingSchedule, BillingScheduleGroup, CreditMemo, CreditMemoLine, Invoice, InvoiceLine, OrderItem, Payment, PaymentSchedule, PaymentScheduleItem, QuoteLineItem, Refund

Field	Details
RequestIdentifier	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** This field is available in API version 57.0 and later. The unique ID returned by the request. Use this ID to identify the revenue transaction error log records for a specific request.
RevenueAsyncOperationId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** This field is available in API version 57.0 and later. The ID of the revenue async operation record created by the request. Revenue async operation records contain information about the status of the asynchronous process initiated by the request. This field is a relationship field. This field is a relationship field. **Relationship Name** RevenueAsyncOperation **Relationship Type** Lookup **Refers To** RevenueAsyncOperation

RuleTerritory2Association

Represents a record-assignment rule and its association to an object, such as Account. Available only if Enterprise Territory Management has been enabled for your organization.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Summer ’20 and later, only standard users can access this object. If a territory model is in `Active` state, any standard user can view that model, including its territories and assignment rules. For territories in an active model, any standard user can view assigned records and assigned users subject to your organization’s sharing settings. Users cannot view territory models in other states (such as `Planning` or `Archived`).

Fields

Field Name	Details
`IsInherited`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates whether the rule is an *inherited* rule (`true`) or a *local* rule (`false`). Rule inheritance flows from the parent territory where the rule is created to the rule's descendent territories (if any) in the territory model hierarchy. A local rule is created within a single territory and affects that territory only.
`RuleId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the rule.
`Territory2Id`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the territory where the rule was created.

SalesAIScoreCycle

Represents the cycle type and ID used to score records. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To see score cycle information, users need a Sales Cloud Einstein license with the View Scoring Model Factors permission enabled. The permission isn't enabled by default. As of the Spring '20 release, Pardot and Sales Engagement users no longer have access to this object.

Fields

Field	Details
CycleType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The cycle used to create scores on opportunity records can be one of two types. • `OpportunityScoreModeling`—Provides model factors, which Sales Cloud Einstein uses to build a scoring model. • `OpportunityScoreScoring`—Provides scores and key factors to individual records, which are based on Sales Cloud Einstein's scoring model. Note: When the value `OpportunityScoreModeling` is returned, use the Sales AI Score Model Factor object to get information about the model factors.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The ID of the cycle. Currently, the name is a system-generated unique value.

SalesAIScoreModelFactor

Represents the factors that Sales Cloud Einstein uses to build a scoring model. Scoring models are used by features, such as Opportunity Scoring, to score individual records. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To see model factor information, users need a Sales Cloud Einstein license with the "View Scoring Model Factors" permission enabled. The permission isn't enabled by default. As of the Spring '20 release, Pardot and Sales Engagement users no longer have access to this object.

Fields

Field	Details
Factor	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** A factor that contributes to a scoring model. For example, a factor could indicate that an amount increase has a positive effect on an opportunity score (AmountIncreasePositive). Or, it could indicate that a change to the close date has a negative effect on an opportunity score (CloseDateChangeNegative).
FactorSummaryOrgLanguage	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Describes the factor in English. For example, the factor field value AmountChangePositive is summarized as “Amount change has positive effect”.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The ID of the model factor. Currently, the name is a system-generated value.
OperatorType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The operator used to analyze field values. For example, the factor HighSuccessLeadSource uses the Lead Source field as the primary source field. When building the scoring model, Einstein uses the Equals operator to determine `PrimarySourceFieldValue = Internet`. The other supported operator is `IsNull`.
PrimarySourceFieldName	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort

Field	Details
	Description The name of the primary field used in the model factor. For example, the factor HighSuccessIndustry uses the account's Industry as the primary field.
`PrimarySourceFieldValue`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Information used to retrieve the PrimarySourceFieldValueText, such as a record ID or value.
`PrimarySourceFieldValueText`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The value of the primary source field used in the model factor. For example, the factor HighSuccessIndustry uses the account's Industry as the primary field, and the value of the Industry field is manufacturing. Note: This field's value is retrieved from the `PrimarySourceFieldValue` field. If the `PrimarySourceFieldValue` field is a record ID, then `PrimarySourceFieldValueText` returns the name of the record. If `OperatorType` returns `isNull`, then `PrimarySourceFieldValue` returns `true` and `PrimarySourceFieldValueText` returns `null`.
`SalesAiScoreCycleId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the score cycle used to generate model factors. Each score cycle can have multiple model factors associated to it.
`ScoreCorrelation`	**Type** double **Properties** Filter, Nillable, Sort **Description** The strength between a model factor and a score. If score correlation value is closer to `+1`, it's more likely that the model factor contributing toward a high score. If score correlation value is closer to `-1`, it's more likely that the model factor is contributing toward a low score.

Field	Details
SecondarySourceFieldName	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The name of the secondary field used in the model factor. For example, the factor HighAmountActivity uses Task as the primary field and Event as the secondary field. Not all model factors use a secondary source field.
SecondarySourceFieldValue	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Information used to retrieve the SecondarySourceFieldValueText, such as a record ID or value. Not all model factors use a secondary source field. This field is available in API version 50.0 and later.
SecondarySourceFieldValueText	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** When the model factor is based on two source fields, this field represents the value of the secondary source field. For example, the factor HighSuccessMultipleSameFieldValue might use the opportunity's related product as the primary field and pricebook as the secondary field. The product and pricebook names are indicated by the PrimarySourceFieldValueText and SecondarySourceFieldValueText, respectively. Not all model factors use a secondary source field. This field is available in API version 50.0 and later. Note: This field's value is retrieved from the `SecondarySourceFieldValue` field. If the `SecondarySourceFieldValue` field is a record ID, then `SecondarySourceFieldValueText` returns the name of the record. If `OperatorType` returns `isNull`, then `SecondarySourceFieldValue` returns `true` and `SecondarySourceFieldValueText` returns `null`.
Status	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Determines whether the model factor is active or inactive.

Usage

Use the SalesAIScoreModelFactor object to run a query that retrieves the latest highest influencing model factors.

```
SELECT Id,Factor,ScoreCorrelation,FactorSummaryOrgLanguage
FROM SalesAIScoreModelFactor
WHERE Status='Active' and SalesAIScoreCycle.CycleType='OpportunityScoreModeling'
ORDER BY ScoreCorrelation desc
```

SalesChannel

Represents the origin of an order. For example, a web storefront, physical store, marketplace, or mobile app. If you integrate Salesforce Order Management with Salesforce B2C Commerce, set up a SalesChannel corresponding to each Site in your B2C Commerce implementation. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the SalesChannel.
`ExternalChannelNumber`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** External system identifier for the SalesChannel.
`LastReferencedDate`	**Type** dateTime

Field	Details
	Properties Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user who currently owns this SalesChannel. Default value is the user logged in to the API to perform the create.
SalesChannelName	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the SalesChannel.
Type	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Type of the SalesChannel. Each Type corresponds to one Type Category. You can customize the Type picklist to represent your business processes, but the Type Category picklist is fixed because some order processing is based on those values. If you customize the Type picklist, include at least one value for each Type Category. This field is available in API version 53.0 and later. Default values are: • B2B • B2C • Other

Field	Details
TypeCategory	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Type Category of the SalesChannel. Each Type Category corresponds to one or more Types. This field isn't visible in the UI. This field is available in API version 53.0 and later. Possible values are: • `B2B` • `B2C` • `Other`

SEE ALSO:

Order

OrderSummary

SalesStoreCatalog

Represents the catalog associated with a store. This object is available in API version 49.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access a store.

Fields

Field	Details
CurrencyIsoCode	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The default value is `USD`. Possible values are: • `USD`—U.S. Dollar

Field	Details
ImplementorType	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The type of implementor. WebStoreCatalog is the only available implementor type for SalesStoreCatalog.
ProductCatalogId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID that references the product catalog.
SalesStoreId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID that references the store.

SalesTransactionItemShape

Defines the business logic for a sales transaction shape item, for example, an item in an order. This object is available in API version 57.0 and later.

This object is visible in Object Manager for customization; for example, you can create custom fields for this object.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `query()`, `retrieve()`

Special Access Rules

This object is available with Subscription Management, B2B Commerce, or B2C Commerce.

Fields

Field	Details
BasisTransactionItemShapeId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the sales transaction shape item to use as a reference when pricing this transaction. For example, when pricing an order, this field refers to the order being canceled. This field is available if Subscription Management is enabled. This field is a relationship field. **Relationship Name** BasisTransactionItemShape **Relationship Type** Lookup **Refers To** SalesTransactionItemShape
BillingFrequency	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The time period that indicates how often the sales transaction shape item is billed. This field is available if Subscription Management is enabled. Possible values are: • `Annual` • `Monthly`
EndDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort **Description** The last day the sales transaction shape item is available. For example, the last day of the subscription. This field is available if Subscription Management is enabled.
ListPrice	**Type** currency **Properties** Create, Filter, Nillable, Sort

Field	Details
	Description The list price for the sales transaction shape item. This value is inherited from the related price book entry.
ListPriceTotal	**Type** currency **Properties** Create, Filter, Nillable, Sort **Description** The list price, inclusive of quantity. This calculated field is equal to `ListPrice` times `Quantity`.
NetUnitPrice	**Type** currency **Properties** Create, Filter, Nillable, Sort **Description** The final unit price of the product, after all adjustments are applied.
ObligatedAmount	**Type** currency **Properties** Create, Filter, Nillable, Sort **Description** **Description** In a subscription, the amount a subscriber is billed for products used during the subscription period that the subscriber returns before the subscription end date. This field's value is the price for use of the product. This field is available in version 57.0 and later. This field is available when Subscription Management is enabled. Note: • A subscriber must submit a quantity amendment in order to change the subscription's product quantity. A quantity amendment request is only valid until the subscription end date. • A subscriber is eligible for a refund only for the periods when the products weren't used. • The subscription's proration policy indicates whether the obligated amount and the refund are prorated for partial periods.
PeriodBoundary	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The period boundary helps determine the start and end date of the billing periods. This field is available if Subscription Management is enabled. Possible values are: • `AlignToCalendar`—The period starts on the first day of the term unit, for example, the first day of the month. • `Anniversary`— The start date determines the boundary. For example, if a monthly subscription starts on September 13, the subscription starts on the 13th day of each month. • `DayOfPeriod`— The period starts on the day indicated by `PeriodBoundaryDay`. • `LastDayOfPeriod`— The period starts on the last day of the pricing term unit; for example, the last day of the month.
`PeriodBoundaryDay`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** Required when `PeriodBoundary` is `DayOfPeriod`. Indicates day of the week or month that marks the period boundary. Must be an integer from 1 through 31. This field is available if Subscription Management is enabled.
`PeriodBoundaryStartMonth`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Nillable, Sort, Update **Description** Field is populated based on input in the StartDate, PeriodBoundary, and PeriodBoundaryDay when BillingFrequency is Annual or by manual user entry. Possible values are: • `1-January` • `2-February` • `3-March` • `4-April` • `5-May` • `6-June` • `7-July` • `8-August` • `9-September` • `10-October`

Field	Details
	• `11-November` • `12-December`
`PricebookEntryId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the related price book entry. The related price book entry contains all the pricing information about the product being sold. This field is a polymorphic relationship field. **Relationship Name** PricebookEntry **Relationship Type** Lookup **Refers To** PricebookEntryInterface
`PricingTermCount`	**Type** double **Properties** Create, Filter, Nillable, Sort **Description** A calculated field indicating the number of pricing terms in the subscription. This field is available if Subscription Management is enabled.
`PricingTransactionType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates the type of pricing transaction, for example, a new sale, an amendment, or a renewal. This field is available if Subscription Management is enabled. Possible values are: • `AmendmentAtLastNegotiatedPrice`— Calculate the price of the amended sales transaction shape item using the same price book and price adjustments as the new sale item. For example, an order item that is amended using a pricing transaction type of `AmendmentAtLastNegotiatedPrice` is priced using the same price book information and price adjustments as the new sale item. The amended order item has the same price as the new sale order item. • `AmendmentStartingFromListPrice`— Calculate the price of the amended sales transaction shape item using current price book information, disregarding any

Field	Details
	pricing information or adjustments that were applied to the new sale item. Typically, an amended transaction item has a different price than the new sale transaction item. • `Cancellation`— Calculate the price of the canceled transaction. For example, let's say that a 1-year subscription was purchased on January 1, then canceled on July 31. The price of the canceled products and services from August 1 through Dec 31 is calculated. • `NewSale`— The price of a new transaction is calculated. • `RenewalAtLastNegotiatedPrice`— Calculate the price of the renewal sales transaction shape item using the same price book and price adjustments as the new sale item. For example, an order item that is renewed using a pricing transaction type of`RenewalAtLastNegotiatedPrice` is priced using the same price book information and price adjustments as the new sale item. The renewal order item has the same price as the new sale order item. • `RenewalAtListPrice`— Calculate the price of the renewal sales transaction shape item using current price book information, disregarding any pricing information or adjustments that were applied to the new sale item. Typically, a renewal transaction item has a different price than the new sale transaction item.
`ProductId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the related product. This field is a relationship field. **Relationship Name** Product **Relationship Type** Lookup **Refers To** Product2
`ProductSellingModelId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the related product selling model. The product selling model defines one method by which a product can be sold; for example, as a one-time sale, an evergreen subscription, or a termed subscription. This field is available if Subscription Management is enabled. This field is a relationship field.

Field	Details
	Relationship Name ProductSellingModel **Relationship Type** Lookup **Refers To** ProductSellingModel
`ProrationPolicyId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the related proration policy. The proration policy defines how the price is calculated for each subscription period; for example, whether partial periods are allowed, and how remainder amounts are handled. This field is available if Subscription Management is enabled. This field is a relationship field. **Relationship Name** ProrationPolicy **Relationship Type** Lookup **Refers To** ProrationPolicy
`Quantity`	**Type** double **Properties** Create, Filter, Nillable, Sort **Description** Number of units in the sales transaction shape item.
`SalesItemType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of sale. Possible values are: • `Charge`— An item that acts as a fee and can't be fulfilled. For example, a delivery charge, a shipping fee, or a membership fee. • `Product`— An item that is a good or service that can be fulfilled. For example, a widget or a widget warranty.

Field	Details
SalesTransactionItemShapeName	**Type** string **Properties** Create, Filter, Group, idLookup, Sort **Description** Required. The name of the sales transaction shape item.
SalesTransactionShapeId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. The ID of the sales transaction shape. A sales transaction shape is the way in which the sales transactions occur. For example, a cart, an order, or a quote. This field is a relationship field. **Relationship Name** SalesTransactionShape **Relationship Type** Lookup **Refers To** SalesTransactionShape
StartDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort **Description** The start date of the subscription. This field is available if Subscription Management is enabled.
StartingPriceTotal	**Type** currency **Properties** Create, Filter, Nillable, Sort **Description** The starting unit price, inclusive of quantity, prorated for the duration of the subscription. This field has two ways to obtain its value. The value can be manually entered or automatically calculated. The calculation is equal to `StartingUnitPrice` times `Quantity`.
StartingUnitPrice	**Type** currency

Field	Details
	Properties Create, Filter, Nillable, Sort **Description** The unit price before any adjustments.
StartingUnitPriceSource	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates whether the starting unit price was inherited, entered manually, or calculated. Possible values are: • `Inherited`— The starting unit price is copied from a previous transaction; for example, from the order item being renewed. • `Manual`— The starting unit price is entered manually, for example, by a sales rep. • `System` — The starting unit price is calculated using pricing information that was configured by an administrator; for example, a pricing tier.
StockKeepingUnit	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The SKU assigned to the related product.
SubscriptionTerm	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** The number of terms in the subscription. You can indicate a subscription's length using either the start and end dates, or by using the start date and the subscription term. This field is available if Subscription Management is enabled.
TotalAdjustmentAmount	**Type** currency **Properties** Create, Filter, Nillable, Sort **Description** The sum of all adjustments applied to the related sales transaction shape items, inclusive of quantity, prorated for the duration of the subscription. Includes distributed price adjustment

Field	Details
	items and price adjustment items applied directly. This calculated field is equal to the sum of `TotalAdjustmentAmount` on the related sales transaction shape items.
`TotalAdjustmentDistAmount`	**Type** currency **Properties** Create, Filter, Nillable, Sort **Description** The sum of the distributed price adjustment items applied to the sales transaction shape item, prorated for the duration of the subscription. Doesn't include price adjustment items that are applied directly. A distributed price adjustment is automatically created to apply a transaction-level adjustment to the transaction items. For example, let's say that you have an order with two order items: one for a file storage service and another for a video streaming service. A 10% volume discount and a 15% manual discount are applied to the entire order. An additional 20% discount is applied to the file storage service. To distribute the order-level discounts, the system creates a 10% price adjustment item and a 15% price adjustment item for each order item. In this example, the file storage service's sales transaction shape item has the following field values: • `TotalAdjustmentAmount` — The sum of all item-level adjustments, including the 10% price adjustment item, the 15% price adjustment item, and the 20% price adjustment item. • `TotalAdjustmentDistAmount`— The sum of the distributed item-level adjustments, including the 10% price adjustment item and the 15% price adjustment item.
`TotalLineAmount`	**Type** currency **Properties** Create, Filter, Nillable, Sort **Description** The total price before price adjustments, inclusive of quantity, prorated for the duration of the subscription. This calculated field is equal to `StartingPriceTotal` times `PricingTermCount`.
`TotalPrice`	**Type** currency **Properties** Create, Filter, Nillable, Sort **Description** The price after all adjustments, inclusive of quantity, prorated for the duration of the subscription. This calculated field is equal to `TotalAdjustmentAmount` plus `StartingPriceTotal`.

SalesTransactionShape

Defines the business logic for a sales transaction; for example, an order, a quote, or a cart. This object is available in API version 57.0 and later.

This object is visible in Object Manager for customization; for example, you can create custom fields for this object.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object is available with Subscription Management, B2B Commerce, or B2C Commerce.

Fields

Field	Details
`AccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The unique identifier for the account associated with this sales transaction shape. This field is available when OrgPermissions or Platform is enabled. This field is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
`SalesTransactionShapeName`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort **Description** The name of the sales transaction shape. For example, Quote.
`TotalAdjustmentAmount`	**Type** currency

Field	Details
	Properties Create, Filter, Nillable, Sort **Description** The sum of all adjustments applied to the sales transaction shape, inclusive of quantity, prorated for the duration of the subscription. Includes distributed price adjustment items and price adjustment items applied directly. This calculated field is equal to the sum of `TotalAdjustmentAmount` on the related sales transaction shape items.
TotalAdjustmentDistAmount	**Type** currency **Properties** Create, Filter, Nillable, Sort **Description** The sum of the distributed price adjustment items applied to the related sales transaction shape items, inclusive of quantity, prorated for the duration of the subscription. Does not include price adjustment items that are applied directly. This calculated field is equal to the sum of `TotalAdjustmentDistAmount` on the related sales transaction shape items.
TotalAmount	**Type** currency **Properties** Create, Filter, Nillable, Sort **Description** The final price of the sales transaction shape, after all adjustments, inclusive of quantity, prorated for the duration of the subscription. This calculated field equal to the sum of `TotalPrice` on the related sales transaction shape items.
TotalListAmount	**Type** currency **Properties** Create, Filter, Nillable, Sort **Description** The sum of the list price of the related sales transaction shape items, inclusive of quantity, prorated for the duration of the subscription. This calculated field is equal to the sum of `ListPriceTotal` on the related sales transaction shape items.
TotalProductAmount	**Type** currency **Properties** Create, Filter, Nillable, Sort **Description** The total price of all related sales transaction shape items of type Product, before price adjustments, inclusive of quantity, prorated for the duration of the subscription. This calculated

Field	Details
	field is equal to the sum of `TotalLineAmount` on the related sales transaction shape items of type Product.

SalesTrxnItemRelationShape

Describes the relationship between sales transaction shape items; for example, a bundle or set. This object is available in API version 57.0 and later.

Supported Calls

`create()` `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available with Subscription Management, B2B Commerce, or B2C Commerce.

Fields

Field	Details
`AssocSalesTrxnItemShapeId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the associated sales transaction shape item. This field is a relationship field. In a bundle relationship, this sales transaction shape item is the bundle component. **Relationship Name** AssocSalesTrxnItemShape **Relationship Type** Lookup **Refers To** SalesTransactionItemShape
`AssocSalesTrxnItemShapeRole`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Describes the position of the associated sales transaction shape item in the relationship.

Field	Details
	Possible values are: • `BundleComponent`—The associated sales transaction shape item is part of a bundle. • `ClassificationComponent`—The associated sales transaction item is a classification component. • `SetComponent`—The associated sales transaction shape item is part of a set.
`AssociatedItemShapePricing`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Describes how the associated sales transaction shape item is priced, relative to the main sales transaction shape item. Possible values are: • `IncludedInBundlePrice`— The associated sales transaction shape item's cost is $0 because it's included in the bundle's price. • `NotIncludedInBundlePrice`— The associated sales transaction shape item has a cost because it's not included in the bundle's price.
`MainSalesTrxnItemShapeId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the main sales transaction shape item. This field is a relationship field. In a bundle relationship, this sales transaction shape item is the bundle parent. **Relationship Name** MainSalesTrxnItemShape **Relationship Type** Lookup **Refers To** SalesTransactionItemShape
`MainSalesTrxnItemShapeRole`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates the position of the main sales transaction shape item in the relationship. Possible values are:

Field	Details
	• `AddOnComponent`— The main sales transaction shape item is an add on component. Available in API version 58.0 and later. • `Bundle`— The main sales transaction shape item is the bundle parent. • `Set`— The main sales transaction shape item is the set parent.
`ProductRelationshipTypeId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the record that describes the relationship between the main and associated sales transaction shape items. This field is a relationship field. **Relationship Name** ProductRelationshipType **Relationship Type** Lookup **Refers To** ProductRelationshipType
`QuantityScaleMethod`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** How to scale the quantity of the associated sales transaction shape item, relative to the main sales transaction shape item. The value is informative; the system doesn't check whether the scaled quantities are correct. If this field has a non-null value, you can't edit the associated sales transaction shape item's quantity. Possible values are: • `Constant`—The associated sales transaction's item quantity remains the same in relation to the main sales transaction shape item's quantity. For example, let's say that the main sales transaction shape item has a quantity of one and the associated sales transaction shape item has a quantity of one. If you increase the quantity of the main sales transaction shape item to two, the associated sales transaction shape item's quantity remains at one. • `Proportional`—The associated sales transaction's item quantity increases or decreases based on the main sales transaction shape item's quantity. For example, let's say that the main sales transaction shape item has a quantity of one and the associated sales transaction shape item has a quantity of two. If you increase the quantity of the main order item to two, the associated order item's quantity increases to four. The default value is `Proportional`.

Field	Details
SalesTransactionShapeId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the related sales transaction shape. This field is a relationship field. **Relationship Name** SalesTransactionShape **Relationship Type** Lookup **Refers To** SalesTransactionShape
SalesTrxnItemRelationShapeName	**Type** string **Properties** Create, Filter, Group, idLookup, Sort **Description** Name of the relationship of the sales transaction shape item.

SalesTrxnItemRelationship

Describes the relationship between sales transaction items; for example, a bundle or set. This object interface is available in API version 58.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object interface is available if Subscription Management is enabled.

Fields

Field	Details
AssociatedItemPricing	**Type** picklist

Field	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort **Description** Describes how the associated sales transaction item is priced, relative to the main sales transaction item. Possible values are: • `IncludedInBundlePrice` — The associated sales transaction item's cost is $0 because it's included in the bundle's price. • `NotIncludedInBundlePrice` —The associated sales transaction item has a cost because it's not included in the bundle's price.
`AssociatedSalesTrxnItemId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The unique identifier of the associated sales transaction item. This field is a polymorphic relationship field. In a bundle relationship, this sales transaction item is the bundle component. **Relationship Name** AssociatedSalesTrxnItem **Relationship Type** Lookup **Refers To** SalesTransactionItem
`AssociatedSalesTrxnItemRole`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Describes the position of the associated sales transaction item in the relationship. Possible values are: • `AddOnComponent`—The associated sales transaction item is an add-on component. • `BundleComponent`—The associated sales transaction item is part of a bundle. • `ClassificationComponent`—The associated sales transaction item is a classification component. • `SetComponent`—The associated sales transaction item is part of a set.
`ImplementorType`	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The object that is implementing this object interface; for example, an OrderProduct object.
MainSalesTrxnItemId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The unique identifier of the main sales transaction item. This field is a polymorphic relationship field. In a bundle relationship, this sales transaction item is the bundle parent. **Relationship Name** MainSalesTrxnItem **Relationship Type** Lookup **Refers To** SalesTransactionItem
MainSalesTrxnItemRole	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates the position of the main sales transaction item in the relationship. Possible values are: • `Bundle`—The main sales transaction item is the bundle parent. • `Set`—The main sales transaction item is the set parent.
ProductRelationshipTypeId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The unique identifier of the record that describes the relationship between the main and associated sales transaction items. This field is a relationship field. **Relationship Name** ProductRelationshipType

Field	Details
	Relationship Type Lookup **Refers To** ProductRelationshipType
`QuantityScaleMethod`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** How to scale the quantity of the associated sales transaction item, relative to the main sales transaction item. The value is informative; the system doesn't check whether the scaled quantities are correct. If this field has a non-null value, you can't edit the associated sales transaction item's quantity. Possible values are: • `Constant` — The associated sales transaction's item quantity remains the same in relation to the main sales transaction item's quantity. For example, let's say that the main sales transaction item has a quantity of one and the associated sales transaction item has a quantity of one. If you increase the quantity of the main sales transaction item to two, the associated sales transaction item's quantity remains at one. • `Proportional` — The associated sales transaction's item quantity increases or decreases based on the main sales transaction item's quantity. For example, let's say that the main sales transaction item has a quantity of one and the associated sales transaction item has a quantity of two. If you increase the quantity of the main order item to two, the associated order item's quantity increases to four. The default value is `Proportional`.
`SalesTransactionId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The unique identifier of the sales transaction to which the main and associated sales transaction items belong to. This field is a polymorphic relationship field. **Relationship Name** SalesTransaction **Relationship Type** Lookup **Refers To** SalesTransaction

SalesWorkQueueSettings

Represents settings used to customize work queue options for third-party scoring. Third-party scoring enables custom number fields on person accounts, contacts, and leads. You must be a Sales Engagement customer to update this object. Previously, you could only use the Einstein Intelligence Score for third-party scoring. Available starting in Version 47.0.

Note: This object can't be packaged.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`FeatureName`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** A value that represents the name of the work queue settings. To use custom number fields in the work queue, the value must be entered as `ThirdPartyScore`.
`TargetEntity`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The related record object of the custom number field. Acceptable SObjects include PersonAccount, Contact, and Lead.
`TargetField`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** A value that represents the DeveloperName of the custom number field related to the TargetEntity. Custom fields must have a custom number data type. • To use Einstein Intelligence Score for lead scoring, enter `ScoreIntelligence.Score` for the DeveloperName. • To remove custom number fields from the work queue, enter `None`.

SamlSsoConfig

Represents a SAML Single Sign-On configuration. This object is available in API version 32.0 and later.

Single sign-on is a process that allows network users to access all authorized network resources without having to log in separately to each resource. Single sign-on allows you to validate usernames and passwords against your corporate user database or other client application rather than having separate user passwords managed by Salesforce.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission or both the Customize Application and Modify All Data permissions can access this object.

Fields

Field Name	Details
`AttributeFormat`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** For SAML 2.0 only and when `identityLocation` is set to `Attribute`. Possible values include `unspecified`, `emailAddress`, or `persistent`. All legal values can be found in the "Name Identifier Format Identifiers" section of the Assertions and Protocols SAML 2.0 specification.
`AttributeName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the identity provider's application. Get this name value from your identity provider.
`Audience`	**Type** string **Properties** Filter, Group, Sort

Field Name	Details
	Description The Issuer, also called the "Entity ID." The value is a URL that uniquely identifies the SAML identity provider.
DeveloperName	**Type** string **Properties** Filter, Group, Sort **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package, and the changes are reflected in a subscriber's organization. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
ErrorUrl	**Type** string **Properties** Filter, Nillable, Sort **Description** When there's an error during login, specify the URL of the page where users are directed. It must be publicly accessible, such as a public site Visualforce page. The URL can be absolute or relative.
ExecutionUserID	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The user that runs the Apex handler class. The user must have the "Manage Users" permission. A user is required if you specify a SAML JIT handler class. This is a relationship field. **Relationship Name** ExecutionUser **Relationship Type** Lookup

Field Name	Details
	Refers To User
IdentityLocation	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The location in the assertion where a user is identified. Valid values are: • SubjectNameId—The identity is in the <Subject> statement of the assertion. • Attribute—The identity is specified in an <AttributeValue>, located in the <Attribute> of the assertion.
IdentityMapping	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The identifier that the service provider uses for the user during Just-in-Time user provisioning. Valid values are: • Username—The user's Salesforce username. • FederationId—The federation ID from the user object; the identifier that's used by the service provider for the user. • UserId—The user ID from the user's Salesforce organization.
Issuer	**Type** string **Properties** Filter, idLookup, Group, Sort **Description** Also called the "Entity ID." The value is a URL that uniquely identifies the SAML identity provider.
Language	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The language for the organization.

Field Name	Details
LoginUrl	**Type** string **Properties** Filter, Nillable, Sort **Description** For SAML 2.0 only: The URL where Salesforce sends a SAML request to start the login sequence.
LogoutUrl	**Type** string **Properties** Filter, Nillable, Sort **Description** For SAML 2.0 only: The URL to direct users to where they click the Logout link. The default is `https://salesforce.com`.
MasterLabel	**Type** string **Properties** Filter, Group, Sort **Description** The text that's used to identify the Visualforce page in the Setup area of Salesforce.
NamespacePrefix	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

Field Name	Details
OptionsSpInitBinding	**Type** boolean **Properties** Filter **Description** The service provider initiated request binding, either HTTP Redirect (`true`) or HTTP POST (`false`).
OptionsUseConfigRequestMethod	**Type** boolean **Properties** Filter **Description** If `true`, applies the selected Request Signature Method (RSM) during single logout. If `false`, the default RSM (`RSA-SHA1`) is applied.
OptionsUseSameDigestAlgoForSigning	**Type** boolean **Properties** Filter **Description** If `true`, uses a SAML digest algorithm based on the selected Request Signature Method (RSM). For example, if the selected RSM is `RSA-SHA256`, the digest algorithm is set to `SHA-256`. If `false`, uses the default digest algorithm (`SHA-1`), regardless of the selected RSM. This field is available in API version 55.0 and later. You can edit this field only for legacy SAML configurations created before the Spring '22 release. For configurations created after Spring '22, this field is `true` by default.
OptionsRequireMfaSaml	**Type** boolean **Properties** Filter **Description** Requires multi-factor authentication (MFA) for single sign-on with this SAML configuration based on the MFA status of each user. For this setting to trigger MFA, you must apply MFA directly to users via one of two methods. 1) Assign the user permission Multi-Factor Authentication for User Interface Logins. 2) Enable the org setting Require multi-factor authentication (MFA) for all direct UI logins to your Salesforce org. For more information, see Use Salesforce MFA for SSO in Salesforce Help.

Field Name	Details
OptionsUserProvisioning	**Type** boolean **Properties** Filter **Description** If `true`, Just-in-Time user provisioning is enabled, which creates users on the fly the first time that they try to log in. Specify `Federation ID` for the `identityMapping` value to use this feature.
RequestSignatureMethod	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The method that's used to sign the SAML request. Valid values are: • `RSA-SHA1` • `RSA-SHA256`
SamlJitHandlerId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The name of an existing Apex class that implements the `Auth.SamlJitHandler` interface. This is a relationship field. **Relationship Name** SamlJitHandler **Relationship Type** Lookup **Refers To** ApexClass
SingleLogoutBinding	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Determines where to put the LogoutRequest or LogoutResponse in the SAML request during single logout (SLO). The value is base64 encoded. Valid values are:

Field Name	Details
	• `RedirectBinding` — Sent in the query string, deflated. • `PostBinding` — Sent in the POST body, not deflated.
`SingleLogoutUrl`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The SAML single logout endpoint. This URL is the endpoint where Salesforce sends LogoutRequests (when Salesforce initiates a logout), or LogoutResponses (when the identity provider initiates a logout).
`ValidationCert`	**Type** string **Properties** Filter, Sort **Description** The certificate that's used to validate the request. Get this certificate value from your identity provider.
`Version`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The SAML version. Valid values are: • `SAML1_1` • `SAML2_2`

SavedPaymentMethod

Represents a payment method saved by an authenticated customer. This object is available in API version 58.0 and later

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
AccountHolderEmail	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Email address of the payment method holder.
AccountHolderName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Full name of the payment method holder.
BankAccountType	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Type of bank account such as a checking or savings account.
BankCode	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Code representing the bank that issued the payment method.
BankName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Name of the bank that issued the payment method.

Field	Details
ExpiryMonth	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Month the payment method expires.
ExpiryYear	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Year the payment method expires.
GatewayReference	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** A reference to the saved payment owner at the payment gateway, for example a Stripe customer ID.
GatewayToken	**Type** encryptedstring **Properties** Nillable **Description** Unencrypted unique token ID generated by the payment gateway to represent the card payment method during transactions. `GatewayToken` is for use with APIs earlier than version 52.0. For version 53.0 and latter, use the GatewayTokenEncrypted field. To secure the token, use the `GatewayTokenEncrypted` field. An error message appears if you try to record a `GatewayToken` for a card payment method that already has a `GatewayToken` or `GatewayTokenEncrypted` value.
IsDefault	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Customer's default payment method. The default value is `false`.

Field	Details
Issuer	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Financial institution issuing the payment method.
Last4	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Last four digits of the payment method account number.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record or list view related to this record, but didn't access it directly.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it's possible the user referenced this record but didn't view it directly.
MerchantAccountId	**Type** reference **Properties** Filter, Group, Sort **Description** Identifies the Salesforce Payments Merchant Account. This field is a relationship field. **Relationship Name** MerchantAccount **Relationship Type** Lookup

Field	Details
	Refers To MerchantAccount
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Name of the saved payment method.
Network	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Saved payment method card network, for example Visa or Union Pay.
Nickname	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Additional name or label to easily identify the payment method.
PaymentGatewayId	**Type** reference **Properties** Filter, Group, Sort **Description** The payment gateway that is used to create a gateway token. For transactions with a saved payment method in Salesforce, this field stores the payment gateway ID used in the transaction. This field is a relationship field. This field is a relationship field. **Relationship Name** PaymentGateway **Relationship Type** Lookup **Refers To** PaymentGateway

Field	Details
ReferenceOwnerId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the Account or Contact record that owns the payment method. This field is a polymorphic relationship field. **Relationship Name** ReferenceOwner **Relationship Type** Lookup **Refers To** Account or Contact
Status	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Status of the saved payment method. Possible values are: • Active • AwaitingPayment • Errored—Failed • Expired
Type	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Type of saved payment method. Possible values are: • au_becs_debit • bacs_debit • bancontact • card • ideal • sepa_debit

Field	Details
	• `us_bank_account` – ACH Direct Debit
UsageType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Indicates if the payment method is used on or off session. Possible values are: • `OffSession` • `OnSession` • `RestrictedOffSession`

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

SavedPaymentMethodChangeEvent on page 52
Change events are available for the object.

SavedPaymentMethodFeed on page 39
Feed tracking is available for the object.

SavedPaymentMethodHistory on page 47
History is available for tracked fields of the object.

SavedPaymentMethodOwnerSharingRule on page 48
Sharing rules are available for the object.

SavedPaymentMethodShare on page 50
Sharing is available for the object.

SavedPaymentMethodEvent

Represents a saved payment method platform event. Subscribe to these events so you can listen and respond to them when they're published. For example, create a Salesforce Flow that is triggered when one of these events is published. This object is available in API version 59.0 and later.

For more information about platform events, see the Platform Events Developer Guide.

Supported Calls

`describeSObjects()`

Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license and Payments must be enabled for your org. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
`ChangeType`	**Type** picklist **Properties** Restricted picklist **Description** Type of saved payment method event, which triggers an event notification. You can write code to operate conditionally on the value of this field. For example, you can ignore a create change but get notified of updates. Possible values are: • `Create`—Saved payment method created. • `Delete`—Saved payment method deleted. • `Update`—Saved payment method property changed.
`SavedPaymentMethodId`	**Type** reference **Properties** Nillable **Description** Identifies the SavedPaymentMethod record for which the event occurs. This field is a relationship field. **Relationship Name** SavedPaymentMethod **Relationship Type** Lookup **Refers To** SavedPaymentMethod

SchedulingAdherenceDetail

Represents the breakdown of daily shift adherence data by agent status. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org requires a Workforce Engagement license, and both Workforce Engagement and Omni-Channel must be enabled. The user requires the Workforce Engagement Planner or Workforce Engagement Admin permission set.

Fields

Field	Details
IsShrinkage	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if the linked status is considered as shrinkage time (`true`) or not (`false`). Shrinkage time is time, such as breaks, when an agent doesn't receive work. The default value is `false`.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** A number that identifies this detail record.
SchedulingAdherenceSummaryId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the Scheduling Adherence Summary. This is a relationship field. **Relationship Name** SchedulingAdherenceSummary **Relationship Type** Lookup **Refers To** SchedulingAdherenceSummary

Field	Details
StatusId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the agent status represented by this detail record. This is a relationship field. **Relationship Name** Status **Relationship Type** Lookup **Refers To** ServicePresenceStatus
StatusName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the agent status represented by this detail record.
TotalStatusMinutes	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Total minutes that the agent was present with this status.

SchedulingAdherenceSummary

Represents daily shift adherence data for a service resource in a service territory and job profile on a specific date. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org requires a Workforce Engagement license, and both Workforce Engagement and Omni-Channel must be enabled. The user requires the Workforce Engagement Planner or Workforce Engagement Admin permission set.

Fields

Field	Details
`AdherencePercentage`	**Type** double **Properties** Filter, Sort **Description** Percentage of time that the agent was present during the scheduled shift time. This is a calculated field. **Formula** `AdherencePercentage = TotalAdherenceMinutes / TotalScheduledMinutes`
`ConformancePercentage`	**Type** double **Properties** Filter, Sort **Description** Percentage of time when the agent was present versus the duration of scheduled shifts. The time that the agent is present can extend beyond the scheduled shift. This is a calculated field. **Formula** `ConformancePercentage = TotalPresenceMinutes / TotalScheduledMinutes`
`Date`	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** Date for which the adherence data is calculated.
`JobProfileId`	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the job profile. This is a relationship field. **Relationship Name** JobProfile **Relationship Type** Lookup **Refers To** JobProfile
JobProfileName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the job profile.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** A number that identifies this summary record.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The user who owns the schedule adherence summary. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User

Field	Details
ServiceResourceId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the service resource. This is a relationship field. **Relationship Name** ServiceResource **Relationship Type** Lookup **Refers To** ServiceResource
ServiceResourceName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the service resource.
ServiceTerritoryId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the service territory. This is a relationship field. **Relationship Name** ServiceTerritory **Relationship Type** Lookup **Refers To** ServiceTerritory
ServiceTerritoryName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the service territory.

Field	Details
TotalAdherenceMinutes	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Total minutes that the agent was present during a shift.
TotalInteractionMinutes	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Total minutes that the agent was actively receiving work.
TotalPresenceMinutes	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Total minutes of agent presence time. This is a calculated field. **Formula** `TotalPresenceMinutes = TotalInteractionMinutes + TotalShrinkageMinutes`
TotalScheduledMinutes	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** Total minutes of scheduled shift time for the agent.
TotalShrinkageMinutes	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Total minutes that the agent was present but not receiving work, such as break times.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

SchedulingAdherenceSummaryOwnerSharingRule on page 48
Sharing rules are available for the object.

SchedulingAdherenceSummaryShare on page 50
Sharing is available for the object.

SchedulingConstraint

Represents scheduling constraints on each service resource. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The org requires the Workforce Engagement license. To view records, the user requires the Workforce Engagement Agent permission set. To create, edit, or delete records, the user requires the Workforce Engagement Planner permission set.

Fields

Field	Details
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the scheduling constraint was last modified. Its label in the user interface is Last Modified Date.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the scheduling constraint was last viewed.
`MaxNonstandardShiftsPerMonth`	**Type** int

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The maximum number of non-standard shifts assigned to an agent in a month. This field is available in API version 54.0 and later.
MaxShiftsPerDay	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The maximum number of shifts an agent can have in a day.
MaxShiftsPerMonth	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The maximum number of shifts an agent can have in a month.
MaxShiftsPerWeek	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The maximum number of shifts an agent can have in a week.
MaxWorkingHoursPerDay	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The maximum number of hours an agent can have in a day.
MaxWorkingHoursPerMonth	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The maximum number of hours an agent can have in a month.

Field	Details
MaxWorkingHoursPerWeek	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The maximum number of hours an agent can have in a week.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The scheduling constraint record name.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the scheduling constraint. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
RestTimeMinutes	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The minimum rest time, in minutes, between an agent’s consecutive shifts. This field is available in API versions 56.0 and later.

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

SchedulingConstraintOwnerSharingRule on page 48
Sharing rules are available for the object.

SchedulingConstraintShare on page 50
Sharing is available for the object.

SchedulingObjective

Represents business goals that the scheduling tools consider. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The org must have the Workforce Engagement license. To view, create, edit, and delete records, the user needs to have the Workforce Engagement Planner permission set.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** The scheduling objective description.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The developer name of the record. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Possible values are the supported languages for Workforce Engagement.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The scheduling objective name.
`SchedulingCategory`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The record that the scheduling objective applies to. Possible values are: • `A`—Appointment • `B`—Shift
`SchedulingObjectiveType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The type of scheduling objective. Possible values are: • `AgentPreference`—Scheduling tools consider agents' service resource preferences. In the UI, this value appears as Maximized Preferences. • `BalanceNonStandardShifts`—Scheduling tools balance the number of shifts across available agents within a time period. • `BalanceShifts`—Scheduling tools balance the number of non-standard shifts across available agents within a time period.

SchedulingRule

Represents scheduling rules that are hard constraints in the scheduling logic engine. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The org must have the Workforce Engagement license. To view, create, edit, and delete records, the user needs to have the Workforce Engagement Planner permission set.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** The scheduling rule description.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The developer name value of the record. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the scheduling rule.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The scheduling rule name.

Field	Details
`SchedulingCategory`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Shifts. Possible values are: • `A`—Appointment • `B`—Shift
`SchedulingRuleType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The scheduling rule type. Possible values are: • `A`—Active Resources • `B`—Match Skills • `C`—Availability • `LimitNonstandardShifts`—Specifies a rule type that limits how many non-standard shifts can be assigned to each agent. This type is available in API version 54.0 and later. • `M`—Match Territory • `Q`—Match Queues • `RestTimeMinutes`—Specifies a rule type that requires the agent to have a minimum rest time between consecutive shifts. This type is available in API version 56.0 and later. • `W`—Work Limit

SchedulingRuleParameter

Represents scheduling rule parameters associated with a scheduling rule. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The org must have the Workforce Engagement license. To view, create, edit, or delete records, the user needs to have the Workforce Engagement Planner permission set.

Fields

Field	Details
`SchedulingParameterKey`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The scheduling rule parameter name. Possible values are: • `ConsiderAbsence`—Consider absences when determining a service resource's availability. This type is available in API version 56.0 and later. • `ConsiderSTM`—Consider service territory membership when determining a service resource's availability. Service territory membership defines the resource's working hours in a location. This type is available in API version 56.0 and later. • `C`—Constraint Field Name • `L`—Limit Type • `R`—Resolution • `T`—Time Resolution • `W`—Work Unit
`SchedulingRuleId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The scheduling rule ID. This is a relationship field. **Relationship Name** SchedulingRule **Relationship Type** Lookup **Refers To** SchedulingRule
`Value`	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The scheduling rule parameter value.

Scontrol

A custom s-control, which is custom content that is hosted by the system but executed by the client application.

Important: Visualforce pages supersede s-controls. Organizations that haven't previously used s-controls can't create them. Existing s-controls are unaffected, and can still be edited. We recommend that you move your s-controls to Visualforce. We continue to support the Scontrol object.

Represents a custom s-control, which is custom content that the system hosts, but client applications execute. An s-control can contain any type of content that you can display or run in a Web browser.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Enterprise, Developer, or Unlimited Edition and be enabled for custom s-controls.
- Customer Portal users can't access this object.

Fields

Field	Details
`Binary`	**Type** base64 **Properties** Create, Nillable, Update **Description** Binary content of this custom s-control, such as an ActiveX control or a Java archive. Can be specified when created, but not when updated. Limit: 5 MB.
`BodyLength`	**Type** int **Properties** Filter, Group, Sort

Field	Details
	Description The length of the custom s-control. Label is **Binary Length**.
ContentSource	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Specifies the source of the s-control content, either custom HTML, a snippet (s-controls that are included in other s-controls), or a URL.
Description	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the custom s-control.
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is **S-Control Name**. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
EncodingKey	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Picklist of character set encodings, including ISO-08859-1, UTF-8, EUC, JIS, Shift-JIS, Korean (ks_c_5601-1987), Simplified Chinese (GB2312), and Traditional Chinese (Big5).

Field	Details
`Filename`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** An uploaded object to display when the custom s-control is added to a custom link. Can be a Java applet, an ActiveX control, or any other type of desired content.
`HtmlWrapper`	**Type** textarea **Properties** Create, Update **Description** Required. HTML page that will be delivered when the user views this custom s-control. This HTML page can be the entire content of the custom s-control, or it can reference the binary. Limit: 1,048,576 characters. Label is **HTML Body**.
`Name`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. Name of this custom s-control. Label is **Label**.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

Field	Details
`SupportsCaching`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the s-control supports caching (`true`) or not (`false`).

Usage

Use custom s-controls to manage custom content that extends application functionality. All users can view custom s-controls, but the "Customize Application" permission is required to create or update custom s-controls.

SEE ALSO:
Overview of Salesforce Objects and Fields

ScontrolLocalization

The translated value of the field label for an s-control.

Important: Visualforce pages supersede s-controls. Organizations that haven't previously used s-controls can't create them. Existing s-controls are unaffected, and can still be edited.

When the Translation Workbench is enabled for your organization, provides the translation of the field label of an s-control.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Professional, Enterprise, Developer, or Unlimited Edition and be enabled for the Translation Workbench.
- To view this object, you must have the "View Setup and Configuration" permission.

Fields

Field	Details
`LanguageLocaleKey`	**Type** picklist

Field	Details
	Properties Create, Filter, Nillable, Restricted picklist **Description** This field is available in API version 16.0 and earlier. It is the same as the `Language` field.
`Language`	**Type** picklist **Properties** Create, Filter, Nillable, Restricted picklist **Description** This field is available in API version 17.0 and later. The combined language and locale ISO code, which controls the language for labels displayed in an application. This picklist contains the following fully-supported languages: • Chinese (Simplified): `zh_CN` • Chinese (Traditional): `zh_TW` • Danish: `da` • Dutch: `nl_NL` • English: `en_US` • Finnish: `fi` • French: `fr` • German: `de` • Italian: `it` • Japanese: `ja` • Korean: `ko` • Norwegian: `no` • Portuguese (Brazil): `pt_BR` • Russian: `ru` • Spanish: `es` • Spanish (Mexico): `es_MX` Spanish (Mexico) defaults to Spanish for customer-defined translations. • Swedish: `sv` • Thai: `th` The Salesforce user interface is fully translated to Thai, but Help is in English. The following end-user only languages are available. • Arabic: `ar`

Field	Details
	• Bulgarian: `bg` • Croatian: `hr` • Czech: `cs` • English (UK): `en_GB` • Greek: `el` • Hebrew: `iw` • Hungarian: `hu` • Indonesian: `in` • Polish: `pl` • Portuguese (European): `pt_PT` • Romanian: `ro` • Slovak: `sk` • Slovenian: `sl` • Turkish: `tr` • Ukrainian: `uk` • Vietnamese: `vi` The following platform languages are available for organizations that use Salesforce exclusively as a platform. • Albanian: `sq` • Afrikaans: `af` • Amharic: `am` • Arabic (Algeria): `ar_DZ` • Arabic (Bahrain): `ar_BH` • Arabic (Egypt): `ar_EG` • Arabic (Iraq): `ar_IQ` • Arabic (Jordan): `ar_JO` • Arabic (Kuwait): `ar_KW` • Arabic (Lebanon): `ar_LB` • Arabic (Libya): `ar_LY` • Arabic (Morocco): `ar_MA` • Arabic (Oman): `ar_OM` • Arabic (Qatar): `ar_QA` • Arabic (Saudi Arabia): `ar_SA` • Arabic (Sudan): `ar_SD` • Arabic (Syria): `ar_SY` • Arabic (Tunisia): `ar_TN` • Arabic (United Arab Emirates): `ar_AE` • Arabic (Yemen): `ar_YE`

Field	Details
	• Armenian: `hy` • Basque: `eu` • Bosnian: `bs` • Bengali: `bn` • Burmese: `my` • Catalan: `ca` • Chinese (Hong Kong): `zh_HK` • Chinese (Singapore): `zh_SG` • Chinese (Malaysia): `zh_MY` • Dutch (Belgium): `nl_BE` • English (Australia): `en_AU` • English (Belgium): `en_BE` • English (Canada): `en_CA` • English (Cyprus): `en_CY` • English (Germany): `en_DE` • English (Hong Kong): `en_HK` • English (India): `en_IN` • English (Ireland): `en_IE` • English (Israel): `en_IL` • English (Malaysia): `en_MY` • English (Malta): `en_MT` • English (Netherlands): `en_NL` • English (New Zealand): `en_NZ` • English (Philippines): `en_PH` • English (Singapore): `en_SG` • English (South Africa): `en_ZA` • English (United Arab Emirates): `en_AE` • Estonian: `et` • Farsi: `fa` • French (Belgium): `fr_BE` • French (Canada): `fr_CA` • French (Luxembourg): `fr_LU` • French (Morocco): `fr_MA` • French (Switzerland): `fr_CH` • Georgian: `ka` • German (Austria): `de_AT` • German (Belgium): `de_BE` • German (Luxembourg): `de_LU`

Field	Details
	• German (Switzerland): `de_CH` • Greek (Cyprus): `el_CY` • Greenlandic: `kl` • Gujarati: `gu` • Hawaiian: `haw` • Haitian Creole: `ht` • Hindi: `hi` • Icelandic: `is` • Irish: `ga` • Italian (Switzerland): `it_CH` • Kannada: `kn` • Kazakh: `kk` • Khmer: `km` • Latvian: `lv` • Lithuanian: `lt` • Luxembourgish: `lb` • Macedonian: `mk` • Malay: `ms` • Malayalam: `ml` • Maltese: `mt` • Marathi: `mr` • Montenegrin: `sh_ME` • Romanian (Moldova): `ro_MD` • Romansh: `rm` • Russian (Armenia): `ru_AM` • Russian (Belarus): `ru_BY` • Russian (Kazakhstan): `ru_KZ` • Russian (Kyrgyzstan): `ru_KG` • Russian (Lithuania): `ru_LT` • Russian (Moldova): `ru_MD` • Russian (Poland): `ru_PL` • Russian (Ukraine): `ru_UA` • Samoan: `sm` • Serbian (Cyrillic): `sr` • Serbian (Latin): `sh` • Spanish (Argentina): `es_AR` • Spanish (Bolivia): `es_BO` • Spanish (Chile): `es_CL`

</table>

Field	Details
	managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
`ScontrolId`	**Type** reference **Properties** Create, Filter, Nillable **Description** The ID of the Scontrol that is being translated.
`Value`	**Type** string **Properties** Create, Filter, Nillable, Update **Description** The actual translated field label of the s-control. Label is **Translation**.

Usage

Use this object to translate your s-controls into a supported language. Users with the Translation Workbench enabled can view s-control translations, but either the "Customize Application" or "Manage Translation" permission is required to create or update s-control translations.

Scorecard

Use scorecards to measure partner performance and establish benchmarks for channel programs within Experience Cloud. Display any report summary results that your channel account manager or executive team wants to see. This object is available in API version 40.0 and later.

Supported Calls

`create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(), undelete(), update(), upsert()`

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the scorecard.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the scorecard visible to end users.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user who owns the scorecard. This is a polymorphic relationship field.

Field	Details
	Relationship Name Owner **Relationship Type** Lookup **Refers To** Group, User

Usage

The Scorecard object is used in tandem with the ScorecardMetric and ScorecardAssociation objects.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ScorecardOwnerSharingRule on page 48
Sharing rules are available for the object.

ScorecardShare on page 50
Sharing is available for the object.

ScorecardAssociation

Represents a connection between a specific scorecard and the associated account, channel program, or channel program level. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.

Field	Details
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the Scorecard Association.
ScorecardId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the scorecard that the association is related to. Several metrics can be tied to a single scorecard. This is a relationship field. **Relationship Name** Scorecard **Relationship Type** Lookup **Refers To** Scorecard
TargetEntityId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The associated object that a specific scorecard is associated with. This is a polymorphic relationship field. **Relationship Name** TargetEntity

Field	Details
	Relationship Type Lookup **Refers To** Account, ChannelProgram, ChannelProgramLevel

ScorecardMetric

Stores information about a Salesforce report that is run and summarized to get a single value. The stored value is added as a metric to the related Scorecard object. This object is available in API version 40.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`Category`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Groups metrics together. It comes with a predefined set of dropdown list entries and can be extended to address vendor's needs each category is user-generated and can be localized through translation workbench. Possible values are: • `Adoption` • `Field Enablement` • `Marketing` • `Sales` • `Support` The default value is 'Sales'.
`Description`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The description of the metric that appears on a scorecard.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the metric that appears on a scorecard.
ReportId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the report that is run and summarized to return a single value. This is a relationship field. **Relationship Name** Report **Relationship Type** Lookup **Refers To** Report
ScorecardId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the scorecard that the metric is related to. Several metrics can be tied to a single scorecard. This is a relationship field. **Relationship Name** Scorecard **Relationship Type** Lookup **Refers To** Scorecard

ScratchOrgInfo

Represents a scratch org and its audit log. Use this object to create a scratch org and keep a log of its creation and deletion. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
`AdminEmail`	**Type** email **Properties** Create, Filter, Group, Nillable, Sort **Description** The email address of the scratch org's Administration user. The read-only `SignupEmail` field is populated with this value. If you don't provide a value for `AdminEmail`, the field is left blank and the `SignupEmail` is populated with the email address of the org user who is creating this object.
`AuthCode`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** A one-time authorization code that can be exchanged for an OAuth access token and refresh token using standard Salesforce APIs. It's used with `ConnectedAppCallbackUrl` and `ConnectedAppConsumerKey`, when the specified connected app hasn't been configured with an X.509 certificate. This field is read-only.
`ConnectedAppCallbackUrl`	**Type** textarea **Properties** Create **Description** When used with `ConnectedAppConsumerKey`, specifies a connected app that is approved automatically during the scratch org creation.

Field Name	Details
ConnectedAppConsumerKey	**Type** string **Properties** Create, Filter, Group, Sort **Description** When used with ConnectedAppCallbackUrl, specifies a connected app that is approved automatically during the scratch org creation.
Country	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The two-character, upper-case ISO-3166 country code. You can find a full list of these codes at several sites, such as: www.iso.ch/iso/en/prods-services/iso3166ma/02iso-3166-code-lists/list-en1.html. The language of the scratch org is auto-determined based on the value of this field. If you do not specify a value, this field defaults to the Dev Hub's country code.
DeletedBy	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The user who requested that the scratch org be deleted. This field is read-only.
DeletedDate	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** The date when the DeletedBy user requested that the scratch org be deleted. This field is read-only.
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** A free-form text field for you to enter a description of this scratch org.

Field Name	Details
DurationDays	**Type** int **Properties** Create, Filter, Nillable, Group, Sort **Description** Number of days after which the scratch org expires. Valid values are 1–30. The default is 7.
Edition	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The org edition of this scratch org. Valid values are `Group`, `Developer`, `Enterprise`, and `Professional`.
ErrorCode	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The error code if the scratch org creation isn't successful. This field is read-only.
ExpirationDate	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** Date when the scratch org expires. This field is read-only.
Features	**Type** textarea **Properties** Create, Nillable **Description** A semi-colon delimited list of the features enabled in this scratch org, such as MultiCurrency. See the *Salesforce DX Developer Guide* for the full list of valid features.
HasSampleData	**Type** boolean

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Sort **Description** Specifies whether the scratch org contains sample data. If set to `true`, the sample data is similar to the data in a Salesforce free trial org.
`Language`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The language of the scratch org being created. Specify the language using a language code listed under "Supported Languages" in Salesforce Help. For example, use `zh_CN` for simplified Chinese. The value you select overrides the language set by locale. If you don't specify a value, the language is based on the `Country` used during scratch org creation. If you don't specify a value for `Country`, the value defaults to the Dev Hub's country.
`LastLoginDate`	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** The date of the last user login to the scratch org. This field is read-only.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date this scratch org was last referenced. This field is read-only.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date this scratch org was last viewed. This field is read-only.
`LoginUrl`	**Type** textarea

Field Name	Details
	Properties Nillable **Description** A URL that logs you in to the scratch org. This field is read-only.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort **Description** The auto-generated ID of this scratch org. This field is read-only.
Namespace	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The namespace you want to associate with this scratch org. The value of this field corresponds to the `NamespacePrefix` field of the `NamespaceRegistry` object that describes your namespace.
OrgName	**Type** string **Properties** Create, Filter, Group, Sort **Description** The name of the scratch org.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user who created this scratch org.
Release	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort

Field Name	Details
	Description The release of the scratch org. During Salesforce's major release transitions, this field allows you to select the Salesforce release version, based on the version of your Dev Hub. This field is available in API version 46.0 and later. Valid values are: • Current • Preview • Previous See Select the Salesforce Release for a Scratch Org for more information.
`ScratchOrg`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The org ID of the scratch org. This field is read-only.
`SignupCountry`	**Type** string **Properties** Filter, Group, Sort **Description** The country code of the scratch org. This field is populated with the value of the `Country` field. If you didn't provide a value for `Country`, it's the country code of the Dev Hub. This field is read-only.
`SignupEmail`	**Type** email **Properties** Filter, Group, Sort **Description** The email address of the scratch org's Administration user. This field is populated with the value of the `AdminEmail` field. If you didn't provide a value for `AdminEmail`, it's the email address of your user in the Dev Hub. This field is read-only.
`SignupInstance`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The Salesforce instance on which this scratch org resides. This field is read-only.

Field Name	Details
SignupLanguage	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The language of the scratch org. This field is populated with the value of the `Language` field. If you didn't provide a value for `Language`, it's the language of the Dev Hub. This field is read-only.
SignupTrialDays	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of days between the scratch org's creation and expiration. This field is read-only.
SignupUsername	**Type** string **Properties** Filter, Group, Sort **Description** The username of the Administration user of this scratch org. This field is populated with the value of the `Username` field. If you didn't provide a value for `Username`, the value of this field is auto-generated. This field is read-only.
SourceOrg	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the org whose shape (features, settings, limits, and licenses) information is used for creating scratch orgs.
Status	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The status of the scratch org, such as active, expired, or deleted. This field is read-only.

Field Name	Details
`Username`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The username of the Administration user of this scratch org.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ScratchOrgInfoFeed
Feed tracking is available for the object.

ScratchOrgInfoHistory
History is available for tracked fields of the object.

ScratchOrgInfoOwnerSharingRule
Sharing rules are available for the object.

ScratchOrgInfoShare
Sharing is available for the object.

SEE ALSO:
ActiveScratchOrg
NamespaceRegistry
Salesforce DX Developer Guide

SearchPromotionRule

Represents a promoted search term, which is one or more keywords that you associate with a Salesforce Knowledge article. When a user's search query includes these keywords, the associated article is returned first in search results. This object is available in API version 31.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

A user must have the "Manage Promoted Search Terms" permission.

Fields

Field Name	Details
`PromotedEntityId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the KnowledgeArticleVersion that the promoted search term is associated with. The article must be in published status.
`Query`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The text of the promoted search term. Maximum length: 100 characters. You can associate the same promoted search term with multiple articles. If the user's search matches the promoted term, all associated articles are promoted in search results, ordered by relevancy. For best results, create promoted search terms selectively and limit the number of articles that are promoted per term.

Usage

Use this object to optimize article search results in Salesforce Knowledge.

SecurityCustomBaseline

Provides the ability to read, create, and delete user-defined custom security baselines, which define an org's security standards. This object is available in API version 39.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

You must have the "View Health Check" permission to read a custom baseline, and the "Manage Health Check" permission to create, edit, or delete one.

Fields

Field Name	Details
`Baseline`	**Type** textarea **Properties** Create, Nillable, Update **Description** The definition of an org's security settings standards.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`IsDefault`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Sets the baseline as the default in Security Health Check.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the presence status.
`MasterLabel`	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Sort, Update **Description** Label for the category node.
NamespacePrefix	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix associated with the package.

SelfServiceUser

Represents a Contact who has been enabled to use your organization's Self-Service portal, where he or she can obtain online support.

Note: Starting with Spring '12, the Self-Service portal isn't available for new Salesforce orgs. Existing orgs continue to have access to the Self-Service portal.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
ContactId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. All Self-Service users must be associated with a Contact. The contact's email should match the Self-Service user email. The contact must have a value in the `AccountId` field or an error occurs.

Field	Details
Email	**Type** email **Properties** Create, Filter, Group, Sort, Update **Description** Required. Make this the same as the email address for the Contact associated with this SelfServiceUser. Password resets and other system communication will be sent to this email address.
FirstName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** First name of the Self-Service user.
IsActive	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the Self-Service user is allowed to log in to the Self-Service portal (`true`) or not (`false`). Note that there is no way to delete a Self-Service user. They can only be marked as inactive.
IsDeleted	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
LanguageLocaleKey	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. This is a restricted picklist field. It is the primary language for the user. All on-screen text in the Self-Service portal is displayed in this language.

Field	Details
LastLoginDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the Self-Service user last logged in.
LastName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. Last name of the Self-Service user.
LocaleSidKey	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. This is a restricted picklist field. The value of this field affects the formatting and parsing of values, especially numeric values, in the Self-Service portal. Values are two-letter codes that indicate language and sometimes language and country. The codes are based on ISO standards.
Name	**Type** string **Properties** Filter, Group, Sort **Description** Concatenation of `FirstName` and `LastName`. Limited to 203 characters, including whitespaces.
SuperUser	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether this Self-Service user is a super user with additional access on his or her company's Self-Service portal (`true`) or not (`false`).
TimeZoneSidKey	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. This is a restricted picklist field. The time zone of a affects the offset used when displaying or entering times in the Self-Service portal.
`Username`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. This contains the name that a Self-Service user enters to log into the Self-Service portal. Value must be unique in your organization. If you try to create or update a user with a duplicate value, the operation is rejected and an error is returned.

Usage

For security reasons, you can't query Self-Service user passwords via the API or the user interface. However, the API allows you to set and reset Self-Service user passwords using the `setPassword()` and `resetPassword()` calls.

SelfServiceUser records created from the API don't cause a notification email to be sent. If you want to notify the user, you must send them an email after creating the user.

SEE ALSO:

Contact

User

Seller

Represents the seller role of an individual with respect to a particular company or organization. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ActiveFromDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The date when the seller’s role became active.
ActiveToDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The date when the seller’s role is no longer active.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it’s possible that this record was referenced (LastReferencedDate) and not viewed.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. Name of this seller.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description The ID of the account owner associated with this seller. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`PartyId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Required. Represents the record based on the Individual object you want to associate the seller with. This is a relationship field. **Relationship Name** Party **Relationship Type** Lookup **Refers To** Individual
`SalesAmount`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The total revenue amount gained from this seller.
`SellerTier`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The tier at which this seller is ranked. Possible values are: • `Bronze`

Field	Details
	• `Gold` • `Silver`
`SellerType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The type of sales this seller specializes in. Possible values are: • `Distributor` • `Reseller` • `SalesPartner` • `Wholesaler`

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

SellerHistory on page 47
History is available for tracked fields of the object.

SellerShare on page 50
Sharing is available for the object.

ServiceAppointment

Represents an appointment to complete work for a customer in Field Service, Lightning Scheduler,Intelligent Appointment Management, and Virtual Care.This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`,`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
AccountId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** (Read only) The account associated with the appointment. If the parent record is a work order or work order line item, this field's value is inherited from the parent. Otherwise, it remains blank. This is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
ActualDuration	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The number of minutes that it took the resource to complete the appointment after arriving at the address. When values are first added to the `Actual Start` and `Actual End` fields, the `Actual Duration` is automatically populated to list the difference between the `Actual Start` and `Actual End`. If the `Actual Start` and `Actual End` fields are subsequently updated, the `Actual Duration` field doesn't re-update, but you can manually update it.
ActualEndTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The actual date and time the appointment ended.
ActualStartTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update

Field Name	Details
	Description The actual date and time the appointment started.
Address	**Type** address **Properties** Filter **Description** The address where the appointment is taking place. The address is inherited from the parent record if the parent record is a work order or work order line item.
AppointmentNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An auto-assigned number that identifies the appointment.
ArrivalWindowEndTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The end of the window of time in which the technician is scheduled to arrive at the site. This window is typically larger than the Scheduled Start and End window to allow time for delays and scheduling changes. You may choose to share the Arrival Window Start and End with the customer, but keep the Scheduled Start and End internal-only.
ArrivalWindowStartTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The beginning of the window of time in which the technician is scheduled to arrive at the site. This window is typically larger than the Scheduled Start and End window to allow time for delays and scheduling changes. You may choose to share the Arrival Window Start and End with the customer, but keep the Scheduled Start and End internal-only.
BundlePolicyId	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Reference to the bundle policy associated with this service appointment. This is a relationship field. **Relationship Name** BundlePolicy **Relationship Type** Lookup **Refers To** ApptBundlePolicy
`City`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The city where the appointment is completed. Maximum length is 40 characters.
`ContactId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The contact associated with the parent record. If needed, you can manually update the service appointment contact. This is a relationship field. **Relationship Name** Contact **Relationship Type** Lookup **Refers To** Contact
`Country`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The country where the work order is completed. Maximum length is 80 characters.

Field Name	Details
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** The description of the appointment.
DueDate	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The date by which the appointment must be completed. Earliest Start Permitted and Due Date typically reflect terms in the customer's service-level agreement.
Duration	**Type** double **Properties** Create, Nillable, Filter, Sort, Update **Description** The estimated length of the appointment. If the parent record is work order or work order line item, the appointment inherits its parent's duration, but it can be manually updated. The duration is in minutes or hours based on the value selected in the `Duration Type` field.
DurationType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The unit of the Duration: Minutes or Hours.
EarliestStartTime	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The date after which the appointment must be completed. Earliest Start Permitted and Due Date typically reflect terms in the customer's service-level agreement.
GeocodeAccuracy	**Type** picklist

Field Name	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The level of accuracy of a location's geographical coordinates compared with its physical address. Usually provided by a geocoding service based on the address's latitude and longitude coordinates. Note: This field is available in the API only.
`IsAnonymousBooking`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether a service resource was automatically assigned to the appointment. The default value is false. This field is available in API version 49.0 and later.
`IsBundle`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if this service appointment is a bundle service appointment. The default value is false. This field is available in API version 54.0 and later.
`IsBundleMember`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if this service appointment is a bundle member service appointment. The default value is false. This field is available in API version 54.0 and later.
`IsManuallyBundled`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if this bundle was created manually. The default value is false.

Field Name	Details
	This field is available in API version 54.0 and later.
`IsOffsiteAppointment`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Any type of work that can be done remotely. This field is available in API version 58.0 and later.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the service appointment was last modified. Its label in the user interface is `Last Modified Date`.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the service appointment was last viewed.
`Latitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `Longitude` to specify the precise geolocation of the address where the service appointments is completed. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. Note: This field is available in the API only.
`Longitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update

Field Name	Details
	Description Used with `Latitude` to specify the precise geolocation of the address where the service appointment is completed. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. Note: This field is available in the API only.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the service appointment. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`ParentRecordId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The parent record associated with the appointment. The parent record can't be updated after the service appointment is created. This is a polymorphic relationship field. **Relationship Name** ParentRecord **Relationship Type** Lookup **Refers To** Account, Asset, Lead, Opportunity, ServiceAppointmentGroup, WorkOrder, WorkOrderLineItem
`ParentRecordStatusCategory`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort

Field Name	Details
	Description (Read only) The `Status Category` of the parent record. If the parent record is a work order or work order line item, this field is populated; otherwise, it remains blank.
`ParentRecordType`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** (Read only) The type of parent record: Account, Asset, Lead, Opportunity, Work Order, or Work Order Line Item.
`PostalCode`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The postal code where the work order is completed. Maximum length is 20 characters.
`RelatedBundleId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The bundle that this service appointment is a member of. This is a relationship field. **Relationship Name** RelatedBundle **Relationship Type** Lookup **Refers To** ServiceAppointment
`SchedEndTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The time at which the appointment is scheduled to end. If you are using the Field Service managed package with the scheduling optimizer, this field is populated

Field Name	Details
	once the appointment is assigned to a resource. `Scheduled End` – `Scheduled Start` = `Estimated Duration`.
`SchedStartTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The time at which the appointment is scheduled to start. If you are using the Field Service managed package with the scheduling optimizer, this field is populated once the appointment is assigned to a resource.
`ServiceTerritoryId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The service territory associated with the appointment. If the parent record is a work order or work order line item, the appointment inherits its parent's service territory. This is a relationship field. **Relationship Name** ServiceTerritory **Relationship Type** Lookup **Refers To** ServiceTerritory
`State`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The state where the service appointment is completed. Maximum length is 80 characters.
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The status of the appointment. The picklist includes the following values, which can be customized: • `None`—Default value. • `Scheduled`—Appointment has been assigned to a service resource. • `Dispatched`—Assigned service resource has been notified about their assignment. • `In Progress`—Work has begun. • `Completed`—Work is complete. • `Cannot Complete`—Work could not be completed. • `Canceled`—Work is canceled, typically before any work began
`StatusCategory`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The category that each `Status` value falls into. The `Status Category` field's values are identical to the default `Status` values. If you create custom `Status` values, you must indicate which category it belongs to. For example, if you create a *`Customer Absent`* value, you may decide that it belongs in the *`Cannot Complete`* category. To learn which processes reference StatusCategory, see How are Status Categories Used?
`Street`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The street number and name where the service appointment is completed.
`Subject`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A short phrase describing the appointment.
`WorkTypeId`	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The work type associated with the service appointment. The work type is inherited from the appointment's parent record if the parent is a work order or work order line item. Note: If Lightning Scheduler is also in use, this field is editable. However, users see an error if they update it to list a different work type than the parent record's work type. This is a relationship field. **Relationship Name** WorkType **Relationship Type** Lookup **Refers To** WorkType

Usage

Service appointments always have a parent record, which can be a work order, work order line item, opportunity, account, or asset. The type of parent record tells you about the nature of the service appointment:

- Service appointments on *work orders* and *work order line items* offer a more detailed view of the work being performed. While work orders and work order line items let you enter general information about a task, service appointments are where you add the details about scheduling and ownership.
- Service appointments on *assets* represent work being performed on the asset.
- Service appointments on *accounts* represent work being performed for the account.
- Service appointments on *opportunities* represent work that is related to the opportunity.
- Service appointments on *leads* represent work that is related to lead—for example, a site visit to pursue a promising lead.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ServiceAppointmentChangeEvent (API version 48.0)
Change events are available for the object.

ServiceAppointmentFeed
Feed tracking is available for the object.

ServiceAppointmentHistory
History is available for tracked fields of the object.

ServiceAppointmentOwnerSharingRule
Sharing rules are available for the object.

ServiceAppointmentShare
Sharing is available for the object.

ServiceAppointmentStatus

Represents a possible status of a service appointment in field service.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
`ApiName`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The API name of the status value.
`IsDefault`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates that the status value is the default status on service appointments. Only one status value can be the default.
`MasterLabel`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The label for the picklist value that appears in the UI.

Field Name	Details
`SortOrder`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The value's position in the drop-down list of values in the UI.
`StatusCode`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The status category that the value corresponds to. The Status Category field has seven values which are identical to the default Status values.

Usage

The Status field on service appointments comes with the following values:

- None—Default value.
- Scheduled—Appointment has been assigned to a service resource.
- Dispatched—Assigned service resource has been notified about their assignment.
- In Progress—Work has begun.
- Completed—Work is complete.
- Cannot Complete—Work could not be completed.
- Canceled—Work is canceled, typically before any work began
- CheckedIn—The customer has arrived for their scheduled appointment.

The ServiceAppointmentStatus object corresponds to the Status field. Adding a value to the Status field—for example, Waiting—creates a service appointment status record, and vice versa.

Note: Service appointments also come with a StatusCategory field whose values are identical to the default Status values. If you create custom Status values, you must indicate which category it belongs to. For example, if you create a *`Customer Absent`* value, you may decide that it belongs in the *`Cannot Complete`* category. To learn which processes reference StatusCategory, see How are Status Categories Used?

ServiceChannel

Represents a channel of work items that are received from your organization—for example, cases, chats, or leads. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
`AcwExtensionDuration`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The maximum length of time, measured in seconds, an agent can spend on After Conversation Work (ACW) each time they extend the timer. You must set this field if `HasAcwExtensionEnabled` is set to `true`. Specify a value from 10 through 3600. Available only for service channels of type Messaging or Voice.
`AfterConvoWorkMaxTime`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The maximum length of time, measured in seconds, an agent has to complete After Conversation Work (ACW). You must set this field if `HasAfterConvoWorkTimer` is set to `true`. Specify a value from 10 through 3600. Available only for service channels of type Messaging or Voice. For service channels of type Voice, this field is available in API version 52.0 and later. For service channels of type Messaging, this field is available in API version 56.0 and later.
`CapacityModel`	**Type** picklist **Properties** Create, Filter, Group, Nillable, RestrictedPicklist, Sort, Update **Description** The method that determines when an agent's capacity for a work item is released. With the Status-Based capacity routing model, work remains assigned and applied to an agent's capacity until the work is completed or reassigned to a different agent. In contrast, the tab-based capacity model releases an agent's capacity when a work tab is closed in the service console. Possible values are StatusBased and TabBased.

Field	Details
`CapacityPercentage`	**Type** percent **Properties** Create, Filter, Nillable, Sort **Description** The percentage of an agent's capacity for work items that's consumed by a specific type of work item from this service channel. For example, you might give phone calls a capacity percentage of *100*. If an agent receives a phone call, the agent won't receive new work items until the call ends, because at that point the agent's capacity will have reached 100%. This field is available in API version 32.0 and earlier. For later API versions, you can set the capacity percentage of work items on the QueueRoutingConfig object. The CapacityPercentage field was removed in API version 33.0.
`CapacityWeight`	**Type** double **Properties** Create, Filter, Nillable, Sort **Description** The amount of an agent's capacity for work items that's consumed by a work item from this service channel. For example, if an agent has a capacity of *6*, and cases are assigned a capacity weight of *2*, an agent can be assigned up to 3 cases before the agent is at capacity and can't receive new work items. This field is available in API version 32.0 and earlier. For later API versions, you can set the capacity weight of work items on the QueueRoutingConfig object. The CapacityWeight field was removed in API version 33.0.

`CustomSoundId`	**Type**
	reference
	Properties
	Create, Filter, Group, Nillable, Sort, Update
	Relationship Name
	`CustomSound`
	Relationship Type
	Lookup
	Refers To
	`StaticResource`
	Description
	The ID of the static resource for the custom sound selected to play for the `PresenceUserConfig` object.

Field	Details
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
DoesCheckCapOnOwnerChange	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** In the Status-Based capacity routing model, when work is reassigned to a specific agent, you can choose to override the capacity check and keep the work assigned to the agent. The default value is `false`.
DoesCheckCapOnStatusChange	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** In the Status-Based capacity routing model, when work is reopened, you can choose to override the capacity check keep the work assigned to a specific agent. The default value is `false`.
DoesMinimizeWidgetOnAccept	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Automatically minimizes the Omni-Channel widget when an agent accepts work. The default value is `false`.

Field	Details
HasAcwExtensionEnabled	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** If set to `true`, agents can extend their After Conversation Work (ACW) time. Available only if `HasAfterConvoWorkTimer` is set to `true`. If set to `true`, you must also set the `AcwExtensionDuration` and `MaxExtensions` fields. The default value is `false`. Available only for service channels of type Messaging or Voice. This field is available in API version 56.0 and later.
HasAfterConvoWorkTimer	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** If set to `true`, After Conversation Work (ACW) time can be configured for the channel. If set to `true`, you must also set the `AfterConvoWorkMaxTime` field. The default value is `false`. Available only for service channels of type Messaging or Voice. For service channels of type Voice, this field is available in API version 52.0 and later. For service channels of type messaging, this field is available in API version 56.0 and later.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the service channel.
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The label of the service channel.
MaxExtensions	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description The maximum number of times an agent can extend their After Work Conversation (ACW) time. Specify a value from 1 through 10. You must set this field if `HasAcwExtensionEnabled` is set to `true`. Available only for service channels of type Messaging or Voice. This field is available in API version 56.0 and later.
`RelatedEntity`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of object that's associated with this service channel. This field is unique within your organization.
`SecRoutingPriorityField`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The name of the standard field or the id of the custom field that is used for secondary routing priority. This field is unique within your organization.
`SoundLength`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The length of time that a sound plays when new work is assigned to an agent.
`StatusField`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The picklist field that you use to track work status in the Status-Based capacity routing model. Use ServiceChannelStatusField to specify the values that indicate completed and in-progress work-item status.

ServiceChannelFieldPriority

Represents a secondary routing priority field-value mapping. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

Fields

Field	Details
`Priority`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The priority number assigned to the mapped field value.
`ServiceChannelId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the service channel.
`Value`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The value of the SecRoutingPriorityField field defined in parent ServiceChannel.

ServiceChannelStatus

Represents the status that's associated with a specific service channel. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
`ServiceChannelId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the service channel.
`ServicePresenceStatusId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the presence status that's associated with the service channel that's specified by the `ServicePresenceChannelId`.

ServiceChannelStatusField

Represents the values that you use to indicate completed and in-progress work item status for the status field in the Status-Based Capacity routing model. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, Omni-Channel and Status-Based Capacity Model must be enabled.

Fields

Field	Details
`ServiceChannelId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the service channel.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** For the field that you use to track work status, specifies whether the values are for completed or in-progress work.
`Value`	**Type** string **Properties** Create, Filter, Group, Sort **Description** Specifies the values that you use to indicate completed and in-progress work status.

ServiceContract

Represents a customer support contract (business agreement). This object is available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`AccountId`	**Type** reference

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** ID of the account associated with the service contract.
`ActivationDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The initial day the service contract went into effect (whereas `StartDate` may include a renewal date).
`AdditionalDiscount`	**Type** percent **Properties** Create, Filter, Nillable, Sort, Update **Description** Extra discount percentage for the service contract. Available in API version 55.0 and later.
`ApprovalStatus`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** Approval status of the service contract.
`BillingAddress` (beta)	**Type** address **Properties** Filter, Nillable **Description** The compound form of the billing address. Read-only. See Address Compound Fields for details on compound address fields.
`BillingCity`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Details for the billing address. Maximum size is 40 characters.

Field	Details
BillingCountry	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Details for the billing address. Maximum size is 40 characters.
BillingCountryCode	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ISO country code for the service contract's billing address.
BillingLatitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `BillingLongitude` to specify the precise geolocation of a billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
BillingLongitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `BillingLatitude` to specify the precise geolocation of a billing address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.
BillingPostalCode	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Details for the billing address. Maximum size is 20 characters.
BillingState	**Type** string **Properties** Group, Sort, Filter, Nillable

Field	Details
	Description Details for the billing address. Maximum size is 20 characters.
`BillingStateCode`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ISO state code for the service contract's billing address.
`BillingStreet`	**Type** textarea **Properties** Filter, Group, Nillable, Sort **Description** Street address for the billing address.
`ContactId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Required. ID of the Contact associated with the service contract. Must be a valid ID.
`ContractNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort **Description** Unique number automatically assigned to the service contract.
`Description`	**Type** textarea **Properties** Nillable **Description** Description of the service contract.
`Discount`	**Type** percent **Properties** Filter, Nillable, Sort

Field	Details
	Description Discount percentage for the service contract.
`EndDate`	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** The last day the service contract is in effect.
`GrandTotal`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total price of the service contract plus shipping and taxes.
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
`LastReferencedDate`	**Type** date **Properties** Filter, Nillable, Sort, Update **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
`LastViewedDate`	**Type** date **Properties** Filter, Nillable, Sort, Update **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it’s possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.

Field	Details
LineItemCount	**Type** int **Properties** Filter, Nillable, Group, Sort **Description** Number of ContractLineItem records associated with the service contract.
Name	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Name of the service contract.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user who currently owns the service contract.
ParentServiceContractId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The service contract’s parent service contract, if it has one.
Pricebook2Id	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the Pricebook2 associated with the service contract. Must be a valid ID.
RootServiceContractId	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description (Read only) The top-level service contract in a service contract hierarchy. Depending on where a service contract lies in the hierarchy, its root could be the same as its parent.
`ShippingAddress` (beta)	**Type** address **Properties** Filter, Nillable **Description** The compound form of the shipping address. Read-only. See Address Compound Fields for details on compound address fields.
`ShippingCity`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Details of the shipping address. Maximum size is 40 characters.
`ShippingCountry`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Details of the shipping address. Country maximum size is 40 characters.
`ShippingCountryCode`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ISO country code for the service contract's shipping address.
`ShippingLatitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `ShippingLongitude` to specify the precise geolocation of a shipping address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.

Field	Details
ShippingLongitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `ShippingLatitude` to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.
ShippingPostalCode	**Type** string **Properties** Create, Filter, Nillable, Update **Description** Details of the shipping address. Postal code maximum size is 20 characters.
ShippingState	**Type** string **Properties** Create, Filter, Nillable, Update **Description** Details of the shipping address. State maximum size is 20 characters.
ShippingStateCode	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ISO state code for the service contract's shipping address.
ShippingStreet	**Type** textarea **Properties** Create, Filter, Nillable, Update **Description** The street address of the shipping address. Maximum of 255 characters.
SpecialTerms	**Type** textarea **Properties** Create, Nillable, Update

Field	Details
	Description Any terms specifically agreed to and tracked in the service contract.
StartDate	**Type** date **Properties** Create, Filter, Nillable, Update **Description** The first day the service contract is in effect.
Status	**Type** picklist **Properties** Filter, Nillable **Description** The status of the service contract, such as Inactive.
Subtotal	**Type** currency **Properties** Filter, Nillable **Description** Total of the service contract line items (products) before discounts, taxes, and shipping are applied.
Tax	**Type** currency **Properties** Create, Filter, Nillable, Update **Description** Total taxes for the service contract.
Term	**Type** int **Properties** Create, Filter, Nillable, Update **Description** Number of months that the service contract is valid.
TotalPrice	**Type** currency

Field	Details
	Properties Filter, Nillable **Description** Total of the contract line items (products) after discounts and before taxes and shipping.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ServiceContractChangeEvent (API version 44.0)
Change events are available for the object.

ServiceContractFeed (API version 23.0)
Feed tracking is available for the object.

ServiceContractHistory
History is available for tracked fields of the object.

