`FolderId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Required. ID of the Folder that contains the document. This is a relationship field. **Relationship Name** Folder **Relationship Type** Lookup **Refers To** Folder, User
`IsBodySearchable`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether the contents of the object can be searched using a SOSL `FIND` call. The `ALL FIELDS` search group includes the content as a searchable field.
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
`IsInternalUseOnly`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the object is only available for internal use (`true`) or not (`false`). Label is **Internal Use Only**.
`IsPublic`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the object is available for external use (`true`) or not (`false`). Label is **Externally Available**.
`Keywords`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Keywords. Limit: 255 characters.
`LastReferencedDate`	**Type** datetime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.

Field	Details
LastViewedDate	**Type** datetime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. Name of the document. Label is **Document Name**.
NamespacePrefix	**Type** string **Properties** Filter, Group, Sort, Nillable **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
Type	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** File type of the Document. In general, the values match the file extension for the type of Document (such as pdf or jpg). Label is **File Extension**.

Field	Details
`Url`	**Type** string **Properties** Create, Filter, Nillable, Group, Sort, Update **Description** URL reference to the file (instead of storing it in the database). If specified, do not specify the `Body` or `BodyLength`.

Usage

When creating or updating a document, you can specify a value in either the `Body` or `Url` fields, but not both.

Encoded Data

The API sends and receives the binary file data encoded as a base64 data type. Prior to creating a record, clients must encode the binary file data as base64. Upon receiving an API response, clients must decode the base64 data to binary (this conversion is usually handled for you by the SOAP client).

Maximum Document Size

You can only create or update documents to a maximum size of 5 MB.

Overview of Salesforce Objects and Fields

DocumentAttachmentMap

Maps the relationship between an EmailTemplate and its attachment, which is stored as a Document.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can’t access this object.

Fields

Field	Details
`DocumentId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the document that this object tracks.
`DocumentSequence`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** Represents the order that the attachments will be included in the email defined by the EmailTemplate specified by the `DocumentId`. Label is **Attachment Sequence**. The first attachment is given a value of 0, and each subsequent attachment is given a value incremented by 1.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the EmailTemplate parent. The attachment identified by `DocumentId` is attached to the EmailTemplate specified in this field.

Usage

Use this object to map the relationship of an EmailTemplate to its attachments, and to specify the order of the attachments.

SEE ALSO:

EmailTemplate

DocumentRecipient

Connects a Service Report to a Digital Signature. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`DigitalSignatureId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Digital Signature to be used on the Service Report. This field is a relationship field. **Relationship Name** DigitalSignature **Relationship Type** Lookup **Refers To** DigitalSignature
`DigitalSignatureUrl`	**Type** textarea **Properties** Create, Nillable, Update **Description** Link to request signature from Experience Cloud site.
`DocumentId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The document sent to the recipient. This field is a polymorphic relationship field. **Relationship Name** Document **Relationship Type** Lookup **Refers To** ServiceReport

Field	Details
DocumentRecipient	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Number automatically assigned to a new record.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of this object. ID of the creator of this object. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
RecipientId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort **Description** The recipient to sign the document. This field is a polymorphic relationship field. **Relationship Name** Recipient **Relationship Type** Lookup **Refers To** Contact, User
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The status of the document recipient record. Possible values are: • `Completed` • `Declined` • `Delivered` • `None` • `Sent` The default value is `None`.
`StatusReason`	**Type** textarea **Properties** Create, Nillable, Update **Description** The final status reason.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

DocumentRecipientFeed on page 39

Feed tracking is available for the object.

DocumentRecipientOwnerSharingRule on page 48
Sharing rules are available for the object.

DocumentRecipientShare on page 50
Sharing is available for the object.

DocumentTag

Associates a word or short phrase with a Document.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
`ItemId`	**Type** reference **Properties** Create, Filter **Description** ID of the tagged item.
`Name`	**Type** string **Properties** Create, Filter **Description** Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
`TagDefinitionId`	**Type** reference **Properties** Filter **Description** ID of the parent TagDefinition object that owns the tag.
`Type`	**Type** picklist

Field Name	Details
	Properties Create, Filter, Restricted picklist **Description** Defines the visibility of a tag. Valid values: • `Public`—The tag can be viewed and manipulated by all users in an organization. • `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`.

Usage

DocumentTag stores the relationship between its parent TagDefinition and the Document being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

Domain

Read-only object that represents a custom Web address assigned to a site in your organization. This object is available in API version 26.0 and later.

To access this object, Salesforce Sites, Digital Experiences, or Site.com must be enabled for your organization. `DomainSite` contains records for domains that serve your Experience Cloud sites only when enhanced domains are deployed. The system-managed site hostnames for those Experience Cloud sites end in `.my.site.com`. This object doesn't contain records for domains that serve Experience Cloud sites with hostnames that end in `.force.com`.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

- Customer Portal users can't access this object.
- To view this object, you must have the View Setup and Configuration permission.
- Site.com Publisher users have read-only API access to the Domain and DomainSite objects.

Fields

Field	Description
`CnameTarget`	**Type** string

Field	Description
	Properties Filter, Nillable, Sort **Description** The canonical name (CNAME) of the external host or server. If you use a custom domain with a non-Salesforce provider, such as your own external server or CDN provider, to serve your domain, this field points to the CNAME of the external provider. This field is available in API version 43.0 and later.
`Domain`	**Type** string **Properties** Filter, idLookup, Sort **Description** The branded custom Web address within the global namespace identified by this domain's type. In the Domain Name System (DNS) global namespace, this field is the custom Web address that you registered with a third-party domain name registrar. The custom Web address can be used to access the site of this domain.
`DomainType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The global namespace that this custom Web address belongs to. This value is set to DNS for custom Web addresses in the global DNS. DomainType can have the following value: • `DNS`—Domain Name System (DNS)
`HttpsOption`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Current HTTPS option. Values include: • `CdnPartner`—Salesforce serves the custom domain, such as `https://www.example.com`, with the Salesforce Content Delivery Network (CDN) partner, Akamai. • `Community`—Used for Experience Cloud sites with hostnames that end in `*.force.com`. This option applies only to orgs without enhanced domains.

Field	Description
	• `CommunityAlt`—Used for Experience Cloud sites served by Salesforce with hostnames that end in `.my.site.com`. This option applies only to orgs with enhanced domains. • `ExternalHttps`—An external service or CDN serves the custom domain, such as `https://www.example.com`. • `NoHttps`—Salesforce serves the custom domain, such as `http://www.example.com`, via HTTP. Used to configure your custom domain before selecting a permanent HTTPS option. • `OrgDomain`—Used for the My Domain login URL for this org. • `Sites`—Used for Salesforce Sites served by Salesforce with hostnames that end in `.force.com`. This option applies only to orgs without enhanced domains. • `SitesAlt`—Used for Salesforce Sites served by Salesforce with hostnames that end in `.my.salesforce-sites.com`. This option applies only to orgs with enhanced domains. • `SitesRuntime`—Salesforce serves the custom domain, such as `https://www.example.com`, using your HTTPS certificate on Salesforce servers. This field is available in API version 47.0 and higher.
`OptionsHstsPreload`	**Type** boolean **Properties** Filter **Description** Indicates whether the `preload` directive is added to the HSTS header so that the domain is eligible for HSTS preloading registration (`true`) or not (`false`). This field is available in API version 52.0 and later. After this field is set to `true`, you must still register the domain at https://hstspreload.org so that HTTPS connections are always used. We only modify the HSTS headers of domains that are eligible for registration. Domain names can consist of a public suffix plus one additional label. For more information, see Add a Domain in Salesforce Help.

Usage

Use this read-only object to query the domains that are associated with each site in your organization.

DomainSite

Read-only junction object that joins the Site and Domain objects. This object is available in API version 26.0 and later.

To access this object, Salesforce Sites, Digital Experiences, or Site.com must be enabled. `DomainSite` contains records for domains that serve your Experience Cloud sites only when enhanced domains are deployed. The system-managed site hostnames for those Experience Cloud sites end in `.my.site.com`. This object doesn't contain records for domains that serve Experience Cloud sites with hostnames that end in `.force.com`.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

- Customer Portal users can't access this object.
- To view this object, you must have the View Setup and Configuration permission.
- Site.com Publisher users have read-only API access to the Domain and DomainSite objects.

Fields

Field	Description
`DomainId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the associated Domain. This is a relationship field. **Relationship Name** Domain **Relationship Type** Lookup **Refers To** Domain
`PathPrefix`	**Type** string **Properties** Filter, Group, Sort **Description** Shows where a site's root exists on a domain. Can only be set for custom Web addresses. Always begins with a `/`.
`SiteId`	**Type** reference

Field	Description
	Properties Filter, Group, Sort **Description** The ID of the associated Site. This is a relationship field. **Relationship Name** Site **Relationship Type** Lookup **Refers To** Site

Usage

Use this read-only object to query or retrieve information about your sites.

DsarPolicy

Represents a Data Subject Access Request (DSAR) policy created in the Privacy Center managed package. DSAR policies anonymize or transfer personal data from your org at your customer's request. This object is available in API version 50.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object is for Privacy Center customers with the ReadAllData or PrivacyDataAccess permissions.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Filter, Group, Nillable, Sort **Description** Description of the policy. The description is limited to 255 characters.

Field	Details
`DeveloperName`	**Type** string **Properties** Filter, Group, Sort **Description** Developer name of the policy. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`IsActive`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether this policy can be used (`true`) or not (`false`) for data subject (customer) requests. The default value is `false`.
`Language`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The language of the MasterLabel. Possible values are: • `da`—Danish • `de`—German • `en_US`—English • `es`—Spanish • `es_MX`—Spanish (Mexico) • `fi`—Finnish • `fr`—French • `it`—Italian • `ja`—Japanese • `ko`—Korean • `nl_NL`—Dutch • `no`—Norwegian • `pt_BR`—Portuguese (Brazil) • `ru`—Russian • `sv`—Swedish

Field	Details
	• `th`—Thai • `zh_CN`—Chinese (Simplified) • `zh_TW`—Chinese (Traditional)
`MasterLabel`	**Type** string **Properties** Filter, Group, Sort **Description** Label of the policy.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as the object.

DsarPolicyLog
Sharing is available for the object.

DsarPolicyLog

Represents the history of Data Subject Access Request (DSAR) policy execution requests. This log records the status and results of executed DSAR policies for a customer. This object is available in API version 50.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object is for Privacy Center customers with the ReadAllData or PrivacyDataAccess permissions.

Fields

Field	Details
`CompletionDateTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the data subject access request was completed. Available in API version 51.0 and later.

Field	Details
DataSubjectId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The 15–18 character ID of the data subject making the request. Available in API version 51.0 and later.
DeletedDateTime	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the file generated for the data subject's request is deleted. Available in API version 51.0 and later.
DeveloperName	**Type** string **Properties** Filter, Group, Sort **Description** Developer name of the policy. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
DownloadedDateTime	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The most recent date and time when the data subject downloaded the file generated at their request. Available in API version 51.0 and later.
DsarError	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Represents an error in generating the file for the data subject access request. Available in API version 51.0 and later.

Field	Details
DsarPolicyId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the DSAR policy.
FileURL	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The result of the DSAR policy execution. The URL links to a downloadable file that contains the customer data.
Language	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The language of the MasterLabel. Possible values are: • da—Danish • de—German • en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean • nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified)

Field	Details
	• `zh_TW`—Chinese (Traditional)
`MasterLabel`	**Type** string **Properties** Filter, Group, Sort **Description** Label of the policy.
`RequestDateTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when a data subject requested access to their data in the org. Available in API version 51.0 and later.
`RequestStatus`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The status of the policy execution. Possible values are: • `Complete` • `Deleted` • `Downloaded` • `Expired` • `Failed` • `In Progress`
`RequestUserId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the org employee or admin making the request on behalf of the data subject. Available in API version 51.0 and later.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as the object.

DsarPolicy
Sharing is available for the object.

DuplicateJob

Represents an instance of a job that identifies duplicates among existing records in the system.

This object is available in API versions 42.0 and later.

A duplicate job is the parent of the DuplicateRecordSet instances that it generates. The duplicate record items in a set generated by a duplicate job are of one object type.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
`DuplicateJobDefinitionId`	**Type** reference **Properties** Filter, Group, Sort, Update **Description** The ID of the corresponding duplicate job definition.
`DuplicateJobStatus`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The current status of a duplicate job. Valid values are `Not Started`, `In Progress`, `Completed`, `Canceled`, `Failed`, `Results Deleted`.
`EndDateTime`	**Type** dateTime

Field Name	Details
	Properties Filter, Nillable, Sort **Description** The date and time when a duplicate job was completed.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when a duplicate job was last referenced.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when a duplicate job was last viewed.
Name	**Type** string **Properties** Filter, Group, idLookup, Sort, Update **Description** The name of a duplicate job.
NumDuplicateRecordItems	**Type** int **Properties** Filter, Group, Sort **Description** The total number of duplicate records identified as a result of invoking a duplicate job.
NumDuplicateRecordSets	**Type** int **Properties** Filter, Group, Sort **Description** The number of duplicate record sets identified as a result of invoking a duplicate job.

Field Name	Details
NumRecordsScanned	**Type** int **Properties** Filter, Group, Sort **Description** The number of records scanned as a result of invoking a duplicate job.
ResultListViewId	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** List view metadata for displaying the duplicate record sets identified as result of invoking a duplicate job.
StartDateTime	**Type** dateTime **Properties** Filter, Sort **Description** The date and time when a duplicate job was invoked.

DuplicateJobDefinition

Setup object defining a job that identifies duplicate record items globally.

This object is available in API versions 42.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
`DeveloperName`	**Type** string **Properties** Filter, Group, Sort **Description** The name of the user who created a duplicate job. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`Language`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The language in the user's personal settings.
`MasterLabel`	**Type** string **Properties** Filter, Group, Sort **Description** The label of the duplicate job.
`SobjectSubtype`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The object subtype. Valid values are `Person Account` or `None`.
`SobjectType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The object type: account, contact, or lead.

DuplicateJobMatchingRule

Represents a MatchingRule to be used with a DuplicateJob sharing the corresponding DuplicateJobMatchingRuleDefinition.

This object is available in API versions 42.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
`DuplicateJobId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the corresponding DuplicateJob.
`DuplicateJobMatchRuleDefId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the matching rule defined for the corresponding DuplicateJobMatchingRuleDefinition.
`MatchingRuleBooleanFilter`	**Type** textarea **Properties** Filter, Sort **Description** Boolean logic of the MatchingRule for this DuplicateJobMatchingRule.
`MatchingRuleDescription`	**Type** textarea **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description Description of the matching rule for this DuplicateJobMatchingRule.
`MatchingRuleName`	**Type** string **Properties** Filter, Group, Sort **Description** The name of the matching rule defined for this particular DuplicateJob invocation.

DuplicateJobMatchingRuleDefinition

Setup object specifying a MatchingRule to use with DuplicateJob instances that share a DuplicateJobDefinition.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

This object is available in API versions 42.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `search()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
`DuplicateJobDefinitionId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of DuplicateJobDefinition (master) for this DuplicateJobMatchingRuleDefinition (detail).
`MatchingRuleId`	**Type** reference

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** ID of the MatchingRule to be used with this DuplicateJobMatchingRuleDefinition.

DuplicateRecordItem

Represents an individual record that's part of a duplicate record set. Use this object to create custom report types.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, enable Duplicate Management. A Salesforce admin can grant access to any user with a Sales Cloud or CRM user license.

Fields

Field Name	Details
`DuplicateRecordSetId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The duplicate record set that the duplicate record item is assigned to. This is a relationship field. **Relationship Name** DuplicateRecordSet **Relationship Type** Lookup **Refers To** DuplicateRecordSet
`Name`	**Type** string

Field Name	Details
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The autogenerated name that's given to the Duplicate Record Item. Label is `Duplicate Record Item Name`.
`RecordId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The name of the record as it appears on the record's detail page. This is a polymorphic relationship field. **Relationship Name** Record **Relationship Type** Lookup **Refers To** Account, Contact, Individual, Lead

DuplicateRecordSet

Represents a group of records that have been identified as duplicates. Each duplicate record set contains one or more duplicate record items. Use this object to create custom report types and view the results of duplicate jobs.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, activate duplicate rules. A Salesforce admin must give users read and write access.

Fields

Field Name	Details
`DuplicateRuleId`	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The duplicate rule used to identify this list of duplicate records. **Label** Duplicate Rule ID This is a relationship field. **Relationship Name** DuplicateRule **Relationship Type** Lookup **Refers To** DuplicateRule
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The autogenerated name that's given to the duplicate record set. Label is `Duplicate Record Set Name`.
`RecordCount`	**Type** int

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** The number of record items in the set.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The `ParentId` represents the parent of a duplicate rule or duplicate job. A `ParentId` is polymorphic. The label is Parent. This field is available in API versions 42.0 and later.

DuplicateRule

Represents a duplicate rule for detecting duplicate records.

Supported Calls

`describeSObjects()`, `describeLayout()`, `query()`, `retrieve()`, `search()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
`DeveloperName`	**Type** string **Properties** Filter, Group, Sort **Description** The developer name for the duplicate rule. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`IsActive`	**Type** boolean

Field Name	Details
	Properties Defaulted on create, Filter, Group, Sort **Description** Indicates whether a duplicate rule is active (`true`) or not (`false`). This field is read only.
`Language`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The language for the duplicate rule.
`MasterLabel`	**Type** string **Properties** Filter, Group, Sort **Description** The label for the duplicate rule.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
`sObjectType`	**Type** picklist

Field Name	Details
	Properties Filter, Group, Restricted picklist, Sort **Description** The type of object the duplicate rule is defined for. For example, account, contact, or lead.

Usage

You can use the API to view a duplicate rule's details. To create, edit, or delete duplicate rules, use the UI.

Use DuplicateRule to get the sObject type.

DuplicateRule is unavailable in some orgs.

ElectronicMediaGroup

Represents the type of media that you can associate with a product or category.This object is available in API version 49.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access a web store.

Fields

Field	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The default value is `USD`.
`Description`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description Description of the store.
DeveloperName	**Type** string **Properties** Filter, Group, Sort **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed.
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Name of the media group.
OwnerId	**Type** reference **Properties** Filter, Group, Sort

Field	Details
	Description The ID of the owner of the ElectronicMediaGroup object. For external routing, allows the object to be used in the Streaming API to listen to events whenever a ElectronicMediaGroup record is created, modified, or deleted.
`UsageType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Possible values are: • `Attachment` • `Banner` • `Listing` • `Standard` • `Tile`

ElectronicMediaUse

Represents the usage of media. This object is available in API version 49.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access a web store.

Fields

Field	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The default value is `USD`. Possible values are: • `USD`—U.S. Dollar

Field	Details
`ElectronicMediaGroupId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the electronic media group.
`ElectronicMediaId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the electronic media.
`ImplementorType`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The type of implementor. Available implementors of ElectronicMediaUse include: • ProductMedia • ProductCategoryMedia
`SortOrder`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The order that electronic media is displayed in.

EmailContent

Represents a marketing email asset for use with Account Engagement. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

EmailContent is only available for orgs that use Account Engagement. The Manage Email Content user permission is required. Users also need the CRM User, Sales, or Service User permission set. EmailContent isn't available for custom portal or guest users.

Fields

Field	Details
ClickThroughRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of visitors who click links contained in emails delivered (sent minus bounces) to them. Multiple clicks for a same link are counted.
ClickToOpenRatio	**Type** percent **Properties** Filter, Nillable, Sort **Description** The number of unique clicks divided by unique HTML opens.
DeliveryRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of the emails that were delivered compared to the number that bounced (soft and hard). Note: this data includes emails that were delivered to the recipient's spam folder.
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the email content, for example, Promotion Mass Mailing.
HtmlBody	**Type** textarea **Properties** Nillable

Field	Details
	Description The body of the email in HTML format. The field is read-only.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp that indicates when the current user last viewed the record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, the record could have been referenced (LastReferencedDate) and not viewed.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the email asset.
`OpenRate`	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of unique HTML opens compared to the total number of emails delivered (sent minus bounces).
`OptOutRate`	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of users that have opted out compared to the total number of emails sent.
`SpamComplaintRate`	**Type** percent

Field	Details
	Properties Filter, Nillable, Sort **Description** The percentage of spam complaints compared to the total number emails sent.
`Subject`	**Type** textarea **Properties** Create, Filter, Nillable, Update **Description** Content of the subject line.
`TemplateId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The Email Template field is mostly read-only. You can populate the Email Template field only during record create to prevent overwriting data on the email content record.
`TextBody`	**Type** textarea **Properties** Create, Nillable, Update **Description** The body of the email in plain text format. The character limit is 384, 000.
`TotalDelivered`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of emails minus hard and soft bounces. Note: this data includes emails that were delivered to the recipient's spam folder.
`TotalHardBounced`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort

Field	Details
	Description The total number of emails that permanently returned to the sender because the address is invalid. A hard bounce can occur because the domain name doesn't exist or because the recipient is unknown.
`TotalOpens`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The total number of times a prospect's email client loaded the images in the HTML version of the email. We also record an open if the prospect clicks a link within the HTML or text email without downloading images. A click indicates that they viewed the message. Some email clients (Outlook, Apple Mail, Thunderbird) do not display images by default. Account Engagement counts an open each time the images load.
`TotalSent`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** Read-only field. The total number of list emails sent, including bounced, opted-out, and invalid To: addresses.
`TotalSoftBounced`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** Read-only field. The total number of times a recipient's mail server acknowledged the email, but returned it to the sender. Sometimes it is because the recipient's mailbox is full or the mail server is temporarily unavailable. After 5 soft bounces, Account Engagement opts the prospect out of emails.
`TotalSpamComplaints`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** Read-only field. The total number of prospects that reported the email as spam.
`TotalTrackedLinkClicks`	**Type** int

Field	Details
	Properties Defaulted on create, Filter, Group, Nillable, Sort **Description** Read-only field. The number of times prospects clicked a link in the email.
`UniqueClickThroughRate`	**Type** percent **Properties** Filter, Nillable, Sort **Description** Read-only field. The percentage of visitors who clicked a link contained in an email
`UniqueOpens`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** Read-only field. The number of prospects who loaded the images in the HTML version of the email. The Unique Opens category counts each recipient only one time, even if the prospect loaded images more than once.
`UniqueOptOuts`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** Read-only field. The total number of prospects that have clicked the link to unsubscribe or opted out of all emails in the Email Preference Center. They are removed from future email sends.
`UniqueTrackedLinkClicks`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** Read-only field. The number of times a prospect clicked a link in the email. This metric doesn't include multiple clicks of the same link.

EmailDomainFilter

Represents a filter that determines whether an email relay is restricted to a specific list of domains. This object is available in API version 43.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

You must have the "Email Administration," "Customize Application," and "View Setup" user permissions to use this object.

You must create an email relay in Setup or through the EmailRelay object before you can use the `EmailDomainFilter` object.

Fields

Field Name	Details
`EmailRelayId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the EmailRelay record. This is a relationship field. **Relationship Name** EmailRelay **Relationship Type** Lookup **Refers To** EmailRelay
`FromDomain`	**Type** textarea **Properties** Create, Nillable, Update **Description** Restricts the email relay to send emails based on the sender domains (`FromDomain`) listed in this field. This field is optional, accepts a list of comma-separated values, and supports the wildcard character.
`IsActive`	**Type** boolean

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the email domain filter is active (`true`) or not (`false`). Use this field to enable or disable the email domain filter.
`PriorityNumber`	**Type** int **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** Indicates the order in which the email domain filter is processed. Filters are evaluated in ascending order. The priority number must be unique. If this field is left blank, it is assigned the next available number and is processed last. Processing stops after the first matching filter is applied.
`ToDomain`	**Type** textarea **Properties** Create, Nillable, Update **Description** Restricts the email relay to send emails based on the recipient domains (`ToDomain`) listed in this field. This field is optional, accepts a list of comma-separated values, and supports the wildcard character.

Usage

Tip: If you also plan to activate Bounce Management and Email Compliance Management, confirm with your email admin that your company allows relaying email sent from Salesforce. For more information on bounce management, see Configure Deliverability Settings for Emails Sent from Salesforce.

EmailDomainKey

Represents a domain key for an organization's domain, used to authenticate outbound email that Salesforce sends on the organization's behalf. This object is available in API version 28.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

We've upgraded and replaced the original DKIM (DomainKeys Identified Mail) key feature, so that you can create a DKIM key with increased email security. For more information, see Setting Up More Secure DKIM Keys.