ServiceContractOwnerSharingRule
Sharing rules are available for the object.

ServiceContractShare
Sharing is available for the object.

SEE ALSO:
ServiceContractOwnerSharingRule

ServiceContractOwnerSharingRule

Represents the rules for sharing a ServiceContract (customer service agreement) with users other than the owner. This object is available in API version 18.0 and later.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The SharingRules Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
AccessLevel	**Type** picklist **Properties** Create, Filter, Group, Sort, Update **Description** A value that represents the type of sharing allowed. The possible values are: • `Read` • `Edit`
Description	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.
DeveloperName	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface. This field is available in API version 24.0 and later. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
GroupId	**Type** reference **Properties** Create, Filter, Group, Sort,

Field Name	Details
	Description The ID representing the source group. Service contracts owned by users in the source group trigger the rule to give access.
`Name`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** in the user interface.
`UserorGroupId`	**Type** reference **Properties** Create, Filter **Description** The ID representing the target user or group. Target users or groups are given access.

Usage

Use this object to manage the sharing rules for a service contract. General sharing and territory management-related sharing use this object.

SEE ALSO:

ServiceContract

Metadata API Developer Guide: SharingRules

ServiceCrew

Represents a group of service resources who can be assigned to service appointments as a unit.

A service crew is a group of service resources whose combined skills and experience make them a good fit to work together on appointments. For example, a wellhead repair crew might include a hydrologist, a mechanical engineer, and an electrician.

Service appointments can only be assigned to service resources. To assign a service crew to service appointments, you must create a service resource with a resource type of Crew that represents the crew, then use the resource for assignment purposes.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
`CrewSize`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The number of members on the crew. This field is manual, so it doesn't auto-update when you add or remove members.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the service crew was last modified. Its label in the user interface is `Last Modified Date`.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the service crew was last viewed.
`Name`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The name of the service crew. For example, Repair Crew.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description The crew owner. By default, the owner is the person who created the service crew.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ServiceCrewChangeEvent (API version 48.0)
Change events are available for the object.

ServiceCrewFeed
Feed tracking is available for the object.

ServiceCrewHistory
History is available for tracked fields of the object.

ServiceCrewOwnerSharingRule
Sharing rules are available for the object.

ServiceCrewShare
Sharing is available for the object.

ServiceCrewMember

Represents a technician service resource that belongs to a service crew.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
`EndDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update

Field Name	Details
	Description The last day that the service resource belongs to the crew. You can use this field to track employment dates for contractors.
`IsLeader`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates that the member is the crew leader.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the service crew member was last modified. Its label in the user interface is `Last Modified Date`.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the service crew member was last viewed.
`ServiceCrewId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The crew that the service resource belongs to.
`ServiceCrewMemberNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort **Description** An auto-generated number identifying the service crew member.
`ServiceResourceId`	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Sort, Update **Description** The service resource that belongs to the crew. Only service resources whose resource type is Technician can be added to service crews.
`StartDate`	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** Required. The day the service resource joins the crew. Service resources can belong to multiple crews as long as their start and end dates don't overlap.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ServiceCrewMemberChangeEvent (API version 48.0)
Change events are available for the object.

ServiceCrewMemberFeed
Feed tracking is available for the object.

ServiceCrewMemberHistory
History is available for tracked fields of the object.

ServiceCrewOwnerSharingRule

Represents the rules for sharing a service crew with user records other than the owner or anyone above the owner in the role hierarchy.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The SharingRules Metadata API type is enabled for all orgs.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
Description	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** A description of the sharing rule. Maximum size is 1000 characters.
DeveloperName	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface. Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance slows down while Salesforce generates one for each record.
GroupId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID representing the source group. A service crew owned by a User in the source Group triggers the rule to give access.
Name	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface.
ServiceResourceAccessLevel	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update **Description** A value that represents the type of access granted to the target Group, or UserRole. The possible values are: • `Read` • `Edit` • `All`
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID representing the User or Group being granted access.

ServicePresenceStatus

Represents a presence status that can be assigned to a service channel. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not

Field	Details
	include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. **Note:** When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`Language`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The language of the presence status.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort **Description** The label of the presence status.

ServiceReport

Represents a report that summarizes a work order, work order line item, or service appointment.

The fields that appear on a service report are determined by its service report template. Service reports can be signed by the customer and shared as a PDF.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
ContentVersionDocumentId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the service report version, used for storage.
DocumentBody	**Type** base64 **Properties** Create, Nillable **Description** The report output.
DocumentContentType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of data used for the report output: application/pdf.
DocumentLength	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The length of the report output.
DocumentName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The name of the report output, always set to Service Report.
IsSigned	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description Indicates whether the service report contains one or more signatures. Tip: Add this field to the Service Reports related list on work orders, work order line items, and service appointments.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the service appointment, work order, or work order line item that the service report summarizes. For example, if you click **Create Service Report** on a service appointment, this field lists the service appointment's record ID.
`ServiceReportLanguage`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Restricted picklist **Description** The language used for the service report. The language is selected in the `ServiceReportLanguage` field on the associated work order. If the work order doesn't specify a service report language, the report is translated in the default language in Salesforce of the person generating the report.
`ServiceReportNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort **Description** An auto-generated number identifying the service report.
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The status of the service report. Available in API version 53.0 and later. Possible values are: • `Completed` • `Failed` • `Generating`

Field Name	Details
	• `In Progress` • `None` The default value is `None`.
`Template`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The service report template used to generate the service report. Note: If the person creating the service report doesn't have access to certain objects or fields that are included in the service report template, those fields aren't visible in the report they create.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ServiceReportChangeEvent on page 52
Change events are available for the object. Available in API version 55.0 and later.

ServiceReportHistory
History is available for tracked fields of the object.

ServiceReportLayout

Represents a service report template in field service.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled. All users with Field Service Standard user permission can view the ServiceReportLayout object via the API.

Fields

Field Name	Details
`DeveloperName`	**Type** string

Field Name	Details
	Properties Filter, Group, Sort **Description** The developer name of the service report template. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`Language`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The language that the service report template uses.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date the service report template was last viewed.
`MasterLabel`	**Type** string **Properties** Filter, Group, Sort **Description** The name of the service report template. For example, Maintenance Report Template.
`TemplateType`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The type of the service report template. Available in API version 46.0 and later. Possible values are: • `DigitalForm` • `ServiceReport` The default value is `ServiceReport`.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ServiceReportLayoutChangeEvent on page 52
Change events are available for the object. Available in API version 55.0 and later.

ServiceResource

Represents a service technician or service crew in Field Service and Salesforce Scheduler, or an agent in Workforce Engagement. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Field Service or Workforce Engagement must be enabled.

Fields

Field Name	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** The description of the resource.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** When selected, this option means that the resource can be assigned to work orders. For service tracking purposes, resources can't be deleted, so deactivating a resource is the best way to send them into retirement. Deactivating a user doesn't deactivate the related service resource. You can't create a service resource that is linked to an inactive user.

Field Name	Details
IsCapacityBased	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Capacity-based resources are limited to a certain number of hours or appointments in a specified time period. Tip: The Capacities related list shows a resource's capacity.
IsOptimizationCapable	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** This field is reserved for Field Service and the managed package. Create a custom field instead of using this field to include a service resource in optimization.
LastKnownLatitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The latitude of the last known location.
LastKnownLongitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The longitude of the last known location.
LastKnownLocation	**Type** location **Properties** Nillable **Description** The service resource's last known location. You can configure this field to display data collected from a custom mobile app. This field isn't visible in the user interface, but you can expose it on service resource page layouts or set up field tracking to be able to view a resource's location history.

Field Name	Details
LastKnownLocationDate	**Type** dateTime **Properties** Filter, Nillable, Sort, Update **Description** The date and time of the last known location.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the service resource was last modified. Its label in the user interface is `Last Modified Date`.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the service resource was last viewed.
LocationId	**Type** reference **Properties** Create, Filter, Group, Sort, Nillable, Update **Description** The location associated with the service resource. For example, a service vehicle driven by the service resource. LocationId is a relationship field. **Relationship Name** Location **Relationship Type** Lookup **Refers To** Location
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update

Field Name	Details
	Description The resource's name, for example the name or title of the associated user or service crew.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the service resource. OwnerId is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`RelatedRecordId`	**Type** reference **Properties** Create, Filter, Group, Sort, Nillable, Update **Description** The associated user. Its label in the UI is `User`. If the service resource represents a service crew rather than a user, leave the `User` field blank and select the related crew in the `ServiceCrewId` field. RelatedRecordId is a relationship field. **Relationship Name** RelatedRecord **Relationship Type** Lookup **Refers To** User
`ResourceType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates whether the resource is a Technician (T), Dispatcher (D), Crew (C), Asset (S), Agent (A), or Planner (P). The default value is Technician (T). Resources who

Field Name	Details
	are dispatchers can't be capacity-based or included in scheduling optimization. Only users with the Field Service Dispatcher permission-set license can be dispatchers. You can't add additional resource types. To create a dependent lookup filter with ServiceResource.ResourceType, use only the first letter of the picklist value, for example T for Technician.
ServiceCrewId	**Type** reference **Properties** Create, Filter, Group, Sort, Nillable, Update **Description** The associated service crew. If the service resource represents a crew, select the crew. Note: This field is hidden for all users by default. To use it, update its field-level security settings in Setup and add it to your service resource page layouts.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ServiceResourceChangeEvent (API version 48.0)
Change events are available for the object.

ServiceResourceFeed
Feed tracking is available for the object.

ServiceResourceHistory
History is available for tracked fields of the object.

ServiceResourceOwnerSharingRule
Sharing rules are available for the object.

ServiceResourceShare
Sharing is available for the object.

ServiceResourceCapacity

Represents the maximum number of scheduled hours or number of service appointments that a capacity-based service resource can complete within a specific time period. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
CapacityInHours	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The number of hours that the resource can work per time period. You must fill out this field, the `CapacityInWorkItems` field, or both.
CapacityInWorkItems	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The total number of service appointments that the resource can complete per time period. You must fill out this field, the `CapacityInHours` field, or both.
CapacityNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** (Read only) An auto-generated number identifying the capacity record.
EndDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The date the capacity ends; for example, the end date of a contract.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort

Field Name	Details
	Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
ServiceResourceId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The associated service resource. You can set multiple capacities for a resource as long as their start and end dates do not overlap.
StartDate	**Type** date **Properties** Create, Filter, Group, Sort **Description** The date the capacity goes into effect.
TimePeriod	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Days, Hours, or Months. For example, if a resource can work 80 hours per month, the capacity's Time Period would be *Month* and Hours per Time Period would be *80*.

Usage

Service resources who are capacity-based can only work a certain number of hours or complete a certain number of service appointments within a specified time period. Contractors tend to be capacity-based. To indicate that a service resource is capacity-based, select **Capacity-Based** on the service resource record, then create a capacity record for the service resource.

You must fill out at least one of these fields: `CapacityInWorkItems` and `CapacityInHours`. If you're using the Field Service managed package and would like to measure capacity both in hours and in number of work items, enter a value for both. The resource is considered to reach their capacity based on whichever term is met first—hours or number of work items.

Important: If you aren't using the Field Service managed package, capacity serves more as a suggestion than a rule. Resources can still be as scheduled beyond their capacity, and you aren't notified when a resource exceeds their capacity.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ServiceResourceCapacityChangeEvent (API version 54.0)
Change events are available for the object.

ServiceResourceCapacityFeed
Feed tracking is available for the object.

ServiceResourceCapacityHistory
History is available for tracked fields of the object.

ServiceResourceCapacityHistory

Represents the history of changes made to tracked fields on a service resource capacity record. This object is available in API version 38.0 and later.

Supported Calls

`getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Special Access Rules

Field Service must be enabled in your organization, and field tracking for service resource capacity fields must be configured.

Fields

Field Name	Details
`DataType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Data type of the field that was changed.
`Field`	**Type** picklist

Field Name	Details
	Properties Filter, Group, Restricted picklist, Sort **Description** The name of the field that was changed.
`NewValue`	**Type** anyType **Properties** Nillable, Sort **Description** The new value of the field that was changed.
`OldValue`	**Type** anyType **Properties** Nillable, Sort **Description** The value of the field before it was changed.
`ServiceResourceCapacityId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the service resource capacity being tracked. The history is displayed on the detail page for this record.

ServiceResourceOwnerSharingRule

Represents the rules for sharing a service resource with user records other than the owner or anyone above the owner in the role hierarchy. This object is available in API version 38.0 and later.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The SharingRules Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
Description	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** A description of the sharing rule. Maximum size is 1000 characters.
DeveloperName	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface. Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance slows down while Salesforce generates one for each record.
GroupId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID representing the source group. A service resource owned by a User in the source Group triggers the rule to give access.
Name	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface.
ServiceResourceAccessLevel	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update **Description** A value that represents the type of access granted to the target Group, or UserRole. The possible values are: • `Read` • `Edit` • `All`
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID representing the User or Group being granted access.

ServiceResourcePreference

Represents the service resource scheduling preferences that are considered as a business objective in the scheduling logic engine. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The org must have the Workforce Engagement license. To view, create, edit, and delete records, the user must have the Workforce Engagement Agent or Workforce Engagement Planner permission set.

Fields

Field	Details
`EndDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The end date period that this preference is effective.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the service resource preference was last modified. Its label in the user interface is **Last Modified Date**.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the service resource preference was last viewed.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The service resource preference record name.
OperatingHoursId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The operating hours associated with the service resource preference. This is a relationship field. **Relationship Name** OperatingHours **Relationship Type** Lookup **Refers To** OperatingHours
OwnerId	**Type** reference

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the service resource preference. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
ServiceResourceId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The service resource associated with the service resource preference. This is a relationship field. **Relationship Name** ServiceResource **Relationship Type** Lookup **Refers To** ServiceResource
StartDate	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** The start date period that this preference is effective.

ServiceResourceSkill

Represents a skill that a service resource possesses in Field Service and Lightning Scheduler. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
`EffectiveEndDate`	**Type** datetime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date when the skill expires. For example, if a service resource needs to be re-certified after six months, the end date would be the date their certification expires.
`EffectiveStartDate`	**Type** datetime **Properties** Create, Filter, Sort, Update **Description** The date when the service resource gains the skill. For example, if the skill represents a certification, the start date would be the date of certification.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the resource skill was last modified. Its label in the user interface is `Last Modified Date`.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the resource skill was last viewed.

Field Name	Details
ServiceResourceId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The service resource who possesses the skill. This is a relationship field. **Relationship Name** ServiceResource **Relationship Type** Lookup **Refers To** ServiceResource
SkillId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The skill the service resource possesses. This is a relationship field. **Relationship Name** Skill **Relationship Type** Lookup **Refers To** Skill
SkillLevel	**Type** double **Properties** Create, Defaulted on create, Filter, Nillable, Sort, Update **Description** The service resource’s skill level. Skill level can range from zero to 99.99.
SkillNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An auto-generated number identifying the resource skill assignment.

Usage

You can assign skills to all service resources in your org to indicate their certifications and areas of expertise, and specify each resource's skill level from 0 to 99.99. For example, you can assign Maria the "Welding" skill, level 50.

If you intend to use the skills feature, determine which skills you want to track and how skill level should be determined. For example, you may want the skill level to reflect years of experience, certification levels, or license classes.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ServiceResourceSkillChangeEvent (API version 54.0)
: Change events are available for the object.

ServiceResourceSkillFeed
: Feed tracking is available for the object.

ServiceResourceSkillHistory
: History is available for tracked fields of the object.

ServiceSetupProvisioning

Represents a task completed by the Service Setup Assistant. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

ServiceSetupProvisioning is accessible only if the Service Setup Assistant is turned on. Users need the Customize Application permission to access it.

Fields

Field	Details
`JobName`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of a group of tasks completed by the Service Setup Assistant.
`Name`	**Type** string

Field	Details
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An automatically generated ID.
`Status`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The status of the task being completed by the Service Setup Assistant. Possible values are: • ` • `Completed`—The task completed successfully. • `ExistingSetup`—The task couldn't be completed due to conflicting configurations. • `FailedFatalError`—The task couldn't be completed. • `InProgress`—The task is in progress. • `PRE_CONDITION_NOT_MET`—The task couldn't be completed because one or more prerequisites weren't met.
`TaskContext`	**Type** textarea **Properties** Nillable **Description** The description of the changes included in the task.
`TaskName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the task.

ServiceTerritory

Represents a geographic or functional region in which work can be performed in Field Service, Salesforce Scheduler, or Workforce Engagement. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
`Address`	**Type** address **Properties** Filter **Description** An address to associate with the territory. For example, you can list the address of the territory's headquarters.
`AvgTravelTime`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The average travel time for this service territory. The value is added to the Work Capacity Usage for each scheduled service appointment in the service territory. Available in API version 59.0 and later.
`City`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The city of the associated address. Maximum length is 40 characters.
`Country`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The country to associate with the territory. Maximum length is 80 characters.

Field Name	Details
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** The description of the territory.
GeocodeAccuracy	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The level of accuracy of a location's geographical coordinates compared with its physical address. Usually provided by a geocoding service based on the address's latitude and longitude coordinates.This field is available in the API only.
IsActive	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the service territory is meant to be used. If a territory is inactive, you can't add members to it or link it to work orders, work order line items, or service appointments.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the territory was last modified. Its label in the user interface is `Last Modified Date`.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the territory was last viewed.
Latitude	**Type** double

Field Name	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** Used with `Longitude` to specify the precise geolocation of the address associated with the territory. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.This field is available in the API only.
`Longitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `Latitude` to specify the precise geolocation of the address associated with the territory. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.This field is available in the API only.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the territory.
`OperatingHoursId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The territory's operating hours, which indicate when service appointments within the territory can occur. Service resources who are members of a territory automatically inherit the territory's operating hours unless different hours are specified on the resource record. This field is a relationship field. **Relationship Name** OperatingHours **Relationship Type** Lookup **Refers To** OperatingHours
`ParentTerritoryId`	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The territory's parent service territory, if it has one. For example, a *`Northern California`* territory can have a *`State of California`* territory as its parent. A service territory hierarchy can contain up to 10,000 territories. This field is a relationship field. **Relationship Name** ParentTerritory **Relationship Type** Lookup **Refers To** ServiceTerritory
`PostalCode`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The postal code of the address associated with the territory. Maximum length is 20 characters.
`State`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The state of the address associated with the territory. Maximum length is 80 characters.
`Street`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The street number and name of the address associated with the territory.
`TopLevelTerritoryId`	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description (Read only) The top-level territory in a hierarchy of service territories. Depending on where a territory lies in the hierarchy, its top-level territory can be the same as its parent. This field is a relationship field. **Relationship Name** TopLevelTerritory **Relationship Type** Lookup **Refers To** ServiceTerritory
`TravelModeId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the TravelMode used for travel time calculations. The travel mode includes information about the type of transportation, such as a car or walking, whether a vehicle can take toll roads, and whether a vehicle is transporting hazardous materials. This field is a relationship field. **Relationship Name** TravelMode **Relationship Type** Lookup **Refers To** TravelMode
`TypicalInTerritoryTravelTime`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Estimated number of minutes needed to travel from one location to another within the service territory. You can use this field in Apex customization.

Usage

If you want to use service territories, determine which territories to create. Depending on how your business works, you can create territories based on cities or counties, or on functional categories such as sales versus service. If you plan to build out a hierarchy of service territories, create the highest-level territories first.

For example, you can create a hierarchy of territories to represent the areas where your team works in California. Include a top-level territory named *`California`*, three child territories named *`Northern California`*, *`Central California`*, and *`Southern California`*, and a series of third-level territories corresponding to California counties. Assign service resources to each county territory to indicate who is available to work in that county.

Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ServiceTerritoryChangeEvent (API version 48.0)
Change events are available for the object.

ServiceTerritoryFeed
Feed tracking is available for the object.

ServiceTerritoryHistory
History is available for tracked fields of the object.

ServiceTerritoryOwnerSharingRule
Sharing rules are available for the object.

ServiceTerritoryShare
Sharing is available for the object.

ServiceTerritoryLocation

Represents a location associated with a particular service territory in field service.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
`LocationId`	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Sort, Update **Description** The location that is associated with the service territory.
ServiceTerritoryId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The associated service territory.
ServiceTerritoryLocationNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort **Description** (Read only) Auto-generated number identifying the service territory location.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ServiceTerritoryLocationChangeEvent (API version 55.0)
Change events are available for the object.

ServiceTerritoryLocationFeed
Feed tracking is available for the object.

ServiceTerritoryLocationHistory
History is available for tracked fields of the object.

ServiceTerritoryMember

Represents a service resource who can be assigned in a service territory in Field Service, Salesforce Scheduler, or Workforce Engagement. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Field Service or Workforce Engagement must be enabled.

Fields

Field Name	Details
Address	**Type** address **Properties** Filter **Description** The member's address. You may want to list the related service resource's address in this field.
City	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The city of the member's address. Maximum length is 40 characters.
Country	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The country of the member's address. Maximum length is 80 characters.
EffectiveEndDate	**Type** datetime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date when the service resource is no longer a member of the territory. If the resource will be working in the territory for the foreseeable future, leave this field blank. This field is mainly useful for indicating when a temporary relocation ends.
EffectiveStartDate	**Type** datetime **Properties** Create, Filter, Sort, Update

Field Name	Details
	Description The date when the service resource becomes a member of the service territory.
`GeocodeAccuracy`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The level of accuracy of a location's geographical coordinates compared with its physical address. Usually provided by a geocoding service based on the address's latitude and longitude coordinates. Note: This field is available in the API only.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the territory member was last modified. Its label in the user interface is `Last Modified Date`.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the territory member was last viewed.
`Latitude`	**Type** double **Properties** Create, Defaulted on create, Filter, Nillable, Sort, Update **Description** Used with `Longitude` to specify the precise geolocation of the member's address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. Note: This field is available in the API only.
`Longitude`	**Type** double

Field Name	Details
	Properties Create, Defaulted on create, Filter, Nillable, Sort, Update **Description** Used with `Latitude` to specify the precise geolocation of the member's address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. Note: This field is available in the API only.
`MemberNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** (Read only) An auto-generated number identifying the service territory member.
`OperatingHoursId`	**Type** reference **Properties** Create, Filter, Group, Sort, Nillable, Update **Description** The operating hours assigned to the service territory member. If no operating hours are specified, the member is assumed to use their parent service territory's operating hours. If a member needs special operating hours, create them in Setup and select them in the `Operating Hours` lookup field on the member's detail page. This is a relationship field. **Relationship Name** OperatingHours **Relationship Type** Lookup **Refers To** OperatingHours
`PostalCode`	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The postal code of the member's address. Maximum length is 20 characters.

Field Name	Details
ServiceResourceId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The service resource assigned to the service territory. This is a relationship field. **Relationship Name** ServiceResource **Relationship Type** Lookup **Refers To** ServiceResource
ServiceTerritoryId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The service territory that the service resource is assigned to. This is a relationship field. **Relationship Name** ServiceTerritory **Relationship Type** Lookup **Refers To** ServiceTerritory
State	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The state of the member’s address. Maximum length is 80 characters.
Street	**Type** textarea **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The street number and name of the member’s address.

Field Name	Details

`TerritoryType`	**Type**
	picklist
	Properties
	Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update
	Description
	Primary, Secondary, or Relocation.
	• The primary territory is typically the territory where the resource works most often—for example, near their home base. Service resources can only have one primary territory.
	• Secondary territories are territories where the resource can be assigned to appointments if needed. Service resources can have multiple secondary territories.
	• Relocation territories represent temporary moves for service resources. If you're using the Field Service managed packages with the scheduling optimizer, resources with relocation territories are always assigned to services within their relocation territories during the specified relocation dates; if they don't have a relocation territory, the primary territories are favored over the secondary.
	For example, a service resource might have the following territories:
	• Primary territory: *`West Chicago`*
	• Secondary territories:
	  – *`East Chicago`*
	  – *`South Chicago`*
	• Relocation territory: *`Manhattan`*, for a three-month period

Usage

If you delete a service territory with members, the service resources who were members no longer have any connection to the territory.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ServiceTerritoryMemberChangeEvent (API version 48.0)
Change events are available for the object.

ServiceTerritoryMemberFeed
Feed tracking is available for the object.

ServiceTerritoryMemberHistory
History is available for tracked fields of the object.

ServiceTerritoryWorkType

Represents the relationship between a ServiceTerritory object and a WorkType object for Salesforce Scheduler appointments. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`IsSlotPublished`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicate whether records in the Shift object are created for the selected Service Territory and Work Type. The default value is `false`.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the current user last viewed a record related to this object.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this object.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of this service territory-work type relationship.

Field	Details
ServiceTerritoryId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the service territory that's related to the work type indicated in the WorkTypeId field. This is a relationship field. **Relationship Name** ServiceTerritory **Relationship Type** Lookup **Refers To** ServiceTerritory
TeamId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Represents the team associated with the service territory for a specific work type. This field is a relationship field and is available in API version 58.0 and later. **Relationship Name** Team **Relationship Type** Lookup **Refers To** Team
WorkTypeId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the work type that's related to the service territory indicated in the ServiceTerritoryId field. This is a relationship field. **Relationship Name** WorkType **Relationship Type** Lookup

Field	Details
	Refers To WorkType

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ServiceTerritoryWorkTypeFeed
Feed tracking is available for the object.

ServiceTerritoryWorkTypeHistory
History is available for tracked fields of the object.

SessionPermSetActivation

The SessionPermSetActivation object represents a permission set assignment activated during an individual user session. When a SessionPermSetActivation object is inserted into a permission set, an activation event fires, allowing the permission settings to apply to the user's specific session. This object is available in API versions 37.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

Note: If you include session-based permission sets in a permission set group, the permissions in them do not require session-based activation for users assigned to the group.

Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Manage Session Permission Set Activations

Fields

Field Name	Details
`AuthSessionId`	**Type** reference **Properties** Filter, Group, Sort **Description** The session ID related to this permission set assignment for its duration. This is a relationship field.

Field Name	Details
	Relationship Name AuthSession **Relationship Type** Lookup **Refers To** AuthSession
`Description`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The session details, such as device used and browser.
`PermissionSetGroupId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The permission set group ID related to this permission set group assignment and user for its duration. This field is available in API version 53.0 and later. This is a relationship field. **Relationship Name** PermissionSetGroup **Relationship Type** Lookup **Refers To** PermissionSetGroup
`PermissionSetId`	**Type** reference **Properties** Filter, Group, Sort **Description** The permission set ID related to this permission set assignment and user for its duration. This is a relationship field. **Relationship Name** PermissionSet **Relationship Type** Lookup

Field Name	Details
	Refers To PermissionSet
`UserId`	**Type** reference **Properties** Filter, Group, Sort **Description** The user ID of the user to whom this permission set assignment applies for its duration. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

Usage

Use SessionPermSetActivation to create a permission set available only for a specified session's duration. For example, create permission sets that provide access to specific applications only during authenticated sessions.

In the following Apex example, an identified session is activated after session information is submitted via a button. Successful activation results in a confirmation message displayed to the user.

```
public class SessionPermSetActivationController {
    // id of the session permission set to be activated
    private final String sessionPermSetId = '0PSxx00000004rJ';
    private final String sessionId;

    public SessionPermSetActivationController() {
       Map<String, String> sessionManagement = Auth.SessionManagement.getCurrentSession();

        sessionId = sessionManagement.get('SessionId');
    }

    public PageReference activate() {
        // activate the permission set
        SessionPermSetActivation activation = new SessionPermSetActivation();
        activation.AuthSessionId = sessionId;
        activation.PermissionSetId = sessionPermSetId;
        activation.Description = 'created by SessionPermSetActivationController';

        insert activation;
```

```
        return null;
    }

    public boolean getActivated() {
        Integer alreadyActivated =  [SELECT count()
                                                FROM SessionPermSetActivation
                                                WHERE AuthSessionId = :sessionId
                                               And PermissionSetId = :sessionPermSetId  LIMIT
 1];
        return alreadyActivated > 0;
    }
}

<apex:page controller="SessionPermSetActivationController">
      <apex:outputPanel rendered="{!!Activated}">
          <h3>Activate Session Permission Set</h3>
          <br />
          <apex:form >
                <apex:commandButton action="{!activate}" value="Activate"
id="activateButton"/>
          </apex:form>
      </apex:outputPanel>
      <apex:outputPanel rendered="{!Activated}">
          <h3>Session Permission Set is already active.</h3>
      </apex:outputPanel>
</apex:page>
```

SetupAuditTrail

Represents changes you or other admins made in your org's Setup area for at least the last 180 days. This object is available in API version 15.0 and later.

Note: SetupAuditTrail is not a supported standard controller. Using SetupAuditTrail as a standard controller in a Visualforce page results in an error.

Supported Calls

`query()`, `retrieve()`

Note: Aggregate queries aren't supported on this object. For example, `SELECT count() FROM SetupAuditTrail` works but `SELECT count(Id) FROM SetupAuditTrail` fails.

Fields

Field	Details
Action	**Type** string

Field	Details
	Properties Filter, Sort **Description** The category of the change made in Setup. For example, a value of *PermSetCreate* indicates that an administrator created a permission set. The Display field contains more specific information.
CreatedByContext	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The context under which the Setup change was made. For example, if Einstein uses cloud-to-cloud services to make a change in Setup, the value of this field is *Einstein*. This field is available in API version 48.0 and later.
CreatedByIssuer	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Reserved for future use.
DelegateUser	**Type** string **Properties** Filter, Nillable, Sort **Description** The Login-As user who executed the action in Setup. If a Login-As user didn't perform the action, this field is blank. This field is available in API version 35.0 and later.
Display	**Type** string **Properties** Nillable, Sort **Description** The full description of changes made in Setup. For example, if the Action field has a value of *PermSetCreate*, the Display field has a value like "Created permission set MAD: with user license Salesforce."
Section	**Type** string

Field	Details
	Properties Nillable, Sort **Description** The section in the Setup menu where the action occurred. For example, Manage Users or Company Profile.

Note: You can use SOQL joins to get the information you need more quickly. For example, running `SELECT CreatedBy.Name FROM SetupAuditTrail LIMIT 10` returns the first and last names of the last 10 people to make changes in Setup.

SetupEntityAccess

Represents the enabled setup entity access settings (such as for Apex classes) for the parent PermissionSet. This object is available in API version 25.0 and later.

To grant users access to an entity, associate the appropriate SetupEntityAccess record with a PermissionSet that's assigned to a user.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only users with "View Setup and Configuration" permission can access this object.

Fields

Field Name	Details
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the entity's parent PermissionSet. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** PermissionSet

Field Name	Details
`SetupEntityId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the entity for which access is enabled, such as an Apex class or Visualforce page.
`SetupEntityType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of setup entity for which access is enabled. Valid values are: • `ApexClass` for Apex classes • `ApexPage` for Visualforce pages • In API version 28.0 and later, `ConnectedApplication` for OAuth connected apps • In API version 48.0 and later, `CustomEntityDefinition` for Custom Settings and Custom Metadata Types • In API version 31.0 and later, `CustomPermission` for custom permissions • In API version 58.0 and later, `ExternalCredentialParameter` for external credential principals. • In API version 58.0 and later, `FlowDefinition` for flows • In API version 58.0 and later, `OrgWideEmailAddress` for organization-wide email addresses • In API version 28.0 and later, `ServiceProvider` for service providers • In API version 28.0 and later, `TabSet` for apps

Usage

Because SetupEntityAccess is a child of the PermissionSet object, the usage is similar to other PermissionSet child objects like FieldPermissions and ObjectPermissions.

For example, the following code returns all permission sets that grant access to any setup entities for which access is enabled:

```
SELECT Id, ParentId, Parent.Name, SetupEntityId
FROM SetupEntityAccess
```

The following code returns permission sets that grant access only to Apex classes:

```
SELECT Id, ParentId, Parent.Name, SetupEntityId
FROM SetupEntityAccess
WHERE SetupEntityType='ApexClass'
```

The following code returns permission sets that grant access to any setup entities, and are not owned by a profile:

```
SELECT Id, ParentId, Parent.Name, SetupEntityId
FROM SetupEntityAccess
WHERE ParentId
IN (SELECT Id
   FROM PermissionSet
   WHERE isOwnedByProfile = false)
```

You may want to return only those permission sets that have access to a specific setup entity. To do this, query the parent object. For example, this code returns all permission sets that grant access to the `helloWorld` Apex class:

```
SELECT Id, Name,
   (SELECT Id, Parent.Name, Parent.Profile.Name
   FROM SetupEntityAccessItems)
FROM ApexClass
WHERE Name = 'helloWorld'
```

While it's possible to return permission sets that have access to a `ConnectedApplication`, `ServiceProvider`, or `TabSet` by `SetupEntityId`, it's not possible to return permission sets that have access to these `SetupEntityType` fields by any other AppMenuItem attribute, such as `Name` or `Description`. For example, to find out if a user has access to the Recruiting app, you'd run two queries. First, query to get the AppMenuItem ID:

```
SELECT Id, Name, Label
FROM AppMenuItem
WHERE Name = 'Recruiting'
```

Let's say the previous query returned the AppMenuItem ID 0DSD0000000GIiMIAW. Using this ID, you can now run a query to find out if a user has access to the Recruiting app:

```
SELECT Id, SetupEntityId, SetupEntityType
FROM SetupEntityAccess
WHERE ParentId
IN
   (SELECT PermissionSetId
   FROM PermissionSetAssignment
   WHERE AssigneeId = '005D0000001QOzF')
AND (SetupEntityId = '0DSD0000000GIiMIAW')
```

ApexClass

ApexPage

ShapeRepresentation

Contains information about the shape of an org. The shape of an org includes licenses and limits information. You can easily create scratch orgs based on a source org's shape. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A free-form text field for you to enter a description of this org shape. This field has a maximum length of 255 characters.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date when the org shape was last referenced. This field is read-only.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date when the org shape was last viewed. This field is read-only.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The alias for the org shape.
`Status`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Status of this org shape. You can use an org shape when it’s Active. This field is read-only.

Field	Details
	Possible values are: • `Active` • `Error` • `InProgress` • `Inactive` • `New`

SharingRecordCollection

Represents a collection of records. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Record collections are limited to 100 items and 100 members for each record collection.

Fields

Field	Details
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the record collection.
`GroupId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The group ID of the record collection.
`LastAdded`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp when an item was last added to the record collection.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the record collection.
`NumberOfRecords`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The number of records in the record collection. The limit is 100.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the record collection owner.

SharingRecordCollectionItem

Represents a single record in a collection of records. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Record collections are limited to 100 items for each record collection.

Fields

Field	Details
`CollectionId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the related record collection.
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the record collection item.
`ItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the record collection item.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the record collection item.

SharingRecordCollectionMember

Represents a user with access to a collection of records. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Record collections are limited to 100 members for each record collection.

Fields

Field	Details
`CollectionId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the related record collection.
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the user or group with access to the record collection.

Shift

Represents a shift for service resource scheduling. Available in API versions 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `upsert()`

Special Access Rules

Field Service or Workforce Engagement must be enabled. For Field Service, users must have Field Service permission. For Workforce Engagement, users must have the Workforce Engagement Admin or Planner permission set.

Fields

Field	Details
BackgroundColor	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Sets a background color when shifts are displayed in the UI. Use a 3- or 6-digit hexadecimal format, for example #FF00FF. Available in API version 54.0 and later.
EndTime	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The date and time that the shift ends.
IsHolidayShift	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates a shift that overlaps with holiday hours. The default value is false. Available in API version 55.0 and later.
IsNonStandard	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the shift is nonstandard, such as overtime or on-call shifts. The default value is false. Available in API version 54.0 and later.
JobProfileId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The job profile associated with the shift. Available in API versions 47.0 and later.
Label	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The label that a shift is given.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the current user last viewed a related record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the current user last viewed this record.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the shift. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
RecordsetFilterCriteriaId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the recordset filter criteria selected for the shift. Available in API version 49.0 and later. This is a relationship field.

Field	Details
	Relationship Name RecordsetFilterCriteria **Relationship Type** Lookup **Refers To** RecordsetFilterCriteria
ServiceResourceId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the service resource the shift belongs to. Available in API versions 47.0 and later. This is a relationship field. **Relationship Name** ServiceResource **Relationship Type** Lookup **Refers To** ServiceResource
ServiceTerritoryId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the service territory the shift belongs to. Available in API versions 47.0 and later. This is a relationship field. **Relationship Name** ServiceTerritory **Relationship Type** Lookup **Refers To** ServiceTerritory
ShiftNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The number automatically given to the shift upon creation.

Field	Details
ShiftTemplateId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The shift template ID, if the shift was created from a shift template. Available in API version 53.0 and later. This is a relationship field. **Relationship Name** ShiftTemplate **Relationship Type** Lookup **Refers To** ShiftTemplate
StartTime	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The date and time that the shift starts.
Status	**Type** picklist **Properties** Create, Filter, Group, Sort, Update **Description** Describes the status of the shift. Users can create custom values. Default values are: • Tentative • Published • Confirmed
StatusCategory	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Describes the status of the shift using static values. This field is derived from `Status` using the mapping defined in setup. Possible values are:

Field	Details
	• `Tentative` • `Published` • `Confirmed`
`TimeSlotType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Type of time slot for the shift. The same setup values as the `TimeSlot` field in the OperatingHours object. Possible values are: • `Normal` (default value) • `Extended`

Usage

Scheduling and dispatching service resources using shift data is not supported in API version 46.0, and is a pilot feature in API version 47.0.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ShiftChangeEvent (API version 54.0)
Change events are available for the object.

ShiftFeed
Feed tracking is available for the object.

ShiftHistory
History is available for tracked fields of the object.

ShiftOwnerSharingRule
Sharing rules are available for the object.

ShiftShare
Sharing is available for the object.

ShiftHistory

Represents the history of changes made to tracked fields on a time sheet. Available in API versions 46.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Special Access Rules

Field Service must be enabled in your organization, and field tracking for shift fields must be configured.

Fields

Field	Details
`DataType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Data type of the field that was changed.
`Field`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The name of the field that was changed.
`NewValue`	**Type** anyType **Properties** Nillable, Sort **Description** The new value of the field that was changed.
`OldValue`	**Type** anyType **Properties** Nillable, Sort **Description** The value of the field before it was changed.
`ShiftId`	**Type** reference

Field	Details
	Properties Filter, Group, Sort **Description** ID of the shift being tracked. The history is displayed on the detail page for this record. This is a relationship field. **Relationship Name** Shift **Relationship Type** Lookup **Refers To** Shift

Usage

Scheduling and dispatching service resources using shift data is not supported in API version 46.0.

ShiftOwnerSharingRule

Represents the rules for sharing a shift with user records other than the owner or anyone above the owner in the role hierarchy. Available in API versions 46.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The SharingRules Metadata API type is enabled for all orgs.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update

Field	Details
	Description A description of the sharing rule. Maximum size is 1000 characters.
DeveloperName	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
GroupId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID representing the source group. A time sheet owned by a User in the source Group triggers the rule to give access.
Name	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface.
ServiceResourceAccessLevel	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** A value that represents the type of access granted to the target Group, or UserRole. The possible values are: • `Read`

Field	Details
	• `Edit` • `All`
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID representing the User or Group being granted access.

Usage

Scheduling and dispatching service resources using shift data is not supported in API version 46.0.

ShiftPattern

Represents a pattern of templates for creating shifts. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled. Users must have Field Service permission.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** A short description of the shift pattern to help users identify the pattern.
`IsActive`	**Type** boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates that the shift pattern can be used to create shifts. The default value is 'false'.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date that the shift pattern was last used.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date that the shift pattern was last viewed.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** A short, descriptive name of the shift pattern.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner of the shift pattern. Default is the user who creates the shift pattern. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User

Field	Details
`PatternLength`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The duration in days of the shift pattern.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ShiftPatternChangeEvent (API version 54.0)
Change events are available for the object.

ShiftPatternFeed on page 39
Feed tracking is available for the object.

ShiftPatternHistory on page 47
History is available for tracked fields of the object.

ShiftPatternShare on page 50
Sharing is available for the object.

SEE ALSO:
ShiftPatternEntry
Shift Patterns

ShiftPatternEntry

ShiftPatternEntry links a shift template to a shift pattern. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled. Users must have Field Service permission.

Fields

Field	Details
DayOrder	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** DayOrder links the shift template to the specific day within the shift pattern duration that the template. For example, if the DayOrder is 2 then a shift from the associated template is created on the second day of the pattern.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date that the shift pattern entry was last used.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date that the shift pattern entry was last viewed.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An auto-generated reference number for the shift pattern entry.
ShiftPatternId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the shift pattern that the shift pattern entry is linked to. This is a relationship field. **Relationship Name** ShiftPattern

Field	Details
	Relationship Type Lookup **Refers To** ShiftPattern
`ShiftTemplateId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the shift template that's used to create shifts for this shift pattern entry. This is a relationship field. **Relationship Name** ShiftTemplate **Relationship Type** Lookup **Refers To** ShiftTemplate

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ShiftPatternEntryChangeEvent (API version 54.0)
Change events are available for the object.

SEE ALSO:
ShiftPattern

ShiftSegment

Represents a scheduled activity within a shift. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org must have the Workforce Engagement license and Workforce Engagement must be enabled. The user requires the Workforce Engagement Planner or Workforce Engagement Admin permission set.

Fields

Field	Details
EndTime	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The date and time when the shift segment ends.
IsInAdherence	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Indicates whether the agent is in adherence (`true`) or not (`false`) for the scheduled segment activity. The default value is `true`.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the shift segment.
SegmentTypeId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The unique ID of the associated shift segment type. This is a relationship field. **Relationship Name** SegmentType **Relationship Type** Lookup **Refers To** ShiftSegmentType
ShiftId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Sort **Description** The unique ID of the shift in which the segment is scheduled. This is a relationship field. **Relationship Name** Shift **Relationship Type** Lookup **Refers To** Shift
`StartTime`	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The date and time when the shift segment starts.

ShiftSegmentType

Represents a type of activity scheduled within a shift. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The org must have the Workforce Engagement license and Workforce Engagement must be enabled. The user requires the Workforce Engagement Planner or Workforce Engagement Admin permission set.

Fields

Field	Details
`AdherenceThreshold`	**Type** int **Properties** Create, Filter, Group, Sort, Update

Field	Details
	Description A threshold, in minutes. If the agent starts the scheduled activity within this threshold, the shift segment activity is in adherence.
`Category`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** A category for the type of shift segment. Possible values are: • `Break`—Break times, such as a coffee or lunch break. • `NonWork`—Non-working activities, such as training or meetings. • `Work`—Work activities, such as answering calls, responding to chats, or handling cases.
`Color`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Sets a background color when shift activities of this type are displayed in the UI. Use a 3- or 6-digit hexadecimal format, for example #FF00FF.
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** A description of the shift segment type.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.

Field	Details
	Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. **Note:** Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if the shift segment type is active (`true`) or not (`false`). The default value is `true`.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the shift segment type. Possible values are the languages that Workforce Engagement supports.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The label of the shift segment type.
`ServicePresenceStatusId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The unique ID of the associated service presence status for segments of this type. This is a relationship field. **Relationship Name** ServicePresenceStatus **Relationship Type** Lookup

Field	Details
	Refers To ServicePresenceStatus

ShiftShare

Represents a sharing entry on a field service shift. Available in API versions 46.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
`AccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Level of access that the user or group has to the shift. The possible values are: • `Read` • `Edit` • `All` (This value isn't valid for create or update calls.) Set to an access level that is at least equal to the organization's default shift access level.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort

Field	Details
	Description The shift associated with the sharing entry. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** Shift
`RowCause`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited. Valid values include: • `Manual`—The User or Group has access because a user with "All" access manually shared the shift record. • `Owner`—The User is the owner of the shift. • `Rule`—The User or Group has access via a shift sharing rule. • `GuestRule`—The User or Group has access via a shift guest user sharing rule.
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** (Read only) ID of the user or group that has access to the shift record. This is a polymorphic relationship field. **Relationship Name** UserOrGroup **Relationship Type** Lookup **Refers To** Group, User

Usage

Scheduling and dispatching service resources using shift data is not supported in API version 46.0.

ShiftStatus

Represents a shift, such as Tentative, Published, or Confirmed. Available in API versions 46.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
`ApiName`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Uniquely identifies a picklist value so it can be retrieved without using an ID or master label.
`IsDefault`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether this is the default shift status value (`true`) or not (`false`) in the picklist. Only one value can be the default value.
`MasterLabel`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Master label for this shift status value. This display value is the internal label that does not get translated. Limit: 255 characters.

Field	Details
SortOrder	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Number used to sort this value in the shift status picklist. These numbers are not guaranteed to be sequential, as some previous shift status values might have been deleted.
StatusCode	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Describes the status of the shift using static values. Possible values are: • Tentative • Published • Confirmed

Usage

Scheduling and dispatching service resources using shift data is not supported in API version 46.0.

ShiftTemplate

Represents a template for creating shifts. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Field Service or Workforce Engagement must be enabled. For Field Service, users must have Field Service permission. For Workforce Engagement, the user needs to have a Workforce Engagement Admin or Planner permission set.

Fields

Field	Details
BackgroundColor	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Sets a background color when shifts are displayed in the UI. Use a 3- or 6-digit hexadecimal format, for example #FF00FF. Available in API version 54.0 and later.
Description	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Additional information about the shift like number of breaks or activities.
Duration	**Type** double **Properties** Create, Filter, Sort, Update **Description** How long the shift lasts. The unit of measurement for this field is determined by `ShiftTemplateDurationType`.
IsActive	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the shift is active or inactive.
IsNonStandard	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the shift is nonstandard, such as overtime or on-call shifts. The default value is false. Available in API version 54.0 and later.
JobProfileId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The Job Profile record. This field is optional. This is a relationship field. **Relationship Name** JobProfile **Relationship Type** Lookup **Refers To** JobProfile
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the shift template was last modified. Its label in the user interface is **Last Modified Date**.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the shift template was last viewed.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The shift template record name.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the shift template. This is a polymorphic relationship field.

Field	Details
	Relationship Name Owner **Relationship Type** Lookup **Refers To** Group, User
`RecordsetFilterCriteriaId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the recordset filter criteria selected for the shift template. Available in API version 53.0 and later. This is a relationship field. **Relationship Name** RecordsetFilterCriteria **Relationship Type** Lookup **Refers To** RecordsetFilterCriteria
`ShiftTemplateDurationType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The unit of measurement for the shift template duration. Possible values are: • `H`—Hours • `M`—Minutes The default value is `H`.
`StartTime`	**Type** time **Properties** Create, Filter, Sort, Update **Description** The time of day when the shift starts.

Field	Details
`TimeSlotType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of time slot. Possible values are: • `Normal` • `Extended` You can use *`Extended`* to represent overtime shifts. Available in API version 55.0 and later.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ShiftTemplateOwnerSharingRule on page 48
Sharing rules are available for the object.

ShiftTemplateShare on page 50
Sharing is available for the object.

ShiftTemplateChangeEvent on page 52
Change Data Capture events are available for the object. Available in API version 54.0 and later.

Shipment

Represents the transport of inventory in field service or a shipment of order items in Order Management.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

At least one of these features must be enabled:

- Order Management
- Field Service
- B2B Commerce
- Health Cloud Visit Inventory
- Consumer Goods Cloud Retail Execution

Fields

Field Name	Details
ActualDeliveryDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Date the product was delivered.
DeliveredToId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The person or entity the product was delivered to. This is a polymorphic relationship field. **Relationship Name** DeliveredTo **Relationship Type** Lookup **Refers To** Group, User
DeliveryMethodId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The delivery method used for the shipment. This field is available in API version 51.0 and later.
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** Details not recorded in the provided fields
DestinationLocationId	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The place the product is to be delivered. This is a relationship field. **Relationship Name** DestinationLocation **Relationship Type** Lookup **Refers To** Location
ExpectedDeliveryDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Date the product is expected to be delivered.
FulfillmentOrderId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The fulfillment order that the shipment belongs to. This field is available in API version 51.0 and later.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort

Field Name	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.
`OrderSummaryId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The order summary associated with the shipment. This field is available in API version 51.0 and later.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the shipment. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`Provider`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The company or person making the transfer.
`ReturnOrderId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** For a return Shipment, the associated ReturnOrder. This field is available in API version 53.0 and later.

Field Name	Details
`ShipFromAddress`	**Type** address **Properties** Filter, Nillable **Description** The place the product is coming from.
`ShipFromCity`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The city of the address where the shipment originates.
`ShipFromCountry`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The country of the address where the shipment originates.
`ShipFromGeocodeAccuracy`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Accuracy level of the geocode for the address where the shipment originates. See Compound Field Considerations and Limitations for details on geolocation compound fields. Note: This field is available in the API only.
`ShipFromLatitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with Longitude to specify the precise geolocation of the address where the shipment originates. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields. Note: This field is available in the API only.

Field Name	Details
`ShipFromLongitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with Latitude to specify the precise geolocation of the address where the shipment originates. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields. Note: This field is available in the API only.
`ShipFromPostalCode`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The postal code of the address where the shipment originates.
`ShipFromState`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The state of the address where the shipment originates.
`ShipFromStreet`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The street of the address where the shipment originates.
`ShipToAddress`	**Type** address **Properties** Filter, Nillable **Description** The physical address where the shipment is delivered.
`ShipToCity`	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The city of the address where the shipment is delivered.
ShipToCountry	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The country of the address where the shipment is delivered.
ShipToGeocodeAccuracy	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Accuracy level of the geocode for the address where the shipment is delivered. See Compound Field Considerations and Limitations for details on geolocation compound fields. Note: This field is available in the API only.
ShipToLatitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with Longitude to specify the precise geolocation of the address where the shipment is delivered. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields. Note: This field is available in the API only.
ShipToLongitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with Latitude to specify the precise geolocation of the address where the shipment is delivered. Acceptable values are numbers between –180 and 180

Field Name	Details
	with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields. **Note:** This field is available in the API only.
`ShipToName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The shipment recipient.
`ShipToPostalCode`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The postal code of the address where the shipment is delivered.
`ShipToState`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The state of the address where the shipment is delivered.
`ShipToStreet`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The street of the address where the shipment is delivered.
`ShipmentNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An auto-generated number identifying the shipment.
`SourceLocationId`	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The field service location where the shipment originates. This is a relationship field. **Relationship Name** SourceLocation **Relationship Type** Lookup **Refers To** Location
`Status`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The status of the shipment. The picklist includes the following values, which can be customized: • *`Shipped`*—The product is in transit. • *`Delivered`*—The product is at the source location.
`TotalItemsQuantity`	**Type** double **Properties** Filter, Nillable, Sort **Description** The total quantity of items included in the shipment. This value is calculated as the sum of the quantities of the shipment items in the shipment. This field is available in API version 51.0 and later.
`TrackingNumber`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Tracking number for the shipment.
`TrackingUrl`	**Type** url

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** URL of website used for tracking the shipment.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ShipmentChangeEvent (API version 48.0)
Change events are available for the object.

ShipmentFeed
Feed tracking is available for the object.

ShipmentHistory
History is available for tracked fields of the object.

ShipmentOwnerSharingRule
Sharing rules are available for the object.

ShipmentShare
Sharing is available for the object.

SEE ALSO:

ShipmentItem

ShipmentItem

Represents an order item included in a shipment. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

At least one of these features must be enabled:

- Order Management
- Field Service
- B2B Commerce
- Health Cloud Visit Inventory
- Consumer Goods Cloud Retail Execution

Fields

Field	Details
Description	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the shipment item.
ExpectedDeliveryDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Expected delivery date of the shipment that contains the shipment item.
FulfillmentOrderLineItemId	**Type** reference **Properties** Filter, Nillable, Sort **Description** The FulfillmentOrderLineItem (fulfillment order product) corresponding to the shipment item.
OrderItemSummaryId	**Type** reference **Properties** Filter, Nillable, Sort **Description** The OrderItemSummary (order product summary) corresponding to the shipment item.
Product2Id	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The product represented by the shipment item. This is a relationship field. **Relationship Name** Product2

Field	Details
	Relationship Type Lookup **Refers To** Product2
`Quantity`	**Type** double **Properties** Create, Filter, Sort, Update **Description** The quantity of products represented by the shipment item.
`ReturnOrderLineItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** For a return ShipmentItem, the associated ReturnOrderLineItem. This field is available in API version 53.0 and later.
`ShipmentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** (Master-Detail) The shipment that contains the shipment item. This is a relationship field. **Relationship Name** Shipment **Relationship Type** Lookup **Refers To** Shipment
`ShipmentItemNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An auto-generated number identifying the shipment item.

Field	Details
TrackingNumber	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The tracking number of the shipment that contains the shipment item.
TrackingUrl	**Type** url **Properties** Filter, Group, Nillable, Sort **Description** The tracking URL of the shipment that contains the shipment item.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ShipmentItemFeed
Feed tracking is available for the object.

ShipmentItemHistory
History is available for tracked fields of the object.

FulfillmentOrderLineItem

ShippingConfigurationSet

Shipping configuration for a set of products in a store. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The ShippingConfigurationSet object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
IsDefault	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the shipping configuration is the default (True) or not (False). The default value is False.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the shipping configuration set.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the shipping configuration owner. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
TargetRecordId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the target record. This field is a relationship field. **Relationship Name** TargetRecord

Field	Details
	Relationship Type Lookup **Refers To** WebStore

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ShippingConfigurationSetOwnerSharingRule (API Version 60.0)
Sharing rules are available for the object.

ShippingConfigurationSetShare (API Version 60.0)
Sharing is available for the object.

ShippingRateArea

A designated geographical area that's available for shipping. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The ShippingRateArea object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
`Countries`	**Type** textarea **Properties** Create, Nillable, Update **Description** Countries in the shipping rate area.
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Currency ISO code of the cart. Possible values are: • `EUR`—Euro • `USD`—U.S. Dollar The default value is `USD`.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the shipping rate area.
`Regions`	**Type** textarea **Properties** Create, Nillable, Update **Description** Reserved for future use.
`ShippingRateGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the shipping rate group This field is a relationship field. **Relationship Name** ShippingRateGroup **Relationship Type** Lookup **Refers To** ShippingRateGroup

ShippingRateGroup

Available shipping rates based on shipping destination. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The ShippingRateGroup object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Currency ISO code of the cart. Possible values are: • `EUR`—Euro • `USD`—U.S. Dollar The default value is `USD`.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the shipping rate group.
`ShippingProfileId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the shipping profile. This field is a relationship field. **Relationship Name** ShippingProfile **Relationship Type** Lookup

Field	Details
	Refers To ShippingConfigurationSet

SignupRequest

Represents a request for a new sign-up. This object is available in API version 27.0 and later.

Note: You're limited to 20 sign-ups per day. To make additional sign-ups, log a support case in the Salesforce Partner Community. For product, specify **Platform**. For topic, specify **AppExchange & Managed Packages**.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Fields

Field Name	Details
`AuthCode`	**Type** string **Properties** Create, Filter, Group, Sort **Description** A one-time authorization code that can be exchanged for an OAuth access token and refresh token using standard Salesforce APIs. It's used with `ConnectedAppCallbackUrl` and `ConnectedAppConsumerKey` when the specified connected app hasn't been configured with an X.509 certificate. The system provides this read-only field after the sign-up request has been processed. This field is available in API version 29.0 and later.
`Company`	**Type** string **Properties** Create, Filter, Group, Sort **Description** The name of the company requesting the trial sign-up.
`ConnectedAppCallbackUrl`	**Type** string **Properties** Create, Filter, Group, Sort

Field Name	Details
	Description When used with `ConnectedAppConsumerKey`, specifies a connected app that's approved automatically during the sign-up creation. This field is available in API version 28.0 and later.
`ConnectedAppConsumerKey`	**Type** string **Properties** Create, Filter, Group, Sort **Description** When used with `ConnectedAppCallbackUrl`, specifies a connected app that's approved automatically during the sign-up creation. This field is available in API version 28.0 and later.
`Country`	**Type** string **Properties** Create, Filter, Group, Sort **Description** The default value is the country of the requesting org. To override the default, enter the two-character, uppercase ISO-3166 country code (Alpha-2 code). A complete list of the codes is located at https://www.iso.org/obp/ui/#search. The language of the trial org is auto-determined based on the value of this field.
`CreatedOrgId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The 15-character org ID of the trial org created. The system provides this read-only field after the sign-up request has been processed.
`CreatedOrgInstance`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The server instance of the new trial org, for example, "na8." This field is available in API version 29.0 and later.
`Edition`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort

Field Name	Details
	Description The Salesforce template that is used to create the trial org. Possible values are `Partner Group`, `Professional`, `Partner Professional`, `Sales Enterprise`, `Professional TSO`, `Enterprise`, `Partner Enterprise`, `Service Professional`, `Enterprise TSO`, `Developer`, and `Partner Developer`. This field is available in API version 35.0 and later.
`ErrorCode`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The error code if the sign-up request isn't successful. The system provides this read-only field for support purposes.
`FirstName`	**Type** string **Properties** Create, Filter, Nillable, Sort **Description** The first name of the admin user for the trial sign-up.
`LastName`	**Type** string **Properties** Create, Filter, Group, Sort **Description** The last name of the admin user for the trial sign-up.
`PreferredLanguage`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The language of the trial org being created. Specify the language using a language code listed under Fully Supported Languages in Supported Languages in Salesforce Help. For example, use *zh_CN* for simplified Chinese. The value you select overrides the language set by the locale. If you specify an invalid language, the org defaults to the default language of the country. Likewise, if you specify a language that isn't supported by the Salesforce edition associated with your trial template, the trial org defaults to the default language of the country. This field is available in API version 35.0 and later.

Field Name	Details
ResolvedTemplateId	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Populated during the sign-up request and for internal use by Salesforce. This field is available in API version 35.0 and later.
ShouldConnectToEnvHub	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** When set to `true`, the trial org is connected to the Environment Hub. The sign-up must take place in the hub main org or a spoke org. This field is available in API version 35.0 and later.
SignupEmail	**Type** email **Properties** Create, Filter, Group, Sort **Description** The email address of the admin user for the trial sign-up.
SignupSource	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** A user-specified description of the trial sign-up, up to 60 characters. This field is available in API version 36.0 and later.
Status	**Type** picklist **Properties** Defaulted on create, Filter, Group, Sort, Update **Description** The status of the request. Possible values are `New`, `In Progress`, `Error`, or `Success`. The default is `New`.
Subdomain	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Sort **Description** The My Domain name for the new trial org used in the org's login and application URLs. In Developer Edition orgs, your name must contain at least 3 characters and no more than 27 characters. In all other editions, it must be at least 3 characters and no more than 34 characters. It can include letters, numbers, and hyphens, but you can't start the name with a hyphen. If you don't choose a My Domain during sign-up, Salesforce assigns one for you based on your company name. If you don't like the one we set, you can change it. For details, see My Domain in Salesforce Help.
`SuppressSignupEmails`	**Type** boolean **Properties** Filter, Group, Nillable, Sort **Description** When set to `true`, no sign-up emails are sent when the trial org is created. This field is used for the Proxy Signup feature and is available in API version 29.0 and later.
`TemplateId`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The 15-character ID of the Trialforce template that is the basis for the trial sign-up. Salesforce must approve the template. If you don't specify an edition, a template ID is required.
`TrialDays`	**Type** anyType **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** The duration of the trial sign-up in days. Must be equal to or less than the trial days for the approved Trialforce template. If not provided, it defaults to the trial duration specified for the Trialforce template.
`TrialSourceOrgId`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description The 15-character org ID of the Trialforce Source Organization (TSO) from which the Trialforce template was created.
`Username`	**Type** string **Properties** Create, Filter, Group, Sort **Description** The username of the admin user for the trial sign-up. It must follow the address convention specified in RFC822: www.w3.org/Protocols/rfc822/#z10.

Usage

The Java class uses REST API to create a SignupRequest object. It authenticates to the Trialforce Management Organization (TMO) and then posts a request to the SignupRequest object.

Here are the variables to specify in this example.

- SERVER—The name of the host server for the TMO, for example, *`yourInstance`*.salesforce.com.
- USERNAME—The admin username for the TMO.
- PASSWORD—The concatenation of the admin password and the security token for the TMO. To get an email with the security token, from your personal settings in Salesforce, select **Reset My Security Token** and click **Reset Security Token**.
- CLIENT_ID—From Setup in Salesforce, in the Quick Find box, enter *`Apps`*, and then select **Apps**. Under Connected Apps, click **New**. Enter values for the required fields (Callback URL is required, but you can initially set it to any valid URL because it's not used). Grant full access for the OAuth scopes in the Selected OAuth Scopes selector, and click **Save**. Then copy the value of Consumer Key and use it for this variable.
- CLIENT_SECRET—On the same page, click **Click to reveal**. Then copy the value of Consumer Secret and use it for this variable.

```
public class IsvSignupDriver {
    private static final String SERVER = server_name:port;
    private static final String USERNAME = tmo_username;
    private static final String PASSWORD = tmo_passwordsecurity_token;
    private static final String CLIENT_ID = consumer_key;
    private static final String CLIENT_SECRET = consumer_secret;

    private static SignupRequestInfo signupRequest = null;

    public static String createSignupRequest (SignupRequestInfo sr)
      throws JSONException, IOException {
       JSONObject createResponse = null;
       signupRequest = sr;
       JSONObject loginResponse = login(SERVER, USERNAME, PASSWORD);
       String instanceUrl = loginResponse.getString("instance_url");
       String accessToken = loginResponse.getString("access_token");
       createResponse = create(instanceUrl, accessToken);
       System.out.println("Created SignupRequest object: " + createResponse + "\n");
```

```
        return createResponse.toString();
    }

    /* Authenticates to the TMO using the required credentials */

    private static JSONObject login(String server, String username, String password)
      throws ClientProtocolException, IOException, JSONException {
        String authEndPoint = server + "/services/oauth2/token";
        HttpClient httpclient = new DefaultHttpClient();
        try {
            HttpPost post = new HttpPost(authEndPoint);

            List<NameValuePair> params = new ArrayList<NameValuePair>();
            params.add(new BasicNameValuePair("grant_type", "password"));
            params.add(new BasicNameValuePair("client_id", CLIENT_ID));
            params.add(new BasicNameValuePair("client_secret", CLIENT_SECRET));
            params.add(new BasicNameValuePair("username", username));
            params.add(new BasicNameValuePair("password", password));
            post.setEntity(new UrlEncodedFormEntity(params, Consts.UTF_8));

            BasicResponseHandler handler = new BasicResponseHandler();
            String response = httpclient.execute(post, handler);
            return new JSONObject(response);
        } finally {
            httpclient.getConnectionManager().shutdown();
        }
    }
    /* Posts a request to the SignupRequest object */

    private static JSONObject create(String instanceUrl, String accessToken)
      throws ClientProtocolException, IOException, JSONException {
        HttpClient httpClient = new DefaultHttpClient();
        try {
            HttpPost post = new HttpPost(instanceUrl +
              "/services/data/v27.0/sobjects/SignupRequest/");
                post.setHeader("Authorization", "Bearer " + accessToken);
                post.setHeader("Content-Type", "application/json");

                JSONObject requestBody = new JSONObject();
                requestBody.put("TemplateId", signupRequest.getTemplateID());
                requestBody.put("SignupEmail", signupRequest.getEmail());
                requestBody.put("username", signupRequest.getUsername());
                requestBody.put("Country", "US");
                requestBody.put("Company", signupRequest.getCompanyName());
                requestBody.put("lastName", signupRequest.getLastName());

                StringEntity entity = new StringEntity(requestBody.toString());
                post.setEntity(entity);
                BasicResponseHandler handler = new BasicResponseHandler();
                String response = httpClient.execute(post, handler);
                return new JSONObject(response);
        } finally {
            httpClient.getConnectionManager().shutdown();
        }
```

```
    }
}
```

Error Codes

If the sign-up fails, the system generates an error code that can help you identify the cause. This table shows the most important error codes.

Error Code	Description
`C-1007`	Duplicate username.
`C-1015`	Error while establishing the new org's My Domain (subdomain) settings. Contact Salesforce support for assistance.
`C-1016`	Error while configuring the OAuth connected app for Proxy Signup. Verify that your connected app has a valid consumer key, callback URL, and unexpired certificate (if applicable).
`C-1018`	Invalid subdomain value provided during sign-up.
`C-1019`	Subdomain in use. Choose a new subdomain value.
`C-1020`	Template not found. Either the template doesn't exist or it was deleted.
`C-1033`	Template is the wrong version.
`C-1034`	Can't create the org. Contact Salesforce Customer Support for assistance.
`C-9999`	Generic fatal error. Contact Salesforce Customer Support for assistance.
`S-1006`	Invalid email address (not in a proper email address format).
`S-1014`	Invalid or missing parameters during the sign-up process. Possible solutions include: • Indicate a valid callback URL. • If indicated, be sure to provide both a Consumer Key and callback URL.
`S-1018`	Invalid My Domain (subdomain) name. Select a name that doesn't: • Contain double hyphens • End in a hyphen • Include restricted words • Exceed 40 characters (33 for Developer Edition)
`S-1019`	My Domain (subdomain) already in use.
`S-1026`	Invalid namespace. A namespace must begin with a letter, can't contain consecutive underscores, can't be a restricted or reserved namespace, and must be 15 characters or fewer.
`T-0001`	Template ID not valid (not in the format 0TTxxxxxxxxxxxx).
`T-0002`	Template not found. Either the template doesn't exist or it was deleted.
`T-0003`	Template not approved for use by Salesforce. Contact Salesforce Customer Support for assistance.

Error Code	Description
T-0004	The Trialforce Source Organization (TSO) for the template doesn't exist or has expired.
VR-0001	Can't create the scratch org. Try again later.
VR-0002	Can't create the scratch org. Check that the release value is valid. If no release value was specified, contact Salesforce Customer Support.
VR-0003	Can't create the scratch org. Check that the release value is valid. If no release value was specified, contact Salesforce Customer Support.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

- SignupRequestFeed—Feed tracking is available for the object.
- SignupRequestHistory—History is available for tracked fields of the object.
- SignupRequestOwnerSharingRule—Sharing rules are available for the object
- SignupRequestShare—Sharing is available for the object.

Site

Represents a public website that is integrated with an org. This object is available in API version 16.0 and later.

To access this object, Digital Experiences, Salesforce Sites, or Site.com must be enabled.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

- Customer Portal users can't access this object.
- To view this object, you must have the View Setup and Configuration permission.

Fields

Field	Description
AdminId	**Type** reference **Properties** Filter, Group, Sort **Description** The site administrator designated as the contact for the site. This user receives site-related communications from site visitors and from Salesforce.

Field	Description
	This is a relationship field. **Relationship Name** Admin **Relationship Type** Lookup **Refers To** User
AnalyticsTrackingCode	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The tracking code associated with your site. This code can be used by services like Google Analytics to track page request data for your site.
ArchiveStatus	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The archived status of a site. Possible values are: • NotArchived • TemporaritlyArchived
ArchivedById	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The user that archived the site. **Relationship Name:** ArchivedBy **Relationship Type:** Lookup **Refers To:** User
ArchivedDate	**Type** dateTime

Field	Description
	Properties Filter, Nillable, Sort **Description** Date and time when the site was archived.
`ClickjackProtectionLevel`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Sets the clickjack protection level. The options are: • `AllowAllFraming`—Allow framing by any page (no protection) • `SameOriginOnly`—Allow framing by the same origin only (recommended) • `NoFraming`—Don't allow framing by any page (most protection) This field is available in API version 30.0 and later.
`DailyBandwidthLimit`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The rolling 24-hour daily bandwidth limit for the sites in your organization.
`DailyBandwidthUsed`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The current rolling 24-hour daily bandwidth usage for the sites in your organization.
`DailyRequestTimeLimit`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The rolling 24-hour daily service request time limit for the sites in your organization. Service request time is calculated as the total server time in minutes required to generate pages for the site.

Field	Description
DailyRequestTimeUsed	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The current rolling 24-hour daily service request time for the sites in your organization.
Description	**Type** textarea **Properties** Filter, Nillable, Sort **Description** An optional description of the site.
GuestRecordDefaultOwnerId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** A user in the Salesforce org that is the default owner of records created by unauthenticated (guest) users. This is a relationship field. **Relationship Name** GuestRecordDefaultOwner **Relationship Type** Lookup **Refers To** User
GuestUserId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The site or Experience Cloud sites specific user that anonymous, unauthenticated users run as when interacting with the site. This is a relationship field. **Relationship Name** GuestUser

Field	Description
	Relationship Type Lookup **Refers To** User
`MasterLabel`	**Type** string **Properties** Filter, Group, Sort **Description** The name of the site as it appears in the user interface.
`MonthlyPageViewsEntitlement`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of page views allowed for the current calendar month for the sites in your organization.
`Name`	**Type** string **Properties** Filter, Group, Sort **Description** The name used when referencing the site in the API.
`OptionsAllowGuestPaymentsApi`	**Type** boolean **Properties** Filter **Description** Indicates whether unauthenticated guest users can access the Payments API (`true`) or not (`false`). The default is `false`. This field is available in API version 49.0 and later.
`OptionsAllowGuestSupportApi`	**Type** boolean **Properties** Filter **Description** The option to enable unauthenticated users to access the Support API.

Field	Description
OptionsAllowHomePage	**Type** boolean **Properties** Filter **Description** The option to enable the standard page associated with the Home tab (`/home/home.jsp`).
OptionsAllowStandardAnswersPages	**Type** boolean **Properties** Filter **Description** The option to enable standard pages associated with an answers Experience Cloud site. If you want to use default Answers pages (such as AnswersHome), enable these pages.
OptionsAllowStandardIdeasPages	**Type** boolean **Properties** Filter **Description** The option to enable standard pages associated with an Ideas Experience Cloud site. If you want to use default Ideas pages (such as IdeasHome), enable these pages.
OptionsAllowStandardLookups	**Type** boolean **Properties** Filter **Description** The option to enable the standard lookup pages. These are the windows associated with lookup fields on Visualforce pages.
OptionsAllowStandardPortalPages	**Type** boolean **Properties** Filter **Description** The option to enable authenticated users to access the standard Salesforce pages.

Field	Description
`OptionsAllowStandardSearch`	**Type** boolean **Properties** Filter **Description** The option to enable the standard search pages. To allow public users to perform standard searches, enable these pages.
`OptionsBrowserXssProtection`	**Type** boolean **Properties** Filter **Description** The option to enable the browser's cross-site scripting protection.
`OptionsCachePublicVfPagesInProxies`	**Type** boolean **Properties** Filter **Description** Indicates whether proxy servers cache this site's publicly available pages only for unauthenticated guest users (`true`) or not (`false`). When this field is `false`, this site's cache-enabled Visualforce pages are cached in the web browser for both authenticated and unauthenticated users. The default is `true`. See Configure Site Caching in Salesforce Help for more information. This field is available in API version 52.0 and later.
`OptionsContentSniffingProtection`	**Type** boolean **Properties** Filter **Description** The option to enable content-sniffing protection.
`OptionsCookieConsent`	**Type** boolean **Properties** Filter **Description** Indicates whether only required Salesforce-supplied cookies are allowed within the site (`true`) or all cookies types are allowed: required, functional, and

Field	Description
	advertising (`false`). The default is `false`. This field is available in API version 52.0 and later.
`OptionsCspUpgradeInsecureRequests`	**Type** boolean **Properties** Filter **Description** This field is removed in API version 52.0 and later. In API version 51.0 and earlier, the value in the field is ignored.
`OptionsEnableFeeds`	**Type** boolean **Properties** Filter **Description** The option that displays the Syndication Feeds related list, where you can create and manage syndication feeds for users on your public sites. This field is visible only if you have the feature enabled for your organization.
`OptionsHasStoredPathPrefix`	**Type** boolean **Properties** Filter **Description** Indicates whether this Experience Cloud site has a customized urlPathPrefix (`true`) or instead uses the Experience Cloud site's `UrlPathPrefix` plus `/s` (`false`). The default is `false`. In other sites, this field has no effect. This field is available in API version 50.0 and later.
`OptionsRedirectToCustomDomain`	**Type** boolean **Properties** Filter **Description** Indicates whether requests to this site's system-managed URLs are redirected to the HTTPS custom domain serving this site (`true`) or not (`false`). System-managed site URLs end in `*.my.salesforce-sites.com` or `*.my.site.com`. In Experience Cloud sites, the default is `false`. In Salesforce Sites, the default is `true`. If multiple custom domains serve this site and this field is set to true, requests are routed to the site's primary custom URL only if it's an HTTPS custom domain. Otherwise, requests are redirected to the first HTTPS custom domain associated

Field	Description
	with this site, in alphanumeric order. If no HTTPS custom domain serves this site, this option has no effect. This field is available in API version 52.0 and later.
OptionsReferrerPolicyOriginWhenCrossOrigin	**Type** boolean **Properties** Filter **Description** The option to enable referrer policy (origin-when-cross-origin).
OptionsRequireHttps	**Type** boolean **Properties** Filter **Description** This field is removed in API version 52.0 and later. In API version 51.0 and earlier, the value in the field is ignored.
SiteType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Identifies whether the site is a Visualforce (Salesforce Sites) or a Site.com site. SiteType is available in API version 21.0 and later. In API version 26.0 and later, if Experience Cloud sites are enabled for your Salesforce org, the site could also be a Network Visualforce or Network Site.com site.
Status	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The status for the site. For example, Active or In Maintenance.
Subdomain	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Description
	Description If you enabled Salesforce Sites or Digital Experiences before you enabled enhanced domains on your My Domain, this field returns this site's previous subdomain. For example, if your domain was `mycompany.force.com`, then `mycompany` is the subdomain. If you enabled Salesforce Sites or Digital Experiences after you enabled enhanced domains, this field returns a null value.
`TopLevelDomain`	**Type** url **Properties** Filter, Nillable **Description** The optional branded custom Web address that you registered with a third-party domain name registrar. The custom Web address acts as an alias to your Salesforce address. Beginning with API version 21.0, `TopLevelDomain` is no longer available. Instead, use the Domain and DomainSite objects.
`UrlPathPrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The unique Salesforce URL that the public uses to access this site.

Usage

Use this read-only object to query or retrieve information on your site.

Associated Objects

This object has the following associated objects. Unless noted, these associated objects are available in the same API version as this object.

SiteFeed
Feed tracking is available for the object.

SiteHistory
History is available for tracked fields of the object.

SiteDetail

Represents the details of a Salesforce site or Experience Cloud site. Available in API Version 38.0 and later.

Supported SOAP Calls

`describeSObjects()`, `query()`

Supported REST HTTP Methods

`GET`

Fields

Field	Details
`DurableId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID of the Site object.
`IsRegistrationEnabled`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the site allows users to sign up.
`SecureUrl`	**Type** url **Properties** Filter, Group, Nillable, Sort **Description** The URL of the website.

Note: SiteDetail fields are exposed in SOAP API version 45.0 and later. You can use Tooling API to query for SiteDetail fields in guest user mode in API version 44.0 and earlier. In API version 45.0 and later, use SOAP API to get this data in guest user mode. SiteDetail is still exposed in Tooling API to User Profiles with the ViewSetup permission.

SiteDomain

SiteDomain is a read-only object, and a one-to-many replacement for the Site.TopLevelDomain field. This object is available in API version 21.0, and has been deprecated as of API version 26.0. In API version 26.0 and later, use the Domain and DomainSite objects instead.

To access this object, Digital Experiences, Salesforce Sites, or Site.com must be enabled.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

- Customer Portal users can't access this object.
- To view this object, you must have the View Setup and Configuration permission.

Fields

Field	Description
`Domain`	**Type** url **Properties** Filter, Sort **Description** The branded custom Web address within the global namespace identified by this domain's type. In the Domain Name System (DNS) global namespace, this field is the custom Web address that you registered with a third-party domain name registrar. The custom Web address can be used to access the site of this domain.
`SiteId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the associated Site.
`DomainType`	**Type** picklist **Properties** Filter, Group, Sort, Nillable

Field	Description
	Description The global namespace that this custom Web address belongs to. This value is set to DNS for custom Web addresses in the global DNS. This field is available in version 24.0 of the API.

Usage

Use this read-only object to query the domains that are associated with each site in your organization.

SiteHistory

Represents the history of changes to the values in the fields of a site. This object is generally available in API version 18.0 and later.

To access this object, Salesforce Sites must be enabled for your organization.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Special Access Rules

- Customer Portal users can't access this object.
- To view this object, you must have the "View Setup and Configuration" permission.

Fields

Field	Details
`DataType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Data type of the field that was changed.
`Field`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The name of the field that was changed.

Field	Details
NewValue	**Type** anyType **Properties** Nillable, Sort **Description** The new value of the field that was changed.
OldValue	**Type** anyType **Properties** Nillable, Sort **Description** The last value of the field before it was changed.
SiteId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the associated Site. This is a relationship field. **Relationship Name** Site **Relationship Type** Lookup **Refers To** Site

SiteIframeWhitelistUrl

Represents a list of external domains that you allow to frame your Salesforce site or Experience Cloud site pages. This object is available in API version 44.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Customer Portal users can't access this object.
- To view this object, you must have the "View Setup and Configuration" permission.

Fields

Field Name	Details
`SiteId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the site to include in the inline frame. This is a relationship field. **Relationship Name** Site **Relationship Type** Lookup **Refers To** Site
`Url`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The domain allowed to frame your Salesforce site or Experience Cloud site page. Accepts these formats: example, example.com, *example.com, and https://example.com.

SiteRedirectMapping

Represents a site redirect from an external site to an Experience Cloud site. This object is available in API version 52.0 and later.

Supported Calls

`create(), delete(), describeSObjects(), query(), retrieve(), update(), upsert()`

Special Access Rules

This object is available only if Digital Experiences is enabled for your org and Create and Set Up Experiences is enabled.

Fields

Field	Details
Action	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The type of the redirect. Possible values are: • Permanent • Temporary
IsActive	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the redirect is enabled. Default value is false.
IsDynamic	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether a redirect rule is dynamic. Default value is false. This field is available in API version 57.0 and later.
SiteId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the site for the redirect. This field is a relationship field.

Field	Details
	Relationship Name Site **Relationship Type** Lookup **Refers To** Site
`Source`	**Type** url **Properties** Create, Filter, Sort **Description** The URL of the site you want to redirect.
`Target`	**Type** url **Properties** Create, Filter, Sort **Description** The URL of the Experience Cloud site you want to users to visit.

Usage

If you build a new site on Experience Cloud but you also have an old site on a different platform, ensure that users visit the new site. Use SiteRedirectMapping to redirect users from the external site to the Experience Cloud site.

Skill

Represents a category or group of Chat users or service resources in Field Service or Workforce Engagement. This object is available in API version 24.0 and later.

Note: For information about WDC skills on a user's profile, see the ProfileSkill topic.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** The description of the skill.
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance slows down while Salesforce generates one for each record.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the skill.
LastViewedDate	**Type** datetime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed the skill.
MasterLabel	**Type** string

Field Name	Details
	Properties Create, Filter, Group, idLookup, Sort, Update **Description** The name of the skill.

Usage

Chat

Use this object to assign Chat users to groups based on their abilities. The skills associated with a LiveChatButton determine which agents receive chat requests that come in through that button.

Field Service

Use this object to track certifications and areas of expertise in your workforce. After you create a skill, you can:

- Assign it to a service resource via the Skills related list on the resource's detail page. When you assign a skill to a service resource, you can specify their skill level and the duration of the skill.
- Add it as a required skill via the Skill Requirements related list on any work type, work order, or work order line item. When you add a required skill to a work record, you can specify the skill level.

Workforce Engagement

Use this object to specify areas of expertise in your workforce. After you create a skill, you can:

- Assign it to a service resource via the Skills related list on the resource's detail page.
- Add it as a required skill via the Skill Requirements related list on a job profile.

SkillLevelDefinition

Represents a skill which can be acquired by completing enablement site (myTrailhead) modules. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org must have a Workforce Engagement license and an Enablement Sites (myTrailhead) license. User must have at least one Workforce Engagement permission set assigned to them: Workforce Engagement Analyst, Workforce Engagement Planner, Workforce Engagement Agent.

Fields

Field	Details
Description	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Describes the mapping.
IsAutoApproved	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Whether this mapping auto-approves. The default value is 'false'.
LearningContent	**Type** string **Properties** Filter, Nillable **Description** The titles of the Trailhead modules associated to this mapping.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The user who owns the Skill Level Definition. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
SkillId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Sort, Update **Description** The skill that this mapping is for. This is a relationship field. **Relationship Name** Skill **Relationship Type** Lookup **Refers To** Skill
`SkillLevel`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The level to assign for the skill.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

SkillLevelDefinitionOwnerSharingRule on page 48
Sharing rules are available for the object.

SkillLevelDefinitionShare on page 50
Sharing is available for the object.

SkillLevelProgress

Represents training progress for a given user. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org must have a Workforce Engagement license and an Enablement Sites (myTrailhead) license. User must have at least one Workforce Engagement permission set assigned to them: Workforce Engagement Analyst, Workforce Engagement Planner, Workforce Engagement Agent.

Fields

Field	Details
`CompletedCount`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** Number of modules that have been completed towards this Skill Mapping.
`CompletedDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date when this progress was completed.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of skill level progress. This is a relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** User
`ServiceResourceId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update

Field	Details
	Description The Service Resource that will be granted a service resource skill when the progress is complete. This is a relationship field. **Relationship Name** ServiceResource **Relationship Type** Lookup **Refers To** ServiceResource
`SkillLevelDefinitionId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The corresponding skill mapping for this progress. This is a relationship field. **Relationship Name** SkillLevelDefinition **Relationship Type** Lookup **Refers To** SkillLevelDefinition
`SkillMasterLabel`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The master label of the Skill associated with the associated SkillLevelDefinition.
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Represents the status of the progress. Possible values are: • `A`—Approved

Field	Details
	• `R`—Review • `S`—Started The default value is 'S'.
`TotalCount`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The total number of modules that need to be completed.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

SkillLevelProgressOwnerSharingRule on page 48
Sharing rules are available for the object.

SkillLevelProgressShare on page 50
Sharing is available for the object.

SkillProfile

Represents a join between Skill and Profile. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `update()`, `retrieve()`

Fields

Field Name	Details
`ProfileId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the profile.

Field Name	Details
`SkillId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the skill.

Usage

Use this object to assign specific skills to specific profiles.

SkillRequirement

Represents a skill that is required to complete a particular task in Field Service, Omni-Channel, Salesforce Scheduler, or Workforce Engagement. Skill requirements can be added to pending service routing objects in Omni-Channel. They can be added to work types, work orders, and work order line items in Field Service and Lightning Scheduler. And they can be added to job profiles in Workforce Engagement. This object is available in API version 38.0 and later. You also can add skill requirements to work items in Omni-Channel skills-based routing using API version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

If you want to use SkillRequirement for Field Service use cases, then Field Service must be enabled.

If you want to use SkillRequirement only for Omni-Channel skills-based routing use cases, then you don't need Field Service to be enabled.

If you want to use SkillRequirement for Workforce Engagement use cases, then Workforce Engagement must be enabled.

Fields

Field Name	Details
`IsAdditionalSkill`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description Indicates that a skill is additional. After a designated timeout period, a skill marked as additional is dropped from Omni-Channel routing. The case is then routed to the best-matched agent even if they don't have all the skills.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed.
`RelatedRecordId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The record that the skill is required for. The related record can be a work order, work order line item, work type, or pending service routing record. This is a polymorphic relationship field. **Relationship Name** RelatedRecord **Relationship Type** Lookup **Refers To** WorkOrder, WorkOrderLineItem, WorkType
`SkillId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update

Field Name	Details
	Description The skill that is required. This is a relationship field. **Relationship Name** Skill **Relationship Type** Lookup **Refers To** Skill
`SkillLevel`	**Type** double **Properties** Create, Defaulted on create, Filter, Nillable, Sort, Update **Description** The level of the skill required. Skill levels can range from zero to 99.99. Depending on your business needs, you can have the skill level to reflect years of experience, certification levels, or license classes.
`SkillNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An auto-generated number identifying the skill requirement.
`SkillPriority`	**Type** int **Properties** Aggregatable, Create, Filter, Group, Nillable, Sort, Update **Description** For additional skills, specify the order in which skills are dropped if after the specified timeout no agent with that skill is available. Higher priority-value skills are dropped first. Lower priority-value skills, for example 0, are dropped last. Skills with the same priority value are dropped as a group. You can set skill priority using skills-based routing rules or Apex code.

Usage

Field Service

Skill requirements help dispatchers assign work orders to service resources with the proper expertise. You can still assign a work order, work order line item, or related service appointment to a service resource that does *not* have the specified skills, so skill requirements serve more as a suggestion than a rule.

> Note: If you're using the Field Service managed package, use matching rules to ensure that appointments are only assigned to service resources who possess the skills listed on the parent work order.

If many of your work orders require the same skills, add skill requirements to work types to save time and keep your processes consistent. When you add a skill requirement to a work type, work orders and work order line items that use that type automatically inherit the skill requirement. For example, if all annual maintenance visits for your Classic Refrigerator product require a Refrigerator Maintenance skill level of at least 50, add that skill requirement to the Annual Maintenance Visit work type. When you create a work order for a customer's annual fridge maintenance, applying that work type adds the skill requirement as well.

Omni-Channel

We recommend that you use Omni-Channel flow or skills-based routing rules to create skills-based routing requests. When you do so, work items are routed by creating a PendingServiceRouting object. The PendingServiceRouting object can have multiple SkillRequirements objects associated with it. When a work item requires multiple skills, it's routed to an agent who has all of the required skills. The PendingServiceRouting object adds attributes to the work item that represent the skill (skill id), priority, skill proficiency, and timestamp.

Workforce Engagement

Workforce Engagement uses skill requirements to assign shifts to agents who have the right skills. You can still assign shifts to service resources if they don't have those skills.

In a non-Omni workflow, create a scheduling rule that matches agents to shifts based on their skills and the job profile's skill requirements. Shift scheduling tools can then assign agents with the right skills.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

SkillRequirementChangeEvent (API version 54.0)
: Change events are available for the object.

SkillRequirementFeed
: Feed tracking is available for the object.

SkillRequirementHistory
: History is available for tracked fields of the object.

SkillUser

Represents a join between Skill and User. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `update()`, `query()`, `retrieve()`

Fields

Field Name	Details
`SkillId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the skill.
`UserId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the user.

Usage

Use this object to assign specific skills to specific users.

SlaProcess

Represents an entitlement process associated with an Entitlement. This object is available in API version 19.0 and later.

An entitlement process is a timeline that includes all the steps (MilestoneType records) that your support team must complete to resolve cases. Each process includes the logic necessary to determine how to enforce the correct service level for your customers.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`, `describeLayout()`

Special Access Rules

As of Summer '20 and later, only Salesforce admin users, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.

Fields

Field	Details
`BusinessHoursId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Required. ID of the BusinessHours associated with the entitlement. Must be a valid business hours ID.
`Description`	**Type** textarea **Properties** Filter, Nillable **Description** A description of the entitlement process.
`IsActive`	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the entitlement process is active (`true`) or not (`false`).
`IsVersionDefault`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the entitlement process is the default version (`true`) or not (`false`). This field is available in API version 28.0 and later in organizations that have entitlement versioning enabled.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the SlaProcess was last viewed.

Field	Details
`Name`	**Type** string **Properties** Filter, idLookup **Description** The name of the entitlement process.
`NameNorm`	**Type** string **Properties** Filter, Group, Sort **Description** The read-only value for the unique name of the entitlement process or the entitlement process version. If entitlement versioning is enabled, this value is automatically generated for each version of an entitlement process in this form: *`process name`*+_v + *`x`*, where *`x`* is the version number (for example, "gold_support_v2"). If entitlement versioning isn't enabled, this value is the same as `Name`. This field is available in API version 28.0 and later.
`SObjectType`	**Type** picklist **Properties** Restricted picklist, Filter, Group, Sort **Description** The type of records that the entitlement process can run on. Its values are: • *`Case`* • *`Work Order`* An entitlement process runs only on records that match its type. For example, a Case entitlement process that's applied to an entitlement runs only on cases associated with the entitlement, not on work orders. As a best practice, therefore, manage customers' work orders and cases on separate entitlements. The field label in the user interface is Entitlement Process Type.
`StartDateField`	**Type** picklist **Properties** Filter, Restricted picklist **Description** The criteria for cases to enter the entitlement process. Cases can enter the process based on: • The creation date on a case

Field	Details
	• A custom date/time field on a case
`VersionMaster`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Identifies the sequence of versions to which this entitlement process belongs. This field's contents can be any value as long as it is identical among all versions of the entitlement process. This field is available in API version 28.0 and later in organizations that have entitlement versioning enabled.
`VersionNotes`	**Type** textarea **Properties** Filter, Group, Nillable, Sort **Description** The description of the entitlement process version. This field is available in API version 28.0 and later in organizations that have entitlement versioning enabled.
`VersionNumber`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The version number of the entitlement process. Must be 1 or greater. This field is available in API version 28.0 and later in organizations that have entitlement versioning enabled.

Usage

Use this object to query entitlement processes on entitlements.

SEE ALSO:

Entitlement
MilestoneType
CaseMilestone

Snippet

Represents a snippet, which is a container for rich text that can be reused across Account Engagement emails and email templates. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Snippets are available in Account Engagement business units with the Sales, CRM, or Service permission set license.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** The description of the snippet. Limited to 32 KB.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. This field value is unique to your org and is required for a Snippet to be resolved in marketing content. Label is **API Name**.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. The name of the snippet.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The type of content a snippet includes. Allowable values are: Date, Image, Link, Text. This field is for organizational purposes.
`Value`	**Type** textarea **Properties** Create, Nillable, Update **Description** The body content of a snippet. This field can contain plain or rich text. The value of a snippet is resolved when a marketing email is sent. The field does not support emojis, HTML, or image files.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

SnippetFeed
Feed tracking is available for the object.

SnippetAssignment

Represents a relationship between a snippet and a campaign. Assignments are required to use snippet content in Account Engagement emails and email templates. A snippet can be assigned to more than one campaign. This object is available in API version 47.0 and later.

Supported Calls

create( ), delete( ), describeLayout( ), describeSObjects( ), getDeleted( ), getUpdated( ), query( ), retrieve( )

Special Access Rules

Snippets are available in Account Engagement business units with the Sales, CRM, or Service permission set license.

Fields

Field	Details
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the parent object
`SnippetId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the related snippet record

SocialPersona

Represents a snapshot of a contact's profile on a social network such as Facebook or Twitter. This object is available in API version 22.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`AreWeFollowing`	**Type** boolean

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** Specifies whether a Salesforce social account is following the social persona or not.
AuthorLabels	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Comma-separated list of author type tags.
AvatarUrl	**Type** string **Properties** Nillable **Description** Retrieves the user's social network avatar. It's a read-only field and you can't specify or update its value.
Bio	**Type** textarea **Properties** Create, Nillable, Update **Description** Biography of the social persona.
ExternalId	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the social persona on the social network.
ExternalPictureURL	**Type** url **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** URL to the picture of the social persona on the social network.

Field Name	Details
Followers	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Number of followers that the social persona has.
Following	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Number of people that the social persona is following.
InfluencerScore	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Radian6 score describing the influence of the social persona. No longer used.
IsBlacklisted	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Specifies whether the social persona is blacklisted or not.
IsDefault	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Specifies whether the social persona supplies the default avatar image that's displayed on the contact or account.
IsFollowingUs	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description Specifies whether the social persona is following a Salesforce social account or not.
IsVerified	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Specifies whether the social persona is verified or not.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date and time when the social persona was last referenced.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date and time when the social persona was last viewed.
ListedCount	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Radian6 field. No longer used.
MediaProvider	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Social network of the social persona.
MediaType	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Social network type of the social persona.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the social persona.
`NumberOfFriends`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Number of friends that the social persona has.
`NumberOfTweets`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Number of tweets made by the social persona.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the contact parent record for the social persona. This is a polymorphic relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** Account, Contact, Lead, SocialPost

Field Name	Details
ProfileType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Type of profile. Values are: • Person • Page
ProfileUrl	**Type** url **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** URL for the profile.
Provider	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Social network, such as Facebook or Twitter, of the social persona.
R6SourceId	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the social persona in Social Studio.
RealName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Real name of the social persona.
SourceApp	**Type** string **Properties** Create, Filter, Group, Nillable, Sort

Field Name	Details
	Description Salesforce product that created the social persona.
`TopicType`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Type of topic, such as keyword or managed.

Usage

The fields on a SocialPersona object don't provide real-time data. They provide a snapshot of information from the last time Salesforce collected a post from the social persona. Many of the Radian6-related fields are no longer accurate or used.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

SocialPersonaHistory (API version 26.0)
History is available for tracked fields of the object.

SocialPost

Represents a snapshot of a post on a social network such as a Facebook or Twitter. This object is available in API version 23.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`AnalyzerScore`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Score set on the social post in Social Studio.

Field Name	Details
AssignedTo	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** User in Social Studio that the social post is assigned to.
AttachmentType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Type of the first attachment on the social post. Values are: • APPLICATION • AUDIO • IMAGE • LINK • TEXT • UNKNOWN • VIDEO
AttachmentUrl	**Type** url **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** URL for the first attachment on the social post.
Classification	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Classification for the social post, such as inquiry or customer case.
CommentCount	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Number of comments on the social post.

Field Name	Details
Content	**Type** textarea **Properties** Create, Nillable, Update **Description** Body of the social post.
DeletedById	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** If the social post is deleted, ID of the person who deleted the social post. This is a relationship field. **Relationship Name** DeletedBy **Relationship Type** Lookup **Refers To** User
EngagementLevel	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Engagement level of the social post, such as reviewed or resolved.
ExternalPostId	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the social post in its social network.
Handle	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Handle of the person who posted the social post.

Field Name	Details
HarvestDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Date and time when Social Studio collected the social post.
Headline	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Headline of the social post.
HiddenById	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** If the social post is hidden, ID of the person who hid it. This is a relationship field. **Relationship Name** HiddenBy **Relationship Type** Lookup **Refers To** User
InboundLinkCount	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Number of links on the inbound social post.
IsOutbound	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Specifies whether the social post is outbound or not.

Field Name	Details
KeywordGroupName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Radian6 field that is no longer used.
Language	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Language of the social post.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date when the social post was last referenced.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date when the social post was last viewed.
LikedBy	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the managed social account in the social network that liked the social post.
LikesAndVotes	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Radian6 number of likes and votes on the social post.

Field Name	Details
MediaProvider	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Social network of the social post.
MediaType	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Type of social network of the social post.
MessageType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Type of message. Values are: • Comment—Facebook comment • Direct—Twitter direct message • Post—Facebook post • Private—Facebook private message • Reply—Twitter or Facebook reply • Retweet—Twitter retweet • Tweet—Twitter tweet
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the social post.
Notes	**Type** textarea **Properties** Create, Nillable, Update **Description** Notes added by Social Hub actions for the social post.

Field Name	Details
OutboundSocialAccountId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the social account used for outbound social posts. This is a relationship field. **Relationship Name** OutboundSocialAccount **Relationship Type** Lookup **Refers To** ExternalSocialAccount
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of the social post. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
ParentId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the parent record of the social post, for example, the ID of a case. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup

Field Name	Details
	Refers To Case
PersonaId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the social persona who made the post. This is a relationship field. **Relationship Name** Persona **Relationship Type** Lookup **Refers To** SocialPersona
PostPriority	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Priority of the social post set in Social Studio.
PostTags	**Type** textarea **Properties** Create, Nillable, Update **Description** Comma-separated list of tags on the social post.
PostUrl	**Type** url **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** URL for the social post.
Posted	**Type** dateTime

Field Name	Details
	Properties Create, Defaulted on create, Filter, Sort, Update **Description** Date and time when the social post was made.
`Provider`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Social network of the social post.
`R6PostId`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** Unique ID of the post in Social Studio.
`R6SourceId`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the author in Social Studio.
`R6TopicId`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID for either the topic profile or the managed account in Social Studio.
`Recipient`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the recipient of the social post in Social Studio.
`RecipientType`	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Type of the recipient of the social post, such as a person.
ReplyToId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** Dynamically generated from replyToExternalPostId in Social Studio. This is a relationship field. **Relationship Name** ReplyTo **Relationship Type** Lookup **Refers To** SocialPost
ResponseContextExternalId	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** External ID, such as a conversation ID, author ID, or post ID, for the item you're responding to.
ReviewScale	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Review scale for the social post.
ReviewScore	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Review score for the social post.

Field Name	Details
ReviewedStatus	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Status of the social post review.
Sentiment	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Sentiment of the social post. Values are: • Negative • Neutral • Positive • SomewhatNegative • SomewhatPositive
Shares	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Number of times the social post has been shared.
SourceTags	**Type** textarea **Properties** Create, Nillable, Update **Description** Comma-separated list of author type tags.
SpamRating	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Spam rating of the social post. Values are: • NotSpam

Field Name	Details
	• `Spam`
`Status`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Status of the social post. Values are: • `DELETED` • `FAILED` • `HIDDEN` • `PENDING` • `PENDING_APPROVAL` • `RECALL_APPROVAL` • `REJECTED_APPROVAL` • `REPLIED` • `SENT` • `UNKNOWN`
`StatusMessage`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Status message for the social post.
`ThreadSize`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Radian6 field. No longer used.
`TopicProfileName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Name of the topic profile for the social post in Social Studio.

Field Name	Details
`TopicType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Type of topic. Values are: • `Keyword` • `Managed`
`TruncatedContent`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Truncated content of the social post.
`UniqueCommentors`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Number of unique people who commented on the social post.
`ViewCount`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Number of times the social post was viewed.
`WhoId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Polymorphic ID of a person such as a lead or a contact. This is a polymorphic relationship field. **Relationship Name** Who **Relationship Type** Lookup

Field Name	Details
	Refers To Account, Contact, Lead

Usage

The fields on a SocialPost object don't provide real-time data. They provide a snapshot of information from the last time Salesforce collected the post from the social network. Many of the Radian6-related fields are no longer accurate or used.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

SocialPostChangeEvent (API version 48.0)
Change events are available for the object.

SocialPostFeed (API version 26.0)
Feed tracking is available for the object.

SocialPostHistory (API version 26.0)
History is available for tracked fields of the object.

SocialPostOwnerSharingRule
Sharing rules are available for the object.

SocialPostShare
Sharing is available for the object.

Solution

Represents a detailed description of a customer issue and the resolution of that issue.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter

Field	Details
	Description Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
`IsHtml`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the Solution is an HTML solution (`true`) or not (`false`).
`IsOutOfDate`	**Type** boolean **Properties** Defaulted on create, Filter **Description** Read-only field that indicates whether a solution master has been updated since the translated version was created (`true`) or not (`false`). Note that this field does not appear in the page layout of master solutions.
`IsPublished`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the Solution has been published (`true`) or not (`false`). A solution's published state does not affect how it can be used, or whether you can query, update, or delete it. Label is **Public**. Note: Prior to Spring '14, the label was **Visible in Self-Service Portal**.
`IsPublishedInPublicKb`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the Solution has been published as a Public Solution (`true`) or not (`false`). Label is **Visible in Public Knowledge Base**. This field only applies to solutions, not articles in the public knowledge base.
`IsReviewed`	**Type** boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort **Description** Indicates whether the Solution has been reviewed (`true`) or not (`false`). This flag can only be set indirectly via the `Status` picklist. Each predefined `Status` value implies an `IsReviewed` value. Label is **Reviewed**.
`LastReferencedDate`	**Type** datetime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
`LastViewedDate`	**Type** datetime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the User who owns the Solution. This is a relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** User
`ParentId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Update

Field	Details
	Description ID of the master solution, if this is the translation of a master solution.
`RecordTypeId`	**Type** reference **Properties** Create, Filter, Nillable, Update **Description** ID of the RecordType to which the Solution is associated.
`SolutionLanguage`	**Type** picklist **Properties** Create, Filter, Restricted picklist, Update **Description** The language that the solution is written in, such as `French` or `Chinese (Traditional).`
`SolutionName`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. If a client application creates a new Solution and a value for this field is unspecified, a hyphen (-), the default value for this field, is used. Limit: 255 characters. Label is **Title**.
`SolutionNote`	**Type** textarea **Properties** Create, Nillable, Update **Description** The details of the Solution record. Limit: 32,000 characters. Label is **Solution Details**. Note: If you have HTML Solutions enabled, any HTML tags used in this field are verified before the object is created or updated. If invalid HTML is entered, an error is thrown. Any JavaScript used in this field is removed before the object is created or updated.
`SolutionNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort

Field	Details
	Description An identifying number that is assigned automatically when a solution is created. It can't be set directly, and it can't be modified.
Status	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Required. The status of the solution. Directly controls the `IsReviewed` value. To obtain the status values in the picklist, a client application can query the SolutionStatus.
TimesUsed	**Type** int **Properties** Filter, Group, Sort **Description** Number of times this solution has been used. Label is **Num Related Case**.

Usage

Use this object to manage your organization's solutions. Client applications can create, update, delete, and query Attachment records associated with a solution.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

SolutionFeed (API version 18.0)
Feed tracking is available for the object.

SolutionHistory
History is available for tracked fields of the object.

SEE ALSO:

CategoryData

CategoryNode

SolutionStatus

Represents the status of a Solution, such as Draft, Reviewed, and so on.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
`ApiName`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Uniquely identifies a picklist value so it can be retrieved without using an id or primary label.
`IsDefault`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether this is the default solution status value (`true`) or not (`false`) in the picklist. Only one value can be the default value.
`IsReviewed`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether this solution status value represents a reviewed Solution (`true`) or not (`false`). Multiple solution status values can represent a reviewed Solution.
`MasterLabel`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Label for this solution status value. This display value is the internal label that does not get translated.
`SortOrder`	**Type** int

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** Number used to sort this value in the solution status picklist. These numbers are not guaranteed to be sequential, as some previous solution status values might have been deleted.

Usage

This object represents a value in the solution status picklist. The solution status picklist provides additional information about the status of a Solution, such as whether a given status value represents a reviewed or unreviewed solution. Your client application can query this object to retrieve the set of values in the solution status picklist, and then use that information while processing Solution objects to determine more information about a given solution. For example, the application could test whether a given case has been reviewed or not based on its `Status` value and the value of the `IsReviewed` property in the associated SolutionStatus record.

SEE ALSO:

Solution

SolutionTag

Associates a word or short phrase with a Solution.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
`ItemId`	**Type** reference **Properties** Create, Filter **Description** ID of the tagged item.
`Name`	**Type** string **Properties** Create, Filter

Field Name	Details
	Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
`TagDefinitionId`	**Type** reference **Properties** Filter **Description** ID of the parent TagDefinition object that owns the tag.
`Type`	**Type** picklist **Properties** Create, Filter, Restricted picklist **Description** Defines the visibility of a tag. Valid values: • `Public`—The tag can be viewed and manipulated by all users in an organization. • `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`.

Usage

SolutionTag stores the relationship between its parent TagDefinition and the Solution being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

SOSDeployment

Represents the general settings for deploying SOS video call capability in a native mobile application. This object is available in API version 34.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance slows down while Salesforce generates one for each record. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the deployment.
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The name of the deployment.
OptionsIsBackwardFacingCameraEnabled	**Type** boolean **Properties** Create, Filter, Update **Description** Determines whether customers can use the backwards-facing camera on their mobile devices to talk to SOS agents.

Field Name	Details
`OptionsIsEnabled`	**Type** boolean **Properties** Create, Filter, Update **Description** Determines whether the deployment is enabled for customers to request new SOS video calls.
`OptionsIsVoiceOnlyMode`	**Type** boolean **Properties** Create, Filter, Update **Description** Determines whether video functionality is disabled for customers, making it so customers can only talk to SOS agents using only audio.
`QueueId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the queue that's associated with the SOS deployment.

Usage

Use this object to query and manage SOS deployments.

SOSSession

This object is automatically created for each SOS session and stores information about the session. This object is available in API versions 34.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
AppVersion	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The version of the customer's mobile application in which SOS is implemented.
CaseId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the case that's associated with the SOS session.
ContactId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the contact that's associated with the SOS session.
DeploymentId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the SOS deployment that the SOS session originated from.
EndTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The time that the SOS session ended.
IpAddress	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description To protect the customer's privacy, this field is now blank.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the session record was last referenced by a user.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the session record was last viewed.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort **Description** The name of the session.
OpentokSession	**Type** encryptedstring **Properties** Create, Nillable, Update **Description** The ID of the OpenTok session that's associated with the SOS video call.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the session record's owner.
SessionDuration	**Type** int **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description The amount of time that the SOS session lasted.
`SessionRecordingUrl`	**Type** url **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The URL where the SOS session recording is stored.
`SosVersion`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The version of SOS that was used in your organization's mobile application when this session occurred.
`StartTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The time that the SOS session began.
`SystemInfo`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Information about the customer's mobile device from which the SOS call originated, such as the device's operating system.
`WaitDuration`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The amount of time the customer waited before an agent accepted the SOS session and the call began.

Usage

Use this object to query and manage SOS session records.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

SOSSessionFeed
Feed tracking is available for the object.

SOSSessionHistory
History is available for tracked fields of the object.

SOSSessionOwnerSharingRule
Sharing rules are available for the object.

SOSSessionShare
Sharing is available for the object.

SOSSessionActivity

Captures information about specific events that occur during an SOS video call, such as when an SOS call begins or ends. This object is available in API version 34.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`ActivityTime`	**Type** dateTime **Properties** Create, Filter, Sort **Description** The time at which the activity occurred.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, idLookup, Filter, Sort **Description** The name of the activity.

Field Name	Details
`SessionId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the SOS session that's associated with the event.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The kind of activity that occurred.

Usage

Use this object to query and manage SOS session activities.

Stamp

Represents a User Specialty. This object is available in API version 39.0 and later.

Create User Specialty labels. Specialties can be any term you want, up to 50 characters, including spaces and underscores.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Description
`Description`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Use this field to describe what the user specialty means and how it applies to a user. You have a 255 character maximum including spaces and underscores.

Field	Description
MasterLabel	**Type** string **Properties** Filter, Group, Sort **Description** The User Specialty label that appears under the user's profile picture. You can create any label you want as long as it's within the 50 character maximum, including spaces and underscores.
ParentId	**Type** reference **Properties** Filter, Group, Sort **Description** The id of the org or network. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** Organization

StampAssignment

Represents assignment of a User Specialty to a user. This object is available in API version 39.0 and later.

Assign a User Specialty to users. This label appears beneath their profile photo.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
StampId	**Type** reference **Properties** Filter, Group, Sort

Field	Details
	Description The unique id generated when creating a user specialty. This is a relationship field. **Relationship Name** Stamp **Relationship Type** Lookup **Refers To** Stamp
`SubjectId`	**Type** reference **Properties** Filter, Group, Sort **Description** The id for the user getting the User Specialty label. This is a relationship field. **Relationship Name** Subject **Relationship Type** Lookup **Refers To** User

StandardInvocableActionType

Represents a collection of fields to set up granular user permissions for access to a standard invocable action in Flow Builder. This object is available in API version 60.0 and later.

Supported Calls

`query()`

Fields

Field	Details
`DeveloperName`	**Type** string

Field	Details
	Properties Filter, Group, Sort **Description** The developer name and namespace combination of the invocable action. This combination must be unique.
`Namespace`	**Type** string **Properties** Filter, Group, Sort **Description** The namespace of the invocable action. Enter a value only if you're using the invocable action in Flow Builder or with Apex.

StandardShippingRate

Standard shipping rate for a store. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The StandardShippingRate object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
`ConditionFactor`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Conditions that affect the shipping rate. Possible values are: • `OrderPriceFactor`—Total price of the order. • `OrderWeightFactor`—Reserved for future use.

Field	Details
ConditionRangeMax	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Maximum value of the shipping rate condition.
ConditionRangeMin	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Minimum value of the shipping rate condition.
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Currency ISO code of the cart. Possible values are: • `EUR`—Euro • `USD`—U.S. Dollar The default value is `USD`.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the standard shipping rate.
Price	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** Price of standard shipping.
ShippingZoneId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Sort **Description** ID of the shipping zone. This field is a relationship field. **Relationship Name** ShippingZone **Relationship Type** Lookup **Refers To** ShippingRateArea

StaticResource

Represents a static resource that can be used in Visualforce markup.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field	Details
`Body`	**Type** base64 **Properties** Create, Nillable, Update **Description** Required. Encoded file data.
`BodyLength`	**Type** int **Properties** Filter, Group, Sort **Description** Size of the file (in bytes).

Field	Details
`CacheControl`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The sharing policy for the static resource when cached. The cache control can have one of the following values: • *`Private`* specifies that the static resource data cached on the Salesforce server shouldn't be shared with other users. The static resource is stored in cache only for the current user's session. • *`Public`* specifies that the static resource data cached on the Salesforce server be shared with other users in your organization for faster load times. For API users, the resource is accessible to all internet traffic.
`ContentType`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Type of content. Label is **Mime Type**. Limit: 120 characters.
`Description`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Text description of the static resource. Limit: 255 characters.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. Name of the static resource.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. This field can't be accessed unless the logged-in user has the Customize Application permission.

Usage

Use static resources to upload content that you can reference in Visualforce markup, including archives (such as .zip and .jar files), images, stylesheets, JavaScript, and other files. Using a static resource is preferable to uploading a file to the Documents tab because:

- You can package a collection of related files into a directory hierarchy and upload that hierarchy as a .zip or .jar archive.
- You can reference a static resource in page markup by name using the `$Resource` global variable instead of hard-coding document IDs.

Encoded Data

The API sends and receives the binary file data encoded as a base64 data type. Prior to creating a record, clients must encode the binary file data as base64. Upon receiving an API response, clients must decode the base64 data to binary (this conversion is usually handled for you by the SOAP client).

Maximum Static Resource Size

You can create or update static resources to a maximum size of 5 MB. An organization can have up to 250 MB of static resources, total.

StoreIntegratedService

Represents an association between an integration and a store. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The StoreIntegratedService object is available only if the B2B Commerce license is enabled.

Fields

Field	Details

`Integration`	**Type**
	picklist
	Properties
	Create, Filter, Group, Restricted picklist, Sort, Update
	Description
	Required. The integration ID.
	Possible values are:
	• If the integration is a RegisteredExternalService:
	  – The ID of the RegisteredExternalService OR
	  – [ServiceProviderType]__[DeveloperName]
	    • ServiceProviderType: Price, Inventory, Tax, or Shipment
	    • DeveloperName of RegisteredExternalService
	• If the integration is a PaymentGateway:
	  – The ID of the PaymentGateway
	• If the integration is a Flow:
	  – [ServiceProviderType]__[NamespacePrefix]__[ApiName]
	  – If NamespacePrefix is null, it's [ServiceProviderType]__[ApiName]
	    • ServiceProviderType: Flow
	    • ApiName and NamespacePrefix of FlowDefinitionView
	• If the integration is the Salesforce Standard pricing:
	  – [ServiceProviderType]__B2B_STOREFRONT__StandardPricing
	    • ServiceProviderType: Price

Field	Details
`ServiceProviderType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. The type of integration service provider. Possible values are: • `Flow` • `Inventory` • `Payment` • `Price` • `Promotions` (this value is available in API version 53.0 and later) • `Shipment` • `Tax`
`StoreId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Required. The unique ID for the store.

StreamingChannel

Represents a channel that is the basis for notifying listeners of generic Streaming API events. This object is available in API version 29.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- This object is available only if Streaming API is enabled for your org.
- Users with the Create permission can create this record.
- You can create a permission set and grant users read and create access to all streaming channels in the org. This access isn't for a specific channel, like with user sharing.
- You can apply user sharing to StreamingChannel. You can restrict access to receiving or sending events on a channel by sharing channels with specific users or groups. Channels shared with public read-only or read-write access send events only to clients

subscribed to the channel that also are using a user session associated with the set of shared users or groups. Only users with read-write access to a shared channel can generate events on the channel, or modify the actual StreamingChannel record.

Fields

Field	Details
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the StreamingChannel. Limit: 255 characters. **Label:** Description
`IsDynamic`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** `true` if the channel gets dynamically created on subscribe if necessary, `false` otherwise.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description Required. Descriptive name of the streaming channel. Limit: 80 characters, alphanumeric and "_", "/" characters only. Must start with "/u/". This value identifies the channel and must be unique. **Label:** Streaming Channel Name
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner of the streaming channel. **Label:** Owner Name This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User

Dynamic Streaming Channel

Streaming API generic streaming supports dynamic streaming channel creation, which creates a StreamingChannel when a client first subscribes to the channel. To enable dynamic streaming channels in your org, from Setup, enter *`User Interface`* in the Quick Find box, then select **User Interface**. Enable **Enable Dynamic Streaming Channel Creation**. You can also enable dynamic channel creation in Metadata API using EventSettings.

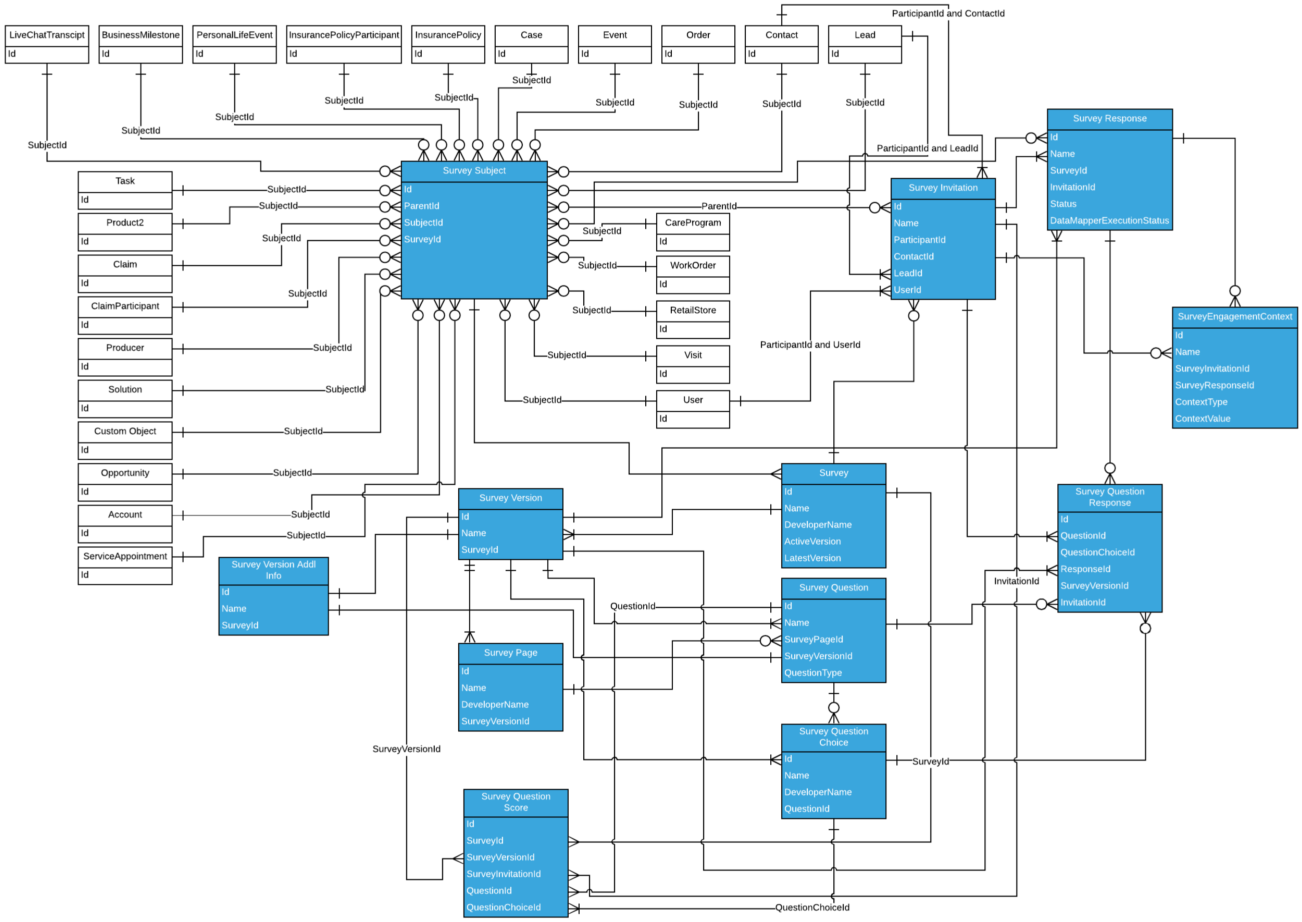
Streaming API Developer Guide

Salesforce Surveys Object Model

Learn about how Salesforce Surveys objects relate to one another in Salesforce.



Survey

Represents a survey.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Note: You can't define custom fields for the Survey object using the Object Manager.

Fields

Field Name	Details
`ActiveVersionID`	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description The ID of the survey version currently activated.
Description	**Type** string **Properties** Nillable **Description** The description of the survey. This field isn’t visible in the UI.
DeveloperName	**Type** string **Properties** Filter, Group, Sort **Description** The survey’s unique API name.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the current user last viewed a record related to the survey.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed the survey.
LatestVersionId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the most recent version of this survey.
Name	**Type** string **Properties** Filter, Group, Sort

Field Name	Details
	Description The name of the survey that appears in the UI. This field is read-only from API version 50.0.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the user who created the survey.
`SurveyType`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Type of the survey. The default value is Survey. Possible values are: • `ASSESSMENT` — Survey type for sales enablement teams. Available from API version 58.0 and later. • `BASIC` — Survey with a question page with like or dislike, long text, multiple selection, NPS, rating, short text, and single selection questions, and without inserted participant responses, display logic, and page branching logic.

Field Name	Details
	• `SURVEY` — Survey with all the available features.
`TotalVersionsCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of versions of the survey.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

SurveyFeed (API version 42.0)
Feed tracking is available for the object.

SurveyOwnerSharingRule
Sharing rules are available for the object.

SurveyShare
Sharing is available for the object.

SurveyEmailBranding

Represents the configuration settings for invitation emails sent to survey participants for a particular survey.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only users with the View Setup and Configuration permission can access this object.

Note: You can't define custom fields for the SurveyEmailBranding object using the Object Manager.

Fields

Field Name	Details
`Body`	**Type** textarea **Properties** Create, Update

Field Name	Details
	Description The body text of the invitation email.
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique API name of the email branding configuration. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
FooterImageId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the content asset that appears in the footer of the invitation email.
FromEmailAddress	**Type** email **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The email address that appears in the “From” field when the invitation is sent to participants.
HeaderImageId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the content asset that appears in the header of the invitation email.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the emails. Available languages include: • Chinese (Simplified)

Field Name	Details
	• Chinese (Traditional) • Danish • Dutch • English • Finnish • French • German • Italian • Japanese • Korean • Norwegian • Portuguese (Brazilian) • Russian • Spanish • Spanish (Mexican) • Swedish • Thai
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The label for these email configuration settings.
Subject	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The subject of the invitation email.

SurveyEngagementContext

Represents the context based on which a survey invitation was sent or a survey response was received. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Note: You can't define custom fields for the SurveyEngagementContext object using the Object Manager.

Fields

Field	Details
ContextType	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Context type based on which the survey invitation was sent or the response was received.
ContextValue	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Context based on which the survey invitation was sent or the response was received.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the record.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the record's owner.
SurveyInvitationId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort

Field	Details
	Description ID of the survey invitation.
`SurveyResponseId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the survey response.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

SurveyEngagementContextShare
Sharing is available for the object.

SurveyInvitation

Represents the invitation sent to a participant to complete the survey.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`CommunityId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the Experience Cloud site that you want to send the survey to.
`ContactId`	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description ID of the contact who received the invitation. This field is available in API v49.0 and later.
EmailBrandingId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the survey email branding object that's associated with this invitation.
InvitationLink	**Type** url **Properties** Group, Nillable **Description** The URL to the survey that is sent to participants. To query on this field, you need access to the associated Survey record.
InviteExpiryDateTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time that the survey invitation expires.
IsDefault	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Determines whether this is the default survey invitation to use when the survey is sent to participants.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this survey invitation.

Field Name	Details
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this survey invitation.
`LeadId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the lead who received the invitation. This field is available in API v49.0 and later.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the survey invitation that appears in the UI.
`OptionsAllowGuestUserResponse`	**Type** boolean **Properties** Create, Filter, Update **Description** Determines whether participants who don't have a Salesforce account can complete the survey.
`OptionsAllowParticipantAccessTheirResponse`	**Type** boolean **Properties** Create, Filter, Update **Description** Determines whether participants can access a copy of their responses after they complete the survey.
`OptionsCollectAnonymousResponse`	**Type** boolean **Properties** Create, Filter, Update

Field Name	Details
	Description Determines whether participants can complete the survey anonymously.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the user who created the survey invitation.
`ParticipantId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the participant if the participant is a Salesforce contact, user, or lead.
`ResponseStatus`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The status of a participant's response to the survey that's associated with the survey invitation. Possible values include: • `NotStarted` — For an invitation with a `ParticipantID`, it means that the recipient hasn't opened the survey. For an invitation without the `ParticipantID`, it means that none of the recipients have opened the survey. • `Started` — For an invitation with a `ParticipantID`, it means that the recipient opened the survey. For an invitation without the `ParticipantID`, it means that the survey has been opened by at least one recipient. • `Paused` — For an invitation with a `ParticipantID`, it means that the recipient has paused the survey. For an invitation without the `ParticipantID`, it means that the survey has been paused by any one of the recipients. Paused isn't available for invitations in which either `OptionsAllowParticipantAccessTheirResponse` or `OptionsCollectAnonymousResponse` is true. • `Completed` — For an invitation with a `ParticipantID`, it means that the recipient has submitted the survey. For an invitation without the `ParticipantID`, it means that the invitation has been submitted by at least one recipient.

Field Name	Details
SurveyId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the survey that’s sent in the invitation.
UUID	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** A unique user ID that's added to a survey invitation generated for a contact, lead,or user.
UserId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the user who received the invitation. This field is available in API v49.0 and later.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

SurveyInvitationOwnerSharingRule
Sharing rules are available for the object.

SurveyInvitationShare
Sharing is available for the object.

SurveyPage

Represents a page, such as the title page or a question page, in a survey.

Supported Calls

`getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Note: You can’t define custom fields for the SurveyPage object using the Object Manager.

Fields

Field	Details
`DeveloperName`	**Type** string **Properties** Filter, Group, Sort **Description** The unique API name of this SurveyPage object.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the survey page that appears in the UI.
`SurveyVersionId`	**Type** reference **Properties** Filter, Group, Sort **Description** The version of the survey that the page belongs to.

SurveyQuestion

Represents a question in a survey.

Supported Calls

`describeLayout()describeSObjects()getDeleted(), getUpdated(), query(), retrieve()`

Note: You can't define custom fields for the SurveyQuestion object using the Object Manager.

Fields

Field	Details
`DeveloperName`	**Type** string

Field	Details
	Properties Filter, Group, Sort **Description** The API name of the SurveyQuestion. The API name must be unique within a particular version of the survey.
`IsDeprecated`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the question was deleted from the survey.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Up to the first 250 characters of the label for the question.
`QuestionName`	**Type** textarea **Properties** Nillable **Description** The label for the question.
`QuestionType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of question. Possible values include: • `Boolean`—This value is available in API v49.0 and later. • `CSAT` • `Currency` • `Date` • `DateTime` • `FreeText` • `Image` • `Matrix`—This value is available in API v55.0 and later.

Field	Details
	• `MultipleChoice` • `MultiSelectPicklist` • `NPS` • `Number` • `Picklist` • `RadioButton` • `StackRank` • `Rating` • `ShortText`—This value is available in API v49.0 and later. • `Slider` • `Toggle`
`RelatedQuestionId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the parent question. This field is blank when the question itself is the parent question. This field is available in API v55.0 and later, with Feedback Management - Starter and Feedback Management - Growth licenses.
`SubQuestionDisplayOrder`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The order in which the question is displayed within the parent question. This field is available in API v55.0 and later, with Feedback Management - Starter and Feedback Management - Growth licenses.
`SurveyPageId`	**Type** reference **Properties** Filter, Group, Sort **Description** Lookup to the SurveyPage that contains the question.
`SurveyVersionId`	**Type** reference **Properties** Filter, Group, Sort

Field	Details
	Description The ID of the SurveyVersion that the question belongs to.
`ValidationType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The validations available for the short-text question. Possible values include: • Custom - Cu • Number - Nu

SurveyQuestionChoice

Represents an answer choice that a participant can select for a survey question.

Supported Calls

`describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Note: You can't define custom fields for the SurveyQuestionChoice object using the Object Manager.

Fields

Field	Details
`DeveloperName`	**Type** string **Properties** Filter, Group, Sort **Description** The unique API name of the SurveyQuestionChoice object.
`DisplayOrder`	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The order in which the question choice is displayed within the parent question. This field is available in API v55.0 and later, with Feedback Management - Starter and Feedback Management - Growth licenses.
`IsDeprecated`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether a question choice was deleted from the survey.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** A label for the question choice that appears in the UI.
`QuestionId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the SurveyQuestion object that this choice belongs to.
`SurveyVersionId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The version of the survey that this question choice belongs to.

SurveyQuestionResponse

Represents a participant's answer to a specific question.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Note: You can't define custom fields for the SurveyQuestionResponse object using the Object Manager.

Fields

Field	Details
`ChoiceValue`	**Type** textarea **Properties** Filter, Nillable, Sort **Description** Response provided by a participant for the following question types: • Multiple choice • Picklist • Radio • Ranking
`Datatype`	**Type** **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The data type of the question response. Possible values are: • `Boolean` This value is available in API v49.0 and later. • `Date` • `Double` • `Int` • `Number` • `String`
`DateTimeValue`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Response provided by a participant for a question of the type date time.
`DateValue`	**Type** date **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description Response provided by a participant for a question of the type date.
InvitationId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the SurveyInvitation that was sent to the survey participant.
IsTrueOrFalse	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Response provided by a participant for a question type which has only two possible values: True and False.
NumberValue	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Response provided by a participant for the following question types: • Net Promoter Score (NPS) • Rating • Score • Slider
QuestionChoiceId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of SurveyQuestionChoice that a participant chose in response to a question.
QuestionId	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The ID of the SurveyQuestion that a participant provided an answer for.
Rank	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Rank provided by a participant for an answer choice for the ranking question type.
ResponseId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the SurveyResponse that is the parent of this SurveyQuestionResponse.
ResponseShortText	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Up to the first 250 characters of the response provided by a participant for a text type question.
ResponseValue	**Type** textarea **Properties** Nillable **Description** Response provided by a participant for a question.
SurveyVersionId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the SurveyVersion that the response belongs to.

SurveyQuestionScore

Represents the aggregate of responses for the following question types: date, multiple choice, picklist, radio, ranking, rating, scoring, slider, and Net Promoter Score® (NPS®).

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Note: You can't define custom fields for the SurveyQuestionScore object using the Object Manager.

Fields

Field	Details
`CumulativeScore`	**Type** double **Properties** Filter, Nillable, Sort **Description** Sum of the responses provided by all the participants for a question of the following types: rating, scoring, and slider. For a question of the type ranking, sum of the weights provided by all the participants for each item. Note: This field is only applicable for the overall score type.
`DateResponse`	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** The date selected by one or more participants for a question of the type date. Note: This field is only applicable for the individual score type.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** For an overall score type record: • Name of a question. • Name of an item in a question of the type ranking. For an individual score type record:

Field	Details
	• Name of an item in a question of the type ranking. • Name of a question of the type date. • Response provided by one or more participants for questions of the following types: picklist, multiple choice, rating, ranking, score, slider, NPS.
`QuestionChoiceId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Unique identifier of the answer choice selected by one or more participants. For an individual score type record, this field is applicable for questions of the following types: picklist, radio, multi choice, ranking and rating. For an overall score type record, this field is applicable for questions of the type ranking.
`QuestionDeveloperName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The API name of the question for which response is recorded. The API name must be unique within a particular version of the survey.
`QuestionId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Unique identifier of the question for which response is recorded.
`QuestionName`	**Type** textarea **Properties** Nillable **Description** Name of the question for which response is recorded.
`QuestionSkippedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description Number of participants who didn't respond to the question. Note: This field is only applicable for the overall score type.
`ResponseCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** For an overall score type record, number of participants who responded to the question. For an individual score type record, number of participants who selected a particular answer choice.
`ResponseValue`	**Type** double **Properties** Filter, Nillable, Sort **Description** Answer choice selected by one or more participants for a question of the following types: rating, slider, score, NPS. Rank provided by the participant for an item in a question of the type ranking. Note: This field is only applicable for the individual score type.
`Score`	**Type** double **Properties** Filter, Nillable, Sort **Description** For an individual score type record, percentage of participants who selected a particular answer choice. Note: For questions of the type ranking, the percentage of participants who have provided the same rank to an item. For overall score type record: • Average score of questions of the following question types: rating, scoring, and slider. • Score of an NPS type question. • Average weight provided by all participants for each item in question of the type ranking. • Number of participants who responded to the question for the following question types: date, radio, multi choice, and picklist.

Field	Details
ScoreType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Type of the score calculated for a record. Possible values are: • Individual • Overall
SurveyId	**Type** reference **Properties** Filter, Group, Sort **Description** Unique identifier of the survey that contains the question for which scores are calculated.
SurveyInvitationId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Unique identifier of the survey invitation for which scores are calculated.
SurveyVersionId	**Type** reference **Properties** Filter, Group, Sort **Description** Unique identifier of the survey version for which scores are calculated.

SurveyResponse

Represents information about a participant's response to a survey, such as the status of the response, the participant's location, and when the survey was completed.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Note: You can't define custom fields for the SurveyResponse object using the Object Manager.

Fields

Field Name	Details
CompletionDateTime	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the participant completed the survey.
DataMapperExecutionStatus	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Status of all the survey data maps after a response is received. This field is available in API v49.0 and later, with Feedback Management - Starter and Feedback Management - Growth licenses. Possible values are: • `Pending` • `InProgress` • `Success` • `Error`
InterviewGuid	**Type** string **Properties** Filter, Group, idLookup, Nillable **Description** An automatically-generated, unique ID for a saved survey response.
InterviewId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the FlowInterview object that's associated with this response.
InvitationId	**Type** reference **Properties** Filter, Group, Sort

Field Name	Details
	Description The ID of the SurveyInvitation object that's associated with this response.
`IpAddress`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The IP address of the device the participant used to take the survey.
`Language`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The language that the participant used to complete the survey. Possible values are: • `af`—Afrikaans • `ar`—Arabic • `ar_AE`—Arabic (United Arab Emirates) • `ar_BH`—Arabic (Bahrain) • `ar_DZ`—Arabic (Algeria) • `ar_EG`—Arabic (Egypt) • `ar_IQ`—Arabic (Iraq) • `ar_JO`—Arabic (Jordan) • `ar_KW`—Arabic (Kuwait) • `ar_LB`—Arabic (Lebanon) • `ar_LY`—Arabic (Libya) • `ar_MA`—Arabic (Morocco) • `ar_OM`—Arabic (Oman) • `ar_QA`—Arabic (Qatar) • `ar_SA`—Arabic (Saudi Arabia) • `ar_SD`—Arabic (Sudan) • `ar_SY`—Arabic (Syria) • `ar_TN`—Arabic (Tunisia) • `ar_YE`—Arabic (Yemen) • `bg`—Bulgarian • `bn`—Bengali • `bs`—Bosnian

Field Name	Details
	• ca—Catalan • cs—Czech • cy—Welsh • da—Danish • de—German • de_AT—German (Austria) • de_BE—German (Belgium) • de_CH—German (Switzerland) • de_LU—German (Luxembourg) • el—Greek • en_AU—English (Australian) • en_CA—English (Canadian) • en_GB—English (UK) • en_HK—English (Hong Kong) • en_IE—English (Ireland) • en_IN—English (Indian) • en_MY—English (Malaysian) • en_NZ—English (New Zealand) • en_PH—English (Philippines) • en_SG—English (Singapore) • en_US—English • en_ZA—English (South Africa) • es—Spanish • es_AR—Spanish (Argentina) • es_BO—Spanish (Bolivia) • es_CL—Spanish (Chile) • es_CO—Spanish (Colombia) • es_CR—Spanish (Costa Rica) • es_DO—Spanish (Dominican Republic) • es_EC—Spanish (Ecuador) • es_GT—Spanish (Guatemala) • es_HN—Spanish (Honduras) • es_MX—Spanish (Mexico) • es_NI—Spanish (Nicaragua) • es_PA—Spanish (Panama) • es_PE—Spanish (Peru) • es_PR—Spanish (Puerto Rico) • es_PY—Spanish (Paraguay)

Field Name	Details
	• es_SV—Spanish (El Salvador) • es_US—Spanish (United States) • es_UY—Spanish (Uruguay) • es_VE—Spanish (Venezuela) • et—Estonian • eu—Basque • fa—Farsi • fi—Finnish • fr—French • fr_BE—French (Belgium) • fr_CA—French (Canadian) • fr_CH—French (Switzerland) • fr_LU—French (Luxembourg) • ga—Irish • gu—Gujarati • hi—Hindi • hr—Croatian • hu—Hungarian • hy—Armenian • in—Indonesian • is—Icelandic • it—Italian • it_CH—Italian (Switzerland) • iw—Hebrew • ja—Japanese • ka—Georgian • kn—Kannada • ko—Korean • lb—Luxembourgish • lt—Lithuanian • lv—Latvian • mi—Te reo • mk—Macedonian • ml—Malayalam • mr—Marathi • ms—Malay • mt—Maltese • my—Burmese

Field Name	Details
	• nl_BE—Dutch (Belgium) • nl_NL—Dutch • no—Norwegian • pl—Polish • pt_BR—Portuguese (Brazil) • pt_PT—Portuguese (European) • rm—Romansh • ro—Romanian • ro_MD—Romanian (Moldova) • ru—Russian • sh—Serbian (Latin) • sh_ME—Montenegrin • sk—Slovak • sl—Slovene • sq—Albanian • sr—Serbian (Cyrillic) • sv—Swedish • sw—Swahili • ta—Tamil • te—Telugu • th—Thai • tl—Tagalog • tr—Turkish • uk—Ukrainian • ur—Urdu • vi—Vietnamese • xh—Xhosa • zh_CN—Chinese (Simplified) • zh_HK—Chinese (Hong Kong) • zh_SG—Chinese (Singapore) • zh_TW—Chinese (Traditional) • zu—Zulu
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort

Field Name	Details
	Description The date and time that another Salesforce object last referenced this SurveyResponse object.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that someone last viewed this SurveyResponse object.
Latitude	**Type** double **Properties** Filter, Nillable, Sort **Description** The latitude of the participant's location.
Location	**Type** location **Properties** Nillable **Description** The latitude and longitude coordinates of the participant's location.
Longitude	**Type** double **Properties** Filter, Nillable, Sort **Description** The longitude of the participant's location.
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the participant.
Status	**Type** picklist

Field Name	Details
	Properties Filter, Group, Restricted picklist, Sort **Description** The status of the survey. Possible values include: • NotStarted — The participant hasn't opened the survey. • Started — The participant has opened the survey. • Paused — The participant has paused the survey. Paused isn't available for invitations in which either `OptionsAllowParticipantAccessTheirResponse` or `OptionsCollectAnonymousResponse` is true. • Completed — The participant has completed the survey.
`SubmitterId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the Salesforce user, contact, or lead who completed the survey. **Relationship Name** Submitter **Relationship Type** Lookup **Refers To** Contact, Lead, User
`SurveyId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the survey that the participant completed.
`SurveyVersionId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the version of the survey that the participant completed.

SurveySubject

Represents a relationship between a survey and another object, such as an account or a case.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the SurveySubject record was last referenced by another object.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed the SurveySubject record.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the SurveySubject record.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Unique identifier of the SurveyInvitation object or SurveyResponse object that is associated with this survey-object relationship.

Field Name	Details
SubjectEntityType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Object that the survey is associated with. Possible values include: • *Account* • *Asset* • *Banker* • *BranchUnit* • *BranchUnitBusinessMember* • *BranchUnitCustomer* • *BusinessMilestone* • *Campaign* • *CareProgram* • *Case* • *Claim* • *ClaimParticipant* • *Contact* • *Event* • *IndividualApplication* • *InsurancePolicy* • *InsurancePolicyParticipant* • *Lead* • *LearningItemSubmission*—Available in API version 58.0 and later. • *LiveChatTranscript* • *LoyaltyProgram* • *LoyaltyProgramMember* • *LoyaltyProgramPartner* • *MessagingSession* • *Opportunity* • *Order* • *PersonalLifeEvent* • *Producer* • *Product2* • *Promotion* • *RebateProgram* • *RetailStore*

Field Name	Details
	• *ServiceAppointment* • *ServiceResource* • *Solution* • *Task* • *TransactionJournal* • *User* • *Visit* • *VoiceCall* • *VolunteerProject* • *WorkOrder* • Custom Objects
`SubjectId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the object that's associated with the survey.
`SurveyId`	**Type** reference **Properties** Filter, Group, Sort **Description** Unique identifier of the survey that's associated with the record that's represented by `SubjectId`.
`SurveyInvitationId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Unique identifier of the survey invitation that's associated with another object.
`SurveyResponseId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Unique identifier of the survey response that's associated with another object.

SurveyVersion

Represents a version of a survey.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Note: You can't define custom fields for the SurveyVersion object using the Object Manager.

Fields

Field Name	Details
`BrandingSetId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the branding set associated with the survey version.
`Description`	**Type** textarea **Properties** Nillable **Description** The description of this survey version.
`IsTemplate`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the survey version is a template. Template surveys are automatically shared with all users in your Salesforce org.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the current user last viewed a record related to the survey version.

Field Name	Details
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed the survey version.
Name	**Type** string **Properties** Filter, Group, Sort Filter, Group, Sort Filter, Group, idLookup, Sort **Description** The name of the survey that appears in the UI.
SurveyId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the survey associated with the survey version.
SurveyStatus	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The status of the survey. Possible values include: • Active • Draft • Obsolete • InvalidDraft
VersionNumber	**Type** int **Properties** Filter, Group, Sort **Description** The version number of the survey.

SurveyVersionAddlInfo

Represents additional information about a survey version. This information defines the default settings of a survey version. This object is available in API version 49.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
`EmailSender`	**Type** textarea **Properties** Filter, Nillable, Sort **Description** The organization-wide email address used to send a survey invitation.
`EmailTemplateId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the email template that's used to send an automated survey invitation.
`EngagementContextMetadata`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The custom metadata created to get the engagement context from the participants.
`InvitationSharingRole`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates the users that share edit access to a survey invitation. Possible values are: • `InvitationRecordCreator`— Owner of the record that's associated with a survey invitation.

Field	Details
	• SurveyOwner
Language	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Language used to create the survey. Possible values are: • af—Afrikaans • ar—Arabic • ar_AE—Arabic (United Arab Emirates) • ar_BH—Arabic (Bahrain) • ar_DZ—Arabic (Algeria) • ar_EG—Arabic (Egypt) • ar_IQ—Arabic (Iraq) • ar_JO—Arabic (Jordan) • ar_KW—Arabic (Kuwait) • ar_LB—Arabic (Lebanon) • ar_LY—Arabic (Libya) • ar_MA—Arabic (Morocco) • ar_OM—Arabic (Oman) • ar_QA—Arabic (Qatar) • ar_SA—Arabic (Saudi Arabia) • ar_SD—Arabic (Sudan) • ar_SY—Arabic (Syria) • ar_TN—Arabic (Tunisia) • ar_YE—Arabic (Yemen) • bg—Bulgarian • bn—Bengali • bs—Bosnian • ca—Catalan • cs—Czech • cy—Welsh • da—Danish • de—German • de_AT—German (Austria) • de_BE—German (Belgium)

Field	Details
	• de_CH—German (Switzerland) • de_LU—German (Luxembourg) • el—Greek • en_AU—English (Australian) • en_CA—English (Canadian) • en_GB—English (UK) • en_HK—English (Hong Kong) • en_IE—English (Ireland) • en_IN—English (Indian) • en_MY—English (Malaysian) • en_NZ—English (New Zealand) • en_PH—English (Philippines) • en_SG—English (Singapore) • en_US—English • en_ZA—English (South Africa) • es—Spanish • es_AR—Spanish (Argentina) • es_BO—Spanish (Bolivia) • es_CL—Spanish (Chile) • es_CO—Spanish (Colombia) • es_CR—Spanish (Costa Rica) • es_DO—Spanish (Dominican Republic) • es_EC—Spanish (Ecuador) • es_GT—Spanish (Guatemala) • es_HN—Spanish (Honduras) • es_MX—Spanish (Mexico) • es_NI—Spanish (Nicaragua) • es_PA—Spanish (Panama) • es_PE—Spanish (Peru) • es_PR—Spanish (Puerto Rico) • es_PY—Spanish (Paraguay) • es_SV—Spanish (El Salvador) • es_US—Spanish (United States) • es_UY—Spanish (Uruguay) • es_VE—Spanish (Venezuela) • et—Estonian • eu—Basque • fa—Farsi

Field	Details
	• fi—Finnish • fr—French • fr_BE—French (Belgium) • fr_CA—French (Canadian) • fr_CH—French (Switzerland) • fr_LU—French (Luxembourg) • ga—Irish • gu—Gujarati • hi—Hindi • hr—Croatian • hu—Hungarian • hy—Armenian • in—Indonesian • is—Icelandic • it—Italian • it_CH—Italian (Switzerland) • iw—Hebrew • ja—Japanese • ka—Georgian • kn—Kannada • ko—Korean • lb—Luxembourgish • lt—Lithuanian • lv—Latvian • mi—Te reo • mk—Macedonian • ml—Malayalam • mr—Marathi • ms—Malay • mt—Maltese • my—Burmese • nl_BE—Dutch (Belgium) • nl_NL—Dutch • no—Norwegian • pl—Polish • pt_BR—Portuguese (Brazil) • pt_PT—Portuguese (European) • rm—Romansh

Field	Details
	• `ro`—Romanian • `ro_MD`—Romanian (Moldova) • `ru`—Russian • `sh`—Serbian (Latin) • `sh_ME`—Montenegrin • `sk`—Slovak • `sl`—Slovene • `sq`—Albanian • `sr`—Serbian (Cyrillic) • `sv`—Swedish • `sw`—Swahili • `ta`—Tamil • `te`—Telugu • `th`—Thai • `tl`—Tagalog • `tr`—Turkish • `uk`—Ukrainian • `ur`—Urdu • `vi`—Vietnamese • `xh`—Xhosa • `zh_CN`—Chinese (Simplified) • `zh_HK`—Chinese (Hong Kong) • `zh_SG`—Chinese (Singapore) • `zh_TW`—Chinese (Traditional) • `zu`—Zulu
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Name of the record.
`SurveyQuestionId`	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description ID of the survey question embedded in the email template used to send automated survey invitations.
SurveyVersionId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the survey version. This field is unique within your organization

SvcCatalogCategory

Represents a group of Service Catalog items by functional area. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, get the Service Catalog Access permission set license , Employee Productivity Starter license, or Employee Productivity Plus add-on license.

Fields

Field	Details
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Unique developer name for the catalog item category.
ImageId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Allows a builder to pick an image displayed in the catalog.

Field	Details
	This field is a relationship field. **Relationship Name** Image **Relationship Type** Lookup **Refers To** ContentAsset
IsActive	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Allows service catalog builders to deprecate categories or create in-draft categories. The default value is `false`.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Possible values are: • `da`—Danish • `de`—German • `en_US`—English • `es`—Spanish • `es_MX`—Spanish (Mexico) • `fi`—Finnish • `fr`—French • `it`—Italian • `ja`—Japanese • `ko`—Korean • `nl_NL`—Dutch • `no`—Norwegian • `pt_BR`—Portuguese (Brazil) • `ru`—Russian • `sv`—Swedish • `th`—Thai • `zh_CN`—Chinese (Simplified)

Field	Details
	• zh_TW—Chinese (Traditional)
ParentCategoryId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Parent category of this category. Allows categories to be grouped up to a max depth of 3. This field is a relationship field. **Relationship Name** ParentCategory **Relationship Type** Lookup **Refers To** SvcCatalogCategory
SortOrder	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Determines the order that the category is displayed to the end user.

SvcCatalogCategoryItem

Represents an association between a Service Catalog item and category. Service catalog items can be grouped into categories. This object is available in API version 58.0 and later.

Supported Calls

create(), delete(), describeSObjects(), query(), retrieve(), update(), upsert()

Special Access Rules

To access this object, get the Service Catalog Access permission set license, Employee Productivity Starter license, or Employee Productivity Plus add-on license.

Fields

Field	Details
IsPrimaryCategory	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Specifies whether the category is the primary category for a catalog item. The default value is `false`.
SortOrder	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Controls the order in which catalog items appear by default when you're viewing all items in a single category.
SvcCatalogCategoryId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the category for which the service category item belongs. This field is a relationship field. **Relationship Name** SvcCatalogCategory **Relationship Type** Lookup **Refers To** SvcCatalogCategory
SvcCatalogItemDefId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the service category item definition. This field is a relationship field. **Relationship Name** SvcCatalogItemDef

Field	Details
	Relationship Type Lookup **Refers To** SvcCatalogItemDef

SvcCatalogFilterCriteria

Represents an eligibility rule that determines if a Service Catalog user has access to a catalog item. This object is available in API version 60.0 and later.

Supported SOAP API Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Supported REST API Methods

`DELETE, GET, HEAD, PATCH, POST, Query`

Special Access Rules

To access this object, get the Service Catalog Access permission set license.

Fields

Field	Details
`CriteriaRelation`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Possible values are: • `AllConditionsAreMet` • `AnyConditionIsMet`
`Description`	**Type** textarea **Properties** Nillable

Field	Details
	Description A description that states the restriction placed on a user's access to a catalog items eligibility.
`DeveloperName`	**Type** string **Properties** Filter, Group, Sort **Description** The unique name of the object in the API. The name: • must be 40 characters or fewer • must begin with a letter • can contain only underscores and alphanumeric characters • can't include spaces • can't end with an underscore • can't contain 2 consecutive underscores In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.
`FullName`	**Type** string **Properties** Create, Group, Nillable
`IsActive`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Specifies if the eligibility rule is active. The default value is `false`.
`Language`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Supported languages for eligibility rules Possible values are: • `da`—Danish

Field	Details
	• de—German • en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean • nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified) • zh_TW—Chinese (Traditional)
ManageableState	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Describes the manageable state of a catalog item that is contained in a package. Possible values are: • beta—Managed-Beta • deleted—Managed-Proposed-Deleted • deprecated—Managed-Proposed-Deprecated • deprecatedEditable—SecondGen-Installed-Deprecated • installed—Managed-Installed • installedEditable—SecondGen-Installed-Editable • released—Managed-Released • unmanaged—Unmanaged
MasterLabel	**Type** string **Properties** Filter, Group, Sort

Field	Details
	Description The label of the eligibility rule record.
`Metadata`	**Type** complexvalue **Properties** Create, Nillable, Update **Description** The metadata type associated with the SvcCatalogFilterCriteria object.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort
`NumOfRelatedItems`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of catalog items that has the eligibility rule.

SvcCatalogItemDef

Represents a Service Catalog item that can be requested by a service catalog user. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

To access this object, get the Service Catalog Access permission set license, Employee Productivity Starter license, or Employee Productivity Plus add-on license.

Fields

Field	Details
`Description`	**Type** textarea

Field	Details
	Properties Create, Nillable, Update **Description** The definition of the catalog item. This field is visible on the Service Catalog page.
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique developer name for the catalog item.
FlowName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The flow called when the user navigates to the request page for the catalog item.
FulfillmentFlowId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the fulfillment flow. This field is a relationship field. **Relationship Name** FulfillmentFlow **Relationship Type** Lookup **Refers To** SvcCatalogFulfillmentFlow
ImageId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The image ID used for the catalog item. This field is a relationship field.

Field	Details
	Relationship Name Image **Relationship Type** Lookup **Refers To** ContentAsset
InternalNotes	**Type** textarea **Properties** Create, Nillable, Update **Description** A place for the Service Catalog Builder to leave internal notes about the catalog item.
IsFeatured	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Specifies whether a catalog item is marked as a favorite for the org. Favorites display as a featured item on the Service Catalog home page. The default value is `false`.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Supported languages for catalog items. Possible values are: • `da`—Danish • `de`—German • `en_US`—English • `es`—Spanish • `es_MX`—Spanish (Mexico) • `fi`—Finnish • `fr`—French • `it`—Italian • `ja`—Japanese • `ko`—Korean

Field	Details
	• nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified) • zh_TW—Chinese (Traditional)
Status	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Allows the Service Catalog Builder to control whether the flow is displayed to users within the Service Catalog. Possible values are: • Deprecated • Draft • PendingChanges • Published The default value is Draft.
UsageType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The business type for which the Service Catalog is used. Possible values are: • CustomerService • Employee The default value is Customer Service.

SvcCatalogRequest

Represents a request made by a user using the Service Catalog. Catalog builders use this object to report on Service Catalog activity. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, get the Service Catalog Access permission set license, Employee Productivity Starter license, or Employee Productivity Plus add-on license.

Fields

Field	Details
`CatalogItemDescription`	**Type** textarea **Properties** Create, Nillable, Update **Description** Description for the catalog item.
`CatalogItemName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Name of the catalog item.
`ClosedDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time when the request was closed. This field is automatically populated when `IsClosed` is 'true'.
`IsClosed`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the request has been resolved. This field is automatically checked when `ClosedDate` is populated. The default value is 'false'.

Field	Details
ItemFlowVersion	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Version for the item flow. This is a calculated field.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The Service Catalog request number.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID for the owner record. This is a polymorphic relationship field. **Relationship Name** Owner

Field	Details
	Relationship Type Lookup **Refers To** Group, User
`SubmitterId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID for the submitter record. This is a relationship field. **Relationship Name** Submitter **Relationship Type** Lookup **Refers To** User
`SvcCatalogItemDefinitionId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The catalog item that was used to create this request. This is a relationship field. **Relationship Name** SvcCatalogItemDefinition **Relationship Type** Lookup **Refers To** SvcCatalogItemDef

SvcCatalogReqRelatedItem

Represents an item related to a Service Catalog Request. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, get the Service Catalog permission set license, Employee Productivity Starter license, or Employee Productivity Plus add-on license.

Fields

Field	Details
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the related item.
`RelatedExternalId`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Text containing an ID from any external system.
`RelatedInternalRecordId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The Salesforce record related to this request. This reference must be for an object that has the following characteristics. • It's a standard object. • It must allow custom fields. • It's referencable (that is, it can be the target of a lookup). • It can be the target of a custom lookup field. • It contains a Name field. • It isn't dependent on a junction object. • It isn't a virtual object or a setup object. This is a polymorphic relationship field.

Field	Details
	Relationship Name RelatedInternalRecord **Relationship Type** Lookup **Refers To** Account, Address, Asset, AssociatedLocation, AuthorizationForm, AuthorizationFormConsent, AuthorizationFormDataUse, AuthorizationFormText, BusinessBrand, Case, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, Contact, ContactPointAddress, ContactPointConsent, ContactPointEmail, ContactPointPhone, ContactPointTypeConsent, Contract, ContractLineItem, Customer, DataUseLegalBasis, DataUsePurpose, Employee, EngagementChannelType, Entitlement, Idea, Individual, InternalOrganizationUnit, Lead, Location, MessagingEndUser, Opportunity, Order, OrderItem, PartyConsent, Pricebook2, ProcessException, Product2, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, QuickText, Recommendation, Seller, ServiceContract, SocialPersona, SocialPost, Solution, SurveyInvitation, SurveySubject, UserProvisioningRequest, VoiceCall
`SvcCatalogRequestId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The SvcCatalogRequest record. This is a relationship field. **Relationship Name** SvcCatalogRequest **Relationship Type** Lookup **Refers To** SvcCatalogRequest

Swarm

Represents a team of agents, Salesforce users, or Slack users in a Slack channel or thread dedicated to solving a problem. This problem can be related to a support case, incident, sales opportunity, or change request. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object for swarming in Salesforce, enable the Run Flows and Service Cloud User user permissions. For swarming in Slack, connect Salesforce to Slack and enable the Run Flows and Slack Service User user permissions.

Fields

Field	Details
`CollaborationRoomId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the collaboration room. This field is a relationship field. **Relationship Name** CollaborationRoom **Relationship Type** Lookup **Refers To** CollaborationRoom
`CollaborationTool`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Tool used for swarming. Possible values are: • `None` • `Slack` The default value is `None`.
`CollaborationUrl`	**Type** url **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** URL of the Slack channel or thread.
`EndedDateTime`	**Type** dateTime

Field	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** Date and time the swarm ended.
HelpNeeded	**Type** textarea **Properties** Create, Nillable, Update **Description** Short description of the problem that the swarm is trying to solve.
IsDedicatedChannel	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates if the swarm is happening in a dedicated channel (true) or in an existing channel (false). The default value is false.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
MessageKey	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description ID of the Slack thread or message.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the swarm.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the swarm owner. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
RelatedRecordId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the record the swarm's problem is related to. The record can be of, for example, a case, incident, sales opportunity, or change request. This field is a polymorphic relationship field. **Relationship Name** RelatedRecord **Relationship Type** Lookup **Refers To** Account, Case, ChangeRequest, Incident, Opportunity, Problem, User
StartedDateTime	**Type** dateTime

Field	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** Date and time the swarm started.
Status	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Status of the swarm. Possible values are: • `Closed` • `In Progress` • `New` • `Waiting (Custom)` The default value is `New`.
UsageType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Type of swarm. Possible values are: • `CareMgmt`—Care Coordination • `DealRoom`—Sales Channel • `PartnerChannel`—Partner Account Channel • `Swarming` The default value is `Swarming`.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

SwarmFeed on page 39
Feed tracking is available for the object.

SwarmHistory on page 47
History is available for tracked fields of the object.

SwarmOwnerSharingRule on page 48
Sharing rules are available for the object.

SwarmShare on page 50
Sharing is available for the object.

SwarmMember

Represents a Salesforce member, such as an agent, of a swarm. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object for swarming in Salesforce, enable the Run Flows and Service Cloud User user permissions. For swarming in Slack, connect Salesforce to Slack and enable the Run Flows and Slack Service User user permissions.

Fields

Field	Details
`AssignedDateTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Date and time the member is added to the swarm.
`CompletedDateTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Date and time the member exits the swarm or the swarm closes.
`HelpNeeded`	**Type** textarea **Properties** Create, Nillable, Update **Description** Short description of the problem that the swarm is trying to solve.

Field	Details
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the swarm or record number.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the Salesforce user assigned to a swarm. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`RelatedRecordId`	**Type** reference

Field	Details
	Properties Create, Filter, Group, Sort, Update **Description** ID of the record the swarm's problem is related to. The record can be of, for example, a case, incident, sales opportunity, or change request. This field is a polymorphic relationship field. **Relationship Name** RelatedRecord **Relationship Type** Lookup **Refers To** Account, Case, ChangeRequest, Incident, Opportunity, Problem, User
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Status of the swarm member or swarm. Possible values are: • `Closed` • `In Progress` • `New` The default value is `New`.
`SwarmId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the swarm the member belongs to. This field is a relationship field. **Relationship Name** Swarm **Relationship Type** Lookup **Refers To** Swarm

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

SwarmMemberFeed on page 39
: Feed tracking is available for the object.

SwarmMemberHistory on page 47
: History is available for tracked fields of the object.

SwarmMemberOwnerSharingRule on page 48
: Sharing rules are available for the object.

SwarmMemberShare on page 50
: Sharing is available for the object.

TabDefinition

Represents a custom tab. Returns only the tabs that the current user has access to. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `search()`

Fields

Field Name	Details
`DurableId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Unique identifier for the tab. Always retrieve this value before using it, because the value isn't guaranteed to stay the same from one release to the next. Simplify queries by using this field instead of making multiple queries.
`IsAvailableInAloha`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the tab is available in Salesforce Classic.
`IsAvailableInDesktop`	**Type** boolean

Field Name	Details
	Properties Defaulted on create, Filter, Group, Sort **Description** Indicates whether the tab is available on desktop.
`IsAvailableInLightning`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the tab is available in Lightning Experience.
`IsAvailableInMobile`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the tab is available in the Salesforce mobile app.
`IsCustom`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the tab is a custom tab created by admins in the org.
`Label`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The localized label corresponding to the `MasterLabel` field in the Tooling API object.
`MobileUrl`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The URL that can be used to launch this tab in the Salesforce mobile app.

Field Name	Details
Name	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The developer name of the tab.
SobjectName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the sObject corresponding to the tab.
Url	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The URL that can be used to launch this tab on desktop.

TagDefinition

Defines the attributes of child Tag objects.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Detail
Name	**Type** string

Field	Detail
	Properties Filter, Nillable, Update **Description** Identifies the tag word or phrase.
`Type`	**Type** picklist **Properties** Filter, Nillable, Restricted picklist **Description** Defines the visibility of a tag. Possible value are: • **Public**: The tag can be viewed and manipulated between all users in an organization. • **Personal**: The tag can be viewed or manipulated only by a user with a matching `OwnerId`.

Usage

When you create a tag for a record, an association is created with to a corresponding TagDefinition:

- If the value in the tag's `Name` field is new, a new TagDefinition record is automatically created and becomes the parent of the tag.
- If the value in the tag's `Name` field already exists in a TagDefinition, that TagDefinition automatically becomes the parent of the tag.

Each TagDefinition record has a one-to-many relationship with its child tag records.

The following standard objects represent tags for records:

- AccountTag
- AssetTag
- CampaignTag
- CaseTag
- ContactTag
- ContractTag
- DocumentTag
- EventTag
- LeadTag
- NoteTag
- OpportunityTag
- SolutionTag
- TaskTag

Custom objects may also be tagged. Tags for custom objects are identified by a suffix of two underscores immediately followed by the word `tag`. For example, a custom object named `Meeting` has a corresponding tag named Meeting__tag in that organization's WSDL. Meeting__tag is only valid for `Meeting` objects.

TagDefinition is useful for mass operations on any tag record. For instance, if you want to rename existing tags, you can search for the appropriate TagDefinition object, update it, and the child tag's `Name` values are also changed. The following Java example replaces all `WC` tags with the phrase `West Coast`:

```
public void tagDefinitionSample() {
  String soqlQuery = "SELECT Id, Name FROM TagDefinition " +
      "WHERE Name = 'WC'";
  QueryResult qResult = null;
  try {
      qResult = connection.query(soqlQuery);
    TagDefinition tagDef = (TagDefinition) qResult.getRecords()[0];
    tagDef.setName("West Coast");
    connection.update(new SObject[]{tagDef});
  } catch (ConnectionException ce) {
    ce.printStackTrace();
  }
}
```

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

Task

Represents a business activity such as making a phone call or other to-do items. In the user interface, Task and Event records are collectively referred to as activities.

Note: Task fields related to calls are exclusive to Salesforce CRM Call Center. Also, `query()`, `delete()`, and `update()` aren't allowed with tasks related to more than one contact in API versions 23.0 and earlier.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Field Type
`AccountId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Represents the ID of the related Account. The `AccountId` is determined as follows. If the value of `WhatId` is any of the following objects, then Salesforce uses that object's `AccountId`. • Account • Opportunity

Field	Field Type
	• Contract • Custom object that is a child of Account If the value of the `WhatId`field is any other object, and the value of the `WhoId` field is a Contact object, then Salesforce uses that contact's `AccountId`. (If your organization uses Shared Activities, then Salesforce uses the `AccountId` of the primary contact.) Otherwise, Salesforce sets the value of the `AccountId` field to `null`. For information on IDs, see ID Field Type. This is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
`ActivityDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Represents the due date of the task. This field has a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone. The timestamp is not relevant; do not attempt to alter it to accommodate time zone differences. Label is **Due Date**. Note: This field can't be set or updated for a recurring task (`IsRecurrence` is `true`).
`CallDisposition`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Represents the result of a given call, for example, "we'll call back," or "call unsuccessful." Limit is 255 characters. Not subject to field-level security, available for any user in an organization with Salesforce CRM Call Center.
`CallDurationInSeconds`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Field Type
	Description Duration of the call in seconds. Not subject to field-level security, available for any user in an organization with Salesforce CRM Call Center.
CallObject	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Name of a call center. Limit is 255 characters. Not subject to field-level security, available for any user in an organization with Salesforce CRM Call Center.
CallType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The type of call being answered: Inbound, Internal, or Outbound.
CompletedDateTime	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time the task was saved with a Closed status. • For insert, if the task is saved with a Closed status the field is set. If the task is saved with an Open status the field is set to NULL. • For update, if the task is saved with a new Closed status, the field is reset. If the task is saved with a new non-closed status, the field is reset to NULL. If the task is saved with the same closed status (that is, unchanged) there is no change to the field. Note: The status is a dynamic enum. If the Closed mapping is changed it won't cause an update of existing tasks. Only new insert/update operations are affected.
ConnectionReceivedId	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field	Field Type
	Description ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.
`ConnectionSentId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** Contains a text description of the task.
`IsArchived`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the event has been archived. The default value of this field is `false`.
`IsClosed`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the task has been completed (`true`) or not (`false`). The default value of this field is `false`. Is only set indirectly via the `Status` picklist. Label is **Closed**.
`IsHighPriority`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort

Field	Field Type
	Description Indicates a high-priority task. This field is derived from the `Priority` field. The default value of this field is `false`.
`IsRecurrence`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Indicates whether the task is scheduled to repeat itself (`true`) or only occurs once (`false`). The default value of this field is `false`. This field is read-only on update, but not on create. If this field value is `true`, then `RecurrenceStartDateOnly`, `RecurrenceEndDateOnly`, `RecurrenceType`, and any recurrence fields associated with the given recurrence type must be populated. See Recurring Tasks.
`IsReminderSet`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether a popup reminder has been set for the task (`true`) or not (`false`). The default value of this field is `false`.
`IsVisibleInSelfService`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether a task associated with an object can be viewed in the Customer Portal (`true`) or not (`false`). If your organization has digital experiences enabled, tasks marked `IsVisibleInSelfService` are visible to any external user in the Experience Cloud site, as long as the user has access to the record the task was created on.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the User or Group who owns the record. Label is **Assigned To ID**. This field accepts Groups of type Queue only.

Field	Field Type
	In the user interface, Group IDs correspond with the queue's list view names. To create or update tasks assigned to Group, use v48.0 or later. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`Priority`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Required. Indicates the importance or urgency of a task, such as high or low. The default value of this field is `Normal`.
`RecurrenceActivityId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Read-only. Not required on create. ID of the main record of the recurring task. Subsequent occurrences have the same value in this field.
`RecurrenceDayOfMonth`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The day of the month in which the task repeats.
`RecurrenceDayOfWeekMask`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The day or days of the week on which the task repeats. This field contains a bitmask. The values are as follows: • Sunday = 1

Field	Field Type
	• Monday = 2 • Tuesday = 4 • Wednesday = 8 • Thursday = 16 • Friday = 32 • Saturday = 64 Multiple days are represented as the sum of their numerical values. For example, Tuesday and Thursday = 4 + 16 = 20.
`RecurrenceEndDateOnly`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The last date on which the task repeats. This field has a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone. The timestamp is not relevant; do not attempt to alter it to accommodate time zone differences.
`RecurrenceInstance`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The frequency of the recurring task. Possible values are: • `First`—1st • `Fourth`—4th • `Last`—last • `Second`—2nd • `Third`—3rd
`RecurrenceInterval`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The interval between recurring tasks.
`RecurrenceMonthOfYear`	**Type** picklist

Field	Field Type
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The month of the year in which the task repeats.
RecurrenceRegeneratedType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Represents what triggers a repeating task to repeat. Add this field to a page layout together with the `RecurrenceInterval` field, which determines the number of days between the triggering date (due date or close date) and the due date of the next repeating task in the series. Label is **Repeat This Task**. This field has the following picklist values: • **None**: The task doesn't repeat. • **After due date**: The next repeating task will be due the specified number of days after the current task's due date. • **After the task is closed**: The next repeating task will be due the specified number of days after the current task is closed. • **(Task closed)**: This task, now closed, was opened as part of a repeating series. Note: When tasks in a series are set to repeat after their due date, Salesforce doesn't create recurrences that would have been due in the past. Instead, Salesforce keeps adding the interval until a repeated task has a due date in the future. For example, suppose that someone sets a task to repeat three days after it's due. But, that person doesn't complete the task (mark it Closed) until five days after it's due. Instead of creating a task that's already overdue, Salesforce gives the new task a due date of tomorrow. This due date is equivalent to 6 days after the due date; two intervals of three days each. If that person completes the repeating task (marks it Closed) before the due date, the next task is still due three days after the due date.
RecurrenceStartDateOnly	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The date when the recurring task begins. Must be a date and time before `RecurrenceEndDateOnly`.

Field	Field Type
RecurrenceTimeZoneSidKey	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The time zone associated with the recurring task. For example, “UTC-8:00” for Pacific Standard Time.
RecurrenceType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates how often the task repeats. For example, daily, weekly, or every nth month (where “nth” is defined in `RecurrenceInstance`).
ReminderDateTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Represents the time when the reminder is scheduled to fire, if `IsReminderSet` is set to `true`. If `IsReminderSet` is set to `false`, then the user may have deselected the reminder checkbox in the Salesforce user interface, or the reminder has already fired at the time indicated by the value.
Status	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Required. Indicates the status of the task. The default value of this field is `Not Started`. Each predefined `Status` field implies a value for the `IsClosed` flag. To obtain picklist values, query the TaskStatus object. Possible values are: • Completed • Deferred • In Progress • Not Started • Waiting on someone else Note: This field can’t be updated for recurring tasks (`IsRecurrence` is `true`).