Fields

Field Name	Details
`AlternatePublicKey`	**Type** textarea **Properties** Nillable **Description** Read-only. Alternate public keys are used by Salesforce to auto-rotate domain keys. This field is available in API version 44.0 and later after activating the Critical Update.
`AlternateSelector`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The text used to distinguish the DKIM key from any other DKIM keys your organization uses for the specified domain. This field is available in API version 44.0 and later after activating the Critical Update.
`AlternateTxtRecordName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The alternate TXT record name is used to create the CNAME record. Refer to the Usage section for more information. This field is available in API version 44.0 and later after activating the Critical Update.
`Domain`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The organization's domain name that the DKIM key is generated for.

Field Name	Details
`DomainMatch`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The specificity of match required on the sending domain name before signing with this DKIM key. Valid values are: • `DomainOnly`—Sign if sending domain matches at the domain level only (example.com but not mail.example.com) • `SubdomainsOnly`—Sign if sending domain matches at the subdomain level only (mail.example.com but not example.com) • `DomainAndSubdomains`—Sign if sending domain matches at the domain and subdomain levels (example.com and mail.example.com)
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether this DKIM key is active (`true`) or not (`false`).
`KeySize`	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort **Description** Indicates the RSA key size, in bits. The possible values are: • 1024 • 2048 This field is available in API version 45.0 and later.
`PrivateKey`	**Type** textarea **Properties** Create, Nillable, Update **Description** Once you activate the Critical Update, this field is no longer visible. The private portion of the DKIM key pair used to encrypt mail headers from your domain. Salesforce generates an encrypted `PrivateKey` if you don't specify

Field Name	Details
	a value when creating the DKIM key. If you do specify a value, it must be an existing valid `PrivateKey` from another EmailDomainKey object. This field doesn't contain the actual private key, but a value that represents the key in our system. Therefore: • The actual private key can't be leaked. • You can't use the value to do your own email signing.
`PublicKey`	**Type** textarea **Properties** Create, Nillable, Update **Description** Part of the domain key pair that mail recipients retrieve to decrypt the DKIM header and verify your domain. Add the `PublicKey` value to your domain's DNS records before you start signing with this domain key.
`Selector`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Text used to distinguish the DKIM key from any other DKIM keys your organization uses for the specified domain.
`TxtRecordName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Read-only. The TXT record name is used to create the CNAME record. Refer to the Usage section for more information. This field is available in API version 44.0 and later after activating the Critical Update.
`TxtRecordsPublishState`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The possible values are: • Published • Publishing in progress

Field Name	Details
	• Publishing failed This field is available in API version 44.0 and later after activating the Critical Update.

Usage

Create DKIM Keys with Increased Security

1. If your Salesforce org was created before Winter '19, enable the Critical Update. From Setup, enter *Critical Updates* in the Quick Find box, and then select **Critical Updates**. For Enable Redesigned DomainKeys Identified Mail (DKIM) Key Feature with Increased Email Security, click **Activate**.
2. Insert Domain, DomainMatch, Selector, and AlternateSelector. Salesforce publishes your TXT record to DNS.
3. Retrieve the TxtRecordName and AlternateTxtRecordName and use them to create and publish the CNAME and Alternate CNAME record to your domain's DNS.
   a. Create CNAME record using: ***<selector>***._domainkey.***<domain>*** IN CNAME ***txtRecordName***.
   b. Create Alternate CNAME record using: ***<alternateSelector>***._domainkey.***<domain>*** IN CNAME ***alternateTxtRecordName***.
4. Set the IsActive field to true.

Create DKIM Keys (pre-Winter '19 Version)

Note: The critical update activates for everyone on October 15, 2019. After that date, this approach to creating DKIM keys will no longer be available.

When you create a DKIM key, Salesforce generates a public and private key pair. Publish the public key in the DNS.

For each domain key you create, we recommend this sequence:

1. Insert the Domain, DomainMatch, and Selector.
2. Update your domain's DNS records.
   a. Locate the DNS record at ***selector***._domainkey.***domain***. For example, mail._domainkey.mail.example.com.
   b. Add the PublicKey value, like this: V=DKIM1; p=***public_key***.

   DKIM Signing Outbound Email

   a. In addition, you can optionally put the record in testing mode, which instructs recipients to not make decisions based on the email signature. Add parameter t=y to the DNS entry: V=DKIM1; t=y; p=***public_key***.
3. Update the key via the API or UI to be active.

EmailMessage

Represents an email in Salesforce.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

EmailMessage is only available for orgs that use Email-to-Case or Enhanced Email, which is automatically enabled for most customers.

To use reply and forward functionality, `FromAddress` must specify an email address that exists in EmailMessageRelation, with a `RelationType` of `FromAddress`.

The `Status` field is mostly read-only. You can change the status only from *`New`* to *`Read`*.

The `HtmlBody` and `RelatedToId` fields are supported in Classic list views but not in Lightning list views. In related lists and search results in Lightning Experience, these fields either don't appear, show blank values, or result in an error.

`update()` is supported when an email record is in `Draft` status, and `IsPrivateDraft` is `false`. It's also supported if the email status is `Draft`, `IsPrivateDraft` is `true`, and `CreatedBy` is associated with the current user. When the email record isn't in `Draft` status, the `IsExternallyVisible` field and custom fields only can be updated.

Set the Update Email Messages user permission for users, such as an Automated Case User, who run automated processes that modify email message-related records. With the Update Email Message permission set, users' processes can modify EmailMessageRelation and ContentDocumentLink records that are related to an email message that isn't in Draft status. Don't set this user permission for other users.

Access to an email message depends on the associated object. The user who created the email is specified in `CreatedById` and always has access, unless that user is a guest user. Guest users have read access if the message is marked as `IsExternallyVisible`.

The object that's used to determine access differs for Email-to-Case and Enhanced Email.

- Email-to-Case—When Email-to-Case is enabled and the email is Case-based (the `ParentId` field is Case), access depends on the user's access to the related Case record. If the email message is a draft, only the user in the `CreatedById` field or users with the Modify All Data permission can access it.
- Enhanced Email—Access is activity-based. The `ActivityId` field specifies an associated Task record. You can control access to activity-based objects with the Access Activities permission. Users with the Modify All Data permission can also access the message.

When you use the API to insert EmailMessage records in bulk, the same access rules apply: access is based on cases in `ParentId` fields or by tasks in `ActivityId` fields. When inserting a single record, set the `CreatedById` field to the user performing the operation or leave it blank.

Fields

Field	Details
`ActivityId`	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort **Description** ID of the activity that is associated with the email. Usually represents an open task that is created for the case owner when a new unread email message is received. `ActivityId` can only be specified for emails on cases. It's auto-created for other entities.
`BccAddress`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** A string array of email addresses for recipients who were sent a visually impaired carbon copy of the email message. Include only email addresses that aren't associated with Contact, Lead, or User records in Salesforce. If the recipient is a contact, lead, or user, add their ID to the `BccIds` field instead of adding their email address to the `BccAddress` field. When adding their ID, the email message is automatically associated with the contact, lead, or user. For an Experience Cloud site user who isn't the sender of the email, this field returns null. You can't send emails unless there's at least one recipient.
`BccIds`	**Type** JunctionIdList **Properties** Create, Update **Description** A string array of IDs for contacts, leads, and users who were sent a visually impaired carbon copy of the email message. Each ID is linked to an `EmailMessageRelation` record, which represents the relationship between an email message and a Contact, Lead, or User record. For an Experience Cloud site user who isn't the sender of the email, this list is empty. Adding a `JunctionIdList` field name to the `fieldsToNull` property deletes all related junction records. This action can't be undone.
`CcAddress`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** A string array of email addresses for recipients who were sent a carbon copy of the email message. Include only email addresses that aren't associated with Contact, Lead, or User records in Salesforce. If the recipient is a contact, lead, or user, add their

Field	Details
	ID to the `CcIds` field instead of adding their email address to the `CcAddress` field. Then the email message is automatically associated with the contact, lead, or user. You can't send emails unless there's at least one recipient.
`CcIds`	**Type** JunctionIdList **Properties** Create, Update **Description** A string array of IDs for contacts, leads, and users who were sent a carbon copy of the email message. Each ID is linked to an `EmailMessageRelation` record, which represents the relationship between an email message and a Contact, Lead, or User record. Adding a `JunctionIdList` field name to the `fieldsToNull` property deletes all related junction records. This action can't be undone.
`ClientThreadIdentifier`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** A value used by third-party email clients to identify which thread an email belongs to. See Email-to-Case Threading for more information. Available in API versions 56.0 and later.
`ContentDocumentIds`	**Type** JunctionIdList **Properties** Create, Update **Description** A string array of IDs for content documents such as files and attachments that are associated with an email. Each ID is linked to a `ContentDocumentLink` record, which represents the relationship between an email message and a content document record. Adding a `JunctionIdList` field name to the `fieldsToNull` property deletes all related junction records. This action can't be undone.
`Division`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as “North America,” “Healthcare,” or “Consulting.” Available only if the organization has the Division permission enabled.
`EmailTemplateId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The email template, if any, that was chosen for the email. This field is populated in Lightning Experience only. This is a relationship field. **Relationship Name** EmailTemplate **Relationship Type** Lookup **Refers To** EmailTemplate
`FirstOpenedDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date the email was first opened. To see this field, enable email tracking in your org.
`FromAddress`	**Type** email **Properties** Create, Filter, Nillable, Sort, Update **Description** The address that originated the email. When using this field, specify an email address that exists in EmailMessageRelation, with a `RelationType` of `FromAddress`.
`FromName`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update

Field	Details
	Description The sender's name. When using this field, specify an email address that exists in EmailMessageRelation, with a `RelationType` of `FromAddress`.
`HasAttachment`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the email was sent with an attachment (`true`) or not (`false`).
`Headers`	**Type** textarea **Properties** Create, Nillable, Update **Description** The Internet message headers of the incoming email. Used for debugging and tracing purposes. Doesn't apply to outgoing emails.
`HtmlBody`	**Type** textarea **Properties** Create, Nillable, Update **Description** The body of the email in HTML format. You can't send emails unless at least one of these fields has content. • Subject field • HTML Body or Text Body field As the sender, you can provide the content, or it can be automatically inserted using predefined values. An email template can also include the content for these fields.
`Incoming`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Indicates whether the email was received (`true`) or sent (`false`).
`IsBounced`	**Type** boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the email bounced. This field is set to True for bounced emails in orgs using Lightning Threading. It's not set to True for orgs using Ref ID threading. To see this field, enable bounce management in your org.
`IsClientManaged`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** If EmailMessage is created with `IsClientManaged` set to `true`, users can modify `EmailMessage.ContentDocumentIds` to link file attachments even when the `Status` of the EmailMessage isn't set to `Draft`. When this field is set to `true` and Enhanced Email is enabled, a Task record is created for the EmailMessage regardless of Email-to-Case settings.
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
`IsExternallyVisible`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If the Experience Cloud site case feed is enabled, `IsExternallyVisible` controls the external visibility of emails in sites. When `IsExternallyVisible` is set to `true`—its default value—external users see the email message in the case feed. • Emails remain visible in the Emails related list whether or not this field is set to `true`. If needed, you can remove this related list from your case page layout for external community users. • Only emails with a value in the `ParentId` field can be made externally visible in sites. • This field can't be updated if the email's `Status` is set to `Draft`.

Field	Details
IsOpened	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the email has been opened. To see this field, enable email tracking in your org.
IsPrivateDraft	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** If `IsPrivateDraft` is set to `true`, then only the `CreatedById` user can view, update, and send this email draft. If `IsPrivateDraft` is set to `false`, then any user with permissions to work on the case can see these drafts. After the email is sent, then this field is updated to be `false`. Public drafts are loaded and visible in Salesforce Classic while Private Drafts are only used in Lightning Experience.
IsTracked	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the email is being tracked. To see this field, enable email tracking in your org.
LastOpenedDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date the email was last opened. To see this field, enable email tracking in your org.
MessageDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date the email was created.

Field	Details
	For inbound emails, Email-to-Case sets this field using the Date header. The Date header is set by the email client and is subject to the sender's time preferences.
MessageIdentifier	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The ID of the email message.
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** A name for the email message that's derived from the first 255 characters of the Subject field. If the Subject field is empty, a localized string of `[No Subject]` is used. This field is read-only and can't be created or updated. Available in API versions 56.0 and later.
ParentId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the case that's associated with the email. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** Case
RelatedToId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The `RelatedToId` represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. RelatedToIds are polymorphic. Polymorphic means a RelatedToId is equivalent to the ID of a related object.

Field	Details
	You must have access to at least one entity listed under Refers To to access RelatedToId. This is a polymorphic relationship field. **Relationship Name** RelatedTo **Relationship Type** Lookup **Refers To** Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CommSubscriptionConsent, ContactEncounter, ContactEncounterParticipant, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, DelegatedAccount, DocumentChecklistItem, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, ListEmail, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PartyConsent, PersonLifeEvent, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductItem, ProductRequest, ProductRequestLineItem, ProductTransfer, PurchaserPlan, ReceivedDocument, ResourceAbsence, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, Shift, Shipment, ShipmentItem, Solution, Visit, VisitedParty, VolunteerProject, WorkOrder, WorkOrderLineItem
`ReplyToEmailMessageId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the inbound or outbound email message the current email message is a reply to. It's not possible to reply to a message whose `Status` is `Draft`. This is a relationship field. This is only set for Case related Email replies at setup.

Field	Details
	Relationship Name ReplyToEmailMessage **Relationship Type** Lookup **Refers To** EmailMessage
`Status`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The status of the email. The `Status` field is mostly read-only. You can change the status only from *`New`* to *`Read`*. Possible values are: • `0` (New) • `1` (Read) • `2` (Replied) • `3` (Sent) • `4` (Forwarded) • `5` (Draft) For emails not sent as part of a case, only the status `3` (Sent) is valid.
`Subject`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** The subject line of the email. You can't send emails unless at least one of these fields has content. • Subject field • HTML Body or Text Body field As the sender, you can provide the content, or it can be automatically inserted using predefined values. An email template can also include the content for these fields.
`TextBody`	**Type** textarea **Properties** Create, Nillable, Update

Field	Details
	Description The body of the email, in plain text format. If `TextBody` isn't set, then it's extracted from `HtmlBody`. You can't send emails unless at least one of these fields has content. • Subject field • HTML Body or Text Body field As the sender, you can provide the content, or it can be automatically inserted using predefined values. An email template can also include the content for these fields
`ThreadIdentifier`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The ID of the email thread the email message belongs to.
`ToAddress`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** A string array of email addresses for recipients who were sent the email message. Include only email addresses that aren't associated with Contact, Lead, or User records in Salesforce. If the recipient is a contact, lead, or user, add their ID to the `ToIds` field instead of adding their email address to the `ToAddress` field. Then the email message is automatically associated with the contact, lead, or user. You can't send emails unless there's at least one recipient.
`ToIds`	**Type** JunctionIdList **Properties** Create, Update **Description** A string array of IDs for contacts, leads, and users who were sent a carbon copy of the email message. Each ID is linked to an `EmailMessageRelation` record, which represents the relationship between an email message and a Contact, Lead, or User record. Adding a `JunctionIdList` field name to the `fieldsToNull` property deletes all related junction records. This action can't be undone.
`ValidatedFromAddress`	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** A picklist value with either the sender's address, validated org-wide email addresses that originated the email, or Email-to-Case Routing Address. `ValidatedFromAddress` isn't suitable for use in Group By or Sort By statements. Use `FromAddress`instead.

Usage

If your org uses Email-to-Case, a case is created when an email is sent to one of your company's addresses. The email, which is related to the case by the `ParentID` field, is stored as an EmailMessage record. When users view the email, they see the EmailMessage record.

If your org uses Enhanced Email, each email is stored as an EmailMessage record and a Task record. When users view an email, they see the EmailMessage record.

Sample Code—Apex

This sample logs email activity in Salesforce.

```
// if EnhancedEmail Perm is not enabled, continue logging the email as a task

// if EnhancedEmail Perm is enabled, create an EmailMessage object
EmailMessage emailMessage = new EmailMessage();
emailMessage.status = '3'; // email was sent
emailMessage.relatedToId = '006B0000003weZGIAY'; // related to record e.g. an opportunity
emailMessage.fromAddress = 'sender@example.com'; // from address
emailMessage.fromName = 'Dan Perkins'; // from name
emailMessage.subject = 'This is the Subject!'; // email subject
emailMessage.htmlBody = '<html><body><b>Hello</b></body></html>'; // email body
// Contact, Lead or User Ids of recipients
String[] toIds = new String[]{'003B000000AxcEjIAJ'};
emailMessage.toIds = toIds;
// additional recipients who don't have a corresponding contact, lead or user id in the
Salesforce org (optional)
emailMessage.toAddress = 'emailnotinsalesforce@toexample.com, anotherone@toexample.com';
insert emailMessage; // insert

// Add Email Message Relation for id of the sender
EmailMessageRelation emr = new EmailMessageRelation();
emr.emailMessageId = emailMessage.id;
emr.relationId = '005B0000003qHvOIAU'; // user id of the sender
emr.relationType = 'FromAddress';
insert emr;
```

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

EmailMessageChangeEvent (API version 48.0)
Change events are available for the object.

Case

Overview of Salesforce Objects and Fields

EmailMessageRelation

Represents the relationship between an email and contacts, leads, and users. This object is available in API version 37.0 and later.

Special Access Rules

EmailMessageRelation is only available for organizations that use Email-to-Case or Enhanced Email, which is automatically enabled for most customers.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
`EmailMessageId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the `EmailMessage` record. This is a relationship field. **Relationship Name** EmailMessage **Relationship Type** Lookup **Refers To** EmailMessage

Field Name	Details
RelationAddress	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The email address of the sender or recipient. Note: If a record relates an email to an existing contact, lead, or user record in Salesforce, the value of `RelationAddress` is the current value of the email address. If the value is not set, it is auto-populated from `RelationId`.
RelationId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The `RecordId` of the sender or recipient. Note: If a record relates an email to an email address that's not associated with an existing contact, lead, or user record in Salesforce, the value of `RelationId` is null. This is a polymorphic relationship field. **Relationship Name** Relation **Relationship Type** Lookup **Refers To** Contact, Lead, User
RelationObjectType	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The API name of the object type of the `RecordId` in the `RelationId` field. It can be a contact, lead, or user.
RelationType	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort

Field Name	Details
	Description The type of relationship the contact, lead, or user has with the email message. Possible values include: • `ToAddress` • `CcAddress` • `BccAddress` • `FromAddress` • `OtherAddress` For an Experience Cloud site user who is not the sender of the email, no `BccAddress` relations are returned.

Usage

EmailMessageRelation allows an email to be related to contacts, leads, and users.

EmailRelay

Represents the configuration for sending an email relay. An email relay routes email sent from Salesforce through your company's email servers. This object is available in API version 43.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

You must have the Email Administration, Customize Application, and View Setup user permissions to use this object.

Fields

Field Name	Details
`AuthType`	**Type** picklist **Properties** Create, Filter, Group, Restricted Picklist, Sort, Update **Description** Specifies which SASL mechanism Salesforce uses for SMTP authentication. This field is available when Enable SMTP Auth is selected. Select an option:

Field Name	Details
	• PLAIN- Salesforce uses PLAIN SASL mechanism for SMTP authentication. Default. • LOGIN- Salesforce uses LOGIN SASL mechanism for SMTP authentication This field is available in API version 52.0 and later.
`Host`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Indicates the host name or IP address of your company's SMTP server.
`IsRequireAuth`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether (true) or not (false) authentication is required. When setting this field to true, the `TlsSetting` must be set to **`RequiredVerify`**. This field is available in API version 44.0 and later.
`Password`	**Type** encryptedstring **Properties** Create, Nillable, Update **Description** Specifies the password for relay host STMP authentication. When `IsRequireAuth` is set to true, this field is required. This field is available in API version 44.0 and later.
`Port`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates the port number of your company's SMTP server. • 25 • 587 • 10025 • 11025

Field Name	Details
TlsSetting	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Specifies whether Salesforce uses TLS for SMTP sessions. • `Off`: TLS is turned off. SMTP session continues through an insecure connection. • `Preferred`: If the remote server supports TLS, Salesforce upgrades the current SMTP session to use TLS. If TLS is unavailable, Salesforce continues the session without TLS. • `Required`: Salesforce continues the session only if the remote server supports TLS. If TLS is unavailable, Salesforce terminates the session without delivering the email. • `PreferredVerify`: If the remote server supports TLS, Salesforce upgrades the current SMTP session to use TLS. Before the session begins, Salesforce verifies that the certificate is signed by a valid certificate authority, and that the common name presented in the certificate matches the domain or mail exchange of the current connection. If TLS is available but the certificate is not signed or the common name does not match, Salesforce disconnects the session and does not deliver the email. If TLS is unavailable, Salesforce continues the session without TLS. • `RequiredVerify`: Salesforce continues the session only if the remote server supports TLS, the certificate is signed by a valid certificate authority, and the common name presented in the certificate matches the domain or mail exchange to which Salesforce is connected. If any of these criteria are not met, Salesforce terminates the session without delivering the email.
Username	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Specifies the username for relay host STMP authentication. When `IsRequireAuth` is set to true, this field is required. This field is available in API version 44.0 and later.

Usage

An email relay must be associated with an active email domain filter to take effect. If you set up multiple email relays in one org, they are processed in the priority order of their email domain filters.

Tip: If you also plan to activate Bounce Management and Email Compliance Management, confirm with your email admin that your company allows relaying email sent from Salesforce. For more information on bounce management, see Configure Deliverability Settings for Emails Sent from Salesforce.

SEE ALSO:

EmailServicesFunction

EmailDomainFilter

EmailServicesAddress

An email service address.

Each email service has one or more email addresses to which users can send messages for processing. An email service only processes messages it receives at one of its addresses.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
`AuthorizedSenders`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Configures the email service address to only accept messages from the email addresses or domains listed in this field. If the email service address receives a message from an unlisted email address or domain, the email service performs the action specified in the `AuthorizationFailureAction` field of its associated email service. Leave this field blank if you want the email service address to receive email from any email address.
`DeveloperName`	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description The name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This 25-character field must be unique among other EmailServicesAddress records under the same EmailServiceFunction parent. In managed packages, this field prevents naming conflicts on package installations. This field is automatically generated, but you can supply your own value if you create the record using the API. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance might be slow while Salesforce generates one for each record.
`EmailDomainName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** A read only field you can query that contains the system-generated domain part of this email service address. The system generates a unique domain-part for each email service address to ensure that no two email service addresses are identical.
`FunctionId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the email service for which the email service address receives messages. This is a relationship field. **Relationship Name** Function **Relationship Type** Lookup **Refers To** EmailServicesFunction
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether this object is active (true) or not (false).
`LocalPart`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The local-part of the email service address. The local-part of the address is the string that comes before the @ symbol. For the local-part of a Salesforce email address, all alphanumeric characters are valid, plus the following special characters: `! # $ % & amp; ' * / = ? ^ _ + - ` { | } ~ ,` The dot character (.) is also valid as long as it's not the first or last character. Email addresses aren't case-sensitive.
`RunAsUserId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The username of the user whose permissions the email service assumes when processing messages sent to this address.

Usage

This object supports the email services feature, which allows you to create automated processes that use Apex classes to process the contents, headers, and attachments of inbound email. For example, you can create an email service that automatically creates contact records based on contact information in messages.

SEE ALSO:

EmailServicesFunction

EmailServicesFunction

An email service.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
`AddressInactiveAction`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates what the email service does with messages received at an email address that is inactive. One of the following values: • `UseSystemDefault`—The system default is used. (In API version 41.0 and earlier, the value specified for this choice is `0`.) • `Bounce`—The email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `1`.) • `Discard`—The email service deletes the message without notifying the sender. (In API version 41.0 and earlier, the value specified for this choice is `2`.) • `Requeue`—The email service queues the message for processing in the next 24 hours. If the message is not processed within 24 hours, the email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `3`.)
`ApexClassId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Required. The ID of the Apex class that the email service uses to process inbound messages. This field is required for API version 12.0 and later.
`AttachmentOption`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates the types of attachments the email service accepts. One of the following values:

Field	Details
	• `None`—The email service accepts the message but discards any attachment. (In API version 41.0 and earlier, the value specified for this choice is `0`.) • `NoContent`—The attachment metadata (filename, MIME type, and so on) is provided to the Apex class, but the body is set to `null`. There was no previous numeric value for this choice. • `TextOnly`—The email service only accepts the following types of attachments: – Attachments with a Multipurpose Internet Mail Extension (MIME) type of text. – Attachments with a MIME type of application/octet-stream and a file name that ends with either a .vcf or .vcs extension. These are saved as text/x-vcard and text/calendar MIME types, respectively. (In API version 41.0 and earlier, the value specified for this choice is `1`.) • `BinaryOnly`—The email service only accepts binary attachments, such as image, audio, application, and video files. (In API version 41.0 and earlier, the value specified for this choice is `2`.) • `All`—The email service accepts any type of attachment. (In API version 41.0 and earlier, the value specified for this choice is `3`.)
`AuthenticationFailureAction`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates what the email service does with messages that fail or do not support any of the authentication protocols if the `IsAuthenticationRequired` field is true. One of the following values: • `UseSystemDefault`—The system default is used. (In API version 41.0 and earlier, the value specified for this choice is `0`.) • `Bounce`—The email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `1`.) • `Discard`—The email service deletes the message without notifying the sender. (In API version 41.0 and earlier, the value specified for this choice is `2`.) • `Requeue`—The email service queues the message for processing in the next 24 hours. If the message is not processed within 24 hours, the email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `3`.)
`AuthorizationFailureAction`	**Type** picklist **Properties** Defaulted on create, Group, Sort, Create, Filter, Nillable, Restricted picklist, Update

Field	Details
	Description Indicates what the email service does with messages received from senders who are not listed in the `AuthorizedSenders` field on either the email service or email service address. One of the following values: • `UseSystemDefault`—The system default is used. (In API version 41.0 and earlier, the value specified for this choice is `0`.) • `Bounce`—The email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `1`.) • `Discard`—The email service deletes the message without notifying the sender. (In API version 41.0 and earlier, the value specified for this choice is `2`.) • `Requeue`—The email service queues the message for processing in the next 24 hours. If the message is not processed within 24 hours, the email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `3`.)
`AuthorizedSenders`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Configures the email service to only accept messages from the email addresses or domains listed in this field. If the email service receives a message from an unlisted email address or domain, the email service performs the action specified in the `AuthorizationFailureAction` field. Leave this field blank if you want the email service to receive email from any email address.
`ErrorRoutingAddress`	**Type** email **Properties** Create, Filter, Nillable, Sort, Update **Description** The destination email address for error notification email messages when `IsErrorRoutingEnabled` is `true`.
`FunctionInactiveAction`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates what the email service does with messages it receives when the email service itself is inactive.

Field	Details
	One of the following values: • `UseSystemDefault`—The system default is used. (In API version 41.0 and earlier, the value specified for this choice is `0`.) • `Bounce`—The email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `1`.) • `Discard`—The email service deletes the message without notifying the sender. (In API version 41.0 and earlier, the value specified for this choice is `2`.) • `Requeue`—The email service queues the message for processing in the next 24 hours. If the message is not processed within 24 hours, the email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `3`.)
`FunctionName`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the email service.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether this object is active (`true`) or not (`false`).
`IsAuthenticationRequired`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Configures the email service to verify the legitimacy of the sending server before processing a message. The email service uses the SPF, SenderId, and DomainKeys protocols to verify the sender's legitimacy: If the sending server passes at least one of these protocols and does not fail any, the email service accepts the email. If the server fails a protocol or does not support any of the protocols, the email service performs the action specified in the `AuthenticationFailureAction` field.
`IsErrorRoutingEnabled`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description When incoming email messages can't be processed, indicates whether error notification email messages are routed to a chosen address or to the senders.
`IsTextAttachmentsAsBinary`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** If `true`, text attachments are supplied to the Apex code as a `Messaging.BinaryAttachment` instead of as a `Messaging.TextAttachment`. This means that the body is supplied as an Apex Blob instead of as an Apex String.
`IsTextTruncated`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** This field is deprecated. It is not available as of API version 23.0 and is deprecated and hidden in versions 17.0 through 22.0. In all API versions, the email service now accepts inbound email messages up to the 10 MB size limit, without truncating the text. Previously, it indicated whether the email service truncated and accepted email messages with HTML body text, plain body text, and text attachments over approximately 100,000 characters (`true`) or rejected these email messages and notified the sender (`false`).
`IsTlsRequired`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Not currently in use.
`OverLimitAction`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates what the email service does with messages if the total number of messages processed by all email services combined has reached the daily limit for your organization. One of the following values:

Field	Details
	• `UseSystemDefault`—The system default is used. (In API version 41.0 and earlier, the value specified for this choice is `0`.) • `Bounce`—The email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `1`.) • `Discard`—The email service deletes the message without notifying the sender. (In API version 41.0 and earlier, the value specified for this choice is `2`.) • `Requeue`—The email service queues the message for processing in the next 24 hours. If the message is not processed within 24 hours, the email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `3`.) The system calculates the limit by multiplying the number of user licenses by 1,000.

Usage

This object supports the email services feature, which allows you to create automated processes that use Apex classes to process the contents, headers, and attachments of inbound email. For example, you can create an email service that automatically creates contact records based on contact information in messages.

SEE ALSO:

EmailServicesAddress

EmailStatus

Represents the status of email sent.

Supported Calls

`describeSObjects()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
`EmailTemplateName`	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The name of the EmailTemplate.
FirstOpenDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date when the email was first opened by recipient. Label is **Date Opened**.
LastOpenDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date when the email was last opened by recipient.
TaskId	**Type** reference **Properties** Filter, Group, Sort **Description** The activity (task or event) associated with the email. Label is **Activity ID**. This is a relationship field. **Relationship Name** Task **Relationship Type** Lookup **Refers To** Task
TimesOpened	**Type** int **Properties** Filter, Group, Sort **Description** Number of times the recipient opened the email.

Field	Details
WhoId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The WhoId represents a human such as a lead or a contact. WhoIds are polymorphic. Polymorphic means a WhoId is equivalent to a contact's ID or a lead's ID. The label is `Name ID`. This is a polymorphic relationship field. **Relationship Name** Who **Relationship Type** Lookup **Refers To** Contact, Lead

SEE ALSO:

EmailTemplate

EmailTemplate

Represents a template for an email, mass email, list email, or Sales Engagement email. Supported in first-generation managed packages only.

Note: You can't send a mass email using a Visualforce email template.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
ApiVersion	**Type** double

Field	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** The API version for this class. Every class has an API version specified at creation.
`Body`	**Type** textarea **Properties** Create, Nillable, Update **Description** Content of the email. Limit: 384 KB.
`BrandTemplateId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Required. ID of the BrandTemplate associated with this email template. The brand template supplies letterhead information for the email template.
`DeliveryRate`	**Type** percent **Properties** Filter, Nillable, Sort **Description** Read-only. The percentage of the emails that were delivered compared to the number that bounced (soft and hard). Note: this data includes emails that were delivered to the recipient's spam folder. This field is available in API version 46.0 and later. To access this field, your org must use Sales Engagement and users need the Sales Engagement User or Sales Engagement Cadence Creator permission set. This field value includes emails sent via the ListEmail object or Sales Engagement cadences.
`Description`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** Description of the template, for example, Promotion Mass Mailing.
`DeveloperName`	**Type** string

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is **Template Unique Name**. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.
`Encoding`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Character set encoding for the template.
`EnhancedLetterheadId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the enhanced letterhead associated with the email template. Note: To use an enhanced letterhead, associate it with a Lightning email template that uses the HML merge language. This is a relationship field. **Relationship Name** EnhancedLetterhead **Relationship Type** Lookup **Refers To** EnhancedLetterhead
`EntityType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort,

Field	Details
	Description When `UIType` is `2` (Lightning Experience) or `3` (Lightning ExperienceSample), `EntityType` indicates which entities this template can be used with (for example, account or lead). Valid values are standard object ID prefixes: 001 for account, 003 for contact, 006 for opportunity, and 00Q for lead, 500 for case, and 701 for campaign. This field has been removed in API version 39.0. Use `RelatedEntityType` instead.
`FolderId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the folder that contains the template. This is a relationship field. **Relationship Name** Folder **Relationship Type** Lookup **Refers To** Folder, Organization, User
`FolderName`	**Type** string **Properties** Filter, Nillable, Sort **Description** The name of the folder that contains the template.
`HasSalesforceFiles`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If the email template has attachments from Salesforce Files. The default value is false.
`HtmlValue`	**Type** textarea **Properties** Create, Nillable, Update

Field	Details
	Description This field contains the content of the email message, including HTML coding to render the email message. Limit: 384 KB.
IsActive	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates that this template is active if `true`, or inactive if `false`.
IsBuilderContent	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If the email template was made in Email Template Builder. The default value is false.
LastUsedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date and time when this email template was last used. Used with Salesforce Classic templates. Not typically used with Lightning Experience templates.
Markup	**Type** textarea **Properties** Create, Nillable, Update **Description** The Visualforce markup, HTML, JavaScript, or any other Web-enabled code that defines the content of the template.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the template. Label is **Email Template Name**.

Field	Details
NamespacePrefix	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. This field can't be accessed unless the logged-in user has the Customize Application permission.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of the template. This is a relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** User
RelatedEntityType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** When UIType is 2 (Lightning Experience) or 3 (Lightning ExperienceSample), RelatedEntityType indicates which entities this template can be used with. Valid

Field	Details
	values are the entity API name: "Account" for account, "Contact" for contact, "Opportunity" for opportunity, "Lead" for lead, and so on. The value can be any entity the user has read access to (including custom entities) but not virtual entities, setup entities, or platform entities. No restrictions exist at the schema level.
Subject	**Type** string **Properties** Create, Nillable, Sort, Update **Description** Content of the subject line. The limit is 1,000 characters for Lightning email templates and 230 characters for Classic email templates.
TemplateStyle	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Style of the template. Possible values are: • formalLetter—Formal Letter • freeForm—Free Form Letter • newsletter—Newsletter • none—No Email Layout • products—Products • promotionLeft—Promotion (Left) • promotionRight—Promotion (Right)
TemplateType	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Type of template. Possible values are: • custom—Custom • html—HTML • text—Text • visualforce—Visualforce

Field	Details
TimesUsed	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Number of times this email template has been used. Used with Salesforce Classic templates. Not typically used with Lightning Experience templates.
TotalDelivered	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Read-only. The total number of emails sent minus hard and soft bounces. Note: this data includes emails that were delivered to the recipient's spam folder. This field is available in API version 46.0 and later. To access this field, your org must use Sales Engagement and users need the Sales Engagement User or Sales Engagement Cadence Creator permission set. This field value includes emails sent via the ListEmail object or Sales Engagement cadences.
TotalHardBounced	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** Read-only. The total number of emails that permanently bounced back to the sender because the address is invalid. A hard bounce can occur because the domain name doesn't exist or because the recipient is unknown. This field is available in API version 46.0 and later. To access this field, your org must use Sales Engagement and users need the Sales Engagement User or Sales Engagement Cadence Creator permission set. This field value includes emails sent via the ListEmail object or Sales Engagement cadences.
TotalOpens	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** Read-only. The total number of times a prospect’s email client loaded the images in the HTML version of the email. We also record an open if the prospect clicks a link within the

Field	Details
	HTML or text email without downloading images. A click indicates that they viewed the message. Some email clients (Outlook, Apple Mail, Thunderbird) don't display images by default. Pardot counts an open each time the images load. This field is available in API version 46.0 and later. To access this field, your org must use Sales Engagement and users need the Sales Engagement User or Sales Engagement Cadence Creator permission set. This field value includes emails sent via the ListEmail object or Sales Engagement cadences.
`TotalSent`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Read-only. The total number of emails sent, including bounced, opted-out, and invalid To: addresses. This field is available in API version 46.0 and later. To access this field, your org must use Sales Engagement and users need the Sales Engagement User or Sales Engagement Cadence Creator permission set. This field value includes emails sent via the ListEmail object or Sales Engagement cadences.
`TotalSoftBounced`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** Read-only. The total number of times a recipient's mail server acknowledged the email, but returned it to the sender. Sometimes it is because the recipient's mailbox is full or the mail server is temporarily unavailable. A soft bounce message can sometimes be delivered at another time. After 5 soft bounces, Pardot opts the prospect out of emails. This field is available in API version 46.0 and later. To access this field, your org must use Sales Engagement and users need the Sales Engagement User or Sales Engagement Cadence Creator permission set. This field value includes emails sent via the ListEmail object or Sales Engagement cadences.
`UIType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the user interface where this template is usable. Possible values are: • `Aloha`

Field	Details
	• `SFX` • `SFX_Sample`—SFXSample

Usage

To retrieve this object, issue a describe call on an object, which returns a query result for each activity since the object was created. You can't query these records.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

EmailTemplateChangeEvent (API version 48.0)
Change events are available for the object.

SEE ALSO:

Attachment
EmailStatus
DocumentAttachmentMap

EmailTemplateMonthlyMetric

Represents the monthly engagement metrics for an email template. This object is available in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Sales Engagement must be enabled.

Fields

Field	Details
`AllEmailsBouncedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The total of hard and soft bounced emails for this email template in the month. This is a calculated field.
AllEmailsDeliveredCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of successfully delivered emails for this email template in the month. This is a calculated field.
AllEmailsHardBouncedCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of hard bounced emails for this email template in the month.
AllEmailsLinkClickedCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails containing a link clicked by the recipient for this email template in the month.
AllEmailsNotDeliveredCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails not delivered for this email template in the month. This field is available in API version 54.0 and later.
AllEmailsOpenedCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails opened by the recipient for this email template in the month.

Field	Details
AllEmailsOutOfOfficeCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails that triggered an out-of-office reply for this email template in the month.
AllEmailsRepliedCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails replied to for this email template in the month.
AllEmailsSentCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent for this email template in the month. This is a calculated field.
AllEmailsSoftBouncedCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails soft bounced for this email template in the month.
AllEmailsTrackedSentCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent with engagement tracking enabled for this email template in the month.
AllEmailsUntrackedSentCount	**Type** int

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The number of emails sent without engagement tracking for this email template in the month.
DeliveredRecipientCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of recipients who were successfully delivered an email for this email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
DeliveredRecipientRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of unique recipients that received an email you sent. This field is available in API version 54.0 and later. This is a calculated field.
EmailTemplateId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the related email template. This is a relationship field. **Relationship Name** EmailTemplate **Relationship Type** Lookup **Refers To** EmailTemplate
HardBounceTrackableSends	**Type** int

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The number of emails sent with hard bounce tracking. This field is available in API version 54.0 and later.
`HrdBncTrackableRecipientSends`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of recipients who received an email with hard bounce tracking. This field is available in API version 54.0 and later.
`IsLocked`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the monthly metric record is locked or not. The default value is 'false'.
`LinkClickTrackableSends`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent with link click tracking for the email template in the month. This field is available in API version 54.0 and later.
`LinkClkTrackableRecipientSends`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of recipients who received an email with link tracking for the email template in the month. This field is available in API version 54.0 and later.
`MayEdit`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether the monthly metric record can be edited or not. The default value is 'false'.
Month	**Type** date **Properties** Filter, Group, Sort **Description** The month in which the engagement occurred.
MonthInt	**Type** int **Properties** Filter, Group, idLookup, Sort **Description** The month in which the engagement occurred, in yyyymm format.
OooTrackableRecipientSends	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of recipients who received an email with out-of-office tracking for the email template in the month. Out-of-office tracking requires Inbox. This field is available in API version 54.0 and later.
OpenTrackableRecipientSends	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of recipients who received an email with open tracking for the email template in the month. This field is available in API version 54.0 and later.
OpenTrackableSends	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent with open tracking for the email template in the month. This field is available in API version 54.0 and later.

Field	Details
OutOfOfficeTrackableSends	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent with out-of-office tracking for the email template in the month. This field is available in API version 54.0 and later.
RecipientReplies	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of unique recipients who replied to an email for this email template in the month. This field is available in API version 54.0 and later.
RecipientSends	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of unique email recipients for this email template in the month. This field is available in API version 54.0 and later.
RecipientsHardBounced	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of recipients that hard-bounced an email for this email template in the month. Hard bounces can mean that the recipient's email address doesn't exist or is misspelled. This field is available in API version 54.0 and later.
RecipientsOutOfOffice	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of recipients that responded with an out-of-office reply for the email template in the month. This field is available in API version 54.0 and later.

Field	Details
RecipientsSoftBounced	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of recipients that soft-bounced an email for the email template in the month. A soft bounce often indicates a temporary issue with the recipient's email server, such as a full inbox. This field is available in API version 54.0 and later.
ReplyTrackableRecipientSends	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of recipients who received an email with reply tracking for this email template in the month. This field is available in API version 54.0 and later.
ReplyTrackableSends	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent with reply tracking for the email template in the month. This field is available in API version 54.0 and later.
SftBncTrackableRecipientSends	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of recipients who received an email with soft bounce tracking for the email template in the month. This field is available in API version 54.0 and later.
SoftBounceTrackableSends	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent with soft bounce tracking for the email template in the month. This field is available in API version 54.0 and later.

Field	Details
SomeEmailsDeliveredCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of sent emails that were successfully delivered to at least one of its recipients for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
SomeEmailsDeliveredRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of sent and tracked emails that were successfully delivered to at least one of their recipients for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableRecipientSendHrdBncRt	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of emails sent to unique recipients with hard bounce tracking that hard bounced for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableRecipientSendOooRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of emails sent with out-of-office tracking that received out-of-office replies from unique recipients for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableRecipientSendReplyRt	**Type** percent

Field	Details
	Properties Filter, Nillable, Sort **Description** The percentage of emails sent with reply tracking that received replies from unique recipients for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableRecipientSendSftBncRt	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of emails sent to unique recipients with soft bounce tracking that soft-bounced for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableSendHardBounceRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of emails sent with hard bounce tracking that hard bounced for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableSendLinkClickRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of emails sent with link tracking that had link clicks for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableSendOpenRate	**Type** percent **Properties** Filter, Nillable, Sort

Field	Details
	Description The percentage of emails sent with open tracking that were opened by the recipient for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableSendOutOfOfficeRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of emails sent with out-of-office tracking that received out-of-office replies for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableSendReplyRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of emails sent with reply tracking that received replies for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableSendSoftBounceRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of emails sent with soft bounce tracking that soft bounced for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
UniqueEmailsLinkClickedCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of link clicks by unique recipients for the email template in the month.
UniqueEmailsOpenedCount	**Type** int

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The number of times an email you sent was opened by a unique recipient for the email template in the month. When you send a list email, this field increments each time a recipient opens the received email.
`UniqueEmailsRepliedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of replies from unique recipients for the email template in the month.

EmbeddedServiceDetail

Represents a metadata catalog object that exposes fields from the underlying Embedded Service setup objects defined in each EmbeddedServiceConfig deployment for guest users. Guest users don't have direct access to the Embedded Service setup objects. Available in API version 39.0 and later.

Supported SOAP Calls

`describeSObjects()`, `query()`

Supported REST HTTP Methods

`GET`

Fields

Field	Details
`AvatarImg`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** URL of the image used as the agent avatar image.
`ContrastInvertedColor`	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** Accent branding color used in the embedded component, displayed as a hexadecimal value. Changes made to this field in the API aren’t reflected in the embedded component.
`ContrastPrimaryColor`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Value of the `ContrastPrimaryColor` field in the EmbeddedServiceBranding setup object.
`CustomMinimizedComponent`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The custom Aura component that’s used for the minimized state for this Embedded Chat deployment.
`CustomPrechatComponent`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The custom Aura component that’s used for the pre-chat page for this Embedded Chat deployment.
`DurableId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Developer name for the EmbeddedServiceConfig.
`FieldServiceConfirmCardImg`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description URL of the image used for the confirmation card in embedded Appointment Management (beta).
FieldServiceHomeImg	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** URL of the image used for the home screen in embedded Appointment Management (beta).
FieldServiceLogoImg	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** URL of the logo used for the home screen in embedded Appointment Management (beta).
Font	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Font used in the chat text of the Embedded Chat window.
FontSize	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Font size for the embedded component. Possible values are: • Small • Medium • Large
HeaderBackgroundImg	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description URL of the image used for the header background in Embedded Chat. This field is removed in API version 49.0 and later. The header background image is no longer supported.
`Height`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Height of the embedded component.
`IsFieldServiceEnabled`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Specifies whether Field Service is enabled for this Embedded Service deployment (`true`) or not (`false`). Embedded Appointment Management is currently beta.
`IsLiveAgentEnabled`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Specifies whether Chat is enabled for this Embedded Service deployment (`true`) or not (`false`).
`IsOfflineCaseEnabled`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Specifies whether offline support is enabled for this Embedded Chat deployment (`true`) or not (`false`).
`IsPrechatEnabled`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Value of the `PrechatEnabled` field in the EmbeddedServiceLiveAgent setup object.

Field	Details
IsQueuePositionEnabled	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Specifies whether queue position (displaying the customer's place in line while they wait for an agent) is enabled for this Embedded Chat deployment (`true`) or not (`false`).
NavBarColor	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Value of the `NavBarColor` field in the EmbeddedServiceBranding setup object.
NavBarTextColor	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** This field is used to set the text color for the header.
OfflineCaseBackgroundImg	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** URL of the image used for the background for the offline support case form in Embedded Chat.
PrechatBackgroundImg	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** URL of the image used for the background for the pre-chat form in Embedded Chat.
PrimaryColor	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description Value of the `PrimaryColor` field in the EmbeddedServiceBranding setup object.
`SecondaryColor`	**Type** string **Properties** Filter, Group, Nillable Sort **Description** Value of the `SecondaryColor` field in the EmbeddedServiceBranding setup object.
`SecondaryNavBarColor`	**Type** string **Properties** Filter, Group, Nillable Sort **Description** This field is used to set the color of a secondary header.
`ShouldHideAuthDialog`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Specifies whether the prompt that the customer log in again during a flow should be hidden (`true`) or not (`false`). When it's hidden, the customer is taken directly to your login page.
`ShouldShowExistingAppointment`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Specifies whether to display a button on the home screen for customers to access their existing appointments (`true`) or not (`false`) for embedded Appointment Management (beta).
`ShouldShowNewAppointment`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Specifies whether to display a button on the home screen for customers to create a new appointment (`true`) or not (`false`) for embedded Appointment Management (beta).

Field	Details
Site	**Type** string **Properties** Filter, Group, Nillable Sort **Description** Value of the `Site` field in the EmbeddedServiceConfig setup object.
SmallCompanyLogoImg	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** URL of the logo image used with Embedded Chat.
WaitingStateBackgroundImg	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** URL of the image used for the background image in Embedded Chat while the customer waits to be connected with a support agent.
Width	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Width of the embedded component.

Note: Any changes you make to the image fields override what you've entered in Setup. We recommend setting your image URLs in Setup.

EmbeddedServiceLabel

Represents a customized label in Embedded Chat or embedded Appointment Management.This object is available in API version 44.0 and later.

Supported SOAP Calls

`describeSObjects()`, `query()`

Supported REST HTTP Methods

GET

Fields

Field	Details
CustomLabelName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The developer name for the custom label.
DurableId	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The unique name containing EmbeddedServiceConfig.labelKey.
EmbeddedServiceConfigDeveloperName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Developer name for the EmbeddedServiceConfig.
LabelKey	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of label for this embedded component. The value corresponds to the label within a label group (substate of chat state or page type).

Employee

Represents an employee within a company or organization. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()` `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, you must have a Workplace Command Center permission set license and the Provides access to Workplace Command Center features system permission or have the Employee Management and Employee User add-on licenses.

Fields

Field	Details
`AboutMe`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Information about the employee, such as areas of interest or skills. Values can be provided on Employee's profile page. This field is available even if Chatter is disabled.
`AlternateEmail`	**Type** email **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The employee's alternate email address.
`Availability`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The employee's availability status. Possible values are: • `In The Office` • `Out Of Office` • `Out Sick` • `PTO` • `Volunteering Time Off` • `Working Remotely`

Field	Details
AvailabilityEndDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The end date of the Employee's availability, inclusive of the date.
AvailabilityStartDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The start date of the Employee's availability, inclusive of the date.
BannerPhotoUrl	**Type** url **Properties** Filter, Nillable, Sort **Description** Read only. The URL for the employee's banner photo. Available in API v51.0 and later.
CurrentWellnessStatus	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The employee's current wellness status. Possible values are: • `Available To Work` • `Remote Work Only` • `Unavailable` • `Unknown`
DateOfBirth	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The employee's date of birth.

Field	Details
Email	**Type** email **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The employee’s email address. This field is unique within your organization.
EmployeeNumber	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. The employee's employment ID for the organization they were hired into. This field is unique within your organization.
EmployeeStatus	**Type** picklist **Properties** Create, Filter, Group, Sort, Update **Description** Required. The employee's current work status. Possible values are: • Active • Inactive • Leave • Terminated
EmploymentType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The employee's full-time or part-time status. Possible values are: • Full-Time • Part-Time
FirstName	**Type** string

Field	Details
	Properties Create, Filter, Group, Sort, Update **Description** Required. The employee’s first name.
FullPhotoUrl	**Type** url **Properties** Filter, Nillable, Sort **Description** Read only. The URL for the employee's profile photo. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo isn’t guaranteed to return a photo. Query this field for the URL of the most recent photo. Available in API v51.0 and later.
Gender	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The employee’s gender. Possible values are: • `Female` • `Male` • `Non-Binary / Non-Conforming` • `Other` • `Prefer Not to State` • `Transgender Female` • `Transgender Male`
HomeAddress	**Type** address **Properties** Filter, Nillable **Description** The employee’s home address.
HomeCity	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The city for the employee's home address.
HomeCountry	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The county for the employee's home address.
HomeGeocodeAccuracy	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The level of accuracy of an employee's home address geographical coordinates compared with its physical address. A geocoding service typically provides this value based on the address's latitude and longitude coordinates. Possible values are: • Address • Block • City • County • ExtendedZip • NearAddress • Neighborhood • State • Street • Unknown • Zip
HomeLatitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with HomeLongitude to specify the precise geolocation of the employee's home address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
HomeLongitude	**Type** double

Field	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** Used with HomeLatitude to specify the precise geolocation of the employee's home address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.
HomePhone	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The employee's home phone number.
HomePostalCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The postal code for the employee's home address.
HomeState	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The state for the employee's home address.
HomeStreet	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The street for the employee's home address.
IndividualId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A reference to the Individual record that this employee is assigned to.