Field	Field Type
`Subject`	**Type** combobox **Properties** Create, Filter, Nillable, Sort, Update **Description** The subject line of the task, such as “Call” or “Send Quote.” Limit: 255 characters.
`TaskSubtype`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Provides standard subtypes to facilitate creating and searching for specific task subtypes. This field isn’t updateable. `TaskSubtype` values: • `Task` • `Email` • `LinkedIn` —Available in API version 56.0 and later. • `List Email` • `Cadence` • `Call` Note: The `Cadence` subtype is an internal value used by Sales Engagement, and can’t be set manually.
`TaskWhoIds`	**Type** JunctionIdList **Properties** Create, Update **Description** A string array of contact or lead IDs related to this task. This `JunctionIdList` field is linked to the `TaskWhoRelations` child relationship. `TaskWhoIds` is only available when the shared activities setting is enabled. The first contact or lead ID in the list becomes the primary `WhoId` if you don’t specify a primary `WhoId`. If you set the `EventWhoIds` field to null, all entries in the list are deleted and the value of `WhoId` is added as the first entry. Warning: Adding a `JunctionIdList` field name to the `fieldsToNull` property deletes all related junction records. This action can’t be undone.
`Type`	**Type** picklist

Field	Field Type
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The type of task, such as Call or Meeting.
`WhatCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Available to organizations that have Shared Activities enabled. Count of related TaskRelations pertaining to `WhatId`. Count of the `WhatId` must be *1* or less.
`WhatId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The `WhatId` represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. `WhatId`s are polymorphic. Polymorphic means a `WhatId` is equivalent to the ID of a related object. The label is `Related To ID`. This is a polymorphic relationship field. **Relationship Name** What **Relationship Type** Lookup **Refers To** Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CommSubscriptionConsent, ContactEncounter, ContactEncounterParticipant, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, DelegatedAccount, DocumentChecklistItem, EnrollmentEligibilityCriteria, HealthcareFacility,

Field	Field Type
	HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, ListEmail, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PartyConsent, PersonLifeEvent, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductItem, ProductRequest, ProductRequestLineItem, ProductTransfer, PurchaserPlan, ReceivedDocument, ResourceAbsence, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, Shift, Shipment, ShipmentItem, Solution, Visit, VisitedParty, VolunteerProject, WorkOrder, WorkOrderLineItem
`WhoCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Available to organizations that have Shared Activities enabled. Count of related TaskRelations pertaining to `WhoId`.
`WhoId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The WhoId represents a human such as a lead or a contact. WhoIds are polymorphic. Polymorphic means a WhoId is equivalent to a contact's ID or a lead's ID. The label is `Name ID`. If Shared Activities is enabled, the value of this field is the ID of the related lead or primary contact. If you add, update, or remove the WhoId field, you might encounter problems with triggers, workflows, and data validation rules that are associated with the record. The label is `Name ID`. Beginning in API version 37.0, if the contact or lead ID in the `WhoId` field is not in the `TaskWhoIds` list, no error occurs and the ID is added to the `TaskWhoIds` as the primary `WhoId`. If `WhoId` is set to null, an arbitrary ID from the existing `TaskWhoIds` list is promoted to the primary position. This is a polymorphic relationship field. **Relationship Name** Who **Relationship Type** Lookup **Refers To** Contact, Lead

Usage

Recurring Tasks

- Recurring tasks are available in API version 16.0 and later.
- After a task is created, it can't be changed from recurring to nonrecurring or vice versa.
- When a user creates a series of recurring tasks, Salesforce creates a main record and subsequent occurrences. For the main record, `IsRecurrence` is set to `true` and other fields that define the recurrence pattern are populated. The ID of the main record of the recurring task is saved in the subsequent occurrences, in the `RecurrenceActivityId` field.
- When you delete a recurring task series through the API, all open and closed task occurrences in the series are removed. However, when you delete a recurring task series through the user interface, only open tasks occurrences (`IsClosed` is `false`) in the series are removed.
- If `IsRecurrence` is `true`, then `RecurrenceStartDateOnly`, `RecurrenceEndDateOnly`, `RecurrenceType`, and any properties associated with the given recurrence type (see the following table) must be populated.
- When you change the `RecurrenceStartDateOnly` field or the recurrence pattern, all open tasks occurrences in the series are deleted and new open task occurrences are created based on the new recurrence pattern. The following fields determine the recurrence pattern: `RecurrenceType`, `RecurrenceTimeZoneSidKey`, `RecurrenceInterval`, `RecurrenceDayOfWeekMask`, `RecurrenceDayOfMonth`, `RecurrenceInstance`, and `RecurrenceMonthOfYear`.
- When you change the value of `RecurrenceEndDateOnly` to an earlier date (for example, from January 20 to January 10), all open task occurrences in the series with the `ActivityDate` value greater than the new end date value are deleted. Other open and closed task occurrences in the series are not affected.
- When you change the value of `RecurrenceEndDateOnly` to a later date (for example, from January 10 to January 20), new task occurrences are created up to the new end date. Existing open and closed tasks in the series are not affected.

This table describes the usage of recurrence fields for Salesforce Classic recurring events. Each recurrence type must have all of its properties set. All unused properties must be set to null.

RecurrenceType Value	Properties	Example Pattern
RecursDaily	RecurrenceInterval	Every second day
RecursEveryWeekday	RecurrenceDayOfWeekMask	Every weekday - can't be Saturday or Sunday
RecursMonthly	RecurrenceDayOfMonth RecurrenceInterval	Every second month, on the third day of the month
RecursMonthlyNth	RecurrenceInterval RecurrenceInstance RecurrenceDayOfWeekMask	Every second month, on the last Friday of the month
RecursWeekly	RecurrenceInterval RecurrenceDayOfWeekMask	Every three weeks on Wednesday and Friday
RecursYearly	RecurrenceDayOfMonth RecurrenceMonthOfYear	Every March on the 26th day of the month
RecursYearlyNth	RecurrenceDayOfWeekMask RecurrenceInstanceRecurrenceMonthOfYear	The first Saturday in every October

JunctionIdList

The `JunctionIdList` field is now implemented in the Event and Task objects. With a single API call, it's easy to create many-to-many relationships between the Event or Task object with contacts, leads, or users.

To create a Task with related Contacts without `JunctionIdList`, you first have to create the task, then use the returned task ID to create the `TaskRelation` records. If the `TaskRelation` save call fails, error handling is your responsibility because the task has already been committed to the database.

```
public void createTasksOld(Contact[] contacts) {
 Task task = new Task();
 task.setSubject("New Task");
 SaveResult[] results = null;
 try {
  results = connection.create(new Task[] {
   task
  });
  if (results[0].isSuccess()) {
   TaskRelation[] relations = new TaskRelation[contacts.size()];
   for (int i = 0; i < contacts.length; i++) {
    relations[i] = new TaskRelation();
    relations[i].setTaskId(results[0].getID());
    relations[i].setRelationId(contacts[i].getID());
   }
   results = connection.create(relations);
  }
 } catch (ConnectionException ce) {
  ce.printStackTrace();
 }
}
```

To create a task using `JuncionIdList`, IDs are pulled from the related contacts and both the task and the `TaskRelation` records are created in one API call. If the `TaskRelation` fails, the task is rolled back because it's all done in a single API call.

```
public void createTaskNew(Contact[] contacts) {
 String[] contactIds = new String[contacts.size()];
 for (int i = 0; i < contacts.size(); i++) {
  contactIds[i] = contacts[i].getID();
 }
 Task task = new Task();
 task.setSubject("New Task");
 task.setTaskWhoIds(contactIds);
 SaveResult[] results = null;
 try {
  results = connection.create(new Task[] {
   task
  });
 } catch (ConnectionException ce) {
  ce.printStackTrace();
 }
}
```

Shared Field-Level Security for Event and Task Objects

Metadata deployments for the Task object should always include the field-level security for the Event object. Shared field-level security prevents each object from changing the field-level security of the associated object.

Metadata deployments that include field-level security for only one of either the Event or Task objects can cause field-level security changes to the other object that aren't reflected in the metadata.

- If field-level security is enabled for one object, then field-level security is enabled for both objects.
- If field-level security is disabled for one object, then it's disabled for both objects.

Note: A missing entry in the metadata is treated as field-level security being disabled.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

TaskChangeEvent (API version 44.0)
Change events are available for the object.

TaskFeed (API version 20.0)
Feed tracking is available for the object.

SEE ALSO:

Overview of Salesforce Objects and Fields

TaskPriority

Represents the importance or urgency of a task, such as High, Normal, or Low.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Customer and Partner Portal users can't access this object.

Fields

Field	Details
`ApiName`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Uniquely identifies a picklist value so it can be retrieved without using an ID or master label.

Field	Details
IsDefault	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the status is the default task priority value (`true`) or not (`false`) in the picklist. Only one value in the picklist can be the default value.
IsHighPriority	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether this task priority value represents a high priority Task (`true`) or not (`false`). Multiple task priority values can represent a high-priority Task.
MasterLabel	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Master label for this task priority value. This display value is the internal label that doesn't get translated. Limit: 255 characters.
SortOrder	**Type** int **Properties** Filter, Nillable, Group, Sort **Description** Number used to sort this value in the task priority picklist. These numbers aren't guaranteed to be sequential, as some previous task priority values might have been deleted.

Usage

This object represents a value in the task priority picklist. The task priority picklist provides additional information about the importance of a Task, such as whether a given priority value represents a high priority. Your client application can query on this object to retrieve the set of values in the task priority picklist, and then use that information while processing Task objects to determine more information about a given task. For example, the application could test whether a given Task is high priority based on its `Priority` value and the value of the `IsHighPriority` in the associated TaskPriority object.

Overview of Salesforce Objects and Fields

TaskRelation

Represents the relationship between a task and a lead, contacts, and other objects related to the task. If Shared Activities is enabled, this object doesn't support triggers, workflow, or data validation rules. This object is available in API version 24.0 and later.

TaskRelation is only available if you've enabled Shared Activities in your organization.

TaskRelation allows the following relationships:

- A task can be related to one lead or up to 50 contacts.
- A task can also be related to one account, asset, campaign, case, contract, opportunity, product, solution, or custom object.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `queryAll()`, `retrieve()`

Fields

Field Name	Details
`AccountId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Indicates the Account ID of the relation. For information on IDs, see ID Field Type.
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether a task has been deleted; label is **Deleted**. When a TaskRelation record is deleted, it isn't moved to the Recycle Bin and can't be undeleted, unless the record was cascade-deleted when the parent object was deleted. Don't use the `IsDeleted` field to detect deleted records in SOQL queries or `queryAll()` calls on directly deleted relation records. Instead, use the call `getDeleted()`.
`IsWhat`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description Indicates whether the relation is an Account, Opportunity, Campaign, Case, other standard object, or a custom object. Value is `false` if `RelationId` is a contact or lead and `true` otherwise.
`RelationId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Indicates the `WhatId` or `WhoId` in the relationship. For more information, see `Task`. For information on IDs, see ID Field Type.
`TaskId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Represents the ID of the associated Task. For information on IDs, see ID Field Type.

Usage

See contacts associated with a task

```
public void queryWhosOfTaskSample() {
     String soqlQuery = "SELECT Id, Subject, (SELECT RelationId, Relation.Name, IsWhat
 from TaskRelations WHERE isWhat = false) FROM Task WHERE Id = '00T x00000050KEN'";
    QueryResult qResult = null;
    try {
        qResult = connection.query(soqlQuery);
        TaskRelation relation1 =
(TaskRelation)qResult.getRecords()[0].getTaskRelations().getRecords()[0];
    }catch (ConnectionException ce) {
        ce.printStackTrace();
     }
 }
```

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

TaskRelationChangeEvent (API version 44.0)
Change events are available for the object.

SEE ALSO:
Task
TaskWhoRelation

TaskStatus

Represents the status of a task, such as Not Started, Completed, or Closed.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
`ApiName`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Uniquely identifies a picklist value so it can be retrieved without using an ID or master label.
`IsClosed`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether this task status value represents a closed Task (`true`) or not (`false`). Multiple task status values can represent a closed Task.
`IsDefault`	**Type** boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort **Description** Indicates whether the status is the default task status value (`true`) or not (`false`) in the picklist.
`MasterLabel`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Master label for this task status value. This display value is the internal label that doesn't get translated. Limit: 255 characters.
`SortOrder`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Number used to sort this value in the task status picklist. These numbers aren't guaranteed to be sequential, as some previous task status values might have been deleted.

Usage

This object represents a value in the task status picklist. The task status picklist provides additional information about the status of a Task, such as whether a given status value represents an open or closed task. Your client application can query this object to retrieve the set of values in the task status picklist, and then use that information while processing Task records to determine more information about a given task. For example, the application could test whether a given task is open or closed based on the Task `Status` value and the value of the `IsClosed` property in the associated TaskStatus record.

SEE ALSO:

Overview of Salesforce Objects and Fields

TaskTag

Associates a word or short phrase with a Task.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
`ItemId`	**Type** reference **Properties** Create, Filter **Description** ID of the tagged item.
`Name`	**Type** string **Properties** Create, Filter **Description** Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
`TagDefinitionId`	**Type** reference **Properties** Filter **Description** ID of the parent TagDefinition object that owns the tag.
`Type`	**Type** picklist **Properties** Create, Filter, Restricted picklist **Description** Defines the visibility of a tag. Valid values: • `Public`—The tag can be viewed and manipulated by all users in an organization. • `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`.

Usage

TaskTag stores the relationship between its parent TagDefinition and the Task being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

TaskWhoRelation

Represents the relationship between a task and a lead or contacts. This object is available in API version 29.0 and later.

This derived object is a filtered version of the TaskRelation on page 4199 object; that is, IsParent is *`true`* and IsWhat is *`false`*. It doesn't represent relationships to accounts, opportunities, or other objects.

TaskWhoRelation allows a variable number of relationships: one lead or up to 50 contacts. Available only if you've enabled Shared Activities for your organization.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
`RelationId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Indicates the ID of the contacts or lead related to the task.
`TaskId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Indicates the ID of the task.
`Type`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Indicates whether the person related to the task is a lead or contact.

Usage

Apex example that queries contacts associated with a task

```
public void queryWhosOfTaskSample() {
    String soqlQuery = "SELECT Id, Subject, (SELECT RelationId, Relation.Name, IsWhat
from TaskWhoRelations) FROM Task WHERE Id = '00Tx0000005OKEN'";
    QueryResult qResult = null;
    try {
        qResult = connection.query(soqlQuery);
        TaskWhoRelation relation1 =
(TaskWhoRelation)qResult.getRecords()[0].getTaskWhoRelations().getRecords()[0];
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Task

TaskRelation

TaxEngine

A tax engine represents both an instance of a tax engine provider as well as the merchant credentials for that specific instance. When Subscription Management calculates tax on an order item, it sends a request through Subscription Management Tax Calculation API to an external tax engine. The Salesforce tax engine record contains information passed to the external tax engine, such as This object is available in API version 55.0 and later.

The merchant credentials are stored in a named credential record in Salesforce. The named credential record is referenced in the tax engine object's Merchant Credentials field.

The tax adapter Apex class ID is stored in the tax engine provider. When a user calls Calculate Tax API, Subscription Management interacts with the external tax provider using the adapter class and the named credentials.

The tax engine address and seller code from the TaxEngine record are also used in the interaction.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available when Subscription Management is enabled.

Fields

Field	Details
Description	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** The description of the tax engine provider and merchant credential.
ExternalReference	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** Shows information about the external platform used for the tax engine.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
MerchantCredentialId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Looks up to the merchant credential setup entity in Salesforce. CommerceTax Tax Calculation API sends this information to the external tax engine for use in the tax calculation process. This field is a relationship field.

Field	Details
	Relationship Name MerchantCredential **Relationship Type** Lookup **Refers To** NamedCredential
SellerCode	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Seller code of the transaction for which the tax engine integration log was captured.
Status	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Shows the status of the tax engine. Possible values are: • Active—This tax engine is available for use. • Inactive—This tax engine isn't available for use.
TaxEngineAddress	**Type** address **Properties** Filter **Description** The compound form of the tax engine address. Read-only. See Address Compound Fields for details on compound address fields. Used in case the request doesn't contain a Ship To address.
TaxEngineCity	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Details for the tax engine address. Maximum size is 40 characters.

Field	Details
`TaxEngineCountry`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Details for the tax engine address. Maximum size is 80 characters.
`TaxEngineGeocodeAccuracy`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Accuracy level of the geocode for the tax engine address. See Compound Field Considerations and Limitations for details on geolocation compound fields.
`TaxEngineLatitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with TaxEngineLongitude to specify the precise geolocation of a tax engine address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields.
`TaxEngineLongitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with TaxEngineLatitude to specify the precise geolocation of a tax engine address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields.
`TaxEngineName`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the tax engine.
`TaxEnginePostalCode`	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Details for the tax engine address. Postal code maximum size is 20 characters.
TaxEngineProviderId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The Id of the tax engine provider. This field is a relationship field. **Relationship Name** TaxEngineProvider **Relationship Type** Lookup **Refers To** TaxEngineProvider
TaxEngineState	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Details for the tax engine address. State maximum size is 80 characters.
TaxEngineStreet	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Details for the tax engine address. Maximum of 255 characters.

TaxEngineInteractionLog

A record of a communication with an external tax engine following a tax calculation request. This object is available in API version 55.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Special Access Rules

This object is available when Subscription Management is enabled in your org.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Filter, Nillable, Sort **Description** Optional user-defined description for providing more information about the tax engine interaction log.
`DocumentCode`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Document code of the transaction for which the tax engine integration log was captured.
`EffectiveDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date that the tax engine request takes effect. This date is available for reference and bookkeeping only and doesn't have any impact on tax calculation.
`InteractionHttpStatusCode`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The HHTP result code of the external callout made to a third-party tax engine provider. Refer to your third-party tax engine provider's documentation for details about the specific codes returned.

Field	Details
`InteractionType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Shows the type of request made to the tax engine. In Subscription Management Summer '22, only `CalculateTax` is supported. Possible values are: • `CalculateTax`
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`ReferenceEntity`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The record on which tax was calculated.
`RequestBody`	**Type** base64 **Properties** Nillable **Description** Contains the content of the tax calculation API request.

Field	Details
RequestContentType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Shows the type of data passed in the request. For example, `application/html` or `text/csv`.
RequestLength	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The character length of text within the request body.
RequestName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the request.
ResponseBody	**Type** base64 **Properties** Nillable **Description** Contains the content of the tax calculation API response.
ResponseContentType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Shows the method used to deliver the tax calculation API response, such as `application/html` or `text/vnd.salesforce.quip-template`.
ResponseLength	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The character length of text within the response body.
ResponseName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Name of the response from the tax engine.
ResultCode	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The code describing the result of the request. Possible values are: • AdapterException—The Apex adapter interface for the tax provider threw an exception. • Success—The request was successful. • TaxEngineError—An error occurred while processing the request. See the log for details. • ValidationError—A validation error occurred. Check that the request is complete and valid.
TaxEngineId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the tax engine used in the tax calculation process. This field is a relationship field. **Relationship Name** TaxEngine **Relationship Type** Lookup **Refers To** TaxEngine
TaxEngineInteractionLogNumber	**Type** string

Field	Details
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** A system-generated number for a log entry.

TaxEngineProvider

Represents general information about a service that manages a tax engine, such as the ID of the tax adapter Apex class in Salesforce, and the engine's namespace prefix. Tax engine providers have a one-to-many relationship with tax engines, where the tax engine record represents a specific configuration of a tax engine that can be assigned to multiple order items. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is available when Subscription Management is enabled in your org.

Fields

Field	Details
`ApexAdapterId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The Id of the Apex adapter used by this tax provider. This field is unique within your organization. This field is a relationship field. **Relationship Name** ApexAdapter **Relationship Type** Lookup **Refers To** ApexClass
`Description`	**Type** textarea

Field	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** The description of the tax engine provider.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The API name for the record.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language used by this tax engine provider. Values appear based on their language codes in Salesforce, such as `da` for Danish or `th` for Thai.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Label used for the tax engine's API in Salesforce.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Apex namespace prefix of the API used for the tax engine. In a packaging context, a namespace prefix is a one to 15-character alphanumeric identifier that distinguishes your package and its contents from packages of other developers on AppExchange.

TaxGeoConfig

Represents a tax configuration associated with a GeoCountry. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The TaxGeoConfig object is available if B2B Commerce or D2C Commerce is enabled.

Fields

Field	Details
`GeoCountryId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The GeoCountry associated with the TaxGeoConfig. This field is a relationship field. **Relationship Name** GeoCountry **Relationship Type** Lookup **Refers To** GeoCountry
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed data in this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it's possible the user accessed data in this record or list view but didn't view it directly.

Field	Details
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the TaxGeoConfig.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the TaxGeoConfig record. By default, the asset owner is the user who created the record. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
RoundingStrategyType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Specifies the tax rounding strategy associated with the TaxGeoConfig. Possible values are: • `Rounding Down` • `Rounding Off` • `Rounding Up` The default value is `Rounding Off`.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

TaxPolicy

A tax policy contains a group of tax treatments, where each treatment represents parameters to determine how a particular product is taxed for a transaction line item. Tax policies are related to products, which pass the policy on to the resulting order items. When you activate an order, Subscription Management assigns a tax treatment to each order item based on the tax policy's DefaultTaxTreatmentId, then uses the tax treatment to calculate tax. This object is available in API version 55.0 and later.

Each tax policy requires at least one tax treatment. We recommend determining the taxation needs for each of your products and creating policies and treatments for each product accordingly. You can then assign your tax policies to the relevant products on your own or through automation.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available when Subscription Management is enabled in your org.

Fields

Field	Details
`DefaultTaxTreatmentId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** When you order a product, the order product receives this tax treatment. This field is a relationship field. **Relationship Name** DefaultTaxTreatment **Relationship Type** Lookup **Refers To** TaxTreatment

Field	Details
Description	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Optional user-defined description for providing more information about the tax policy.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Optional user-defined name for the tax policy.
Status	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** To calculate tax for order products, products must have an active tax policy. Tax policies are created with a Draft status before being assigned to a product or order product. After activating a tax policy, you can't edit certain policy fields. Possible values are: • Active

Field	Details
	• `Draft` • `Inactive`
`TreatmentSelection`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Defines how Subscription Management chooses a tax treatment to assign to order products related to this tax policy. In API version 55.0, only `Default` is supported. Possible values are: • `Default`—The order product receives the tax treatment defined in the tax policy's `DefaultTreatmentId` field. • `LegalEntity`—Assigns a tax treatment based on matching legal entities between the order product and tax treatment. • `Manual`—Order products don't receive tax treatments based on the tax policy; users must provide the treatment on their own instead.

TaxRate

Represents a tax rate for a tax code and country. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The TaxRate object is available if B2B Commerce or D2C Commerce is enabled.

Fields

Field	Details
`GeoCountryId`	**Type** reference **Properties** Create, Filter, Group, Sort

Field	Details
	Description The ID of the GeoCountry for which the tax rate applies. You can define only one tax rate per GeoCountry and tax code combination. This field is a relationship field. **Relationship Name** GeoCountry **Relationship Type** Lookup **Refers To** GeoCountry
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it's possible the user accessed data in this record or list view but didn't viewed it directly.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The unique ID of the tax rate.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The TaxRate record owner. By default, the record owner is the user who created the record. This field is a polymorphic relationship field.

Field	Details
	Relationship Name Owner **Relationship Type** Lookup **Refers To** Group, User
`Priority`	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Reserved for future use.
`Rate`	**Type** double **Properties** Create, Filter, Sort, Update **Description** The tax percentage rate that will be applied to orders.
`TaxCode`	**Type** string **Properties** Create, Filter, Group, Sort **Description** The code used to calculate the tax rate for the invoice line.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

TaxRateChangeEvent on page 52
Change events are available for the object.

TaxRateFeed on page 39
Feed tracking is available for the object.

TaxRateHistory on page 47
History is available for tracked fields of the object.

TaxRateOwnerSharingRule on page 48
Sharing rules are available for the object.

TaxRateShare on page 50
Sharing is available for the object.

TaxTreatment

A tax treatment contains details about how Salesforce and external engines calculate taxes, and the tax engine to use for tax calculation. The IsTaxable field determines whether tax is calculated for the product in the transaction. The tax code, tax engine, and product code are sent via API to the external tax calculation service. When you invoice an order item that has a tax treatment, the invoice line inherits the tax treatment from the order item's related billing schedule. The invoice line's TaxCode field is populated based on the code that the tax engine used for calculation. This object is available in API version 55.0 and later.

Each product requires a tax policy to determine whether to apply tax. The tax treatments determine how taxable products are taxed. Each tax policy requires at least one tax treatment. We recommend determining the taxation needs for each of your products and creating policies and treatments for each product accordingly. You can then assign your tax policies to the relevant products on your own or through automation.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available when Subscription Management, B2B Commerce, or D2C Commerce is enabled in your org.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Optional user-defined description for providing more information about the tax treatment.
`IsTaxable`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Determines whether Subscription Management calculates tax for order items covered by the tax treatment. When this value is True, Subscription Management calls the CalculateTax API for the order item during order item creation. The default value is 'False'.

Field	Details
	This field is available when Subscription Management is enabled.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Optional user-defined name for the tax treatment.
ProductCode	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** Code of the product that the tax treatment applies to.
Status	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Status of the tax treatment. Possible values are: • Active • Draft

Field	Details
	• `Inactive`
`TaxCode`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Reference code used when tax is calculated in an external tax engine.
`TaxEngineId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The tax engine for the tax treatment. A tax engine represents both an instance of a tax engine provider as well as the merchant credentials for that specific instance. When Subscription Management begins the tax calculation process for an order item, it uses the tax engine from the order item’s tax treatment. If the tax treatment’s `IsTaxable` value is True, the treatment requires a tax engine. This field is a relationship field. This field is available when Subscription Management is enabled. **Relationship Name** TaxEngine **Relationship Type** Lookup **Refers To** TaxEngine
`TaxPolicyId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The tax treatment’s parent tax policy. A tax policy is a group of tax treatments, where each treatment represents a rule for how to invoice a customer for an order item. Tax policies are related to products, which pass the policy on to the resulting order items. When you activate an order, Subscription Management assigns a tax treatment to each order item based on the tax policy's DefaultTaxTreatmentId, then uses the tax treatment to calculate tax. This field is a relationship field. **Relationship Name** TaxPolicy

Field	Details
	Relationship Type Lookup **Refers To** TaxPolicy

TenantSecret

This object stores an encrypted organization-specific key fragment that's used with the master secret to produce organization-specific data encryption keys. This object is available in API version 34.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

You can rotate tenant secrets of the `Data` type once every four hours in a sandbox org or every 24 hours in production orgs. You can rotate tenant secrets of the `SearchIndex` type one time every seven days.

Note: This information is about Shield Platform Encryption and not Classic Encryption.

Supported Calls

`create()`, `query()`, `retrieve()`, `update()`

Fields

Field Name	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** The description of the tenant secret.
`KeyDerivationMode`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The key derivation mode applied to customer-supplied key material. Modes are: **PBKDF2** The customer-supplied key material is used by the Shield KMS to create a derived data encryption key.

Field Name	Details
	NONE The customer-supplied key material is used by the Shield KMS as the final data encryption key to directly encrypt and decrypt data. Available in API version 43.0 and later.
`RemoteKeyCertificate`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The name of the certificate whose public key is used to encrypt the `SecretValue` during a remote key callout. Available in API version 45.0 and later.
`RemoteKeyIdentifier`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** A unique key identifier for key material fetched from a remote key service. Available in API version 45.0 and later.
`RemoteKeyServiceID`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The named credential used to fetch remote key material from a remote key service. Available in API version 45.0 and later.
`SecretValue`	**Type** base64 **Properties** Create, Nillable, Update **Description** The encrypted 256-bit secret value encoded in base64.
`SecretValueCertificate`	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The certificate needed to upload a customer-supplied tenant secret. Each certificate has a unique name.
`SecretValueHash`	**Type** base64 **Properties** Create **Description** The matching tenant secret hash for an uploaded customer-supplied tenant secret.
`Source`	**Type** picklist **Properties** Create, Default on create, Filter, Group, Restricted picklist, Sort **Description** The source of the encryption key material. Values are: **HSM** A Salesforce-generated tenant secret. **Uploaded** A customer-supplied tenant secret or data encryption key. **Remote** A tenant secret or data encryption key fetched from a key service outside of Salesforce. Available in API version 44.0 and later. Note: Tenant secrets with a `Source` value of Remote are listed as Fetched on the Key Management page in Setup. Available in API version 43.0 and later.
`Status`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The status of the tenant secret. Values are: **Active** Can be used to encrypt and decrypt new or existing data.

Field Name	Details
	Archived Can't encrypt new data. Can be used to decrypt data previously encrypted with this key when it was active. **Destroyed** Can't encrypt or decrypt data. Data encrypted with this key when it was active can no longer be decrypted. Files and attachments encrypted with this key can no longer be downloaded. You can update the `Status` field through the API in versions 44.0 or later.
`Type`	**Type** picklist **Properties** Create, Default on create, Filter, Group, Restricted picklist, Sort **Description** The type of tenant secret. The `Type` field is available in API version 39.0 and later. The following values appear in the `Type` picklist: • `Data`—data stored in the Salesforce database. Includes data in encrypted fields, files, and attachments but not search index files. Tenant secrets created in API version 34.0 and later default to the `Data` type. • `SearchIndex`—search index files (available in API version 39.0 and later). • `Analytics`—CRM Analytics data (available in API version 39.0 and later). • `DeterministicData`—data stored in the Salesforce database. Includes data in encrypted fields, files, and attachments, but not search index files (available in API version 39.0 and later). • `EventBus`—Change Data Capture event data (available in API version 43.0 and later).
`Version`	**Type** int **Properties** Filter, Group, idLookup, Sort **Description** The version number of this secret. The version number is unique within your org.

Usage

Use this object to create or update an org-specific tenant secret or customer-supplied key material.

Example 1: Build an automated tenant secret creation and activation solution similar to the following.

1. Start by creating an Apex class to create the tenant secret. Specify the value of the tenant secret to encrypt data of a particular type.

```
global class CreateNewSecret implements Schedulable {
   global void execute(SchedulableContext SC) {
      TenantSecret secret = new TenantSecret ();
      secret.description = 'Created new secret from scheduled job';
      secret.type= 'SearchIndex';
      insert secret;
   }
}
```

> **Note:** `Type` is available in API version 39.0 and later. `Type` is optional; all tenant secrets default to the `Data` type.

2. Schedule the Apex class to run at the specified interval.

   This Apex code only needs to be run a single time to schedule the job. This code runs the job every 90 days.

```
CreateNewSecret secret = new CreateNewSecret();
String schedule = '0 0 0 1 JAN,APR,JUL,OCT ?';
String jobID = system.schedule('Automated secret creation and activation', schedule,
secret);
```

3. Validate that the job is scheduled.
4. Validate that tenant secrets are created after the job is run.

Example 2: Upload a customer-supplied tenant secret or customer-supplied data encryption key.

1. Create a certificate that's compatible with customer-supplied key material. See Generate a BYOK-Compatible Certificate in Salesforce Help.
2. Then upload your matching key material and key material hash. Include the unique name of the compatible certificate. The key material is uploaded in encrypted form.

```
      TenantSecret secret = new TenantSecret ();
      secret.description = 'New uploaded secret';
      secret.type= 'Data';
      secret.SecretValue = ...
      EncodingUtil.base64Decode('...');;
      secret.SecretValueCertificate = ...;
      secret.SecretValueHash = ...
      EncodingUtil.base64Decode('...');
      insert secret;
```

   You can use this script to generate a customer-supplied tenant secret and tenant secret hash.

3. Validate that the key material is uploaded.

Example 3: Opt out of key derivation on a key-by-key basis when you upload key material. When you upload your key material, specify `'Source':Uploaded` and `'KeyDerivationMode':'NONE'`, and set non-null values for the SecretValueCertificate, SecretValue, and SecretValueHash.

Example 4: Import a tenant secret of the `Data` type.

```
TenantSecret secret = [SELECT Id FROM TenantSecret WHERE Type = 'Data' AND Version = 2];
secret.SecretValue = "<previously_exported_secret_as_a_String>";
update secret;
```

Example 5: Export a tenant secret by writing the `secret.SecretValue` to a file. Here's an example that uses a tenant secret of the `SearchIndex` type.

```
TenantSecret secret = [SELECT SecretValue FROM TenantSecret WHERE Type = 'TenantSecret'
AND Version = 2];
secret.SecretValue =...;
update secret;
```

Example 6: Destroy a tenant secret of the `Data` type.

Warning: Your tenant secret is unique to your organization and to the specific data to which it applies. When you destroy a tenant secret, related data isn't accessible unless you previously exported the key and then import the key back into Salesforce.

```
TenantSecret secret = [SELECT Id FROM TenantSecret WHERE Type = 'Data' AND Version = 2];
secret.SecretValue = NULL;
secret.Status = Destroyed;
update secret;
```

Example 7: Change the `Status` of a tenant secret from Archived to Destroyed. Include the SecretValue and new tenant secret Status.

```
TenantSecret secret = [SELECT Id FROM TenantSecret WHERE Type = 'Data' AND Version = 2];
secret.Status = Destroyed;
update secret;
```

Cache-Only Key Service customers can change the Status of cache-only key tenant secrets. For example, reactivate a cache-only key by changing its Status from Destroyed to Active.

Example 8: Create a callout connection that fetches a cache-only key tenant secret from a key service outside of Salesforce.

1. Make sure that your org has at least one active Data in Salesforce key, either Salesforce-generated or customer-supplied. Then turn on Allow Cache-Only Keys with BYOK from the Advanced Settings page in Setup.
2. Create a certificate that's compatible with customer-supplied key material. See Generate a BYOK-Compatible Certificate in Salesforce Help.
3. Create and assemble your key material.
4. Create a named credential to serve as your authenticated callout mechanism. You can define your named credential through Setup or directly with Apex. Specify a BYOK-compatible certificate and an HTTPS endpoint.
5. Configure the connection to your remote key service. This connection uses a named credential and its associated certificate to fetch a specified cache-only key tenant secret.

```
remote_params = { 'Source': 'Remote',
'RemoteKeyIdentifier': ...,
'RemoteKeyServiceId': ...,
'RemoteKeyCertificate': ...}

sf.TenantSecret.create(remote_params)
```

System Fields

TenantSecurityAlertRuleSelectedTenant

Stores information about a Security Center alert rule for tenants. This object is available for Security Center subscribers in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is read-only.

Fields

Field	Details
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the metric for the data collected.
`NotificationRuleIdentifier`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the corresponding TenantSecurityNotificationRule.
`Tenant`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The ID of the tenant (org) that this record is for.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

TenantSecurityAlertRuleSelectedTenantChangeEvent on page 52
Change events are available for the object.

TenantSecurityAlertRuleSelectedTenantFeed on page 39
Feed tracking is available for the object.

TenantSecurityAlertRuleSelectedTenantHistory on page 47
History is available for tracked fields of the object.

TenantSecurityAlertRuleSelectedTenantOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityAlertRuleSelectedTenantShare on page 50
Sharing is available for the object.

TenantSecurityApiAnomaly

Stores detected anomalies in how users typically make API calls. Fore more information, see Threat Detection. This object is available to Security Center subscribers in API version 53.0 and later.

Note: Threat Detection is available only for Event Monitoring subscribers.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is read-only.

Fields

Field	Details
`DetailIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the individual detail record. This field is unique within your org.
`EventDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The time when the anomaly was reported. For example, 2020-01-20T19:12:26.965Z. The most granular setting is milliseconds.
`EventIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The unique ID of the event, which is shared with the corresponding storage object.
`EventName`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the event, which is Api Anomaly.
`MetricIdentifier`	**Type** string **Properties** Filter, Group, Sort **Description** The ID of the type of metric that was counted.
`MetricsType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of data collected.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the metric for the data collected.
`Operation`	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The API call that generated the event. For example, Query.
QueriedEntities	**Type** textarea **Properties** Nillable **Description** The type of entities associated with the event.
RequestIdentifier	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The unique ID of a single transaction. A transaction can contain one or more events.
RowsProcessed	**Type** double **Properties** Filter, Nillable, Sort **Description** Total row count for the current operation.
Score	**Type** double **Properties** Filter, idLookup, Nillable, Sort **Description** A number from 0 through 100 that represents the anomaly score for the API execution or export tracked by this event. The anomaly score shows how the current API activity differs from the user's typical activity. A low score indicates that the user's current API activity is similar to the usual activity, and a high score indicates that it's different.
SecurityEventData	**Type** textarea **Properties** Nillable

Field	Details
	Description The set of features about the API activity that triggered this anomaly event. See the Threat Detection documentation for the possible features. For example, a user typically downloads 10 accounts at a time but then deviates from that pattern and downloads 1,000 accounts. This event is triggered, and the contributing features are captured in this field. Potential features include row count, column count, average row size, day of week, and the browser's user agent used for the report activity. The data captured also shows how much as a percentage that the feature contributed to triggering this anomaly event. The data is in JSON format.
Summary	**Type** textarea **Properties** Nillable **Description** A text summary of the API anomaly that caused this event.
Tenant	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the tenant that was targeted in the event.
TenantName	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the tenant that was targeted in the event.
Uri	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
UserAgent	**Type** textarea **Properties** Nillable

Field	Details
	Description UserAgent used in the HTTP request, post-processed by the server.
`UserIdentifier`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The origin user's unique ID.
`Username`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The origin username in the format of user@company.com at the time that the event was created.

Associated Objects

TenantSecurityConnectedApp

Stores the details for a connected app that was added to or removed from a Security Center tenant. This object is available to Security Center subscribers in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object can only be read and queried.

Fields

Field	Details
Action	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The action taken on the connected app within a tenant. Possible values are: • ADDED • REMOVED • UPDATED
ActionBy	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The user who performed the action on the connected app.
ActionDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date that the action was taken.
AppName	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the connected app.
AuthorizedBy	**Type** string

Field	Details
	Properties Filter, Group, idLookup, Nillable, Sort **Description** The user who authorized the connected app to be installed.
`AuthorizedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date that the connected app was authorized for installation.
`DetailIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the individual detail record. This field is unique within your org.
`LastUsedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The last date that the connected app was used for authentication.
`MetricIdentifier`	**Type** string **Properties** Filter, Group, Sort **Description** The ID of the type of metric that was counted.
`MetricsType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of data being collected.
`Name`	**Type** string

Field	Details
	Properties Filter, Group, idLookup, Sort **Description** The name of the metric for which data is being collected.
`Publisher`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Represents if the relevant tenant is the original publisher of the connected app for all connected tenants in the org.
`Scope`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The scope or scopes assigned to the connected app. A scope defines the type of protected resource that the connected app can access.
`Tenant`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the relevant tenant.
`TenantName`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the tenant that the connected app is connected to.
`Version`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The current version of the connected app.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecurityConnectedAppChangeEvent on page 52
Change events are available for the object.

TenantSecurityConnectedAppFeed on page 39
Feed tracking is available for the object.

TenantSecurityConnectedAppHistory on page 47
History is available for tracked fields of the object.

TenantSecurityConnectedAppOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityConnectedAppShare on page 50
Sharing is available for the object.

TenantSecurityCredentialStuffing

Stores when a user successfully logs in to Salesforce during an identified credential stuffing attack. For more information, see Threat Detection. This object is available to Security Center subscribers in API version 53.0 and later.

Note: Threat Detection is available only for Event Monitoring subscribers.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is read-only.

Fields

Field	Details
`AcceptLanguage`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** List of HTTP headers that specify the natural language, such as English, that the client understands.
`DetailIdentifier`	**Type** string

Field	Details
	Properties Filter, Group, idLookup, Sort **Description** The ID of the individual detail record. This field is unique within your org.
`EventDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the hijacking event was reported. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
`EventIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The unique ID of the event.
`EventName`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the event, which is Credential Stuffing.
`LoginType`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The type of login used to access the session. For the list of possible values, see the LoginType field of LoginHistory in the Object Reference.
`LoginUrl`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The URL of the login page. For example, `login.salesforce.com`.

Field	Details
MetricIdentifier	**Type** string **Properties** Filter, Group, Sort **Description** The ID of the type of metric that was counted.
MetricsType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of data collected.
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the metric for the data collected.
Score	**Type** double **Properties** Filter, idLookup, Nillable, Sort **Description** Indicates that a user successfully logged in to Salesforce during an identified credential stuffing attack. The value of this field is always 1.
Summary	**Type** textarea **Properties** Nillable **Description** A summary of the threat that caused this event to be created.
Tenant	**Type** string **Properties** Filter, Group, idLookup, Sort

Field	Details
	Description The ID of the tenant that was targeted in the event.
`TenantName`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the tenant that was targeted in the event.
`UserAgent`	**Type** textarea **Properties** Nillable **Description** UserAgent used in the HTTP request, post-processed by the server.
`UserIdentifier`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The origin user's unique ID.
`Username`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The origin username in the format of user@company.com at the time the event was created.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecurityCredentialStuffingChangeEvent on page 52
Change events are available for the object.

TenantSecurityCredentialStuffingFeed on page 39
Feed tracking is available for the object.

TenantSecurityCredentialStuffingHistory on page 47
History is available for tracked fields of the object.

TenantSecurityCredentialStuffingOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityCredentialStuffingShare on page 50
Sharing is available for the object.

TenantSecurityGuestUserAnomaly

Represents metric details for guest user anomaly events detected by Threat Detection. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is read-only.

Fields

Field	Details
`DetailIdentifier`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The unique identifier for this detail record.
`EventDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The time when the anomaly was reported. For example, 2020-01-20T19:12:26.965Z. The most granular setting is milliseconds.
`EventIdentifier`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update

Field	Details
	Description The unique ID of the event, which is shared with the corresponding storage object.
EventName	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The name of the event.
MetricIdentifier	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the type of metric counted. This field is unique within your organization.
MetricsType	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of data collected.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the metric for the data collected.
RequestedObjects	**Type** textarea **Properties** Create, Nillable, Update **Description** The objects requested by the customers.
Score	**Type** double **Properties** Create, Filter, idLookup, Nillable, Sort, Update

Field	Details
	Description Specifies how significantly the guest user behavior deviates from the other guest users. It is formatted as a number between 0 and 1.
`SoqlCommands`	**Type** textarea **Properties** Create, Nillable, Update **Description** SOQL commands run by the guest user.
`Summary`	**Type** textarea **Properties** Create, Nillable, Update **Description** A text summary of the anomaly that caused this event.
`Tenant`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The ID of the tenant that was targeted in the event.
`TenantName`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The name of the tenant that was targeted in the event.
`TotalControllerEvents`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of times controllers were triggered.
`UserAgent`	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** User Agent for this event.
`UserIdentifier`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The origin user's unique ID.
`UserType`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Type of user of this event. For example, a guest user.
`Username`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The origin username in the format of `user@company.com` at the time the event was created.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

TenantSecurityGuestUserAnomalyChangeEvent on page 52
Change events are available for the object.

TenantSecurityGuestUserAnomalyFeed on page 39
Feed tracking is available for the object.

TenantSecurityGuestUserAnomalyHistory on page 47
History is available for tracked fields of the object.

TenantSecurityGuestUserAnomalyOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityGuestUserAnomalyShare on page 50
Sharing is available for the object.

TenantSecurityEncryptionPolicy

Stores tenant encryption policy status. This object is available in API version 58.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is read-only.

Fields

Field	Details
`Action`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The action taken on the encryption policy within a tenant. Possible values are: • `Added` • `Removed` • `Updated`
`ActionBy`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** This field is reserved for future use.
`ActionDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** When the change to the tenant encryption policy status was made.
`DetailIdentifier`	**Type** string

Field	Details
	Properties Filter, Group, idLookup, Sort **Description** Unique identifier for this detail record.
MetricIdentifier	**Type** string **Properties** Filter, Group, Sort **Description** The ID of the type of metric that was counted. This field is unique within your organization.
MetricsType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of encryption policy collected by this metric.
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the metric for the data collected.
PolicyName	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the policy.
PolicyStatus	**Type** int **Properties** Filter, Group, idLookup, Nillable, Sort **Description** Status of the policy. Possible values are: • -1—No license. • 0—Not Enabled.

Field	Details
	• `-1`—Enabled
`Tenant`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the tenant with Shield Encryption.
`TenantName`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the tenant that this record is for.

TenantSecurityFeature

Stores org features across all tenants in Security Center. This object is available in API version 57.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is read-only.

Fields

Field	Details
`DetailIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the individual detail record. This field is unique across all tenants.
`FeatureDescription`	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The description of the feature.
`FeatureName`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the feature.
`IsEnabled`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the feature is enabled or disabled. The default value is `false`.
`MetricIdentifier`	**Type** string **Properties** Filter, Group, Sort **Description** The ID of the type of metric counted. This field is unique within your organization.
`MetricsType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of feature collected by this metric.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the feature for which data is being collected.

Field	Details
`Tenant`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the tenant where the feature was applied.
`TenantName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the connected tenant where the feature was enabled or disabled.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

TenantSecurityFeatureChangeEvent on page 52
Change events are available for the object.

TenantSecurityFeatureFeed on page 39
Feed tracking is available for the object.

TenantSecurityFeatureHistory on page 47
History is available for tracked fields of the object.

TenantSecurityFeatureOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityFeatureShare on page 50
Sharing is available for the object.

TenantSecurityHealthCheckBaselineTrend

Stores metric details related to Health Check baseline settings. The Health Check detail page in Security Center displays scores and settings for all your tenants in one place. Use this object to get details about which metrics are collected and for which tenants, and changes made to the Health Check baseline. This object is available to Security Center subscribers in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is read-only.

Fields

Field	Details
`Action`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The type of action. For example, added, updated, or removed.
`ActionBy`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The user or admin that made the change.
`ActionDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time of the change.
`ApiName`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The name of the metric used by the API and managed packages.
`BaselineDescription`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** For custom baselines, the name of the custom baseline file.

Field	Details
BaselineIdentifier	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the baseline.
BaselineName	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The name of the baseline.
DetailIdentifier	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The ID of the individual detail record. This field is unique across all tenants.
IsDefault	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Whether the baseline is default or custom. The default is `false`.
MetricIdentifier	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the type of metric collected.
MetricsType	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The type of data collected. For example, SecurityHealthCheckBaselineMetric.

Field	Details
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the metric for the data collected.
Tenant	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The ID of the tenant that was scored by the Security Health Check.
TenantName	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The name of the tenant that was scored by the Security Health Check.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecurityHealthCheckBaselineTrendChangeEvent on page 52
Change events are available for the object.

TenantSecurityHealthCheckBaselineTrendFeed on page 39
Feed tracking is available for the object.

TenantSecurityHealthCheckBaselineTrendHistory on page 47
History is available for tracked fields of the object.

TenantSecurityHealthCheckBaselineTrendOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityHealthCheckBaselineTrendShare on page 50
Sharing is available for the object.

TenantSecurityHealthCheckDetail

Stores the details of Health Check scores for a connected tenant. The Health Check detail page in Security Center displays scores and settings for all your tenants in one place. Use this object to get settings and risks per tenant on a selected date. This object is available to Security Center subscribers in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is read-only.

Fields

Field	Details
`HealthCheckSettingIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The ID of the Health Check setting. This field is unique within your org.
`HealthCheckTrendKey`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID of the Health Check trend related to the Health Check detail records.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the tenant that was scored.
`OrgValue`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The org's value for the security setting.
`RiskType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description The level of risk of the org's security setting value. Possible values are: • `HIGH_RISK` • `MEDIUM_RISK` • `MEETS_STANDARD`
`Setting`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the security setting. For example, Minimum Password Length.
`SettingGroup`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the security setting group in Setup that this setting is in. For example, Password Policies.
`SettingRiskCategory`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The level of risk of the org's security settings. Possible values are: • `HIGH_RISK` • `INFORMATIONAL` • `LOW_RISK` • `MEDIUM_RISK`
`StandardValue`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The recommended standard value for the security setting.

Field	Details
`Tenant`	**Type** string **Properties** Filter, Group, Sort **Description** The ID of the tenant that was scored.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecurityHealthCheckDetailChangeEvent on page 52
Change events are available for the object.

TenantSecurityHealthCheckDetailFeed on page 39
Feed tracking is available for the object.

TenantSecurityHealthCheckDetailHistory on page 47
History is available for tracked fields of the object.

TenantSecurityHealthCheckDetailOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityHealthCheckDetailShare on page 50
Sharing is available for the object.

TenantSecurityHealthCheckTrend

Stores the history of Security Health Check scores for a connected tenant within Security Center. Health Check in Security Center displays Health Check scores and the average risk settings for all your tenants in one place. This object belongs to the parent tenant and stores Health Check data pushed from child tenants. This object is available for Security Center subscribers in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is read-only.

Fields

Field	Details
`Baseline`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The definition of an org’s security settings standards.
`HighRisk`	**Type** int **Properties** Filter, Group, Sort **Description** Indicates that fields with this picklist value contain data highly sensitive to your company.
`Informational`	**Type** int **Properties** Filter, Group, Sort **Description** Indicates that fields with this picklist value contain data that isn't sensitive for your company.
`LowRisk`	**Type** int **Properties** Filter, Group, Sort **Description** Indicates that fields with this picklist value contain data with low sensitivity for your company.
`MediumRisk`	**Type** int **Properties** Filter, Group, Sort **Description** Indicates that fields with this picklist value contain data with moderate sensitivity for your company.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort

Field	Details
	Description The name of the tenant that was scored.
`ProcessedTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time when the Health Check score was calculated.
`Score`	**Type** double **Properties** Filter, Sort **Description** The summary score that shows how your org measures against a security baseline.
`ScoreDelta`	**Type** double **Properties** Filter, Nillable, Sort **Description** The percentage amount that the Health Check score changed.
`Tenant`	**Type** string **Properties** Filter, Group, Sort **Description** The ID of the tenant that was scored.
`TenantOriginalIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The ID of the Health Check Trend record for a tenant. This field is unique within your org.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecurityHealthCheckTrendChangeEvent on page 52
Change events are available for the object.

TenantSecurityHealthCheckTrendFeed on page 39
Feed tracking is available for the object.

TenantSecurityHealthCheckTrendHistory on page 47
History is available for tracked fields of the object.

TenantSecurityHealthCheckTrendOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityHealthCheckTrendShare on page 50
Sharing is available for the object.

TenantSecurityLicense

Stores license usage information within Security Center. This object is available in API version 59.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available only for Security Center subscribers. This object is read-only.

Fields

Field	Details
`Action`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The type of change made to the license. Possible values are: • `ADDED` • `REMOVED` • `UPDATED`
`ActionDate`	**Type** dateTime

Field	Details
	Properties Filter, Nillable, Sort **Description** The timestamp for when this change was made.
`DetailIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The unique identifier for this detail record.
`ExpirationDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date on which this license expires.
`MetricIdentifier`	**Type** string **Properties** Filter, Group, Sort **Description** The ID of the corresponding TenantSecurityMonitorMetric.
`MetricsType`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The type of license collected by this metric.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the license.
`Status`	**Type** string

Field	Details
	Properties Filter, Group, idLookup, Nillable, Sort **Description** The status of the license.
`Tenant`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the tenant with this license.
`TenantName`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the tenant with this license.
`TotalLicenses`	**Type** int **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The total number of licenses.
`UsedLicenses`	**Type** int **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The number of used licenses.
`UsedLicensesLastUpdated`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date that the used licenses were last updated for this tenant.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

TenantSecurityLicenseChangeEvent on page 52
Change events are available for the object.

TenantSecurityLicenseFeed on page 39
Feed tracking is available for the object.

TenantSecurityLicenseHistory on page 47
History is available for tracked fields of the object.

TenantSecurityLicenseOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityLicenseShare on page 50
Sharing is available for the object.

TenantSecurityLogin

Stores the login details of a single user to a tenant, grouped by date and type. You can query this object to find out how many times the user logged in to a specific tenant using a specific login type (for example, username/password or SSO). This object is available to Security Center subscribers in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is read-only.

Fields

Field	Details
`DetailIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the individual detail record. This field is unique within your org.
`LastLoginDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The last time the user logged in.
`LoginCount`	**Type** int **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The number of times the user has logged in to the tenant.
`MetricIdentifier`	**Type** string **Properties** Filter, Group, Sort **Description** The ID of the type of metric that was counted.
`MetricsType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of data collected. The supported metric types are: • LOGIN_PWLESS • LOGIN_PWLESS2FA • LOGIN_UNPW • LOGIN_UNPW2FA • LOGIN_SSO • LOGIN_SSO2FA • LOGIN_OAUTH • LOGIN_OAUTH2FA
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the metric for which data is being collected.

Field	Details
Tenant	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the tenant that was scored.
TenantName	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the tenant that was scored.
UserEmail	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The email address of the user.
Username	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The user's org username.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecurityLoginChangeEvent on page 52
Change events are available for the object.

TenantSecurityLoginFeed on page 39
Feed tracking is available for the object.

TenantSecurityLoginHistory on page 47
History is available for tracked fields of the object.

TenantSecurityLoginOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityLoginShare on page 50
Sharing is available for the object.

TenantSecurityLoginIpRangeTrend

Stores details of changes related to login IP ranges in Security Center. This object is available in API version 59.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available only for Security Center subscribers. This object is read-only.

Fields

Field	Details
`Action`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The type of change made to the login IP range. Possible values are: • `ADDED` • `REMOVED` • `UPDATED`
`ActionBy`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the person who made this change.
`ActionDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when this change was made.

Field	Details
`Description`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The description of the login IP range record.
`DetailIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The unique identifier for this detail record.
`IpEndAddress`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The end IP address of the login IP range. For example, `10.0.0.0 - 10.255.255.255`.
`IpRangeIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** Unique identifier of the IP range.
`IpStartAddress`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The start IP address of the login IP range. For example, `10.0.0.0 - 10.255.255.255`.
`MetricIdentifier`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID of the corresponding TenantSecurityMonitorMetric.

Field	Details
MetricsType	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The type of metric for the data collected.
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the metric for the data collected.
ProfileIdentifier	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The ID of the profile that is assigned to this login IP range.
ProfileName	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the profile that is assigned to this login IP range.
Tenant	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The ID of the tenant (org) that this record is for.
TenantName	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the tenant (org) that this record is for.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

TenantSecurityLoginIpRangeTrendChangeEvent on page 52
Change events are available for the object.

TenantSecurityLoginIpRangeTrendFeed on page 39
Feed tracking is available for the object.

TenantSecurityLoginIpRangeTrendHistory on page 47
History is available for tracked fields of the object.

TenantSecurityLoginIpRangeTrendOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityLoginIpRangeTrendShare on page 50
Sharing is available for the object.

TenantSecurityMobilePolicyTrend

Stores metrics related to changes in mobile security policies across all tenants in Security Center. This object is available to Security Center subscribers in API version 54.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object can only be read and queried.

Fields

Field	Details
`Action`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The change made to the mobile security policy. For example, a new policy was added, updated, or removed.
`ActionBy`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update

Field	Details
	Description The user who made the change.
`ActionDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time of the mobile security policy change.
`ConnectedApp`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The app that is associated with the mobile security policy.
`DetailIdentifier`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The ID of the individual detail record. This field is unique across all tenants.
`EffectiveDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date a mobile security policy is enforced.
`IsEnabled`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** A value indicating whether the mobile security policy is enabled. The default is `false`, which means policies are disabled.
`MetricIdentifier`	**Type** string

Field	Details
	Properties Create, Filter, Group, Sort, Update **Description** The foreign key of the metric.
MetricsType	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The type of mobile security policy data collected.
MobilePlatform	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The mobile operating system of the mobile security policy.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the metric for which data is collected.
PolicyType	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The type of mobile security policy. For example, Block Calendar.
RuleValue	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The value of the security notification rule.
RuleValueType	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The type of rule value. For example, boolean or text.
`SeverityLevel`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The severity level of the security threat. For example, `CRITICAL`.
`Tenant`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The ID of the tenant.
`TenantName`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The name of the tenant.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecurityPackageChangeEvent on page 52
Change events are available for the object.

TenantSecurityPackageFeed on page 39
Feed tracking is available for the object.

TenantSecurityPackageHistory on page 47
History is available for tracked fields of the object.

TenantSecurityPackageOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityPackageShare on page 50
Sharing is available for the object.

TenantSecurityMonitorMetric

Stores the daily count and daily count change for a metric within Security Center. This object is available to Security Center subscribers in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is read-only.

Fields

Field	Details
`ChangeCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** How much the relevant metric changed.
`Count`	**Type** int **Properties** Filter, Group, Sort **Description** The current metric count.
`EndProcessTime`	**Type** dateTime **Properties** Filter, Sort **Description** The date and time that the metric count process ended.
`MetricIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort

Field	Details
	Description The ID of the type of metric counted. This field is unique within your organization.
MetricsType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of data collected.
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the tenant.
PreviousMetricIdentifier	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The previous ID of the type of metric that was counted. This field is unique within your organization.
StartProcessTime	**Type** dateTime **Properties** Filter, Sort **Description** The date and time that the metric count process started.
Tenant	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the tenant that was scored.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecurityMonitorMetricChangeEvent on page 52
Change events are available for the object.

TenantSecurityMonitorMetricFeed on page 39
Feed tracking is available for the object.

TenantSecurityMonitorMetricHistory on page 47
History is available for tracked fields of the object.

TenantSecurityMonitorMetricOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityMonitorMetricShare on page 50
Sharing is available for the object.

TenantSecurityNotification

Stores information about notifications that were triggered in Security Center as a function of the Alerts feature. For more information, see Create Alerts for Security Changes. This object is available to Security Center subscribers in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is read-only.

Fields

Field	Details
`MetricCount`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The metric count that triggered the notification.
`MetricIdentifier`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description The ID of the type of metric that was counted.
MetricsType	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The metric for which the notification was sent.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the triggered notification rule.
NotificationDate	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The date and time that the notification was sent.
NotificationType	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The type of notification sent. For example, a Chatter feed or push notification.
Operator	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The quantity of metrics used to measure.
RecipientEmails	**Type** textarea **Properties** Create, Nillable, Update

Field	Details
	Description The email addresses of the recipients who receive security notifications.
RuleName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The name of the notification rule.
Tenant	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The ID of the tenant for which the notification was triggered.
TenantName	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The org name of the tenant for which the notification was triggered.
Threshold	**Type** int **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The threshold value that triggered the notification.
TriggerType	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The type of trigger that set off the notification. For example, a security change was made.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecurityNotificationChangeEvent on page 52
Change events are available for the object.

TenantSecurityNotificationFeed on page 39
Feed tracking is available for the object.

TenantSecurityNotificationHistory on page 47
History is available for tracked fields of the object.

TenantSecurityNotificationOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityNotificationShare on page 50
Sharing is available for the object.

TenantSecurityNotificationRule

Stores an alert configured in the Security Center Alerts feature to notify recipients of changes made to security settings. For more information, see Create Alerts for Security Changes. This object is available to Security Center subscribers in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is read/write.

Fields

Field	Details
`MetricsType`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The type of data being collected.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description The name of the metric for which data is being collected.
NotificationRuleIdentifier	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The ID of the alert that was triggered. This field is unique within your organization.
NotificationType	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The type of notification used for the alert. The options are: • Email • In-App
Operator	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The operator for the change that triggered the alert. For example, greater than.
RecipientEmails	**Type** textarea **Properties** Create, Nillable, Update **Description** The email addresses for the recipients of the alert details.
RuleName	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the custom alert that triggered the notification. This field is unique within your organization.

Field	Details
`Status`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The status of the alert setting. The options are: • `Active` • `Draft` • `Inactive`
`Threshold`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The threshold value that triggered the alert.
`TriggerType`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The type of trigger used for the alert. The values are: • `Always` • `On Change`
`Version`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The version number of the custom alert.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecurityNotificationRuleChangeEvent on page 52

Change events are available for the object.

TenantSecurityNotificationRuleFeed on page 39
Feed tracking is available for the object.

TenantSecurityNotificationRuleHistory on page 47
History is available for tracked fields of the object.

TenantSecurityNotificationRuleOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityNotificationRuleShare on page 50
Sharing is available for the object.

TenantSecurityMetricDetailLink

Represents the link between the metric count and metric drill down. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is read-only.

Fields

Field	Details
`DetailIdentifier`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The unique identifier for this detail record.
`MetricIdentifier`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The ID of the type of metric counted. This field is unique within your organization.
`Name`	**Type** string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update **Description** The name of the metric for the data collected.
`Tenant`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the tenant that was targeted in the event.

TenantSecurityPackage

Stores details about managed and unmanaged packages that are added, updated, or removed from a tenant in Security Center. Use this object to identify whether new packages are installed, upgraded, or uninstalled from your connected tenants. This object is available to Security Center subscribers in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object can only be read and queried.

Fields

Field	Details
`Action`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The action taken on a package within a tenant. The options are: • `Added` • `Removed`

Field	Details
ActionDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date the action was taken.
AppExchangeReady	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Indicates whether the package has passed AppExchange review.
DetailIdentifier	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the individual detail record. This field is unique within your org.
InstalledBy	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The user that installed the package.
MetricIdentifier	**Type** string **Properties** Filter, Group, Sort **Description** The ID of the type of metric that was counted.
MetricsType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of data being collected.

Field	Details
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the metric for which data is being collected.
NamespacePrefix	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix associated with the package.
PackageName	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the package being added to or removed from the tenant.
Publisher	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the publisher that created the package.
ReleaseStatus	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The release status of the package. The options are: • Beta • Released
Tenant	**Type** string **Properties** Filter, Group, idLookup, Sort

Field	Details
	Description The ID of the tenant that the package was added to or removed from.
`TenantName`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the tenant that the package was added to or removed from.
`Version`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The current version of the package.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecurityPackageChangeEvent on page 52
Change events are available for the object.

TenantSecurityPackageFeed on page 39
Feed tracking is available for the object.

TenantSecurityPackageHistory on page 47
History is available for tracked fields of the object.

TenantSecurityPackageOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityPackageShare on page 50
Sharing is available for the object.

TenantSecurityPolicy

Stores security policies created and deployed in Security Center. For more information, see Define and Deploy Security Policies. This object is available to Security Center subscribers in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is read/write.

Fields

Field	Details
ApiName	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The API name of the policy.
Description	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the policy.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the policy.
PolicyData	**Type** textarea **Properties** Create, Update **Description** The policy details contained in JSON format.
PolicyIdentifier	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The ID of this policy. Contains a unique virtual key from child to parent.

Field	Details
PolicyType	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The type of policy. For example, Health Check Baseline.
SourceRowIdentifier	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the policy that is applied to the tenant. This value is specific to the org that owns this record.
Status	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The status of the policy. For example, the policy is active or inactive.
Version	**Type** int **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The version of the policy.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecurityPolicyChangeEvent on page 52
Change events are available for the object.

TenantSecurityPolicyFeed on page 39
Feed tracking is available for the object.

TenantSecurityPolicyHistory on page 47
History is available for tracked fields of the object.

TenantSecurityPolicyOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityPolicyShare on page 50
Sharing is available for the object.

TenantSecurityPolicyDeployment

Stores the status of deployments of a Security Center policy on a tenant. For more information, see Define and Deploy Security Policies. This object is available to Security Center subscribers in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is read/write.

Fields

Field	Details
`DeploymentDate`	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The date the deployment was triggered.
`DeploymentStatus`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The status of the deployment. For example, Not Deployed, Processing, Deployed, or Failed.
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the deployment status.

Field	Details
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the deployment.
PolicyIdentifier	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the TenantSecurityPolicy entity.
StatusDate	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The date that the status of the deployment was provided.
Tenant	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The ID of the tenant for which the policy was deployed.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecurityPolicyDeploymentChangeEvent on page 52
Change events are available for the object.

TenantSecurityPolicyDeploymentFeed on page 39
Feed tracking is available for the object.

TenantSecurityPolicyDeploymentHistory on page 47
History is available for tracked fields of the object.

TenantSecurityPolicyDeploymentOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityPolicyDeploymentShare on page 50

Sharing is available for the object.

TenantSecurityPolicySelectedTenant

Stores the list of tenants selected for a Security Center policy. For more information, see Define and Deploy Security Policies. This object is available to Security Center subscribers in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is read/write.

Fields

Field	Details
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the policy for the selected tenant.
`PolicyIdentifier`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the security policy.
`Tenant`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The ID of the tenant.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecurityPolicySelectedTenantChangeEvent **on page 52**
: Change events are available for the object.

TenantSecurityPolicySelectedTenantFeed **on page 39**
: Feed tracking is available for the object.

TenantSecurityPolicySelectedTenantHistory **on page 47**
: History is available for tracked fields of the object.

TenantSecurityPolicySelectedTenantOwnerSharingRule **on page 48**
: Sharing rules are available for the object.

TenantSecurityPolicySelectedTenantShare **on page 50**
: Sharing is available for the object.

TenantSecurityReportAnomaly

Stores anomalies in how users run or export reports, including unsaved reports, as detected by Threat Detection. For more information, see Threat Detection. This object is available to Security Center subscribers in API version 53.0 and later.

Note: Threat Detection is available only for Event Monitoring subscribers.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is read-only.

Fields

Field	Details
`DetailIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the detail record. This field is unique within your org.
`EventDate`	**Type** dateTime

Field	Details
	Properties Filter, Nillable, Sort **Description** The date when the hijacking event was reported. For example, 2020-01-20T19:12:26.965Z. The most granular setting is milliseconds.
EventIdentifier	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The unique ID of the event.
EventName	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the event, which is Report Anomaly.
MetricIdentifier	**Type** string **Properties** Filter, Group, Sort **Description** The ID of the type of metric that was counted.
MetricsType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of data being collected.
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the metric for which data is being collected.

Field	Details
Report	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID for the report for which this anomaly event was detected. If the anomaly resulted from a user executing an unsaved report, the value of this field is null.
Score	**Type** double **Properties** Filter, idLookup, Nillable, Sort **Description** A number from 0 through 100 that represents the anomaly score for the report execution or export tracked by this event. The anomaly score indicates how the user's current report activity differs from their typical activity. A low score indicates that the current report activity is similar to the user's usual activity. A high score indicates that it's different.
SecurityEventData	**Type** textarea **Properties** Nillable **Description** The set of features about the report activity that triggered this anomaly event. See the Threat Detection documentation for the possible features. For example, a user typically downloads 10 accounts at a time, but then deviates from that pattern and downloads 1,000 accounts. This event is triggered, and the contributing features are captured in this field. Potential features include row count, column count, average row size, day of week, and the browser's user agent used for the report activity. The data captured also shows as a percentage how much a particular feature contributed to this anomaly event. The data is in JSON format.
Summary	**Type** textarea **Properties** Nillable **Description** A text summary of the report anomaly that caused this event.
Tenant	**Type** string **Properties** Filter, Group, idLookup, Sort

Field	Details
	Description The ID of the tenant that was targeted in the event.
TenantName	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the tenant that was targeted in the event.
UserIdentifier	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The origin user's unique ID.
Username	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The origin username in the format of user@company.com at the time the event was created.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecurityReportAnomalyChangeEvent on page 52
Change events are available for the object.

TenantSecurityReportAnomalyFeed on page 39
Feed tracking is available for the object.

TenantSecurityReportAnomalyHistory on page 47
History is available for tracked fields of the object.

TenantSecurityReportAnomalyOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityReportAnomalyShare on page 50
Sharing is available for the object.

TenantSecuritySessionHijacking

Stores information about session hijacking events as detected by Threat Detection within connected tenants in Security Center. For more information, see Threat Detection. This object is available for Security Center subscribers in API version 53.0 and later.

Note: Threat Detection is available only for Event Monitoring subscribers.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is read-only.

Fields

Field	Details
`CurrentIp`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The IP address of the observed fingerprint that deviates from the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. If the IP address didn't contribute to the observed fingerprint deviation, the value of this field is the same as the `PreviousIp` field.
`CurrentPlatform`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The platform of the observed fingerprint that deviates from the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. If the platform didn't contribute to the observed fingerprint deviation, the value of this field is the same as the `PreviousPlatform` field.
`CurrentScreen`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The screen of the observed fingerprint that deviates from the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. If the screen didn't contribute to the observed fingerprint deviation, the value of this field is the same as the `PreviousScreen` field.
`CurrentUserAgent`	**Type** textarea **Properties** Nillable **Description** The user agent of the observed fingerprint that deviates from the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. If the user agent didn't contribute to the observed fingerprint deviation, the value of this field is the same as the `PreviousUserAgent` field.
`CurrentWindow`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The browser window of the observed fingerprint that deviates from the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. If the window didn't contribute to the observed fingerprint deviation, the value of this field is the same as the `PreviousWindow` field.
`DetailIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the individual detail record. This field is unique within your org.
`EventDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the hijacking event was reported. For example, 2020-01-20T19:12:26.965Z. The most granular setting is milliseconds.
`EventIdentifier`	**Type** string

Field	Details
	Properties Filter, Group, idLookup, Nillable, Sort **Description** The unique ID of the event.
EventName	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the event, which is Session Hijacking.
MetricIdentifier	**Type** string **Properties** Filter, Group, Sort **Description** The ID of the type of metric that was counted.
MetricsType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of data being collected.
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the metric for which data is being collected.
PreviousIp	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The IP address of the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. See the `CurrentIp` field for the newly observed IP address.

Field	Details
PreviousPlatform	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The platform of the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. See the `CurrentPlatform` field for the newly observed platform.
PreviousScreen	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The screen of the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. See the `CurrentScreen` field for the newly observed screen.
PreviousUserAgent	**Type** textarea **Properties** Nillable **Description** The user agent of the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. See the `CurrentUserAgent` field for the newly observed user agent.
PreviousWindow	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The browser window of the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. See the `CurrentWindow` field for the newly observed window.
Score	**Type** double **Properties** Filter, idLookup, Nillable, Sort

Field	Details
	Description Specifies how much the new fingerprint deviates from the previous one. The score is from 6.0 through 21.0. The event exposes five field pairs (such as `CurrentIp` and `PreviousIp`) to view the before and after data for browser features that contributed to this anomaly. See the `SecurityEventData` field for all contributing features in JSON format. A large deviation score (6.0 or more) between two intra-session fingerprints indicates that two different browsers are active in the same session. The presence of two active browsers usually means that session hijacking has occurred.
`SecurityEventData`	**Type** textarea **Properties** Nillable **Description** The set of browser fingerprint features that triggered this event. See the Threat Detection documentation for the possible features. For example, a user's current browser fingerprint diverges from the previously known fingerprint. If Salesforce concludes the user's session was hijacked, it fires this event, and the contributing features are captured in this field in JSON format. Each feature describes a browser fingerprint property, such as the browser user agent, window, or platform. The data includes the current and previous values for each feature.
`Summary`	**Type** textarea **Properties** Nillable **Description** A text summary of the threat that caused this event. The summary lists the browser fingerprint features that most contributed to the threat detection, along with their contribution to the total score.
`Tenant`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the tenant that was targeted in the event.
`TenantName`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort

Field	Details
	Description The name of the tenant that was targeted in the event.
UserIdentifier	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The origin user's unique ID.
Username	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The origin username in the format of user@company.com at the time that the event was created.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecuritySessionHijackingChangeEvent on page 52
Change events are available for the object.

TenantSecuritySessionHijackingFeed on page 39
Feed tracking is available for the object.

TenantSecuritySessionHijackingHistory on page 47
History is available for tracked fields of the object.

TenantSecuritySessionHijackingOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecuritySessionHijackingShare on page 50
Sharing is available for the object.

TenantSecurityTenantInfo

Stores information on changes related to the tenant history. This object is available in API version 56.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is read only.

Fields

Field	Details
DetailIdentifier	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Unique Identifier for this detail record.
MyDomainName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the domain where this user permission was applied.
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the metric for which data is being collected.
SandboxAlias	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The alias specified by the user when the user creates a Sandbox.
SandboxType	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The type specified by the user when the user creates a Sandbox.

Field	Details
Status	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The status of the policy. For example, active or inactive.
Tenant	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the tenant where the user permission was applied.
TenantName	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the connected tenant where the user permission was applied.
TenantType	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Type of tenant in this org.

Usage

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

TenantSecurityTenantInfoChangeEvent on page 52
Change events are available for the object.

TenantSecurityTenantInfoFeed on page 39
Feed tracking is available for the object.

TenantSecurityTenantInfoHistory on page 47
History is available for tracked fields of the object.

TenantSecurityTenantInfoOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityTenantInfoShare on page 50
Sharing is available for the object.

TenantSecurityTransactionPolicyTrend

Stores changes to the count of Transaction Security Policies for a connected tenant within Security Center. This object is available for Security Center subscribers in API version 55.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is read-only.

Fields

Field	Details
`Action`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** Stores information on a change to the policy. Available options include: • `ADDED` • `REMOVED` • `UPDATED`
`ActionBy`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the person who made this change.
`ActionConfig`	**Type** textarea **Properties** Nillable

Field	Details
	Description Contains a JSON description for how a user is alerted to an action on the policy. For example: • `In-app` • `Email`
`ActionDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** When this change was made.
`DetailIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Unique identifier for this detail record.
`EventName`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the event of the corresponding Transaction Security Policy.
`MetricIdentifier`	**Type** string **Properties** Filter, Group, Sort **Description** The ID of the corresponding TenantSecurityMonitorMetric.
`MetricsType`	**Type** string **Properties** Filter, Group, Sort **Description** The type of metric for the data collected.

Field	Details
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the metric for the data collected.
`Tenant`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the tenant (org) that this record is for.
`TenantName`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the tenant (org) that this record is for.
`TransactionPolicyState`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The state of the transaction security policy. The possible states are `ENABLED` or `DISABLED`.
`TransactionPolicyType`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The type of policy configured. The available types are standard policy or a custom Apex policy.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecurityPolicyChangeEvent on page 52
Change events are available for the object.

TenantSecurityPolicyFeed on page 39
Feed tracking is available for the object.

TenantSecurityPolicyHistory on page 47
History is available for tracked fields of the object.

TenantSecurityPolicyOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityPolicyShare on page 50
Sharing is available for the object.

TenantSecurityTrustedIpRangeTrend

Stores details of changes related to trusted IP ranges in Security Center.This object is available for Security Center subscribers in API version 54.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`,`query()`, `retrieve()`

Special Access Rules

This object is read-only.

Fields

Field	Details
`Action`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** Stores information on a change to the policy. Available options include: • `ADDED` • `REMOVED` • `UPDATED`
`ActionBy`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort

Field	Details
	Description The name of the person who made this change.
`ActionDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** When this change was made.
`Description`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** A description of the trusted IP range. For example, "Trusting the IP addresses from NA-West region".
`DetailIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** Unique identifier for this detail record.
`IpEndAddress`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The end IP address of a trusted IP range. For example, `10.0.0.0 - 10.255.255.255`.
`IpRangeIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** Unique identifier of the IP range.
`IpStartAddress`	**Type** string

Field	Details
	Properties Filter, Group, idLookup, Nillable, Sort **Description** The start IP address of a trusted IP range. For example, `10.0.0.0 - 10.255.255.255`.
`MetricIdentifier`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID of the corresponding TenantSecurityMonitorMetric.
`MetricsType`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The type of metric for the data collected.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the metric for the data collected.
`Tenant`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The ID of the tenant (org) that this record is for.
`TenantName`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the tenant (org) that this record is for.
`UsageOptions`	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** For internal use only.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

TenantSecurityTrustedIpRangeTrendChangeEvent on page 52
Change events are available for the object.

TenantSecurityTrustedIpRangeTrendFeed on page 39
Feed tracking is available for the object.

TenantSecurityTrustedIpRangeTrendHistory on page 47
History is available for tracked fields of the object.

TenantSecurityTrustedIpRangeTrendOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityTrustedIpRangeTrendShare on page 50
Sharing is available for the object.

TenantSecurityUserActivity

Stores details related to how a user interacts with a tenant. Use this object to determine whether to reevaluate a user's access to your org for security purposes. You can check whether a user has never logged in, hasn't been active for 90 days, has a frozen account, or isn't using multi-factor authentication. This object is available to Security Center subscribers in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object can only be read and queried.

Fields

Field	Details
`DetailIdentifier`	**Type** string

Field	Details
	Properties Filter, Group, idLookup, Sort **Description** The ID of the individual detail record. This field is unique within your org.
`LastLoginDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The last time the user logged in.
`MetricIdentifier`	**Type** string **Properties** Filter, Group, Sort **Description** The ID of the type of metric that was counted.
`MetricsType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of data being collected.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the metric for which data is being collected.
`Tenant`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the tenant.
`TenantName`	**Type** string

Field	Details
	Properties Filter, Group, idLookup, Nillable, Sort **Description** The name of the tenant where the user activity happened.
`UserCreatedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date that the user was created.
`UserEmail`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The email address of the user.
`UserLicense`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The license assigned to the user.
`Username`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The user's org username.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecurityUserActivityChangeEvent on page 52
Change events are available for the object.

TenantSecurityUserActivityFeed on page 39
Feed tracking is available for the object.

TenantSecurityUserActivityHistory on page 47
History is available for tracked fields of the object.

TenantSecurityUserActivityOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityUserActivityShare on page 50
Sharing is available for the object.

TenantSecurityUserPerm

Stores information on permissions assigned to a user. Use this object to see which tenants a user is assigned to. This object is available to Security Center subscribers in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object can only be read and queried.

Fields

Field	Details
`Action`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The action taken regarding the user's permission. The options are: • `Added` • `Removed`
`ActionBy`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** This field is reserved for future use.
`ActionDate`	**Type** dateTime

Field	Details
	Properties Filter, Nillable, Sort **Description** The date that the permission action was taken.
`Context`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the profile or permission set assigned to the user.
`ContextType`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** Indicates the method through which the permission was granted. The options are: • `Permission Set` • `Profile`
`DetailIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the individual detail record. This field is unique within your org.
`MetricIdentifier`	**Type** string **Properties** Filter, Group, Sort **Description** The ID of the type of metric that was counted.
`MetricsType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of metric that the assigned permission represents.

Field	Details
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the metric for which data is being collected.
Tenant	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The ID of the tenant where the user permission was applied.
TenantName	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the connected tenant where the user permission was applied.
UserEmail	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The user's email address.
UserLicense	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The license assigned to the user.
Username	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The user's org username.

Associated Objects

This object has these associated objects. If the API version isn't specified, it's available in the same API versions as this object. Otherwise, it's available in the specified API version and later.

TenantSecurityUserPermChangeEvent on page 52
Change events are available for the object.

TenantSecurityUserPermFeed on page 39
Feed tracking is available for the object.

TenantSecurityUserPermHistory on page 47
History is available for tracked fields of the object.

TenantSecurityUserPermOwnerSharingRule on page 48
Sharing rules are available for the object.

TenantSecurityUserPermShare on page 50
Sharing is available for the object.

Territory

Represents a flexible collection of accounts and users where the users have at least read access to the accounts, regardless of who owns the accounts. Only available if territory management has been enabled for your organization.

Note: The original territory management feature is now unavailable. For more information, see The Original Territory Management Module Will Be Retired in the Summer '21 Release. The information in this topic applies to the original territory management feature only, and not to Enterprise Territory Management.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard and partner users can access this object, and only users with the Manage Territories permission can edit this object.

Fields

Field	Details
`AccountAccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Sort, Update **Description** Account access level granted to users assigned to this territory.

Field	Details
CaseAccessLevel	**Type** picklist **Properties** Create, Filter, Nillable, Group, Sort, Update **Description** Case access level granted to users assigned to this territory.
ContactAccessLevel	**Type** picklist **Properties** Filter, Group, Nillable, Sort **Description** A value that represents the type of access granted to the target Group, UserRole, or User for any associated contacts. The possible values are: • None • Read • Edit Note: When DefaultContactAccess is set to "Controlled by Parent," you can't create or update this field.
Description	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** A description of the territory that is 1,000 characters or less.
DeveloperName	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Territory Name** in the user interface. This field is available in API version 24.0 and later.

Field	Details
	Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
`ForecastUserId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the Forecast Manager, who is the user to whom forecasts from this territory's child territories roll up.
`MayForecastManagerShare`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the forecast manager can manually share their own forecast.
`Name`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** A name for the territory. Limit is 80 characters. Corresponds to **Label** on the user interface.
`OpportunityAccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Sort, Update **Description** Opportunity access level granted to users assigned to this territory.
`ParentTerritoryID`	**Type** reference **Properties** Create, Filter, Nillable, Update **Description** Territory immediately above this territory in the territory hierarchy. Label is **Parent Territory ID**.

Field	Details
RestrictOppTransfer	**Type** boolean **Properties** Create, Defaulted on create, Filter, Update **Description** Indicates whether the opportunities associated with this territory are kept within the bounds of this territory and this territory's children when account assignment rules are run (`true`), or if opportunities associated with this territory can be assigned to other nodes of the territory hierarchy when account assignment rules are run (`false`). Label is **Confine Opportunity Assignment**.

Usage

Use the Territory object to query your organization's territory hierarchy. Use it to obtain valid territory IDs when querying or modifying records associated with territories.

SEE ALSO:

- AccountTerritoryAssignmentRule
- AccountTerritoryAssignmentRuleItem
- UserTerritory

TerritoryMgmtObjectConfig

Represents territory management settings and defaults for a particular object. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Only standard and partner users can access this object.

Fields

Field	Details
DefaultAccessLevel	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description The default access level of the defined object for all territories.
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The API name.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language used in the org where the territory model was created.
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The readable label for this entity.
Object	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The name of the Enterprise Territory Management object. Possible values are: • Lead
State	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The state of the supported object.

Territory2

Represents a sales territory. Available only if Enterprise Territory Management has been enabled for your organization.

Supported Calls

create(), delete(), describeLayout(), describeSObjects(), query(), retrieve(), update(), upsert()

Special Access Rules

As of Summer '20 and later, only standard and partner users can access this object. If a territory model is in Active state, any standard or partner user can view that model, including its territories and assignment rules. For territories in an active model, any standard or partner user can view assigned records and assigned users subject to your org's sharing settings. Users cannot view territory models in other states (such as Planning or Archived).

Fields

Field Name	Details
AccountAccessLevel	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Represents the default account record access levels for users that are assigned to the territory. Values are: • Read Only • Read/Write • Owner
CaseAccessLevel	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Represents the default case record access levels for users that are assigned to the territory. Values are: • Private • Read Only • Read/Write
ContactAccessLevel	**Type** picklist

Field Name	Details
	Properties Filter, Group, Restricted picklist, Sort **Description** Represents the default contact record access levels for users that are assigned to the territory. Values are: • `Private` • `Read Only` • `Read/Write`
`Description`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** The description of the territory. The field label in the user interface is `Territory Description`.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The field label in the user interface is `Territory Name`. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
`ForecastUserId`	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** Unique identifier of a territory's forecast manager. To select a `ForecastUserId`, select someone in the list of users assigned to the territory.
`Name`	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Sort, Update **Description** The name of the territory. The field label in the user interface is `Territory Label`.
`OpportunityAccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Represents the default opportunity record access levels for users that are assigned to the territory. Values are: • `Private` • `Read Only` • `Read/Write`
`ParentTerritory2Id`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the territory's parent territory (if any). If the territory has no parent territory, this value is `null`.
`Territory2ModelId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the territory model that the territory belongs to.
`Territory2TypeId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the territory type that the territory belongs to.

Territory2AlignmentLog

Represents the start and end status of a territory assignment rule run job. This object is available in API version 54.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Available only if Enterprise Territory Management has been enabled for your Salesforce org.

Only standard and partner users can access this object. If a territory model is in `Active` state, any standard or partner user can view that model, including its territories and assignment rules. For territories in an active model, any standard or partner user can view assigned records and assigned users subject to your org's sharing settings. Users can't view territory models in other states (such as `Planning` or `Archived`).

Fields

Field	Details
`EndTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the assignment rule run job finished.
`Filter`	**Type** textarea **Properties** Nillable **Description** Criteria to filter the rule jobs. For example, {RULE_LAST_MOD_DATE_FORM=2021-08-31, RULE_LAST_MOD_DATE_TO=2021-09-15}.
`RunAsId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the Salesforce user who started the assignment rule run job. This is a relationship field.

Field	Details
	Relationship Name RunAs **Relationship Type** Lookup **Refers To** User
StartTime	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the user started the assignment rule run job.
Status	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The status of the assignment rule run job.
Territory2Id	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the territory for which the assignment rule run was performed. If the assignment rule run was for the territory model, this value is null. This is a relationship field. **Relationship Name** Territory2 **Relationship Type** Lookup **Refers To** Territory2
Territory2ModelId	**Type** reference **Properties** Filter, Group, Sort

Field	Details
	Description The ID of the territory model for which the assignment rule run was performed. This is a relationship field. **Relationship Name** Territory2Model **Relationship Type** Lookup **Refers To** Territory2Model

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

Territory2AlignmentLogChangeEvent
Change events are available for the object.

Territory2Model

Represents a territory model. Available only if Enterprise Territory Management has been enabled for your organization.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only standard and partner users can access this object. If a territory model is in `Active` state, any standard or partner user can view that model, including its territories and assignment rules. For territories in an active model, any standard or partner user can view assigned records and assigned users subject to your org's sharing settings. Users cannot view territory models in other states (such as `Planning` or `Archived`).

Fields

Field Name	Details
`ActivatedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field Name	Details
	Description The date when the territory model was activated.
DeactivatedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the territory model was archived.
Description	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the territory model.
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The field label in the user interface is `Territory Model Name`. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
LastOppTerrAssignEndDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Read-only. The date when the opportunity territory assignment filter was last run. Used for Filter-Based Opportunity Territory Assignment (Pilot in Spring '15 / API version 33).

Field Name	Details
LastRunRulesEndDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the last rules run was completed.
Name	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The territory model name. The field label in the user interface is `Label`.
State	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The state of the territory model. Values are: `Planning`, `Activating`, `Activation Failed`, `Active`, `Archiving`, `Archiving Failed`, `Archived`, `Deleting`, and `Deletion Failed`.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

Territory2ModelFeed
Feed tracking is available for the object.

Territory2ModelHistory
History is available for tracked fields of the object.

Territory2ModelHistory

Represents the history of changes to the values in the fields on a territory model. Available only if Enterprise Territory Management has been enabled for your organization.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Fields

Field Name	Details
`DataType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Data type of the field that was changed.
`Field`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The name of the field whose value was changed.
`NewValue`	**Type** anyType **Properties** Nillable, Sort **Description** The new value of the changed field.
`OldValue`	**Type** anyType **Properties** Nillable, Sort **Description** The previous value of the changed field.
`Territory2ModelId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the territory model whose history is tracked.

Usage

This object is automatically generated whenever any field value changes on a territory model record. Use this object it to identify those changes.

Territory2ObjectExclusion

Represents the objects that aren't included in territory assignment rule runs, even when they meet assignment rule criteria. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Available only if Enterprise Territory Management has been enabled for your organization.

Only standard and partner users can access this object. If a territory model is in `Active` state, any standard or partner user can view that model, including its territories and assignment rules. For territories in an active model, any standard or partner user can view assigned records and assigned users subject to your org's sharing settings. Users can't view territory models in other states (such as `Planning` or `Archived`).

Fields

Field	Details
`Note`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update
`ObjectId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the Account object to exclude from the territory assignment rule. This is a polymorphic relationship field. **Relationship Name** Object **Relationship Type** Lookup **Refers To** Account
`Territory2Id`	**Type** reference

Field	Details
	Properties Create, Filter, Group, Sort **Description** The ID of the territory to exclude from the territory model assignment rule. This is a relationship field. **Relationship Name** Territory2 **Relationship Type** Lookup **Refers To** Territory2

Territory2ObjSharingConfig

Represents the sharing access level of objects assigned to a particular territory. This object is available in API version 56.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

Special Access Rules

Only standard and partner users can access this object. Any standard or partner user can view object sharing configuration records in an active model. Users without the Manage Territories permission can't view territory records in the `Planning` or `Archived` state.

Fields

Field	Details
`AccessLevel`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort, Update **Description** The access level of the object for the particular territory.
`Territory2Id`	**Type** reference **Properties** Filter, Group, Sort

Field	Details
	Description The territory on which the access level is defined. This field is a relationship field. **Relationship Name** Territory2 **Relationship Type** Lookup **Refers To** Territory2
`TerritoryMgmtObjectConfigId`	**Type** reference **Properties** Filter, Group, Sort **Description** The object configuration record the territory access level is related to. This field is a relationship field. **Relationship Name** TerritoryMgmtObjectConfig **Relationship Type** Lookup **Refers To** TerritoryMgmtObjectConfig

Territory2Type

Represents a category for territories (Territory2). Every Territory2 must have a Territory2Type. Available only if Enterprise Territory Management has been enabled for your organization.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only standard and partner users can access this object.

Fields

Field Name	Details
Description	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the territory type.
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The field label in the user interface is `Territory Type Name`. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the label in the user interface.
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required The user interface label for the territory type.
Priority	**Type** int

Field Name	Details
	Properties Create, Filter, Group, SortUpdate **Description** Required. Used for Filter-Based Opportunity Territory Assignment (Pilot in Spring '15 / API version 33). Lets you specify a priority for a territory type. For opportunity assignments, the filter examines all territories assigned to the account that the opportunity is assigned to. The account-assigned territory whose territory type priority is highest is then assigned to the opportunity. The `priority` field value on each territory type must be unique. Further, if there are multiple territories with the same territory type (and therefore the same priority) assigned to the account, no territory is assigned to the opportunity.

TestSuiteMembership

Associates an Apex class with an ApexTestSuite. This object is available in API version 36.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

In API version 49.0 and later, users must have the View Setup and Configuration permission to access this object.

Fields

Field Name	Description
`ApexClassId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The Apex class whose tests are to be executed. This is a relationship field. **Relationship Name** ApexClass **Relationship Type** Lookup

Field Name	Description
	Refers To ApexClass
`ApexTestSuiteId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The test suite to which the Apex class is assigned. This is a relationship field. **Relationship Name** ApexTestSuite **Relationship Type** Lookup **Refers To** ApexTestSuite

Usage

Insert a TestSuiteMembership object using an API call to associate an Apex class with an ApexTestSuite object. (ApexTestSuite and TestSuiteMembership aren't editable through Apex DML.) To remove the class from the test suite, delete the TestSuiteMembership object. If you delete an Apex test class or test suite, all TestSuiteMembership objects that contain that class or suite are deleted.

The following SOQL query returns the membership object that relates this Apex class to this test suite.