Field	Details
InternalOrganizationUnitId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A reference to the InternalOrganizationUnit this employee is assigned to.
JobProfile	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The employee's job profile at the company.
LastName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. The employee's last name.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
LocationId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description A reference to the Location that this employee is assigned to.
`ManagerId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A reference to the Employee record of the employee's manager.
`MediumPhotoUrl`	**Type** url **Properties** Filter, Nillable, Sort **Description** Read only. The URL for the medium-sized employee's profile photo. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo isn't guaranteed to return a photo. Query this field for the URL of the most recent photo. Available in API v51.0 and later.
`MiddleName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The employee's middle name.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** A compound field of `Employee.FirstName`, `Employee.MiddleName`, and `Employee.LastName`.
`NameSuffix`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The employee's suffix.

Field	Details
OutOfOfficeMessage	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The message portion of the employee availability. This message can provide reasons or details about the change in availability. The maximum length of this string is 40 characters.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user who currently owns this record. Default value is the user logged in to the API to perform the create operation.
PreferredFirstName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The name the employee prefers to be called.
PreferredPronoun	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The employee's preferred pronoun. Possible values are: • He/Him/His • Other/Ask Me • She/Her/Hers • They/Them/Theirs
RelatedPersonId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Links an employee to a person account with a unique value. Reserved for future use. Don't edit it.
`SmallPhotoUrl`	**Type** url **Properties** Filter, Nillable, Sort **Description** Read only. The URL for the small-sized employee's profile photo. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo isn't guaranteed to return a photo. Query this field for the URL of the most recent photo. Available in API v51.0 and later.
`StatusAsOf`	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** Required. Start date of the employee's current status.
`StatusEndDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Planned end date for the employee's status.
`TimeZone`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The time zone which the employee's work hours fall within.
`UserId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Lookup field to associate an Employee record with a user in the org. The field is optional and unique.

Field	Details
WorkPhone	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The employee's formatted work phone number including country code and extension.
WorkerType	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. The type of worker for the employee. Possible values are: • Alumnus • Contractor • Employee • Intern • Temporary
WorkingHoursEnd	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The end time of the employee's working hours.
WorkingHoursStart	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The start time of the employee's working hours.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

EmployeeHistory (API version 49.0)
History is available for tracked fields of the object.

EmployeeOwnerSharingRule
Sharing rules are available for the object.

EmployeesShare (API version 49.0)
Sharing is available for the object.

SEE ALSO:

Workplace Command Center for Work.com Developer Guide: Extend Work.com with Custom Solutions

EmployeeCrisisAssessment

Represents a crisis assessment of an Employee. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

For Work.com, when an employee responds to a wellness survey, an EmployeeCrisisAssessment record is created based on an employee's answers.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, you must be assigned a Workplace Command Center permission set license and the Provides access to Workplace Command Center features system permission.

Fields

Field	Details
`Assessment`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The employee's COVID-19 status at the time of the assessment. Possible values are: • `COVID-19 Immune or Recovered` • `COVID-19 No Symptoms` • `COVID-19 Symptoms or Exposed` • `COVID-19 Test Negative` • `COVID-19 Test Positive` • `Declined`

Field	Details
AssessmentDate	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The date of the assessment. Required
AssessmentNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The assessment record number.
CrisisId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The Crisis that this assessment is associated with.
EmployeeId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Required. The Employee that this assessment is associated with.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user who currently owns this record. Default value is the user logged in to the API to perform the create operation.
`SourceAssessment`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The record in the source system that drove this assessment.
`SourceSystem`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The source system that drove this assessment.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

EmployeeCrisisAssessmentHistory (API version 49.0)
History is available for tracked fields of the object.

EmployeeCrisisAssessmentOwnerSharingRule
Sharing rules are available for the object.

EmployeeCrisisAssessmentShare (API version 49.0)
Sharing is available for the object.

SEE ALSO:

Workplace Command Center for Work.com Developer Guide: Extend Work.com with Custom Solutions

EmpUserProvisioningProcess

Represents an employee-user provisioning process. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object requires a Workplace Command Center add-on license, or an Employee Experience add-on license.

Fields

Field	Details
`EndTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time that the user provisioning process ended.
`ErrorRecordCount`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of records that encountered an error during the user provisioning process.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the user provisioning process was last referenced, with a precision of one second.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The date and time when the user provisioning process was last viewed, with a precision of one second.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the user provisioning process.
`ProcessStatus`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The status of the user provisioning process. Possible values are: • `Aborted` • `Cancelled` • `Failed` • `Finished` • `Initializing` • `Processing` • `Queued`
`StartTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time that the user provisioning process started.
`SuccessRecordCount`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of records that were successfully provisioned during the user provisioning process.

Field	Details
`TotalRecordCount`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The total number of records in the user provisioning process.

Usage

Use the EmpUserProvisioningProcess to view the status of an employee-user provisioning process.

EmpUserProvisionProcessErr

Represents an employee-user provisioning process error. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object requires a Workplace Command Center add-on license, or an Employee Experience add-on license.

Fields

Field	Details
`EmployeeId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the employee record associated with the error. This is a relationship field. **Relationship Name** Employee **Relationship Type** Lookup

Field	Details
	Refers To Employee
ErrorCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The error code if the provisioning isn’t successful.
ErrorMessage	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** If an error occurred, this field contains the error message.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the error was last referenced, with a precision of one second.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the error was last viewed, with a precision of one second.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the error.
ProvisioningProcessId	**Type** reference **Properties** Create, Filter, Group, Sort

Field	Details
	Description The ID of the associated user provisioning process. This is a relationship field. **Relationship Name** ProvisioningProcess **Relationship Type** Lookup **Refers To** EmpUserProvisioningProcess

Usage

Use the EmpUserProvisionProcessErr to view the errors for an employee-user provisioning process.

EnablementMeasureDefinition

This object is reserved for future use. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access EnablementMeasureDefinition object, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.

Fields

Field	Details
`AggregateFieldApiName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** Reserved for future use. Don’t edit this field.
`AggregateFunction`	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort **Description** Reserved for future use. Don’t edit this field. Possible values are: • `Average` • `Count` • `Sum`
`Description`	**Type** string **Properties** Create, Filter, Sort, Update **Description** Reserved for future use. Don’t edit this field.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Reserved for future use. Don’t edit this field.
`DisplayFieldApiName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** Reserved for future use. Don’t edit this field.
`IsValid`	**Type** string **Properties** Defaulted on create, Filter, Group, Sort **Description** Reserved for future use. Don’t edit this field.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Reserved for future use. Don’t edit this field. Possible values are: • `da`—Danish • `de`—German • `en_US`—English • `es`—Spanish • `es_MX`—Spanish (Mexico) • `fi`—Finnish • `fr`—French • `it`—Italian • `ja`—Japanese • `ko`—Korean • `nl_NL`—Dutch • `no`—Norwegian • `pt_BR`—Portuguese (Brazil) • `ru`—Russian • `sv`—Swedish • `th`—Thai • `zh_CN`—Chinese (Simplified) • `zh_TW`—Chinese (Traditional)
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Reserved for future use. Don’t edit this field.
`PublishedDateTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Reserved for future use. Don’t edit this field.
`SourceMeasureObjectId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Reserved for future use. Don't edit this field. This field is a relationship field. **Relationship Name** SourceMeasureObject **Relationship Type** Lookup **Refers To** EnblMeasureObjectDefinition
`SourceObjectApiName`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Reserved for future use. Don't edit this field.
`Status`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Reserved for future use. Don't edit this field. Possible values are: • `Archived` • `Draft` • `Published` Note: Status value Published refers to Active status in Lightning Experience.

EnablementProgram

Represents an Enablement program, which includes exercises and measurable milestones to help users such as sales reps achieve specific outcomes related to your company's revenue goals. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a supported Partner Relationship Management (PRM) add-on license.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Update **Description** The description of the program.
`DoesAllowSelfEnrollment`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the **Users Can Self-Enroll** option is on (`true`) or not (`false`). The default value is `false`. When this field is `true`, Enablement admins can share the program with specific users, who can then self-enroll in the program.
`IsOutcomeBased`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the **Outcome-Based Program** option is on (`true`) or not (`false`). The default value is `false`.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record. If this value is null, maybe the user accessed this record (`LastReferencedDate`) but not viewed it yet.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the Enablement program. For example, `AE Onboarding`, `Event Prep`, or `New Product Launch`.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of the program. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`PublishedDateTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date that the program is published.
`Status`	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort **Description** The status of the program. Only a published program is available for an Enablement admin to assign to users or share with users so they can self-enroll. Possible values are: • `Archived` • `Draft` • `Published`
`TotalAssigned`	**Type** int **Properties** Nillable **Description** The number of assignments in this program. For example, if the program is assigned to 3 users, then `TotalAssigned=3`.
`TotalBehind`	**Type** int **Properties** Nillable **Description** The number of assignments that are behind in this program. For example, if the program is assigned to 3 users, and 2 users are behind on their assignments, then `TotalBehind=2`
`TotalCompleted`	**Type** int **Properties** Nillable **Description** The number of completed assignments in this program. For example, if the program is assigned to 3 users, and 1 user has completed the program, then `TotalCompleted=1`.
`TotalDays`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** Total days of the program. This value is derived from the latest day of all items in the program, including exercises, milestones, and the outcome. This field is a calculated field. For example,

Field	Details
	a program has Task A on day 1 and Task B on day 2. Since Task B has the latest days of all tasks, then `TotalDays=2`.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The type of the program. Possible values are: • `Enablement` • `PtnrEnablement`

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

EnablementProgramOwnerSharingRule (API version 60.0)
Sharing rules are available for the object.

EnablementProgramShare (API version 60.0)
Sharing is available for the object.

EnblMeasureObjectDefinition

This object is reserved for future use. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access EnablementMeasureDefinition object, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.

Fields

Field	Details
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update

Field	Details
	Description Reserved for future use. Don't edit this field.
EnablementMeasureDefinitionId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Reserved for future use. Don't edit this field. This field is a relationship field. **Relationship Name** EnablementMeasureDefinition **Relationship Type** Lookup **Refers To** EnablementMeasureDefinition
FilterLogic	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Reserved for future use. Don't edit this field.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Reserved for future use. Don't edit this field. Possible values are: • da—Danish • de—German • en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean

Field	Details
	• nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified) • zh_TW—Chinese (Traditional)
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Reserved for future use. Don't edit this field.
ObjectApiName	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Reserved for future use. Don't edit this field.
SequenceNumber	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** Reserved for future use. Don't edit this field.

EnblProgramSection

Represents an optional section in an Enablement program. A section can include other program items, such as milestones and exercises. This object is available in API version 60.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a supported Partner Relationship Management (PRM) add-on license.

Fields

Field	Details
`EnablementProgramId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of an Enablement program that contains the section. This field is a relationship field. **Relationship Name** EnablementProgram **Relationship Type** Lookup **Refers To** EnablementProgram
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The title of the program section.
`SequenceNumber`	**Type** int **Properties** Filter, Group, Sort **Description** A number assigned to a section in a record sequence, starting at 0. This field supports use cases where a program has one or more empty sections, and the Enablement admin specified the order of those sections. For example, a program has five empty sections that outline an

Field	Details
	onboarding plan, and the Enablement admin plans to add milestones and exercises to those sections later.

EnblProgramTaskDefinition

Represents an outcome, a milestone, or an exercise in an Enablement program. A program task is also known as a program item. This object is available in API version 60.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a supported Partner Relationship Management (PRM) add-on license.

Fields

Field	Details
`Day`	**Type** int **Properties** Filter, Group, Sort **Description** The day of the program when the item is due, relative to the program's start date. For example, if a user is expected to complete an exercise where they watch a product demo by day 2, this field's value is 2. For an outcome, this field specifies the number of days the full program takes. For example, if your program lasts 60 days, the value of this field is 60 for the outcome. This field's value contributes to the program's due date that users see when they take the program.
`Description`	**Type** textarea

Field	Details
	Properties none **Description** The description of the program task.
`EnablementProgramId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of an Enablement program that contains the outcome, milestone, or exercise. This field is a relationship field. **Relationship Name** EnablementProgram **Relationship Type** Lookup **Refers To** EnablementProgram
`EnblProgramSectionId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of an optional program section that contains the milestone or exercise. This field is a relationship field. **Relationship Name** EnblProgramSection **Relationship Type** Lookup **Refers To** EnblProgramSection
`IsMilestoneAnOutcome`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Whether the program item is an outcome (`true`) or not (`false`). The default value is `false`.

Field	Details
`LearningItemId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the learning item that the task is associated with. This field is a relationship field. **Relationship Name** LearningItem **Relationship Type** Lookup **Refers To** LearningItem
`MilestoneTarget`	**Type** double **Properties** Filter, Nillable, Sort **Description** The outcome or milestone target for the user to achieve to get credit for completing the outcome or milestone. The unit depends on the specific measure that's associated with the outcome or milestone. For example, if the measure is the dollar amount of all closed opportunities, then the field value is measured in dollars.
`MinimumSampleSize`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Represents the number of records that you want to evaluate for calculating an outcome or milestone that uses an average-based measure. Use this field in combination with `MilestoneTarget`. For example, if you want users to achieve an average deal size of $50,000 after closing 4 deals, then this field's value is 4 and `MilestoneTarget` has a value of 50000.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the outcome, milestone, or exercise.

Field	Details
SequenceNumber	**Type** int **Properties** Filter, Group, Sort **Description** A number for program items that have the same due date, starting at 0. The sequence number determines the order of items that users see for that day in the program.
TaskCategory	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of program item. Possible values are: • Exercise • Milestone
TaskSubCategory	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of exercise, if the program item is an exercise. This value determines the content associated with the exercise. For example, if the field value is Video, the exercise must reference video content from the Enablement workspace in the Digital Experiences app. The LearningItemId field specifies the reference to that video content. Possible values are: • ActionItem • AudioRecording • Document • Other • OtherExercise • ScheduledEvent • TextLesson • Trailhead • Video

EnblProgramTaskProgress

Represents a user's progress towards completing an outcome, a milestone, or an exercise in an Enablement program. This object is available in API version 60.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a supported Partner Relationship Management (PRM) add-on license.

Fields

Field	Details
CompletedDateTime	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date that the user completed the outcome, milestone, or exercise.
CompletedOnDay	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Number of days that the user took to complete the outcome, milestone, or exercise.
CompletedPercent	**Type** percent **Properties** Filter, Nillable, Sort **Description** Percentage of the outcome, milestone, or exercise that's complete.

Field	Details
ContributingRecordCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Reserved for future use.
DueDate	**Type** date **Properties** Filter, Group, Sort **Description** The date the outcome, milestone, or exercise is due.
EnblProgramTaskDefinitionId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the outcome, milestone, or exercise definition. This field is a relationship field. **Relationship Name** EnblProgramTaskDefinition **Relationship Type** Lookup **Refers To** EnblProgramTaskDefinition
IsCompleted	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Whether the outcome, milestone, or exercise is complete (`true`) or not (`false`). The default value is `false`.
IsNoLongerTracking	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort

Field	Details
	Description If the user hasn't completed the outcome or milestone and 30 days have elapsed since the program's due date, the value is `true`. Otherwise, the value is `false`. The default value is `false`. For details, see Completion Statuses in Enablement Analytics.
`LearningItemProgressId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the record that tracks the user's progress through the program that includes this outcome, milestone, or exercise. This field is a relationship field. **Relationship Name** LearningItemProgress **Relationship Type** Lookup **Refers To** LearningItemProgress
`MilestoneComputationResult`	**Type** double **Properties** Filter, Nillable, Sort **Description** Derived from the associated EnblProgramTaskDefinition record. For example, if a milestone has a single measure A with a result of 5, this field's value is 5.
`ProgressStatus`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Status of the outcome, milestone, or exercise progress. Possible values are: • `Behind` • `Completed Late` • `Completed On Time` • `No Longer Tracking` • `Not Completed` • `Overdue` For details, see Completion Statuses in Enablement Analytics.

EngagementChannelType

Represents a channel through which a customer can be reached for communication. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`ContactPointType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The contact point type of the channel. Possible values are: • `Email` • `MailingAddress` • `Phone` • `Social` • `Web`
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it’s possible that this record was referenced (`LastReferencedDate`) and not viewed.
`Name`	**Type** string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update **Description** Required. Name of the communication subscription consent record.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the account owner associated with this customer. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

EngagementChannelTypeFeed
Feed tracking is available for the object.

EngagementChannelTypeHistory
History is available for tracked fields of the object.

EngagementChannelTypeOwnerSharingRule
Sharing rules are available for the object.

EngagementChannelTypeShare
Sharing is available for the object.

EnhancedLetterhead

Represents an enhanced letterhead that can be associated with a Lightning email template that doesn't use the Salesforce Merge Language (SML). This object is available in API version 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Description	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the contents of the header and footer.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date and time when this enhanced letterhead was last used.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date and time when this enhanced letterhead was last viewed.
LetterheadFooter	**Type** textarea **Properties** Create, Nillable, Update **Description** The contents of the enhanced letterhead's footer.
LetterheadHeader	**Type** textarea **Properties** Create, Nillable, Update **Description** The contents of the enhanced letterhead's header.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description The name of the enhanced letterhead, such as Standard Company Letterhead.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

EnhancedLetterheadFeed
Feed tracking is available for the object.

Entitlement

Represents the customer support an account or contact is eligible to receive. This object is available in API version 18.0 and later. Entitlements may be based on an asset, product, or service contract.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`AccountId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the Account associated with the entitlement.
`AssetId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Required. ID of the Asset associated with the entitlement. Must be a valid asset ID.
`AssetWarrantyID`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The identifier of the asset warranty record. Must be a valid asset warranty ID. AssetWarranty is available only with Field Service.
`BusinessHoursId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Required. ID of the BusinessHours associated with the entitlement. Must be a valid business hours ID.
`CasesPerEntitlement`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of cases the entitlement supports. This field is only available if `IsPerIncident` is `true`.
`ContractLineItemId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Required. ID of the ContractLineItem associated with the entitlement. Must be a valid ID.
`EndDate`	**Type** date **Properties** Create, Filter, Nillable, Update **Description** The last day the entitlement is in effect.
`IsPerIncident`	**Type** boolean **Properties** Defaulted on create, Filter, Update **Description** Indicates whether the entitlement is limited to supporting a specific number of cases (`true`) or not (`false`).

Field	Details
LastReferencedDate	**Type** date **Properties** Filter, Nillable, Sort, Update **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** date **Properties** Filter, Nillable, Sort, Update **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.
LocationID	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the Location associated with the entitlement. Must be a valid location ID.
Name	**Type** string **Properties** Create, Filter, Update **Description** Required. Name of the entitlement.
SvcApptBookingWindowsId	**Type** reference **Properties** Create, Filter, Group, Sort, Nillable, Update **Description** The operating hours that the entitlement's work orders should respect. The label in the user interface is `Operating Hours`. Available only if Field Service is enabled.
RemainingCases	**Type** int

Field	Details
	Properties Create, Filter, Nillable, Update **Description** The number of cases the entitlement can support. This field decreases in value by one each time a case is created with the entitlement. This field is only available if `IsPerIncident` is selected.
`RemainingWorkOrders`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of agreed work orders remaining to be created.
`ServiceContractId`	**Type** reference **Properties** Create, Filter, Nillable, Update **Description** Required. ID of the ServiceContract associated with the entitlement. Must be a valid ID.
`SlaProcessId`	**Type** reference **Properties** Create, Filter, Nillable, Update **Description** ID of the SlaProcess associated with the entitlement. This field is available in version 19.0 and later.
`StartDate`	**Type** date **Properties** Create, Filter, Nillable, Update **Description** The first date the entitlement is in effect.
`Status`	**Type** picklist **Properties** Filter, Nillable

Field	Details
	Description Status of the entitlement, such as `Expired`.
`SvcApptBookingWindows`	**Type** reference **Properties** Create, Filter, Group, Sort, Nillable, Update **Description** The operating hours of the entitlement. This field is visible only if Field Service is enabled.
`Type`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Nillable, Update **Description** The type of entitlement, such as Web or phone support.
`WorkOrdersPerEntitlement`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Total number of work orders available for this entitlement.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

EntitlementChangeEvent (API version 44.0)
Change events are available for the object.

EntitlementFeed (API version 23.0)
Feed tracking is available for the object.

EntitlementHistory
History is available for tracked fields of the object.

SEE ALSO:
EntitlementContact
SlaProcess

EntitlementContact

Represents a Contact eligible to receive customer support via an Entitlement. This object is available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Fields

Field	Details
`ContactId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the Contact associated with the entitlement. Must be a valid ID.
`EntitlementId`	**Type** reference **Properties** Create, Filter **Description** Required. ID of the Entitlement associated with the entitlement contact. Must be a valid ID.
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Nillable **Description** Required. Name of the entitlement contact.

Usage

Use to query and manage entitlement contacts.

SEE ALSO:

Entitlement

EntitlementTemplate

Represents predefined terms of customer support for a product (Product2). This object is available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only Salesforce admins, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.

Fields

Field	Details
`BusinessHoursId`	**Type** reference **Properties** Create, Filter, Nillable, Update **Description** ID of the BusinessHours associated with the entitlement template. Must be a valid business hours ID.
`CasesPerEntitlement`	**Type** int **Properties** Create, Filter, Nillable, Update **Description** The total number of cases the entitlement template supports. This field is only available if `IsPerIncident` is `true`.
`IsPerIncident`	**Type** boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Update **Description** Indicates whether the entitlement template is limited to supporting a specific number of cases (`true`) or not (`false`).
`Name`	**Type** string **Properties** Create, Filter, idLookup, Update **Description** Required. Name of the entitlement template.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. Available in version 34.0 and later.
`SlaProcessId`	**Type** reference **Properties** Create, Filter, Nillable, Update **Description** ID of the SlaProcess associated with the entitlement template. This field is available in API version 19.0 and later.

Field	Details
`Term`	**Type** int **Properties** Create, Defaulted on create, Filter, Nillable, Update **Description** Number of days that the entitlement template is valid.
`Type`	**Type** picklist **Properties** Create, Filter, Nillable, Update **Description** The type of entitlement template, such as Web or phone support.

Usage

Use this object to manage entitlement templates.

EntityHistory

Represents historical information about an object's changed field values. This object is only available to users with the "View All Data" permission. This object is unavailable beginning with API version 8.0. Use the object-specific Historyobjects instead.

Supported Calls

`describeSObjects()`, `getUpdated()`, `getDeleted()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Fields

Field	Details
`FieldName`	**Type** picklist **Properties** Filter, Restricted picklist **Description** ID of the standard or custom field.

Field	Details
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
`NewValue`	**Type** anyType **Properties** Nillable **Description** New value of the modified field.
`OldValue`	**Type** anyType **Properties** Nillable **Description** Previous value of the modified field.
`ParentId`	**Type** reference **Properties** Filter **Description** ID of the object that contains the field.
`ParentSobjectType`	**Type** picklist **Properties** Filter, Restricted picklist **Description** The kind of object that contains the field.

Usage

In API version 7.0 and later, this object works with Case, Contract, and Solution objects:

- This object is always read-only in the online application.

- When a field is modified, this object records both the old and new field values. There are exceptions to this behavior for certain fields such as long text areas and multi-select picklists. These fields appear in this object to indicate that the field was changed, but the old and new values are not recorded.
- Two rows are added to this object when foreign key fields change. One row contains the foreign key object names that display in the online application. For example, "Jane Doe" is recorded as the name of a contact. The other row contains the actual foreign key ID that is only returned to and visible from the API.
- Up to a total of twenty fields (standard or custom) can be tracked for a given object.
- In the online application, you can specify which fields are tracked or not tracked at any time.
- As soon as tracking is turned on for a field, all changes to its value are recorded in the database.
- Turning off tracking for a field stops further changes from being recorded, but the history data is not deleted.
- Be advised that deleting a custom field also permanently deletes the history data for that custom field.

EntityMilestone

Represents a required step in a customer support process on a work order. The Salesforce user interface uses the term "object milestone. This object is available in API version 37.0 and later.

Note: Milestones on cases use the CaseMilestone object type.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

Special Access Rules

- As of Summer '20 and later, only Salesforce admins, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.
- Entitlement management must be enabled.
- Work orders or Field Service must be enabled.

Fields

Field Name	Details
`ActualElapsedTimeInDays`	**Type** double **Properties** Filter, Nillable, Sort **Description** The number of days that it took to complete a milestone. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time)

Field Name	Details
	Note: To display this field, select **Enable stopped time and actual elapsed time** on the Entitlement Settings page and add the field to the object milestone page layout.
`ActualElapsedTimeInHrs`	**Type** double **Properties** Filter, Nillable, Sort **Description** The number of hours that it took to complete a milestone. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time) **Note:** To display this field, select **Enable stopped time and actual elapsed time** on the Entitlement Settings page and add the field to the object milestone page layout.
`ActualElapsedTimeInMins`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of minutes that it took to complete a milestone. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time) **Note:** To display this field, select **Enable stopped time and actual elapsed time** on the Entitlement Settings page and add the field to the object milestone page layout.
`BusinessHoursId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The business hours on the milestone. If business hours aren't specified, the entitlement process business hours are used. If business hours are also not specified on the entitlement process, the business hours on the record are used.
`CompletionDate`	**Type** dateTime **Properties** Filter, Nillable, Sort, Update **Description** The date and time the milestone was completed.

Field Name	Details
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
ElapsedTimeInDays	**Type** double **Properties** Filter, Nillable, Sort **Description** The number of days it took to complete a milestone, including time during which the milestone was stopped. Automatically calculated to include the business hours on the record. Elapsed time is calculated only after the Completion Date field is populated. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time).
ElapsedTimeInHrs	**Type** double **Properties** Filter, Nillable, Sort **Description** The number of hours it took to complete a milestone, including time during which the milestone was stopped. Automatically calculated to include the business hours on the record. Elapsed time is calculated only after the Completion Date field is populated. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time).
ElapsedTimeInMins	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of minutes it took to complete a milestone, including time during which the milestone was stopped. Automatically calculated to include the business hours on the record. Elapsed time is calculated only after the Completion Date field is populated. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time).
IsCompleted	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description Icon ( ) that indicates a milestone completion.
`IsViolated`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Icon ( ) that indicates a milestone violation.
`MilestoneTypeId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the milestone (for instance, First Response).
`Name`	**Type** string **Properties** Filter, Group, Sort, Update **Description** The name of the milestone.
`ParentEntityId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the record—for example, a work order—that contains the milestone.
`SlaProcessId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The entitlement process associated with the milestone.
`StartDate`	**Type** dateTime

Field Name	Details
	Properties Filter, Nillable, Sort, Update **Description** The date and time that milestone tracking started.
`StoppedTimeInDays`	**Type** double **Properties** Filter, Nillable, Sort **Description** The number of days that an agent has been blocked from completing a milestone. For example, an agent may be waiting for a customer to reply with more information. Note: To display this field, select **Enable stopped time and actual elapsed time** on the Entitlement Settings page and add the field to the object milestone page layout.
`StoppedTimeInHrs`	**Type** double **Properties** Filter, Nillable, Sort **Description** The number of hours that an agent has been blocked from completing a milestone. For example, an agent may be waiting for a customer to reply with more information. Note: To display this field, select **Enable stopped time and actual elapsed time** on the Entitlement Settings page and add the field to the object milestone page layout.
`StoppedTimeInMins`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of minutes that an agent has been blocked from completing a milestone. For example, an agent may be waiting for a customer to reply with more information. Note: To display this field, select **Enable stopped time and actual elapsed time** on the Entitlement Settings page and add the field to the object milestone page layout.

Field Name	Details
TargetDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time to complete the milestone.
TargetResponseInDays	**Type** double **Properties** Filter, Nillable, Sort **Description** The number of days to complete the milestone. Automatically calculated to include the business hours on the record.
TargetResponseInHrs	**Type** double **Properties** Filter, Nillable, Sort **Description** The number of hours to complete the milestone. Automatically calculated to include the business hours on the record.
TargetResponseInMins	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of minutes to complete the milestone. Automatically calculated to include the business hours on the record.
TimeRemainingInDays	**Type** string **Properties** Filter, Nillable, Sort **Description** The days that remain before a milestone violation. Automatically calculated to include the business hours on the record.
TimeRemainingInHrs	**Type** string

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** The hours that remain before a milestone violation. Automatically calculated to include the business hours on the record.
`TimeRemainingInMins`	**Type** string **Properties** Group, Nillable, Sort **Description** The minutes that remain before a milestone violation. Automatically calculated to include the business hours on the record.
`TimeSinceTargetInDays`	**Type** string **Properties** Filter, Nillable, Sort **Description** The days that have elapsed since a milestone violation. Automatically calculated to include the business hours on the record.
`TimeSinceTargetInHrs`	**Type** string **Properties** Filter, Nillable, Sort **Description** The hours that have elapsed since a milestone violation. Automatically calculated to include the business hours on the record.
`TimeSinceTargetInMins`	**Type** string **Properties** Group, Nillable, Sort **Description** The minutes that have elapsed since a milestone violation. Automatically calculated to include the business hours on the record.

Usage

When you create an entitlement process, you select its type based on the type of record that you want the process to run on: Case or Work Order. Processes created before Summer ’16 use the Case type. When a Work Order entitlement process runs on a work order, the resulting milestones on the work order are object milestones. Conversely, when a Case entitlement process runs on a case, the resulting milestones are case milestones, a separate standard object.

Tip: If an entitlement has an entitlement process associated with it, don't use the entitlement for multiple types of support records. An entitlement process works only on records that match the process's type. For example, when a Case entitlement process is applied to an entitlement, the process runs only on cases associated with that entitlement. If a work order is also associated with the entitlement, the process doesn't run on the work order. To ensure that the milestones you set up work as expected, associate a customer's work orders and cases with different entitlements.

Customize page layouts, validation rules, and more for object milestones from the Object Milestones node in Setup under Entitlement Management.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

EntityMilestoneFeed
Feed tracking is available for the object.

EntityMilestoneHistory
History is available for tracked fields of the object.

EntitySubscription

Represents a subscription for a user following a record or another user. This object is available in API version 34.0 and later.

A user can subscribe to a record or to another user. Changes to the record and updates from the users are displayed in the Chatter feed on the user's home page, which is a useful way to stay up-to-date with other users and with changes made to records in Salesforce. Feeds are available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
`NetworkId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the Experience Cloud site where the user is following the record or user. This field is available in API version 26.0 and later, if digital experiences is enabled for your org.
`ParentId`	**Type** reference

Field	Details
	Properties Create, Filter, Group, Sort **Description** Required. ID of the record or user which the user is following. This is a polymorphic relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** Account, Accreditation, ActivationTarget, ActivationTrgtIntOrgAccess, ApiAnomalyEventStore, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CodeSet, CollaborationGroup, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContentDocument, Contract, CoverageBenefit, CoverageBenefitItem, CredentialStuffingEventStore, CreditMemo, CreditMemoLine, Dashboard, DashboardComponent, DataStream, DelegatedAccount, DocumentChecklistItem, EngagementChannelType, EnhancedLetterhead, EnrollmentEligibilityCriteria, Event, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Identifier, Image, IndividualApplication, Invoice, InvoiceLine, Lead, Location, MarketSegment, MarketSegmentActivation, MemberPlan, MessagingSession, MktCalculatedInsight, OperatingHours, Opportunity, Order, OrderItem, OtherComponentTask, PartyConsent, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, Product2, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, ProviderSearchSyncLog, PurchaserPlan, PurchaserPlanAssn, ReceivedDocument, Report, ReportAnomalyEventStore, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SessionHijackingEventStore, Shift, Shipment, ShipmentItem, Site, SkillRequirement, SocialPost, Solution, Task, ThreatDetectionFeedback, Topic, User, Visit, VisitedParty, Visitor, VoiceCall,

Field	Details
	VolunteerProject, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup, WorkTypeGroupMember
`SubscriberId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the user who is following the record or user. This is a relationship field. **Relationship Name** Subscriber **Relationship Type** Lookup **Refers To** User

Usage

Consider this when following records and users:

- Users can only follow records that they can see.
- Users can see which records other users are following, unless they don't have access to the records.
- Administrators and users with the "Modify All Data" permission can configure a user to follow records that the user has read access to.
- Administrators and users with the "Modify All Data" permission can configure users to stop following records.
- Following topics is available in API version 29.0 and later. For this reason, a topic ID is now a supported value for the `ParentId` field.
- If you deactivate a user, any EntitySubscription where the user is associated with the ParentId or SubscriberId field, meaning all subscriptions both to and from the user, are soft deleted. If the user is reactivated, the subscriptions are restored. However, if you deactivate multiple users at once and these users follow each other, their subscriptions are hard deleted. In this case, the user-to-user EntitySubscription is deleted twice (double deleted). Such subscriptions can't be restored upon user reactivation.

When using `query()` with EntitySubscription,

- Note the following SOQL restriction. No SOQL limit if logged-in user has "View All Data" permission. If not, specify a LIMIT clause of 1,000 records or fewer.
- A query using a `WHERE` clause can only filter by fields on the EntitySubscription object.
- If user sharing is enabled and the querying user is not an administrator, a SOQL query must be constrained either by the `ParentId` or `SubscriberId`. Otherwise, the query behavior at run time is undefined, meaning the result set can be incomplete or inconsistent from invocation to invocation. For an unconstrained query, the sharing check limits imposed on a non-adminstrative user are likely to be exceeded before the query completes, because access checks are run against both parent and subject, for each row of the result set. We recommend using the Connect REST API to query EntitySubscription data instead of running a SOQL query.

- Users without the “View All Data” permission
  - Need read access on the object associated with the `ParentId` field to see which users are following records for the object.
  - Can use an `ORDER BY` clause in a query only to order by fields on the EntitySubscription object. For example, if the subscription relates to an Account record, the query can `ORDER BY ParentId`, but it can’t `ORDER BY Account.Name`.
  - Don’t always get all matching subscriptions when running a query. For these users, a query evaluates visibility criteria on a maximum of 500 records to reduce the prospect of long-running queries. If a user runs a query to see the CEO's subscriptions, it might scan a large number of records. The query only returns matches within the first 500 records scanned. It is possible that there are more subscriptions that are visible to the user, but they are not returned. To mitigate this, we recommend using a `WHERE` clause, if possible, to reduce the scope of the query.

Sample—SOQL

The following SOQL query returns subscriptions for all the accounts that a subscriber is following that have more than 10 employees:

```
SELECT Id
FROM EntitySubscription
WHERE SubscriberId = '005U0000000Rg2CIAS'
AND ParentId IN (
  SELECT Id FROM Account
  WHERE NumberOfEmployees > 10
)
LIMIT 200
```

SEE ALSO:

Custom Object__Feed

EnvironmentHubMember

Represents a member organization in the Environment Hub. This object is available in API version 29.0 and later.

Note: You can create only 20 member orgs per day. If you need to create additional orgs, log a support case in the Salesforce Partner Community. For product, specify **Platform**. For topic, specify **AppExchange & Managed Packages**.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

Fields

Field Name	Details
`Description`	**Type** textarea **Properties** Nillable, Update

Field Name	Details
	Description A brief description of this org.
`DisplayName`	**Type** string **Properties** Filter, Group, Nillable,Sort, Update **Description** The name that the user has specified for this member org.
`EnvironmentHubId`	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** The Org ID of this member's Environment Hub org.
`Instance`	**Type** String **Properties** Filter, Group, Nillable, Sort **Description** Name of the instance where the Environment Hub member org resides.
`IsFedIdSsoMatchAllowed`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if single sign-on (SSO) has been enabled based on matching the Federation ID. The default is `false`.
`IsSandbox`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if the member org is a sandbox (`true`) or not (`false`). This field is available in API version 36.0 and later.
`MemberEntity`	**Type** string

Field Name	Details
	Properties Filter, Group, idLookup, Sort **Description** The unique Org ID of the member org for this record.
`MemberType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of member org for this record. Possible values include `Branch Org`, `Patch Org`, `Release Org`, `Sandbox Org`, `Trialforce Management Org`, and `Trialforce Source Org`. Note: Only one member type at a time is stored. Member type is determined according to this hierarchy: (1) Sandbox, (2) Release, (3) Trialforce Source Org (TSO), (4) Patch, (5) Branch, and (6) Trialforce Management Org (TMO). For example, if an org is both a sandbox and a TMO, the value of `MemberType` is `Sandbox Org`.
`Name`	**Type** string **Properties** Defaulted on create, Filter, idLookup, Sort **Description** The name of the member org for this record.
`OrgEdition`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The org’s edition, for example, Enterprise Edition or Unlimited Edition.
`OrgStatus`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The licensing or creation status of this org. Possible values include `Active`, `Demo`, `Deleted`, `Free`, `Inactive`, and `Trial`.

Field Name	Details
Origin	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The method by which this org was added to the Environment Hub. Possible values are `autoDiscovered`, `userAdded`, and `provisioned`.
SSOMappedUsers	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of mapped users in this member org. This field is available in API version 36.0 and later.
ServiceProviderId	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** The ID of the service provider for this member org. This field is available in API version 36.0 and later.
ShouldAddRelatedOrgs	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Status of the connection of related orgs to the hub. Possible values are `done`, `notRequested`, `pending`, and `requested`.
ShouldEnableSSO	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort, Update **Description** If SSO should be enabled when this member org is added. The default is `false`.
SsoStatus	**Type** picklist

Field Name	Details
	Properties Defaulted on create, Filter, Group, Sort, Update **Description** If SSO has been enabled for this org. Possible values are: • `Enabled`—Single sign-on is enabled. • `Disabled`—Single sign-on is disabled. • `Pending`—Single sign-on is in the process of being enabled. • `Failed`—Single sign-on enablement failed. Contact Salesforce support for assistance.
`SsoUsernameFormula`	**Type** string **Properties** Filter, Group, Nillable, Sort, Update **Description** The custom formula for matching users in the hub and member orgs.

Usage

Use this object to access and modify settings of member orgs in the Environment Hub.

Event

Represents an event in the calendar. In the user interface, event and task records are collectively referred to as activities.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Note:

- An EventRelation object can't be related to a child event, and child events don't include the invitee related list.
- `query()`, `delete()`, and `update()` aren't allowed with events related to more than one contact in API versions 25.0 and earlier.
- `create()` and `update()` aren't available for read-only fields on Lightning Experience event series.
- `upsert()` and `undelete()` aren't supported for syncing changes made to events through the API using the feature Lightning Sync.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AcceptedEventInviteeIds	**Type** JunctionIdList **Properties** Create, Update **Description** A string array of contact or lead IDs who accepted this event. This `JunctionIdList` is linked to the `AcceptedEventRelation` child relationship. Warning: Adding a `JunctionIdList` field name to the `fieldsToNull` property deletes all related junction records. This action can't be undone.
AccountId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Represents the ID of the related account. The `AccountId` is determined as follows. If the value of `WhatId` is any of the following objects, then Salesforce uses that object's `AccountId`. • Account • Opportunity • Contract • Custom object that's a child of Account If the value of the `WhatId` field is any other object, and the value of the `WhoId` field is a contact object, then Salesforce uses that contact's `AccountId`. If your org uses Shared Activities, Salesforce uses the `AccountId` of the primary contact. Otherwise, Salesforce sets the value of the `AccountId` field to `null`. For information on IDs, see ID Field Type. This is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
ActivityDate	**Type** date

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Contains the event's due date if the `IsAllDayEvent` flag is set to `true`. This field is a date field with a timestamp that's always set to midnight in the Coordinated Universal Time (UTC) time zone. Don't attempt to alter the timestamp to account for time zone differences. Label is **Due Date Only**. This field is required in API versions 12.0 and earlier if the `IsAllDayEvent` flag is set to `true`. The value for this field and `StartDateTime` must match, or one of them must be `null`.
`ActivityDateTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Contains the event's due date if the `IsAllDayEvent` flag is set to `false`. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. Label is **Due Date Time**. This field is required in API versions 12.0 and earlier if the `IsAllDayEvent` flag is set to `false`. The value for this field and `StartDateTime` must match, or one of them must be `null`.
`ClientGuid`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The client globally unique identifier identifies the external API client used to create the event. Label is **Client GUID**.
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
`DeclinedEventInviteeIds`	**Type** JunctionIdLIst

Field	Details
	Properties Create, Update **Description** A string array of contact, lead, or user IDs who declined this event. This `JunctionIdList` is linked to the `DeclinedEventRelation` child relationship. Warning: Adding a `JunctionIdList` field name to the `fieldsToNull` property deletes all related junction records. This action can't be undone.
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** Contains a text description of the event. Limit: 32,000 characters.
`Division`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.
`DurationInMinutes`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Contains the event length, in minutes. Even though this field represents a temporal value, it's an integer type—not a Date/Time type. Required in API versions 12.0 and earlier if `IsAllDayEvent` is false. In API versions 13.0 and later, this field is optional, depending on the following: • If `IsAllDayEvent` is true, you can supply a value for either `DurationInMinutes` or `EndDateTime`. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are `null`, the duration defaults to one day. • If `IsAllDayEvent` is false, a value must be supplied for either `DurationInMinutes` or `EndDateTime`. Supplying values in both fields is allowed if the values add up to the same amount of time.

Field	Details
	If the multiday event feature is enabled, then API versions 13.0 and later support values greater than 1440 for the `DurationInMinutes` field. API versions 12.0 and earlier can't access event objects whose `DurationInMinutes` is greater than 1440. For more information, see **Multiday Events**. Depending on your API version, errors with the `DurationInMinutes` and `EndDateTime` fields may appear in different places. • Versions 38.0 and before—Errors always appear in the `DurationInMinutes` field. • Versions 39.0 and later—If there's no value for the `DurationInMinutes` field, errors appear in the `EndDateTime` field. Otherwise, they appear in the `DurationInMinutes` field.
`EndDate`	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** Read-only. Available in API versions 46.0 and later. This field supplies the date value that appears in the EndDateTime field. This field is a date field with a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone.
`EndDateTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Available in API versions 13.0 and later. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. This field is optional, depending on the following: • If `IsAllDayEvent` is true, you can supply a value for either `DurationInMinutes` or `EndDateTime`. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are `null`, the duration defaults to one day. • If `IsAllDayEvent` is false, a value must be supplied for either `DurationInMinutes` or `EndDateTime`. Supplying values in both fields is allowed if the values add up to the same amount of time. Depending on your API version, errors with the `DurationInMinutes` and `EndDateTime` fields may appear in different places. • Versions 38.0 and before—Errors always appear in the `DurationInMinutes` field. • Versions 39.0 and later—If there's no value for the `DurationInMinutes` field, errors appear in the `EndDateTime` field. Otherwise, they appear in the `DurationInMinutes` field.

Field	Details
EventSubtype	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Provides standard subtypes to facilitate creating and searching for events. This field isn't updateable.
EventWhoIds	**Type** JunctionIdList **Properties** Create, Update **Description** A string array of contact or lead IDs used to create many-to-many relationships with a shared event. `EventWhoIds` is available when the shared activities setting is enabled. The first contact or lead ID in the list becomes the primary `WhoId` if you don't specify a primary `WhoId`. If you set the `EventWhoIds` field to null, all entries in the list are deleted and the value of `WhoId` is added as the first entry. Warning: Adding a `JunctionIdList` field name to the `fieldsToNull` property deletes all related junction records. This action can't be undone.
GroupEventType	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Read-only. Available in API versions 19.0 and later. The possible values are: • `0` (Non–group event)—An event with no invitees. • `1` (Group event)—An event with invitees. • `2` (Proposed event)—An event created when a user requests a meeting with a contact, lead, or person account using the Salesforce user interface. When the user confirms the meeting, the proposed event becomes a group event. You can't create, edit, or delete proposed events in the API. This value is no longer used in API version 41.0 and later. • `3` (IsRecurrence2 Series Pattern)—An event representing an event series recurrence pattern in Lightning Experience.
IsAllDayEvent	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether the `ActivityDate` field (`true`) or the `ActivityDateTime` field (`false`) is used to define the date or time of the event. Label is **All-Day Event**. See also `DurationInMinutes` and `EndDateTime`.
`IsArchived`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the event has been archived.
`IsChild`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the event is a child of another event (`true`) or not (`false`). For a child event, you can update `IsReminderSet` and `ReminderDateTime` only. You can query and delete a child event. If the objects related to the child event are different from those objects related to the parent event (this difference is possible if you use API version 25.0 or earlier) and one of the objects related to the child event is deleted, the objects related to the parent event are updated to ensure data integrity.
`IsClientManaged`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the event is managed by an external client. If the value of this field is false, the event isn't owned or managed by an external client, and Salesforce can be used to update it. If the value is true, Salesforce can be used to change only noncritical fields on the event. Label is **Is Client Managed**.
`IsGroupEvent`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the event is a group event—that is, whether it has invitees (`true`) or not (`false`).

Field	Details
IsPrivate	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether users other than the creator of the event can (`false`) or can't (`true`) see the event details when viewing the event user's calendar. However, users with the View All Data or Modify All Data permission can see private events in reports and searches, or when viewing other users' calendars. Private events can't be associated with opportunities, accounts, cases, campaigns, contracts, leads, or contacts. Label is **Private**.
IsRecurrence	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Indicates whether a Salesforce Classic event is scheduled to repeat itself (`true`) or only occurs one time (`false`). This field is read-only when updating records, but not when creating them. If this field value is `true`, then `RecurrenceEndDateOnly`, `RecurrenceStartDateTime`, `RecurrenceType`, and any recurrence fields associated with the given recurrence type must be populated. Label is **Create recurring series of events**.
IsRecurrence2	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Read-only. This field is available in API version 44.0 and later. Indicates whether a Lightning Experience event is scheduled to repeat (`true`) or only occurs one time (`false)`. If this field value is true, then `Recurrence2PatternText` and `Recurrence2PatternVersion` must be populated. Label is **Repeat**.
IsRecurrence2Exception	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Read-only. This field is available in API version 44.0 and later. Indicates whether an individual event in a Lightning Experience event series has a recurrence pattern that's different from the rest of the series, making it an exception.

Field	Details
`IsRecurrence2Exclusion`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Read-only. This field is available in API version 44.0 and later. Indicates when updates to a Lightning Experience event series recurrence pattern have been made, but affect future event occurrences only. For past event occurrences, `IsRecurrence2Exclusion` is set to `true`, excluding past occurrences from the series recurrence pattern.
`IsReminderSet`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the activity is a reminder (`true`) or not (`false`).
`IsVisibleInSelfService`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether an event associated with an object can be viewed in the Customer Portal (`true`) or not (`false`). If your org has enabled digital experiences, events marked `IsVisibleInSelfService` are visible to any external user in the Experience Cloud site, as long as the user has access to the record the event was created on. This field is available when • Customer Portal or partner portal is enabled OR • Digital experiences is enabled and you have Customer Portal or partner portal licenses
`Location`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Contains the location of the event.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Contains the ID of the user or public calendar who owns the event. Label is **Assigned to ID**. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Calendar, User
`Recurrence2PatternStartDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Read-only. This field is available in API version 44.0 and later. Indicates the date and time when the Lightning Experience event series begins. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate.
`Recurrence2PatternText`	**Type** textarea **Properties** Create, Nillable **Description** The RRULE that describes the recurrence pattern for Lightning Experience event series. Supports a subset of the RFC 5545 standard for internet calendaring and scheduling. See the Event Series section in this topic for usage examples. This field has a maximum length of 512 characters. This field is available in API version 44.0 and later, and has the `Create` property in API version 52.0 and later.
`Recurrence2PatternTimeZone`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** This field is available in API version 44.0 and later. Indicates the time zone in which the Lightning Experience event series was created or updated. This field uses standard Java TimeZone IDs. For example, America/Los_Angeles.