```
SELECT Id FROM TestSuiteMembership WHERE ApexClassId = '01pD0000000Fhy9IAC'
    AND ApexTestSuiteId = '05FD00000004CDBMA2'
```

SEE ALSO:

ApexTestSuite

ThirdPartyAccountLink

Represents the list of external users who authenticated using an authentication provider. This object is available in API version 32.0 and later.

A list of third-party account links is generated when users of an organization authenticate using an external authentication provider. Use this object to list and revoke a given user's social sign-on connections (such as Facebook©).

Supported Calls

`describeSObjects()`, `query()`

Fields

Field Name	Details
`Handle`	**Type** string **Properties** Filter, Nillable, Sort **Description** The username in the third-party system.
`IsNotSsoUsable`	**Type** boolean **Properties** Defaulted on create, Filter, Sort **Description** Support for single sign-on. If `true`, the link can't be used for a single sign-on flow. It's only available OAuth access and refresh tokens.
`Provider`	**Type** string **Properties** Filter, Nillable, Sort **Description** The third-party account provider name.
`RemoteIdentifier`	**Type** string **Properties** Filter, Nillable, Sort **Description** The unique ID for the user in the third-party system.
`SsoProvider`	**Type** AuthProvider **Properties** Filter, Nillable, Sort **Description** The foreign key to the AuthProvider on page 696 of the third-party system.
`SsoProviderId`	**Type** reference

Field Name	Details
	Properties Filter, Nillable, Sort **Description** The ID associated with the `SsoProvider` value. This is a relationship field. **Relationship Name** SsoProvider **Relationship Type** Lookup **Refers To** AuthProvider
`SsoProviderName`	**Type** string **Properties** Filter, Nillable, Sort **Description** The name associated with the AuthProvider of the third-party system, in case the user has no access to the provider foreign key (the `SsoProvider` value).
`ThirdPartyAccountLinkKey`	**Type** string **Properties** Filter, Nillable, Sort **Description** A concatenated string including the organization ID, the `SsoProviderId` value, the `SsoProvider` value, and the `RemoteIdentifier` value.
`UserId`	**Type** reference **Properties** Filter, Nillable, Sort **Description** The Salesforce user associated with this third-party account link. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

Usage

Admins (with the Manage Users permission) querying this object can see all the links for all users in the organization. Without the Manage Users permission, users can only retrieve their own links. Users sometimes don't have access to the `SsoProvider` value (the foreign key). In this case, use the `SsoProviderName` to render the name of the provider for the associated link.

Use the Apex method `Auth.AuthToken.revokeAccess()` to revoke a link. To use this method, the `IsNotSsoUsable` field must be `false`.

To make the ThirdPartyAccountLink standard object writable for Salesforce admins, contact Salesforce Customer Support. With this feature, you can easily add or delete third-party account links using the API, but you can't update existing account links.

In API version 34.0 and later, this object was enhanced to help manage high instance counts. A `query()` call returns up to 500 rows. A queryMore() call returns 500 more, up to 2500 total. No more records are returned after 2500. To make sure that you don't miss any records, issue a `COUNT()` query in a SELECT clause for ThirdPartyAccountLink. This query gives you the total number of records. If there are more than 2500 records, divide your query by filtering on fields, like `UserId`, to return subsets of less than 2500 records.

ThreatDetectionFeedback

Represents feedback provided by a user about a Threat Detection event that occurred in your org. The feedback specifies whether the event was malicious, suspicious, not a threat, or unknown. Each ThreatDetectionFeedback object is associated with one of these Threat Detection storage events: ApiAnomalyEventStore, CredentialStuffingEventStore, ReportAnomalyEventStore, or SessionHijackingEventStore. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `update()`, `upsert()`

Fields

Field	Details
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed.

Field	Details
Response	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Describes the severity of the threat. Possible values are: • `Malicious` • `Not a Threat` • `Suspicious` • `Unknown`
ThreatDetectionEventId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Reference to the unique ID of one of these associated Threat Detection storage events: • ApiAnomalyEventStore • CredentialStuffingEventStore • ReportAnomalyEventStore • SessionHijackingEventStore For example, `0fjRM000000005p`. This is a polymorphic relationship field. **Relationship Name** ThreatDetectionEvent **Relationship Type** Lookup **Refers To** ApiAnomalyEventStore, CredentialStuffingEventStore, ReportAnomalyEventStore, SessionHijackingEventStore
ThreatDetectionFeedbackNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Auto-generated number used as the unique name for this object.

Field	Details
UserId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The origin user's unique ID. For example, 005000000000123. This is a polymorphic relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User
Username	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The origin username in the format of user@company.com at the time the object was created.

Associated Object

This object has the following associated object. It's available in the same API version as this object.

ThreatDetectionFeedbackFeed
Feed tracking is available for the object.

SEE ALSO:

Salesforce Help: Threat Detection

TimeSheet

Represents a schedule of a service resource's time in Field Service or Workforce Engagement. This object is available in API v47.0 and later.

Time sheets are composed of time sheet entries, which typically track individual tasks like travel or asset repair.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service or Workforce Engagement must be enabled.

Fields

Field Name	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization. The label in the user interface is `Currency ISO Code`.
`EndDate`	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** The last day the time sheet covers.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field Name	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the time sheet.
`ServiceResourceId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The service resource whose time is being tracked with the time sheet.
`StartDate`	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** The first day the time sheet covers.
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The status of the time sheet. The picklist includes the following values, which can be customized: • New • Submitted • Approved
`TimeSheetEntryCount`	**Type** int **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description (Read Only) The number of related time sheet entries.
TimeSheetNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An auto-generated number identifying the time sheet.
TotalDurationInHours	**Type** double **Properties** Filter, Nillable, Sort **Description** Represents the sum total of the duration field of all the time sheet entries related to the time sheet object in hours.
TotalDurationInMinutes	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Represents the sum total of the duration field of all the time sheet entries related to the time sheet object in minutes.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

TimeSheetChangeEvent (API version 48.0)
Change events are available for the object.

TimeSheetFeed
Feed tracking is available for the object.

TimeSheetHistory
History is available for tracked fields of the object.

TimeSheetOwnerSharingRule
Sharing rules are available for the object.

TimeSheetShare
Sharing is available for the object.

TimeSheetEntry

Represents a span of time that a service resource spends on a field service task. This object is available in API version 47.0 and later.

Time sheets are composed of time sheet entries. Time sheet entries typically track individual tasks like travel or asset repair.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization. The label in the user interface is `Currency ISO Code`. Time sheet entries inherit their time sheet's currency code. Updates to a time sheet's currency code aren't reflected in existing time sheet entries' currency code.
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** Notes on how the time was spent. For example, "This service took longer than normal because the machine was jammed."
`DurationInMinutes`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Minutes recorded on the time sheet entry.

Field Name	Details
EndTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time the activity finished.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (LastReferencedDate), but not viewed it.
LocationTimeZone	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Time zone of the location where the activity occurred. This field is available in API version 50.0 and later.
StartTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time the activity began.
Status	**Type** picklist

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The status of the time sheet entry. The picklist includes the following values, which can be customized: • New • Submitted • Approved
`Subject`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Activity performed; for example, repair, lunch, or travel.
`TimeSheetEntryNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort **Description** An auto-generated number identifying the time sheet entry.
`TimeSheetId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The time sheet associated with the time sheet entry.
`Type`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The type of work performed. The picklist includes the following values, which can be customized: • Direct • Indirect

Field Name	Details
WorkOrderId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The work order related to the time sheet entry. Work orders are searchable by their content.
WorkOrderLineItemId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The work order line item related to the time sheet entry. Work order line items are searchable by their content.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

TimeSheetEntryChangeEvent (API version 48.0)
Change events are available for the object.

TimeSheetEntryFeed
Feed tracking is available for the object.

TimeSheetEntryHistory
History is available for tracked fields of the object.

TimeSlot

Represents a period of time on a specified day of the week during which work can be performed in Field Service, Salesforce Scheduler, or Workforce Engagement. Operating hours consist of one or more time slots. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
`DayOfWeek`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The day of the week when the time slot takes place.
`EndTime`	**Type** time **Properties** Create, Filter, Sort, Update **Description** The time when the time slot ends.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed.
`MaxAppointments`	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Maximum number of appointments for a single time slot. Available in API version 47.0 and later.

Field Name	Details
OperatingHoursId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The operating hours that the time slot belongs to. An operating hours' time slots appear in the Operating Hours related list. This is a relationship field. **Relationship Name** OperatingHours **Relationship Type** Lookup **Refers To** OperatingHours
StartTime	**Type** time **Properties** Create, Filter, Sort, Update **Description** The time when the time slot starts.
RecordSetFilterCriteriaId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the recordset filter criteria selected for the time slot. This is a relationship field. **Relationship Name** RecordsetFilterCriteria **Relationship Type** Lookup **Refers To** RecordsetFilterCriteria
TimeSlotNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort

Field Name	Details
	Description The name of the time slot. The name is auto-populated to a day and time format—for example, `Monday 9:00 AM - 10:00 PM`—but you can manually update it if you wish.
`Type`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of time slot. Possible values are *`Normal`* and *`Extended`*. You may choose to use *`Extended`* to represent overtime shifts.
`WorkTypeGroupId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Work type group assigned to the time slot. Available in API version 47.0 and later. This is a relationship field. **Relationship Name** WorkTypeGroup **Relationship Type** Lookup **Refers To** WorkTypeGroup

Usage

Operating hours are composed of time slots, which indicate the hours of operation for a particular day. After you create operating hours, create time slots for each day. For example, if the operating hours should be 8 AM to 5 PM Monday through Friday, create five time slots, one per day. To reflect breaks such as lunch hours, create multiple time slots in a day: for example, *`Monday 8:00 AM - 12:00 PM`* and *`Monday 1:00 PM - 5:00 PM`*.

Tip: Time slots don't come with any built-in rules, but you can create Apex triggers that limit time slot settings in your org. For example, you may want to restrict the start and end times on time slots to half-hour increments, or to prohibit end times later than 8 PM.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

TimeSlotChangeEvent (API version 54.0)
Change events are available for the object.

TimeSlotHistory

Represents the history of changes made to tracked fields on a time slot. This object is available in API version 38.0 and later.

Supported Calls

`getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Special Access Rules

Field Service must be enabled in your organization, and field tracking for time slot fields must be configured.

Fields

Field Name	Details
`Field`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The name of the field that was changed.
`NewValue`	**Type** anyType **Properties** Nillable, Sort **Description** The new value of the field that was changed.
`OldValue`	**Type** anyType **Properties** Nillable, Sort **Description** The value of the field before it was changed.
`TimeSlotId`	**Type** reference

Field Name	Details
	Properties Filter, Group, Sort **Description** ID of the time slot being tracked. The history is displayed on the detail page for this record.

Topic

Represents a topic on a Chatter post or record. This object is available in API version 28.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field Name	Details
`Description`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** Description of the topic.
`ManagedTopicType`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Type of managed topic. Values are: • `Content` • `Featured` • `Navigational` This field is available in API version 44.0 and later.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update

Field Name	Details
	Note: You can change only the spacing and capitalization of a topic name with the update property. **Description** Name of the topic.
`NetworkId`	**Type** reference **Properties** Create, Filter, Nillable, Sort **Description** Identifier of the Experience Cloud site to which the topic belongs. This field is available only if digital experiences is enabled in your org.
`TalkingAbout`	**Type** int **Properties** Filter, Group, Sort **Description** Number of people talking about the topic over the last two months, based on factors such as topic additions and comments on posts with the topic.

Usage

Use this object to query a specific topic or to get a list of all topics, even those used solely in private groups and on records, and the number of people talking about them.

Use this object to create, edit, or delete topics. To create a topic, you must have the Create Topics permission. To edit a topic, you must have the Edit Topics permission. To delete a topic, you must have the Delete Topics or Modify All Data permission.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

TopicFeed (API version 29.0)
Feed tracking is available for the object.

TopicAssignment

Represents the assignment of a topic to a specific feed item, record, or file. This object is available in API version 28.0 and later.

Administrators must enable topics for objects before users can add topics to records of that object type. Topics for most objects are available in API version 30.0 and later. Topics for ContentDocument are available in API version 37.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `delete()`, `getDeleted()`, `getUpdate()`, `query()`, `retrieve()`

Fields

Field Name	Details
`EntityId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Identifier of the feed item, record, or file. This is a polymorphic relationship field. **Relationship Name** Entity **Relationship Type** Lookup **Refers To** Account, Asset, Campaign, Case, Contact, ContentDocument, Contract, Event, FeedItem, Lead, Opportunity, Order, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, Shift, Shipment, Solution, Task, WorkOrder, WorkOrderLineItem
`EntityKeyPrefix`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The first three digits of the `EntityID` field, which identify the object type (account, opportunity, etc). This read-only field is available in API version 32.0 and later. Interface label is “Record Key Prefix,” which appears only in reports.
`EntityType`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description The standard name for the object type (account, opportunity, etc). This read-only field is available in API version 33.0 and later. Note: Querying topic assignments for the ManagedContentVersion entity type isn't supported. Interface label is "Object Type," which appears only in reports. Tip: In most cases, you should use this field rather than `EntityKeyPrefix`, which exists primarily to support older reports.
`NetworkId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** Identifier of the community to which the TopicAssignment belongs. This field is available only if digital experiences is enabled in your org.
`TopicId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Identifier of the topic. This is a relationship field. **Relationship Name** Topic **Relationship Type** Lookup **Refers To** Topic

Usage

Use this object to query the assignments of topics to feed items, records, or files. To assign or remove topics, you must have the "Assign Topics" permission.

In SOQL `SELECT` syntax, this object supports nested semi-joins, allowing queries on Knowledge articles assigned to specific topics. For example:

```
SELECT parentId FROM KnowledgeArticleViewStat
    WHERE parentId in (SELECT KnowledgeArticleId FROM KnowledgeArticleVersion
```

```
WHERE publishStatus = 'Online' AND language = 'en_US'
AND  Id in (select EntityId from TopicAssignment where TopicId ='0T0xx0000000xxx'))
```

No SOQL limit if logged-in user has "View All Data" permission. If not, do one of the following:

- Specify a LIMIT clause of 1,100 records or fewer.
- Filter on `Id` or `Entity` when using a `WHERE` clause with "=".

SEE ALSO:

Topic

FeedItem

TopicLocalization

Represents the translated version of a topic name. Topic localization applies only to navigational and featured topics in Experience Cloud sites. This object is available in API version 33.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Users with the Translation Workbench enabled can view topic translations, but the Customize Application, Manage Translation, or Manage Categories permission is required to create or update them.

Fields

Field Name	Details
`Language`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The combined language and locale ISO code, which controls the language for labels displayed in an application. (The values in this field are not related to the default locale selection.) This picklist contains the following fully-supported languages: • Chinese (Simplified): `zh_CN` • Chinese (Traditional): `zh_TW` • Danish: `da` • Dutch: `nl_NL`

Field Name	Details
	- English: `en_US` - Finnish: `fi` - French: `fr` - German: `de` - Italian: `it` - Japanese: `ja` - Korean: `ko` - Norwegian: `no` - Portuguese (Brazil): `pt_BR` - Russian: `ru` - Spanish: `es` - Spanish (Mexico): `es_MX` Spanish (Mexico) defaults to Spanish for customer-defined translations. - Swedish: `sv` - Thai: `th` The Salesforce user interface is fully translated to Thai, but Help is in English. The following end-user only languages are available. - Arabic: `ar` - Bulgarian: `bg` - Croatian: `hr` - Czech: `cs` - English (UK): `en_GB` - Greek: `el` - Hebrew: `iw` - Hungarian: `hu` - Indonesian: `in` - Polish: `pl` - Portuguese (European): `pt_PT` - Romanian: `ro` - Slovak: `sk` - Slovenian: `sl` - Turkish: `tr` - Ukrainian: `uk` - Vietnamese: `vi` The following platform languages are available for organizations that use Salesforce exclusively as a platform. - Albanian: `sq` - Afrikaans: `af`

Field Name	Details
	• Amharic: am • Arabic (Algeria): ar_DZ • Arabic (Bahrain): ar_BH • Arabic (Egypt): ar_EG • Arabic (Iraq): ar_IQ • Arabic (Jordan): ar_JO • Arabic (Kuwait): ar_KW • Arabic (Lebanon): ar_LB • Arabic (Libya): ar_LY • Arabic (Morocco): ar_MA • Arabic (Oman): ar_OM • Arabic (Qatar): ar_QA • Arabic (Saudi Arabia): ar_SA • Arabic (Sudan): ar_SD • Arabic (Syria): ar_SY • Arabic (Tunisia): ar_TN • Arabic (United Arab Emirates): ar_AE • Arabic (Yemen): ar_YE • Armenian: hy • Basque: eu • Bosnian: bs • Bengali: bn • Burmese: my • Catalan: ca • Chinese (Hong Kong): zh_HK • Chinese (Singapore): zh_SG • Chinese (Malaysia): zh_MY • Dutch (Belgium): nl_BE • English (Australia): en_AU • English (Belgium): en_BE • English (Canada): en_CA • English (Cyprus): en_CY • English (Germany): en_DE • English (Hong Kong): en_HK • English (India): en_IN • English (Ireland): en_IE • English (Israel): en_IL • English (Malaysia): en_MY

Field Name	Details

Field Name	Details
	• Urdu: `ur` • Welsh: `cy` • Xhosa: `xh` • Zulu: `zu`
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID that identifies the topic. After a TopicLocalization record is created, this ID can't be modified.
`Value`	**Type** string **Properties** Create, Filter, Sort, Update **Description** The translated text for the topic name. Label is **Topic Name Translation**.

TopicUserEvent

Represents an action (such as comment, post, like, or share) made by a user on a topic. This object is available in API version 42.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Only users with the Modify All Data permission can view and delete these data.

Fields

Field	Details
`ActionEnum`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The action taken by a user on a topic. The possible values are: • LIKE • COMMENT • POST • ASSIGN • SHARE • FAVORITE • UNFAVORITE • AT_MENTION • BANG_MENTION • COMMENT_LIKE • USER_ENDORSEMENT • SKILL_PEER_ENDORSEMENT • SKILL_SELF_ENDORSEMENT • BEST_ANSWER
`NetworkId`	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description ID of the Experience Cloud site where the action was performed.
`TopicId`	**Type** reference **Properties** Filter, Group, Sort **Description** Identifier of the topic.
`UserId`	**Type** reference **Properties** Filter, Group, Sort **Description** Unique Salesforce user ID.

Usage

Use the TopicUserEvent object to delete topic-related activities by Experience Cloud site users who would like all their topic-related activities to be removed from a site.

TransactionSecurityPolicy

Represents a transaction security policy definition.

This object is available in API version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`ActionConfig`	**Type** textarea **Properties** Create, Update

Field	Details
	Description Describes the action to take when the matching Transaction Security policy is triggered. Also indicates the type of notifications selected and the ID of the intended recipient. The recipient must be active and assigned the Modify All Data and View Setup user permissions. Multiple actions can be taken. The actions available depend on the `Event Type` field.
`ApexPolicyId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Represents the Apex `TxnSecurity.PolicyCondition` or `TxnSecurity.EventCondition` interface for this policy.
`BlockMessage`	**Type** string **Properties** Create,Filter, Nillable, Sort, Update **Description** The custom message sent to a user when a policy blocks their action. Used in Real-Time Event Monitoring only. Maximum of 1000 characters. This field is null when the default message option is selected in the UI. Available only when `EventName` is set to `ApiEvent`, `ListViewEvent`, `BulkApiResultEventStore`, or `ReportEvent`. Available in API version 49.0 and later. Include org- or policy-specific information in your custom message, such as the name of the responsible administrator or the business unit. Be careful about what you include. Too much information on how the policy was designed. can aid a malicious user. Two-factor authentication (2FA) isn't supported in Lightning Experience, so events like `ListView` and `ReportEvent` are upgraded to Block in Lightning. Custom messages aren't translatable.
`CustomEmailContent`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** The administrator-created custom email content sent when a policy is triggered. Used in Real-Time Event Monitoring only. Maximum of 1333 characters. This field is null when the Custom Email Content setting is selected in the UI but no message content is entered. This field is available in API version 54.0 and later. Custom messages aren't translatable.

Field	Details
Description	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** The description entered for this policy.
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The API, or program name, for this policy. Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
EventName	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Used in Real-Time Event Monitoring only. Indicates the name of the event the policy monitors. Valid values are: • `ApiEvent`—Tracks these user-initiated read-only API calls: `query()`, `queryMore()`, and `count()`. Captures API requests through SOAP API and Bulk API for the Enterprise and Partner WSDLs. Tooling API calls and API calls originating from a Salesforce mobile app aren't captured. • `ApiAnomalyEventStore`—Tracks anomalies in how users make API calls. ApiAnomalyEventStore is an object that stores the event data of `ApiAnomalyEvent`. This object is available in API version 50.0 and later. • `BulkApiResultEventStore`—Tracks when a user downloads the results of a Bulk API request. `BulkApiResultEventStore` is a big object that stores the event data of `BulkApiResultEvent`. This object is available in API version 50.0 and later. • `CredentialStuffingEventStore`—Tracks when a user successfully logs into Salesforce during an identified credential stuffing attack. Credential stuffing refers to large-scale automated login requests using stolen user credentials.This value is available in API 49.0 and later. • `FileEventStore`—Tracks when a user downloads, previews, or uploads a file. FileEventStore is a big object that stores the event data of FileEvent. This object is available in API version 57.0 and later.

Field	Details
	• `GuestUserAnomalyEventStore`—Tracks data access anomalies that are caused by guest user misconfiguration. GuestUserAnomalyEventStore is an object that stores the event data of GuestUserAnomalyEvent.This object is available in API version 60.0 and later. • `ListViewEvent`—Tracks when users access data with list views using Lightning Experience, Salesforce Classic, or the API. It doesn't track list views of Setup entities. • `LoginEvent`—LoginEvent tracks the login activity of users who log in to Salesforce. • `PermissionSetEventStore`—Tracks changes to permission sets and permission set groups. • `ReportAnomalyEventStore`—Tracks anomalies in how users run or export reports, including unsaved reports. This value is available in API 49.0 and later. • `ReportEvent`—Tracks when reports are run in your org. • `SessionHijackingEventStore`—Tracks when unauthorized users gain ownership of a Salesforce user's session with a stolen session identifier. To detect such an event, Salesforce evaluates how significantly a user's current browser fingerprint diverges from the previously known fingerprint using a probabilistically inferred significance of change. This value is available in API 49.0 and later.
`EventType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Used in Legacy Transaction Security only. Indicates the type of event the policy monitors. Valid values are: • `AccessResource`—Notifies you when the selected resource has been accessed. • `AuditTrail`—Reserved for future use. • `DataExport`—Notifies you when any API query is made, such as from the Data Loader API client, or when a Report export occurs. • `Entity`—Notifies you on use of an object type such as an authentication provider or chatter post. • `Login`—Notifies you when a user logs in. As of Summer '20, Legacy Transaction Security is a retired feature in all Salesforce orgs.
`ExecutionUserId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Used in Legacy Transaction Security only. The ID of an active user who is assigned the Modify All Data and View Setup user permissions. As of Summer '20, Legacy Transaction Security is a retired feature in all Salesforce orgs.

Field	Details
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The policy's name. Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.
NamespacePrefix	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix associated with this object. Each Developer Edition organization that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. The namespace prefix can have one of the following values: • In Developer Edition organizations, the namespace prefix is set to the namespace prefix of the organization for all objects that support it. There is an exception if an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition organization of the package developer. • In organizations that are not Developer Edition organizations, NamespacePrefix is only set for objects that are part of an installed managed package. There is no namespace prefix for all other objects.
ResourceName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Used in Legacy Transaction Security only. A resource used to narrow down the conditions under which the policy triggers. For example, with a DataExport event, you can select a resource Lead to specifically monitor export activity occurring on your Lead entities. The resources available depend on the EventType field. As of Summer '20, Legacy Transaction Security is a retired feature in all Salesforce orgs.
State	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates whether the policy is active. Valid values are: • `Disabled` • `Enabled`
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of validation that the policy uses. The valid values are: • `CustomApexPolicy`— Created with Apex editor. • `CustomConditionBuilderPolicy`— Created with Condition Builder .

Translation

The Translation object represents the languages enabled for translation in your Salesforce org. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Enterprise, Performance, Unlimited, or Developer edition.
- To view this object, you must have the "View Setup and Configuration" permission.
- To use the `create()`, `update()`, and `upsert()` calls, Translation Workbench must be enabled in your org.
- To manage translations, Translation Workbench must be enabled in your org. Specify translators for each language through the Translation Language Settings Setup page.

Fields

Field	Details
`CanManage`	**Type** boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort **Description** Indicates whether the language is available for translation (`true`) or not (`false`). Specify translators for each language through the Translation Language Setup page.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the translated values for this language display to users (`true`) or not (`false`).
`Language`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The language code. See the Salesforce Help for a full list of languages and their codes.

TravelMode

Represents a travel mode used for travel time calculations. The records include information about the type of transportation (such as Car or Walking), whether a vehicle can take toll roads, and whether a vehicle is transporting hazardous materials. This object is available in API version 54.0 and later.

Fields

Field	Details
`CanUseTollRoads`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if the vehicle is allowed to drive on toll roads. The default value is `false`.

Field	Details
IsLocked	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the travel model record is locked or not. The default value is `false`.
IsTransportingHazmat	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if the vehicle is transporting hazardous materials. The default value is `false`.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate=`) but not viewed it.
MayEdit	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the travel model record can be edited or not. The default value is `false`.

Field	Details
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the travel mode.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of this object. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
TransportType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Type of transportation. Possible values are: • `Bicycle` • `Car`-Default. • `Heavy Truck` • `Light Truck` • `Walking`

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

TravelModeFeed
Feed tracking is available for the object.

TravelModeOwnerSharingRule
Sharing rules are available for the object.

TravelModeShare
Sharing is available for the object.

TwoFactorInfo

Stores a user's secret for multi-factor operations. Use this object when customizing multi-factor authentication in your organization. (Note that multi-factor authentication was formerly called two-factor authentication.) This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

You need the Manage Multi-Factor Authentication in API permission to create or update this object.

Fields

Field Name	Details
`SharedKey`	**Type** string **Properties** Create, Group, Sort, Update **Description** This field is never read-enabled, though it is write-enabled. A request for this value always returns `null`. The value must be a base32-encoded string of a 20-byte secret. You can use the Apex method `Auth.SessionManagement.getQrCode()` to get a value to write to this field. Note: If you write a secret to this field, in API version 37.0 and later the user gets an email notification that a new identity verification method was added to the user's account.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update

Field Name	Details
	Description The multi-factor method. • TOTP—The time-based one-time password.
UserId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID for the user who's associated with the authentication secret.

TwoFactorMethodsInfo

Stores information about which identity verification methods a user has registered. This object is available in API version 37.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

You need the Manage Multi-Factor Authentication in API permission to access this object. (Note that multi-factor authentication was formerly called two-factor authentication.)

Fields

Field Name	Details
ExternalId	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** A unique system-generated numerical identifier for the user.
HasBuiltInAuthenticator	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description If `true`, the user has registered a built-in authenticator on their device, such as Touch ID or Windows Hello. The user can verify their identity by using the built-in authenticator. This field is available in API version 53.0 and later.
`HasSalesforceAuthenticator`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, the user has connected the Salesforce Authenticator mobile app. The user can verify identity by approving a notification sent to the app. If the user sets a trusted location in the app, Salesforce Authenticator verifies automatically when the user is in the trusted location.
`HasSecurityKey`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, the user has registered a WebAuthn-compatible security key. This field includes all security keys registered or used after Summer '22. The user can verify their identity by inserting the security key into a USB port to generate credentials.
`HasTempCode`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, the user has a temporary verification code generated by a Salesforce admin or user with Manage Multi-Factor Authentication in User Interface permission.
`HasTotp`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, the user has connected an authenticator app that generates verification codes, also known as time-based one-time passwords (TOTP). The user can verify identity by entering a code generated by the app.

Field Name	Details
`HasU2F`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, the user has registered a U2F security key. The user can verify identity by inserting the security key into a USB port to generate credentials. Note: For U2F security keys registered or used after Summer '22, use HasSecurityKey instead.
`HasUserVerifiedEmailAddress`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, the user has self-registered and verified an email address. This parameter is available in API version 43 and later.
`HasUserVerifiedMobileNumber`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, the user has self-registered and verified a mobile phone number. Salesforce can text a verification code to the user at that number. This parameter is available in API version 43 and later.
`HasVerifiedMobileNumber`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, the user has a mobile phone number that was added by an administrator or self-registered by the user. Salesforce can text a verification code to the user at that number.
`UserId`	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description ID of the user who's associated with the identity verification methods.

Usage

In API version 34.0 and later, this object was enhanced to help manage high instance counts. A `query()` call returns up to 500 rows. A queryMore() call returns 500 more, up to 2500 total. No more records are returned after 2500. To make sure that you don't miss any records, issue a `COUNT()` query in a SELECT clause for ThirdPartyAccountLink. This query gives you the total number of records. If there are more than 2500 records, divide your query by filtering on fields, like `UserId`, to return subsets of less than 2500 records.

TwoFactorTempCode

Stores information about a user's temporary verification code for confirming their identity when logging in. This object is available in API version 37.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

You need the Manage Multi-Factor Authentication in API permission to access this object. (Note that multi-factor authentication was formerly called two-factor authentication.)

Fields

Field Name	Details
`Expiration`	**Type** dateTime **Properties** Filter, Sort **Description** The date and time when the temporary verification code expires. The code expires in 1 to 24 hours after it's generated. Salesforce admins and non-admin users with the Manage Multi-Factor Authentication in User Interface permission set the expiration time when generating the code.
`Identifier`	**Type** string **Properties** Filter, Group, Sort

Field Name	Details
	Description The unique identifier for the temporary code. This is a required field that can take any value.
TempCode	**Type** encryptedstring **Description** A request for this value always returns `null`.
UserId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID for the user who's associated with the temporary verification code.

UiFormulaCriterion

Represents a filter that helps define component visibility on a Lightning page. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
LeftHandSide	**Type** string **Properties** Filter, Group, Sort **Description** Represents the field that the filter is based on. For example, `AMOUNT`.
OperatorId	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description Represents the filter operator. Valid values are: • `CONTAINS` • `EQUAL` • `GE`—greater than or equal • `GT`—greater than • `LE`—less than or equal • `LT`—less than • `NE`—not equal This is a relationship field. **Relationship Name** Operator **Relationship Type** Lookup **Refers To** null
`ParentKeyPrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Represents the three-digit prefix of the parent ID.
`RightHandSide`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Represents the value used to evaluate the component's visibility. For example, 1000000.
`RuleId`	**Type** reference **Properties** Filter, Group, Sort **Description** Represents the formula rule ID. This is a relationship field. **Relationship Name** Rule

Field	Details
	Relationship Type Lookup **Refers To** UiFormulaRule

UiFormulaRule

Represents a set of one or more filters that define the conditions under which a component displays on a Lightning page. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
`AssociatedElementId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Represents a parent component that UiFormulaRule is associated with, such as PromptVersion. This is a relationship field. **Relationship Name** AssociatedElement **Relationship Type** Lookup **Refers To** PromptVersion
`BooleanFilter`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Represents the filter logic applied to UiFormulaRule. References the UI formula rule stored by UiFormulaCriterion based on the sortIndex, such as ((1 && 3) || 2).

Field	Details
DeveloperName	**Type** string **Properties** Filter, Group, Sort **Description** Represents the API name of the UiFormulaRule. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Formula	**Type** textarea **Properties** Nillable **Description** Represents the formula source string of UiFormulaRule.
Language	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Represents the language of the UiFormulaRule.
MasterLabel	**Type** string **Properties** Filter, Group, Sort **Description** Required. Represents the label of the UiFormulaRule.
ParentKeyPrefix	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Represents the three-digit prefix for AssociatedElementId.

UndecidedEventRelation

Represents event participants (invitees or attendees) with the status `Not Responded` for a given event. This object is available in API versions 29.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
`EventId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Indicates the ID of the event. This is a relationship field. **Relationship Name** Event **Relationship Type** Lookup **Refers To** Event
`RelationId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Indicates the ID of the invitee. This is a polymorphic relationship field. **Relationship Name** Relation **Relationship Type** Lookup **Refers To** Calendar, Contact, Lead, User
`RespondedDate`	**Type** dateTime

Field Name	Details
	Properties Filter, Nillable, Sort **Description** This field is always `null`.
`Response`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Indicates the content of the response field. Label is `Comment`.
`Type`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Indicates whether the invitee is a user, lead or contact, or resource.

Usage

Query invitees who have not responded to an invitation to an event

```
SELECT eventId, type, response FROM UndecidedEventRelation WHERE
eventid='00UTD000000ZH5LA'
```

SEE ALSO:

AcceptedEventRelation

DeclinedEventRelation

UsageImpactFactor

Represents a collection of fields to set up the Usage Impact Factors used across jurisdictions and programs.This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only with the EAndU Cloud Usage Impact Access permission set.

Fields

Field	Details
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the Usage Impact Factor is active. The default value is `false`.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the Usage Impact Factor.
`ShortForm`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The acronym of the Usage Impact Factor.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Specifies the type of Usage Impact Factor Possible values are: • `AdjustedGrossAnnual`—Adjusted Gross Annual • `AdjustedGrossAnnualMMBTU`—Adjusted Gross Annual MMBTU • `AdjustedGrossAnnualkW`—Adjusted Gross Annual kW • `AdjustedGrossAnnualkWSummer`—Adjusted Gross Annual kW Summer • `AdjustedGrossAnnualkWWinter`—Adjusted Gross Annual kW Winter

Field	Details
	• `AdjustedGrossAnnualkWh`—Adjusted Gross Annual kWh • `GrossAnnualMMBTU`—Gross Annual MMBTU • `GrossAnnualkW`—Gross Annual kW • `GrossAnnualkWh`—Gross Annual kWh • `NetAnnual`—Net Annual • `NetLifetime`—Net Lifetime • `NetToGross`—Net To Gross • `NetToGrossFR`—Net To Gross FR • `UsefulLife`—Useful Life

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

UsageImpactFactorChangeEvent
Change events are available for the object.

UsageImpactFactorFeed
Feed tracking is available for the object.

UsageImpactFactorHistory
History is available for tracked fields of the object.

UsageImpactFactorOwnerSharingRule
Sharing rules are available for the object.

UsageImpactFactorShare
Sharing is available for the object.

UsageImpactGroup

Represents a collection of fields to set up the Usage Impact Groups used across jurisdictions and programs. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only with the EAndU Cloud Usage Impact Access permission set.

Fields

Field	Details
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the Usage Impact Group.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the Usage Impact Group is active. The default value is `false`.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the Usage Impact Group.
`ShortForm`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The acronym of the Usage Impact Group.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Specifies the type of Usage Impact Group. Possible values are: • `ForwardMarkets`—Forward Markets • `Planning` • `Production`

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

UsageImpactGroupChangeEvent
Change events are available for the object.

UsageImpactGroupFeed
Feed tracking is available for the object.

UsageImpactGroupHistory
History is available for tracked fields of the object.

UsageImpactGroupOwnerSharingRule
Sharing rules are available for the object.

UsageImpactGroupShare
Sharing is available for the object.

UsageImpactGroupFactor

Represents a junction between an Usage Impact Group version and Usage Impact Factor. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only with EAndU Cloud Usage Impact Access permission set.

Fields

Field	Details
`FactorValue`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Defines the value of the Usage Impact Group Factor.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether the Usage Impact Group Factor is active. The default value is `false`.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the Usage Impact Group Factor.
`UnitOfMeasureId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The UnitOfMeasure object associated with the Usage Impact Group Factor. This field is a relationship field. **Relationship Name** UnitOfMeasure **Relationship Type** Lookup **Refers To** UnitOfMeasure
`UsageImpactFactorId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The Usage Impact Factor object associated with the Usage Impact Group Factor. This field is a relationship field. **Relationship Name** UsageImpactFactor **Relationship Type** Lookup **Refers To** UsageImpactFactor
`UsageImpactGroupVersionId`	**Type** reference

Field	Details
	Properties Create, Filter, Group, Sort, Update **Description** The Usage Impact Group Version object associated with the Usage Impact Group Factor. This field is a relationship field. **Relationship Name** UsageImpactGroupVersion **Relationship Type** Lookup **Refers To** UsageImpactGroupVersion

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

UsageImpactGroupFactorChangeEvent
Change events are available for the object.

UsageImpactGroupFactorFeed
Feed tracking is available for the object.

UsageImpactGroupFactorHistory
History is available for tracked fields of the object.

UsageImpactGroupFactorOwnerSharingRule
Sharing rules are available for the object.

UsageImpactGroupFactorShare
Sharing is available for the object.

UsageImpactGroupPgmMeasure

Represents a junction between the program, product, and Usage Impact Group version. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only with EAndU Cloud Usage Impact Access permission set.

Fields

Field	Details
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the Usage Impact Group Program Measure.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the Usage Impact Group Program Measure.
`Product2Id`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The Product2 object associated with the Usage Impact Group Program Measure. This field is a relationship field. **Relationship Name** Product2 **Relationship Type** Lookup **Refers To** Product2
`ProgramId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The Program object associated with the Usage Impact Group Program Measure. This field is a relationship field. **Relationship Name** Program **Relationship Type** Lookup

Field	Details
	Refers To Program
UsageImpactGroupVersionId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The Usage Impact Group Version associated with the Energy Saving Group Association. This field is a relationship field. **Relationship Name** UsageImpactGroupVersion **Relationship Type** Lookup **Refers To** UsageImpactGroupVersion

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

UsageImpactGroupPgmMeasureChangeEvent
Change events are available for the object.

UsageImpactGroupPgmMeasureFeed
Feed tracking is available for the object.

UsageImpactGroupPgmMeasureHistory
History is available for tracked fields of the object.

UsageImpactGroupPgmMeasureOwnerSharingRule
Sharing rules are available for the object.

UsageImpactGroupPgmMeasureShare
Sharing is available for the object.

UsageImpactGroupVersion

Represents a collection of fields to set up the versions of Usage Impact Groups. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only with EAndU Cloud Usage Impact Access permission set.

Fields

Field	Details
`ApprovedMeasureExtlid`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The approved Measure Category ID assigned by a regulator.
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the Usage Impact Group Version.
`EndDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The date when the validity of Usage Impact Group Version ends.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the Usage Impact Group Version is active. The default value is `false`.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the Usage Impact Group Version.

Field	Details
StartDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The date when the validity of Usage Impact Group Version begins.
TechResourceManualCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The code and version of the Technical Reference Manual which is the source for the values associated with this Usage Impact Group Version. This is necessary for regulatory reporting.
UsageImpactGroupId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The Usage Impact Group object associated with the Usage Impact Group Version. This field is a relationship field. **Relationship Name** UsageImpactGroup **Relationship Type** Lookup **Refers To** UsageImpactGroup
Version	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The version number of the Usage Impact Group Version.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

UsageImpactGroupVersionChangeEvent
Change events are available for the object.

UsageImpactGroupVersionFeed
Feed tracking is available for the object.

UsageImpactGroupVersionHistory
History is available for tracked fields of the object.

UsageImpactGroupVersionOwnerSharingRule
Sharing rules are available for the object.

UsageImpactGroupVersionShare
Sharing is available for the object.

User

Represents a user in your organization.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

- To create or update a User record, you must have the Manage Internal Users permission. If the user is a Customer Portal user, you must have the Manage Customer Users permission. If the user is a partner portal user, you must have the Manage External Users permission. But the `describeSObjects` call always returns `createable` as `true`.
- If digital experiences is enabled, to create or update external users for Customer Portal, partner portal, or Experience Cloud sites, you must also have the Manage External Users permission.
- Information in hidden fields in a user's profile isn't searchable by external users (with a portal profile) in an Experience Cloud site. For example, if a user in a site has a hidden email address and an external user searches for it, the user record isn't returned in the search results. Hidden field values also aren't returned when external users perform searches on nonhidden fields. So if an external user searches for a user's name (can't be hidden), any hidden field values associated with the user record such as a hidden email address aren't returned in the search results.

  But internal users belonging to the same Experience Cloud site can search for and view hidden field values in search results.
- When requested by portal users, queries that look up to the User object, such as `owner.name` or `owner.email` sometimes don't return values when the portal user making the request doesn't have Read access to the User record being queried.

  The behavior depends on the number of domains associated with the lookup field. If the object can look up to more than one domain, `owner.name` returns a value, but other detail fields don't. For example, Case owner can look up to the User or Queue objects. In this case, portal users can see only the value of `owner.name`. Other User detail fields, such as `owner.email` or `owner.phone` don't return a value.

  If the object can look up to only a single domain, such as Account owner, then no detail fields return values, including `owner.name`.
- To change ownership of a record by updating its `OwnerId` field, you must have both the Transfer Record permission and Read access to the User record of the new record owner.
- To view the `NumberOfFailedLogins` field, you must have the Manage User permission.

Fields

Field	Details
AboutMe	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Information about the user, such as areas of interest or skills. This field is available even if Chatter is disabled.
AccountId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the Account associated with a Customer Portal user. This field is null for Salesforce users. This is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
Address (beta)	**Type** address **Properties** Filter, Nillable **Description** The compound form of the address. Read-only. See Address Compound Fields for details on compound address fields.
Alias	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. The user's alias. For example, `jsmith`.

Field	Details
BadgeText	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The Experience Cloud site role, displayed on the user profile page just below the user name.
BannerPhotoUrl	**Type** url **Properties** Filter, Nillable, Sort **Description** The URL for the user's banner photo. This field is available in API version 36.0 and later.
CallCenterId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** If Salesforce CRM Call Center is enabled, represents the call center that this user is assigned to.
City	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The city associated with the user. Up to 40 characters allowed.
CommunityNickname	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Name used to identify this user in the Experience Cloud site.
CompanyName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The name of the user's company.
ContactId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the Contact associated with this account. The contact must have a value in the AccountId field or an error occurs. This is a relationship field. **Relationship Name** Contact **Relationship Type** Lookup **Refers To** Contact
Country	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The country associated with the user. Up to 80 characters allowed.
CountryCode	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ISO country code associated with the user.
CurrentStatus	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Text that describes what the user is working on.

Field	Details
	Note: If you update this field, the API automatically adds a post of type `UserStatus` on the user's profile in Chatter. This field is deprecated in API version 25.0. To achieve similar behavior, post to the user directly by creating a FeedItem with the user's ParentId.
`DefaultCurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The user's default currency setting for new records. For example, if a user in France sets `DefaultCurrencyIsoCode` to euros, then that's their default currency. Only applicable for organizations that use multiple currencies.
`DefaultDivision`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** This record's default division. Only applicable if divisions are enabled.
`DefaultGroupNotificationFrequency`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. The default frequency for sending the user's Chatter group email notifications when the user joins groups. The valid values are: • `P`—Email on every post • `D`—Daily digests • `W`—Weekly digests • `N`—Never The default value is `N`. For Professional, Enterprise, Unlimited, and Developer Edition organizations that existed before API version 22.0, the default value remains `D`. This field is available in API version 21.0 and later.
`DelegatedApproverId`	**Type** reference **Properties** Create, Filter, Group, Nillable,Sort, Update

Field	Details
	Description Id of the user who is a delegated approver for this user.
`Department`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The company department associated with the user.
`DigestFrequency`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. The send frequency of the user’s Chatter personal email digest. The valid values are: • `D` = Daily • `W` = Weekly • `N` = Never The default value is `D`.
`Division`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The division associated with this user, similar to Department, and unrelated to `DefaultDivision`.
`Email`	**Type** email **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. The user’s email address.
`EmailEncodingKey`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description Required. The email encoding for the user, such as `ISO-8859-1` or `UTF-8`.
`EmailPreferencesAutoBcc`	**Type** boolean **Properties** Create, Filter, Update **Description** Determines whether the user receives copies of sent emails. This option applies only if compliance BCC emails aren't enabled.
`EmployeeNumber`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The user's employee number.
`Extension`	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The user's phone extension number.
`Fax`	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The user's fax number.
`FederationIdentifier`	**Type** string **Properties** Create, Filter, idLookup, Nillable, Sort, Update **Description** Indicates the value that must be listed in the `Subject` element of a Security Assertion Markup Language (SAML) *IDP certificate* to authenticate the user for a client application using single sign-on. This value must be specified if the `SAML User ID Type` is Assertion contains Federation ID from the User record. Otherwise, this field can't be edited.

Field	Details
FirstName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The user’s first name.
ForecastEnabled	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the user is enabled for forecasts (`true`) or not (`false`). Forecast user have access to the forecasts page.
FullPhotoUrl	**Type** url **Properties** Filter, Nillable, Sort **Description** The URL for the user's profile photo. This field is available even if Chatter is disabled. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo is uploaded, the URL returned for an older photo isn’t guaranteed to return a photo. Query this field for the URL of the most recent photo. This field is available in API version 20.0 and later.
GeocodeAccuracy	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The level of accuracy of a location’s geographical coordinates compared with its physical address. A geocoding service typically provides this value based on the address’s latitude and longitude coordinates.
IndividualId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the data privacy record associated with this user. This field is available if Data Protection and Privacy is enabled.

Field	Details
	This is a relationship field. **Relationship Name** Individual **Relationship Type** Lookup **Refers To** Individual
IsActive	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the user has access to log in (`true`) or not (`false`). You can modify a User's active status from the user interface or via the API.
IsPartner	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the user is a partner who has access to the partner portal (`true`) or not (`false`). This field isn't available for release 9.0 and later. Instead, use `UserType` with the value `Partner` or `Power Partner`.
IsPortalEnabled	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether an active, external, user has access to Experience Cloud sites or portals (`true`) or not (`false`). This field is only available if one of these conditions is true: • Digital experiences is enabled and you have community or portal user licenses • Portals are enabled Note: Users with External Identity licenses can access Experience Cloud sites even if the flag is false.
IsPortalSelfRegistered	**Type** boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort **Description** Indicates whether the user is a Customer Portal user who self-registered for your organization's Customer Portal (`true`) or not (`false`). This field isn't available for release 9.0 and earlier.
`IsPrmSuperUser`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Available for partner portal users only. Indicates whether the user has super user access in the partner portal (`true`) or not (`false`). This field is available in API version 24.0 and later. Note: This field isn't automatically enabled. Contact Salesforce to enable this field.
`IsProfilePhotoActive`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether a user has a profile photo (`true`) or not (`false`). This field is available in API version 36.0 and later.
`JigsawImportLimitOverride`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The Data.com user's monthly addition limit. The value must be between zero and the organization's monthly addition limit. Label is **Data.com Monthly Addition Limit**. This field is available in API version 27.0 and later.
`LanguageLocaleKey`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. The user's language, such as French or Chinese (Traditional). Label is **Language**. Note: In API version 47.0 and later, when using the DescribeSObjectResult API to return PicklistEntry values from this picklist, the `active` value indicates whether

Field	Details
	the language is in the user's **Displayed Languages** (`true`) or the user's **Available Languages** (`false`). All other languages aren't in the returned `active` value array. In API version 46.0 and earlier, the PicklistEntry `active` values indicate whether the language is in either the user's **Displayed Languages** or **Available Languages** lists (`true`) or not in either list (`false`).
`LastLoginDate`	**Type** dateTime **Properties** Filter, Sort, Nillable **Description** The date and time when the user last successfully logged in. This value is updated if 60 seconds elapses since the user's last login.
`LastName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. The user's last name.
`LastReferencedDate`	**Type** datetime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** datetime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) but not viewed.
`Latitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update

Field	Details
	Description Used with `Longitude` to specify the geolocation of an address. Acceptable values are numbers between –90 and 90 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
`LocaleSidKey`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. This field is a restricted picklist field. The value of the field affects formatting and parsing of values, especially numeric values, in the user interface. It doesn’t affect the API. The field values are named according to the language, and the country if necessary, using two-letter ISO codes. The set of names is based on the ISO standard. You can also manually set a user’s locale in the user interface, and then use that value for inserting or updating other users via the API.
`Longitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `Latitude` to specify the geolocation of an address. Acceptable values are numbers between –180 and 180 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
`Manager`	**Type** picklist **Properties** Create, Filter, Restricted picklist, Update **Description** User lookup field used to select the user's manager. This field establishes a hierarchical relationship, preventing you from selecting a user that directly or indirectly reports to themselves.
`ManagerId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The Id of the user who manages this user. This is a relationship field.

Field	Details
	Relationship Name Manager **Relationship Type** Lookup **Refers To** User
`MediumBannerPhotoUrl`	**Type** url **Properties** Filter, Nillable, Sort **Description** The URL for the medium-sized user profile banner photo.
`MiddleName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The user's middle name. Maximum size is 40 characters. To enable this field, contact Salesforce Customer Support.
`MobilePhone`	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The user's mobile device number.
`Name`	**Type** string **Properties** Filter, Group, Sort **Description** Concatenation of `FirstName` and `LastName`. Limited to 203 characters, including whitespaces.
`NumberOfFailedLogins`	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The number of failed login attempts for the user's account. When the maximum number of failed login attempts is reached, the counter resets and the user's account is locked. If there's a successful login before the maximum number of failed login attempts is reached, the counter resets and the user's account remains unlocked.
OfflineTrialExpirationDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the user's Connect Offline trial expires.
Phone	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The user's phone number.
PortalRole	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The role of the user in the Customer Portal (either Executive, Manager, User, or PersonAcount). Prior to API version 16.0, if you set this field to null, the system automatically included a portal role. In API version 16.0 and above, when you set this field to null, a portal role is not automatically created. When this field is null and a `ContactId` is provided, the user is assigned to the User role. The Update property is available in API version 43.0 and later. The field is available if Customer Portal is enabled OR digital experiences is enabled and Experience Cloud sites have available partner portal, Customer Portal, or High-Volume Portal User licenses.
PostalCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The user's postal or ZIP code. Label is **Zip/Postal Code**.

Field	Details
`ProfileId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Required. ID of the user's Profile. Use this value to cache metadata based on profile. In earlier releases, this was `RoleId`. If you change the user's profile, the user's license also changes, because every profile belongs to exactly one user license type. This is a relationship field. **Relationship Name** Profile **Relationship Type** Lookup **Refers To** Profile
`ReceivesAdminInfoEmails`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the user receives email for administrators from Salesforce (`true`) or not (`false`).
`ReceivesInfoEmails`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the user receives informational email from Salesforce (`true`) or not (`false`).
`SenderEmail`	**Type** email **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The email address used as the From address when the user sends emails. This address is the same value shown in Setup on the My Email Settings page.

Field	Details
SenderName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The name used as the email sender when the user sends emails. This name is the same value shown in Setup on the My Email Settings page.
Signature	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** The signature text added to emails. This text is the same value shown in Setup on the My Email Settings page.
SmallBannerPhotoUrl	**Type** url **Properties** Filter, Nillable, Sort **Description** The URL for the small user profile banner photo.
SmallPhotoUrl	**Type** url **Properties** Filter, Nillable, Sort **Description** The URL for a thumbnail of the user's profile photo. This field is available even if Chatter is disabled. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo is uploaded, the URL returned for an older photo isn’t guaranteed to return a photo. Query this field for the URL of the most recent photo. This field is available in API version 20.0 and later.
State	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The state associated with the User. Up to 80 characters allowed.

Field	Details
StateCode	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ISO state code associated with the user.
Street	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The street address associated with the User.
Suffix	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The user's name suffix. Maximum size is 40 characters. To enable this field, contact Salesforce Customer Support.
TimeZoneSidKey	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. This field is a restricted picklist field. A User time zone affects the offset used when displaying or entering times in the user interface. But the API doesn't use a User time zone when querying or setting values. Values for this field are named using region and key city, according to ISO standards. You can also manually set one User time zone in the user interface, and then use that value for creating or updating other User records via the API.
Title	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The user's business title, such as Vice President.

Field	Details
Username	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. Contains the name that a user enters to log in to the API or the user interface. The value for this field must be in the form of an email address, using all lowercase characters. It must also be unique across all organizations. If you try to create or update a User with a duplicate value for this field, the operation is rejected. Each inserted User also counts as a license. Every organization has a maximum number of licenses. If you attempt to exceed the maximum number of licenses by inserting User records, the create request is rejected.
UserPermissionsCallCenterAutoLogin	**Type** boolean **Properties** Create, Filter, Update **Description** Required if Salesforce CRM Call Center is enabled. Indicates whether the user is enabled to use the auto login feature of the call center (`true`) or not (`false`).
UserPermissionsChatterAnswersUser	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates whether the portal user is enabled to use the Chatter Answers feature (`true`) or not (`false`). This field defaults to `false` when a Customer Portal user is created from the API.
UserPermissionsInteractionUser	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates whether the user can run flows or not. Label is **Flow User**.
UserPermissionsJigsawProspectingUser	**Type** boolean **Properties** Create, Filter, Update

Field	Details
	Description Indicates whether the user is allocated one Data.com user license (`true`) or not (`false`). The Data.com user lets the user add Data.com contact and lead records to Salesforce in supported editions. Label is **Data.com User**.
`UserPermissionsKnowledgeUser`	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates whether the user is enabled to use Salesforce Knowledge (`true`) or not (`false`). Label is **Knowledge User**.
`UserPermissionsLiveAgentUser`	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates whether the user is enabled to use Chat (`true`) or not (`false`). Label is **Live Agent User**.
`UserPermissionsMarketingUser`	**Type** boolean **Properties** Create, Filter, Update **Description** Required. Indicates whether the user is enabled to manage campaigns in the user interface (`true`) or not (`false`). Label is **Marketing User**.
`UserPermissionsOfflineUser`	**Type** boolean **Properties** Create, Filter, Update **Description** Required. Indicates whether the user is enabled to use Offline Edition (`true`) or not (`false`). Label is **Offline User**.
`UserPermissionsSFContentUser`	**Type** boolean **Properties** Create, Filter, Update

Field	Details
	Description Indicates whether the user is allocated one Salesforce CRM Content User License (`true`) or not (`false`). Label is **Salesforce CRM Content User**. The Salesforce CRM Content User license grants the user access to the Salesforce CRM Content application.
UserPermissionsSiteforceContributorUser	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates whether the user is allocated one Site.com Contributor feature license (`true`) or not (`false`). Label is **Site.com Contributor User**. The Site.com Contributor feature license grants the user access to the Site.com application. Users with a Contributor license can use Site.com Studio to edit site content only.
UserPermissionsSiteforcePublisherUser	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates whether the user is allocated one Site.com Publisher feature license (`true`) or not (`false`). Label is **Site.com Publisher User**. The Site.com Publisher feature license grants the user access to the Site.com application. Users with a Publisher license can build and style websites, control the layout and functionality of pages and page elements, and add and edit content.
UserPermissionsSupportUser	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, the user can use the Salesforce console.
UserPermissionsWirelessUser	**Type** boolean **Properties** Create, Filter, Update **Description** Required if the Wireless permission is enabled. Indicates whether the user is enabled to use Wireless Edition (`true`) or not (`false`). Label is **Wireless User**.

Field	Details
	Note: As of November 2005, Salesforce Wireless Edition is no longer available for purchase. You can continue to use Wireless Edition through the end of your existing contract term if you are: • A Professional Edition customer and purchased Wireless Edition before November 7, 2005. • An Enterprise Edition customer who signed or renewed their Salesforce contract before November 7, 2005.
UserPermissionsWorkDotComUserFeature	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates whether the WDC feature is enabled for the user (`true`) or not (`false`).
UserPreferencesActivityRemindersPopup	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, a reminder window automatically opens when an activity reminder is due. Corresponds to the `Trigger alert when reminder comes due` checkbox at the Reminders page in the personal settings in the user interface.
UserPreferencesAllowConversationReminders	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, voice and call reminders are displayed as notification cards in Lightning Experience. Corresponds to the `Show conversation reminders in Lightning Experience` checkbox in the Activity Reminders page in the personal settings in the user interface. This field is available in API version 55.0 and later.
UserPreferencesApexPagesDeveloperMode	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, indicates that the user has enabled developer mode for editing Visualforce pages and controllers.

Field	Details
UserPreferencesAutoForwardCall	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, the user receives Dialer calls simultaneously in their browser and on their forwarding number.
UserPreferencesContentEmailAsAndWhen	**Type** boolean **Properties** Create, Filter, Update **Description** When `false`, a user with Salesforce CRM Content subscriptions receives a once-daily email summary if activity occurs on the subscribed content, libraries, tags, or authors. To receive email, the `UserPreferencesContentNoEmail` field must also be `false`. The default value is `false`. Note: This field is only visible when Salesforce CRM Content is enabled.
UserPreferencesContentNoEmail	**Type** boolean **Properties** Create, Filter, Update **Description** When `false`, a user with Salesforce CRM Content subscriptions receives email notifications if activity occurs on the subscribed content, libraries, tags, or authors. To receive real-time email alerts, set this field to `false` and set the `UserPreferencesContentEmailAsAndWhen` field to `true`. The default value is `false`. Note: This field is only visible when Salesforce CRM Content is enabled.
UserPreferencesEnableAutoSubForFeeds	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, the user automatically subscribes to feeds for any objects that the user creates. This field is available in API version 25.0 and later.

Field	Details
UserPreferencesDisableAllFeedsEmail	**Type** boolean **Properties** Create, Filter, Update **Description** When `false`, the user automatically receives email for all updates to Chatter feeds, based on the types of feed emails and digests the user has enabled. This field is available in API version 24.0 and later.
UserPreferencesDisableAutoSubForFeeds	**Type** boolean **Properties** Create, Filter, Update **Description** When `false`, the user automatically subscribes to feeds for any objects that the user creates. This field is deprecated in API version 25.0 and later. Starting with API version 25.0, use `UserPreferencesEnableAutoSubForFeeds` to enable or disable auto-follow for objects a user creates.
UserPreferencesDisableBookmarkEmail	**Type** boolean **Properties** Create, Filter, Update **Description** When `false`, the user automatically receives email every time someone comments on a Chatter feed item after the user has bookmarked it. This field is available in API version 24.0 and later.
UserPreferencesDisableChangeCommentEmail	**Type** boolean **Properties** Create, Filter, Update **Description** When `false`, the user automatically receives email every time someone comments on a change the user has made, such as an update to their profile. This field is available in API version 24.0 and later.
UserPreferencesDisableEndorsementEmail	**Type** boolean **Properties** Create, Filter, Update

Field	Details
	Description When `false`, the member automatically receives email every time someone endorses them for a topic.
UserPreferencesDisableFileShareNotificationsForApi	**Type** boolean **Properties** Create, Filter, Update **Description** When `false`, email notifications are sent from the person who shared the file to the users that the file is shared with. This field is available in API version 25.0 and later.
UserPreferencesDisableFollowersEmail	**Type** boolean **Properties** Create, Filter, Update **Description** When `false`, the user automatically receives email every time someone starts following the user in Chatter. This field is available in API version 24.0 and later.
UserPreferencesDisableLaterCommentEmail	**Type** boolean **Properties** Create, Filter, Update **Description** When `false`, the user automatically receives email every time someone comments on a feed item after the user has commented on the feed item. This field is available in API version 24.0 and later.
UserPreferencesDisableLikeEmail	**Type** boolean **Properties** Create, Filter, Update **Description** When `false`, the user automatically receives email every time someone likes their post or comment. This field is available in API version 24.0 and later.
UserPreferencesDisableMentionsPostEmail	**Type** boolean **Properties** Create, Filter, Update

Field	Details
	Description When `false`, the user automatically receives email every time they're mentioned in posts. This field is available in API version 24.0 and later.
UserPreferencesDisableProfilePostEmail	**Type** boolean **Properties** Create, Filter, Update **Description** When `false`, the user automatically receives email every time someone posts to the user's profile. This field is available in API version 24.0 and later.
UserPreferencesDisableSharePostEmail	**Type** boolean **Properties** Create, Filter, Update **Description** When `false`, the user automatically receives email every time their post is shared. This field is available in API version 24.0 and later.
UserPreferencesDisableFeedbackEmail	**Type** boolean **Properties** Create, Filter, Update **Description** When `false`, the user automatically receives emails related to WDC feedback. The user receives these emails when someone requests or offers feedback, shares feedback with the user, or reminds the user to answer a feedback request. This field isn't visible as of API version 54.0.
UserPreferencesDisCommentAfterLikeEmail	**Type** boolean **Properties** Create, Filter, Update **Description** When `false`, the user automatically receives email every time someone comments on a post that the user liked. This field is available in API version 24.0 and later.
UserPreferencesDisMentionsCommentEmail	**Type** boolean **Properties** Create, Filter, Update

Field	Details
	Description When `false`, the user automatically receives email every time the user is mentioned in comments. This field is available in API version 24.0 and later.
UserPreferencesDisableMessageEmail	**Type** boolean **Properties** Create, Filter, Update **Description** When `false`, the user automatically receives email for Chatter messages sent to the user. This field is available in API version 24.0 and later.
UserPreferencesDisableRewardEmail	**Type** boolean **Properties** Create, Filter, Update **Description** When `false`, the user automatically receives emails related to WDC rewards. The user receives these emails when someone gives a reward to the user.
UserPreferencesDisableWorkEmail	**Type** boolean **Properties** Create, Filter, Update **Description** When `false`, the user receives emails related to WDC feedback, goals, and coaching. The user must also sign up for individual emails listed on the WDC email settings page. When `true`, the user doesn't receive any emails related to WDC feedback, goals, or coaching even if they're signed up for individual emails.
UserPreferencesDisProfPostCommentEmail	**Type** boolean **Properties** Create, Filter, Update **Description** When `false`, the user automatically receives email every time someone comments on posts on the user's profile. This field is available in API version 24.0 and later.
UserPreferencesEmailVerified	**Type** boolean **Properties** Update

Field	Details
	Description Indicates whether a user's email address is verified (`true`) or unverified (`false`).
UserPreferencesEnableVoiceCallRecording	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, voice call recording is enabled for the user.
UserPreferencesEnableVoiceLocalPresence	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, local numbers are shown when the user calls customers with Sales Dialer.
UserPreferencesEventRemindersCheckboxDefault	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, a reminder popup is automatically set on the user's events. Corresponds to the `By default, set reminder on Events to...` checkbox on the Reminders page in the user interface. This field is related to UserPreference and customizing activity reminders.
UserPreferencesHideBiggerPhotoCallout	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, users can choose to hide the callout text below the large profile photo.
UserPreferencesHideChatterOnboardingSplash	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, the initial Chatter onboarding prompts don’t appear.

Field	Details
UserPreferencesHideCSNDesktopTask	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, the Chatter recommendations panel never displays the recommendation to install Chatter Desktop. This field is available in API version 26.0 and later.
UserPreferencesHideCSNGetChatterMobileTask	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, the Chatter recommendations panel never displays the recommendation to install Chatter Mobile. This field is available in API version 26.0 and later.
UserPreferencesHideEndUserOnboardingAssistantModal	**Type** boolean **Properties** Create, Filter, Update **Description** Reserved for future use.
UserPreferencesHideLightningMigrationModal	**Type** boolean **Properties** Create, Filter, Update **Description** Reserved for future use.
UserPreferencesHideSecondChatterOnboardingSplash	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, the secondary Chatter onboarding prompts don't appear.
UserPreferencesHideS1BrowserUI	**Type** boolean **Properties** Create, Filter, Update

Field	Details
	Description Controls the interface that the user sees when logging in to Salesforce from a supported mobile browser. If `false`, the user is automatically redirected to the Salesforce mobile web. If `true`, the user sees the full Salesforce site. The default value is `false`. Label is **Salesforce User**. This field is available in API version 29.0 or later.
UserPreferencesHideSfxWelcomeMat	**Type** boolean **Properties** Create, Filter, Update **Description** Controls whether a user sees the Lightning Experience new user message. That message welcomes users to the new interface and provides step-by-step instructions that describe how to return to Salesforce Classic.
UserPreferencesJigsawListUser	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, the user is a Data.com List user so shares record additions from a pool. UserPermissionsJigsawProspectingUser must also be set to `true`. Label is **Data.com List User**. This field is available in API version 27.0 and later.
UserPreferencesLightningExperiencePreferred	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, redirects the user to the Lightning Experience interface. Label is **Switch to Lightning Experience**. This field is available in API version 35.0 and later.
UserPreferencesLiveAgentMiawSetupDeflection	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, disables the pop-up to deflect users on Chat setup nodes to the Messaging setup. The default value is `false`. This field is available in API version 59.0 and later.

Field	Details
UserPreferencesNativeEmailClient	**Type** boolean **Properties** Create, Filter, Update **Description** Use this field to set a default email preference for the user's native email client. This field is available in API version 47.0 and later. The default value is `false`, corresponding to the Salesforce docked email composer.
UserPreferencesOptOutOfTouch	**Type** boolean **Properties** Create, Filter, Update **Description** This field is deprecated in API version 29.0. When `false`, the user automatically accesses the Salesforce Touch app when logging in to Salesforce from an iPad. If `true`, automatic access to the Salesforce Touch app is turned off and the user's iPad is directed to the full Salesforce site instead. The default value is `false`. Note: Salesforce Touch must be enabled before this field is visible.
UserPreferencesOutboundBridge	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, outbound calls are made through the user's phone.
UserPreferencesPathAssistantCollapsed	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, Sales Path appears collapsed or hidden to the user. This field is available in API version 35.0 and later.
UserPreferencesProcessAssistantCollapsed	**Type** boolean **Properties** Create, Filter, Update

Field	Details

Description

When `true`, Sales Path appears collapsed or hidden to the user. This field is available in API versions 33.0 and 34.0 only. In API versions 35.0 and later, use `UserPreferencesPathAssistantCollapsed`.

UserPreferencesReceiveNoNotificationsAsApprover

Type

boolean

Properties

Create, Filter, Update

Description

Controls email notifications from the approval process for *approvers*.

- If `true`, emails are *disabled*.
- If `false`, emails are *enabled*.

The default value is `false`.

> Note: The `Receive Approval Request Emails` setting in the UI controls this field and the `UserPreferencesReceiveNotificationsAsDelegatedApprover` field.
>
> - Setting: **If I'm an approver or delegated approver**
>
>   Result:
>   - UserPreferencesReceiveNoNotificationsAsApprover = false
>   - UserPreferencesReceiveNotificationsAsDelegatedApprover = true
> - Setting: **Only if I'm an approver**
>
>   Result:
>   - UserPreferencesReceiveNoNotificationsAsApprover = false
>   - UserPreferencesReceiveNotificationsAsDelegatedApprover = false
> - Setting: **Only if I'm a delegated approver**
>
>   Result:
>   - UserPreferencesReceiveNoNotificationsAsApprover = true
>   - UserPreferencesReceiveNotificationsAsDelegatedApprover = true
> - Setting: **Never**
>
>   Result:
>   - UserPreferencesReceiveNoNotificationsAsApprover = true
>   - UserPreferencesReceiveNotificationsAsDelegatedApprover = false

---

UserPreferencesReceiveNotificationsAsDelegatedApprover

Type

boolean

Field	Details
	Properties Create, Filter, Update **Description** Controls email notifications from the approval process for *delegated approvers*. • If `true`, emails are *enabled*. • If `false`, emails are *disabled*. The default value is `false`. Note: The `Receive Approval Request Emails` setting in the UI controls this field and the `UserPreferencesReceiveNoNotificationsAsApprover` field. • Setting: **If I'm an approver or delegated approver** Result: – UserPreferencesReceiveNoNotificationsAsApprover = false – UserPreferencesReceiveNotificationsAsDelegatedApprover = true • Setting: **Only if I'm an approver** Result: – UserPreferencesReceiveNoNotificationsAsApprover = false – UserPreferencesReceiveNotificationsAsDelegatedApprover = false • Setting: **Only if I'm a delegated approver** Result: – UserPreferencesReceiveNoNotificationsAsApprover = true – UserPreferencesReceiveNotificationsAsDelegatedApprover = true • Setting: **Never** Result: – UserPreferencesReceiveNoNotificationsAsApprover = true – UserPreferencesReceiveNotificationsAsDelegatedApprover = false
UserPreferencesReminderSoundOff	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, a sound automatically plays when an activity reminder is due. Corresponds to the `Play a reminder sound` checkbox on the Reminders page in the user interface.
UserPreferencesShowCityToExternalUsers	**Type** boolean

Field	Details
	Properties Create, Filter, Update **Description** Indicates the visibility of the city field in the user's contact information. City is visible only to internal members of the user's organization when: • This field is `false`. When `false`, this field returns the value `#N/A`. City is visible to external members in an Experience Cloud site when: • This field is `true`, or • This field is `false` but `UserPreferencesShowCityToGuestUsers` is `true`, which overrides this field's value. External users are users with Community, Customer Portal, or partner portal licenses. The default value is `false`. This field is available in API version 26.0 and later.
UserPreferencesShowCityToGuestUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the city field in the user's contact information. When `true`, city is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `false`, this field returns the value `#N/A`. When `true`, this field overrides the value `false` in `UserPreferencesShowCityToExternalUsers`, making the user's city visible to external members. The default value is `false`. This field is available in API version 28.0 and later.
UserPreferencesShowCountryToExternalUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the country field in the user's contact information. Country is visible only to internal members of the user's organization when: • This field is `false`. When `false`, this field returns the value `#N/A`. Country is visible to external members in an Experience Cloud site when: • This field is `true`, or • This field is `false` but `UserPreferencesShowCountryToGuestUsers` is `true`, which overrides this field's value. External users are users with Community, Customer Portal, or partner portal licenses.

Field	Details
	The default value is `false`. This field is available in API version 26.0 and later.
UserPreferencesShowCountryToGuestUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the country field in the user's contact information. When `true`, country is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `false`, this field returns the value `#N/A`. When `true`, this field overrides the value `false` in `UserPreferencesShowCountryToExternalUsers`, making the user's country visible to external members. The default value is `false`. This field is available in API version 28.0 and later.
UserPreferencesShowEmailToExternalUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the email address field in the user's contact information. Email address is visible only to internal members of the user's organization when this field is `false`. Email address is visible to external members in an Experience Cloud site when this field is `true`. External users are users with Community, Customer Portal, or partner portal licenses. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 26.0 and later.
UserPreferencesShowEmailToGuestUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the email address field in the user's contact information. When `true`, the email address is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `true`, this field overrides the value `false` in `UserPreferencesShowEmailToExternalUsers`, making the user's email address visible to guests. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 34.0 and later.

Field	Details
UserPreferencesShowFaxToExternalUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the fax number field in the user’s contact information. Fax number is visible only to internal members of the user’s organization when this field is `false`. Fax number is visible to external members in an Experience Cloud site when this field is `true`. External users are users with Community, Customer Portal, or partner portal licenses. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 26.0 and later.
UserPreferencesShowFaxToGuestUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the fax number field in the user’s contact information. When `true`, the fax number field is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `true`, this field overrides the value `false` in `UserPreferencesShowFaxToExternalUsers`, making the user’s fax number visible to guests. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 34.0 and later.
UserPreferencesShowManagerToExternalUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the manager field in the user’s contact information. Manager is visible only to internal members of the user’s organization when this field is `false`. Manager is visible to external members in an Experience Cloud site when this field is `true`. External users are users with Community, Customer Portal, or partner portal licenses. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 26.0 and later.
UserPreferencesShowManagerToGuestUsers	**Type** boolean

Field	Details
	Properties Create, Filter, Update **Description** Indicates the visibility of the manager field in the user's contact information. When `true`, the manager field is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `true`, this field overrides the value `false` in `UserPreferencesShowManagerToExternalUsers`, making the user's manager visible to guests. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 34.0 and later.
UserPreferencesShowMobilePhoneToExternalUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the mobile device number field in the user's contact information. The number is visible only to internal members of the user's organization when this field is `false`. The number is visible to external members in an Experience Cloud site when this field is `true`. External users are users with Community, Customer Portal, or partner portal licenses. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 26.0 and later.
UserPreferencesShowMobilePhoneToGuestUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the mobile phone field in the user's contact information. When `true`, the mobile phone field is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `true`, this field overrides the value `false` in `UserPreferencesShowMobilePhoneToExternalUsers`, making the user's mobile phone visible to guests. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 34.0 and later.
UserPreferencesShowPostalCodeToExternalUsers	**Type** boolean

Field	Details
	Properties Create, Filter, Update **Description** Indicates the visibility of the postal or ZIP code field in the user's contact information. Postal code is visible only to internal members of the user's organization when: • This field is `false`. When `false`, this field returns the value `#N/A`. Postal code is visible to external members in an Experience Cloud site when: • This field is `true`, or • This field is `false` but `UserPreferencesShowPostalCodeToGuestUsers` is `true`, which overrides this field's value. External users are users with Community, Customer Portal, or partner portal licenses. The default value is `false`. This field is available in API version 26.0 and later.
UserPreferencesShowPostalCodeToGuestUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the postal or ZIP code field in the user's contact information. When `true`, postal code is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `false`, this field returns the value `#N/A`. When `true`, this field overrides the value `false` in `UserPreferencesShowPostalCodeToExternalUsers`, making the user's postal code visible to external members. The default value is `false`. This field is available in API version 28.0 and later.
UserPreferencesShowProfilePicToGuestUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the user's profile photo. When `true`, the photo is visible to guest users in an Experience Cloud site. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `false`, this field returns the stock photo. The default value is `false`. This field is available in API version 28.0 and later.
UserPreferencesShowStateToExternalUsers	**Type** boolean

Field	Details
	Properties Create, Filter, Update **Description** Indicates the visibility of the state field in the user's contact information. State is visible only to internal members of the user's organization when: • This field is `false`. When `false`, this field returns the value `#N/A`. State is visible to external members in an Experience Cloud site when: • This field is `true`, or • This field is `false` but `UserPreferencesShowStateToGuestUsers` is `true`, which overrides this field's value. External users are users with Community, Customer Portal, or partner portal licenses. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 26.0 and later.
UserPreferencesShowStateToGuestUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the state field in the user's contact information. When `true`, state is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `false`, this field returns the value `#N/A`. When `true`, this field overrides the value `false` in UserPreferencesShowStateToExternalUsers, making the user's state visible to external members. The default value is `false`. This field is available in API version 28.0 and later.
UserPreferencesShowStreetAddressToExternalUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the street address field in the user's contact information. The address is visible only to internal members of the user's organization when this field is `false`. The address is visible to external members in an Experience Cloud site when this field is `true`. External users are users with Community, Customer Portal, or partner portal licenses. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 26.0 and later.

Field	Details
UserPreferencesShowStreetAddressToGuestUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the street address field in the user's contact information. When `true`, the street address field is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `true`, this field overrides the value `false` in `UserPreferencesShowStreetAddressToExternalUsers`, making the user's street address visible to guests. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 34.0 and later.
UserPreferencesShowTitleToExternalUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the business title field in the user's contact information. Title is visible only to internal members of the user's organization when: • This field is `false`. When `false`, this field returns the value `#N/A`. Title is visible to external members in an Experience Cloud site when: • This field is `true`, or • This field is `false` but `UserPreferencesShowTitleToGuestUsers` is `true`, which overrides this field's value. External users are users with Community, Customer Portal, or partner portal licenses. The default value is `true`. This field is available in API version 26.0 and later.
UserPreferencesShowTitleToGuestUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the business title field in the user's contact information. When `true`, title is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `false`, this field returns the value `#N/A`. When `true`, this field overrides the value `false` in UserPreferencesShowTitleToExternalUsers, making the user's title visible to external members.

Field	Details
	The default value is `false`. This field is available in API version 28.0 and later.
UserPreferencesShowWorkPhoneToExternalUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the work phone number field in the user's contact information. The number is visible only to internal members of the user's organization when this field is `false`. The number is visible to external members in an Experience Cloud site when this field is `true`. External users are users with Community, Customer Portal, or partner portal licenses. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 26.0 and later.
UserPreferencesShowWorkPhoneToGuestUsers	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates the visibility of the work phone field in the user's contact information. When `true`, the work phone field is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `true`, this field overrides the value `false` in `UserPreferencesShowWorkPhoneToExternalUsers`, making the user's work phone visible to guests. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 34.0 and later.
UserPreferencesSortFeedByComment	**Type** boolean **Properties** Create, Filter, Update **Description** Specifies the data value used in sorting a user's feed. When `true`, the feed is sorted by most recent comment activity. When `false`, the feed is sorted by post date.
UserPreferencesSuppressEventSFXReminders	**Type** boolean **Properties** Create, Filter, Update

Field	Details
	Description When `true`, event reminders don't appear. Corresponds to the **Show event reminders in Lightning Experience** checkbox on the Activity Reminders page in the user interface. This field is related to UserPreference and customizing activity reminders.
UserPreferencesSuppressTaskSFXReminders	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, task reminders don't appear. Corresponds to the **Show task reminders in Lightning Experience**. checkbox on the Activity Reminders page in the user interface. This field is related to UserPreference and customizing activity reminders.
UserPreferencesTaskRemindersCheckboxDefault	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, a reminder popup is automatically set on the user's tasks. Corresponds to the `By default, set reminder on Tasks to...` checkbox on the Reminders page in the user interface. This field is related to UserPreference and customizing activity reminders.
UserPreferencesUserDebugModePref	**Type** boolean **Properties** Create, Filter, Update **Description** When `true`, the Lightning Component framework executes in debug mode for the user. Corresponds to the `Debug Mode` checkbox on the Advanced User Details page of personal settings in the user interface.
UserRoleId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the user's UserRole. Label is **Role ID**. This is a relationship field. **Relationship Name** UserRole

Field	Details
	Relationship Type Lookup **Refers To** UserRole
`UserType`	**Type** picklist **Properties** Filter, Group, Nillable, Sort, Restricted picklist **Description** The category of user license. Each `UserType` is associated with one or more UserLicense records. Each UserLicense is associated with one or more profiles. In API version 10.0 and later, valid values include: • Standard: user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses. Label is **Standard**. • PowerPartner: User whose access is limited because they're a partner and typically access the application through a partner portal or Experience Cloud site. Label is **Partner**. • CspLitePortal: user whose access is limited because they're an org's customer and access the application through a Customer Portal or Experience Cloud site. Label is **High Volume Portal**. • CustomerSuccess: user whose access is limited because they're an org's customer and access the application through a Customer Portal. Label is **Customer Portal User**. • PowerCustomerSuccess: user whose access is limited because they're an org's customer and access the application through a Customer Portal. Label is **Customer Portal Manager**. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the Customer Portal role hierarchy. • CsnOnly: user whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. Label is **Chatter Free**. • Guest: user whose access is limited because they're an unauthenticated user without login credentials. Label is **Guest**.
`WirelessEmail`	**Type** email **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Wireless email address associated with this user. For use with Salesforce Wireless Edition. This field is available only if the Wireless and Email permissions are enabled for your organization.

Field	Details
	Note: As of November 2005, Salesforce Wireless Edition is no longer available for purchase. You can continue to use Wireless Edition through the end of your existing contract term if you are: • A Professional Edition customer and purchased Wireless Edition before November 7, 2005. • An Enterprise Edition customer who signed or renewed their Salesforce contract before November 7, 2005.

Usage

Use this object to query information about users and to provision and modify users in your organization. Unlike other objects, the records in the User table represent actual users—not data owned by users. Any user can query or describe User records.

For example, the following SOQL code finds users with a particular user role.