Field	Details
Recurrence2PatternVersion	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort, **Description** Read-only. This field is available in API version 44.0 and later. Indicates the standard specifications for Lightning Experience event series recurrence patterns. The only possible value is `1` (RFC 5545 v4 RRULE)—RFC 5545 is a standard set of specifications for internet calendaring and scheduling that `IsRecurrence2` adheres to for series recurrence patterns. RFC 5545 specifications for series recurrence patterns are called RRULES. For examples of RRULE usage, see the Lightning Experience Event Series and Recurring Events section in this topic.
RecurrenceActivityId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Read-only. Not required on create. Contains the ID of the main record of the Salesforce Classic recurring event. Subsequent occurrences have the same value in this field.
RecurrenceDayOfMonth	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the day of the month on which the event repeats.
RecurrenceDayOfWeekMask	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the day or days of the week on which the Salesforce Classic recurring event repeats. This field contains a bitmask. The values are as follows: • Sunday = `1` • Monday = `2` • Tuesday = `4` • Wednesday = `8` • Thursday = `16` • Friday = `32` • Saturday = `64`

Field	Details
	Multiple days are represented as the sum of their numerical values. For example, Tuesday and Thursday = 4 + 16 = 20.
`RecurrenceEndDateOnly`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the last date on which the event repeats. For multiday Salesforce Classic recurring events, this date is the day on which the last occurrence starts. This field is a date field with a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone. Don't attempt to alter the timestamp to account for time zone differences.
`RecurrenceInstance`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the frequency of the Salesforce Classic event's recurrence. For example, `2nd` or `3rd`.
`RecurrenceInterval`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the interval between Salesforce Classic recurring events.
`RecurrenceMonthOfYear`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the month in which the Salesforce Classic recurring event repeats.
`RecurrenceStartDateTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Indicates the date and time when the Salesforce Classic recurring event begins. The value must precede the `RecurrenceEndDateOnly`. The time portion of this field is always

Field	Details
	transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate.
`RecurrenceTimeZoneSidKey`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the time zone associated with a Salesforce Classic recurring event. For example, "UTC-8:00" for Pacific Standard Time.
`RecurrenceType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates how often the Salesforce Classic event repeats. For example, daily, weekly, or every nth month (where "nth" is defined in `RecurrenceInstance`).
`ReminderDateTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Represents the time when the reminder is scheduled to fire, if `IsReminderSet` is set to `true`. If `IsReminderSet` is set to `false`, then the user may have deselected the reminder checkbox in the Salesforce user interface, or the reminder has already fired at the time indicated by the value.
`ShowAs`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates how this event appears when another user views the calendar: Busy, Out of Office, or Free. Label is **Show Time As**.
`StartDateTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update

Field	Details
	Description Indicates the start date and time of the event. Available in versions 13.0 and later. If the Event `IsAllDayEvent` flag is set to true (indicating that it's an all-day Event), then the event start date information is contained in the `StartDateTime` field. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. If the Event `IsAllDayEvent` flag is set to false (indicating that it isn't an all-day event), then the event start date information is contained in the `StartDateTime` field. The time portion is always transferred in the Coordinated Universal Time (UTC) time zone. You need to translate the time portion to or from a local time zone for the user or the application, as appropriate. If this field has a value, then `ActivityDate` and `ActivityDateTime` must either be `null` or match the value of this field.
`Subject`	**Type** combobox **Properties** Create, Filter, Nillable, Sort, Update **Description** The subject line of the event, such as Call, Email, or Meeting. Limit: 255 characters.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the event type, such as Call, Email, or Meeting.
`UndecidedEventInviteeIds`	**Type** JunctionIdList **Properties** Create, Update **Description** A string array of contact, lead, or user IDs who are undecided about this event. This `JunctionIdList` is linked to the `UndecidedEventRelation` child relationship. Warning: Adding a `JunctionIdList` field name to the `fieldsToNull` property deletes all related junction records. This action can't be undone.
`WhatCount`	**Type** int

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** Available if your organization has enabled Shared Activities. Represents the count of related EventRelations pertaining to the `WhatId`. The count of the `WhatId` must be *1* or less.
`WhatId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The `WhatId` represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. `WhatId`s are polymorphic. Polymorphic means a `WhatId` is equivalent to the ID of a related object. The label is `Related To ID`. This is a polymorphic relationship field. **Relationship Name** What **Relationship Type** Lookup **Refers To** Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CommSubscriptionConsent, ContactEncounter, ContactEncounterParticipant, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, DelegatedAccount, DocumentChecklistItem, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, ListEmail, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PartyConsent, PersonLifeEvent, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductItem, ProductRequest, ProductRequestLineItem, ProductTransfer, PurchaserPlan, ReceivedDocument, ResourceAbsence, ReturnOrder, ReturnOrderLineItem,

Field	Details
	ServiceAppointment, ServiceResource, Shift, Shipment, ShipmentItem, Solution, Visit, VisitedParty, VolunteerProject, WorkOrder, WorkOrderLineItem
`WhoCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Available to organizations that have Shared Activities enabled. Represents the count of related EventRelations pertaining to the `WhoId`.
`WhoId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The WhoId represents a human such as a lead or a contact. WhoIds are polymorphic. Polymorphic means a WhoId is equivalent to a contact's ID or a lead's ID. The label is `Name ID`. If Shared Activities is enabled, the value of this field is the ID of the related lead or primary contact. If you add, update, or remove the WhoId field, you might encounter problems with triggers, workflows, and data validation rules that are associated with the record. The label is `Name ID`. If the `JunctionIdList` field is used, all `WhoId`s are included in the relationship list. Beginning in API version 37.0, if the contact or lead ID in the `WhoId` field isn't in the `EventWhoIds` list, no error occurs and the ID is added to the `EventWhoIds` as the primary `WhoId`. If `WhoId` is set to null, an arbitrary ID from the existing `EventWhoIds` list is promoted to the primary position. This is a polymorphic relationship field. **Relationship Name** Who **Relationship Type** Lookup **Refers To** Contact, Lead

Usage

Use Event to manage calendar appointments.

Querying and Filtering Events

Queries on events are denied before they time out if they involve amounts of data that are deemed too large. In such cases, the exception code `OPERATION_TOO_LARGE` is returned. If you receive `OPERATION_TOO_LARGE`, refactor your query to return or scan a smaller amount of data.

When querying for events with a specific due date, you must filter on both the `ActivityDateTimeand` and `ActivityDate` fields. For example to find all events with a due date of February 14, 2003, you need two filters:

- One filter with the `ActivityDate` field equal to the Coordinated Universal Time (UTC) time zone on February 14, 2003.
- One filter with the `ActivityDate` field greater than or equal to midnight on February 14, 2003 in the user's local time zone AND less than or equal to midnight on February 15, 2003 in the user's local time zone.

Alternatively, in API version 13.0 and later, you can find events with a specific due date by filtering on `StartDateTime`. For example, to find all events with a due date of February 14, 2003, filter with the `StartDateTime` greater than or equal to midnight on February 14, 2003 in the user's local time zone AND less than or equal to midnight on February 15, 2003 in the user's local time zone.

The `EventId` field of an EventRelation object always points to the master record. An invitee on a group event can query the EventRelation object to view the master record.

Multiday Events

- Multiday events are available in API version 13.0 and later. Also, in earlier versions SOQL queries don't return multiday events.
- Multiday events are enabled through the user interface from Setup by entering *`Activity Settings`* in the `Quick Find` box, then selecting **Activity Settings**.
- If the multiday event feature is enabled, then API versions 13.0 and later support values greater than 1440 for the `DurationInMinutes` field. API versions 12.0 and earlier can't access event objects whose `DurationInMinutes` is greater than 1440.
- Multiday events can't exceed 14 days.

Event Series and Recurring Events

In Lightning Experience, events with multiple occurrences are called event series, and are indicated when the `IsRecurrence2` field is set to `true`. In Salesforce Classic, events with multiple occurrences are called recurring events, and are indicated when the `IsRecurrence` field is set to `true`. Both fields can't be set to true for the same event.

- Lightning Experience event series are available in API version 44.0 and later as read-only fields. Recurrence patterns, specified by the Recurrence2PatternText field, are creatable in API version 52.0 and later. Salesforce Classic recurring events are available in API version 7.0 and later. In earlier versions, SOQL queries don't return any Lightning Experience event series.
- After an event is created, you can't change the values of `IsRecurrence2` or `IsRecurrence` from `true` to `false` or vice versa.
- You can't set fields associated with `IsRecurrence2` for events where `IsRecurrence` is set to `true`, or vice versa.
- For Lightning Experience event series where `IsRecurrence2` is `true`, if you'd like to delete a single or all remaining events, use the REST API call. For Salesforce Classic recurring events where `IsRecurrence` is `true`, all past and future events in the series are removed when you delete the recurring event series through the API. However, when you delete the recurring event series through the user interface, only future occurrences are removed.
- For Lightning Experience event series in API version 58.0 and later, when you change a future event, events in the entire series also change. When you change a past event, `IsRecurrence2Exception` is set to `true` and only that past event changes.
- When creating a Salesforce Classic recurring event series, the duration of the event must be 24 hours or less. When the Salesforce Classic recurring event series is created, you can extend the length of individual occurrences beyond 24 hours if Multiday events are enabled; see **Multiday Events**.
- For Salesforce Classic recurring events, `RecurrenceStartDateTime`, `RecurrenceEndDateOnly`, `RecurrenceType`, and any properties associated with the given recurrence type (see the Recurrence Field Usage for Salesforce Classic Recurring Events table) must be populated.

- When updating a Salesforce Classic recurring event series, it's not possible to update the `EventRelation` for the event series object and the EventRelation for the series object occurrences at the same time.
- Lightning Experience event series have no series ID, so it's not possible to locate other occurrences in the series. In Salesforce Classic recurring events, you can use `RecurrenceActivityId` to locate other occurrences.
- For both Lightning Experience event series and Salesforce Classic recurring events, when a series repeats every day, month, or year, you can only schedule occurrences one time per day, month, or year. The week option lets you schedule occurrences multiple days per week.

Limits for Lightning Experience event series and limits for Salesforce Classic recurring events also apply.

Lightning Experience Event Series and Recurring Events

Use the `Recurrence2PatternText` field to specify the recurrence pattern for Lightning Experience event series. These recurrence patterns, called reference rules or RRULES, support a subset of the RFC 5545 standards. This table includes common RRULE examples.

Recurrence Pattern	RRULE Example
Every day for five days	`RRULE:FREQ=DAILY;INTERVAL=1;COUNT=5`
Every Monday, Tuesday, Wednesday, Thursday, and Friday with no end date	`RRULE:FREQ=WEEKLY;INTERVAL=1;BYDAY=MO,TU,WE,TH,FR`
Every two weeks on Monday and Friday for 10 occurrences	`RRULE:FREQ=WEEKLY;INTERVAL=2;BYDAY=MO,FR;COUNT=10`
Monthly on the first day of the month until January 1, 2020	`RRULE:FREQ=MONTHLY;INTERVAL=1;BYMONTHDAY=1;UNTIL=20200101T100000Z`
Yearly on July 4th for three years (in this example, specify the date using StartDateTime)	`RRULE:FREQ=YEARLY;INTERVAL=1;BYMONTH=7;BYMONTHDAY=4;COUNT=3`
Daily until January 1, 2022 with no end date	`RRULE:FREQ=DAILY;UNTIL=20220101T000000Z`
Every third Friday of the month with no end date	`RRULE:FREQ=MONTHLY;BYSETPOS=3;BYDAY=FR`

The RRULE defined by `Recurrence2PatternText` supports a subset of the RFC 5545 standard for internet calendaring and scheduling. Supported RRULE parts include FREQ, BYMONTH, BYMONTHDAY, BYDAY, WKST, BYSETPOS, INTERVAL, UNTIL, and COUNT.

When the event record is saved, the RRULE might be modified to follow the required format:

- The RRULE parts are placed in the following order: FREQ, BYMONTH, BYMONTHDAY, BYDAY, WKST, BYSETPOS, INTERVAL, UNTIL, and COUNT.
- Any missing default values are inserted. For example, if the RRULE doesn't include INTERVAL, then `INTERVAL=1` is added.
- The RRULE is prefaced with `RRULE:` if that preface is missing.

RRULE Part	Supported RFC 5545 Implementation
FREQ	Required. Indicates the type of recurrence rule. Allowed values are: • `DAILY`—supported parts include FREQ, INTERVAL, UNTIL, and COUNT. • `WEEKLY`—supported parts include INTERVAL, UNTIL, COUNT, BYDAY, and WKST. BYDAY is required, but can't be preceded by a number. For example, to indicate weekly on Tuesday and Thursday until September 1, 2023, use `RRULE:FREQ=WEEKLY;UNTIL=20230901T000000Z;BYDAY=TU,TH` • `MONTHLY`—supported patterns include:

RRULE Part	Supported RFC 5545 Implementation
	– BYMONTHDAY For example, to indicate monthly on the third day of the month use: `RRULE:FREQ=MONTHLY;BYMONTHDAY=3` – BYDAY and BYSETPOS For example, to indicate the last weekday of the month, use `RRULE:FREQ=MONTHLY;BYDAY=MO,TU,WE,TH,FR;BYSETPOS=-1` – BYDAY, where the BYDAY values are specified with a numeric value For example, to indicate monthly on the first Friday for 10 occurrences, use `RRULE:FREQ=MONTHLY;COUNT=10;BYDAY=1FR` • `YEARLY`—supported patterns include: – BYMONTH, BYDAY, and BYSETPOS For example, to indicate every year on the second Friday of January, use `RRULE:FREQ=YEARLY;BYMONTH=1;BYDAY=FR;BYSETPOS=2` – BYMONTH and BYMONTHDAY For example, to indicate every year on October 31, use `RRULE:FREQ=YEARLY;BYMONTH=10;BYMONTHDAY=31` For example, to create a maintenance pattern such as twice in May, and September on 7th and 15th; and one time in June/July/August on the 1st, use two RRULEs: `RRULE: FREQ=MONTHLY; BYMONTH=5,9; BYMONTHDAY=7, 15` `RRULE:FREQ=MONTHLY; BYMONTH=6,7,8; BYMONTHDAY=1`
BYMONTH	The month. Valid values are `1 to 12`.
BYMONTHDAY	The day of the month. Valid values are `1 to 31`. If BYMONTHDAY is `31` and the month has fewer than 31 days, the event is created on the last day of the month.
BYDAY	A comma-separated list of days of the week. Valid values are `SU`, `MO`, `TU`, `WE`, `TH`, `FR`, `SA`. For RRULES with yearly or monthly frequency, BYDAY must be one of: • a single day • weekend days • weekdays • every day of the week Each BYDAY value can be preceded by an integer that indicates the nth occurrence of a specific day within the monthly or yearly RRULE. Allowed values are `-1, 1, 2, 3`, and `4`. You can't use different numbers in the BYDAY values. For example, this RRULE isn't supported: `RRULE:FREQ=MONTHLY;INTERVAL=2;COUNT=10;BYDAY=1SU,-1SU` If BYDAY values are prefaced with a number, the RRULE can't include BYSETPOS.
WKST	Specifies the day on which the workweek starts. Valid values are `MO`, `TU`, `WE`, `TH`, `FR`, `SA`, and `SU`. Default value is based on the user's locale.

RRULE Part	Supported RFC 5545 Implementation
BYSETPOS	A comma-separated list of values that correspond to the nth occurrence within the set of recurrence instances specified by the rule. Valid values are `-1`, `1`, `2`, `3`, or `4`. Default value is `1`. For example, to indicate the last weekday of the month, use: `RRULE:FREQ=MONTHLY;BYDAY=MO,TU,WE,TH,FR;BYSETPOS=-1`
INTERVAL	The repetition interval. Valid values are: • an integer between `1` and `999` if FREQ=DAILY • an integer between `1` and `99` if FREQ=WEEKLY or FREQ=MONTHLY • `1` if FREQ=YEARLY Default value is `1`.
UNTIL	Specifies the datetime in UTC format when the recurrence rule stops. The supported format is yyyyMMddTHHmmssZ, for example: 20210419T083000Z. An RRULE can't contain both UNTIL and COUNT. A recurring event without either UNTIL or COUNT repeats indefinitely.
COUNT	The number of occurrences. Allowed values are 1 to 999. An RRULE can't contain both UNTIL and COUNT. A recurring event without either UNTIL or COUNT repeats indefinitely.
BYWEEKNO	Specifies a comma-separated list of values that specify weeks of the year. Valid values are: • `1` to `53` • `-53` to `-1` For example, to indicate specific weeks in a year, use: `RRULE: BYWEEKNO=20, -20`. This rule part can't be used when the FREQ rule part is set to anything other than YEARLY. For example, 3 represents the third week of the year. Note: Assuming a Monday week start, week 53 can only occur when Thursday is January 1 or if it's a leap year and Wednesday is January 1.
BYYEARDAY	Specifies a comma-separated list of values that specify days of the year. Valid values are: • `1` to `366` • `-366` to `-1` For example, to indicate specific days in a year, use: `RRULE:BYYEARDAY=1,100,200`; or, `RRULE:BYYEARDAY=1,-2`.

Salesforce Classic Event Series and Recurring Events

This table describes the usage of recurrence fields for Salesforce Classic recurring events. Each recurrence type must have all of its properties set. All unused properties must be set to null.

RecurrenceType Value	Properties	Example Pattern
RecursDaily	RecurrenceInterval	Every second day

RecurrenceType Value	Properties	Example Pattern
RecursEveryWeekday	RecurrenceDayOfWeekMask	Every weekday - can't be Saturday or Sunday
RecursMonthly	RecurrenceDayOfMonth RecurrenceInterval	Every second month, on the third day of the month
RecursMonthlyNth	RecurrenceInterval RecurrenceInstance RecurrenceDayOfWeekMask	Every second month, on the last Friday of the month
RecursWeekly	RecurrenceInterval RecurrenceDayOfWeekMask	Every three weeks on Wednesday and Friday
RecursYearly	RecurrenceDayOfMonth RecurrenceMonthOfYear	Every March on the 26th day of the month
RecursYearlyNth	RecurrenceDayOfWeekMask RecurrenceInstanceRecurrenceMonthOfYear	The first Saturday in every October

Attendees, Invitees, and Resources

The field `GroupEventType` indicates that event participants are included on an event. You can add a resource to an event only when the resource is available. The only attendance status that can be assigned to resources is Accepted. Events can't be saved when resources you've added aren't available.

JunctionIdList

To create an event using `JunctionIdList`, IDs are pulled from the related contacts and both the event and the `EventRelation` records are created in one API call. If the `EventRelation` fails, the event is rolled back because it's all done in a single API call.

```
public void createEventNew(Contact[] contacts) {
 String[] contactIds = new String[contacts.size()];
 for (int i = 0; i < contacts.size(); i++) {
  contactIds[i] = contacts[i].getID();
 }
 Event event = new Event();
 event.setSubject("New Event");
 event.setEventWhoIds(contactIds);
 SaveResult[] results = null;
 try {
  results = connection.create(new Event[] {
   task
  });
 } catch (ConnectionException ce) {
  ce.printStackTrace();
 }
}
```

Syncing Events with Lightning Sync

Attendee statuses (Accepted or Maybe, Declined, or No Response) sync from Microsoft® Exchange or Google to Salesforce, but not from Salesforce to Exchange or Google. Be wary of creating API flows that update attendee status in Salesforce for users set up to sync both ways. Eventually the original Exchange or Google status overrides the update made in Salesforce.

Shared Field-Level Security for Event and Task Objects

Metadata deployments for the Event object must include the field-level security for the Task object. Shared field-level security prevents each object from changing the field-level security of the associated object.

Metadata deployments that include field-level security for only one of either the Event or Task objects can cause field-level security changes to the other object that aren't reflected in the metadata.

- If field-level security is enabled for one object, then field-level security is enabled for both objects.
- If field-level security is disabled for one object, then it's disabled for both objects.

Note: A missing entry in the metadata is treated as field-level security being disabled.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

EventChangeEvent (API version 44.0)
Change events are available for the object.

EventFeed (API version 20.0)
Feed tracking is available for the object.

SEE ALSO:

Overview of Salesforce Objects and Fields

EventLogFile

Represents event log files for event monitoring. The event monitoring product gathers information about your Salesforce org's operational events, which you can use to analyze usage trends and user behavior. This object is available in API version 32.0 and later. The `Interval` and `Sequence` fields are available only in API version 37.0 and later.

You can interact with event monitoring data by querying fields on the EventLogFile object (like `EventType` and `LogDate`). `CreatedDate` tracks when the log file was generated. To view the underlying event data, query the `LogFile` field. The `EventType` determines the schema of this field. For more information, see EventLogFile Supported Event Types.

Note: Log data schema for each `EventType` can change. With each new release, use the `LogFileFieldNames` and `LogFileFieldTypes` fields to validate the schema changes. In the unlikely case in which no log files are generated for 24 hours, contact Salesforce Customer Support.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Special Access Rules

Accessing this object requires View Event Log Files and API Enabled user permissions. Users with View All Data permission can view event log files.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
`ApiVersion`	**Type** double **Properties** Filter, Sort **Description** The specific API version for this log file. This field is available in API version 30.0 and later.
`EventType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The event type—API, Login, Report, URI, and so forth. Use to determine which files were generated for your org. For the corresponding `LogFile` schema, see EventLogFile Supported Event Types.
`Interval`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The generation schedule for the event log file. Possible values are: • `Daily` • `Hourly` This field is available in API version 37.0 and later.
`LogDate`	**Type** dateTime **Properties** Filter, Sort **Description** The date and time of the log file's creation. For daily event log files, tracks usage activity for a 24-hour period, from 12:00 a.m. to 11:59 p.m. UTC time. For hourly event log files, indicates the hour in which the log file was generated. For example, for events that occur between 11:00 AM and 12:00 PM on 3/7/2016, this field's value is 2016-03-07T11:00:00.000Z. Note: For hourly event log files, we recommend using `CreatedDate` to query the date and time that an EventLogFile object was created.

Field	Details
`LogFile`	**Type** base64 **Description** Encoded file data in `.csv` format. The `EventType` field defines the schema for this data.
`LogFileContentType`	**Type** string **Properties** Filter, Group, Sort **Description** The content type of the log file; always `.csv`.
`LogFileFieldNames`	**Type** string **Properties** Nillable **Description** The ordered list of fields in the log file data. Note: `LogFileFieldNames` and `LogFileFieldTypes` are specific to each `EventType`. For example, `LogFileFieldNames` has a different value for an API `EventType` and a Login `EventType`.
`LogFileFieldTypes`	**Type** string **Properties** Nillable **Description** The ordered list of field types in the log file data (`String`, `Id`, and so forth). Note: `LogFileFieldNames` and `LogFileFieldTypes` are specific to each `EventType`. For example, `LogFileFieldTypes` has a different value for an API `EventType` and a Login `EventType`.
`LogFileLength`	**Type** double **Properties** Filter, Sort **Description** The log file length in bytes. You can use this field to plan storage needs for your log files.
`Sequence`	**Type** int

Field	Details
	Properties Filter, Group, Sort **Description** The number for the portion of the event log file data captured in an hour. For 24-hour event log file generation, the value of this field is 0. For hourly event log files, the initial value is 1. This value increases by 1 when events are added in the same hour after the latest event log file is created. The value resets to 1 in the subsequent hour. For example, you have activity between 2:00 and 3:00 PM. Two-log files are generated that contain the event log data for that hour, with `Sequence` values of 1 and 2. For event log data that occurs at 3:01 PM, the `Sequence` value resets to 1. This field is available in API version 37.0 and later.

EventLogFile Supported Event Types

The `EventType` field in the EventLogFile object supports these events. Some common fields, such as `CPU_TIME` and `RUN_TIME`, can have null or zero values depending on how the events are generated for a given feature. Sometimes, three quotation marks appear around event data containing special characters in the CSV file. The third quotation mark is necessary for tools and applications to parse the field data at the correct field value boundary.

EventLogFile Supported Event Types

The `EventType` field in the EventLogFile object supports these events. Some common fields, such as `CPU_TIME` and `RUN_TIME`, can have null or zero values depending on how the events are generated for a given feature. Sometimes, three quotation marks appear around event data containing special characters in the CSV file. The third quotation mark is necessary for tools and applications to parse the field data at the correct field value boundary.

We generate some text messages in quotes, as in "example message". To preserve the original value, we add two more quotes and the final value looks like """example message""" in the CSV file.

Note: The API Total Usage, CORS Violation Record, Hostname Redirects, Insecure External Assets, Login, and Logout events are available in supported Salesforce editions at no additional cost. To purchase the remaining event types, contact Salesforce.

Apex Callout Event Type

Apex Callout events contain details about callouts (external requests) during Apex code execution.

Apex Execution Event Type

Apex Execution events contain details about Apex classes that are used.

Apex REST API Event Type

Apex REST API events capture information about every Apex REST API request.

Apex SOAP Event Type

Apex SOAP events contain details about custom SOAP web service calls.

Apex Trigger Event Type

Apex Trigger events contain details about triggers that fire in an organization.

Apex Unexpected Exception Event Type

The Apex Unexpected Exception event type captures information about unexpected exceptions in Apex code execution. This event type is available in the EventLogFile object in API version 45.0 and later.

API Total Usage

API Total usage events contain details about Platform SOAP API, Platform REST API, and Bulk API requests.

Asynchronous Report Run Event Type

Asynchronous Report Run events are created for reporting requests that are scheduled. This category includes dashboard refreshes, asynchronous reports, schedule reports, and analytics snapshots.