```
SELECT Id, Username
FROM User
WHERE UserRoleId='00ED0000000xicT'
```

Each portal user is associated with a portal account. A portal account can have a maximum of three portal roles (Executive, Manager, and User). You can select the default number of roles to be created from the user interface. The role hierarchy is maintained when you insert and delete portal roles, and roles are created bottom-up. Deleting the User role causes the Manager role to be renamed to User role. Deleting both the Executive and User roles causes the Manager role to be renamed to User role. Before deleting a role, you must assign users under that role to another role.

Deactivate Users

You can't delete a user in the user interface or the API. You can deactivate a user in the user interface; and you can deactivate or disable a Customer Portal or partner portal user in the user interface or the API. Because users can never be deleted, we recommend that you exercise caution when creating them.

Be aware of the expected behaviors when deactivating users. See Considerations for Deactivating Users. The user interface provides options to auto-remove a user from teams, but the removal isn't supported in API.

If you deactivate a user, any EntitySubscription where the user is associated with the ParentId or SubscriberId field, meaning all subscriptions both to and from the user, are soft deleted. If the user is reactivated, the subscriptions are restored. However, if you deactivate multiple users at once and these users follow each other, their subscriptions are hard deleted. In this case, the user-to-user EntitySubscription is deleted twice (double deleted). Such subscriptions can't be restored upon user reactivation.

Passwords

For security reasons, you can't query User passwords via the API or the user interface. But the API allows you to set and reset User passwords using the `setPassword()` and `resetPassword()` calls. The password lockout status and the ability to reset the User locked-out status isn't available via the API. Check and reset the User password lockout status using the user interface.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

UserChangeEvent (API version 44.0)
: Change events are available for the object.

UserFeed (API version 18.0)
: Feed tracking is available for the object.

UserShare
: Sharing is available for the object.

SEE ALSO:

SOAP API Developer Guide: Frequently-Occurring Fields

UserRole

UserLicense

UserAccessChange (Beta)

Represents a change related to user access. This object is available in API version 57.0 and later.

UserAccessChange records are created through different access-related operations. For example, being assigned to or removed from a permission set.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To access UserAccessChange records, users must have the View Setup and Configuration permission.

Note: This feature is a Beta Service. Customer may opt to try such Beta Service in its sole discretion. Any use of the Beta Service is subject to the applicable Beta Services Terms provided at Agreements and Terms.

Fields

Field	Details
`Source`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The source of the user access change. For example, `UserAccessPolicyId`.

UserAccessPolicy (Beta)

Represents a user access policy. This object is available in API version 57.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To create or modify user access policies, users must have the Manage User Access Policies permission.

Note: This feature is a Beta Service. Customer may opt to try such Beta Service in its sole discretion. Any use of the Beta Service is subject to the applicable Beta Services Terms provided at Agreements and Terms.

Fields

Field	Details
`BooleanFilter`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The logic that determines how your user criteria filters are applied in the user access policy.
`Description`	**Type** textarea **Properties** Filter, Group, Nillable, Sort **Description** Description of the user access policy.
`DeveloperName`	**Type** string **Properties** Filter, Group, Sort **Description** The unique name for the user access policy.
`Language`	**Type** picklist

Field	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort **Description** The language of the user access policy.
MasterLabel	**Type** string **Properties** Filter, Group, Sort **Description** Label for the user access policy. In the UI, this field is Label.
NamespacePrefix	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix associated with this object. Each Developer Edition organization that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. The namespace prefix can have one of the following values: • In Developer Edition organizations, the namespace prefix is set to the namespace prefix of the organization for all objects that support it. There is an exception if an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition organization of the package developer. • In organizations that are not Developer Edition organizations, NamespacePrefix is only set for objects that are part of an installed managed package. There is no namespace prefix for all other objects.
Status	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The status of the user access policy. Possible values are: • Active • Completed • Design

Field	Details
	• `Failed` • `Migrate` • `Testing` • `Updating` The default value is `Design`.
`TriggerType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of user record trigger for which this user access policy runs. Possible values are: • `Create`—The user access policy runs when a user who matches the policy criteria is created. • `CreateAndUpdate`—The user access policy runs when a user who matches the policy criteria is either created or updated. • `Update`—The user access policy runs when a user who matches the policy criteria is updated.

Usage

For more information, see User Access Policies (Beta) in Salesforce Help.

UserAccountTeamMember

Represents a User on the default account team of another User.

See also OpportunityTeamMember, which represents a User on the opportunity team of an Opportunity

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal and Chatter Free users can't access this object.

Fields

Field	Details
`AccountAccessLevel`	**Type** picklist **Properties** Create, Filter, Restricted picklist, Update **Description** Required. For Account records that the user has added to his or her default account team, the level of access the account team member has. . The possible values are: • `Read` • `Edit` This field must be set to an access level that is higher than the organization’s default access level for accounts.
`CaseAccessLevel`	**Type** picklist **Properties** Create, Filter, Restricted picklist, Update **Description** Required. Level of access that the account team member has to Case records related to the account. The possible values are: • `None` • `Read` • `Edit` This field must be set to an access level that is higher than the organization's default access level for cases.
`ContactAccessLevel`	**Type** picklist **Properties** Create, Filter, Restricted picklist, Update **Description** Required. ForContact records related to the account, the level of access that the account team member has. The possible values are: • `None` • `Read` • `Edit` This field must be set to an access level that is higher than the organization's default access level for contacts.

Field	Details
	Note: When `DefaultContactAccess` is set to `Controlled by Parent`, you can't create or update this field.
`OpportunityAccessLevel`	**Type** picklist **Properties** Create, Filter, Restricted picklist, Update **Description** Required. Level of access that the team member has to Opportunity records related to the account. The possible values are: • `None` • `Read` • `Edit` This field must be set to an access level that is higher than the organization's default access level for opportunities.
`OwnerId`	**Type** reference **Properties** Create, Filter **Description** Required. ID of the User who owns the default account team.
`TeamMemberRole`	**Type** picklist **Properties** Create, Filter, Nillable, Update **Description** Role that the team member has on opportunities for which the user has added his or her default account team. The valid values are set by the organization's administrator in the Account Team Roles picklist. Label is **Team Role**.
`UserId`	**Type** reference **Properties** Create, Filter **Description** Required. ID of the User who is a member of the default account team. This field cannot be updated.

Usage

This object is available only in organizations that have enabled the account teams functionality, which can be done using the user interface.

If you attempt to create a record that matches an existing record, the create call updates any modified fields and returns the existing record.

You can set up a User record so the default account team includes the others who typically work with them on accounts.

UserAppInfo

Stores the last Lightning app logged in to. If the user hasn't logged into Salesforce or if the user lost access to the last accessed app, the UserAppInfo object stores a Null value. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`AppDefinitionId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the last Lightning app that the user logged in to. This field is available in API version 43.0 and later. This is a relationship field. **Relationship Name** AppDefinition **Relationship Type** Lookup **Refers To** AppDefinition
`FormFactor`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The relative size of the app as displayed. Values are:

Field Name	Details
	• Small—suitable for a small device like a mobile phone • Medium—suitable for a tablet • Large—suitable for a large display device, like a monitor It's possible to have three versions of the app as the one last logged in to, where each version has a different form factor.
`UserId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the user that used this app. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

UserAppMenuCustomization

Represents an individual user's settings for items in the app menu or App Launcher. This object is available in API version 35.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`ApplicationId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The 15-character ID for the application associated with the menu item.

Field Name	Details
	This is a relationship field. **Relationship Name** Application **Relationship Type** Lookup **Refers To** ConnectedApplication
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user for these specific settings. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`SortOrder`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The index value that controls where this item appears in the menu. For example, a menu item with a sort order value of 5 will appear between items with sort order values of 3 and 9.

Usage

See the AppMenuItem object for the organization-wide default settings This object contains the fields representing any changes the user made to the menu.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

UserAppMenuCustomizationOwnerSharingRule
Sharing rules are available for the object.

UserAppMenuCustomizationShare
Sharing is available for the object.

UserAppMenuItem

Represents the organization-wide settings for items in the app menu or App Launcher that the requesting user has access to in Setup. This object is available in API version 35.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `search()`

Fields

Field Name	Details
`AppMenuItemId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The 15-character ID for the menu item.
`ApplicationId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The 15-character ID for the application associated with the menu item.
`Description`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** A description of this menu item.
`IconUrl`	**Type** url

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** The icon for the menu item's application.
`InfoUrl`	**Type** url **Properties** Filter, Group, Nillable, Sort **Description** The URL for more information about the application.
`IsUsingAdminAuthorization`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, the app is pre-authorized for certain users by the administrator.
`IsVisible`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, the app is visible to the user.
`Label`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The app's name.
`LogoUrl`	**Type** url **Properties** Filter, Group, Nillable, Sort **Description** The logo for the menu item's application. The default is the initials of the `Label` value.

Field Name	Details
MobileStartUrl	**Type** url **Properties** Filter, Group, Nillable, Sort **Description** The location mobile users are directed to after they've authenticated. This is only used with connected apps.
Name	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The API name of the item.
SortOrder	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The index value that controls where this item appears in the menu. For example, a menu item with a sort order value of 5 will appear between items with sort order values of 3 and 9.
StartUrl	**Type** url **Properties** Filter, Group, Nillable, Sort **Description** The location users are directed to after they've authenticated. For a connected app, this is the location specified by the `StartUrl`. Otherwise it's the application's default start page.
Type	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of application represented by this item. The types are: • ConnectedApplication

Field Name	Details
	• Network • ServiceProvider • TabSet
`UserSortOrder`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The index value that represents where the user set this item in the menu (or App Launcher). For example, an item with a sort order value of 5 will appear between items with sort order values of 3 and 9. This value is separate from SortOrder so you can create logic incorporating both values. For example, if you want the user-sorted items to appear first, followed by the organization order for the rest, use: `SELECT ApplicationId,SortOrder,UserSortOrder FROM AppMenuItem order by userSortOrder NULLS LAST, sortOrder NULLS LAST`

Usage

See the AppMenuItem object for the organization-wide default settings This object contains the fields the requesting user has permission to see.

UserAuthCertificate

Represents a user authentication certificate in your org. A user certificate is a unique PEM-encoded X.509 digital certificate to authenticate individual users to your org. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is only available in orgs with `Let users authenticate with a certificate` enabled in Identity Verification. Only users with the Manage Internal Users permission can access this object.

Fields

Field	Details
`CertificateChain`	**Type** base64 **Properties** Create, Update **Description** The uploaded PEM files can contain a single certificate or up to 10 certificates in a certificate chain. Uploaded PEM files can’t be larger than 1 MB.
`CertificateChainLength`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The auto-generated length of the certificate or certificate chain in the uploaded PEM file.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, Salesforce generates one for each record, which slows performance. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`ExpirationDate`	**Type** dateTime **Properties** Filter, Sort **Description** The expiration date of the uploaded certificate.
`Fingerprint`	**Type** string **Properties** Filter. Group, idLookup, Sort

Field	Details
	Description The unique fingerprint of the uploaded certificate.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language in which to display the certificate. Possible values are: • `da` (Danish) • `de` (German) • `en_US` (English) • `es` (Spanish) • `es_MX` (Spanish - Mexico) • `fi` (Finnish) • `fr` (French) • `it` (Italian) • `ja` (Japanese) • `ko` (Korean) • `nl_NL` (Dutch) • `no` (Norwegian) • `pt_BR` (Portuguese - Brazil) • `ru` (Russian) • `sv` (Swedish) • `th` (Thai) • `zh_CN` (Chinese - Simplified) • `zh_TW` (Chinese - Traditional)
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** A descriptive name for the certificate.
SerialNumber	**Type** string **Properties** Filter, Group, Sort

Field	Details
	Description The serial number of the uploaded certificate.
`UserID`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The user associated with the certificate.

UserConfigTransferButton

Represents the association between a Chat configuration and a live chat button. This association allows users associated with a specific configuration to transfer chats to a button queue.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field Name	Details
`LiveChatButtonId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the live chat button that agents can transfer chats to.
`LiveChatUserConfigId`	**Type** reference **Properties** Create, Filter, Group, Sort

Field Name	Details
	Description The ID of the Chat configuration; agents associated with this configuration can transfer chats to the chat button indicated by the `LiveChatButtonId`.

UserConfigTransferSkill

Represents the association between a Chat configuration and a skill. This association allows users associated with a specific configuration to transfer chats to agents who have that skill.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
`LiveChatUserConfigId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the Chat configuration; agents associated with this configuration can transfer chats to the chat button indicated by the `LiveChatButtonId`.
`SkillId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the skill group that agents can transfer chats to.

UserCustomBadge

Represents a custom badge for a user. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
BadgeType	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of badge. Valid values are: • Customer • Partner • Employee
CustomText	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Custom text for the badge.
ParentId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the Experience Cloud site or org that the badge is in.

UserCustomBadgeLocalization

Represents the translated version of a custom badge for a user. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

- Translation Workbench must be enabled for your org.
- Users with the “Customize Application” or “Manage Translation” permission can create or update UserCustomBadge translations.

Fields

Field Name	Details
`Language`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The language the UserCustomBadge is translated into. This picklist contains these fully supported languages. • Chinese (Simplified): `zh_CN` • Chinese (Traditional): `zh_TW` • Danish: `da` • Dutch: `nl_NL` • English: `en_US` • Finnish: `fi` • French: `fr` • German: `de` • Italian: `it` • Japanese: `ja` • Korean: `ko` • Norwegian: `no` • Portuguese (Brazil): `pt_BR` • Russian: `ru` • Spanish: `es` • Spanish (Mexico): `es_MX` Spanish (Mexico) defaults to Spanish for customer-defined translations. • Swedish: `sv` • Thai: `th` The Salesforce user interface is fully translated to Thai, but Help is in English.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. The namespace prefix can have one of the following values.

Field Name	Details
	• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the UserCustomBadge.
`Value`	**Type** string **Properties** Create, Filter, Sort, Update **Description** The translated text for the UserCustomBadge. Label is **Translation Text**.

UserDailyMetric

Represents the daily engagement metrics for a user. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Sales Engagement must be enabled.

Fields

Field	Details
`AllCallsCallBackLater`	**Type** int

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The number of calls in the day for this user with the call result Call Back Later.
`AllCallsLeftVoicemail`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the day for this user with the call result Left Voicemail.
`AllCallsMeaningfulConnect`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the day for this user with the call result Meaningful Connect.
`AllCallsNotInterested`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the day for this user with the call result Not Interested.
`AllCallsUncategorized`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the day for this user with no call result specified.
`AllCallsUnqualified`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the day for this user with the call result Unqualified.
`AllEmailsBouncedCount`	**Type** int

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The total of hard and soft bounced emails for this user in the day. This is a calculated field.
`AllEmailsDeliveredCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of successfully delivered emails for this user in the day. This is a calculated field.
`AllEmailsHardBouncedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of hard bounced emails for this user in the day.
`AllEmailsOutOfOfficeCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails that triggered an out of office reply for this user in the day.
`AllEmailsSentCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent by this user in the day. This is a calculated field.
`AllEmailsSoftBouncedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The number of emails soft bounced for this user in the day.
AllEmailsTrackedSentCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent by this user with engagement tracking enabled in the day.
AllEmailsUntrackedSentCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent by this user without engagement tracking enabled in the day.
AllTotalCallsCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of calls by this user with all call results in the day. This is a calculated field.
DailyCutOffTimeStamp	**Type** dateTime **Properties** Filter, Sort **Description** The time of day when each 24 hour metrics period starts and ends.
Date	**Type** date **Properties** Filter, Group, Sort **Description** The date on which the engagement occurred.
DateInt	**Type** int

Field	Details
	Properties Filter, Group, idLookup, Sort **Description** The date on which the engagement occurred, in yyyymmdd format.
`IsLocked`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the daily metric record is locked or not. The default value is 'false'.
`MayEdit`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the daily metric record can be edited or not. The default value is 'false'.
`UniqueEmailsLinkClickedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of unique recipients who clicked a link in an email sent by the user on the day.
`UniqueEmailsOpenedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of unique recipients who opened an email sent by the user on the day.
`UniqueEmailsRepliedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of unique recipients who replied to an email sent by the user on the day.

Field	Details
UserId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the related user. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

UserDailyMetricOwnerSharingRule
Sharing rules are available for the object.

UserDailyMetricShare **on page 50**
Sharing is available for the object.

UserDailyMetricOwnerSharingRule

Represents the rules for sharing the user daily metric with users other than the owner.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The SharingRules Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Sales Engagement must be enabled.

Fields

Field	Details
`AccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Determines the level of access users have to records. Values are: • `Read` (read only) • `Edit` (read/write)
`Description`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Description of the sharing rule. Maximum length is 1000 characters.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
`GroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the source group. Records that are owned by users in the source group trigger the rule to give access.

Field	Details
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Label of the sharing rule as it appears in the UI. Maximum length is 80 characters.
UserOrGroupId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the user or group that you are granting access to.

Usage

Use this object to manage the sharing rules for cases. General sharing and territory management-related sharing use this object.

Metadata API Developer Guide: SharingRules

UserDevice

Represents information unique to a device. Available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

You must have View Devices enabled to see devices.

Fields

Field Name	Details
BrowserType	**Type** string

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** The browser used for login.
`DeviceNativeUid`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** A unique string used to identify a mobile device.
`DeviceType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The device used to log in to Salesforce. The picklist options are: • `Desktop` • `Tablet` • `iPad` • `iPhone` • `Phone` • `Unknown`
`IsVerified`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Reserved for future use.
`LastLoginHistoryId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The most recent LoginHistory associated with the device.
`Name`	**Type** string

Field Name	Details
	Properties Filter, Group, idLookup, Sort **Description** This field is system-generated and can't be changed.
`PlatformType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The operating system of the device. The picklist options are: • iOS • Android • OSX • Linux • Phone • Windows • AppleApp • Blackberry • Other
`PlatformVersion`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The version of the operating system running on the device.
`Status`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The activity status of the device. The picklist options are: • Approved • Pending Approval • Revoked
`UserId`	**Type** reference

Field Name	Details
	Properties Filter, Group, Sort **Description** The ID of the user.
`UserLastSeen`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time of the user's last access.
`UserProvidedDeviceIdentifier`	**Type** string **Properties** Filter, Group, Nillable, Sort, Update **Description** An identifier for the user's device such as the International Mobile Equipment Identity (IMEI) number or the device serial number. Note: This field isn't automatically populated. The developer must provide values.

UserDeviceApplication

Represents information on applications installed on a device that is accessing Salesforce. Available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

You must have View Devices enabled to see devices.

Fields

Field Name	Details
`ApplicationType`	**Type** string

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** The type of application used to log in to Salesforce.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** This field is system-generated and cannot be changed.
`Status`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The activity status of the device application. The picklist options are: • Approved • Pending Approval • Revoked
`UserDeviceId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The unique identifier used to identify a device when tracking events. `UserDeviceId` is a generated value that's created when the mobile app is initially run after installation.
`UserId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the user.

UserDeviceHistory

Represents tracking information on the UserDevice sObject. This object is available in API version 50.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Fields

Field	Details
`DataType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of data that has changed. Possible values are: • `Address` • `AnyType` • `AutoNumber` • `Base64` • `BitVector` • `Boolean` • `Content` • `Currency` • `DataCategoryGroupReference` • `DateOnly` • `DateTime` • `Division` • `Double` • `DynamicEnum` • `Email` • `EncryptedBase64` • `EncryptedText` • `EntityId` • `EnumOrId` • `ExternalId` • `Fax`

Field	Details
	• `File` • `HtmlMultiLineText` • `HtmlStringPlusClob` • `InetAddress` • `Json` • `Location` • `MultiEnum` • `MultiLineText` • `Namespace` • `Percent` • `PersonName` • `Phone` • `Raw` • `RecordType` • `SfdcEncryptedText` • `SimpleNamespace` • `StringPlusClob` • `Switchable_PersonName` • `Text` • `TimeOnly` • `Url` • `YearQuarter`
`Field`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The field that has changed. Possible values are: • `BrowserType`—Browser • `DeviceNativeUid`—Device Native ID • `DeviceType`—Device Type • `HashedBrowserFingerPrint`—Hashed Browser Fingerprint • `IsVerified`—Is Device Verified • `LastLoginHistory`—Login History • `Name` • `PlatformType`—Platform or OS Type

Field	Details
	• `PlatformVersion`—Platform or OS Version • `RawBrowserFingerPrint`—Raw Browser Fingerprint Data • `Status`—Device Status • `User` • `UserLastSeen`—Last time user was seen • `UserProvidedDeviceIdentifier`—User provided device identifier • `created`—Created. • `feedEvent`—Feed event • `individualMerged`—Individual Merged • `locked`—Record locked. • `ownerAccepted`—Owner (Accepted) • `ownerAssignment`—Owner (Assignment) • `unlocked`—Record unlocked.
`NewValue`	**Type** anyType **Properties** Nillable, Sort **Description** The value after a change has occurred.
`OldValue`	**Type** anyType **Properties** Nillable, Sort **Description** The value before a change has occurred.
`UserDeviceId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the UserDevice object.

UserEmailCalendarSync

Represents the user assignments of an Einstein Activity Capture configuration. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `update()`, `upsert()`

Special Access Rules

To access this object, enable Einstein Activity Capture in your org.

Fields

Field	Details
`AssignedId`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the user or profile. Only Einstein Activity users can be added to a configuration.
`ConfigurationId`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the Einstein Activity Capture configuration. The configuration is created in Salesforce Setup. After the configuration is created, the autogenerated ID is visible on the Configurations tab. From Setup, in the Quick Find box, enter *`Einstein Activity Capture`*, and then select **Settings**. Click the Configurations tab.

Usage

Use UserEmailCalendarSync to add and remove users to an Einstein Activity Capture configuration. You can add users to a configuration via a user ID or a profile ID. You can add a profile to only one configuration and assign a profile to only one user.

This example adds two users to an Einstein Activity Capture configuration.

```
// Create a list of UserEmailCalendarSync records
List<UserEmailCalendarSync> usersToAdd = new ArrayList<>();

// Populate the UserEmailCalendarSync record with the ID of
// the user or profile, and with the ID of the Activity Capture configuration you are
adding them to
UserEmailCalendarSync user1 = new UserEmailCalendarSync(ConfigurationId = '0063xxxxxxxxxxx',
 AssignedId = '005xxxxxxxxxxxx');
```

```
UserEmailCalendarSync user2= new UserEmailCalendarSync(ConfigurationId = '0063xxxxxxxxxxx',
 AssignedId = '005xxxxxxxxxxxx');
```

```
// add the UserEmailCalendarSync users to your list
usersToAdd.add(user1);
usersToAdd.add(user2);
```

```
// Insert the list of UserEmailCalendarSync into the database
Database.SaveResult[] results = Database.insertImmediate(usersToAdd);
```

This example removes a user from an Einstein Activity Capture configuration.

To remove a user, call `UserEmailCalendarSync()`, passing in `null` for `ConfigurationId`.

```
UserEmailCalendarSync user2Remove= new
UserEmailCalendarSync(ConfigurationId = "", AssignedId ='005xxxxxxxxxxxx');
Database.SaveResult results =Database.insertImmediate(user2Remove);
```

UserEmailPreferredPerson

Represents a mapping for a user's preferred record for an email address when multiple records match an email field.This object is available in API version 44.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
`Email`	**Type** email **Properties** Create, Filter,Group, idLookup, Sort, Update **Description** Required. The unique email the mapping applies to. This field is unique for each user.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description Read-only. Auto-generated field.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Required. The userId that owns the record. Each record is only accessible to the owner. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
PersonRecordId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Required. The recordId of a contact, lead, or user that represents the preferred record for the email address. Use cascade delete for contact and lead, and delete if the personId is a deactivated user record. This is a polymorphic relationship field. **Relationship Name** PersonRecord **Relationship Type** Lookup **Refers To** Contact, Lead, User

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

UserEmailPreferredPersonShare
Sharing is available for the object.

UserEmailPreferredPersonShare

Represents a sharing entry on a UserEmailPreferredPerson object. Sharing is not customizable for UserEmailPreferredPerson records.This object is available in API version 44.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`AccessLevel`	**Type** picklist **Properties** Create, Filter,Group, Restricted picklist, Sort, Update **Description** Required. The level of access allowed. Values can be: • `All` • `Edit` • `Read` .
`ParentId`	**Type** reference **Properties** Create, Filter,Group, Sort, **Description** Id of the parent record, if any. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup

Field	Details
	Refers To UserEmailPreferredPerson
`RowCause`	**Type** picklist **Properties** Create, Filter,Group, Nillable, Restricted picklist, Sort, **Description** Required. Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited. Valid values can include: • `Manual`—The User or Group has access because a user with All access manually shared the record with them. • `Owner`—The User is the owner of the record or is in a role above the record owner in the role hierarchy.
`UserOrGroupId`	**Type** reference **Properties** Create, Filter,Group, Sort, **Description** Required. ID of the user or group that has been given access to the `UserEmailPreferredPerson` record. The `UserOrGroupID` is polymorphic. The label is `User/Group Id`. This is a polymorphic relationship field. **Relationship Name** UserOrGroup **Relationship Type** Lookup **Refers To** Group, User

UserLicense

Represents a user license in your organization. A user license entitles a user to specific functionality and determines the profiles and permission sets available to the user.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
`LicenseDefinitionKey`	**Type** string **Properties** Filter, Group, Sort **Description** A string that uniquely identifies a particular user license. Label is `License Def. ID`. Values are: **AUL**: corresponds to the Salesforce Platform user license **AUL1**: corresponds to the Salesforce Platform One user license **AUL_LIGHT** corresponds to the Salesforce Platform Light user license **FDC_ONE** corresponds to the Lightning Platform - One App user license **FDC_SUB** corresponds to the Lightning Platform App Subscription user license **Overage_Platform_Portal_User** corresponds to the Overage Authenticated Website user license **PID_STRATEGIC_PRM**: corresponds to the Gold Partner user license **PID_CHATTER** corresponds to the Chatter Only user license **PID_CONTENT** corresponds to the Content Only user license **PID_Customer_Portal_Basic**: corresponds to the Customer Portal Manager Standard user license and the Customer Portal User license **PID_Customer_Portal_Standard**: corresponds to the Customer Portal Manager Custom user license **PID_FDC_FREE** corresponds to the Lightning Platform Free user license **PID_IDEAS** corresponds to the Ideas Only user license **PID_Ideas_Only_Portal** corresponds to the Ideas Only Portal user license **PID_Ideas_Only_Site** corresponds to the Ideas Only Site user license **PID_KNOWLEDGE** corresponds to the Knowledge Only user license **PID_Customer_Community** corresponds to the Customer Community license. **PID_Customer_Community_Login** corresponds to the Customer Community Login license. **PID_Partner_Community** corresponds to the Partner Community license. **PID_Partner_Community_Login** corresponds to the Partner Community Login license. **PID_Limited_Customer_Portal_Basic**: corresponds to the Limited Customer Portal Manager Standard user license **PID_Limited_Customer_Portal_Standard**: corresponds to the Limited Customer Portal Manager Custom user license

Field	Details
	PID_Overage_Customer_Portal_Basic: corresponds to the Overage Customer Portal Manager Standard user license **PID_Overage_High Volume Customer Portal** corresponds to the Overage High Volume Customer Portal user license **Platform_Portal_User**: corresponds to the Authenticated Website user license **POWER_PRM**: corresponds to the Partner user license **POWER_SSP**: corresponds to the Customer Portal Manager user license **SFDC**: corresponds to the Full CRM user license
`MasterLabel`	**Type** string **Properties** Filter, Group, Sort **Description** The user license label. This field is available in API version 32.0 and later.
`MonthlyLoginsEntitlement`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The maximum number of customer or partner portal logins allowed per month. A `null` value in this field means the user license is charged according to the number of users rather than the number of logins. This field is available in API version 20.0 and later. Note: To be visible and queryable, this field requires: • Digital Experiences enabled • the View Setup and Configuration user permission
`MonthlyLoginsUsed`	**Type** int **Properties** Group, Nillable, Sort **Description** The number of successful logins for all users associated with a customer or partner portal user license. This field has a non-`null` value if `MonthlyLoginsEntitlement` has a non-`null` value. This field is available in API version 20.0 and later.

Field	Details
	Note: To be visible and queryable, this field requires: • Digital Experiences enabled • the View Setup and Configuration user permission
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The internal name of the user license. **Note:** Your organization may also include custom user licenses.
`Status`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The current status of the user license. Valid values for this field are `Active` and `Disabled`. This field is available in API version 32.0 and later.
`TotalLicenses`	**Type** int **Properties** Filter, Group, Sort **Description** The number of user licenses in the organization. This field is available in API version 32.0 and later.
`UsedLicenses`	**Type** int **Properties** Filter, Group, Sort **Description** The number of user licenses that are assigned to active users in the organization. This field is available in API version 32.0 and later.
UsedLicensesLastUpdated	**Type** dateTime **Properties** aggregate, Filter, Sort

Field	Details
	Description The timestamp of the query. If your license count exceeds your org's allotted threshold, the count timestamp reflects the previous day, otherwise the timestamp reflects the current day and time. This field is available in API version 41.0 and later.

Usage

Users with the "View Setup and Configuration" permission can use the UserLicense object to view the set of currently defined user licenses in your organization.

The UserLicense object is currently used by bulk user creation to determine the user license to which each profile and permission set belongs. For example, if you use the API to create portal users and you want to know which profile belongs to each portal user license, you can query this object for each profile and check the `LicenseDefinitionKey` to identify the associated user license.

SEE ALSO:
Profile

UserListView

Represents the customizations a user made to a list view. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Name	Details
`LastViewedChart`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The last chart a user viewed.
`ListViewId`	**Type** reference **Properties** Create, Filter, Group, Sort

Name	Details
	Description The ID of the list view. This is a relationship field. **Relationship Name** ListView **Relationship Type** Lookup **Refers To** ListView
`SobjectType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The API name of the sObject for the user list view.
`UserId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the user. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

UserListViewCriterion

Represents the criterion for a user's customized list view. The criterion consists of the filters or sort order a user added to a list view for the Salesforce Mobile app. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Name	Details
ColumnName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The name of the column in the user list view.
Operation	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The criteria to apply, such as “equals” or “starts with.”
SortOrder	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The order in which the list view is evaluated compared to other UserListViewCriterion objects for the given UserListView.
UserListViewId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the user list view. This is a relationship field. **Relationship Name** UserListView **Relationship Type** Lookup **Refers To** UserListView
Value	**Type** string

Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The field values used to filter the list view. For example, a value of `94105` if the Field is `Billing Zip/Postal Code` shows only rows that have a billing ZIP code of 94105.

UserLogin

Represents the settings that affect a user's ability to log into an organization. To access this object, you need the `UserPermissions.ManageUsers` permission. This object is available in API version 29.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

Fields

Field Name	Details
`IsFrozen`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort, Update **Description** If `true`, the user account associated with this object is frozen.
`IsPasswordLocked`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort, Update **Description** If `true`, the user account associated with this object is locked because of too many login failures. From the API, you can set this field to `false`, but not `true`. Note: If the Lockout effective period is set to Forever (must be reset by admin) in your org's Password Policies Setup page, this field isn't set to `false`.
`UserId`	**Type** reference

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** ID of the associated user account. This field can't be updated.

Usage

To query for all frozen users in your organization:

```
SELECT Id, UserId
FROM UserLogin
WHERE IsFrozen = true
```

UserMembershipSharingRule

Represents the rules for sharing user records from a source group to a target group. A user record contains details about a user. Users who are members of the source group can be shared with members of the target group. The source and target groups can be based on roles, portal roles, public groups, or territories. This object is available in API version 26.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

As of Spring '20 and later, only users with the View Setup and Configuration permission can access this object, and only users with the Manage Sharing permission can edit this object.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.
`DeveloperName`	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
`GroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID representing the source group.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface.
`UserAccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** A value that represents the type of sharing being allowed. The possible values are: • `Read` • `Edit`
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort

Field	Details
	Description The ID representing the target group being given access.

Usage

Use this object to manage sharing rules for user records. Source and target groups can include internal users, portal users, Chatter or Chatter External users.

UserMonthlyMetric

Represents the monthly engagement metrics for a user. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Sales Engagement must be enabled.

Fields

Field	Details
`AllCallsCallBackLater`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the month for this user with the call result Call Back Later.
`AllCallsLeftVoicemail`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the month for this user with the call result Left Voicemail.
`AllCallsMeaningfulConnect`	**Type** int

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The number of calls in the month for this user with the call result Meaningful Connect.
`AllCallsNotInterested`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the month for this user with the call result Not Interested.
`AllCallsUncategorized`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the month for this user with no call result specified.
`AllCallsUnqualified`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the month for this user with the call result Unqualified.
`AllEmailsBouncedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total of hard and soft bounced emails sent by this user in the month. This is a calculated field.
`AllEmailsDeliveredCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of successfully delivered emails sent by this user in the month. This is a calculated field.

Field	Details
AllEmailsHardBouncedCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of hard bounced emails sent by this user in the month.
AllEmailsLinkClickedCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails containing a link clicked by the recipient sent by this user in the month.
AllEmailsOpenedCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails opened by the recipient sent by this user in the month.
AllEmailsOutOfOfficeCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails that triggered an out of office reply sent by this user in the month.
AllEmailsRepliedCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails replied to for this user in the month.
AllEmailsSentCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent by this user in the month.

Field	Details
	This is a calculated field.
`AllEmailsSoftBouncedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent by this user that soft bounced in the month.
`AllEmailsTrackedSentCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent by this user with engagement tracking enabled in the month.
`AllEmailsUntrackedSentCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent by this user without engagement tracking enabled in the month.
`AllTotalCallsCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of calls with all call results for this user in the month. This is a calculated field.
`IsLocked`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the monthly metric record is locked or not. The default value is `false`.
`MayEdit`	**Type** boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort **Description** Indicates whether the monthly metric record can be edited or not. The default value is `false`.
`Month`	**Type** date **Properties** Filter, Group, Sort **Description** The month in which the engagement occurred.
`MonthInt`	**Type** int **Properties** Filter, Group, idLookup, Sort **Description** The month in which the engagement occurred, in yyyymm format.
`UniqueEmailsLinkClickedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of unique recipients who clicked a link in an email sent by this user in the month.
`UniqueEmailsOpenedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of unique recipients who opened an email sent by this user in the month.
`UniqueEmailsRepliedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of unique recipients who replied to an email sent by this user in the month.

Field	Details
`UserId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the related user. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

UserMonthlyMetricOwnerSharingRule
: Sharing rules are available for the object.

UserMonthlyMetricShare **on page 50**
: Sharing is available for the object.

UserMonthlyMetricOwnerSharingRule

Represents the rules for sharing the user monthly metric with users other than the owner.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The SharingRules Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Sales Engagement must be enabled.

Fields

Field	Details
`AccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Determines the level of access users have to records. Values are: • `Read` (read only) • `Edit` (read/write)
`Description`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Description of the sharing rule. Maximum length is 1000 characters.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
`GroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the source group. Records that are owned by users in the source group trigger the rule to give access.

Field	Details
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Label of the sharing rule as it appears in the UI. Maximum length is 80 characters.
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the user or group that you are granting access to.

Usage

Use this object to manage the sharing rules for cases. General sharing and territory management-related sharing use this object.

UserPackageLicense

Represents a license for an installed managed package, assigned to a specific user. This object is available in API version 31.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()` `update()`

Fields

Field Name	Details
`IsRevoked` (Beta)	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description Indicates whether the managed package license assignment was revoked (`true`) or not (`false`). Defaults to `false`. This field is available in API version 58.0 and later. Note: This feature is a Beta Service. Customer may opt to try such Beta Service in its sole discretion. Any use of the Beta Service is subject to the applicable Beta Services Terms provided at Agreements and Terms.
`LastCreatedByChangeId` (Beta)	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the user access change record related to this managed package license assignment. This field is available in API version 58.0 and later. This field is a relationship field. **Relationship Name** LastCreatedByChange **Relationship Type** Lookup **Refers To** UserAccessChange Note: This feature is a Beta Service. Customer may opt to try such Beta Service in its sole discretion. Any use of the Beta Service is subject to the applicable Beta Services Terms provided at Agreements and Terms.
`LastDeletedByChangeId` (Beta)	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the user access change record related to this managed package license assignment being revoked. This field is available in API version 58.0 and later. This field is a relationship field. **Relationship Name** LastCreatedByChange **Relationship Type** Lookup **Refers To** UserAccessChange

Field Name	Details
	Note: This feature is a Beta Service. Customer may opt to try such Beta Service in its sole discretion. Any use of the Beta Service is subject to the applicable Beta Services Terms provided at Agreements and Terms.
`PackageLicenseId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The 18-character Globally Unique ID (GUID) that identifies the package license This is a relationship field. **Relationship Name** PackageLicense **Relationship Type** Lookup **Refers To** PackageLicense
`UserId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The User ID of the user licensed to use this package

Usage

Use this object, in conjunction with PackageLicense, to provide users access to a managed package installed in your organization.

UserPermissionAccess

Represents the permissions accessibility for a current user. Available in API version 41.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
`LastCacheUpdate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The last modified date and time of either the user info or org info, whichever is later.
`Permissions<PermissionName>`	**Type** boolean **Properties** Filter **Description** The name of the permission, such as `PermissionsActivateContract` or `PermissionsAuthorApex` and whether it's available to the user (`true`) or not (`false`).

Usage

API users without `PermissionsViewSetup` can use this object to check if their own sessions have access to a feature.

SEE ALSO:

Profile

PermissionSet

UserPrioritizedRecord

Represents records that Pipeline Inspection, Account Intelligence, Contact Intelligence, and Lead Intelligence users flag as important for tracking in pipeline and intelligence views and filters. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To use UserPrioritizedRecord in Pipeline Inspection and the Account Intelligence, Contact Intelligence, and Lead Intelligence views, enable the Pipeline Inspection user permission and the Pipeline Inspection setting.

Fields

Field	Details
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the user who marked this record as important. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
TargetId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the target object that is marked as important. Supported objects include: • Account • Contact • Lead • Opportunity This field is a polymorphic relationship field. **Relationship Name** Target **Relationship Type** Lookup **Refers To** • Account • Contact • Lead • Opportunity
TargetKeyPrefix	**Type** string

Field	Details
	Properties Filter, Group, idLookup, Sort **Description** The key prefix of the target object that is marked as important.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

UserPrioritizedRecordOwnerSharingRule on page 48
Sharing rules are available for the object.

UserPrioritizedRecordShare on page 50
Sharing is available for the object.

UserPreference

Represents a functional preference for a specific user in your organization.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Only users with the View All Data or Manage Users permission can access UserPreference records of other users but all users can access their own UserPreference record.

Note: This behavior does not affect other types of user access such as Create or Edit.

Fields

Field	Details
`Preference`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The name of the user preference. Supported values are: • `57` (Event Reminder Default Lead Time)

Field	Details
	• `58` (Task Reminder Default Time) • `91` (Prevent Logs on Load) • `92` (Autocomplete Apex After Key Press) • `93` (Visualforce Viewstate Inspector) • `94` (Forecasting Displayed Type) • `96` (Editor Theme) • `97` (Editor Font Size) • `98` (Pinned Folders) • `99` (Enable Query Plan) • `100` (Enable New Open Dialog) • `101` (Email Transport Type) • `102` (Pinned Wave Folders) • `108` (Density) • `109` (Lightning Flow Builder) • `111` (Format with Tabs) • `112` (Format Tab Width) • `113` (Format Print Width) • `114` (Record Page Activities Display) • `118` (Lightning Flow Explorer) • `119` (For internal use only) • `120` (Simple Auth Option) • `122` (Sales Alert Notifications Snooze Time) `Event Reminder Default Lead Time` and `Task Reminder Default Time` are related to these fields on the User object: • `UserPreferencesEventRemindersCheckboxDefault` • `UserPreferencesTaskRemindersCheckboxDefault` • `UserPreferencesSuppressEventSFXReminders` • `UserPreferencesSuppressTaskSFXReminders` `Enable New Open Dialog` is reserved for future use. When creating SOQL queries, `tolabel` is required to return accurate results. For example, `select Id, tolabel(Preference), Value, UserId from UserPreference`. `108` (Density) is available in API v44.0 and later.
`UserId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update

Field	Details
	Description The ID of the user associated with this role. The corresponding field label is **User ID**. Admin users can create and edit preferences for other users. Standard users can delete their own preferences only. For a standard user, the value of the `UserId` field must be their own UserId.
`Value`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** The value of the user preference. For `Event Reminder Default Lead Time`, the values are increasing intervals of time from 0 minutes to 2 days. For `Task Reminder Default Time`, the values are half-hours from 12:00 AM to 11:30 PM. To view the respective sets of values, access the Reminders in your personal settings in the online application.

Usage

Use this object to query the set of currently configured user preferences in your organization. In your client application, you can query the User object to obtain valid User IDs to access the UserPreference object.

All users can invoke the supported calls with this object. Standard users can invoke these calls, but only on their own preferences.

UserProfile

Represents a Chatter user profile.

Note: This object has been deprecated as of API version 32.0. Use the User object to query information about a user in API version 32.0 and later.

Supported Calls

`describeLayout()`, `query()`, `retrieve()`

Special Access Rules

- Information in hidden fields in a user's profile isn't searchable by external users (with a portal profile) in an Experience Cloud site. For example, if a user in a site has a hidden email address and an external user searches for it, the user record isn't returned in the search results. Hidden field values also aren't returned when external users perform searches on nonhidden fields. So if an external user searches for a user's name (can't be hidden), any hidden field values associated with the user record such as a hidden email address aren't returned in the search results.

  internal users belonging to the same Experience Cloud site can search for and view hidden field values in search results.

- Any fields that have been restricted in visibility will be returned empty, whether or not they are, and will not be removed from the field listing.

Fields

Field	Details
AboutMe	**Type** textarea **Properties** Filter, Nillable, Sort **Description** Information about the user, such as areas of interest or skills.
Address (beta)	**Type** address **Properties** Filter, Nillable **Description** The compound form of the address. Read-only. See Address Compound Fields for details on compound address fields.
City	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The city associated with the user profile.
CompanyName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The company associated with the user profile.
Country	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The country associated with the user profile.

Field	Details
`Email`	**Type** email **Properties** Filter, Group, idLookup, Sort **Description** The email address associated with the user profile.
`Fax`	**Type** phone **Properties** Filter, Group, Nillable, Sort **Description** The fax number associated with the user profile.
`FirstName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The user's first name.
`FullPhotoUrl`	**Type** url **Properties** Filter, Nillable, Sort **Description** The URL for the user's profile photo if Chatter is enabled. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo is uploaded, the URL returned for an older photo isn't guaranteed to return a photo. Query this field for the URL of the most recent photo.
`IsActive`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the user has access to log in (`true`) or not (`false`). You can modify a User's active status from the user interface or via the API.

Field	Details
`IsBadged`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the user is visually badged (`true`) or not (`false`). Users of the same Chatter user type (internal, external) are badged. Different user types are not badged.
`LastName`	**Type** string **Properties** Filter, Group, Sort **Description** The user's last name.
`Latitude` (beta)	**Type** double **Properties** Filter, Nillable, Sort **Description** Used with `Longitude` to specify the precise geolocation of an address. Acceptable values are numbers between –90 and 90 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
`Longitude` (beta)	**Type** double **Properties** Filter, Nillable, Sort **Description** Used with `Latitude` to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
`ManagerId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user who manages this user.

Field	Details
MobilePhone	**Type** phone **Properties** Filter, Group, Nillable, Sort **Description** The user’s mobile or cellular phone number.
Name	**Type** string **Properties** Filter, Group, Sort **Description** Concatenation of `FirstName` and `LastName`.
Phone	**Type** phone **Properties** Filter, Group, Nillable, Sort **Description** The user’s phone number.
PostalCode	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The user’s postal or ZIP code. Label is **Zip/Postal Code**.
SmallPhotoUrl	**Type** url **Properties** Filter, Nillable, Sort **Description** The URL for a thumbnail of the user's profile photo if Chatter is enabled. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo is uploaded, the URL returned for an older photo isn’t guaranteed to return a photo. Query this field for the URL of the most recent photo.
State	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The state associated with the user profile.
`Street`	**Type** textarea **Properties** Filter, Group, Nillable, Sort **Description** The street address associated with the user profile.
`Title`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The user's business title, such as "Vice President."
`UserPreferencesActivityRemindersPopup`	**Type** boolean **Properties** Filter **Description** When `true`, a reminder window automatically opens when an activity reminder is due. Corresponds to the `Trigger alert when reminder comes due` checkbox at the Reminders page in the personal settings in the user interface.
`UserPreferencesApexPagesDeveloperMode`	**Type** boolean **Properties** Filter **Description** When `true`, indicates that the user has enabled developer mode for editing Visualforce pages and controllers.
`UserPreferencesDisableAllFeedsEmail`	**Type** boolean **Properties** Filter

Field	Details
	Description When `false`, the user automatically receives email for all updates to Chatter feeds, based on the types of feed emails and digests the user has enabled.
`UserPreferencesDisableBookmarkEmail`	**Type** boolean **Properties** Filter **Description** When `false`, the user automatically receives email every time someone comments on a Chatter feed item after the user has bookmarked it.
`UserPreferencesDisableChangeCommentEmail`	**Type** boolean **Properties** Filter **Description** When `false`, the user automatically receives email every time someone comments on a change the user has made, such as an update to their profile.
`UserPreferencesDisableEndorsementEmail`	**Type** boolean **Properties** Filter **Description** When `false`, the member automatically receives email every time someone endorses them for a topic.
`UserPreferencesDisableFeedbackEmail`	**Type** boolean **Properties** Filter **Description** When `false`, the user automatically receives emails related to WDC feedback. This includes when someone requests or offers feedback, shares feedback with the user, or reminds the user to answer a feedback request.
`UserPreferencesDisableFileShareNotificationsForApi`	**Type** boolean

Field	Details
	Properties Filter **Description** When `false`, email notifications are sent from the person who shared the file to the users that the file is shared with.
`UserPreferencesDisableFollowersEmail`	**Type** boolean **Properties** Filter **Description** When `false`, the user automatically receives email every time someone starts following the user in Chatter.
`UserPreferencesDisableLaterCommentEmail`	**Type** boolean **Properties** Filter **Description** When `false`, the user automatically receives email every time someone comments on a feed item after the user has commented on the feed item.
`UserPreferencesDisableLikeEmail`	**Type** boolean **Properties** Filter **Description** When `false`, the user automatically receives email every time someone likes their post or comment.
`UserPreferencesDisableMentionsPostEmail`	**Type** boolean **Properties** Filter **Description** When `false`, the user automatically receives email every time they're mentioned in posts.
`UserPreferencesDisableMessageEmail`	**Type** boolean

Field	Details
	Properties Filter **Description** When `false`, the user automatically receives email for Chatter messages sent to the user.
`UserPreferencesDisableProfilePostEmail`	**Type** boolean **Properties** Filter **Description** When `false`, the user automatically receives email every time someone posts to the user's profile.
`UserPreferencesDisableRewardEmail`	**Type** boolean **Properties** Filter **Description** When `false`, the user automatically receives emails related to WDC rewards. This includes when someone someone gives a reward to the user.
`UserPreferencesDisableSharePostEmail`	**Type** boolean **Properties** Filter **Description** When `false`, the user automatically receives email every time their post is shared.
`UserPreferencesDisableWorkEmail`	**Type** boolean **Properties** Filter **Description** When `false`, the user receives emails related to WDC feedback, goals, and coaching. The user must also sign up for individual emails listed on the WDC email settings page. When `true`, the user will not receive any emails related to WDC feedback, goals, or coaching even if they are signed up for individual emails.

Field	Details
UserPreferencesDisCommentAfterLikeEmail	**Type** boolean **Properties** Filter **Description** When `false`, the user automatically receives email every time someone comments on a post that the user liked.
UserPreferencesDisMentionsCommentEmail	**Type** boolean **Properties** Filter **Description** When `false`, the user automatically receives email every time the user is mentioned in comments.
UserPreferencesDisProfPostCommentEmail	**Type** boolean **Properties** Filter **Description** When `false`, the user automatically receives email every time someone comments on posts on the user's profile.
UserPreferencesEnableAutoSubForFeeds	**Type** boolean **Properties** Filter **Description** When `true`, the user automatically subscribes to feeds for any objects that the user creates.
UserPreferencesEventRemindersCheckboxDefault	**Type** boolean **Properties** Filter **Description** When `true`, a reminder popup is automatically set on the user's events. Corresponds to the `By default, set reminder on Events to...` checkbox on the Reminders page in the user interface. This field is related to UserPreference and customizing activity reminders.

Field	Details
UserPreferencesHideChatterOnboardingSplash	**Type** boolean **Properties** Filter **Description** When `true`, the initial Chatter onboarding prompts do not appear.
UserPreferencesHideCSNDesktopTask	**Type** boolean **Properties** Filter **Description** When `true`, the Chatter recommendations panel never displays the recommendation to install Chatter Desktop.
UserPreferencesHideCSNGetChatterMobileTask	**Type** boolean **Properties** Filter **Description** When `true`, the Chatter recommendations panel never displays the recommendation to install Chatter Mobile.
UserPreferencesHideS1BrowserUI	**Type** boolean **Properties** Filter **Description** Controls the interface that the user sees when logging in to Salesforce from a supported mobile browser. If `false`, the user is automatically redirected to the Salesforce mobile web. If `true`, the user sees the full Salesforce site. The default value is `false`. Label is **Salesforce User**. This field is available in API version 29.0 or later.
UserPreferencesHideSecondChatterOnboardingSplash	**Type** boolean **Properties** Filter **Description** When `true`, the secondary Chatter onboarding prompts do not appear.

Field	Details
`UserPreferencesReminderSoundOff`	**Type** boolean **Properties** Filter **Description** When `true`, a sound automatically plays when an activity reminder is due. Corresponds to the `Play a reminder sound` checkbox on the Reminders page in the user interface.
`UserPreferencesShowCityToExternalUsers`	**Type** boolean **Properties** Filter **Description** Indicates the visibility of the city field in the user's contact information. City is visible only to internal members of the user's organization when: • This field is `false`. When `false`, this field returns the value `#N/A`. City is visible to external members in an Experience Cloud site when: • This field is `true`, or • This field is `false` but `UserPreferencesShowCityToGuestUsers` is `true`, which overrides this field's value. External users are users with Community, Customer Portal, or partner portal licenses. The default value is `false`. This field is available in API version 26.0 and later.
`UserPreferencesShowCityToGuestUsers`	**Type** boolean **Properties** Filter **Description** Indicates the visibility of the city field in the user's contact information. When `true`, city is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `false`, this field returns the value `#N/A`. When `true`, this field overrides the value `false` in `UserPreferencesShowCityToExternalUsers`, making the user's city visible to external members.

Field	Details
	The default value is `false`. This field is available in API version 28.0 and later.
`UserPreferencesShowCountryToExternalUsers`	**Type** boolean **Properties** Filter **Description** Indicates the visibility of the country field in the user's contact information. Country is visible only to internal members of the user's organization when: • This field is `false`. When `false`, this field returns the value `#N/A`. Country is visible to external members in an Experience Cloud site when: • This field is `true`, or • This field is `false` but `UserPreferencesShowCountryToGuestUsers` is `true`, which overrides this field's value. External users are users with Community, Customer Portal, or partner portal licenses. The default value is `false`. This field is available in API version 26.0 and later.
`UserPreferencesShowCountryToGuestUsers`	**Type** boolean **Properties** Filter **Description** Indicates the visibility of the country field in the user's contact information. When `true`, country is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `false`, this field returns the value `#N/A`. When `true`, this field overrides the value `false` in `UserPreferencesShowCountryToExternalUsers`, making the user's country visible to external members. The default value is `false`. This field is available in API version 28.0 and later.
`UserPreferencesShowEmailToExternalUsers`	**Type** boolean

Field	Details
	Properties Filter **Description** Indicates the visibility of the email address field in the user's contact information. Email address is visible only to internal members of the user's organization when this field is `false`. Email address is visible to external members in an Experience Cloud site when this field is `true`. External users are users with Community, Customer Portal, or partner portal licenses. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 26.0 and later.
`UserPreferencesShowFaxToExternalUsers`	**Type** boolean **Properties** Filter **Description** Indicates the visibility of the fax number field in the user's contact information. Fax number is visible only to internal members of the user's organization when this field is `false`. Fax number is visible to external members in an Experience Cloud site when this field is `true`. External users are users with Community, Customer Portal, or partner portal licenses. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 26.0 and later.
`UserPreferencesShowManagerToExternalUsers`	**Type** boolean **Properties** Filter **Description** Indicates the visibility of the manager field in the user's contact information. Manager is visible only to internal members of the user's organization when this field is `false`. Manager is visible to external members in an Experience Cloud site when this field is `true`. External users are users with Community, Customer Portal, or partner portal licenses. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 26.0 and later.
`UserPreferencesShowMobilePhoneToExternalUsers`	**Type** boolean

Field	Details
	Properties Filter **Description** Indicates the visibility of the mobile device number field in the user's contact information. The number is visible only to internal members of the user's organization when this field is `false`. The number is visible to external members in an Experience Cloud site when this field is `true`. External users are users with Community, Customer Portal, or partner portal licenses. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 26.0 and later.
`UserPreferencesShowPostalCodeToExternalUsers`	**Type** boolean **Properties** Filter **Description** Indicates the visibility of the postal or ZIP code field in the user's contact information. Postal code is visible only to internal members of the user's organization when: • This field is `false`. When `false`, this field returns the value `#N/A`. Postal code is visible to external members in an Experience Cloud site when: • This field is `true`, or • This field is `false` but `UserPreferencesShowPostalCodeToGuestUsers` is `true`, which overrides this field's value. External users are users with Community, Customer Portal, or partner portal licenses. The default value is `false`. This field is available in API version 26.0 and later.
`UserPreferencesShowPostalCodeToGuestUsers`	**Type** boolean **Properties** Filter **Description** Indicates the visibility of the postal or ZIP code field in the user's contact information. When `true`, postal code is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license

Field	Details
	associated with each site. When `false`, this field returns the value `#N/A`. When `true`, this field overrides the value `false` in `UserPreferencesShowPostalCodeToExternalUsers`, making the user's postal code visible to external members. The default value is `false`. This field is available in API version 28.0 and later.
`UserPreferencesShowProfilePicToGuestUsers`	**Type** boolean **Properties** Filter **Description** Indicates the visibility of the user's profile photo. When `true`, the photo is visible to guest users in an Experience Cloud site. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `false`, this field returns the stock photo. The default value is `false`. This field is available in API version 28.0 and later.
`UserPreferencesShowStateToExternalUsers`	**Type** boolean **Properties** Filter **Description** Indicates the visibility of the state field in the user's contact information. State is visible only to internal members of the user's organization when: • This field is `false`. When `false`, this field returns the value `#N/A`. State is visible to external members in an Experience Cloud site when: • This field is `true`, or • This field is `false` but `UserPreferencesShowStateToGuestUsers` is `true`, which overrides this field's value. External users are users with Community, Customer Portal, or partner portal licenses. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 26.0 and later.

Field	Details
UserPreferencesShowStateToGuestUsers	**Type** boolean **Properties** Filter **Description** Indicates the visibility of the state field in the user's contact information. When `true`, state is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `false`, this field returns the value `#N/A`. When `true`, this field overrides the value `false` in UserPreferencesShowStateToExternalUsers, making the user's state visible to external members. The default value is `false`. This field is available in API version 28.0 and later.
UserPreferencesShowStreetAddressToExternalUsers	**Type** boolean **Properties** Filter **Description** Indicates the visibility of the street address field in the user's contact information. The address is visible only to internal members of the user's organization when this field is `false`. The address is visible to external members in an Experience Cloud site when this field is `true`. External users are users with Community, Customer Portal, or partner portal licenses. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 26.0 and later.
UserPreferencesShowTitleToExternalUsers	**Type** boolean **Properties** Filter **Description** Indicates the visibility of the business title field in the user's contact information. Title is visible only to internal members of the user's organization when: • This field is `false`. When `false`, this field returns the value `#N/A`. Title is visible to external members in an Experience Cloud site when: • This field is `true`, or

Field	Details
	• This field is `false` but `UserPreferencesShowTitleToGuestUsers` is `true`, which overrides this field's value. External users are users with Community, Customer Portal, or partner portal licenses. The default value is `true`. This field is available in API version 26.0 and later.
`UserPreferencesShowTitleToGuestUsers`	**Type** boolean **Properties** Filter **Description** Indicates the visibility of the business title field in the user's contact information. When `true`, title is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `false`, this field returns the value `#N/A`. When `true`, this field overrides the value `false` in UserPreferencesShowTitleToExternalUsers, making the user's title visible to external members. The default value is `false`. This field is available in API version 28.0 and later.
`UserPreferencesShowWorkPhoneToExternalUsers`	**Type** boolean **Properties** Filter **Description** Indicates the visibility of the work phone number field in the user's contact information. The number is visible only to internal members of the user's organization when this field is `false`. The number is visible to external members in an Experience Cloud site when this field is `true`. External users are users with Community, Customer Portal, or partner portal licenses. When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 26.0 and later.
`UserPreferencesTaskRemindersCheckboxDefault`	**Type** boolean **Properties** Filter

Field	Details
	Description When `true`, a reminder popup is automatically set on the user's tasks. Corresponds to the `By default, set reminder on Tasks to...` checkbox on the Reminders page in the user interface. This field is related to UserPreference and customizing activity reminders.

Usage

Use this object to query Chatter—related information about the user. While the User object contains all the information about a user and is historically tied to user management, UserProfile is a read-only entity that contains the information that is relevant in a Chatter context.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

UserProfileFeed (API verison 18.0–26.0)
Feed tracking is available for the object.

UserProvAccount

Represents information that links a Salesforce user account with an account in a third-party (target) system, such as Google, for users of connected apps with Salesforce user provisioning enabled. This object is available in API version 33.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`ConnectedAppId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The 15 character application ID. This is a relationship field.

Field	Details
	Relationship Name ConnectedApp **Relationship Type** Lookup **Refers To** ConnectedApplication
DeletedDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time when the associated user account in the target system was deleted. This value is automatically updated during the provisioning and reconciling processes.
ExternalEmail	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The email address as stored in the target system for the associated user account.
ExternalFirstName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The first name as stored in the target system for the associated user account.
ExternalLastName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The last name as stored in the target system for the associated user account.
ExternalUserId	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update

Field	Details
	Description The unique identifier for the user as stored in the target system.
`ExternalUsername`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The username as stored in the target system for the associated user account.
`IsKnownLink`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Setting the `IsKnownLink` value to `true` implies the administrator or another user is managing the relationship between the Salesforce user account and the third-party user account, manually. This field helps Salesforce coordinate updates between the UserProvAccountStaging object and the UserProvAccount object while committing staged accounts. Typically, for a matching user account (the same `ExternalUserId` for both objects), Salesforce copies the values from the UserProvAccountStaging object to the UserProvAccount object. However, if Salesforce encounters a UserProvAccountStaging object with a matching `ExternalUserId` but different `LinkState` and `SalesforceUserId` values during this process, Salesforce checks the UserProvAccount `IsKnownLink` value. If the `IsKnownLink`value is `true`, Salesforce doesn't copy the `LinkState` and `SalesforceUserId` values from the UserProvAccountStaging object to the UserProvAccount object (all other values are copied). The default is `false`, meaning Salesforce manages the account relationship.
`LinkState`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The state of the current connection between the user account in the Salesforce organization and the associated user account in the target system. The valid values are: • `linked`— changes to the account in the Salesforce organization are queued to be updated for the associated user account in the target system. • `duplicate`— an associated account in the target system exists. • `orphaned`—no associated account exists in the target system.

Field	Details
	• `ignored`— changes to the account in the Salesforce organization have no effect on the associated user account in the target system.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The unique name for this object.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Namepointing, Sort, Update **Description** The user ID of the owner of this object—typically a Salesforce administrator.
`SalesforceUserId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The user ID for the user account in the Salesforce organization that is associated with the user account in the target system. This is a relationship field. **Relationship Name** SalesforceUser **Relationship Type** Lookup **Refers To** User
`Status`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The status of the account in the target system. The valid values are: • `Active` • `Deactivated` • `Deleted`

UserProvAccountStaging

Temporarily stores user account information while a user completes the User Provisioning Wizard. This information that is stored in the UserProvAccount object when you click the button to collect and analyze accounts on the target system.

User provisioning links a Salesforce user account with an account in a third-party (target) system. To configure user provisioning, you use a User Provisioning Wizard that guides you through the setup process. As you enter values about account details in the wizard, these values are stored in this object until you click the button to collect and analyze accounts on the target system. The general user provisioning configuration details are stored in the UserProvisioningConfig object.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`ConnectedAppId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The 15 character connected app ID. This is a relationship field. **Relationship Name** ConnectedApp **Relationship Type** Lookup **Refers To** ConnectedApplication
`ExternalEmail`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The email address as stored in the target system for the associated user account.
`ExternalFirstName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The first name as stored in the target system for the associated user account.
ExternalLastName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The last name as stored in the target system for the associated user account.
ExternalUserId	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The unique identifier for the user as stored in the target system.
ExternalUsername	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The username as stored in the target system for the associated user account.
LinkState	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The state of the current connection between the user account in the Salesforce organization and the associated user account in the target system. The valid values are: • `linked`— a user account matches one in the target system. • `duplicate`— an associated account in the target system exists. • `orphaned`—no associated account exists in the target system. • `ignored`— changes to the account in the Salesforce organization have no effect on the associated user account in the target system.
Name	**Type** string

Field Name	Details
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The unique name for this object.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The user ID of the owner of this object—typically a Salesforce administrator.
SalesforceUserId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The user ID for the user account in the Salesforce organization that is associated with the user account in the target system. This is a relationship field. **Relationship Name** SalesforceUser **Relationship Type** Lookup **Refers To** User
Status	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The status of the account in the target system. The valid values are: • Active • Deactivated • Deleted

Usage

When committing fields from a UserProvAccountStaging to a UserProvAccount object, Salesforce looks up the UserProvAccount record where `UserProvAccountStaging.ExternalUserId = UserProvAccount.ExternalUserId`.

- If an `ExternalUserId` doesn't match an existing account, Salesforce creates a UserProvAccount record based on the UserProvAccountStaging record.
- If an `ExternalUserId` matches, then Salesforce checks the `UserProvAccount.isKnownLink` value, and does the following.
  - If `UserProvAccount.IsKnownLink = true`, Salesforce copies the UserProvAccountStaging values to the UserProvAccount object, except for the `ExternalUserId` and `LinkState` values.
  - If `UserProvAccount.IsKnownLink = false`, Salesforce copies all of the UserProvAccountStaging values to the UserProvAccount object.

UserProvMockTarget

Represents an entity for testing user data before committing the data to a third-party system for user provisioning.

During the user provisioning process, user account information is sent to a third-party system to create, update or delete a user account on that system. While configuring user provisioning for your organization using a flow or Apex action, you can use this object to confirm the associated flow or Apex code is sending the desired data. After confirming the correct fields and values, you can update the flow or Apex action to send the data to the target system.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`ExternalEmail`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The email address as stored in the target system for the associated user account.
`ExternalFirstName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The first name as stored in the target system for the associated user account.

Field Name	Details
ExternalLastName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The last name as stored in the target system for the associated user account.
ExternalUserId	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The unique identifier for the user as stored in the target system.
ExternalUsername	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The username as stored in the target system for the associated user account.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The unique name for this object.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The user ID of the owner of this object—typically a Salesforce administrator.

UserProvisioningConfig

Represents information for a flow to use during a user provisioning request process, such as the attributes for an update. This object is available in API version 34.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
`ApprovalRequired`	**Type** textarea **Properties** Create, Nillable, Update **Description** Denotes whether approvals are required for provisioning users for the associated connected app. If the value is null, no approval is required.
`ConnectedAppId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The 18-digit application ID for the connected app. This is a relationship field. **Relationship Name** ConnectedApp **Relationship Type** Lookup **Refers To** ConnectedApplication
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the

Field Name	Details
	object's name in a managed package, and the changes are reflected in a subscriber's organization. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`Enabled`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether user provisioning is enabled for the associated connected app (`true`) or not (`false`).
`EnabledOperations`	**Type** textarea **Properties** Create, Nillable, Update **Description** Lists the operations, as comma-separated values, that create a UserProvisioningRequest object for the associated connected app. Allowed values are: • `Create` • `Update` • `EnableAndDisable` (activation and deactivation) • `SuspendAndRestore` (freeze and unfreeze)
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The two- to five-character code that represents the language and locale ISO. This code controls the language for labels displayed in an application.
`LastReconDateTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update

Field Name	Details
	Description The date and time when user accounts were last reconciled between Salesforce and the target system.
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The primary label for this object. This value is the internal label that doesn't get translated.
NamedCredentialId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Salesforce ID of the named credential that's used for a request. The named credential identifies the third-party system and the third-party authentication settings. This is a relationship field. **Relationship Name** NamedCredential **Relationship Type** Lookup **Refers To** NamedCredential
NamespacePrefix	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the

Field Name	Details
	installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
`Notes`	**Type** textarea **Properties** Create, Nillable, Update **Description** A utility field for administrators to add any additional information about the configuration. This field is for internal reference only, and is not used by any process.
`OnUpdateAttributes`	**Type** textarea **Properties** Create, Nillable, Update **Description** Lists the user attributes, as comma-separated values, that generate a UserProvisioningRequest object during an update.
`ReconFilter`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** When collecting and analyzing users on a third-party system, the plug-in uses this filter to limit the scope of the collection.
`UserAccountMapping`	**Type** textarea **Properties** Create, Nillable, Update **Description** Stores the attributes used to link the Salesforce user to the account on the third-party system, in JSON format. For example: `{"linkingSalesforceUserAttribute":"Username", "linkingTargetUserAttribute":"Email"}`

UserProvisioningLog

Represents messages generated during the process of provisioning users for third-party applications. This object is available in API version 33.0 and later.

Some messages for this object are generated automatically by Salesforce, and others are created by the developers of the user provisioning plugin. Developers can use this object to log messages from the flow associated with the user provisioning process or the Apex plugin that calls the target system. Administrators can use this object as a log of all user provisioning activity and as a troubleshooting tool if desired behavior is missing. This object is available as a custom report type.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`Details`	**Type** textarea **Properties** Create, Nillable, Update **Description** The value of this field depends on the log entry. For example, if the target system returns an error, the error message may be recorded in this field.
`ExternalUserId`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The unique identifier for the user in the target system.
`ExternalUsername`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The username set in the target system for the associated user account.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description The unique name for this object.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Salesforce ID of the Group or User who owns this object.
`Status`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The status of the user provisioning request. Based on the context of the log, it can contain different values, such as an HttpStatusCode.
`UserId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Salesforce ID of the user making the request. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User
`UserProvisioningRequestId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A unique identifier for the user provisioning request. This is a relationship field. **Relationship Name** UserProvisioningRequest

Field	Details
	Relationship Type Lookup **Refers To** UserProvisioningRequest

UserProvisioningRequest

Represents an individual provisioning request to create, update, or delete a single user account in a third-party service system (or another Salesforce organization). This object is available in API version 33.0 and later.

A UserProvisioningRequest (UPR) record is created for each provisioning action for each user, and for each connected app available to the user. For example, if a user has two connected apps, and a provisioning request is sent to two different services to create an account for the user, Salesforce creates two UPR objects. Provisioning actions include creating, updating, or deleting a user account.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`AppName`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The unique name of the connected app associated with the service provider.
`ApprovalStatus`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The status of the approval for the current request. If the user provisioning setup for the connected app does not have an approval process enabled, the status is `Not Required`. If an approval process is enabled, supported values are: • `Required`— An approval process is enabled in the user provisioning setup for the associated connected app, but there is no response to the request yet. • `Not Required`— An approval process is not enabled in the user provisioning setup for the associated connected app.

Field	Details
	• `Approved` • `Denied`
`ConnectedAppId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The 18-digit application ID for the connected app. This is a relationship field. **Relationship Name** ConnectedApp **Relationship Type** Lookup **Refers To** ConnectedApplication
`ExternalUserId`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The unique identifier for the user in the target system.
`ManagerId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Salesforce ID of the user who manages the user specified in the `SalesforceUserId` field. If an approval process is configured for the user provisioning request. this value allows the manager to approve the request. Available in API version 34.0 and later. This is a relationship field. **Relationship Name** Manager **Relationship Type** Lookup **Refers To** User

Field	Details
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The unique name for this object.
Operation	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The Apex method called by the trigger associated with the provisioning request (typically a change to the User object). Supported values are: • `Create` • `Read` • `Update` • `Deactivate` • `Activate` • `Freeze` • `Unfreeze` • `Reconcile` • `Linking` For example, when the User object field `isActive` is set to `false`, the UPR object `Operation` field value is set to `Deactivate`.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Salesforce ID of the Group or User who owns this object. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User

Field	Details
ParentID	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** When a retry event is created, the failed UPR is cloned and resubmitted. This field contains a lookup to the failed UPR that was cloned to create the current record. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** UserProvisioningRequest
Retry Count	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** Number of retry attempts performed on a UPR. Retry Count enables custom business logic such as “Retry 5 times then stop and notify your admin.”
SalesforceUserId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Salesforce ID of the user making the request. This is a relationship field. **Relationship Name** SalesforceUser **Relationship Type** Lookup **Refers To** User
ScheduleDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update

Field	Details
	Description When to send this request to the service provider. Note: Scheduling is not implemented yet. Currently, provisioning changes are queued immediately to be sent to the service provider.
`State`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Status of this request. Supported values are: • `New` • `Requested` • `Completed` • `Failed` • `Collecting` • `Collected` • `Analyzing` • `Analyzed` • `Committing` • `Retried` • `Manually Completed` The `State` goes from `New` to `Requested` to `Completed` or `Failed`, unless a reconciliation process is occurring. For details about the reconciliation process `State` value changes, see Usage. The `State` goes from `Failed` to `Retried` or `Manually Completed` when troubleshooting UPR failures. For details about handling failures, see State Values for Managing Provisioning Failures.
`UserProvAccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID value of the associated UserProvAccount object. This is a relationship field. **Relationship Name** UserProvAccount **Relationship Type** Lookup

Field	Details
	Refers To UserProvAccount
UserProvConfigId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID value of the associated UserProvisioningConfig object. Available in API version 34.0 and later. This is a relationship field. **Relationship Name** UserProvConfig **Relationship Type** Lookup **Refers To** UserProvisioningConfig

Usage

The `State` value changes during a reconciliation process (`Operation = Reconcile`) to gather and compare users on the third-party system to Salesforce users. Typically, when a UPR entry is first created, it has a `State` value of `New`. When a collection process is triggered, the `State` transitions to `Collecting` until that process is finished and the `State` is `Collected`. When an analyze process is triggered, the `State` transitions to `Analyzing` until that process is finished and the `State` is `Analyzed`. If a process commits the request, the `State` then transitions to `Committing`, and the properties move from the UserProvAccountStaging object to the UserProvAccount object. When those properties are saved in the UserProvAccount object, the `State` transitions to `Completed`.

However, the `State` does not necessarily start at `New`. For example, UserProvAccountStaging entries can be inserted programmatically. If a process is initiated that triggers linking these rows to accounts on the third-party service, a UPR entry could start with the `Analyzing` `State`.

Also, the `State` cannot go backwards from an active task. For example, a successful `Analyzing` `State` must progress to `Analyzed`; unless the active process fails, and then the `State` must change to `Failed`. Certain `State` transitions cannot be made programmatically and must be triggered by Salesforce.

The following table shows the `State` transitions that can occur for each `State` value. Each row corresponds to a current `State` value and each column corresponds to a new `State` after a potential transition.

- — the transition to this value is not allowed.
- — the transition to this value is allowed.
- — only Salesforce can transition the `State` to this value.

	New	Requested	Collecting	Collected	Analyzing	Analyzed	Committing	Completed	Failed	Retried	Manually Completed
New	✓	☁	✓	✓	✓	✓	✓	✓	✓	✗	✗
Requested	✗	✓	☁	☁	☁	☁	☁	☁	☁	✗	✗

Retried	✗	✗	✗	✗	✗	✗	✗	✗	✗	✗	✗
Manually Completed	✗	✗	✗	✗	✗	✗	✗	✗	✗	✗	✗

State Values for Managing Provisioning Failures

The `state` value changes to `Failed` for several reasons, such as network outages, session timeouts, permissions issues, and record locks. The `Failed` state can transition to either `Retried` or `Manually Completed` to indicate what action was taken to address the failure. Actions can include correcting the root cause of the failure and requesting that the provisioning engine retry the UPR. Or, it can be completing the action against the target manually. Each UPR is an independent transaction and it's possible the retry causes a failure with a different root cause. So it's hard to distinguish failed events that you addressed from the ones that require more action.

If you tried to correct the cause of the failure and requested the provisioning engine to retry the UPR, you can mark the failed UPR `Retried`. Or, if the action against the target was completed manually, you can mark it `Manually Completed`.

When a retry event is created, the failed UPR is cloned, and resubmitted. The `ParentID` field contains a lookup to the failed UPR to use to clone the new UPR. The `Retry Count` field contains the number of retry attempts that were performed on a UPR. With the `Retry Count` field, you can add custom business logic like "Retry 5 times then stop and notify your admin."

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

UserProvisioningRequestOwnerSharingRule (API version 34.0)
: Sharing rules are available for the object.

UserProvisioningRequestShare (API version 34.0)
: Sharing is available for the object.

UserRecordAccess

Represents a user's access to a set of records. This object is read only and is available in API version 24.0 and later. This object doesn't consider whether a user's access is blocked by a restriction rule.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
`HasAllAccess`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether a user can share the record.
`HasDeleteAccess`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether a user has delete access to the record (`true`) or not (`false`).
`HasEditAccess`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether a user has edit access to the record (`true`) or not (`false`).
`HasTransferAccess`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether a user has transfer access to the record (`true`) or not (`false`).
`HasReadAccess`	**Type** boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort **Description** Indicates whether a user has read access to the record (`true`) or not (`false`).
`MaxAccessLevel`	**Type** picklist **Properties** Group, Nillable, Restricted picklist, Sort **Description** Indicates a user's maximum level of access to a record. Valid values are: • `None` • `Read` • `Edit` • `Delete` • `Transfer` • `All`
`RecordId`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** ID of the record.
`UserId`	**Type** reference **Properties** Filter, Group **Description** ID of the user.

Usage

Use this object to query a user's access to records. You can only query records of objects listed on the Sharing Settings Setup page. You can't create, delete, or update any records using this object.

Note: UserRecordAccess doesn't consider whether a user's access is blocked due to a restriction rule. If a user's access is blocked even though query results state that they should have access, check to see if a restriction rule on the object prevents the user's access.

Up to 200 record IDs can be queried. You can include an `ORDER BY` clause for any field that is being selected in the query.

The following sample query returns the records, whether the queried user has read and transfer access to each record, and the user's maximum access level to each record.

```
SELECT RecordId, HasReadAccess, HasTransferAccess, MaxAccessLevel
     FROM UserRecordAccess
     WHERE UserId = [single ID]
     AND RecordId = [single ID]      //or Record IN [list of IDs]
```

The following query returns the records to which a queried user has read access.

```
SELECT RecordId
     FROM UserRecordAccess
     WHERE UserId = [single ID]
     AND RecordId = [single ID]      //or Record IN [list of IDs]
     AND HasReadAccess = true
```

Using API version 30.0 and later, UserRecordAccess is a foreign key on the records. You can't filter by or provide the `UserId` or `RecordId` fields when using this object as a lookup or foreign key. The previous sample queries can be run as:

```
SELECT Id, Name, UserRecordAccess.HasReadAccess, UserRecordAccess.HasTransferAccess,
UserRecordAccess.MaxAccessLevel
      FROM Account
```

```
SELECT Id, Name, UserRecordAccess.HasReadAccess
      FROM Account
```

SOQL restrictions:

- When the running user is querying a user's access to a set of records, records that the running user doesn't have read access to are filtered out of the results.
- When filtering by `UserId` and `RecordId` only, you must use `SELECT RecordId` and optionally one or more of the access level fields:`HasReadAccess`, `HasEditAccess`, `HasDeleteAccess`, `HasTransferAccess`, and `HasAllAccess`. You can include `MaxAccessLevel`.
- When filtering by `UserId`, `RecordId`, and an access level field, you must use `SELECT RecordId` only.

SEE ALSO:

Developer Guide: Restriction Rules

UserRole

Represents a user role in your organization.

Note: This object was called "Role" in previous versions of the API documentation.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users with the View Roles and Role Hierarchy permission can access this object, and only users with the Manage Roles permission can edit this object.

Fields

Field	Details
`CaseAccessForAccountOwner`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The case access level for the account owner.
`ContactAccessForAccountOwner`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The contact access level for the account owner. Note: When `DefaultContactAccess` is set to `Controlled by Parent`, you can't create or update this field.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Role Name** in the user interface. This field is available in API version 24.0 and later. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.

Field	Details
ForecastUserId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the forecast manager associated with this role. Label is **User ID**.
IsPartner	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the user role is a partner who has access to the partner portal (`true`) or not (`false`). This field is not available for release 9.0 and later. Instead, use `PortalType` with the value `Partner`.
MayForecastManagerShare	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the forecast manager can manually share their own forecast.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. Name of the role. Corresponds to **Label** on the user interface.
OpportunityAccessForAccountOwner	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. The opportunity access level for the account owner. Note that you can't set a user role with an opportunity access less than that specified in organization-wide defaults.
ParentRoleId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the parent role.
`PortalAccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the role's associated portal account. This field is read-only.
`PortalAccountOwnerId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the role's associated portal account's owner. This field is read-only.
`PortalRole`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The portal role: Executive, Manager, User, or PersonAccount.
`PortalType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** This value indicates the type of portal for the role: • None: Salesforce application role. • CustomerPortal: Customer portal role. • Partner: partner portal role. The field `IsPartner` used in release 8.0 will map to this value. This field replaces `IsPartner` beginning with release 9.0.
`RollupDescription`	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Description of the forecast rollup. Label is **Description**.

Usage

Use this object to query the set of currently configured user roles in your organization. Use it in your client application to obtain valid UserRole IDs to use when querying or modifying a User record.

Users with the View Roles and Role Hierarchy permission can query or describe this object. If your client application logs in with the "Manage Users" permission, it can query, create, update, or delete UserRole records.

Note: You can't update any field for a portal role.

For example, the following code finds all roles that are not assigned to any users.