Aura Request Event Type

Aura Request events contain details of requests to Apex methods from Aura and Lightning web components. For example, you can benchmark request time or identify the URI of an unsuccessful request.

Bulk API Event Type

Bulk API events contain details about Bulk API requests.

Bulk API 2.0 Event Type

BulkApi2 events contain details about Bulk API 2.0 requests.

Change Set Operation Event Type

Change Set Operation events contain information from change set migrations.

Concurrent Long-Running Apex Limit Event Type

Concurrent Long-Running Apex Limit events contain information about long-running concurrent Apex requests in your org that Salesforce terminated after reaching your org's concurrency limit. Requests with an established Apex context that execute for 5 seconds are counted towards your org's limit of concurrent long-running requests. (Asynchronous requests don't count towards the limit.) When there are more than 10 long-running requests (org default limit), additional long-running requests are terminated. This event type is available in the EventLogFile object in API version 45.0 and later.

Console Event Type

Console events contain information about the performance and use of Salesforce Consoles. The Console events are logged whenever a Console tab is opened with a sidebar component. Outside of that, when Console tabs are opened, a regular view record detail event is served just like in Salesforce Classic.

Content Distribution Event Type

Content Distribution events contain information about content distributions and deliveries to users.

Content Document Link Event Type

Content Document Link events contain sharing information for content documents.

Content Transfer Event Type

Content Transfer events contain information about content transfer events, such as downloads, uploads, and previews. This information includes events performed on files and attachments to records.

Continuation Callout Summary Event Type

Continuation Callout Summary events contain information about all of the asynchronous callouts performed during a transaction, their response status codes, execution times, and URL endpoint destinations. This event type is available in the EventLogFile object in API version 43.0 and later.

CORS Violation Record Event Type

CORS Violation Record events capture information about Cross-Origin Resource Sharing (CORS) violations. Cross-origin requests to Lightning apps are blocked unless the request comes from a URL listed in your CORS allowlist.

Dashboard Event Type

Dashboard events contain details about report requests from dashboards. These requests are triggered by dashboard refreshes, subscriptions, and filter changes.

Document Attachment Downloads Event Type

Document Attachment Downloads events contain details of document and attachment downloads.

External Cross-Org Callout Event Type

External Cross-Org Callout events represent external data callouts via the cross-org adapter for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

External Custom Apex Callout Event Type

External Custom Apex Callout events represent external data callouts via custom adapters for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

External Data Source Callout Event Type

External Data Source Callout events represent external data callouts via the Salesforce Connect adapters for Amazon DynamoDB and Amazon Athena. This event type is available in the EventLogFile object in API version 56.0 and later.

External OData Callout Event Type

External OData Callout events represent external data callouts via the OData 2.0 and OData 4.0 adapters for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

Flow Execution Event Type

Flow Execution events contain information about flows that were executed including details such as total execution time, number of interviews, and number of errors.

Group Membership Event Type

Group Membership events capture details about changes to public group and queue membership, such as when members are added to or removed from the public group or queue.

Hostname Redirects Event Type

Hostname Redirect events contain details about blocked and successful redirections for your previous My Domain hostnames. The Hostname Redirects event type is available in the EventLogFile object in API version 56.0 and later.

Insecure External Assets Event Type

Insecure External Assets events contain information about external assets. External assets include images or videos accessed by users over an insecure HTTP protocol. The event lists all your Salesforce pages that contain assets hosted insecurely on third-party sites that users loaded with a Chrome, Firefox, Microsoft Edge, or Safari browser. The `INSECURE_URI` field contains the URI being used to load the asset insecurely. The Insecure External Assets event type is available in the EventLogFile object in API version 42.0 and later.

Insufficient Access Event Type

Insufficient Access events contain details about errors relating to insufficient record access, so that you can troubleshoot and resolve access issues for your users.

Knowledge Article View Event Type

Knowledge Article View events contain user activity with your knowledge base.

Lightning Error Event Type

Lightning Error events represent errors that occurred during user interactions with Lightning Experience and the Salesforce mobile app. This event type is available in the EventLogFile object in API version 39.0 and later.

Lightning Interaction Event Type

Lightning Interaction events track user actions in Lightning Experience and the Salesforce mobile app, such as the user clicking, tapping, or scrolling on a page. This event type is available in the EventLogFile object in API version 39.0 and later.

Lightning Logger Event Type

Lightning Logger events contain information from observed Lightning component logs. This event type is available in the EventLogFile object in API version 58.0 and later.

Lightning Page View Event Type

Lightning Page View events represent information about the page on which the event occurred in Lightning Experience and the Salesforce mobile app. A Lightning Page View event tracks the page a user visited, how long the user spent on the page, and the load time for the page. This event type is available in the EventLogFile object in API version 39.0 and later.

Lightning Performance Event Type

Lightning Performance events track trends in Lightning Experience and Salesforce mobile app performance. This event type is available in the EventLogFile object in API version 39.0 and later.

Login Event Type

Login events contain details about your org's user login history.

Login As Event Type

Login As events contain details about what a Salesforce admin did while logged in as another user.

Logout Event Type

Logout events contain details of user logouts.

Metadata API Operation Event Type

Metadata API Operation events contain details of Metadata API retrieval and deployment requests.

Multiblock Report Event Type

Multiblock Report events contain details about Joined Report reports.

Named Credential Event Type

The Named Credential event type captures information about Apex callouts that use named credentials as their endpoints. Use this event type to audit the installed managed packages that use named credentials. If you don't recognize the package namespace in the named credential event log file, then you can investigate whether a security breach has occurred. This event type is available in the EventLogFile object in API version 53.0 and later.

One Commerce Usage Event Type

One Commerce Usage events capture information about your Commerce instance. This event type is available in the EventLogFile object in API version 51.0 and later.

Package Install Event Type

Package Install events contain details about package installation in the organization.

Platform Encryption Event Type

Platform Encryption event contains information about tenant secret and derived encryption key usage. This event type is available in API versions 41.0 and later.

Queued Execution Event Type

Queued Execution events contain details about queued executions—for example, batch Apex.

Report Event Type

Report events contain information about what happened when a user ran a report. This event type includes all activity that's in the Report Export event type, plus more. For example, it has user activity for reports exported as both Formatted Report and Details Only output.

Report Export Event Type

Report Export events contain details about reports that a user exported. For example, this event type captures when a user exports a report as Details Only output. But it doesn't capture reports that users export as Formatted Report or XLSX Detail output. For that data, see the Report event type.

REST API Event Type

REST API events contain details about REST-specific requests.

Sandbox Event Type

Sandbox events contain details about sandbox copies.

Search Event Type

Search events contain details about the user's search query. All searches within the app, including Experience Cloud sites, are included. However, unauthenticated users won't have a unique Salesforce user ID.

Search Click Event Type

Search Click events contain details about the user's interaction with the search results. All searches within the app, including Experience Cloud sites, are included. However, unauthenticated users won't have a unique Salesforce user ID.

Sites Event Type

Sites events contain details of Site.com requests. Requests can originate from the browser (UI).

SOAP API Event Type

SOAP API events contain details about your org's SOAP API request activity.

Time-Based Workflow Event Type

Time-Based Workflow events contain details about queue activity monitoring.

Transaction Security Event Type

Transaction Security events contain details about policy execution. This event type is supported in API version 55.0 and later.

URI Event Type

URI events contain details about user interaction with the web browser UI.

Visualforce Request Event Type

Visualforce Request events contain details of Visualforce requests. Requests can originate from the browser (UI).

Wave Change Event Type

Wave Change events represent route or page changes made in the CRM Analytics user interface. A Wave Change event type is captured every time the user opens a new CRM Analytics asset or tab, switches between tabs, or changes dashboard pages. Wave Change events are logged when opening new tabs and switching back to previously opened tabs.

Wave Download Event Type

Wave Download events represent downloads made from lens explorations and dashboard widgets in the CRM Analytics user interface. A Wave Download event type is captured when a user downloads images (.png), Microsoft® Excel® data (.xls), or comma-separated values (.csv) files.

Wave Interaction Event Type

Wave Interaction events represent route or page changes made in the CRM Analytics user interface. A Wave Interaction event type is captured when a tab is closed. It also collates the interaction statistics over the life of the tab, including total open time, read time, and so on. These statistics are aggregated as you go to other tabs and return, and logged only once when the tab is closed.

Wave Performance Event Type

Wave Performance events help you track trends in your Analytics performance.

SEE ALSO:

EventLogFile

Apex Callout Event Type

Apex Callout events contain details about callouts (external requests) during Apex code execution.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
CLIENT_IP	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
CPU_TIME	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `ApexCallout`.
LOGIN_KEY	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
METHOD	**Type** String **Description** The HTTP method of the callout. **Example** For example: `GET`, `POST`, `PUT`, and so on.
ORGANIZATION_ID	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.

	Example
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
REQUEST_SIZE	**Type** Number **Description** The size of the callout request body, in bytes.
RESPONSE_SIZE	**Type** Number **Description** The size of the callout response, in bytes.
RUN_TIME	**Type** Number **Description** Not used for this event type. Use the TIME field instead.
SESSION_KEY	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
STATUS_CODE	**Type** Number **Description** The HTTP status code for the response.
SUCCESS	**Type** Boolean **Description** Indicates if the HTTP callout was sent and a response was returned (1) or not (0).

`TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds (ms).
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`TYPE`	**Type** String **Description** The type of Apex callout. For example: `REST` or `AJAX`.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`URL`	**Type** String **Description** The callout endpoint URL. **Example** `www.salesforce.com`

Field	Details
USER_ID	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.

SEE ALSO:

EventLogFile Supported Event Types

EventLogFile

Apex Execution Event Type

Apex Execution events contain details about Apex classes that are used.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
CALLOUT_TIME	**Type** Number **Description** Time spent waiting on webservice callouts, in milliseconds.
CLIENT_IP	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". If the user's session context isn't available, this field returns a blank value.
CPU_TIME	**Type** Number

Field	Details
	Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`DB_TOTAL_TIME`	**Type** Number **Description** Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.
`ENTRY_POINT`	**Type** String **Description** The entry point for this Apex execution. **Example** • `GeneralCloner.cloneAndInsertRecords` • `VF- /apex/CloneUser`
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `ApexExecution`.
`EXEC_TIME`	**Type** Number **Description** The end-to-end Apex execution time (in milliseconds).
`IS_LONG_RUNNING_REQUEST`	**Type** Boolean **Description** Indicates whether the request is counted against your org's concurrent long-running Apex request limit (`true`) or not (`false`). Note: Asynchronous Apex jobs (batch, queueable, scheduled, and future), background processes, and bulk API requests aren't counted against the concurrent long-running limit.
`LOGIN_KEY`	**Type** String

	Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`NUMBER_SOQL_QUERIES`	**Type** Number **Description** The number of SOQL queries that were executed during the event. This value is the aggregate across all namespaces, and can exceed the per-namespace limits. For test executions, the aggregate total value across all test methods executed in the request is used. If you're using this value to track limit consumption, consider filtering out test execution quiddities (indicated by the QUIDDITY field).
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`QUIDDITY`	**Type** String **Description** The type of outer execution associated with this event. **Example** • `A`–ACS Batch Apex • `B`–Bulk API and Bulk API 2.0 • `BA`–Start method of a Batch Apex job • `C`–Scheduled Apex • `CI`–Commerce Integration • `DL`– Discoverable Login page • `E`–Inbound Email Service • `F`–Future • `FC`–Function Callback • `H`–Apex REST • `I`–Invocable Action • `K`–Quick Action • `L`–Lightning

	- M–Remote Action - P–Bulk Apex jobs running in parallel - PEPC–Platform Event Publish Callback - PI–Post install script for a managed package - Q–Queueable - QTXF–Transaction Finalizer for Queueable - R–Synchronous uncategorized (which is where all transactions not specified elsewhere end up) - S–QueryLocator Batch Apex (Batch Apex jobs run faster when the start method returns a QueryLocator object that doesn't include related records via a subquery. See Batch Apex Best Practices in Using Batch Apex.) - TA–Tests Async - TD–Tests Deployment - TS–Tests Synchronous - UD–Undefined is the default when an event hasn't been assigned a more descriptive quiddity. - V–Visualforce - W–SOAP Webservices - X–Execute Anonymous Note: Implementations of the Process.Plugin interface use the quiddity value **R**.
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
RUN_TIME	**Type** Number **Description** The amount of time that the request took in milliseconds. Requests with a value over five seconds are considered long-running requests for the purposes of the Concurrent Long-Running Apex Limit. Note: HTTP callout processing time isn't included when calculating the 5-second limit. We pause the timer for the callout and resume it when the callout completes.

`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id

Field	Details
	Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.

EventLogFile

Apex REST API Event Type

Apex REST API events capture information about every Apex REST API request.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide. For information about Apex REST, see Introduction to Apex REST.

Fields

Field	Details
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`DB_BLOCKS`	**Type** Number **Description** Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.
`DB_CPU_TIME`	**Type** Number

	Description The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.
`DB_TOTAL_TIME`	**Type** Number **Description** The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.
`ENTITY_NAME`	**Type** Set **Description** API objects that are accessed. For example: `Account`, `Opportunity`, `Contact`, and so on.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `ApexRestApi`.
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`MEDIA_TYPE`	**Type** String **Description** The media type of the response.
`METHOD`	**Type** String **Description** The HTTP method of the request. For example: `GET`, `POST`, `PUT`, and so on.

NUMBER_FIELDS	**Type** Number **Description** The number of fields or columns, where applicable.
ORGANIZATION_ID	**Type** Id **Description** The 15-character ID of the organization. For example: 00D000000000123.
REQUEST_SIZE	**Type** Number **Description** The size of the callout request body, in bytes.
REQUEST_STATUS	**Type** String **Description** The status of the request for a page view or user interface action. Possible values are: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error.
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.

`RESPONSE_SIZE`	**Type** Number **Description** The size of the callout response, in bytes.
`ROWS_PROCESSED`	**Type** Number **Description** The number of rows that were processed in the request. For example: `150`.
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`STATUS_CODE`	**Type** Number **Description** The HTTP status code for the response.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.

`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_AGENT`	**Type** Number **Description** The numeric code for the type of client used to make the request (for example, the browser, application, or API).
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.
`USER_TYPE`	**Type** String **Description** The category of user license. Possible values are: • `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers

	and access the application through a customer portal or an Experience Cloud site. • `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in. • `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal. • `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

Apex SOAP Event Type

Apex SOAP events contain details about custom SOAP web service calls.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`CLASS_NAME`	**Type** String **Description** The Apex class name. If the class is part of a managed package, this string includes the package namespace.

Field	Details
CLIENT_IP	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
CLIENT_NAME	**Type** String **Description** The name of the client that's using Salesforce services. This field is an optional parameter that can be passed in API calls. If blank, the caller didn't specify a client in the CallOptions header.
CPU_TIME	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DB_TOTAL_TIME	**Type** Number **Description** Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `ApexSoap`.
LIMIT_USAGE_PERCENT	**Type** Number **Description** The percentage of Apex SOAP calls that were made against the organization's limit.
LOGIN_KEY	**Type** String

Field	Details
	Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`METHOD_NAME`	**Type** String **Description** The name of the calling Apex method.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`QUERY`	**Type** String **Description** The SOQL query, if one was performed.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`REQUEST_STATUS`	**Type** String **Description** The status of the request for a page view or user interface action. Possible values are: • `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • `U`—Undefined

- A—Authorization Error
- R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- N—Not Found. 404 error.

RUN_TIME	**Type** Number **Description** The amount of time that the request took in milliseconds. Requests with a value over five seconds are considered long-running requests for the purposes of the Concurrent Long-Running Apex Limit. Note: HTTP callout processing time isn't included when calculating the 5-second limit. We pause the timer for the callout and resume it when the callout completes.
SESSION_KEY	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
URI	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.

`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `0059000000I1SNIA0`.
`USER_TYPE`	**Type** String **Description** The category of user license. Possible values are: • `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in. • `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared

	with users below them in the customer portal role hierarchy. • `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal. • `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

EventLogFile

Apex Trigger Event Type

Apex Trigger events contain details about triggers that fire in an organization.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`DB_TOTAL_TIME`	**Type** Number

	Description Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.
`ENTITY_NAME`	**Type** String **Description** The name of the object affected by the trigger.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `ApexTrigger`.
`EXEC_TIME`	**Type** Number **Description** The end-to-end Apex execution time (in milliseconds).
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.

REQUEST_STATUS	**Type** String **Description** The status of the request for a page view or user interface action. Possible values are: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error.
RUN_TIME	**Type** Number **Description** This field is always null. To view the end-to-end Apex execution time (in milliseconds), refer to the EXEC_TIME field.
SESSION_KEY	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

	For example: `2015-07-27T11:32:59.555Z`. The timezone is GMT.
`TRIGGER_ID`	**Type** String **Description** The 15-character ID of the trigger that was fired.
`TRIGGER_NAME`	**Type** String **Description** For triggers coming from managed packages, `TRIGGER_NAME` includes a namespace prefix separated with a `.` character. If no namespace prefix is present, the trigger is from an unmanaged trigger. Examples: • `examplePackage.managedExampleTrigger`- Managed trigger from the examplePackage namespace • `unmanagedExampleTrigger` - Unmanaged trigger
`TRIGGER_TYPE`	**Type** String **Description** The type of this trigger. **Possible Values** • AfterInsert • AfterUpdate • BeforeInsert • BeforeUpdate
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.

`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.
`USER_TYPE`	**Type** String **Description** The category of user license. Possible values are: • `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in. • `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.

	• `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal. • `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

EventLogFile Supported Event Types

EventLogFile

Apex Unexpected Exception Event Type

The Apex Unexpected Exception event type captures information about unexpected exceptions in Apex code execution. This event type is available in the EventLogFile object in API version 45.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `ApexUnexpectedException`.
`EXCEPTION_CATEGORY`	**Type** String **Description** The category of the unexpected Apex exception. Provides a breakdown of unhandled exceptions based on the type. For example, the `LimitException` exception type is split into subcategories that indicate if you exceeded a limit, such as the total heap size or CPU time. Possible values: • Subcategories of `LimitException` that indicate the Apex limit you've exceeded. Examples: – `LimitException: CpuTime`: Maximum CPU time on the Salesforce servers. – `LimitException: HeapSize`: Total heap size. – `LimitException: Queries`: Total number of SOQL queries issued. – `LimitException: QueryRows`: Total number of records retrieved by SOQL queries. – `LimitException: DmlStatements`: Total number of DML statements issued.

Field	Details
	– `LimitException: Callouts`: Total number of callouts (HTTP requests or web services calls) in a transaction. See Execution Governors and Limits for other limits. • `CustomException`: Unhandled custom exception. • An Apex exception that isn't limit-related; see Exception Class and Built-In Exceptions This field is available in API version 57.0 and later. **Example** `LimitException: CpuTime`
`EXCEPTION_MESSAGE`	**Type** Text **Description** The exception's message. **Example** Divide by 0
`EXCEPTION_TYPE`	**Type** String **Description** The class type of the unexpected exception. **Example** `System.MathException`
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the org. For example: `00D000000000123`.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`STACK_TRACE`	**Type** Text **Description** The stack trace for the exception.

Field	Details

	Note: If the exception is thrown from a managed package, `STACK_TRACE` is omitted.
	Example
	`Class.OpportunityUtility.insert: line 22, column 1`
	`AnonymousBlock: line 1, column 1`

`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.

EventLogFile Supported Event Types
EventLogFile

API Total Usage

API Total usage events contain details about Platform SOAP API, Platform REST API, and Bulk API requests.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`API_FAMILY`	**Type** String **Description** The API family. For example, `REST`, `SOAP`, or `Bulk`.
`API_RESOURCE`	**Type** String

	Description The API method or resource. For example, `describeSObjects` for SOAP, or `/v21.0/sobjects/Account/001xx000003DGQW` for REST.
`API_VERSION`	**Type** Number **Description** The API version. For example, `21`.
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as “Salesforce.com IP”. For example: `96.43.144.26`.
`CLIENT_NAME`	**Type** String **Description** The name of the client making the API request. Includes values passed via the Sforce-Call-Options header.
`CONNECTED_APP_ID`	**Type** String **Description** The ID of the connected app making the API request. If the connected app ID includes the prefix *`0H4`*, append it to the connected app ID in the My Domain URL to access app details (*https://MyDomainName.my.salesforce.com/`0H4`xxxxxxxxxxxx*). If, however, the connected app ID uses the prefix *`888`*, contact Salesforce Customer Support for app details.
`COUNTS_AGAINST_API_LIMIT`	**Type** Boolean **Description** Whether the request counted against the API limit (`true`) or not (`false`).
`ENTITY_NAME`	**Type** Set

	Description The name of the object accessed by the API request. For example: `Account`, `Opportunity`, `Contact`, and so on.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `ApiTotalUsage`.
`HTTP_METHOD`	**Type** String **Description** The HTTP method. For example, `GET`.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`STATUS_CODE`	**Type** Number **Description** The HTTP response status code for the request.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime

Field	Details
	Description The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the API. For example: `00530000009M943`

Asynchronous Report Run Event Type

Asynchronous Report Run events are created for reporting requests that are scheduled. This category includes dashboard refreshes, asynchronous reports, schedule reports, and analytics snapshots.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`AVERAGE_ROW_SIZE`	**Type** Number **Description** The average row size of all rows in the Asynchronous Report Run event, in bytes. A large average size, coupled with a high `ROW_COUNT`, can indicate that a user is downloading information for fraudulent purposes. For example, a salesperson who downloads all sales leads before departing for a competitor. **Example** 700
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.

`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`DASHBOARD_ID`	**Type** String **Description** The 15-character ID of the dashboard that was run.
`DB_TOTAL_TIME`	**Type** Number **Description** The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.
`DB_BLOCKS`	**Type** Number **Description** Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.
`DB_CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.
`DISPLAY_TYPE`	**Type** String **Description** The report display type, indicating the run mode of the report. Possible values are: • `D`—Dashboard • `S`—Show Details • `H`—Hide Details

ENTITY_NAME	**Type** String **Description** The name of the object affected by the trigger.
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `AsynchronousReportRun`.
LOGIN_KEY	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
NUMBER_BUCKETS	**Type** Number **Description** The number of buckets that were used in the report.
NUMBER_COLUMNS	**Type** Number **Description** The number of columns in the report.
NUMBER_EXCEPTION_FILTERS	**Type** Number **Description** The number of exception filters that are used in the report.
ORGANIZATION_ID	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
ORIGIN	**Type** String

Description

The context in which the report executed, such as from a UI (Classic, Lightning, Mobile), through an API (synchronous, asynchronous, Apex), or through a dashboard.

Possible Values

- `ReportOpenedFromMobileDashboard`: Report executed when a user clicked a dashboard component on a mobile device and drilled down to a report.
- `DashboardComponentUpdated`: Report executed when a user refreshed a dashboard component.
- `DashboardComponentPreviewed`: Report executed from a Lightning dashboard component preview.
- `ReportRunUsingSynchronousApi`: Report executed from a synchronous API.
- `ReportRunUsingAsynchronousApi`: Report executed from an asynchronous API.
- `ReportRunUsingApexSynchronousApi`: Report executed from the synchronous Apex API.
- `ReportRunUsingApexAsynchronousApi`: Report executed from the asynchronous Apex API.
- `ReportExported`: Report executed from a printable view or report export that was not asynchronous nor an API export.
- `ReportRunFromClassic`: Report executed from the Run Report option of Salesforce Classic.
- `ReportRunFromMobile`: Report executed from the Run Report option of the mobile Salesforce app.
- `ReportRunFromLightning`: Report executed from the Run option in Lightning Experience from a non-mobile browser.
- `ReportRunFromRestApi`: Report executed from the REST API.
- `ReportPreviewed`: Report executed when a user got preview results while using the report builder.
- `ReportScheduled`: Report was scheduled.
- `ProbeQuery`: Report executed from a probe query.
- `ReportRunFromReportingSnapshot`: Report executed through Snapshot Analytics.
- `ReportExportedAsynchronously`: Report was exported asynchronously.
- `ReportExportedUsingExcelConnector`: Report was exported using the Excel connector.

- `ChartRenderedOnVisualforcePage`: Report executed from a rendered chart on a VisualForce Page.
- `ChartRenderedInEmbeddedAnalyticsApp`: Report executed from a rendered chart in an embedded Analytics app.
- `ReportRunAndNotificationSent`: Report executed through the notifications API.
- `ChartRenderedOnHomePage`: Report executed from a rendered chart on the home page.
- `ReportResultsAddedToWaveTrending`: Report executed when a user trended a report in CRM Analytics.
- `ReportAddedToCampaign`: Report was added from an Add to Campaign action.
- `ReportResultsAddedToEinsteinDiscovery`: Report executed synchronously from Einstein Discovery.
- `Unknown`: Report execution origin is unknown.
- `Test`: Report execution resulted from a test.