```
SELECT Id, Name, DeveloperName
FROM UserRole
WHERE Id NOT IN (SELECT UserRoleId
                 FROM User
                 WHERE UserRoleId !='000000000000000')
```

SEE ALSO:

Overview of Salesforce Objects and Fields

UserServicePresence

Represents a presence user's real-time presence status. This object is available in API version 32.0 and later.

Supported Calls

`delete()`, `query()`, `getDeleted()`, `getUpdated()`, `retrieve()`, `undelete()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

Fields

Field	Details
`AtCapacityDuration`	**Type** int

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The duration that the user is at full capacity. This field is updated when the agent's capacity changes, such as when the agent is assigned, declines, or closes a work item. Available in API versions 34.0 and later.
`AverageCapacity`	**Type** double **Properties** Filter, Nillable, Sort **Description** The user's average capacity. This field is updated when the agent's capacity changes, such as when the agent is assigned, declines, or closes a work item. Available in API versions 34.0 and later.
`ConfiguredCapacity`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The user's total configured primary capacity.
`ConfiguredInterruptCapacity`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The user's total configured interruptible capacity. Available in version 57.0 and later when the Interruptible Capacity feature is enabled.
`IdleDuration`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The duration that the user is idle. This field is updated when the agent's capacity changes, such as when the agent is assigned, declines, or closes a work item. Available in API versions 34.0 and later.
`IsAway`	**Type** boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort **Description** Indicates whether the user's status is `Away`. The default value is `false`.
`IsCurrentState`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether a presence status is the user's current state. If `true`, the agent is in that presence status. Available in API versions 34.0 and later. The default value is `false`.
`Name`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** An automatically generated ID number that identifies the record.
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the owner of the `UserServicePresence` entity. For external routing, allows the entity to be used in the Streaming API to listen to events whenever a `UserServicePresence` record is created, modified, or deleted.
`ServicePresenceStatusId`	**Type** reference **Properties** Create, Filter, Nillable, Sort, Update **Description** The ID of the presence status that's associated with the presence user that's specified by the `UserId`.
`StatusDuration`	**Type** int

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The duration of the user service presence status. This field is set only when the current user service presence status ends, such as when the agent changes to another presence status or logs out. Available in API versions 34.0 and later. This field is a calculated field: StatusEndDate - StatusStartDate.
`StatusEndDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The end date of the user service presence status. This field is set only when the current user service presence status ends, such as when the agent changes to another presence status or logs out. Available in API versions 34.0 and later.
`StatusStartDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The start date of the user service presence status. Available in API versions 34.0 and later.
`UserId`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the Omni-Channel user.

Usage

Apex triggers aren't supported with `UserServicePresence`.

In API version 41.0 or later, `UserServicePresence` records can be deleted programmatically. The Customize Application permission is required.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

UserServicePresenceOwnerSharingRule
Sharing rules are available for the object.

UserServicePresenceShare
Sharing is available for the object.

UserShare

Represents a sharing entry on a user record. This object is available in API version 26.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only standard users or users with the Customize Application permission can access this object.

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field	Details
`IsActive`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Read-only. Indicates whether the User has access to log in (`true`) or not (`false`). You can modify a User's active status from the user interface or via the API.
`RowCause`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited. Possible values include: • `Manual`—The User or Group has access to the user record because a User with "All" access manually shared the User with them. • `Rule`—The User or Group has access to the user record via a User sharing rule. • `GuestRule`—The User or Group has access via a User guest user sharing rule. • `LpuImplicit`—The User has access to records owned by high-volume Experience Cloud site users via a share group.
`UserAccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Level of access that the User or Group has to the specified user. The specified user is denoted by the `UserId`. The possible values are: • `Read` • `Edit` This field must be set to an access level that is at least equal to the organization's default `UserAccessLevel`. `UserAccessLevel` can be updated only if `RowCause` is set to `Manual Sharing`.
`UserId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the User being shared. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

Field	Details
UserOrGroupId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the User or Group that has been given access to the User. This field can't be updated. This is a polymorphic relationship field. **Relationship Name** UserOrGroup **Relationship Type** Lookup **Refers To** Group, User

Usage

This object allows you to determine which users and groups can view or edit User records owned by other users.

UserTeamMember

Represents a single User on the default opportunity team of another User.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- This object is available only in organizations that have enabled the team selling functionality.
- Customer Portal users can't access this object.

Fields

Field	Details
OpportunityAccessLevel	**Type** picklist

Field	Details
	Properties Create, Filter, Restricted picklist, Update **Description** Required. Level of access that the team member has to opportunities for which the user has added his or her default opportunity team. The possible values are: • `Read` • `Edit` This field must be set to an access level that is higher than the organization's default access level for opportunities.
`OwnerId`	**Type** reference **Properties** Create, Filter **Description** Required. ID of the User who owns the default opportunity team. This field can't be updated.
`TeamMemberRole`	**Type** picklist **Properties** Create, Filter, Nillable, Update **Description** Role that the team member has on opportunities for which the User has added his or her default opportunity team. The valid values are set by the organization's administrator in the Opportunity Team Roles picklist. Label is **Team Role**.
`UserId`	**Type** reference **Properties** Create, Filter **Description** Required. ID of the User who is a member of the default opportunity team. This field can't be updated.

Usage

If you attempt to create a record that matches an existing record, the create request updates any modified fields and returns the existing record.

Users can set up their default opportunity team to include other users that typically work with them on opportunities.

SEE ALSO:

OpportunityTeamMember

UserTerritory

Represents a User who has been assigned to a Territory.

Note: The original territory management feature is now unavailable. For more information, see The Original Territory Management Module Will Be Retired in the Summer '21 Release. The information in this topic applies to the original territory management feature only, and not to Enterprise Territory Management.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

- Only available if territory management has been enabled for your organization.
- As of Spring '20 and later, only users with the View Setup and Configuration permission can access this object, and only users with the Manage Territories permission can edit this object.

Fields

Field	Details
`IsActive`	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the user is active in the given territory (`true`), or inactive in the given territory (`false`): • Users who are active in a territory are explicitly assigned to the territory and can have open opportunities, closed opportunities, or no opportunities associated with that territory. • Users who are inactive in a territory are not explicitly assigned to the territory, but own an open or closed opportunity that is associated with the territory. For example, a user may have been transferred out of a territory, but still own opportunities in his or her old territory. Until a user is deleted from a territory (not simply removed from the territory), the record is not returned in a `getDeleted()` call.

Field	Details
IsDeleted	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
TerritoryId	**Type** reference **Properties** Create, Filter **Description** ID of the Territory to which the user has been assigned. This field is required when creating a record in API version 20.0 and later.
UserId	**Type** reference **Properties** Create, Filter **Description** ID of the user. This field is required when creating a record.

Usage

If a user is inactive in a territory, and the opportunities they own that are associated with the territory are all closed, the user is not returned in the Territories related list on the User page in Setup. Regardless of whether the user is inactive or the opportunities are closed, the user is returned in the Quotas related list.

SEE ALSO:

Territory

AccountTerritoryAssignmentRule

AccountTerritoryAssignmentRuleItem

UserTerritory2Association

Represents an association (by assignment) between a territory and a user record. Available only if Enterprise Territory Management has been enabled for your organization.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only standard and partner users can access this object. If a territory model is in `Active` state, any standard or partner user can view that model, including its territories and assignment rules. For territories in an active model, any standard or partner user can view assigned records and assigned users subject to your org's sharing settings. Users cannot view territory models in other states (such as `Planning` or `Archived`).

Fields

Field Name	Details
IsActive	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the user is active (`true`) or inactive (`false`) in the given territory.
RoleInTerritory2	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The role of the user in a territory. Possible values are: Owner, Administrator, Sales Rep. Label is `Role in Territory`.
Territory2Id	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the territory that the user is assigned to.
UserId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the user who is assigned to the territory.

UserWorkList

Represents a list of work items in the My Feed tab for Sales Engagement users.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Whether the work list is active or not.
`ListType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The type of list, such as a call or email.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the work list.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the list.

UserWorkListItem

Represents an individual work item in the My Feed tab for Sales Engagement users.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`PriorityOrder`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The order of the item in the list.
`RelatedRecordId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the related record.
`UserWorkListId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the related work list.

VendorCallCenterStatusMap

Stores a mapping between a call center vendor agent status and a Salesforce presence status for an associated call center. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, Omni-Channel and Service Cloud Voice must be enabled.

Fields

Field	Details
CallCenterId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Reference to a call center. This is a relationship field. **Relationship Name** CallCenter **Relationship Type** Lookup **Refers To** CallCenter
ExternalStatus	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Status value to set for the call center vendor agent.
ServicePresenceStatusId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Reference to a presence status that can be assigned to a service channel. This is a relationship field. **Relationship Name** ServicePresenceStatus **Relationship Type** Lookup **Refers To** ServicePresenceStatus

VerificationHistory

Represents the past six months of your org users' attempts to verify their identity. This object is available in API version 36.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Special Access Rules

Only users with Manage Users permission can access this object.

Fields

Field Name	Details
`Activity`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The action the user attempted that requires identity verification. The label is User Activity. Available values are: • `AccessReports`—The user attempted to access reports or dashboards. • `Apex`—The user attempted to access a Salesforce resource with a verification Apex method. • `ChangeEmail`—The user attempted to change an email address. • `ConnectSms`—The user attempted to connect a phone number. • `ConnectToopher`—The user attempted to connect Salesforce Authenticator. • `ConnectTotp`—The user attempted to connect a one-time password generator. • `ConnectU2F`—The user attempted to register a U2F security key. • `ConnectWebAuth`—The user attempted to register a built-in authenticator. • `ConnectedApp`—The user attempted to access a connected app. • `EnableLL`—The user attempted to enroll in Lightning Login. • `ExportPrintReports`—The user attempted to export or print reports or dashboards. • `ExternalClientApp`— The user attempted to access an external client app. • `ExtraVerification`—Reserved for future use.

Field Name	Details
	• `ListView`—The user attempted to access a list view. • `Login`—The user attempted to log in. • `Registration`—Reserved for future use. • `TempCode`—The user attempted to generate a temporary verification code.
`EventGroup`	**Type** int **Properties** Filter, Group, Sort **Description** ID of the verification attempt. Verification can involve several attempts and use different verification methods. For example, in a user's session, a user enters an invalid verification code (first attempt). The user then enters the correct code and successfully verifies identity (second attempt). Both attempts are part of a single verification and, therefore, have the same ID. The label is Verification Attempt.
`LoginGeoId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The 18-character ID for the record of the geographic location of the user for a successful or unsuccessful identity verification attempt. Due to the nature of geolocation technology, the accuracy of geolocation fields (for example, country, city, postal code) can vary. This is a relationship field. **Relationship Name** LoginGeo **Relationship Type** Lookup **Refers To** LoginGeo
`LoginHistoryId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID for the record of the user's successful or unsuccessful login attempt. This is a relationship field. **Relationship Name** LoginHistory

Field Name	Details
	Relationship Type Lookup **Refers To** LoginHistory
`Policy`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The identity verification security policy or setting. The label is Triggered By. Available values are: • `CustomApex`—Identity verification made by a verification Apex method. • `DeviceActivation`—Identity verification required for users logging in from an unrecognized device or new IP address. This verification is part of Salesforce's risk-based authentication. • `EnableLightningLogin`—Identity verification required for users enrolling in Lightning Login. This verification is triggered when the user attempts to enroll. Users are eligible to enroll if they have the Lightning Login User user permission and the org has enabled Allow Lightning Login in Session Settings. • `ExtraVerification`—Reserved for future use. • `HighAssurance`—High assurance session required for resource access. This verification is triggered when the user tries to access a resource, such as a connected app, report, or dashboard, that requires a high-assurance session level. • `LightningLogin`—Identity verification required for internal users logging in via Lightning Login. This verification is triggered when the enrolled user attempts to log in. Users are eligible to log in if they have the Lightning Login User user permission and have successfully enrolled in Lightning Login. Also, from Session Settings in Setup, Allow Lightning Login must be enabled. • `PageAccess`—Identity verification required for users attempting to perform an action, such as changing an email address or adding a verification method for multi-factor authentication (MFA). • `PasswordlessLogin`—Identity verification required for customers attempting to log in to an Experience Cloud site that is set up for passwordless login. The admin controls which registered verification methods can be used, for example, email, SMS, Salesforce Authenticator, or TOTP. • `ProfilePolicy`—Session security level required at login. This verification is triggered by the Session security level required at login setting on the user's profile. • `TwoFactorAuthentication`—Multi-factor authentication (formerly called two-factor authentication) required at login. This verification is triggered

Field Name	Details
	by the Multi-Factor Authentication for User Interface Logins user permission assigned to a custom profile. Or the user permission is included in a permission set that is assigned to a user.
`Remarks`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The text the user sees on the page or in Salesforce Authenticator when prompted to verify identity. For example, if identity verification is required for a user's login, the user sees "You're trying to Log In to Salesforce." In this case, the Remarks value is "Log In to Salesforce." But if the Activity value is Apex, the Remarks value is a custom description passed by an Apex method. If the user is verifying identity using Salesforce Authenticator, the custom description also appears in the app. If the custom description isn't specified, the value is the name of the Apex method. The label is Activity Message.
`ResourceId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** If the `Activity` value is ConnectedApp, the `ResourceId` value is the ID of the connected app. The label is Connected App ID. This is a relationship field. **Relationship Name** Resource **Relationship Type** Lookup **Refers To** ConnectedApplication
`SourceIp`	**Type** string **Properties** Filter, Group, Sort **Description** The IP address of the machine from which the user attempted the action that requires identity verification. For example, the IP address of the machine from where the user tried to log in or access reports. If it's a non-login action that required verification, the IP address can be different from the address from where the user logged in. This address can be an IPv4 or IPv6 address.

Field Name	Details
`Status`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The status of the identity verification attempt. Available values are: • `AutomatedSuccess`—Salesforce Authenticator approved the request for access because the request came from a trusted location. After users enable location services in Salesforce Authenticator, they can designate trusted locations. When a user trusts a location for a particular activity, such as logging in from a recognized device, that activity is approved from the trusted location for as long as the location is trusted. • `Denied`—The user denied the approval request in the authenticator app, such as Salesforce Authenticator. • `FailedGeneralError`—An error caused by something other than an invalid verification code, too many verification attempts, or authenticator app connectivity. • `FailedInvalidCode`—The user entered an invalid verification code. • `FailedInvalidPassword`—The user entered an invalid password. • `FailedPasswordLockout`—The user attempted to enter a password too many times. • `FailedTooManyAttempts`—The user attempted to verify identity too many times. For example, the user entered an invalid verification code repeatedly. • `Initiated`—Salesforce initiated identity verification but hasn't yet challenged the user. • `InProgress`—Salesforce challenged the user to verify identity and is waiting for the user to respond or for Salesforce Authenticator to send an automated response. • `RecoverableError`—Salesforce can't reach the authenticator app to verify identity, but it continues to retry. • `ReportedDenied`—The user denied the approval request in the authenticator app, such as Salesforce Authenticator, and also flagged the approval request to report to an administrator. • Succeeded—The user's identity was verified.
`UserId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the user verifying identity.

Field Name	Details
	This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User
`VerificationMethod`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The method by which the user attempted to verify identity in the verification event. The label is Method. Available values are: • `BuiltInAuthenticator`—A built-in authenticator set up on the user's device, such as Touch ID or Windows Hello, generated the required credentials.This value is available in API version 53.0 and later. • `Email`—Salesforce sent an email with a verification code to the address associated with the user's account. • `EnableLL`—Salesforce Authenticator sent a notification to the user's mobile device to enroll in Lightning Login. This value is available in API version 38.0 and later. • `LL`—Salesforce Authenticator sent a notification to the user's mobile device to approve login via Lightning Login. This value is available in API version 38.0 and later. • `SalesforceAuthenticator`—Salesforce Authenticator sent a notification to the user's mobile device to verify account activity. • `Sms`—Salesforce sent a text message with a verification code to the user's mobile device. SMS messaging requires a Salesforce add-on license for Identity Verification Credits. • `TempCode`—A Salesforce admin or a user with the Manage Multi-Factor Authentication in User Interface permission generated a temporary verification code for the user. This value is available in API version 37.0 and later. • `Totp`—An authenticator app generated a time-based, one-time password (TOTP) on the user's mobile device. • `U2F`—A U2F security key generated required credentials for the user. This value is available in API version 38.0 and later.
`VerificationTime`	**Type** dateTime

Field Name	Details
	Properties Filter, Sort **Description** The date and time of the identity verification attempt, for example, `7/19/2025, 3:19:13 PM PDT`. The time zone is based on GMT. The label is Time.

Usage

Here are two examples queries that you can perform on VerificationHistory.

Query	String
Show verification history for a user's login record	`SELECT Activity, EventGroup, Policy, Remarks, Status, UserId,VerificationMethod, VerificationTime FROM VerificationHistory WHERE LoginHistoryId = '0YaD000#########'`
Get detailed geographic location information for a user's verification attempt	`SELECT City, CountryIso, Latitude, Longitude, PostalCode FROM LoginGeo WHERE LoginGeoId = '0LE###############'`

VisualforceAccessMetrics

Represents summary statistics for Visualforce pages.

Supported Calls

`count()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, to access VisualforceAccessMetrics, users must have the Customize Application permission.

Fields

Field	Details
`ApexPageId`	**Type** reference **Properties** Aggregate, Filter, Group, Sort

Field	Details
	Description The ID of the Visualforce page. This is a relationship field. **Relationship Name** ApexPage **Relationship Type** Lookup **Refers To** ApexPage
`ProfileId`	**Type** reference **Properties** Aggregate, Filter, Group, Nillable, Sort **Description** The ID of the use who viewed the Visualforce page. This is a relationship field. **Relationship Name** Profile **Relationship Type** Lookup **Refers To** Profile
`DailyPageViewCount`	**Type** int **Properties** Aggregate, Filter, Group, Nillable, Sort **Description** The number of views received by the specified Visualforce page.
`MetricsDate`	**Type** date **Properties** Aggregate, Filter, Group, Sort **Description** The date the metrics are queried.
`LogDate`	**Type** date

Field	Details
	Properties Aggregate, Filter, Group, Nillable, Sort **Description** The most recent page access date.

Usage

Use this object to query information on the Visualforce pages in your org.

```
SELECT ApexPageId, DailyPageViewCount, Id, ProfileId, MetricsDate, LogDate FROM
VisualforceAccessMetrics
```

VideoCall

Represents a video call.

One `VideoCall` record can be related to several `VideoCallRecording` records — for example, a video call can have several video recordings and a transcript. As well, one video call record can be associated with several video call participant records.

This object is available in API version 51.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

Fields

Field	Details
`Description`	**Type** textarea **Properties** Nillable **Description** Description of the video call. Typically, the sales rep enters the description.
`DurationInSeconds`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The video call duration in seconds.

Field	Details
EndDateTime	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Time the video call ended, in universal time coordinated (UTC).
EventId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the event record associated with this video call. Reserved for future use. This is a relationship field. **Relationship Name** Event **Relationship Type** Lookup **Refers To** Event
ExternalId	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The ID of the video call, sent by the video call provider.
HostId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user who hosted the meeting. This is a relationship field. **Relationship Name** Host **Relationship Type** Lookup **Refers To** User

Field	Details
`IntelligenceScore`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The Einstein Intelligence score for the video call. Video calls with higher scores are likely to contain more relevant information. For example, video calls where product names and competitor names are mentioned tend to have a higher score.
`IsCallCoachingIncluded`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether Einstein Conversation Insights is available for this org and this user `(true)` or not `(false)`.
`IsDiarizationOptIn`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether optimal speaker separation (diarization) is opted in `(true)` or not `(false)` for the call.
`IsRecorded`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the video call was recorded `(true)` or not `(false)`.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime

Field	Details
	Properties Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is `null`, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the video call. Typically entered by the sales rep.
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort, Update **Description** The ID of the user who created the video call. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`RelatedRecordId`	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** The ID of the account or opportunity related to this video call. This is a polymorphic relationship field. **Relationship Name** RelatedRecord **Relationship Type** Lookup **Refers To** Account, Opportunity

Field	Details
`StartDateTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the video call started, in universal time coordinated (UTC).
`TranscribedLanguage`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The language that is transcribed for this video call.
`VendorMeetingKey`	**Type** string **Properties** Filter, Group, Sort **Description** The vendor's ID for this video call.
`VendorMeetingUuid`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The vendor's unique identifier for this video call.
`VendorName`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The name of the vendor providing the video call software. Possible values are: • `ZOOM`

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

VideoCallChangeEvent (API version 51.0)
Change events are available for the object.

SEE ALSO:
VideoCallParticipant
VideoCallRecording

VideoCallParticipant

Represents a participant in a video call.

Participant information can come from the video call provider (for example, Zoom), or Salesforce.

This object is available in API version 51.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`

Fields

Field	Details
`Email`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The email address of the participant, from the video call provider.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is `null`, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The participant's name or phone number. This information is provided by the video call provider.
`RelatedPersonId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The Salesforce ID of the user, lead, or contact record for this participant. This is a polymorphic relationship field. **Relationship Name** RelatedPerson **Relationship Type** Lookup **Refers To** Contact, Lead, User
`VideoCallId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the video call record. This is a relationship field. **Relationship Name** VideoCall **Relationship Type** Lookup

Field	Details
	Refers To VideoCall

SEE ALSO:

VideoCall

VideoCallRecording

VideoCallRecording

Represents a recording from a video call, such as a video recording, a voice recording, or a transcript.

Video call recordings aren't saved in Salesforce.

This object is available in API version 51.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`

Fields

Field	Details
`DurationInSeconds`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The video call duration in seconds, not the recording duration.
`EndDateTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Time the call ended, in universal time coordinated (UTC).
`ExternalRecordingKey`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort

Field	Details
	Description The ID of the video call recording, from the recording provider. For example, the Zoom ID of the recording. This value is unique.
`FileSizeInByte`	**Type** long **Properties** Filter, Group, Nillable, Sort **Description** The size of the video call recording, in bytes.
`FileType`	**Type** string **Properties** Filter, Group, Sort **Description** The file type of the video call recording. Possible values are: • `MP4`—Video file • `M4A`—Audio-only file • `TIMELINE`—Time stamp file in JSON format. • `TRANSCRIPT`—Transcription files in VTT format. • `CHAT`—Text file containing chat messages from the video call. • `CC`—File containing closed captions of the video call recording. File is in VTT format.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is `null`, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.

Field	Details
Name	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The name of the video call recording, entered by the sales rep.
StartDateTime	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The start time of the video call recording.
VideoCallRecordId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the VideoCall record (the parent record). This is a relationship field. **Relationship Name** VideoCallRecord **Relationship Type** Lookup **Refers To** VideoCall

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

VideoCallRecordingChangeEvent (API version 51.0)
Change events are available for the object.

VoiceCall

Represents a call in Service Cloud Voice or Sales Dialer.

To manage VoiceCall records when using Service Cloud Voice, see the Telephony Integration REST API.

The fields in the VoiceCall object apply to the Sales Dialer and Service Cloud Voice features unless otherwise stated in the field description. For example, if a field applies to just one feature or is applied differently by feature, this is stated in the field description.

In addition to the standard fields listed in this page, you can define up to 50 custom fields for the VoiceCall object. As an alternative to using custom fields, consider creating a custom object with lookup fields that look up to the VoiceCall object.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Fields

Field Name	Details
`ActivityId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The unique ID of the activity record. Available in API version 48.0 and later. This is a relationship field. **Relationship Name** Activity **Relationship Type** Lookup **Refers To** Task
`CallAcceptDateTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort **Description** If Service Cloud Voice is enabled, this field represents the date and time (in UTC) when an agent accepts the call. Available in API version 48.0 and later.
`CallCenterId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort

Field Name	Details
	Description If Service Cloud Voice is enabled, this field represents the unique ID of the call center (CallCenter `Id`) where the activity took place. Available in API version 48.0 and later. This is a relationship field.
`CallConnectDateTime`	**Type** datetime **Properties** Create, Filter, Nillable, Sort **Description** For Sales Dialer, this field represents the date and time (in UTC) when the call was connected.
`CallDisposition`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The status of the phone call. For Sales Dialer, possible values are: • `in progress` • `busy` • `failed` For Service Cloud Voice, possible values are: • `new`—The voice call record has been created. • `in-progress`—The call has been accepted (or, for outbound messages, initiated) by an agent. • `completed`—The call has ended. This includes calls that are transferred. (If a call is transferred, another voice call record is created to track the state of the transferred call.) If After Conversation Work (ACW) is enabled, that work begins after the call completes.
`CallDurationInSeconds`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** The total duration (in seconds) of the call.

Field Name	Details
`CallEndDateTime`	**Type** dateTime **Properties** Create, Filter, Sort **Description** The date and time (in UTC) when the call ended.
`CallerId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** For Service Cloud Voice, this field represents the unique ID of the participant who initiated the call. If “Match Callers to End User Records” is enabled in Lightning Experience, the value is null and the `EndUserId` field is used instead to determine the end user associated with this voice call. Available in API version 48.0 and later. This is a relationship field. **Relationship Name** Caller **Relationship Type** Lookup **Refer To** ConversationParticipant
`CallerIdType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** For Sales Dialer, this field represents the number displayed for outbound calls. Possible values are: • `VendorLine`—User. • `CompanyNumber`—Company. • `LocalPresence`—Local Presence. • `CustomCallerId`—Custom Caller ID. Available in API version 41.0 and later.
`CallOrigin`	**Type** picklist

Field Name	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Information about how this call originated. For Service Cloud Voice, possible values are: • `Preview`—Preview dialer. • `Progressive`—Progressive dialer. • `Voicemail`—Voicemail call. Available in API version 56.0 and later.
`CallQueuedDateTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort **Description** If Service Cloud Voice is enabled, this field represents the date and time (in UTC) when the call was added to a queue to be routed to an agent. Available in API version 48.0 and later.
`CallRecordingId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** For Service Cloud Voice, this field represents the unique ID of the call recording for the voice call. Available in API version 41.0 and later. This is a relationship field. **Relationship Name** CallRecording **Relationship Type** Lookup **Refers To** VoiceCallRecording
`CallResolution`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The resolution outcome of the call. The default value is 'Resolved', meaning the call has been resolved. Available in API version 48.0 and later.

Field Name	Details
CallStartDateTime	**Type** dateTime **Properties** Create, Filter, Sort **Description** The date and time (UTC) when the call started.
CallType	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The types of call. For Sales Dialer, possible values are: • `Bridge` • `Coach` • `Inbound` • `Internal` • `Outbound` For Service Cloud Voice, possible values are: • `Callback` • `Inbound` • `InternalCall` • `Outbound` • `Transfer`
CoachingDurationInSeconds	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** For Sales Dialer, this field represents the total duration (in seconds) of the coaching session. This field only appears if call coaching is enabled. Available in API version 41.0 and later.
ConferenceKey	**Type** string **Properties** Create, Filter, Group, Nillable, Sort

Field Name	Details
	Description For Sales Dialer, this field represents the related conference key. This field is only available if call monitoring is enabled. Available in API version 41.0 and later.
ConversationId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** If Service Cloud Voice is enabled, this field represents the unique ID of the conversation. This field is only available if call monitoring is enabled. Available in API version 48.0 and later. This is a relationship field. **Relationship Name** Conversation **Relationship Type** Lookup **Refers To** Conversation
CurrencyCode	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** For Sales Dialer, this field represents the ISO currency code used to bill the call.
CustomerHoldDuration	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** If Service Cloud Voice is enabled, this field represents the total duration (in seconds) of all the holds that occurred during the voice call. Available in API version 49.0 and later.
Description	**Type** textarea **Properties** Create, Nillable, Update

Field Name	Details
	Description If Service Cloud Voice is enabled, this field represents a text field where the agent can enter a summary of the call. Available in API version 48.0 and later.
`DisconnectReason`	**Type** string **Properties** Create, Filter, Group, Nillable **Description** If Service Cloud Voice is enabled, this field represents the reason why the voice call was disconnected. The reason is provided by the partner telephony. For Amazon Connect instances, this value is automatically populated through the Contact Trace Record (CTR) if you have Contact Center version 13.0 or later. See DisconnectReason in the Amazon Connect contact records data model page for a list of possible reasons why a voice call may be disconnected. For all other partner telephony models, configure this feature through the `disconnectReason` parameter in the Update a Voice Call Record Telephony Integration API. Available in API version 59.0 and later.
`EndUserId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** For Service Cloud Voice, if "Match Callers to End User Records" is enabled in Lightning Experience, this field represents the unique ID of the messaging end user (MessagingEndUser `Id`) associated with this voice call. Available in API version 53.0 and later. This is a relationship field. **Relationship Name** EndUser **Relationship Type** Lookup **Refers To** MessagingEndUser
`FromPhoneNumber`	**Type** phone **Properties** Create, Filter, Group, Sort **Description** The phone number of the user who initiated the call.

Field Name	Details
IsDiarizationOptIn	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether optimal speaker separation (diarization) is opted in `(true)` or not `(false)` for the call.
IsRecorded	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Indicates whether a Voice Call Recording record was created ('true') or not ('false') for this voice call. The default value is 'false'. Available in API version 44.0 and later.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time (in UTC) when the current user last viewed a record related to this voice call.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time (in UTC) when the current user last viewed this voice call. If this record was only referenced (`LastReferencedDate`), this value will be null.
LongestHoldDuration	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** If Service Cloud Voice is enabled, this field represents the longest hold duration (in seconds) that occurred during the call. Available in API version 49.0 and later.

Field Name	Details
MediaProviderId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The unique ID of the related media provider. Available in API version 49.0 and later. This is a relationship field. **Relationship Name** MediaProvider **Relationship Type** Lookup **Refers To** CallCoachingMediaProvider
NextCallId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** If Service Cloud Voice is enabled, this field represents the unique ID of the next call if the call was transferred to another agent. If a transfer or callback didn't occur, this value will be null. Available in API version 48.0 and later. This is a relationship field. **Relationship Name** NextCall **Relationship Type** Lookup **Refers To** VoiceCall
NumberOfHolds	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** If Service Cloud Voice is enabled, this field represents the number of times the customer was put on hold. Available in API version 49.0 and later.
OwnerId	**Type** reference

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** The unique ID of the user who owns the voice call record. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
PreviousCallId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** If Service Cloud Voice is enabled, this field represents the unique ID of the previous call if the call was transferred from another agent. If a transfer or callback didn't occur, this value will be null. Available in API version 48.0 and later. This is a relationship field. **Relationship Name** PreviousCall **Relationship Type** Lookup **Refers To** VoiceCall
Price	**Type** double **Properties** Create, Filter, Nillable, Sort **Description** For Sales Dialer, this field represents the cost of the phone call.
QualityScore	**Type** double **Properties** Create, Filter, Nillable, Sort, Update

Field Name	Details
	Description If Service Cloud Voice is enabled, this field represents the value of the Mean Opinion Score (MOS) that measures voice call quality. This algorithm is based on packet loss percentage, average latency, and average jitter. Available in API version 53.0 and later.
`QueueName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** If Service Cloud Voice is enabled, this field represents the name of the agent queue. Available in API version 49.0 and later.
`RecipientId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** For Service Cloud Voice, this field represents the unique ID of the participant who received the call. If “Match Callers to End User Records” is enabled in Lightning Experience, this value will be null and the EndUserId field is used instead to determine the end user associated with this voice call. This is a relationship field. **Relationship Name** Recipient **Relationship Type** Lookup **Refers To** ConversationParticipant
`RecordyTypeId`	**Type** reference **Properties** Create, Filter, Nillable, Updates **Description** The ID of the voice call record type assigned to this voice call. If a record type isn't assigned to this voice call, the value is null. Available in API version 59.0 and later. This is a relationship field. **Relationship Name** RecordType

Field Name	Details
	Relationship Type Lookup **Refers To** RecordType
RelatedRecordId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The unique ID of the related record. This is a polymorphic relationship field. **Relationship Name** RelatedRecord **Relationship Type** Lookup **Refers To** Account, Case, Contact, Lead, Opportunity
SourceType	**Type** picklist **Properties** Create, Group, Nillable, Restricted picklist, Sort, Update **Description** The general purpose of the call. The permission sets assigned to the voice call owner determine the value. A call's source type controls which insights Einstein Conversation Insights applies during analysis. Possible values are: • Sales • Service Available in API version 52.0 and later.
ToPhoneNumber	**Type** phone **Properties** Create, Filter, Group, Sort **Description** The recipient of the phone call. For inbound, transfer, and callback calls, this value is the agent's number. For outbound calls, this value is the customer's number.

Field Name	Details
TranscribedLanguage	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The language that is transcribed for this voice call.
UserId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The unique ID of the Salesforce user who initiates an outbound call or accepts an inbound call. If no one takes the call, this value defaults to null. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User
VendorCallKey	**Type** string **Properties** Create, Filter, Group, Nillable, idLookup, Sort **Description** The unique ID of the child leg of the call that's provided by the Sales Dialer vendor or Service Cloud Voice telephony provider.
VendorParentCallKey	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** For Sales Dialer, this field represents the unique ID of the parent leg of the call that's provided by the Dialer vendor.
VendorType	**Type** picklist

Field Name	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** For Sales Dialer, this field represents the type of Dialer vendor. For Service Cloud Voice, this field is always set to 'ContactCenter'. Available in API version 41.0 and later.
`VoiceVendorLineId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** For Sales Dialer, this field represents the unique ID of the associated Dialer vendor line. This is a relationship field. **Relationship Name** VoiceVendorLine **Relationship Type** Lookup **Refers To** VoiceVendorLine

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

VoiceCallChangeEvent (Available in API version 48.0 and later)
Change events are available for the object.

VoiceCallFeed (Available in API version 50.0 and later.)
Feed tracking is available for the object.

VoiceCallOwnerSharingRule
Sharing rules are available for the object.

VoiceCallShare
Sharing is available for the object.

VoiceCallMetrics

Represents metrics for a VoiceCall lifecycle event, aggregated daily. This object is available in API version 56.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
`AverageSCVCallDuration`	**Type** double **Properties** Filter, Nillable, Sort **Description** The average call duration, measured in minutes, for a given day.
`AvgMessagesPerCall`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The average number of transcription messages per call for a given day.
`InboundCallsAgentsConnected`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of inbound calls where agents connect with callers for a given day.
`MaxMessagesPerCall`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of transcription messages for the call with the highest number of said messages for a given day.
`MaxSCVCallDuration`	**Type** double **Properties** Filter, Nillable, Sort **Description** The longest call duration, measured in minutes, for a given day.

Field	Details
MetricsDate	**Type** date **Properties** Filter, Group, Sort **Description** The date and time (in UTC) when the metric was gathered. For example, daily metrics jobs run at 12am local instance time (not UTC).
NumACWInitiated	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls where After Conversation Work (ACW) is initiated for a given day.
NumCallbackCallsCtrCompleted	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of callback calls where interactive voice response (IVR) data is fully and completely captured from a telephony provider for a given day.
NumInboundCallsCtrCompleted	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of inbound calls where interactive voice response (IVR) data is fully and completely captured from a telephony provider for a given day.
NumInboundIVRAbandonCalls	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of inbound calls where callers disconnected while waiting in the interactive voice response (IVR) system for a given day.
NumInboundQueueAbandonCalls	**Type** int

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The number of inbound calls where callers disconnected while waiting in the queue for a given day.
NumOutboundCallsCtrCompleted	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of outbound calls where interactive voice response (IVR) data is fully and completely captured from a telephony provider for a given day.
NumRecordedCalls	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls where the conversation between an agent and caller is recorded for a given day.
NumSCVCallbackCalls	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of callback calls for a given day.
NumSCVInboundCalls	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of inbound calls for a given day.
NumSCVOutboundCalls	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of outbound calls for a given day.

Field	Details
NumSCVTransferCalls	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of transfer calls for a given day.
NumTransferCallsCtrCompleted	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of transfer calls where interactive voice response (IVR) data is fully and completely captured from a telephony provider for a given day.
OutboundCallsAgentsConnected	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of outbound calls where an agent is connected with a caller for a given day.
TotalACWInboundMinutes	**Type** double **Properties** Filter, Nillable, Sort **Description** The total number of minutes agents spent in After Conversation Work (ACW) for inbound calls for a given day.
TotalACWOutboundMinutes	**Type** double **Properties** Filter, Nillable, Sort **Description** The total number of minutes agents spent in After Conversation Work (ACW) for outbound calls for a given day.
TotalAgentInboundMinutes	**Type** double **Properties** Filter, Nillable, Sort

Field	Details
	Description The total number of minutes agents spent talking to callers on inbound calls for a given day.
TotalHoldDurationMinutes	**Type** double **Properties** Filter, Nillable, Sort **Description** The number of minutes callers were put on hold for a given day.
TotalIVRInboundMinutes	**Type** double **Properties** Filter, Nillable, Sort **Description** The total number of minutes callers spent in the IVR system on inbound calls for a given day.
TotalMessages	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of transcription messages for a given day.
TotalOutboundMinutes	**Type** double **Properties** Filter, Nillable, Sort **Description** The total number of minutes agents spent talking to callers on outbound calls for a given day.
TotalQueueInboundMinutes	**Type** double **Properties** Filter, Nillable, Sort **Description** For inbound calls, the total number of minutes callers spent in the queue waiting for a given day.

VoiceCallList

Represents a prioritized list of numbers to call.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

As of Spring ’20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Whether the call list is active or not.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the call list.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the call list owner.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

VoiceCallListOwnerSharingRule
Sharing rules are available for the object.

VoiceCallListShare
Sharing is available for the object.

VoiceCallListItem

Represents a single phone number in a prioritized call list.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

As of Spring ’20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
`CallListId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the related call list.
`Ordinal`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The order of the item in the overall call list.
`RelatedRecordId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the related record.
`State`	**Type** picklist

Field Name	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update **Description** Whether the call list item is not called, called, or skipped.

VoiceCallQualityFeedback

Represents feedback given by a Sales Dialer user about the quality of a VoiceCall .

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field Name	Details
`FeedbackText`	**Type** textarea **Properties** Nillable **Description** The detailed feedback about a call left by a user.
`FeedbackType`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The feedback category (Call could not connect, Audio lagged, etc.) selected by a user.
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the user leaving the feedback.

Field Name	Details
VoiceCallId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the related VoiceCall.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

VoiceCallQualityFeedbackOwnerSharingRule
Sharing rules are available for the object.

VoiceCallQualityFeedbackShare
Sharing is available for the object.

VoiceCallRecording

Represents a call recording in Service Cloud Voice and Sales Dialer. Call recordings for Service Cloud Voice with Amazon Connect and for Service Cloud Voice with Partner Telephony from Amazon Connect are stored in S3 buckets on your Amazon Web Services (AWS) account and can be accessed via AWS. Call recordings for Sales Dialer are saved as files in Salesforce.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
DurationInSeconds	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The total length (in seconds) of the voice call recording.

Field Name	Details
	This value depends on which parameters are passed to the `PATCH /telephony/v1/voiceCalls/{CALL ID}` API. • If the totalRecordingDuration parameter is passed, then `DurationInSeconds = totalRecordingDuration`. • If the agentInteractionDuration and totalHoldDuration parameters are passed, then `DurationInSeconds = agentInteractionDuration + totalHoldDuration`. • If the agentInteractionDuration, totalHoldDuration, and totalRecordingDuration parameters are passed, then `DurationInSeconds = totalRecordingDuration`.
`IntelligenceScore`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The intelligence score of the recording.
`IsConsented`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Whether the call recording was indicated as consented or not.
`MediaContentId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the related media content, a ContentDocument. The record counts toward your org's file storage quota. This is a relationship field. **Relationship Name** MediaContent **Relationship Type** Lookup **Refers To** ContentDocument
`Name`	**Type** string

Field Name	Details
	Properties Create, Filter, Group, idLookup, Sort, Update **Description** The name of the call recording file.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner of the call recording. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
UploadDateTime	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time and date that the recording was uploaded.
VoiceCallId	**Type** reference **Properties** Filter, Group, Sort **Description** Required. The ID of the related phone call. The property `nillable` has been removed in API version 50.0 and later. This is a relationship field. **Relationship Name** VoiceCall **Relationship Type** Lookup **Refers To** VoiceCall

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

VoiceCallRecordingChangeEvent (API version 48.0)
Change events are available for the object.

VoiceCallRecordingOwnerSharingRule
Sharing rules are available for the object. Removed in API version 50.0 and later.

VoiceCallRecordingShare
Sharing is available for the object. Removed in API version 50.0 and later.

VoiceCoaching

Represents a call that is using call monitoring.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the manager monitoring the call.
`RelatedRecordId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the call list owner.
`TraineeId`	**Type** reference

Field Name	Details
	Properties Filter, Group, Sort, Unique **Description** The ID of the call list owner.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

VoiceCoachingOwnerSharingRule
Sharing rules are available for the object.

VoiceCoachingShare
Sharing is available for the object.

VoiceLocalPresenceNumber

Represents a phone number with the same area code as the person who's being called.

Supported Calls

`query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
`CountryCode`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The country code of the phone number.
`LastUsedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field Name	Details
	Description The date the phone number was last used.
`PhoneNumber`	**Type** phone **Properties** Filter, Group, Sort **Description** The local presence phone number.
`Prefix`	**Type** reference **Properties** Filter, Group, Sort **Description** The area code of the phone number.

VoiceMailContent

Represents a voicemail message left by a caller to the context user.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
`DurationInSeconds`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The duration of the voicemail message in seconds.

Field Name	Details
FirstHeardDateTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The time and date when the user first listened to the voicemail message.
MediaContentId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the related media content, a ContentDocument. The record counts toward your org’s file storage quota.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the voicemail message.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner of the voicemail message.
VoiceCallId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the related Dialer call.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

VoiceMailContentOwnerSharingRule
Sharing rules are available for the object.

VoiceMailContentShare
Sharing is available for the object.

VoiceMailGreeting

Represents a custom greeting message that plays upon reaching a user's voicemail. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
`DurationInSeconds`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The duration of the voicemail greeting message in seconds.
`IsDefault`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Whether the greeting is the user's default greeting (`true`) or not (`false`).
`MediaContentId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the related content document.
`Name`	**Type** string

Field Name	Details
	Properties Create, Filter, Group, idLookup, Sort, Update **Description** The name of the voicemail greeting message.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the voicemail greeting message owner.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

VoiceMailGreetingOwnerSharingRule
Sharing rules are available for the object.

VoiceMailGreetingShare
Sharing is available for the object.

VoiceMailMessage

Represents a prerecorded voicemail message.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
`DurationInSeconds`	**Type** int **Properties** Create, Filter, Group, Sort, Update

Field Name	Details
	Description The duration of a prerecorded voicemail message in seconds.
`IsDefault`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Specifies whether the message is the context user's default voicemail drop message.
`MediaContentId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the file.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the prerecorded voicemail message.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the prerecorded voicemail message.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

VoiceMailMessageOwnerSharingRule
Sharing rules are available for the object.

VoiceMailMessageShare
Sharing is available for the object.

VoiceUserLine

Represents a user's forwarding phone number.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
`IsCustomCallerId`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the number is a custom caller ID (`true`) or not (`false`).
`IsVerified`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Reserved for future use.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort **Description** The name of the phone number.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description The ID of the user who owns the phone number.
`PhoneNumber`	**Type** phone **Properties** Create, Filter, Group, Sort, Update **Description** The user’s phone number.
`UserId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the user using the phone number.
`VendorVerifiedCallerIdKey`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The ID for a custom phone number provided by the Sales Dialer service provider.
`VoiceVendorInfoId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the related Sales Dialer service provider.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

VoiceUserLineOwnerSharingRule
Sharing rules are available for the object.

VoiceUserLineShare
Sharing is available for the object.

VoiceUserPreferences

Represents the number the user displays when making outbound calls. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
`CallerIdType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The number displayed for outbound calls. The possible values are: • VendorLine • CompanyNumber • LocalPresence • CustomCallerId
`DeskPhoneNumber`	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A separate phone number users can utilize as part of a call bridge.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the phone number owner.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

VoiceUserPreferencesOwnerSharingRule
Sharing rules are available for the object.

VoiceUserPreferencesShare
Sharing is available for the object.

VoiceVendorInfo

Represents information about the Service Cloud Voice or Sales Dialer provider's vendor.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
`CorporateNumber`	**Type** phone **Properties** Filter, Group, Nillable, Sort **Description** The standard number that users can choose to display when making outgoing calls.
`IsActive`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Specifies whether the vendor is active or not.
`LocalPresenceDefaultNumber`	**Type** phone **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description The default routing number that's available for incoming local presence calls.
TenantConfigVersion	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The version of the Service Cloud Voice tenant configuration. Available in API version 51.0 and later.
VendorAccountKey	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The account key of the vendor.
VendorProviderName	**Type** string **Properties** Filter, Group, Sort **Description** The name of the vendor.
VendorType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The name of the telephony vendor.

VoiceVendorLine

Represents a user's phone number reserved with the vendor.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
CallUsageInSecondsLastMonth	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** An org's total call usage last month in seconds.
OwnerId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the user who owns the phone number. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
PhoneNumber	**Type** phone **Properties** Filter, Group, idLookup, Sort **Description** The unique vendor phone number.
ShouldRecord	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Reserved for future use.

Field Name	Details
Status	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Specifies whether the number is currently active or released.
UserId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user using the phone number. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User
VoiceVendorInfoId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the Dialer vendor. This is a relationship field. **Relationship Name** VoiceVendorInfo **Relationship Type** Lookup **Refers To** VoiceVendorInfo

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

VoiceVendorLineOwnerSharingRule
Sharing rules are available for the object.

VoiceVendorLineShare
Sharing is available for the object.

Vote

Represents a vote that a user has made on a Knowledge Article, Idea, or Reply.

Note: In API version 16.0 and earlier, SOQL queries on the Vote object only return votes for the Idea object. Starting in API version 17.0, SOQL queries return votes for both Idea and Reply.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer ’20 and later, only authenticated internal and external users can access this object.

Voting on Knowledge articles is available only when Knowledge is enabled.

Fields

Field	Details
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
`LastModifiedById`	**Type** reference **Properties** Defaulted on create, Filter, Group, Sort **Description** ID of the user most recently associated with this vote.
`LastModifiedDate`	**Type** dateTime **Properties** Defaulted on create, Filter, Sort

Field	Details
	Description The datetime when this vote was last modified.
`ParentId`	**Type** reference **Properties** Group, Sort, Create, Filter **Description** ID of the Knowledge Article, Idea, or Reply associated with this vote. This is a polymorphic relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** Idea, IdeaComment, KnowledgeArticle, Solution
`Type`	**Type** picklist **Properties** Group, Sort, Create, Filter, Restricted picklist, Update **Description** Picklist that indicates the type of vote. The value `Up` indicates that the vote is a user's positive endorsement of the associated idea or reply. The value `Down` indicates that the vote is a user's negative endorsement of the associated idea or reply.

Note: If you are importing Vote data into Salesforce and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself..

Usage

For Knowledge Articles, one vote record is inserted per user per Knowledge Article. Voting for another article version overrides the vote for the previous version.

In version 12.0 and later, use this object to track the votes that users made on ideas. For more information on ideas, see "Understand and Work with Ideas" in the Salesforce Help .

In version 17.0 and later, you must filter using the following syntax when querying this object in a SOQL query: `ParentId = `***`single ID`***, `Parent.Type = `***`single Type`***, `Id = `***`single ID`***, or `Id IN (`***`list of IDs`***`)`. See Comparison Operators in the Salesforce SOQL and SOSL Reference Guide for a sample query.

A SOQL query must filter using one of the following Parent or Id clauses.

- `ParentId = [`***`single ID`***`]`

- `Parent.Type = [`***`single type`***`]`
- `Id = [`***`single ID`***`]`
- `Id IN = [`***`list of IDs`***`]`

Idea

IdeaComment

WarrantyTerm

Represents warranty terms defining the labor, parts, and expenses covered, along with any exchange options, provided to rectify issues with products. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`Code`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A code or other identifier associated with this warranty term.
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the warranty term.
`EffectiveStartDate`	**Type** picklist **Properties** Create, Filter, Group, Sort, Update **Description** Date on which the warranty term became available for use. Possible values are:

Field	Details
	• `InstallDate` • `ManufactureDate` • `PurchaseDate`
`ExchangeType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The type of exchange offered. Possible values are: • `AdvanceExchange` • `Loaner` • `ReturnExchange`
`Exclusions`	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of any exclusions.
`ExpensesCovered`	**Type** percent **Properties** Create, Filter, Nillable, Sort, Update **Description** The percentage of expenses covered.
`ExpensesCoveredDuration`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The duration for which expenses are covered.
`ExpensesCoveredUnitOfTime`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description The unit in which expenses covered duration is measured. Possible values are: • `Days` • `Months` • `Weeks` • `Years`
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Defines whether the warranty term is active.
`IsTransferable`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Defines whether the warranty can be transferred to a new owner.
`LaborCovered`	**Type** percent **Properties** Create, Filter, Nillable, Sort, Update **Description** The percentage of labor covered.
`LaborCoveredDuration`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The duration for which labor is covered.
`LaborCoveredUnitOfTime`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description The unit in which labor covered duration is measured. Possible values are: • `Days` • `Months` • `Weeks` • `Years`
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the warranty term was last modified. Its label in the user interface is `Last Modified Date`.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the warranty term was last viewed.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The warranty term’s assigned owner.
`PartsCovered`	**Type** percent **Properties** Create, Filter, Nillable, Sort, Update **Description** The percentage of parts covered.
`PartsCoveredDuration`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The duration for which parts are covered.
PartsCoveredUnitOfTime	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The unit in which parts covered duration is measured. Possible values are: • `Days` • `Months` • `Weeks` • `Years`
Pricebook2Id	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the price book item associated with this warranty term.
WarrantyDuration	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The duration of the warranty offered by this term.
WarrantyTermName	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the warranty term.
WarrantyType	**Type** picklist **Properties** Create, Filter, Group, Sort, Update

Field	Details
	Description The type of warranty. Possible values are: • `Repair` • `Standard` • `Supplier`
`WarrantyUnitOfTime`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The unit in which the warranty duration is measured. Possible values are: • `Days` • `Months` • `Weeks` • `Years`

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

WarrantyTermChangeEvent
Change events are available for the object.

WaveAutoInstallRequest

Provides access to the concrete object that represents a CRM Analytics auto-install request. The auto-install request tracks the progress of CRM Analytics applications created from CRM Analytics templates by the automated process user. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

CRM Analytics must be enabled in your org. A user must have the Auto Install permission enabled.

Fields

Field	Details
`Configuration`	**Type** textarea **Properties** Create, Nillable **Description** CRM Analytics application configuration for the auto-install request.
`FailedReason`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** If the CRM Analytics application fails to complete successfully, this value indicates why the failure occurred. Values can be: • `OrganizationIncompatible`: the org didn't pass the template compatibility checks. • `AppInstallationSkipped`: the org didn't pass the template compatibility checks and was skipped. • `RetriesExhausted`: the request exhausted the maximum number of retries. • `RequestCancelled`: the user canceled the request. • `AppCreateFailure`: the app or folder creation failed. Check the request log and try again. • `AppUpdateFailure`: the app or folder update failed. Check the request log and try again. • `AppConstructionFailure`: the app or folder construction failed. Check the request log and try again. • `WaveDisabled`: the org doesn't have the Wave org permission or preference enabled. Check the licenses for CRM Analytics and try again. • `CancelFailed`: canceling an in-progress app failed. Check the request log and try again. • `DeleteFailed`: deleting an app failed. Check the request log and try again. • `DependencyFailure`: a dependent auto-install request failed. Check App Install History and try again. • `DependencyCancelled`: the user canceled a dependent auto-install request. Check App Install History and try again. • `FailedToEnqueue`: the request failed to enqueue. Check the request log and try again. • `FailedOther`: the request failed for another reason. Check the request log and try again.

Field	Details
FolderId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the CRM Analytics application created by the auto-install request. This is a relationship field. **Relationship Name** Folder **Relationship Type** Lookup **Refers To** Folder
IsLocked	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates if the auto-install request is locked or not.
MayEdit	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates if the auto-install request can be edited or not.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the auto-install request, provided at creation by the user.
RequestLog	**Type** textarea **Properties** Create, Nillable, Update **Description** A log of the auto-install progress and completion results.

Field	Details
RequestStatus	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The status of the auto-install request. Values can be `New`, `Enqueued`, `Cancelled`, `In Progress`, `AppInProgress`, `Failed`, and `Success`.
RequestType	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The type of auto-install request. Values can be `WaveEnable`, `OrgCompatibilityCheck`, `WaveAppCreate`, `WaveAppUpdate`, `WaveAppDelete`, and `StartDataflow`.
TemplateApiName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The API name of the CRM Analytics template to create the CRM Analytics app from.
TemplateVersion	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The version of the CRM Analytics template to create the CRM Analytics app from.

Usage

Use this object to query and create auto-install requests for CRM Analytics applications in your org. This object is useful to troubleshoot issues with templated applications that the automated process user creates.

WebCart

Represents an online shopping cart for a store built with B2B Commerce or D2C Commerce, with total amounts for products, shipping and handling, and taxes. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The WebCart object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
`AccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the account that owns this `WebCart`. In API version 51.0 and later, if the `WebCart` was created through Guest Browsing, this ID is the ID of the `GuestBuyerProfile`. This field is a polymorphic relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
`BillingAddress`	**Type** address **Properties** Filter, Nillable **Description** The mailing address to which this `WebCart` is billed.
`BillingCity`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The city of the billing address.
`BillingCountry`	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The country of the billing address.
BillingGeocodeAccuracy	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The accuracy rating of the geocode for the billing address. Possible values are: • Address • Block • City • County • ExtendedZip • NearAddress • Neighborhood • State • Street • Unknown • Zip
BillingLatitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The latitude of the geocode for the billing address.
BillingLongitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The longitude of the geocode for the billing address.
BillingPostalCode	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The postal code for the billing address.
`BillingState`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The state of the billing address.
`BillingStreet`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The street of the billing address. Enter up to 255 characters.
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The ISO code for the currency that's specified on the buyer's account. Default value is `USD`. Possible values are: • `EUR`—Euro • `USD`—U.S. Dollar Note: Although this field is Nillable, if you want to use Commerce Webstore Cart Promotions with multi-currency enabled, this field is required.
`GrandTotalAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Sum of all cart items' `TotalAmount`, or `WebCart TotalAmount` plus `WebCart TotalTaxAmount`.
`GuestCompanyName`	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Company name associated with a delivery for a guest customer. This field is available in API version 59.0 and later.
GuestEmailAddress	**Type** email **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The email address of a guest buyer. This field is available in API version 52.0 and later.
GuestFirstName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The first name of a guest buyer. This field is available in API version 52.0 and later.
GuestLastName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The last name (or surname) of a guest buyer. This field is available in API version 52.0 and later.
GuestPhoneNumber	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The phone number of a guest buyer. This field is available in API version 52.0 and later.
GuestSecondName	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The second name of a guest buyer. This field is available in API version 52.0 and later.
InventoryReservationIdentifier	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Reserved for future use. This field is available in API version 57.0 and later.
IsRepricingNeeded	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Whether the cart has changed since the last repricing. The default value is false.
IsSecondary	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Whether the cart is a secondary cart or a primary cart. This field is available in API version 52.0 and later.
LastRepricingDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Date when the last repricing was done.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description The name of this `WebCart` record. `Name` can be up to 255 characters.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner of this `WebCart`. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`PaymentGroupId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the `WebCart` payment group. This field is a relationship field. **Relationship Name** PaymentGroup **Relationship Type** Lookup **Refers To** PaymentGroup
`PaymentMethodId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The method of payment for this `WebCart`. This field is a polymorphic relationship field. **Relationship Name** PaymentMethod

Field	Details
	Relationship Type Lookup **Refers To** AlternativePaymentMethod, CardPaymentMethod, DigitalWallet
`PoNumber`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The purchase order number. Enter up to 80 characters.
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The status of this `WebCart`. Possible values are: • `Active`—Cart is created and available for modifications, like adding or removing products or promotions. • `Checkout`—Cart is in checkout. If the customer modifies the cart, the current checkout session is canceled. • `Closed`—Checkout is complete and an order was created. The cart cannot be modified. • `PendingClosed`—Cart is marked to be closed, but the request isn't completed yet. The cart can't be modified. This value is available in API version 57.0 and later. • `PendingDelete`—Cart is marked for delete, but the request isn't completed yet. The cart can't be modified. • `Processing`—Cart is processing. For example, taxes are being calculated. The cart can't be modified.
`TaxLocaleType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The type of tax locale. Possible values are: • `Net` • `Gross` This field is available in API versions 52.0 to 54.0.

Field	Details
TaxType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The type of tax policy. Possible values are: • Net • Gross This field is available in API version 55.0 and later.
TotalAdjustmentAmount	**Type** currency **Properties** Defaulted on create, Filter, Nillable, Sort **Description** A calculated field that reflects the total of all adjustments to the cart subtotal. Adjustments include various types of discounts.
TotalAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of all cart items' TotalPrice, or TotalProductAmount plus TotalChargeAmount. If the store tax type is Gross, the sum includes taxes. Note: Although this field is Nillable, if you want to use Commerce Webstore Cart Promotions, this field is required and must have a value greater than or equal to zero (0).
TotalAmountAfterAllAdjustments	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of all cart items after all price adjustments are applied. Adjustments include various types of discounts. This field is available in API version 52.0 and later.
TotalChargeAmount	**Type** currency

Field	Details
	Properties Defaulted on create, Filter, Nillable, Sort **Description** The sum of all cart items' `TotalPrice` for cart items of the type `Charge`.
`TotalChargeTaxAmount`	**Type** currency **Properties** Defaulted on create, Filter, Nillable, Sort **Description** The sum of all the cart items' `TotalTaxAmount` for cart items of the type `Charge`.
`TotalLineItemsWithErrors`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** A calculated field that shows the total number of cart line items of type `Product` with errors. This field is available in API version 50.0 and later.
`TotalListAmount`	**Type** currency **Properties** Defaulted on create, Filter, Nillable, Sort **Description** Sum of all the cart items' `TotalListPrice`.
`TotalProductAmount`	**Type** currency **Properties** Defaulted on create, Filter, Nillable, Sort **Description** The sum of all the cart items' `TotalPrice` for cart items of the type `Product`.
`TotalProductCount`	**Type** double **Properties** Defaulted on create, Filter, Nillable, Sort **Description** A count of all the products in the `WebCart`.

Field	Details
TotalProductListAmount	**Type** currency **Properties** Defaulted on create, Filter, Nillable, Sort **Description** The sum of all the cart items' `TotalListAmount` for the `CartItem` type `Product`. This field is available in API version 59.0 and later.
TotalProductTaxAmount	**Type** currency **Properties** Defaulted on create, Filter, Nillable, Sort **Description** The sum of all the cart items' `TotalTaxAmount` for the `CartItem` type `Product`.
TotalPromoAdjustmentAmount	**Type** currency **Properties** Defaulted on create, Filter, Nillable, Sort **Description** The total of all item discounts related to product promotions. This field is available in API version 52.0 and later.
TotalPromoAdjustmentTaxAmount	**Type** currency **Properties** Defaulted on create, Filter, Nillable, Sort **Description** The total tax adjustment for all item discounts related to product promotions. This field is available in API version 52.0 and later.
TotalTaxAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of all cart items' `TotalTaxAmount`, or `TotalProductTaxAmount` plus `TotalDeliveryTaxAmount`.
Type	**Type** picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The `WebCart` type. Default value is `Cart`. Possible values are: • `Cart`
`UniqueProductCount`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The count of unique product SKUs in the `WebCart`.
`WebStoreId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The store ID related to this `WebCart`. This field is a relationship field. **Relationship Name** WebStore **Relationship Type** Lookup **Refers To** WebStore

Usage Notes

- In a B2B Commerce for Lightning store, customers who created custom components for adding items to carts noticed that, after adding items, the cart badge didn't refresh. A hard refresh causes the value to properly update.

Associated Objects

This object has the following associated objects. Unless it's noted, associated objects are available in the same API version as this object.

WebCartChangeEvent (API version 58.0)
Change events are available for the object.

WebCartHistory
History is available for tracked fields of the object.

WebCartOwnerSharingRule
Sharing rules are available for the object.

WebCartShare
Sharing is available for the object.

SEE ALSO:

Commerce Webstore Cart Promotions
Commerce Webstore Promotions, Associate Action
Commerce Webstore Promotions, Execute Action

WebCartAdjustmentBasis

Coupons that trigger promotions for the cart. When a customer tries to add a coupon to the cart, the store looks for promotions associated with the coupon. If a promotion results in a price adjustment, a WebCartAdjusmentBasis record is created. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
`AdjustmentBasisDetail`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Coupon code for the coupon associated with the promotion.
`AdjustmentBasisReferenceId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Foreign key reference to the coupon. This field is a relationship field.

Field	Details
	Relationship Name AdjustmentBasisReference **Relationship Type** Lookup **Refers To** Coupon
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The currency ISO code of the cart. Possible values are: • `EUR` • `USD` The default value is `USD`.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the WebCartAdjustmentBasis record.
`WebCartId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the cart. This field is a relationship field. **Relationship Name** WebCart **Relationship Type** Lookup **Refers To** WebCart

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

WebCartAdjustmentBasisChangeEvent on page 52
: Change events are available for the object.

WebCartAdjustmentGroup

Group of price adjustments for a cart. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The WebCartAdjustmentGroup object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
`AdjustmentSource`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Price adjustment type. Possible values are: • `Discretionary` • `Promotion` • `System`
`AdjustmentTargetType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Target for the price adjustment (the cart itself or individual items). Possible values are: • `Cart`

Field	Details
	• `Item`
`AdjustmentType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates if the price adjustment is applied as percentage or an absolute amount. Possible values are: • `AdjustmentAmount` • `AdjustmentPercentage`
`AdjustmentValue`	**Type** double **Properties** Create, Filter, Sort, Update **Description** Numeric value of the adjustment (for example, 10 if the price adjustment is either 10% off or $10 off).
`CartId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the cart to which the price adjustment belongs. This is a relationship field. **Relationship Name** Cart **Relationship Type** Lookup **Refers To** WebCart
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The ISO code for the currency that's specified on the buyer's account. Default value is `USD`. Possible values are:

Field	Details
	• `EUR`—Euro • `USD`—U.S. Dollar
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the adjustment group.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the adjustment group.
`PriceAdjustmentCauseId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of entity that caused this adjustment (for example, a promotion ID). This is a relationship field. **Relationship Name** PriceAdjustmentCause **Relationship Type** Lookup **Refers To** Promotion
`Priority`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** If there are multiple price adjustments, sequence in which the price adjustments are applied.
`TaxAmount`	**Type** currency

Field	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** Tax on the total adjusted price.
`TotalAmount`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** Total price after adjustments.
`TotalAmountWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total adjusted price plus tax.

Associated Objects

This object has the following associated objects. Unless it's noted, associated objects are available in the same API version as this object.

WebCartAdjustmentGroupChangeEvent (API version 58.0)
Change events are available for the object.

WebCartHistory

WebCartHistory represents the history of changes to the values in the fields of the `WebCart` object.

For specific version information, see the documentation for `WebCart`.

Supported Calls

`describeSObjects()`, `query`, `replicate`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Special Access Rules

For specific special access rules, if any, see the documentation for `WebCart`.

Fields

Field Name	Details
DataType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Data type of the field that was changed.
Field	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Name of the field that was changed.
NewValue	**Type** anyType **Properties** Nillable, Sort **Description** New value of the field that was changed.
OldValue	**Type** anyType **Properties** Nillable, Sort **Description** Old value of the field that was changed.
WebCartId	**Type** reference **Properties** Filter, Group, Sort **Description** The unique ID of the `WebCart`.

WebLink

Represents a custom link to a URL or Scontrol.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

- To create a custom link, the client application must be logged in with the “Customize Application” permission.
- Customer Portal users can’t access this object.

Fields

Field Name	Details
Availability	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description**
Description	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Description of the custom link. Limit is 1,000 characters.
DisplayType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Type of display: button, link, or mass-action button.
EncodingKey	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. Encoding of parameters on the URL link.
HasMenubar	**Type** boolean

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the popup window shows a menu bar (`true`) or not (`false`).
`HasScrollbars`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the popup window shows scroll bars (`true`) or not (`false`).
`HasToolbar`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the popup window shows browser toolbars (`true`) or not (`false`). Toolbars normally contain navigation buttons like Back, Forward, and Print.
`Height`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Height of the popup in pixels.
`IsProtected`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the object is protected (`true`) or not (`false`). Protected components that have been installed in other organizations can’t be linked to or referenced by components created in the subscriber organization. A developer can easily delete a protected component contained in a managed package in a future release of the package without worrying about failing installations. However, once a component is marked as unprotected and is released globally, the developer can’t delete it.

Field Name	Details
`IsResizable`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether users are allowed to resize the popup window (`true`) or not (`false`).
`LinkType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. Type of link (S-control or URL).
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Master label for the link. Limit is 240 characters. This display value is the internal label that is not translated.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. Name to display on page.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed

Field Name	Details
	managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. This field can't be accessed unless the logged-in user has the Customize Application permission.
`OpenType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. How the custom link opens when clicked in a browser—NewWindow, Sidebar, or NoSidebar.
`PageOrSobjectType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Required. For standard objects, the name of the page on which to display the custom link. For custom objects, the name of the object.
`Position`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Location on the screen where the popup should open—TopLeft, FullScreen, or None.
`RequireRowSelection`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the custom link requires a row selection (`true`) or not (`false`).
`ScontrolId`	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** ID of the custom s-control object (Scontrol) to link to. Can include fields as tokens within the custom s-control object. Label is **Custom S-Control ID**.
`ShowsLocation`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the popup window shows the browser's address bar containing the URL (`true`) or not (`false`).
`ShowsStatus`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Show the status bar at the bottom of the browser.
`Url`	**Type** textarea **Properties** Create, Nillable, Update **Description** Required. URL of the page to link to. Can include fields as tokens within the URL. Limit: 1,024 KB.
`Width`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Width of the popup in pixels.

Usage

Use this object to programmatically manage custom links, which allow client applications to integrate data with external URLs, an organization's intranet, or other back-end office systems. A custom link can point to:

- An external URL, such as `www.google.com` or your company's intranet.

- A custom s-control, such as a Java applet or Active-X control.

Custom links can include fields as tokens within the URL or custom s-control.

SEE ALSO:

Scontrol

WebLinkLocalization

Represents the translated value of the field label for a custom link to a URL or s-control when the Translation Workbench is enabled for your organization.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Professional, Enterprise, Developer, Unlimited, or Performance Edition and be enabled for the Translation Workbench.
- To view this object, you must have the "View Setup and Configuration" permission.

Fields

Field	Details
`LanguageLocaleKey`	**Type** picklist **Properties** Create, Filter, Nillable, Restricted picklist **Description** This field is available in API version 16.0 and earlier. It is the same as the `Language` field.
`Language`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** This field is available in API version 17.0 and later. The combined language and locale ISO code, which controls the language for labels displayed in an application. This picklist contains the following fully-supported languages:

Field	Details
	• Chinese (Simplified): `zh_CN` • Chinese (Traditional): `zh_TW` • Danish: `da` • Dutch: `nl_NL` • English: `en_US` • Finnish: `fi` • French: `fr` • German: `de` • Italian: `it` • Japanese: `ja` • Korean: `ko` • Norwegian: `no` • Portuguese (Brazil): `pt_BR` • Russian: `ru` • Spanish: `es` • Spanish (Mexico): `es_MX` Spanish (Mexico) defaults to Spanish for customer-defined translations. • Swedish: `sv` • Thai: `th` The Salesforce user interface is fully translated to Thai, but Help is in English. The following end-user only languages are available. • Arabic: `ar` • Bulgarian: `bg` • Croatian: `hr` • Czech: `cs` • English (UK): `en_GB` • Greek: `el` • Hebrew: `iw` • Hungarian: `hu` • Indonesian: `in` • Polish: `pl` • Portuguese (European): `pt_PT` • Romanian: `ro` • Slovak: `sk` • Slovenian: `sl` • Turkish: `tr` • Ukrainian: `uk` • Vietnamese: `vi`

Field	Details
	The following platform languages are available for organizations that use Salesforce exclusively as a platform. • Albanian: sq • Afrikaans: af • Amharic: am • Arabic (Algeria): ar_DZ • Arabic (Bahrain): ar_BH • Arabic (Egypt): ar_EG • Arabic (Iraq): ar_IQ • Arabic (Jordan): ar_JO • Arabic (Kuwait): ar_KW • Arabic (Lebanon): ar_LB • Arabic (Libya): ar_LY • Arabic (Morocco): ar_MA • Arabic (Oman): ar_OM • Arabic (Qatar): ar_QA • Arabic (Saudi Arabia): ar_SA • Arabic (Sudan): ar_SD • Arabic (Syria): ar_SY • Arabic (Tunisia): ar_TN • Arabic (United Arab Emirates): ar_AE • Arabic (Yemen): ar_YE • Armenian: hy • Basque: eu • Bosnian: bs • Bengali: bn • Burmese: my • Catalan: ca • Chinese (Hong Kong): zh_HK • Chinese (Singapore): zh_SG • Chinese (Malaysia): zh_MY • Dutch (Belgium): nl_BE • English (Australia): en_AU • English (Belgium): en_BE • English (Canada): en_CA • English (Cyprus): en_CY • English (Germany): en_DE • English (Hong Kong): en_HK

Field	Details
	- English (India): `en_IN` - English (Ireland): `en_IE` - English (Israel): `en_IL` - English (Malaysia): `en_MY` - English (Malta): `en_MT` - English (Netherlands): `en_NL` - English (New Zealand): `en_NZ` - English (Philippines): `en_PH` - English (Singapore): `en_SG` - English (South Africa): `en_ZA` - English (United Arab Emirates): `en_AE` - Estonian: `et` - Farsi: `fa` - French (Belgium): `fr_BE` - French (Canada): `fr_CA` - French (Luxembourg): `fr_LU` - French (Morocco): `fr_MA` - French (Switzerland): `fr_CH` - Georgian: `ka` - German (Austria): `de_AT` - German (Belgium): `de_BE` - German (Luxembourg): `de_LU` - German (Switzerland): `de_CH` - Greek (Cyprus): `el_CY` - Greenlandic: `kl` - Gujarati: `gu` - Hawaiian: `haw` - Haitian Creole: `ht` - Hindi: `hi` - Icelandic: `is` - Irish: `ga` - Italian (Switzerland): `it_CH` - Kannada: `kn` - Kazakh: `kk` - Khmer: `km` - Latvian: `lv` - Lithuanian: `lt` - Luxembourgish: `lb`

Field	Details
	• Macedonian: mk • Malay: ms • Malayalam: ml • Maltese: mt • Marathi: mr • Montenegrin: sh_ME • Romanian (Moldova): ro_MD • Romansh: rm • Russian (Armenia): ru_AM • Russian (Belarus): ru_BY • Russian (Kazakhstan): ru_KZ • Russian (Kyrgyzstan): ru_KG • Russian (Lithuania): ru_LT • Russian (Moldova): ru_MD • Russian (Poland): ru_PL • Russian (Ukraine): ru_UA • Samoan: sm • Serbian (Cyrillic): sr • Serbian (Latin): sh • Spanish (Argentina): es_AR • Spanish (Bolivia): es_BO • Spanish (Chile): es_CL • Spanish (Colombia): es_CO • Spanish (Costa Rica): es_CR • Spanish (Dominican Republic): es_DO • Spanish (Ecuador): es_EC • Spanish (El Salvador): es_SV • Spanish (Guatemala): es_GT • Spanish (Honduras): es_HN • Spanish (Nicaragua): es_NI • Spanish (Panama): es_PA • Spanish (Paraguay): es_PY • Spanish (Peru): es_PE • Spanish (Puerto Rico): es_PR • Spanish (United States): es_US • Spanish (Uruguay): es_UY • Spanish (Venezuela): es_VE • Swahili: sw

Field	Details
	• Tagalog: `tl` • Tamil: `ta` • Te reo: `mi` • Telugu: `te` • Urdu: `ur` • Welsh: `cy` • Xhosa: `xh` • Zulu: `zu` The values in this field are not related to the default locale selection.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
`Value`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** The actual translated label of the custom link. Label is **Translation**.
`WebLinkId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort

Field	Details
	Description The ID of the WebLink that is being translated.

Usage

Use this object to translate your custom links to URLs or s-controls into the different languages supported by Salesforce. Users with the Translation Workbench enabled can view custom link translations, but either the “Customize Application” or “Manage Translation” permission is required to create or update custom link translations.

CategoryNodeLocalization

ScontrolLocalization

WebStore

Represents a B2B or B2C store. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have a B2B Commerce or D2C Commerce commerce license to create a web store.

Fields

Field	Details
`CheckoutTimeToLive`	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Amount of time in minutes that a B2B checkout stays active and doesn’t expire. If you use a `Null` value, your checkout never expires. If you use a `0` value, checkout is disabled. This field is available in API version 50.0 and later.
`CheckoutValidAfterDate`	**Type** dateTime

Field	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** A timestamp in the default server timezone (GMT). All B2B checkouts that start before this date are considered expired. A `Null` value means that all checkouts are valid. Example format: 2020-07-14T14:27:00.000Z. This field is available in API version 50.0 and later.
`Country`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Two-digit ISO code of the store's country. Purchases can be shipped only to the country assigned to the store. This field is available in API version 55.0 and later.
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The default value is `USD`. Possible values are: • `USD`—U.S. Dollar
`DefaultLanguage`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The primary supported language for your store. Possible values include: • `da`— Danish • `de`— German • `en_US`— English • `es`— Spanish • `en_MX`— Spanish (Mexico) • `fi`— Finnish • `fr`— French • `it`— Italian • `ja`— Japanese • `ko`— Korean

Field	Details
	• `nl_NL`— Dutch • `no`— Norwegian • `pt_BR`— Portuguese (Brazil) • `ru`— Russian • `sv`— Swedish • `th`— Thai • `zh_CN`— Chinese (Simplified) • `zh_TW`— Chinese (Traditional)
`DefaultTaxLocaleType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Tax type of the store. This field is available in API version 55.0 and later. Possible values include: • `Gross`— Prices include tax • `Net`— Prices don't include tax
`DefaultTaxPolicyId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The default tax policy for the store. This field is a relationship field. This field is available in API version 56.0 and later. **Relationship Name** DefaultTaxPolicy **Relationship Type** Lookup **Refers To** TaxPolicy
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the store.

Field	Details
`ExternalReference`	**Type** textarea **Properties** Nillable **Description** Identifies the instance of B2C Commerce. Format is `<<SiteId>>@<<InstanceId>>`. This field is available in API version 54.0 and later.
`GuestBuyerProfileId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the GuestBuyerProfile associated with the store. GuestBuyerProfile determines what buyer groups are part of the profile. The guest buyer groups then determine the entitlements and pricing of products for the guest buyer.
`GuestCartTimeToLive`	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The time that a guest cart is to remain valid before it expires. The default value is 168 hours (7 days), and the maximum value is 720 hours (30 days). This field is available in API version 52.0 and later.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced and not viewed directly.

Field	Details
LocationId	**Type** reference **Properties** Filter, Group, Sort **Description** The location associated with the address. If you don't specify a `LocationId` when you create a WebStore record, the system creates a Location record for you. The `LocationType` field on the Location record is set to virtual.
MaxValuesPerFacet	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The maximum number of values that can be added to a facet.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the catalog.
OptionsAutoFacetingEnabled	**Type** boolean **Properties** Create, Filter, Update **Description** If enabled (True), the most relevant search facets are automatically returned, in addition to the configured search facets, in the product search results. If disabled (False), only the configured search facets are returned. The default is `False`.See Add Product Search Filters (Facets).for more information. This field is available in API version 50.0 or later.
OptionsCartAsyncProcessingEnabled	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates whether add-to-cart requests are processed asynchronously (`True`) or not (`False`). The default value is `True`. This field is available in API version 59.0 or later.

Field	Details
OptionsCartCalculateEnabled	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates whether the cart calculate extension is enabled (`True`) or not (`False`). The default value is `False`. This field is available in API version 59.0 or later.
OptionsCartToOrderAutoCustomFieldMapping	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates whether custom field mapping for cart and order objects is enabled (`True`) or not (`False`). The default value is `True`. This field is available in API version 57.0 or later.
OptionsDuplicateCartItemsEnabled	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates whether a cart can include multiple items with the same product ID (True) or not (False). The default value is `False`. This field is available in API version 59.0 or later.
OptionsGuestBrowsingEnabled	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates whether guest browsing is enabled for this store. Set the option to `True` to allow guest buyers access to products in the store.
OptionsGuestCartEnabled	**Type** boolean **Properties** Create, Filter, Update

Field	Details
	Description Indicates whether guest cart access is enabled for a store created with an LWR template. Set the option to `True` to allow guest buyers access to products in the store. This field is available in API version 58.0 and later.
`OptionsGuestCheckoutEnabled`	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates whether guest checkout access is enabled for a store created with an LWR template. Set the option to `True` to allow guest buyers access to products in the store. This field is available in API version 58.0 and later.
`OptionsPreserveGuestCartEnabled`	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates whether cart contents are preserved when a guest logs in to the store. Set the option to `True` to preserve guest carts. This field is available in API version 60.0 and later.
`OptionsSkipAdditionalEntitlementCheckForSearch`	**Type** boolean **Properties** Create, Filter, Update **Description** By default, user entitlement checks are run as part of a search index rebuild and again when product search results are returned. Skips the second check to promote faster search performance. Set the option to `True` to skip additional entitlement checks on a search. This field is available in API version 52.0 and later.
`OrderActivationStatus`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Status of the order. This field is available in API version 55.0 and later. Possible values are: • `Activated`

Field	Details
	• `Draft`
`OrderLifeCycleType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates whether order summaries are processed with Order Management features: • `Managed`— • `Unmanaged`— This field is available in API version 55.0 and later.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates the owner of the store. This field is available in API 53.0 or later. This is a relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`PaginationSize`	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Dimensions of the page.
`PricingStrategy`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Possible values are: • `LowestPrice`— Best Price • `Priority`— Priority Price.

Field	Details
	The default value is `LowestPrice`.
`ProductGrouping`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Determines whether product variations are listed individually in search results or are represented by the parent product, which links to its children. Possible values are: • `NoGrouping`—Variations are listed individually in search results. • `VariationParent`—The parent product is returned in search results with a link to its children. The default value is `VariationParent`. This field is available in API version 52.0 and later.
`SortByPriceBookId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the price book used for the sorting rule. This field is available in API version 55.0 and later. This is a relationship field. **Relationship Name** SortByPriceBook **Relationship Type** Lookup **Refers To** Pricebook2
`StrikethroughPricebookId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the strikethrough price book.
`SupportedCurrencies`	**Type** textarea **Properties** Create, Defaulted on create, Nillable, Update

Field	Details
	Description Currencies supported in the store.
SupportedLanguages	**Type** textarea **Properties** Create, Defaulted on create, Nillable, Update **Description** Languages supported in the store.
Type	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Type of store that can be created. Possible values are: • B2B • B2C • B2CE • OMS The default value is B2B.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

WebStoreEvent (API version 55.0)
Change events are available for the object.

SEE ALSO:
WebStoreNetwork

WebstoreBuyerGroup

Associates a webstore with a buyer group. Supports dynamically changing locales when buyers shop in orgs that are enabled for multiple languages and currencies. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`BuyerGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Required. The ID of the buyer group this record references. This field is a relationship field. **Relationship Name** BuyerGroup **Relationship Type** Lookup **Refers To** BuyerGroup
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, and `LastReferenceDate` isn't null, the user accessed this record or list view indirectly.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description Name of this record.
WebStoreId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the webstore. This field is a relationship field. **Relationship Name** WebStore **Relationship Type** Lookup **Refers To** WebStore

Usage

This object can support a localized buyer experience by associating a Market-enabled webstore with a buyer group, allowing shoppers to view their group entitlements, price books, and promotions in localized languages and currencies.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

WebstoreBuyerGroupChangeEvent on page 52
Change events are available for the object.

WebstoreBuyerGroupFeed on page 39
Feed tracking is available for the object.

WebstoreBuyerGroupHistory on page 47
History is available for tracked fields of the object.

WebstoreBuyerGroupOwnerSharingRule on page 48
Sharing rules are available for the object.

WebstoreBuyerGroupShare on page 50
Sharing is available for the object.

WebStoreCatalog

Represents the collection of products associated with a store. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access product media.

Fields

Field	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Possible values are: • `GBP`— British Pound • `USD`— U.S. Dollar The default value is `USD`.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description Name of the catalog.
`ProductCatalogId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the catalog, containing products.
`SalesStoreId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the store that the catalog is associated with. This field is unique within your org.

Associated Objects

WebStoreCatalogHistory
History is available for tracked fields of the object.

WebStoreNetwork

Represents the relationship between a web store and an experience site. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have store admin permission to access this object.

Fields

Field	Details
`Name`	**Type** string

Field	Details
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Name of the web store network.
`NetworkId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the experience site associated with the web store. This field is a relationship field. **Relationship Name** Network **Relationship Type** Lookup **Refers To** Network
`WebStoreId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the web store associated with the experience site. This field is a relationship field. **Relationship Name** WebStore **Relationship Type** Lookup **Refers To** WebStore

Usage

When you copy web store data between a sandbox and production, or between sandboxes, you can programmatically associate the copy with a different site by updating the corresponding WebStoreNetwork record. You can even change the association while the store is active. The site must use a template that's compatible with the web store type, and the site can't be associated with a store. Otherwise, you can change the association only by editing the web store in the UI.

SEE ALSO:

Network

WebStore

WebStorePricebook

Represents a store price book used in Lightning B2B Commerce. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Determines whether the WebStorePricebook is active (`true`) or not (`false`). Default value is `false`.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the store price book record.
`Pricebook2Id`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the price book assigned to the store.
`WebStoreId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the store assigned to the price book.

Usage

Use the WebStorePricebook object to assign price books to a store. When you assign a price book to a web store, any buyer who has access to the store can price products from the assigned price books. When a store or buyer has multiple price book assignments, including prices to the same product, the price is determined by the pricing strategy of the store.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WebStorePricebookFeed
Feed tracking is available for this object.

Wishlist

Represents a buyer-created list of `WishlistItem`s in a store that's built with B2B Commerce on Lightning. Available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The Wishlist object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
`AccountId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the account that owns the `Wishlist`.
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The ISO code for the currency that's specified on the buyer's account. Default value is `USD`. Possible values are: • `USD`—U.S. Dollar
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of this `Wishlist` record. `Name` can be up to 255 characters.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user or group that owns the `Wishlist`.

Field	Details
WebStoreId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the `WebStore` related to this `Wishlist`.
WishlistProductCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The count of `WishlistItems` on this `Wishlist`. `WishlistProductCount` is a calculated field.

Associated Objects

This object has the following associated objects. Unless it's noted, associated objects are available in the same API version as this object.

WishlistOwnerSharingRule on page 48
Sharing rules are available for the object.

WishlistShare on page 50
Sharing is available for the object.

Usage Notes

- Wishlists aren't included in any searches.

SEE ALSO:

WishlistItem

WishlistItem

Represents an item on a `Wishlist` in a store built with B2B Commerce for Lightning. Available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The WishListItem object is available only if the B2B Commerce for Lightning license is enabled.

Fields

Field	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The ISO code for the currency that’s specified on the buyer’s account. Default value is `USD`.Possible values are: • `USD`—U.S. Dollar
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of this `WishlistItem` record. `Name` can be up to 255 characters.
`Product2Id`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the product that is represented by the `WishlistItem`.
`WishlistId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the parent `Wishlist` of this `WishlistItem`.

SEE ALSO:

Wishlist

WorkAccess

Used to grant or restrict user access to give badge definitions. Each badge definition record must have one WorkAccess record.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Additional Considerations and Related Objects

WorkAccess is not available through Schema Builder and is not customizable. A WorkAccess record is **required** for users to **Give** BadgeDefinitions. If a WorkAccess record is not created, BadgeDefinitions will not be available to users.

The sharing of WorkAccess records is through WorkAccessShare. For each WorkBadgeDefinition record, you must create both a WorkAccess record (per WorkBadgeDefinition) and WorkAccessShare records for sharing to users or groups.

Fields

Field Name	Details
`AccessType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Define the type of Access given to user (“Give”).
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Salesforce unique ID for owner of Access record. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`ParentId`	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Sort, Update **Description** Salesforce unique ID for BadgeDefinition record associated with this Access record. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** WorkBadgeDefinition

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkAccessOwnerSharingRule

Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

WorkAccessShare

Sharing is available for the object.

WorkAccessShare

Used to control Givers of WorkBadgeDefinition records.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Additional Considerations and Related Objects

Related to WorkAccess Object. WorkAccess is the parent of WorkAccessShare.

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field Name	Details
`AccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** CRUD Access Level (picklist values: Read Only, Read/Write, Owner).
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID for WorkAccess record. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** WorkAccess
`RowCause`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited. Values can include: • `Manual`—The User or Group has access because a user with "All" access manually shared the WorkAccess with them. • `Owner`—The User is the owner of the WorkAccess or is in a role above the WorkAccess owner in the role hierarchy.

Field Name	Details
UserOrGroupId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** User or Group ID for WorkAccess. This is a polymorphic relationship field. **Relationship Name** UserOrGroup **Relationship Type** Lookup **Refers To** Group, User

WorkBadge

Represents information about who the badge was given to and which badge was given. A WorkBadge record is created for each recipient of a WorkBadgeDefinition.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Additional Considerations and Related Objects

WorkBadge is a lookup to WorkThanks. Each WorkBadge record must derive a SourceId from WorkThanks. There can be multiple WorkBadge records tied to a single WorkThanks record.

Fields

Field Name	Details
DefinitionId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. Salesforce unique ID for the given WorkBadgeDefinition record given. This is a relationship field.

Field Name	Details
	Relationship Name Definition **Relationship Type** Lookup **Refers To** WorkBadgeDefinition
`Description`	**Type** textarea **Properties** Nillable **Description** The description of the WorkBadgeDefinition.
`GiverId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the badge giver. Can’t be the same as `RecipientId`. This is a relationship field. **Relationship Name** Giver **Relationship Type** Lookup **Refers To** User
`ImageUrl`	**Type** url **Properties** Filter, Group, Nillable, Sort **Description** The URL of the badge image.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field Name	Details
	Description The time stamp that indicates when the current user last viewed a record that is related to this WorkBadge.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time stamp that indicates when the current user last viewed this WorkBadge. If this value is null, this record might have been only referenced (LastReferencedDate) and not viewed.
Message	**Type** textarea **Properties** Nillable **Description** The message accompanying the thanks badge.
NetworkId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the community that this WorkBadge is associated with. This field is available only if digital experiences is enabled in your org.
RecipientId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. Salesforce unique ID for User who is the Recipient of Badge. Can’t be the same as GiverId This is a relationship field. **Relationship Name** Recipient **Relationship Type** Lookup **Refers To** User

Field Name	Details
RewardId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Salesforce unique ID for Reward given with badge (if Reward Badge)
SourceId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Salesforce unique ID for Thanks record referenced to this badge. This is a relationship field. **Relationship Name** Source **Relationship Type** Lookup **Refers To** WorkThanks

WorkBadgeDefinition

Represents the attributes of a badge including the badge name, description, and image. Each WorkBadge record must have a lookup to a WorkBadgeDefinition since badge attributes (like badge name) are derived from the WorkBadgeDefinition object.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Additional Considerations and Related Objects

WorkBadgeDefinition has a field called `ImageUrl` that references a DocumentID. This is a required field for creating a Badge.

To grant “giver” access to a WorkBadgeDefinition, you must also create the WorkAccess (and the related WorkAccessShare records.

Each WorkBadgeDefinition has an `ImageUrl` field that must be populated with a DocumentID of the Document record containing the badge image.

Fields

Field Name	Details
Description	**Type** textarea **Properties** Create, Update **Description** Required. Limit: 4000 characters. The description of the badge and what it means to receive this badge.
GivenBadgeCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of badges given per user or across all users. Note: This field can't be added in a list view or referenced in a formula field.
ImageUrl	**Type** url **Properties** Create, Filter, Group, Sort, Update **Description** Required. This is the badge image that will be displayed in the UI. Use DocumentID or ImageURL.
IsActive	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Represents whether a WorkBadgeDefinition is active and available in the UI and API.
IsCompanyWide	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Represents a special class of badges known as Company Badges. Company badges are visible to the entire company and visible in specific list view filters.

Field Name	Details
	Note: If this field is selected, everyone within the user's network will be able to give the badge automatically. If this field is not selected, people with sharing must be added to the badge's access list in order to give the badge.
`IsLimitPerUser`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the badge limit is per user (`true`) or across all users (`false`). The default value is `false`.
`IsRewardBadge`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the badge is a reward badge (`true`) or not (`false`).
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time stamp that indicates when the current user last viewed a record that is related to this WorkBadgeDefinition.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time stamp that indicates when the current user last viewed this WorkBadgeDefinition. If this value is null, this record might have been only referenced (`LastReferencedDate`) and not viewed.
`LimitNumber`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The badge limit per user or across all users.
LimitStartDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The start date of the badge limit. The date can be reset to the current date.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. Name of the Badge. **Label:** Badge Title.
NetworkId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the community that this WorkBadgeDefinition is associated with. This field is available only if digital experiences is enabled in your org.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Salesforce User ID for User who is the Owner of the WorkBadgeDefinition record (usually the creator of the record) This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User

Field Name	Details
RewardFundId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Salesforce unique ID for the WorkRewardFund that is associated with this WorkBadgeDefinition. WorkBadgeDefinition records with a RewardFundID indicate a Reward Badge.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkBadgeDefinitionFeed
Feed tracking is available for the object.

WorkBadgeDefinitionHistory
History is available for tracked fields of the object.

WorkBadgeDefinitionOwnerSharingRule
Sharing rules are available for the object.

WorkBadgeDefinitionShare
Sharing is available for the object.

WorkCapacityAvailability

Represents the available work capacity for a specific time and service territory. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AvailCapacityHours	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The number of available capacity in hours in the time frame the user defined for a service territory.

Field	Details
AvailCapacityMinutes	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The number of available capacity in minutes in the time frame the user defined for a service territory.
EndDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The end date of the total available capacity.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, and `LastReferenceDate` isn't null, the user accessed this record or list view indirectly.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner of this object. This field is a polymorphic relationship field. **Relationship Name** Owner

Field	Details
	Relationship Type Lookup **Refers To** Group, User
`ServiceTerritoryId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the service territory of the work capacity availability calculation. This field is a relationship field. **Relationship Name** ServiceTerritory **Relationship Type** Lookup **Refers To** ServiceTerritory
`StartDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The start date of the total available capacity.
`TimePeriod`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The time period the user selected when creating the work capacity limit. The value is copied from the `TimePeriod` field of the WorkCapacityLimit object. Possible values are: • `Day` The default value is `Day`.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

WorkCapacityAvailabilityFeed on page 39
Feed tracking is available for the object.

WorkCapacityAvailabilityShare on page 50
Sharing is available for the object.

WorkCapacityLimit

Represents the capacity limit for a workstream in a specific service territory for a given period. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the work capacity limit.
`EndDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** End date of the work capacity limit. If no `EndDate` is set this work capacity limit is without an expiration date.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether the work capacity limit is active or inactive. When creating a record, save the record, and then activate it. You can't update fields in an active record. The default value is `false`.
`IsFriday`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the limitation is applied on Fridays. The default value is `false`.
`IsMonday`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the limitation is applied on Mondays. The default value is `false`.
`IsSaturday`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the limitation is applied on Saturdays. The default value is `false`.
`IsSunday`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the limitation is applied on Sundays. The default value is `false`.
`IsThursday`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether the limitation is applied on Thursdays. The default value is `false`.
`IsTuesday`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the limitation is applied on Tuesdays. The default value is `false`.
`IsWednesday`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the limitation is applied on Wednesdays. The default value is `false`.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, and `LastReferenceDate` isn't null, the user accessed this record or list view indirectly.
`LimitationUnits`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description Unit of the `LimitationValue`. Possible values are: • `Hours` • `Percentage` The default value is `Hours`.
`LimitationValue`	**Type** double **Properties** Create, Filter, Sort, Update **Description** If the `LimitationUnits` is `Hours`, `LimitationValue` is the threshold that represents how many hours of total work capacity can be scheduled for a specific workstream in a service territory. Enter the number of hours for the daily limitation as a whole number. If the `LimitationUnits` is `Percentage` this threshold represents the percentage of the total work capacity that can be scheduled for a specific workstream in a service territory. Enter the percentage for the daily limitation as a whole number.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the creator of the work capacity limit. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`ServiceTerritoryId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the service territory of the work capacity workstream for which the limit is defined. This field is a relationship field.

Field	Details
	Relationship Name ServiceTerritory **Relationship Type** Lookup **Refers To** ServiceTerritory
`StartDate`	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** The start date of the Work Capacity Limit.
`SvcApptField`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Work-specific criteria used to define the capacity limit for the workstream. The service appointment field is set for the organization when the first work capacity limit instance is created. Possible values are: • `ServiceAppointment.AccountId` • `ServiceAppointment.ActualDuration`—Actual duration (in minutes) • `ServiceAppointment.Duration`—Duration • `ServiceAppointment.DurationInMinutes` • `ServiceAppointment.FSL__Appointment_Grade__ce` • `ServiceAppointment.FSL__Auto_Schedule__c` • `ServiceAppointment.FSL__Duration_In_Minutes__c`—Scheduled duration • `ServiceAppointment.FSL__Emergency__c` • `ServiceAppointment.FSL__GanttColor__c` • `ServiceAppointment.FSL__GanttLabel__c` • `ServiceAppointment.FSL__InJeopardyReason__c` • `ServiceAppointment.FSL__InJeopardy__c` • `ServiceAppointment.FSL__IsFillInCandidate__c` • `ServiceAppointment.FSL__IsMultiDay__c` • `ServiceAppointment.FSL__Last_Updated_Epoch__c`

Field	Details
	• `ServiceAppointment.FSL__MDS_Calculated_length__c`—Multiday work calculated length • `ServiceAppointment.FSL__Pinned__c` • `ServiceAppointment.FSL__Prevent_Geocoding_For_Chatter_Actions__c` • `ServiceAppointment.FSL__Related_Service__c` • `ServiceAppointment.FSL__Same_Day__c` • `ServiceAppointment.FSL__Same_Resource__c` • `ServiceAppointment.FSL__Schedule_Mode__c` • `ServiceAppointment.FSL__Schedule_over_lower_priority_appointment__c` • `ServiceAppointment.FSL__Scheduling_Policy_Used__c` • `ServiceAppointment.FSL__Time_Dependency__c` • `ServiceAppointment.FSL__UpdatedByOptimization__c` • `ServiceAppointment.FSL__Use_Async_Logic__c` • `ServiceAppointment.FSL__Virtual_Service_For_Chatter_Action__c` • `ServiceAppointment.IsOffsiteAppointment` • `ServiceAppointment.Subject` • `ServiceAppointment.WorkTypeId`—Work Type ID
`SvcApptFieldValDplyNm`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The workstream display name of `SvcApptFieldValue`. If `SvcApptField` is a lookup to a service appointment, `SvcApptFieldValue` is an ID and the display name describes the value for the user.
`SvcApptFieldValue`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The value of `SvcApptField`, the work-specific criteria of the capacity limit.
`TimePeriod`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Duration for defining the capacity limitation on the workstream in the service territory.

Field	Details
	Possible values are: • `Day` The default value is `Day`.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

WorkCapacityLimitFeed on page 39
Feed tracking is available for the object.

WorkCapacityLimitHistory on page 47
History is available for tracked fields of the object.

WorkCapacityLimitShare on page 50
Sharing is available for the object.

WorkCapacityUsage

Represents the time consumed by a workstream for a specified time and service territory. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`AvailCapacityHours`	**Type** double **Properties** Create, Defaulted on create, Filter, Nillable, Sort, Update **Description** This value is copied from the `AvailCapacityHours` of the WorkCapacityAvailability object for the service territory on the same date.
`CapLimitRelaxTime`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description
EndDate	**Type** date **Properties** Create, Filter, Group, Sort **Description** End date of the time period for which the capacity usage is accumulated.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, and `LastReferenceDate` isn't null, the user accessed this record or list view indirectly.
LimitationPercentage	**Type** double **Properties** Create, Defaulted on create, Filter, Nillable, Sort **Description** If the `LimitationUnits` is `Percentage` this value is copied from the `LimitationValue` field of the WorkCapacityLimit object.
LimitationUnits	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Defines whether the limitation for the workstream in the service territory is in hours or as a percentage of all the available hours for all the workstreams for which limitations exist in the service territory on a specific day. Possible values are:

Field	Details
	• `Hours` • `Percentage` The default value is `Hours`.
`LimitationValue`	**Type** double **Properties** Create, Filter, Sort **Description** The `LimitationValue` depends on the LimitationUnit. If the `LimitationUnit` is Hours the value is copied from `LimitationValue` in the WorkCapacityLimit object. If the `LimitationUnit` is Percentage, the percentage is calculated relative to the availability in the WorkCapacityAvailability object.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of this object. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`ServiceTerritoryId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the service territory of the work capacity workstream for which usage is accumulated. This field is a relationship field. **Relationship Name** ServiceTerritory **Relationship Type** Lookup **Refers To** ServiceTerritory

Field	Details
StartDate	**Type** date **Properties** Create, Filter, Group, Sort **Description** Start date of the time period for which the capacity usage is accumulated.
SvcApptField	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Work-specific criteria used to define the capacity limit for the workstream. Possible values are: • ServiceAppointment.AccountId • ServiceAppointment.ActualDuration—Actual duration (in minutes) • ServiceAppointment.Duration—Duration • ServiceAppointment.DurationInMinutes • ServiceAppointment.FSL__Appointment_Grade__ce • ServiceAppointment.FSL__Auto_Schedule__c • ServiceAppointment.FSL__Duration_In_Minutes__c—Scheduled duration • ServiceAppointment.FSL__Emergency__c • ServiceAppointment.FSL__GanttColor__c • ServiceAppointment.FSL__GanttLabel__c • ServiceAppointment.FSL__InJeopardyReason__c • ServiceAppointment.FSL__InJeopardy__c • ServiceAppointment.FSL__IsFillInCandidate__c • ServiceAppointment.FSL__IsMultiDay__c • ServiceAppointment.FSL__Last_Updated_Epoch__c • ServiceAppointment.FSL__MDS_Calculated_length__c—Multiday work calculated length • ServiceAppointment.FSL__Pinned__c • ServiceAppointment.FSL__Prevent_Geocoding_For_Chatter_Actions__c • ServiceAppointment.FSL__Related_Service__c • ServiceAppointment.FSL__Same_Day__c • ServiceAppointment.FSL__Same_Resource__c • ServiceAppointment.FSL__Schedule_Mode__c • ServiceAppointment.FSL__Schedule_over_lower_priority_appointment__c

Field	Details
	• `ServiceAppointment.FSL__Scheduling_Policy_Used__c` • `ServiceAppointment.FSL__Time_Dependency__c` • `ServiceAppointment.FSL__UpdatedByOptimization__c` • `ServiceAppointment.FSL__Use_Async_Logic__c` • `ServiceAppointment.FSL__Virtual_Service_For_Chatter_Action__c` • `ServiceAppointment.IsOffsiteAppointment` • `ServiceAppointment.Subject` • `ServiceAppointment.WorkTypeId`—Work Type ID
`SvcApptFieldValDplyNm`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Workstream display name of `SvcApptFieldValue`.
`SvcApptFieldValue`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** Value of `SvcApptField`, the work-specific criteria of the capacity limit.
`TimeConsumedInHours`	**Type** double **Properties** Create, Filter, Nillable, Sort **Description** Time consumed in hours by the workstream in the service territory for the defined period. This value is calculated by dividing `TimeConsumedInMinutes` by 60.
`TimeConsumedInMinutes`	**Type** double **Properties** Create, Filter, Sort **Description** Time consumed in minutes by the workstream in the service territory for the defined period.
`TimePeriod`	**Type** picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Duration for defining the capacity limitation on the workstream in the service territory. Possible values are: • `Day` The default value is `Day`.
`WcuUniqueField1`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** Read-only. Auto populated, unique identifying number.
`WcuUniqueField2`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Read-only. Auto populated, unique identifying number.
`WorkCapacityUsageNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Read-only. Auto populated, unique identifying number.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

WorkCapacityUsageFeed on page 39
: Feed tracking is available for the object.

WorkCapacityUsageShare on page 50
: Sharing is available for the object.

WorkCoaching

Represents a single coaching relationship between two users. One of the users is defined as the coach and the other is defined as a coachee. WorkCoaching is feed-enabled so there is a private feed available to the coach and coachee.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`CoachId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** [Required] The coach in this 1:1 coaching relationship.
`CoachedId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** [Required] The user being coached in this 1:1 coaching relationship.
`IsInactive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the coaching relationship is *`Inactive`* (`true`) or not (`false`).
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time stamp that indicates when the current user last viewed a record that is related to this coaching relationship.

Field Name	Details
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time stamp that indicates when the current user last viewed this coaching relationship. If this value is null, this record might have been only referenced (LastReferencedDate) and not viewed.
Name	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** [Required] The record's name. Max length is 255 characters.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the contact who owns the WorkCoaching record.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkCoachingFeed
Feed tracking is available for the object.

WorkCoachingHistory
History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

WorkCoachingOwnerSharingRule
Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

WorkCoachingShare
Sharing is available for the object.

WorkDemographic

Represents the field values used to specify slices in the workload forecasting and capacity planning. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The org must have the Workforce Engagement license. To view, create, edit, or delete records, the user must have the Workforce Engagement Analyst permission set.

Fields

Field	Details
`Channel`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The channel value.
`CustomWorkType`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Custom dimension value that the user can define other than the channel, region, and skill dimensions.
`GroupIdentifier`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The group or queue associated to a slice when creating an Omni-based workload.
`JobProfileId`	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort **Description** The foreign key to the JobProfile object. This is a relationship field. **Relationship Name** JobProfile **Relationship Type** Lookup **Refers To** JobProfile
`Region`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The region value.
`ServiceChannelId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The foreign key to the ServiceChannel object. This is a relationship field. **Relationship Name** ServiceChannel **Relationship Type** Lookup **Refers To** ServiceChannel
`ServiceTerritoryId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The foreign key to the ServiceTerritory object. This is a relationship field.

Field	Details
	Relationship Name ServiceTerritory **Relationship Type** Lookup **Refers To** ServiceTerritory
SkillSet	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The skill value.

WorkFeedback

Represents the answer to a question that a person was asked via a feedback request. Also used to store offered feedback without linking it to a particular question.

Note: The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Additional Considerations and Related Objects

- Ownership is transferred to the requester on submit for certain types (ad-hoc feedback).
- The record is read-only after the request that it's linked to is set to Submitted.
- You can't link a feedback object to a request unless you are the recipient.
- The question that the feedback is linked to must be part of the same question set that the request is linked to.

Fields

Field Name	Details
Feedback	**Type** textarea

Field Name	Details
	Properties Create, Nillable, Update **Description** Contains either the free-form text of the answer, or the choice selected by the user. Max length is 65536.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the WorkFeedback record.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of the WorkFeedback record.
`QuestionId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The question this answer applies to. When this feedback is linked to a request of an unsolicited type, the question ID is null.
`RequestId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the request this response belongs to, in case of offered feedback.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkFeedbackOwnerSharingRule
Sharing rules are available for the object.

WorkFeedbackShare

Sharing is available for the object.

WorkFeedbackQuestion

Represents a free-form text type or multiple choice question within a set of questions.

Note: The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`Choices`	**Type** textarea **Properties** Create, Nillable, Update **Description** New-line separated list of valid choices for multiple choice questions. Maximum length is 1000 characters.
`Detail`	**Type** textarea **Properties** Create, Nillable, Update **Description** Detailed instructions on how to answer the question.
`IsConfidentialAnswer`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Answers to questions marked confidential will not be shared with the subject of the review. This field applies only to performance summaries.
`IsOptional`	**Type** boolean

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** If this option is selected, the question is optional and isn't required to be answered. This field applies only to performance summaries.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** A short description of the question, which can be used as a header for reports and Calibration.
Number	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The order of the question that is displayed within the question set, such as question number three in a question set that has five questions.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of the WorkFeedbackQuestion.
QuestionSetId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The question set this question is a part of.
Text	**Type** textarea **Properties** Create, Update **Description** The body of the question. Max length is 16384 characters.

Field Name	Details
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Allows for either a free-form text answer or a multiple choice question defined by new-line separate choices in the 'Choices' field. Valid picklist values are: • MultipleChoice • FreeText • Rating

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkFeedbackQuestionOwnerSharingRule
Sharing rules are available for the object.

WorkFeedbackQuestionShare
Sharing is available for the object.

WorkFeedbackQuestionSet

Represents a set of questions being asked. The question set is used to link all the individual requests where different recipients were asked the same set of questions on the same subject.

Note: The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

In the WDC performance application, a question set defines the type of summaries and their due dates that will accompany the deployment of a specific performance summary cycle.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`DueDate`	**Type** date

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The date that this specific question set is expected to be submitted by the recipient. This field applies only to performance summaries.
FeedbackType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The description of the collection of questions that are written in context to the type of recipient answering them, relative to the subject of the summary. This field applies only to performance summaries.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the question set. Maximum length is 225 characters.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of the WorkFeedbackQuestionSet.
PerformanceCycleId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** If a question set is associated to a performance summary cycle, then that cycle ID is referenced in this field. This field applies only to performance summaries.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkFeedbackQuestionSetOwnerSharingRule
Sharing rules are available for the object.

WorkFeedbackQuestionSetShare
Sharing is available for the object.

WorkFeedbackRequest

Represents a single feedback request on a subject or topic (question) to a single recipient in the feedback application. In the case of offered feedback, WorkFeedbackRequest represents feedback that is offered about a subject. In the performance application, WorkFeedbackRequest represents a request for feedback on a set of questions from a question set, on a subject—for the recipient to complete and submit.

Note: The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Additional Considerations and Related Objects

- After a request's state is changed to Submitted, fields can't be changed, except for LastSharedDate and IsUnreadByOwner.
- If LastRemindDate is updated, a reminder notification will be sent to the request's recipient (only possible when request is in Draft state).
- When a new request is created, a notification is sent to the recipient.
- When a recipient of a request submits their feedback (Draft->Submitted), a notification will be sent to requester (except for offered feedback).
- Requester cannot modify the subject of the question set after a request is created.
- For offered feedback (to user, to manager, or both), the person who is offering feedback is both the creator of WorkFeedbackRequest as well as the recipient.

Fields

Field Name	Details
`AdHocFeedback`	**Type** textarea **Properties** Create, Filter, Nillable, Sort **Description** The content of the feedback.

Field Name	Details
AdHocQuestion	**Type** textarea **Properties** Create, Filter, Nillable, Sort **Description** The content of the feedback question.
Description	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the WorkFeedbackRequest.
FeedbackRequestState	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The current state of the feedback request. Allowed picklist values are: • Draft • Submitted • Declined
FeedbackType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Specifies the type of request. Picklist values that are used for performance summaries: • Unspecified • Peer Summary • Self Summary • Manager Summary • Skip Level Summary Picklist values that are used for feedback: • Personal • Unsolicited to User • Unsolicited to Manager

Field Name	Details
	• Unsolicited to User and Manager • On Topic The type of the feedback determines the sharing and visibility rules that are applied to answers.
IsDeployed	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** If `true`, the feedback is part of a deployed performance summary cycle.
IsShareWithSubject	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** If `true`, the feedback is shared with the summary subject.
IsUnreadByOwner	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** If `true`, the submitted request has not been seen by the requester.
IsUnsolicited	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** If `true`, the feedback request is unsolicited feedback offered to another user.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time stamp that indicates when the current user last viewed a record that is related to this WorkFeedbackRequest.

Field Name	Details
LastRemindDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The last time a reminder was sent to the recipient of this draft request.
LastSharedDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The last time this request was shared with another user or group.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time stamp that indicates when the current user last viewed this WorkFeedbackRequest. If this value is null, this record might have been only referenced (`LastReferencedDate`) and not viewed.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the WorkFeedbackRequest.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of the WorkFeedbackRequest.
PerformanceCycleId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description Used by performance summaries to link to a summary cycle. This field applies only to performance summaries.
`QuestionSetId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** Question set associated with the current request.
`RecipientId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** User asked to provide feedback on the subject.
`RelatedObjectId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** Specifies a record in the system that this feedback request is related to. Used by ad-hoc feedback to gather feedback in the context of an opportunity or WDC goal. Used by performance summaries to link to a summary cycle.
`SharingScope`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The users that see the feedback. `SharingScope` can have the following values: • Nobody • Subject • Manager • SubjectAndManager

Field Name	Details
SubjectId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the user that this request (or offer) is about.
SubmitFeedbackToId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the person this performance summary feedback request (and its respective answers) is shared with. It's also the ID of the person who owns the requested subject's manager summary request. This field applies only to performance summaries.
SubmittedDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The last time (in case it was reopened by admin) this request was submitted by the recipient. This field applies only to performance summaries.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkFeedbackRequestFeed
Feed tracking is available for the object.

WorkFeedbackRequestOwnerSharingRule
Sharing rules are available for the object.

WorkFeedbackRequestShare
Sharing is available for the object.

WorkforceCapacity

Represents the time series for actual or forecasted workforce allocation. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org must have the Workforce Engagement license. To view, create, edit, and delete records, the user must have the Workforce Engagement Analyst permission set.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Additional information about the planning.
`EndDateTime`	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The end date and time of the planning.
`IsOmni`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Derived from isOmni field on Workload object. Indicates that the workload is Omni-based. If workload is null, the field value defaults to `false`. The default value is `false`.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the plan.

Field	Details
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the record. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
PlanType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of capacity plan. Possible values are: • `Intraday`—The plan shows intraday management. • `LongTerm`—The plan predicts the required number of full-time employees (FTEs). • `ShortTerm`—The plan predicts the required number of shifts. This field is available in API version 54.0 and later.
StartDateTime	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The start date and time of the planning.
TimeZone	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The time zone associated with the capacity plan. Possible values are the time zones supported by Workforce Engagement. This field is available in API version 56.0 and later.

Field	Details
`WorkloadId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The foreign key to the Workload object. This is a relationship field. **Relationship Name** Workload **Relationship Type** Lookup **Refers To** Workload

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

WorkforceCapacityOwnerSharingRule on page 48
Sharing rules are available for the object.

WorkforceCapacityShare on page 50
Sharing is available for the object.

WorkforceCapacityUnit

Represents the number of resources allocated or needed for a specific set of work items at a timestamp within a specific duration. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org must have the Workforce Engagement license. To view, create, edit, or delete records, the user must have the Workforce Engagement Analyst permission set.

Fields

Field	Details
AssignedTotalCount	**Type** double **Properties** Create, Filter, Nillable, Sort **Description** The number of shifts assigned at specific time period.
AvailableTotalCount	**Type** double **Properties** Create, Filter, Nillable, Sort **Description** The total number of shifts scheduled at a specific time period.
Capacity	**Type** double **Properties** Create, Filter, Nillable, Sort **Description** Staffing prediction for a capacity plan. This field is available in API version 54.0 and later.
DateTime	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The timestamp of the data point.
IsOmni	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Derived from the isOmni field on WorkforceCapacity. Indicates that the workload is Omni-based. The default value is 'false'.
IsShiftTemplateNonStandard	**Type** boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the shift template that's used at a specific time period is a non-standard shift. This field is available in API version 53.0 and later. The default value is `false`.
`JobProfileName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The derived field from the WorkDemographic SkillSet field.
`MaxCount`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** The max number of resources allocated or needed at a specific time period.
`MeasureUnit`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The time interval (in minutes) used in capacity plans. Possible values are: • `43200`—Monthly for long-term capacity plans. This value is available in API version 54.0 and later. • `10080`—Weekly • `1440`—Daily • `60`—Hourly • `30`—30 minutes. Reserved for future use. • `15`—15 minutes. Reserved for future use. The default value is '1440'.
`OriginalTotalCount`	**Type** int

Field	Details
	Properties Create, Filter, Group, Nillable, Sort **Description** The original total number of resources allocated or needed at specific time period calculated from the planning process.
ResourceGap	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Represents the resource gap between the available and required resources.
ServiceTerritoryName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The derived field from the WorkDemographic Region field.
ShiftTemplateDuration	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The duration of the shift template that's used at a specific time period. This field is available in API version 53.0 and later.
ShiftTemplateDurationType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates whether the duration of the shift template that's used at a specific time period is in minutes or hours. This field is available in API version 53.0 and later. Possible values are: • `H`—Hours • `M`—Minutes The default value is `H`.

Field	Details
ShiftTemplateId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the shift template that's used at a specific time period. This field is available in API version 53.0 and later. This is a relationship field. **Relationship Name** ShiftTemplate **Relationship Type** Lookup **Refers To** ShiftTemplate
ShiftTemplateJobProfile	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The job profile that relates to the shift template that's used at a specific time period. This field is available in API version 53.0 and later.
ShiftTemplateName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Name of the shift template that's used at a specific time period. This field is available in API version 53.0 and later.
ShiftTemplateStartTime	**Type** time **Properties** Create, Filter, Nillable, Sort, Update **Description** The start time of the shift template that's used at a specific time period. This field is available in API version 53.0 and later.
TotalCount	**Type** int

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The total number of resources allocated or needed at specific time period. It represents the updated count after the adjustment. This value is the same as `OriginalTotalCount` if no adjustments were made. This is a calculated field.
`WorkDemographicId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The foreign key to WorkDemographic object. This is a relationship field. **Relationship Name** WorkDemographic **Relationship Type** Lookup **Refers To** WorkDemographic
`WorkforceCapacityId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The foreign key to WorkCapacity object. This is a relationship field. **Relationship Name** WorkforceCapacity **Relationship Type** Lookup **Refers To** WorkforceCapacity

WorkGoal

Represents the components of a goal, such as its description and associated metrics. This object has been deprecated as of API version 35.0. Use the Goal object to query information about WDC goals.

Note: The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Related

WorkGoalCollaborator, WorkGoalLink, WorkGoalFeed

Fields

Field Name	Details
`ActualValue`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The actual value of the WorkGoal metric. Applicable only to WorkGoal objects of `Type`: Metric.
`ActualValueExternalUrl`	**Type** url **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Contains a URL that references WDC data synchronization for the actual value of a metric. Applicable only to WorkGoal objects of `Type`: Metric.
`CompletionDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The completion date of the goal. **Note:** Field-level security limits access to only administrators and owners by default, and only they can complete a goal.
`Description`	**Type** textarea (max length 4000)

Field Name	Details
	Properties Create, Nillable, Update **Description** The description of the goal.
`DueDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The date the WorkGoal object is due (optional). Applicable only to WorkGoal objects of `Type`: Metric.
`FlaggedAs`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The progress of the WorkGoal object. Applicable only to WorkGoal objects of `Type`: Metric. Possible values: • On Track: Progress on the metric is on track. • Behind: Progress on the metric is behind schedule. • Postponed: The metric is postponed. • Critical: Progress on the metric is critical.
`ImageUrl`	**Type** url **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The URL for the goal image. The image must be stored in Documents and set as externally available. Applicable only to WorkGoal objects of `Type`: Goal.
`InitialValue`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The initial value of the WorkGoal metric. Applicable only to WorkGoal objects of `Type`: Metric and `MetricType`: Progress or Percent.

Field Name	Details
IsKeyCompanyGoal	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Used to indicate if the goal is a key company goal. Used for the Company Goal Showcase. Applicable only to WorkGoal objects of `Type`: Goal.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time stamp that indicates when the current user last viewed a record that is related to this goal.
LastSyncDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The time stamp that indicates when the actual value was last synced with the associated metrics report.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time stamp that indicates when the current user last viewed this goal.
MetricType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The type of metric that is represented. (See values in the following list). Applies only to WorkGoal objects of `Type`: Metric. Possible values: • Progress: ActualValue / TargetValue as a percentage • Percent: the metric as a percentage only

Field Name	Details
	• YesNo: the completed / not completed metric as a milestone • Absolute: Deprecated
`MetricTypeDataSource`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Specifies how the metric (ActualValue and CurrentValue) is updated. Applies only to WorkGoal objects of `Type`: Goal and Metric. Possible values: • Manual: indicates that the actual and target value of the metric is updated manually by the user • Rollup: indicates that the actual and target value of a goal is rolled up automatically by WDC Goals • DataSyncActualOnly: indicates that the actual value of the metric is linked to a Salesforce report
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the WorkGoal object. (Maximum length is 255.)
`OverallStatus`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The overall calculated status of the WorkGoal based on `FlaggedAs` and `CompletionDate`.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the user who owns the WorkGoal.
`ParentId`	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Specifies the structural parent of the WorkGoal. For example, a goal that has a metric is represented by a WorkGoal of `Type` Metric, which has a parent of WorkGoal of Type Goal. Note: The root and the parent must be set to the parent goal for any child metrics.
`Progress`	**Type** percent **Properties** Filter, Nillable, Sort **Description** Read Only. The overall progress of the WorkGoal.
`RootId`	**Type** reference to a WorkGoal object **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Specifies the structural root of the WorkGoal. For example, a goal that has a metric is represented by a WorkGoal of `Type` Metric, which has a root of WorkGoal of `Type` Goal.
`State`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The state of the WorkGoal object. Applies only to WorkGoal objects of `Type`: Metric. Possible values: • Draft: the draft state for the WorkGoal • Published: published state for the WorkGoal • Archived: archived state for the WorkGoal (for example, goals that no longer apply)
`TargetValue`	**Type** double

Field Name	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** The target value of the WorkGoal. Applies only to WorkGoal objects of `Type`: Metric.
`Type`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of the WorkGoal object, used to differentiate between the components of a goal. (This field is used to represent components of a goal such as its description and associated metrics.) Possible values: • Goal: a goal • Metric: a metric (typically associated with goals) • Objective: an objective • KeyResult: a key result (typically associated with objectives • V2Mom: a V2MOM (pilot feature) • Vision: a vision (pilot feature — typically associated with V2MOM) • Value: a value (pilot feature - typically associated with V2MOM) • Method: a method (pilot feature - typically associated with V2MOM) • Obstacle: an obstacle (pilot feature - typically associated with V2MOM) • Measure: a measure (pilot feature - typically associated with a method) Note: Administrators can rename goals and metrics to objectives and key results, respectively. If this preference is enabled, use the `Type` Objective or KeyResult. Otherwise, use the default `Type` Goal or KeyResult.
`Weight`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The weight of the goal or metric. The sum of the weights should equal 100%.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkGoalFeed (API verison 35.0)
Feed tracking is available for the object.

WorkGoalHistory
History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

WorkGoalOwnerSharingRule
Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

WorkGoalShare
Sharing is available for the object.

WorkGoalCollaborator

Represents collaborators on a WorkGoal object. This doesn't include WorkGoal followers, which is handled by Chatter Feed Follow functionality. This object has been deprecated as of API version 35.0. Use the Goal object to query information about WDC goals.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`InvitationDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The date that a user was invited to become a collaborator (nill if the user was not invited).
`State`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates the state of the collaborating user. Whether the user has not responded, joined, or declined collaboration. The possible values are:

Field Name	Details
	• PendingResponse: a user who was invited to collaborate but hasn't joined or declined • Joined: a user who is collaborating on a goal (joined/commit) • Declined: a user who declined to collaborate on a goal
`UserId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The collaborating user.
`WorkGoalId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The WorkGoal object that this collaborator is a part of.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkGoalCollaboratorHistory

History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

WorkGoalCollaboratorHistory

Represents the history of changes to the values in the fields in a WorkGoalCollaborator object. Access is read-only.

Note: This object has been deprecated as of API version 35.0. Use the Goal object to query information about WDC goals in API version 35.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Fields

Field Name	Details
DataType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Data type of the field that was changed.
Field	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Name of the standard or custom field.
NewValue	**Type** anyType **Properties** Nillable, Sort **Description** New value of the modified field.
OldValue	**Type** anyType **Properties** Nillable, Sort **Description** Previous value of the modified field.
WorkGoalCollaboratorId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the WorkGoalCollaborator object that is associated with this history entry.

WorkGoalHistory

Represents the history of changes to the values in the fields of a WorkGoal. Access is read-only. This object has been deprecated as of API version 35.0. Use the GoalHistory object to query historical information for WDC goals.

Note: The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Fields

Field Name	Details
`Field`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The name of the field that was changed.
`NewValue`	**Type** Any Type **Properties** Nillable, Sort **Description** The new value of the field that was changed.
`OldValue`	**Type** Any Type **Properties** Nillable, Sort **Description** The latest value of the field before it was changed.
`WorkGoalId`	**Type** reference **Properties** Filter, Group, Sort

Field Name	Details
	Description ID of the Goal. Label is Goal ID.

WorkGoalLink

Represents the relationship between two goals (many to many relationship). This object has been deprecated as of API version 35.0. Use the GoalLink object to query information about the relationship between two WDC goals.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()` , `upsert()`

Fields

Field Name	Details
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Whether the WorkGoalLink is active (`true`) or not (`false`)
`LinkType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of link
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The auto-generated name of the goal link
`SourceGoalId`	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Sort, Update **Description** The ID of the source WorkGoal object
`TargetGoalId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the target WorkGoal object

WorkGoalShare

Represents a sharing entry on a WorkGoal object. This object has been deprecated as of API version 35.0. Use the GoalShare object to query information about sharing for WDC goals.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field Name	Details
`AccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The user's or group's level of access to the goal. The possible values are: • Read

Field Name	Details
	• Edit • All: This value is not valid when you create, update, or delete records This field must be set to an access level that is higher than the organization's default access level for goals.
ParentId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the WorkGoal object that is associated with this sharing entry.
RowCause	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited. Valid values include: • `Owner`—The User is the owner of the WorkGoal or is in a user role above the WorkGoal owner in the role hierarchy. • `Manual`—The User or Group has access, because a user with "All" access manually shared the WorkGoal with the user or group. • `Rule`—The User or Group has access via a WorkGoal sharing rule. • `GuestRule`—The User or Group has access via a WorkGoal guest user sharing rule.
UserOrGroupId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the user or group that was given access to the goal. This field can't be updated.

Workload

Represents the time series for work item volume and average handle time from aggregation and forecasting processes. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org must have the Workforce Engagement license. To view, create, edit, or delete records, the user must have the Workforce Engagement Analyst permission set.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Additional information about the workload
`EndDateTime`	**Type** dateTime **Properties** Create, Filter, Sort **Description** The end date and time of the time series represented by the Workload object.
`IsOmni`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Indicates that the workload is Omni-based. The default value is 'false'.
`Name`	**Type** string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update **Description** The workload name.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the workload. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
StartDateTime	**Type** dateTime **Properties** Create, Filter, Sort **Description** The start date and time of the time series represented by the Workload object.
TimeZone	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The time zone associated with the workload. Possible values are the time zones supported by Workforce Engagement. This field is available in API version 56.0 and later.
WorkloadType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of the workload.

Field	Details
	Possible values are: • F—Forecasted • H—Historical • IH—Intraday History. This value is available in API version 55.0 and later. The default value is 'H'.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

WorkloadOwnerSharingRule on page 48
Sharing rules are available for the object.

WorkloadShare on page 50
Sharing is available for the object.

WorkloadUnit

Represents the number of work items and average handle time in a specific time interval. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org must have a Workforce Engagement license. To view, create, edit, and delete records, the user must have the Workforce Engagement Analyst permission set.

Fields

Field	Details
AverageHandleTime	**Type** double **Properties** Filter, Nillable, Sort **Description** The average handle time at a specific period of time.

Field	Details
`Channel`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The channel value.
`CustomWorkType`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The derived field of WorkDemographic.CustomWorkType for the custom dimension value.
`DateTime`	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The timestamp of the single data point in the time series of the workload.
`IsOmni`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Derived from isOmni field in workload. Indicates that the workload is Omni-based The default value is 'false'.
`MeasureUnit`	**Type** string **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The time interval (in minutes) used in the workload. Possible values are: • `43200`—Monthly. Reserved for future use. • `10080`—Weekly • `1440`—Daily • `60`—Hourly

Field	Details
	• 30—30 minutes. Reserved for future use. • 15—15 minutes. Reserved for future use. The default value is '1440'.
Region	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The derived field from WorkDemographic.Region for the region value.
SkillSet	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The derived field from WorkDemographic.SkillSet for the skill value.
TotalCount	**Type** int **Properties** Create, Filter, Group, Sort **Description** The total number work items at a specific period of time.
WorkDemographicId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The foreign key to the WorkDemographic object. This is a relationship field. **Relationship Name** WorkDemographic **Relationship Type** Lookup **Refers To** WorkDemographic
WorkloadId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Sort **Description** The foreign key to the Workload object. This is a relationship field. **Relationship Name** Workload **Relationship Type** Lookup **Refers To** Workload
`WorkloadType`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The derived field from Workload.WorkloadType to indicate the type of workload, for example, a history or forecast workload. Possible values are: • `F`—Forecasted • `H`—Historical The default value is 'H'.

WorkOrder

Represents field service work to be performed for a customer. This object is available in API version 36.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Work orders or Field Service must be enabled.
- The following fields can't be edited, regardless of your field-level security settings:
  - Discount
  - GrandTotal

- IsGeneratedFromMaintenancePlan
- RootWorkOrderId

Fields

Field Name	Details
AccountId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The account associated with the work order. This is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
Address	**Type** address **Properties** Filter, Nillable **Description** The compound form of the address where the work order is completed.
AssetId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The asset associated with the work order. This is a relationship field. **Relationship Name** Asset **Relationship Type** Lookup **Refers To** Asset

Field Name	Details
AssetWarrantyId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The asset warranty term associated with the work order. This field is available in API version 50.0 and above.
BusinessHoursId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The business hours associated with the work order. This is a relationship field. **Relationship Name** BusinessHours **Relationship Type** Lookup **Refers To** BusinessHours
CaseId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The case associated with the work order. This is a relationship field. **Relationship Name** Case **Relationship Type** Lookup **Refers To** Case
City	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The city where the work order is completed. Maximum length is 40 characters.
`ContactId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The contact associated with the work order. This is a relationship field. **Relationship Name** Contact **Relationship Type** Lookup **Refers To** Contact
`Country`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The country where the work order is completed. Maximum length is 80 characters.
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. The label in the user interface is `Currency ISO Code`.
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** The description of the work order. Try to include the steps needed to change the work order's status to Completed.

Field Name	Details
`Discount`	**Type** percent **Properties** Filter, Nillable, Sort **Description** Read only. The weighted average of the discounts on all line items in the work order. It can be any positive number up to 100.
`Duration`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The estimated time required to complete the work order. Specify the duration unit in the `Duration Type` field. Note: Work order duration and work order line item duration are independent of each other. If you want work order duration to automatically show the sum of the work order line items' duration, replace the Duration field on work orders with a custom roll-up summary field.
`DurationInMinutes`	**Type** double **Properties** Filter, Nillable, Sort **Description** The estimated duration in minutes. For internal use only.
`DurationType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The unit of the duration: Minutes or Hours.
`EndDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date when the work order is completed. This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the `EndDate` to 365 days after the `StartDate`.

Field Name	Details
EntitlementId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The entitlement associated with the work order.
GeocodeAccuracy	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Accuracy level of the geocode for the address. See Compound Field Considerations and Limitations for details on geolocation compound fields. Note: This field is available in the API only.
GrandTotal	**Type** currency **Properties** Filter, Nillable, Sort **Description** Read only. The total price of the work order with tax added.
IsClosed	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the work order is closed (`true`) or open (`false`). Tip: Use this field to report on closed versus open work orders.
IsGeneratedFromMaintenancePlan	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** (Read Only) Indicates that the work order was generated from a maintenance plan (`true`), rather than manually created (`false`). Note: This option is deselected for work orders that were generated from maintenance plans before Summer '18.

Field Name	Details
`IsStopped`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether a milestone is paused (`true`) or counting down (`false`). This field is available only if **Enable stopped time and actual elapsed time** is selected on the Entitlement Settings page.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the work order was last modified. Its label in the user interface is `Last Modified Date`.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the work order was last viewed.
`Latitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with Longitude to specify the precise geolocation of the address where the work order is completed. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields. Note: This field is available in the API only.
`LineItemCount`	**Type** int **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description The number of work order line items in the work order. Its label in the user interface is `Line Items`.
`LocationId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The location associated with the work order. For example, a work site. This is a relationship field. **Relationship Name** Location **Relationship Type** Lookup **Refers To** Location
`Longitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with Latitude to specify the precise geolocation of the address where the work order is completed. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields. Note: This field is available in the API only.
`MaintenancePlanId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The maintenance plan associated with the work order. When the work order is auto-generated from a maintenance plan, this field automatically lists the related plan.
`MaintenanceWorkRuleId`	**Type** reference

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** ID of the maintenance work rule that generated this work order. This field is available in API version 50.0 and above.
MilestoneStatus	**Type** string **Properties** Group, Nillable, Sort **Description** Indicates the status of a milestone. This field is visible if an entitlement process is applied to a work order.
MinimumCrewSize	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The minimum crew size allowed for a crew assigned to the work order. If you’re not using the Field Service managed package, this field serves as a suggestion rather than a rule. If you are using the managed package, the scheduling optimizer counts the number of service crew members on a service crew to determine whether it fits a work order’s minimum crew size requirement.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The work order’s assigned owner. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
ParentWorkOrderId	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The work order's parent work order, if it has one. Tip: Create a custom report to view a work order's child work orders. This is a relationship field. **Relationship Name** ParentWorkOrder **Relationship Type** Lookup **Refers To** WorkOrder
`PostalCode`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The postal code where the work order is completed. Maximum length is 20 characters.
`Pricebook2Id`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The price book associated with the work order. Adding a price book to the work order lets you assign different price book entries to the work order's line items. This is only available if Product2 is enabled. This is a relationship field. **Relationship Name** Pricebook2 **Relationship Type** Lookup **Refers To** Pricebook2
`Priority`	**Type** picklist

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The priority of the work order. The picklist includes the following values, which can be customized: • `Low` • `Medium` • `High` • `Critical`
`ProductServiceCampaignId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The product service campaign associated with the work order.
`ProductServiceCampaignItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The product service campaign item associated with the work order.
`RecommendedCrewSize`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The recommended number of people on the service crew assigned to the work order. For example, you might have a Minimum Crew Size of 2 and a Recommended Crew Size of 3.
`ReturnOrderId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The return order associated with the work order.

Field Name	Details
ReturnOrderLineItemId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The return order line item associated with the work order.
RootWorkOrderId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** (Read only) The top-level work order in a work order hierarchy. Depending on where a work order lies in the hierarchy, its root could be the same as its parent. Note: View a work order's child work order in the Child Work Orders related list. This is a relationship field. **Relationship Name** RootWorkOrder **Relationship Type** Lookup **Refers To** WorkOrder
ServiceAppointmentCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of service appointments on the work order.
ServiceContractId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The service contract associated with the work order.
ServiceReportLanguage	**Type** picklist

Field Name	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language used for all service reports and service report previews created for the work order, its service appointments, and its work order line items and their service appointments. If the field is blank, service reports are generated in the default language in Salesforce of the person creating the report. To appear as an option in the ServiceReportLanguage field, a language must be set up in Translation Workbench or be one of Salesforce's 18 fully supported languages. Rich text fields and service report section names aren't translated.
`ServiceReportTemplateId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The service report template that the work order uses. If you don't specify a service report template on a work order, it uses the service report template listed on its work type. If the work type doesn't list a template or no work type is specified, the work order uses the default service report template.
`ServiceTerritoryId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The service territory where the work order is taking place. This is a relationship field. **Relationship Name** ServiceTerritory **Relationship Type** Lookup **Refers To** ServiceTerritory
`SlaExitDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time that the work order exits the entitlement process.

Field Name	Details
`SlaStartDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The time that the work order enters the entitlement process. You can update or reset the time if you have “Edit” permission on work orders.
`StartDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date when the work order goes into effect. This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the StartDate to the date when the Status changes to In Progress.
`State`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The state where the work order is completed. Maximum length is 80 characters.
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The status of the work order. The picklist includes the following values, which can be customized: • `New`—Work order was created, but there hasn’t yet been any activity. • `In Progress`—Work has begun. • `On Hold`—Work is paused. • `Completed`—Work is complete. • `Cannot Complete`—Work could not be completed. • `Closed`—All work and associated activity is complete. • `Canceled`—Work is canceled, typically before any work began. Changing a work order’s status does not affect the status of its work order line items or associated service appointments.

Field Name	Details
`StatusCategory`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The category that each `Status` value falls into. The `Status Category` field has eight default values: seven values which are identical to the default `Status` values, and a `None` value for statuses without a status category. If you create custom `Status` values, you must indicate which category it belongs to. For example, if you create a *`Waiting for Response`* value, you may decide that it belongs in the *`On Hold`* category. To learn which processes reference StatusCategory, see How are Status Categories Used?
`StopStartDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Indicates when the milestone was paused. The label in the user interface is `Stopped Since`.
`Street`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The street number and name where the work order is completed.
`Subject`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The subject of the work order. Try to describe the nature and purpose of the job to be completed. For example, “Annual On-Site Well Maintenance.” Maximum length is 255 characters.
`Subtotal`	**Type** currency **Properties** Filter, Nillable, Sort

Field Name	Details
	Description Read only. The total of the work order line items' subtotals before discounts and taxes are applied.
`SuggestedMaintenanceDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The suggested date that the work order is completed. When the work order is auto-generated from a maintenance plan, this field is automatically populated based on the maintenance plan's settings.
`Tax`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** The total tax on the work order. You can enter a number with or without the currency symbol and use up to two decimal places. For example, in a work order whose total price is $100, enter $10 to apply a 10% tax.
`TotalPrice`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Read only. The total of the work order line items' prices. This value has discounts applied but not tax.
`WorkOrderNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An eight-digit, auto-generated number that identifies the work order.
`WorkTypeId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The work type associated with the work order. When a work type is selected, the work order automatically inherits the work type's `Duration`, `Duration Type`, and required skills. This is a relationship field. **Relationship Name** WorkType **Relationship Type** Lookup **Refers To** WorkType

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

WorkOrderChangeEvent (API version 48.0)
Change events are available for the object.

WorkOrderFeed
Feed tracking is available for the object.

WorkOrderHistory
History is available for tracked fields of the object.

WorkOrderOwnerSharingRule
Sharing rules are available for the object.

WorkOrderShare
Sharing is available for the object.

WorkOrderHistory

Represents the history of changes made to tracked fields on a work order. This object is available in API version 36.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Special Access Rules

Work orders or Field Service must be enabled in your organization, and field tracking for work order fields must be configured.

Fields

Field Name	Details
DataType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Data type of the field that was changed.
Field	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The name of the field that was changed.
NewValue	**Type** anyType **Properties** Nillable, Sort **Description** The new value of the field that was changed.
OldValue	**Type** anyType **Properties** Nillable, Sort **Description** The value of the field before it was changed.
WorkOrderId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the work order being tracked. The history is displayed on the detail page for this record. This is a relationship field. **Relationship Name** WorkOrder

Field Name	Details
	Relationship Type Lookup **Refers To** WorkOrder

WorkOrderLineItem

Represents a subtask on a work order in field service. This object is available in API version 36.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Work orders or Field Service must be enabled.

Fields

Field Name	Details
`Address`	**Type** address **Properties** Filter, Nillable **Description** The compound form of the address where the line item is completed.
`AssetId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The asset associated with the work order line item. The asset is not automatically inherited from the parent work order. This is a relationship field. **Relationship Name** Asset

Field Name	Details
	Relationship Type Lookup **Refers To** Asset
`AssetWarrantyId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The asset warranty term associated with the work order line item. This field is available in API version 50.0 and above.
`City`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The city where the line item is completed. Maximum length is 40 characters.
`Country`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The country where the line item is completed. Maximum length is 80 characters.
`CurrencyIsoCode`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. The label in the user interface is `Currency ISO Code`.
`Description`	**Type** textarea **Properties** Create, Nillable, Update

Field Name	Details
	Description The description of the work order line item. Try to describe the steps needed to mark the line item Completed.
`Discount`	**Type** percent **Properties** Create, Filter, Nillable, Sort, Update **Description** The percent discount to apply to the line item. You can enter a number with or without the percent symbol, and you can use up to two decimal places.
`Duration`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The estimated time required to complete the line item. Specify the duration unit in the `Duration Type` field. Note: Work order duration and work order line item duration are independent of each other. If you want work order duration to automatically show the sum of the work order line items' duration, replace the Duration field on work orders with a custom roll-up summary field.
`DurationInMinutes`	**Type** double **Properties** Filter, Nillable, Sort **Description** The estimated duration in minutes. For internal use only.
`DurationType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The unit of the duration: Minutes or Hours.
`EndDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update

Field Name	Details
	Description The date on which the line item is completed. This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the EndDate to 365 days after the StartDate.
`GeocodeAccuracy`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The level of accuracy of a location's geographical coordinates compared with its physical address. Usually provided by a geocoding service based on the address's latitude and longitude coordinates. Note: This field is available in the API only. Possible values are: • `Address` • `Block` • `City` • `County` • `ExtendedZip` • `NearAddress` • `Neighborhood` • `State` • `Street` • `Unknown` • `Zip`
`IsClosed`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the line item has been closed. Changing the line item's status to `Closed` causes this checkbox to be selected in the user interface (sets `IsClosed` to `true`). Tip: Use this field to report on closed versus open work order line items.
`IsGeneratedFromMaintenancePlan`	**Type** boolean

Field Name	Details
	Properties Defaulted on create, Filter, Group, Sort **Description** Identifies whether the work order line item is generated from a maintenance plan.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the line item was last modified. Its label in the user interface is `Last Modified Date`.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the line item was last viewed.
`Latitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `Longitude` to specify the precise geolocation of the address where the line item is completed. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. Note: This field is available in the API only.
`LineItemNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An auto-generated number that identifies the work order line item. Each work order's line items start at 1.
`ListPrice`	**Type** currency

Field Name	Details
	Properties Filter, Nillable, Sort **Description** The price of the line item (product) as listed in its corresponding price book entry. If a price book entry isn't specified, the list price defaults to zero.
LocationId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A location associated with the work order line item. For example, a work site. This is a relationship field. **Relationship Name** Location **Relationship Type** Lookup **Refers To** Location
Longitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `Latitude` to specify the precise geolocation of the address where the line item is completed. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. Note: This field is available in the API only.
MaintenancePlanId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The maintenance plan associated with the work order line item.
MaintenanceWorkRuleId	**Type** reference

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** ID of the maintenance work rule that generated this line item. This field is available in API version 50.0 and above.
`MinimumCrewSize`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The minimum crew size allowed for a crew assigned to the line item. If you're not using the Field Service managed package, this field serves as a suggestion rather than a rule. If you are using the managed package, the scheduling optimizer counts the number of service crew members on a service crew to determine whether it fits a work order line item's minimum crew size requirement.
`OrderId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The order associated with the line item. For example, you may need to order replacement parts before you can complete the line item. This is a relationship field. **Relationship Name** Order **Relationship Type** Lookup **Refers To** Order
`ParentWorkOrderLineItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The line item's parent work order line item, if it has one. Tip: Create a custom report to view a line item's child line items. This is a relationship field.

Field Name	Details
	Relationship Name ParentWorkOrderLineItem **Relationship Type** Lookup **Refers To** WorkOrderLineItem
`PostalCode`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The postal code where the line item is completed. Maximum length is 20 characters.
`PricebookEntryId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The price book entry (product) associated with the line item. The label in the user interface is `Product`. This field's lookup search only returns products that are included in the work order's price book. This is a relationship field. **Relationship Name** PricebookEntry **Relationship Type** Lookup **Refers To** PricebookEntry
`Priority`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The priority of the line item. The picklist includes the following values, which can be customized: • `Low` • `Medium` • `High`

Field Name	Details
	• `Critical`
`Product2Id`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** (Read only) The product associated with the price book entry. This field is not available in the user interface. For best results, use the `PricebookEntryId` field in any custom code or layouts. This is a relationship field. **Relationship Name** Product2 **Relationship Type** Lookup **Refers To** Product2
`ProductServiceCampaignId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The product service campaign associated with the work order line item.
`ProductServiceCampaignItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The product service campaign item associated with the work order line item.
`Quantity`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Number of units of the line item included in the associated work order.
`RecommendedCrewSize`	**Type** int

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The recommended number of people on the service crew assigned to the line item. For example, you might have a Minimum Crew Size of 2 and a Recommended Crew Size of 3.
ReturnOrderId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The return order associated with the work order line item.
ReturnOrderLineItemId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The return order line item associated with the work order line item.
RootWorkOrderLineItemId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** (Read only) The top-level line item in a work order line item hierarchy. Depending on where a line item lies in the hierarchy, its root could be the same as its parent. Note: View a line item's child line items in the Child Work Order Line Items related list. This is a relationship field. **Relationship Name** RootWorkOrderLineItem **Relationship Type** Lookup **Refers To** WorkOrderLineItem
ServiceAppointmentCount	**Type** int

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** The number of service appointments on the work order line item.
ServiceReportTemplateId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The service report template that the line item uses. If you don't specify a service report template on a work order line item, it uses the service report template listed on its work type. If the work type doesn't list a template or no work type is specified, the line item uses the default service report template.
ServiceTerritoryId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The service territory where the line item is completed. This is a relationship field. **Relationship Name** ServiceTerritory **Relationship Type** Lookup **Refers To** ServiceTerritory
StartDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date on which the line item goes into effect. This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the StartDate to the date when the Status changes to In Progress.
State	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The state where the line item is completed. Maximum length is 80 characters.
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The status of the line item. The picklist includes the following values, which can be customized: • `New`—Line item was created, but there hasn't yet been any activity. • `In Progress`—Work has begun. • `On Hold`—Work is paused. • `Completed`—Work is complete. • `Cannot Complete`—Work could not be completed. • `Closed`—All work and associated activity is complete. • `Canceled`—Work is canceled, typically before any work began.
`StatusCategory`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The category that each `Status` value falls into. The `Status Category` field has eight default values: seven values which are identical to the default `Status` values, and a `None` value for statuses without a status category. If you create custom `Status` values, you must indicate which category it belongs to. For example, if you create a *`Waiting for Response`* value, you may decide that it belongs in the *`On Hold`* category. To learn which processes reference StatusCategory, see How are Status Categories Used?
`Street`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The street number and name where the line item is completed.

Field Name	Details
Subject	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A word or phrase describing the line item.
Subtotal	**Type** currency **Properties** Filter, Nillable, Sort **Description** (Read only) The line item's unit price multiplied by the quantity.
SuggestedMaintenanceDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Date when maintenance work is planned.
TotalPrice	**Type** currency **Properties** Filter, Nillable, Sort **Description** Read only. The line item's subtotal with discounts applied.
UnitPrice	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** Initially, the unit price for a work order line item is the line item's list price from the price book, but you can change it.
WorkOrderId	**Type** reference **Properties** Create, Filter, Group, Sort

Field Name	Details
	Description The line item's parent work order. Because work order line items must be associated with a work order, this is a required field. This is a relationship field. **Relationship Name** WorkOrder **Relationship Type** Lookup **Refers To** WorkOrder
`WorkTypeId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The work type associated with the line item. When a work type is selected, the line item automatically inherits the work type's `Duration`, `Duration Type`, and required skills. This is a relationship field. **Relationship Name** WorkType **Relationship Type** Lookup **Refers To** WorkType

Usage

A work order line item is a child record of a work order. It represents a specific subtask on a work order.

For example, suppose a customer purchased a truck from you. The truck is represented as an asset in your Salesforce org. After some time, the truck needs both headlight bulbs replaced. Here's one way that you can use work orders and work order line items to track the repair.

1. Create a work order named "Replace Headlight Bulbs" from the asset record detail page.
2. Add three work order line items to the work order: "Replace Left Headlight Bulb," "Replace Right Headlight Bulb," and "Test Headlights."
3. Assign the work order to a technician via a queue.
4. As the technician completes each line item, he or she marks the item `Completed`.
5. When all the line items are complete, the technician marks the work order `Completed`.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

WorkOrderLineItemChangeEvent (API version 48.0)
Change events are available for the object.

WorkOrderLineItemFeed
Feed tracking is available for the object.

WorkOrderLineItemHistory
History is available for tracked fields of the object.

WorkOrderLineItemHistory

Represents the history of changes made to tracked fields on a work order line item. This object is available in API version 36.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Special Access Rules

Work orders or Field Service must be enabled in your organization, and field tracking for work order line item fields must be configured.

Fields

Field Name	Details
`DataType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Data type of the field that was changed.
`Field`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The name of the field that was changed.

Field Name	Details
NewValue	**Type** anyType **Properties** Nillable, Sort **Description** The new value of the field that was changed.
OldValue	**Type** anyType **Properties** Nillable, Sort **Description** The value of the field before it was changed.
WorkOrderLineItemId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the work order line item being tracked. The history is displayed on the detail page for this record. This is a relationship field. **Relationship Name** WorkOrderLineItem **Relationship Type** Lookup **Refers To** WorkOrderLineItem

WorkOrderLineItemStatus

Represents a possible status of a work order line item in field service.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
ApiName	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The API name of the status value.
IsDefault	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates that the status value is the default status on work orders. Only one status value can be the default.
MasterLabel	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The label for the picklist value that appears in the UI.
SortOrder	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The value's position in the drop-down list of values in the UI.
StatusCode	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The status category that the value corresponds to. The Status Category field has seven values which are identical to the default Status values.

Usage

The Status field on work order line items comes with the following values:

- New—Line item was created, but there hasn't yet been any activity.
- In Progress—Work has begun.
- On Hold—Work is paused.
- Completed—Work is complete.
- Cannot Complete—Work could not be completed.
- Closed—All work and associated activity is complete.
- Canceled—Work is canceled, typically before any work began.

The WorkOrderLineItemStatus object corresponds to the Status field. Adding a value to the Status field—for example, Canceled By Customer—creates a work order line item status record, and vice versa.

Note: Work order line items also come with a StatusCategory field whose values are identical to the default Status values. If you create custom Status values, you must indicate which category it belongs to. For example, if you create a *`Customer Absent`* value, you may decide that it belongs in the *`Cannot Complete`* category. To learn which processes reference StatusCategory, see How are Status Categories Used?

WorkOrderShare

Represents a sharing entry on a work order. This object is available in API version 36.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Work orders or Field Service must be enabled in your organization. External users can't access this object.

Fields

Field Name	Details
`AccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update

Field Name	Details
	Description Level of access that the user or group has to the work order. The possible values are: • *Read* • *Edit* • *All* (This value isn't valid for create or update calls.) Set to an access level that is at least equal to the organization's default work order access level.
ParentId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The work order associated with the sharing entry. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** WorkOrder
RowCause	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is Manual. If no value is specified, the field defaults to Manual. All other RowCause values are read-only. After the sharing entry is created, this field can't be edited. Valid values include: • Manual—The User or Group has access because a user with "All" access manually shared the work order. • Owner—The User is the owner of the work order. • Rule—The User or Group has access via a work order sharing rule. • GuestRule—The User or Group has access via a work order guest user sharing rule. • LpuImplicit—The User has access to records owned by high-volume Experience Cloud site users via a share group.

Field Name	Details
UserOrGroupId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** (Read Only) ID of the user or group that has access to the work order. This is a polymorphic relationship field. **Relationship Name** UserOrGroup **Relationship Type** Lookup **Refers To** Group, User

WorkOrderStatus

Represents a possible status of a work order in field service.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
ApiName	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The API name of the status value.
IsDefault	**Type** boolean

Field Name	Details
	Properties Defaulted on create, Filter, Group, Sort **Description** Indicates that the status value is the default status on work orders. Only one status value can be the default.
MasterLabel	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The label for the picklist value that appears in the UI.
SortOrder	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The value's position in the drop-down list of values in the UI.
StatusCode	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The status category that the value corresponds to. The Status Category field has seven values which are identical to the default Status values.

Usage

The Status field on work orders comes with the following values:

- New—Work order was created, but there hasn't yet been any activity.
- In Progress—Work has begun.
- On Hold—Work is paused.
- Completed—Work is complete.
- Cannot Complete—Work could not be completed.
- Closed—All work and associated activity is complete.
- Canceled—Work is canceled, typically before any work began.

The WorkOrderStatus object corresponds to the Status field. Adding a value to the Status field—for example, Canceled By Customer—creates a work order status record, and vice versa.

Note: Work orders also come with a StatusCategory field whose values are identical to the default Status values. If you create custom Status values, you must indicate which category it belongs to. For example, if you create a `Customer Absent` value, you may decide that it belongs in the `Cannot Complete` category. To learn which processes reference StatusCategory, see How are Status Categories Used?

WorkPerformanceCycle

Represents feedback that is gathered to assess the performance of a specific set of employees.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`ActivityFrom`	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** The date that you want to start filtering the WDC objects to help requesters create accurate summaries. The start of the evaluation period.
`ActivityTo`	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** The date that you want to stop filtering the WDC objects to help requesters create accurate summaries. The end of the evaluation period.
`CurrentTask`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The current task that the performance summary cycle is engaged in, including deploying and sharing.
`LastManagerRequestsSharedDate`	**Type** dateTime

Field Name	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** The date when all manager requests are set to be shared.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time stamp that indicates when the current user last viewed a record that is related to this WorkPerformanceCycle.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time stamp that indicates when the current user last viewed this WorkPerformanceCycle. If this value is null, this record might have been only referenced (LastReferencedDate) and not viewed.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the performance summary cycle that employees will participate in. This name is created by the administrator and is visible on all respective notifications and in the UI.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of the WorkPerformanceCycle.
State	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update

Field Name	Details
	Description The state that the performance summary cycle is in. Available pick list values: • Setup: The summary is in draft. • In Progress: The summary is deployed and people are answering the questions that were created. • Finished: The summary is no longer in progress. • Error: The summary encountered an error.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkPerformanceCycleFeed
Feed tracking is available for the object.

WorkPerformanceCycleHistory
History is available for tracked fields of the object.

WorkPerformanceCycleOwnerSharingRule
Sharing rules are available for the object.

WorkPerformanceCycleShare
Sharing is available for the object.

WorkPlan

Represents a work plan for a work order or work order line item. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
`Description`	**Type** textarea

Field	Details
	Properties Create, Nillable, Update **Description** The description of the work plan.
`ExecutionOrder`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The order in which the plan is executed. Only positive values or null are supported.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the work plan.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user who created the work plan.

Field	Details
WorkOrderId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Required. The ID of the work order.
WorkOrderLineItemId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the work order line item.

Associated Objects

This object has these associated objects. Unless noted, they're available in the same API version as this object.

WorkPlanChangeEvent
Change events are available for the object.

WorkPlanFeed
Feed tracking is available for the object.

WorkPlanHistory
History is available for tracked fields of the object.

WorkPlanOwnerSharingRule
Sharing rules are available for the object.

WorkPlanShare
Sharing is available for the object.

WorkPlanSelectionRule

Represents a rule that selects a work plan for a work order or work order line item. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
AssetId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the asset.
Description	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the selection rule.
IsActive	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Controls whether this selection rule is active (`true`) or not (`false`). Default is `false`. Label is Active.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.

Field	Details
LocationId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the location.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner.
Product2Id	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the product. Label is Product.
ServiceTerritoryId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the service territory.
WorkPlanSelectionRuleNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The auto-generated number of the work plan selection rule, for example, WPSR-0001.
WorkPlanTemplateId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Required. The ID of the work plan template.

Field	Details
WorkTypeId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the work type.

Associated Objects

This object has these associated objects. Unless noted, they're available in the same API version as this object.

WorkPlanSelectionRuleChangeEvent
Change events are available for the object.

WorkPlanSelectionRuleFeed
Feed tracking is available for the object.

WorkPlanSelectionRuleHistory
History is available for tracked fields of the object.

WorkPlanSelectionRuleOwnerSharingRule
Sharing rules are available for the object.

WorkPlanSelectionRuleShare
Sharing is available for the object.

WorkPlanTemplate

Represents a template for a work plan. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
Description	**Type** textarea

Field	Details
	Properties Create, Nillable, Update **Description** The description of the work plan template.
IsActive	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Controls whether the specific template is available for application (`true`) or not (`false`). Default is `false`. Label is Active.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The user-defined name of the work plan template.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description The ID of the owner who created the work plan template.
`RelativeExecutionOrder`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The relative execution order for sorting the work plan when it's applied to the work order or work order line item. Only positive integers are supported.

Associated Objects

This object has these associated objects. Unless noted, they're available in the same API version as this object.

WorkPlanTemplateChangeEvent
Change events are available for the object.

WorkPlanTemplateFeed
Feed tracking is available for the object.

WorkPlanTemplateHistory
History is available for tracked fields of the object.

WorkPlanTemplateOwnerSharingRule
Sharing rules are available for the object.

WorkPlanTemplateShare
Sharing is available for the object.

WorkPlanTemplateEntry

Represents an object that associates a work step template with a work plan template. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
ExecutionOrder	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The sequence number of when this entry is executed. Only positive values are supported.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it’s possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.
WorkPlanTemplateEntryNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The auto-generated number of the work plan template entry, for example, WPTE-0001.
WorkPlanTemplateId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. The ID of the work plan template.
WorkStepTemplateId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Sort, Update **Description** Required. The ID of the work step template.

Associated Objects

This object has these associated objects. Unless noted, they're available in the same API version as this object.

WorkPlanTemplateEntryChangeEvent
Change events are available for the object.

WorkPlanTemplateEntryFeed
Feed tracking is available for the object.

WorkPlanTemplateEntryHistory
History is available for tracked fields of the object.

WorkReward

Used to store reward codes tied to a Reward Fund. Reward Funds must have at least one WorkReward record.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have the Reward permission enabled in order to use the Rewards feature, including WorkRewardFund and WorkReward.

Additional Considerations and Related Objects

WorkReward is a lookup to WorkRewardFund. WorkRewardFund must have at least one WorkReward record to be available for use. Each WorkBadge record with a `RewardId` indicates a reward badge given to a Recipient.

Fields

Field Name	Details
`Code`	**Type** string **Properties** Create, Filter, Group, Sort, Update

Field Name	Details
	Description Represents a singe reward code tied to a RewardFundId.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Represents the User ID of Owner of WorkReward record
`RecipientId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Salesforce User ID for User associated with this WorkReward record.
`RedemptionDisclaimer`	**Type** textarea **Properties** Nillable **Description** The disclaimer information about the WorkReward.
`RedemptionInfo`	**Type** textarea **Properties** Nillable **Description** The instructions for redeeming the WorkReward.
`RedemptionUrl`	**Type** textarea **Properties** Nillable **Description** The URL for redeeming the WorkReward.
`RewardFundId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update

Field Name	Details
	Description Salesforce unique ID for WorkRewardFund record that is associated with WorkReward record.
RewardFundTypeId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Salesforce unique ID of the WorkRewardFundType associated with the WorkReward.
Value	**Type** double **Properties** Filter, Nillable, Sort **Description** The value of the WorkReward.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkRewardHistory

History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

WorkRewardOwnerSharingRule

Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

WorkRewardShare

Sharing is available for the object.

WorkRewardFund

Represents a Reward Fund and describes the Reward Fund attributes.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To use the Rewards feature, including WorkRewardFund and WorkReward, you must have the Reward permission enabled. To create Rewards, the user must have Create on WorkRewardFund, which is not a standard permission.

Additional Considerations and Related Objects

WorkReward is a lookup to WorkRewardFund. WorkRewardFund must have at least one WorkReward record available. Each WorkBadgeDefinition with a RewardFundId is a “Reward Badge.”

Fields

Field Name	Details
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the WorkRewardFund is active (`true`) or not (`false`).
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time stamp that indicates when the current user last viewed a record that is related to this WorkRewardFund.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time stamp that indicates when the current user last viewed this WorkRewardFund. If this value is null, this record might have been only referenced (`LastReferencedDate`) and not viewed.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. Name of the Reward Fund.

Field Name	Details
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Salesforce unique ID of User who is the Owner of the WorkRewardFund record.
RewardFundTypeId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Salesforce unique ID of the WorkRewardFundType that is associated with the WorkRewardFund.
TotalCodeCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Total reward codes that are available in the WorkRewardFund. Derived from WorkReward records that are associated with the WorkRewardFund.
Type	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** RewardType of the WorkRewardFund. Default is Amazon.com.
UsedCodeCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Total reward codes that are used in the WorkRewardFund. Derived from the total assigned WorkReward records that are associated with the WorkRewardFund.
Value	**Type** currency **Properties** Create, Filter, Sort, Update

Field Name	Details
	Description Value of each of the reward codes in the WorkRewardFund.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkRewardFundFeed
Feed tracking is available for the object.

WorkRewardFundHistory
History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

WorkRewardFundOwnerSharingRule
Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

WorkRewardFundShare
Sharing is available for the object.

WorkRewardFundType

Represents the type of WorkRewardFund object.

Note: The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`CreditSystem`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update

Field Name	Details
	Description The credit system that is used by the WorkRewardFundType object (gift codes or points). If points are selected, the reward message will not consider the `CurrencyCode` field.
`CurrencyCode`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The currency code of the WorkRewardFundType
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Whether the WorkRewardFundType is active and available in the UI
`IsPredefined`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Whether the WorkRewardFundType is predefined (`true`) or not (`false`)
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time stamp that indicates when the current user last viewed a record that is related to this WorkRewardFundType.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time stamp that indicates when the current user last viewed this WorkRewardFundType. If this value is null, this record might have been only referenced (`LastReferencedDate`) and not viewed.

Field Name	Details
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the WorkRewardFundType
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the WorkRewardFundType owner
RedemptionDisclaimer	**Type** textarea **Properties** Create, Nillable, Update **Description** The redemption disclaimer text for the WorkRewardFundType
RedemptionInfo	**Type** textarea **Properties** Create, Nillable, Update **Description** Redemption text for the WorkRewardFundType
RedemptionUrl	**Type** textarea **Properties** Create, Nillable, Update **Description** The URL that’s linked to the redemption
UploadCodeColumn	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The column where the reward code is contained in the CSV file. The upload uses the second value by default.
`UploadValueColumn`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The column where the reward value is contained in the CSV file. The upload uses the third column by default.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkRewardFundTypeFeed
Feed tracking is available for the object.

WorkRewardFundTypeHistory
History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring ’22. This object isn’t available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

WorkRewardFundTypeOwnerSharingRule
Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring ’22. This object isn’t available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

WorkRewardFundTypeShare
Sharing is available for the object.

WorkStep

Represents a work step in a work plan. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
`ActionDefinition`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The platform action that the work step executes. The possible values are the names of the flow and quick actions configured in your org. To launch Lightning Web Components from Work Steps, you must use `QuickAction` on the action definition.
`ActionType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of platform action that the work step is associated with. Possible values are: • `Flow` • `QuickAction`
`Description`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** The description of the work step.
`EndTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time the work step ends. The value must be greater than or equal to `StartTime`.
`ExecutionOrder`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The order in which the work step is executed. Only positive integer values or null are supported.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. The user-defined name of the work step.
`PausedFlowInterviewId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The auto-populated ID of the flow interview paused by a user.
`StartTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time the work step starts.

Field	Details
Status	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The customizable status of the work order. Every status must be mapped to a status category, but there can be status categories not mapped to a status. Possible values are: • `Completed` • `In Progress` • `New` • `Not Applicable` • `Paused`
StatusCategory	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The category that each status value belongs to. Each default status category is mapped to the corresponding default status. If you create a custom status, you must indicate which status category it belongs to. To learn which processes reference StatusCategory, see How are Status Categories Used?. Possible values are: • `Completed` • `InProgress` • `New` • `NotApplicable` • `Paused`
WorkOrderId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the work order.
WorkOrderLineItemId	**Type** reference

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The ID of the work order line item.
`WorkPlanExecutionOrder`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The ID of the plan execution order.
`WorkPlanId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the work plan.

Associated Objects

This object has these associated objects. Unless noted, they're available in the same API version as this object.

WorkStepChangeEvent
Change events are available for the object.

WorkStepFeed
Feed tracking is available for the object.

WorkStepHistory
History is available for tracked fields of the object.

WorkStepStatus

Represents a picklist for a status category on a work step. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
ApiName	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Required. The name of the work step status.
IsDefault	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Controls whether this status is the default value of the picklist of the corresponding status category (`true`) or not (`false`). Default is `false`.
MasterLabel	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Required. The label of the work step status.
SortOrder	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Required. The order in which the work step statuses are displayed in the status category's picklist.
StatusCode	**Type** picklist **Properties** Required. Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The status category that this status belongs to. Possible values are: • `Completed` • `InProgress`

Field	Details
	• `New` • `NotApplicable` • `Paused`

WorkStepTemplate

Represents a template for a work step. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
`ActionDefinition`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The platform action that the work step executes. The possible values are the names of the flow and quick actions configured in your org.
`ActionType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of platform action that the work step is associated with. Possible values are: • `Flow` • `QuickAction`

Field	Details
Description	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** The description of the work step template.
IsActive	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Controls whether this work step template is active `true` or not `false`. Default is `false`.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it’s possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The user-defined name of the work step template.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description The ID of the owner who created the work step template.

Associated Objects

This object has these associated objects. Unless noted, they're available in the same API version as this object.

WorkStepTemplateChangeEvent
Change events are available for the object.

WorkStepTemplateFeed
Feed tracking is available for the object.

WorkStepTemplateHistory
History is available for tracked fields of the object.

WorkStepTemplateOwnerSharingRule
Sharing rules are available for the object.

WorkStepTemplateShare
Sharing is available for the object.

WorkThanks

Represents the source and message of a thanks post.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Additional Considerations and Related Objects

WorkBadge is a lookup to WorkThanks. Each WorkBadge record must derive a SourceId from WorkThanks.

Fields

Field Name	Details
`FeedItemId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the FeedItem related to the thanks badge.

Field Name	Details
	This is a relationship field. **Relationship Name** FeedItem **Relationship Type** Lookup **Refers To** FeedItem
GiverId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Salesforce user ID for the giver of the Thanks record. This is a relationship field. **Relationship Name** Giver **Relationship Type** Lookup **Refers To** User
Message	**Type** textarea **Properties** Create **Description** Required. Message associated with the Thanks record.
NetworkId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the community that this WorkThanks is associated with. This field is available only if digital experiences is enabled in your org.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description Salesforce user ID for the owner of the badge record (typically the same user as the giver of the record). This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkThanksOwnerSharingRule
Sharing rules are available for the object.

WorkThanksShare
Sharing is available for the object.

WorkType

Represents a type of work to be performed in Field Service and Lightning Scheduler. Work types are templates that can be applied to work order or work order line items. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update

Field Name	Details
	Description The description of the work type. Try to add details about the task or tasks that this work type represents.
`DurationType`	**Type** picklist **Properties** Create, Filter, Group, Defaulted on create, Restricted picklist, Sort, Update **Description** The unit of the `Estimated Duration`: Minutes or Hours.
`EstimatedDuration`	**Type** double **Properties** Create, Filter, Sort, Update **Description** The estimated length of the work. The estimated duration is in minutes or hours based on the value selected in the `Duration Type` field.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the work type was last modified. Its label in the user interface is `Last Modified Date`.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the work type was last viewed by the current user.
`MinimumCrewSize`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The minimum crew size allowed for a crew assigned to the work. Work orders and work order line items inherit their work type's minimum crew size.

Field Name	Details
	If you're not using the Field Service managed package, this field serves as a suggestion rather than a rule. If you are using the managed package, the scheduling optimizer counts the number of service crew members on a service crew to determine whether it fits the minimum crew size requirement.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the work type. Try to use a name that helps users quickly understand the type of work orders that can be created from the work type. For example, "Annual Refrigerator Maintenance" or "Valve Replacement."
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The work type's owner. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
RecommendedCrewSize	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The recommended number of people on the service crew assigned to the work. For example, you might have a Minimum Crew Size of 2 and a Recommended Crew Size of 3. Work orders and work order line items inherit their work type's recommended crew size.
ServiceReportTemplateId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The service report template associated with the work type. When users create service reports from a work order or work order line item that uses this work type, the reports will use this template.
`ShouldAutoCreateSvcAppt`	**Type** boolean **Properties** Create, Filter, Group, Defaulted on create, Sort, Update **Description** Select this option to have a service appointment automatically created on work orders and work order line items that use the work type. Note: • By default, the Due Date on auto-created service appointments is seven days after the created date. Admins can adjust this offset from the Field Service Settings page in Setup. • If a work type with the Auto-Create Service Appointment option selected is added to an existing work order or work order line item, a service appointment is only created for the work order or work order line item if it doesn't yet have one. • If someone updates an existing work type by selecting the Auto-Create Service Appointment option, service appointments aren't created on work orders and work order line items that were already using the work type.

Usage

Adding a work type to a work order or work order line item causes the record to inherit the work type's duration values and required skills and products.

Note:

- If needed, you can update the duration values and required skills and products on a work order or work order line item after they're inherited from the work type.
- If a work order or work order line item already has required skills or products, associating it with a work type doesn't cause it to inherit the work type's requirements.
- Customizations to required skills or products, such as validation rules or Apex triggers, are not carried over from work types to work orders and work order line items.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

WorkTypeChangeEvent (API version 48.0)
Change events are available for the object.

WorkTypeFeed
Feed tracking is available for the object.

WorkTypeHistory
History is available for tracked fields of the object.

WorkTypeOwnerSharingRule
Sharing rules are available for the object.

WorkTypeShare
Sharing is available for the object.

WorkTypeGroup

Represents a grouping of work types used to categorize types of appointments available in Lightning Scheduler, or to define scheduling limits in Field Service. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`AdditionalInformation`	**Type** multipicklist **Properties** Create, Filter, Nillable, Update **Description** Additional information about the types of appointments this work type group represents.
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** A description of this work type group.
`GroupType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description The category of this work type group. Possible values are: • `Capacity`—A group of work types used to define a work capacity limit in Field Service. • `Default`—A non-capacity group of work types used in Lightning Scheduler.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether this work type group can be used for appointment scheduling or work capacity limits. A work type can belong to only one active work type group of type Capacity.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the current user last viewed a record related to this object.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this object.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of this work type group.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user who created this record. This is a polymorphic relationship field.

Field	Details
	Relationship Name Owner **Relationship Type** Lookup **Refers To** Group, User

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkTypeGroupFeed
Feed tracking is available for the object.

WorkTypeGroupHistory
History is available for tracked fields of the object.

WorkTypeGroupOwnerSharingRule
Sharing rules are available for the object.

WorkTypeGroupShare
Sharing is available for the object.

WorkTypeGroupMember

Represents the relationship between a work type and the work type group it belongs to. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the current user last viewed a record related to this object.

Field	Details
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this object.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Autogenerated number identifying the work type group membership. It uses the format ########.
WorkTypeGroupId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the work type group that this record belongs to. This is a relationship field. **Relationship Name** WorkTypeGroup **Relationship Type** Lookup **Refers To** WorkTypeGroup
WorkTypeId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the work type that this record corresponds to. This is a relationship field. **Relationship Name** WorkType **Relationship Type** Lookup

Field	Details
	Refers To WorkType

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkTypeGroupMemberFeed
Feed tracking is available for the object.

WorkTypeGroupMemberHistory
History is available for tracked fields of the object.

CHAPTER 6 Data Model

The entity relationship diagrams (ERDs) for standard Salesforce objects in this section illustrate important relationships between objects. Salesforce ERDs use crow's foot notation. The following ERDs are available.

[other]: We're updating our data models, one at a time, and moving all diagrams to Salesforce Architects. We'll share a direct link to the new version of each diagram as they become available, and retire this page when all data models have been updated and moved.

- B2B Commerce and D2C Commerce Objects—includes objects related to operating a B2B or B2C store
- Sales Objects—includes accounts, contacts, opportunities, leads, campaigns, and other related objects
- Task and Event Objects—includes tasks and events and their related objects
- Support Objects—includes cases and solutions and their related objects
- Salesforce Knowledge Objects—includes view and vote statistics, article versions, and other related objects
- Document, Note, and Attachment Objects—includes documents, notes, and attachments and their related objects
- User, Sharing, and Permission Objects—includes users, profiles, and roles
- User Email Objects
- Profile and Permission Objects—includes users, profiles, permission sets, and related permission objects
- Record Type Objects—includes record types and business processes and their related objects
- Product and Schedule Objects—includes opportunities, products, and schedules
- Sharing and Team Selling Objects—includes account teams, opportunity teams, and sharing objects
- Forecasts Objects—includes objects for Collaborative Forecasts.
- Territory Management 2.0 Objects—includes territories and related objects associated with Territory Management 2.0
- Original Territory Management—includes territories and related objects
- Process Objects—includes approval processes and related objects
- Content Objects—includes content and libraries and their related objects
- Chatter Feed Objects—includes objects related to feeds
- Consent Management Objects—includes consent, authorization form, and communication subscription objects
- WDC Badge and Reward Objects—includes badge and reward objects
- WDC Feedback and Performance Cycle Objects—includes feedback and performance cycle objects

Each ERD includes links to the topics that describe the fields in objects related to the diagram. The data model for your custom objects depends on what you create.

Chatter Objects

Diagram showing the relationships between the Chatter objects

The following diagram shows the relationships between the major Chatter objects.

- A feed item is an entry in the feed, such as a change to a record that's being followed, an updated post, or a user status change.
- All feed items have a `ParentId`, which is either:
  - a record
  - a user
  - a group