`RENDERING_TYPE`

Type

String

Description

Describes the format of the report output in Salesforce Classic. If the report was exported in Lightning Experience, this field is blank.

Possible Values

- `W`: Web (HTML)
- `E`: Email
- `P`: Printable
- `X`: Excel
- `C`: Comma-separated values (CSV)
- `J`: JavaScript Object Notation (JSON)
- `D`: Dummy data

`REPORT_ID`

Type

Id

Description

The 15-character ID of the report that was run.

`REPORT_ID_DERIVED`

Type

Id

Description

The 18-character case insensitive ID of the report that was run.

REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
REQUEST_STATUS	**Type** String **Description** The status of the request for a page view or user interface action. Possible values are: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error.
ROW_COUNT	**Type** Number **Description** The number of rows that were processed in the Asynchronous Report Run event. High row counts, coupled with a high AVERAGE_ROW_SIZE, can indicate that a user is downloading information for fraudulent purposes. For example, a salesperson who downloads all sales leads before departing for a competitor. **Example** 150
RUN_TIME	**Type** Number **Description** The amount of time that the request took in milliseconds.

`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`SORT`	**Type** String **Description** The sort column and order that was used in the report.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id

	Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.
`USER_TYPE`	**Type** String **Description** The category of user license. Possible values are: • `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in. • `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.

	• `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

EventLogFile

Aura Request Event Type

Aura Request events contain details of requests to Apex methods from Aura and Lightning web components. For example, you can benchmark request time or identify the URI of an unsuccessful request.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`ACTION_MESSAGE`	**Type** String **Description** The action (Apex method) names and times for all the actions in the request in the format: `action1Name=action1Time;action2Name=action2Time...`
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`DB_TOTAL_TIME`	**Type** Number

	Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `AuraRequest`.
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`. **Example**
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`REQUEST_METHOD`	**Type** String **Description** The HTTP method of the request, such as GET or POST.
`REQUEST_STATUS`	**Type** String

Field	Details
	Description The status of the request for a page view or user interface action. Possible values are: • `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • `U`—Undefined • `A`—Authorization Error • `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • `N`—Not Found. 404 error.
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.

`URI`	**Type** String **Description** The URI of the resource that's receiving the request. For example: `/aura`.
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_AGENT`	**Type** Number **Description** The numeric code for the type of client used to make the request (for example, the browser, application, or API).
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.
`USER_TYPE`	**Type** String **Description** The category of user license. Possible values are: • `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers

and access the application through a customer portal or an Experience Cloud site.

- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

EventLogFile

Bulk API Event Type

Bulk API events contain details about Bulk API requests.

Note: This event type does not include Bulk API 2.0 requests. For information about the BulkApi2 event type, see Bulk API 2.0 Event Type on page 1732.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`BATCH_ID`	**Type** String

Field	Details
	Description The 15-character ID of the Bulk API batch.
CLIENT_IP	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
CPU_TIME	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
ENTITY_TYPE	**Type** String **Description** The type of entity that the Bulk API used.
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `BulkApi`.
JOB_ID	**Type** String **Description** The 15-character ID of the Bulk API job.
LOGIN_KEY	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
MESSAGE	**Type** EscapedString

	Description Any success or error message that's associated with the request.
NUMBER_FAILURES	**Type** Number **Description** The number of failures that were returned with the request.
OPERATION_TYPE	**Type** String **Description** The type of Bulk API operation that was performed.
ORGANIZATION_ID	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
ROWS_PROCESSED	**Type** Number **Description** The number of rows that were processed in the request. For example: `150`.
RUN_TIME	**Type** Number **Description** The amount of time that the request took in milliseconds.
SESSION_KEY	**Type** String

Field	Details
	Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`SUCCESS`	**Type** Boolean **Description** Whether the batch was successful.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`

`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.

EventLogFile Supported Event Types
EventLogFile

Bulk API 2.0 Event Type

BulkApi2 events contain details about Bulk API 2.0 requests.

Note: This event type does not include Bulk API requests. For information about the BulkApi event type, see Bulk API Event Type on page 1728.

You can monitor the following Bulk API 2.0 parameters:

- The type of data processed via Bulk API 2.0 operations, and how much of that data was processed.
- Bulk API 2.0 limits.
- For jobs, track how long it takes to complete, database, and CPU usage.
- Understand users and the operations they performed.
- Detailed errors and failures.

BulkApi2 events represent the steps in the Bulk API 2.0 workflow and changes in job state.

For a Bulk API 2.0 **Ingest** job, an event is emitted when a job is marked:

- created
  - Note: For multi-part requests, there is no "created" event emitted, only an uploadComplete event.
- uploadComplete
- inProgress
- with a processing update
- complete
- aborted
- deleted

For a Bulk API 2.0 **Query** job, an event is emitted when a job is marked:

- created
- uploadComplete
- inProgress
- with a processing update
- complete
- aborted

- deleted

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
CLIENT_IP	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
CPU_TIME	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
ENTITY_TYPE	**Type** String **Description** The type of entity that Bulk API 2.0 used. For example, `Account` or `Contact`.
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `BulkApi2`.
JOB_ID	**Type** String **Description** The 15-character ID of the Bulk API 2.0 job.
JOB_STATUS	**Type** String **Description** The job's current status.
LOGIN_KEY	**Type** String

Field	Details
	Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`OPERATION_TYPE`	**Type** String **Description** The type of Bulk API 2.0 operation that was performed.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`RECORDS_FAILED`	**Type** Number **Description** The total number of records that failed. For example: `150`.
`RECORDS_PROCESSED`	**Type** Number **Description** Number of records processed for this event. For example: `980`. Note: The number of records processed is reported differently for ingest and query jobs. For *ingest* jobs: • Events with a status of `InProgress` report (if applicable) the number of records processed. For *query* jobs: • Events with a status of `JobComplete` or `InProgress` report (if applicable) the number of records processed.
`RESULT_SIZE_MB`	**Type** Number **Description** Number of megabytes returned in query. Empty for ingest jobs. For example: `670`.

Note: RESULT_SIZE_MB currently does not emit events, but is shown here as a placeholder for future enhancement.

`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID

Field	Details
	Description The 18-character case-safe ID of the URI of the page that's receiving the request.
USER_ID	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
USER_ID_DERIVED	**Type** Id **Description** The 18-character case-safe ID of the user who's using Salesforce services through the UI or the API. For example: `0059000000I1SNIA0`.

Change Set Operation Event Type

Change Set Operation events contain information from change set migrations.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
CHANGE_SET_NAME	**Type** String **Description** The name of the change set.
CLIENT_IP	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
CPU_TIME	**Type** Number

Field	Details
	Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `ChangeSetOperation`.
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`OPERATION`	**Type** String **Description** The operation that's being performed. **Possible Values** • DELETE • DEPLOY • UPLOAD • VALIDATE
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.

`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`TARGET_ORG_ID`	**Type** Id **Description** The 15-character ID of the organization that's receiving the change set.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID

	Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `0059000000I1SNIA0`.

EventLogFile Supported Event Types

EventLogFile

Concurrent Long-Running Apex Limit Event Type

Concurrent Long-Running Apex Limit events contain information about long-running concurrent Apex requests in your org that Salesforce terminated after reaching your org's concurrency limit. Requests with an established Apex context that execute for 5 seconds are counted towards your org's limit of concurrent long-running requests. (Asynchronous requests don't count towards the limit.) When there are more than 10 long-running requests (org default limit), additional long-running requests are terminated. This event type is available in the EventLogFile object in API version 45.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `ConcurrentLongRunningApexLimit`.
`NUMBER_REQUESTS`	**Type** Number

Field	Details
	Description Count of requests with an established Apex context executing for longer than 5 seconds in your org.
ORGANIZATION_ID	**Type** Id **Description** The 15-character ID of the organization. For example: 00D000000000123.
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
REQUEST_URI	**Type** String **Description** URI of the long-running Apex request that Salesforce terminated. **Example** /apex/ApexClassName
REQUESTS_LIMIT	**Type** Number **Description** Maximum count of requests with an established Apex context that can execute for longer than 5 seconds. When NUMBER_REQUESTS reaches this limit, then additional long-running Apex requests are terminated. (Asynchronous requests don't count towards the limit.) The default limit is 10. **Example** 10
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	**Type** DateTime

Field	Details
	Description The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`

Usage

For example, you can monitor Concurrent Long-Running Apex Limit log counts to get a benchmark or plot a count by hour. To identify where the limit was exceeded, see the REQUEST_URI field. Then, cross-reference this data with Apex Execution event data where the average RUN_TIME exceeds 5 seconds. To identify synchronous requests only, cross-reference event data with the QUIDDITY field in Apex Execution event data. For example, QUIDDITY NOT IN (A,BA,F,Q,S) and CALLOUT_TIME (>5000).

EventLogFile Supported Event Types

EventLogFile

Salesforce Developers Blog: Designing Force.com Applications That Avoid Hitting Concurrent Request Limits

Console Event Type

Console events contain information about the performance and use of Salesforce Consoles. The Console events are logged whenever a Console tab is opened with a sidebar component. Outside of that, when Console tabs are opened, a regular view record detail event is served just like in Salesforce Classic.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.

`COMPONENT_ID`	**Type** Id **Description** The 15-character ID of the component.
`COMPONENT_ID_DERIVED`	**Type** Id **Description** The 18-character, case-insensitive ID of the component.
`CONSOLE_ID`	**Type** Id **Description** The 15-character ID of the console.
`CONSOLE_ID_DERIVED`	**Type** Id **Description** The 18-character, case-insensitive ID of the console.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`DB_TOTAL_TIME`	**Type** Number **Description** The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `Console`.
`LICENSE_CONTEXT`	**Type** String

	Description The license context in which a user is using a console. **Example** service, salesandservice, sales
LOGIN_KEY	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
ORGANIZATION_ID	**Type** Id **Description** The 15-character ID of the organization. For example: 00D000000000123.
RECORD_ID	**Type** Id **Description** The 15-character ID of the record that's associated with the console.
RECORD_ID_DERIVED	**Type** Id **Description** The 18-character, case-insensitive ID of the record that's associated with the console.
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
REQUEST_STATUS	**Type** String

	Description The status of the request for a page view or user interface action. Possible values are: • `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • `U`—Undefined • `A`—Authorization Error • `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • `N`—Not Found. 404 error.
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.

URI	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
URI_ID_DERIVED	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
USER_ID_DERIVED	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `0059000000I1SNIA0`.
USER_TYPE	**Type** String **Description** The category of user license. Possible values are: • `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.

- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

EventLogFile Supported Event Types

EventLogFile

Content Distribution Event Type

Content Distribution events contain information about content distributions and deliveries to users.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`ACTION`	**Type** String **Description** The action that's used when a delivery is viewed. **Possible Values** • `VIEW` • `INSERT` • `UPDATE`

`DELIVERY_ID`	**Type** Id **Description** The 15-character ID of the content delivery.
`DELIVERY_LOCATION`	**Type** String **Description** The location of the delivery.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `ContentDistribution`.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`RELATED_ENTITY_ID`	**Type** Id **Description** The 15-character ID of the record that's associated with the delivery distribution.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.

TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
USER_ID	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.
VERSION_ID	**Type** Id **Description** The 15-character ID of the content version.

SEE ALSO:
EventLogFile Supported Event Types
EventLogFile

Content Document Link Event Type

Content Document Link events contain sharing information for content documents.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
DOCUMENT_ID	**Type** Id

Field	Details
	Description The 15-character ID of the document that's being shared.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `ContentDocumentLink`.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`SHARED_WITH_ENTITY_ID`	**Type** Id **Description** Who the document was shared with.
`SHARING_OPERATION`	**Type** String **Description** The type of sharing operation on the document. **Possible Values** • `INSERT` • `UPDATE` • `DELETE`
`SHARING_PERMISSION`	**Type** String **Description** What permissions the document was shared with.

Field	Details
	Possible Values • V: Viewer • C: Collaborator • I: Inferred—that is, the sharing permissions were inferred from a relationship between the viewer and document. For example, a document's owner has a sharing permission to the document itself. Or, a document can be a part of a content collection, and the viewer has sharing permissions to the collection rather than explicit permissions to the document directly.
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
USER_ID	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.

EventLogFile

Content Transfer Event Type

Content Transfer events contain information about content transfer events, such as downloads, uploads, and previews. This information includes events performed on files and attachments to records.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
DOCUMENT_ID	**Type** Id **Description** The 15-character ID of the document that's being shared.
DOCUMENT_ID_DERIVED	**Type** Id **Description** The 18-character case insensitive ID of the document that's being shared.
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `ContentTransfer`.
FILE_PREVIEW_TYPE	**Type** String **Description** The content type of the file preview.
FILE_TYPE	**Type** String **Description** The content type of the file version.
ORGANIZATION_ID	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
REQUEST_ID	**Type** String

	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`SIZE_BYTES`	**Type** Number **Description** The size of the file transfer, in bytes.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`TRANSACTION_TYPE`	**Type** String **Description** The operation that was performed, including operations on files and attachments to records. For example, you can track operations in the Attachments related list on a case. **Possible Values** • `VersionDownloadAction` and `VersionDownloadApi` represent downloads via the user interface and API respectively. • `VersionRenditionDownload` represents a file preview action. • `saveVersion` represents a file that's being uploaded.
`USER_ID`	**Type** Id

	Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.
`VERSION_ID`	**Type** Id **Description** The 15-character ID of the content version.
`VERSION_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the content version.

EventLogFile Supported Event Types

EventLogFile

Continuation Callout Summary Event Type

Continuation Callout Summary events contain information about all of the asynchronous callouts performed during a transaction, their response status codes, execution times, and URL endpoint destinations. This event type is available in the EventLogFile object in API version 43.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or the REST API Developer's Guide.

Fields

Field	Details
`CONTINUATION_ID`	**Type** String **Description** A unique ID identifying a sequence of events within a request.

Field	Details
	Example SFDC-Continuation-14e3cg85-961d-389e-7bz1-3d171543162a
DURATION	**Type** Number **Description** Total duration of continuation, in milliseconds.
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `ContinuationCalloutSummary`.
ORGANIZATION_ID	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
ORIGIN_REQUEST_ID	**Type** Id **Description** The ID of the request that initiated a callout. **Example** TID:5ILoVKlztX_rDDJcp7
REQUEST_FORM_SIZE	**Type** String **Description** Continuation request form size, in bytes. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
RESPONSE_SIZE	**Type** String

Field	Details
	Description The size of the callout response, in bytes. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.
STATUS_CODE	**Type** String **Description** The HTTP status or internal code returned by the remote endpoint. A status code of 200 indicates that the request was successful. Other status code values indicate the type of problem that was encountered. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values. **Examples** • 2000—The timeout was reached, and the server didn't get a chance to respond. • 2001—There was a connection failure. • 2002—Exceptions occurred. • 2003—The response hasn't arrived (which also means that the Apex asynchronous callout framework hasn't resumed). • 2004—The response size is too large (greater than 1 MB).
SUCCESS	**Type** Boolean **Description** Indicates whether the continuation was successful (1) or not (0).
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
URL	**Type** String **Description** The callout endpoint URL. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.

Field	Details
	Example http://prod.location.amazonaws.com:1000/orders/order/_search
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `0059000000I1SNIA0`.
`VF_CONTROLLER_SIZE`	**Type** String **Description** Continuation Visualforce controller size, in bytes. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.

SEE ALSO:

EventLogFile Supported Event Types

EventLogFile

CORS Violation Record Event Type

CORS Violation Record events capture information about Cross-Origin Resource Sharing (CORS) violations. Cross-origin requests to Lightning apps are blocked unless the request comes from a URL listed in your CORS allowlist.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `CorsViolation`.

`HOST`	**Type** String **Description** The URL of the requested Salesforce resource. If JavaScript code at `https://www.example.com` requests a resource from `https://www.salesforce.com`, the origin is `https://www.example.com` and the host is `https://www.salesforce.com`.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`ORIGIN`	**Type** String **Description** The URL of the site making the cross-origin request to Salesforce. If JavaScript code at `https://www.example.com` requests a resource from `https://www.salesforce.com`, the origin is `https://www.example.com` and the host is `https://www.salesforce.com`.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime

Field	Details
	Description The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.

Dashboard Event Type

Dashboard events contain details about report requests from dashboards. These requests are triggered by dashboard refreshes, subscriptions, and filter changes.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`DASHBOARD_COMPONENT_ID`	**Type** Id **Description** The 15-character ID of the dashboard component.
`DASHBOARD_ID`	**Type** String **Description** The 15-character ID of the dashboard that was run.
`DASHBOARD_ID_DERIVED`	**Type** String

	Description The 18-character case insensitive ID of the dashboard that was run.
DASHBOARD_TYPE	**Type** String **Description** The type of dashboard. **Possible Values** • R: Run as running user • C: Run as context user • S: Run as specific user
EVENT_TYPE	**Type** String **Description** The type of event. The value is always Dashboard.
IS_SCHEDULED	**Type** Boolean **Description** 1 if the dashboard component ran successfully, 0 if it didn't.
IS_SUCCESS	**Type** Boolean **Description** 1 if the dashboard component ran successfully, 0 if it didn't.
LOGIN_KEY	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
ORGANIZATION_ID	**Type** Id **Description** The 15-character ID of the organization. For example: 00D000000000123.

REPORT_ID	**Type** Id **Description** The 15-character ID of the report that was run.
REPORT_ID_DERIVED	**Type** Id **Description** The 18-character case insensitive ID of the report that was run.
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
RUN_TIME	**Type** Number **Description** The amount of time that the request took in milliseconds.
SESSION_KEY	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).

	For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user the dashboard is running as. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user the dashboard is running as. For example: `00590000000I1SNIA0`.
`VIEWING_USER_ID`	**Type** Id **Description** The ID of the user who's viewing the dashboard.

EventLogFile

Document Attachment Downloads Event Type

Document Attachment Downloads events contain details of document and attachment downloads.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
ENTITY_ID	**Type** Id **Description** The 15-character ID of the entity that's associated with the document or attachment.
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `DocumentAttachmentDownoads`.
FILE_TYPE	**Type** String **Description** The type of the file or attachment.
ORGANIZATION_ID	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
TIMESTAMP_DERIVED	**Type** DateTime

	Description The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `0059000000I1SNIA0`.

EventLogFile Supported Event Types

EventLogFile

External Cross-Org Callout Event Type

External Cross-Org Callout events represent external data callouts via the cross-org adapter for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer Guide.

Note: For the cross-org adapter for Salesforce Connect, event monitoring currently doesn't track search callouts.

Fields

Field	Details
`ACTION`	**Type** String **Description** Action performed by the callout. **Possible Values** • query

Field	Details
	• upsert • delete
`ENTITY`	**Type** String **Description** Name of the external object being accessed. **Example** Order
`EVENT_TYPE`	**Type** String **Description** Type of event. Value is always `ExternalCrossOrgCallout`.
`EXECUTE_MS`	**Type** Number **Description** How long it took (in milliseconds) for Salesforce to prepare and execute the query. Available in API version 42.0 and later. **Example** 1
`FETCH_MS`	**Type** Number **Description** How long it took (in milliseconds) to retrieve the query results from the external system. Available in API version 42.0 and later. **Example** 452
`FILTER`	**Type** Text **Description** Field expressions to filter which rows to return. Corresponds to `WHERE` in SOQL queries. **Example** WHERE CustomerId='123456'
`HAVING`	**Type** Text **Description** Reserved for future use.

Field	Details
`LIMIT`	**Type** Number **Description** Maximum number of rows to return for a query. Corresponds to `LIMIT` in SOQL queries. **Example** 200
`MESSAGE`	**Type** String **Description** Error or warning message associated with the failed query callout. Value is always empty for upsert and delete callouts. **Example** System.UnexpectedException: Query is either selecting too many fields or the filter conditions are too complicated
`OFFSET`	**Type** Number **Description** Number of rows to skip when paging through a result set. Corresponds to `OFFSET` in SOQL queries. If a SOQL query doesn't define an `OFFSET`, the value is -1. **Example** 0 (default)
`ORDERBY`	**Type** String **Description** Field or column to use for sorting query results, and whether to sort the results in ascending (default) or descending order. Corresponds to `ORDER BY` in SOQL queries. **Examples** • ORDER BY ShipName • ORDER BY ShipName DESC
`ORGANIZATION_ID`	**Type** Id **Description** 15-character ID of the organization. **Example** 00D000000000123

Field	Details
`REQUEST_ID`	**Type** String **Description** Unique ID of a transaction. A transaction can contain one or more events. All events in a transaction have the same REQUEST_ID. **Example** 4A13-HSKv3CKs-0FKfceaV
`ROWS`	**Type** Number **Description** Total number of records in the result set. Value is always 0 for upsert and delete callouts. **Example** 200
`ROWS_FETCHED`	**Type** Number **Description** Reserved for future use.
`SELECT`	**Type** String **Description** Comma-separated list of fields being queried. Corresponds to `SELECT` in SOQL queries. **Example** SELECT Id,Name,CustomerID,OrderDate
`STATUS`	**Type** Boolean **Description** Whether the query was successful. Value is always empty for upsert and delete callouts. **Possible Values** • 1—Success • 0—Failed
`SUBQUERIES`	**Type** Number **Description** The number of subqueries that the query is split into.

Field	Details
THROUGHPUT	**Type** Number **Description** Reserved for future use.
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
TOTAL_MS	**Type** Number **Description** How long it took (in milliseconds) to prepare and execute the query and to retrieve the query results. **Example** 453
USER_ID	**Type** Id **Description** 15-character ID of the user accessing the external system. **Example** 00530000009M943
USING_MRU	**Type** Boolean

Field	Details
	Description Reserved for future use.

EventLogFile Supported Event Types

EventLogFile

External Custom Apex Callout Event Type

External Custom Apex Callout events represent external data callouts via custom adapters for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer Guide.

Fields

Field	Details
`ACTION`	**Type** String **Description** Action performed by the callout. **Possible Values** • query • upsert • delete
`ENTITY`	**Type** String **Description** Name of the external object being accessed. **Example** Order
`EVENT_TYPE`	**Type** String **Description** Type of event. Value is always `ExternalCustomApexCallout`.
`EXECUTE_MS`	**Type** Number

Field	Details
	Description How long it took (in milliseconds) for Salesforce to prepare and execute the query. Available in API version 42.0 and later. **Example** 102
`FETCH_MS`	**Type** Number **Description** How long it took (in milliseconds) to retrieve the query results from the external system. Available in API version 42.0 and later. **Example** 607
`FILTER`	**Type** Text **Description** Field expressions to filter which rows to return. Corresponds to `WHERE` in SOQL queries. **Example** Filter:[columnName=CustomerID, columnValue=537, subfilters=null, tableName=Order, type=EQUALS]
`LIMIT`	**Type** Number **Description** Maximum number of rows to return for a query. Corresponds to `LIMIT` in SOQL queries. **Example** 200
`MESSAGE`	**Type** String **Description** Error or warning message associated with the failed call. **Example** System.UnexpectedException: Query is either selecting too many fields or the filter conditions are too complicated
`OFFSET`	**Type** Number **Description** Number of rows to skip when paging through a result set. Corresponds to `OFFSET` in SOQL queries.

Field	Details
	Example 0 (default)
`ORDERBY`	**Type** String **Description** Field or column to use for sorting query results, and whether to sort the results in ascending (default) or descending order. Corresponds to `ORDER BY` in SOQL queries. **Examples** (Order:[columnName=OrderDate, direction=ASCENDING, tableName=Order])
`ORGANIZATION_ID`	**Type** Id **Description** 15-character ID of the organization. **Example** 00D000000000123
`REQUEST_ID`	**Type** String **Description** Unique ID of a transaction. A transaction can contain one or more events. All events in a transaction have the same REQUEST_ID. **Example** 4A13-HSKv3CKs-0FKfceaV
`ROWS`	**Type** Number **Description** Total number of records in the result set. The value is always -1 if the custom adapter's `DataSource.Provider` class doesn't declare the `QUERY_TOTAL_SIZE` capability. **Example** 200
`ROWS_FETCHED`	**Type** Number **Description** Number of rows fetched by the callout. Available in API version 42.0 and later. **Example** 200

Field	Details
SELECT	**Type** String **Description** Comma-separated list of fields being queried. Corresponds to SELECT in SOQL queries. **Example** (ColumnSelection:[aggregation=NONE, columnName=Name, tableName=Order], ColumnSelection:[aggregation=NONE, columnName=CustomerID, tableName=Order], ColumnSelection:[aggregation=NONE, columnName=OrderDate, tableName=Order])
STATUS	**Type** Boolean **Description** Whether the query was successful. **Possible Values** • 1—Success • 0—Failed • Empty—Failed with no logged status or message
THROUGHPUT	**Type** Number **Description** Number of records retrieved in one second. **Example** 302.57
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. For example: 20130715233322.670.
SUBQUERIES	**Type** Number **Description** Reserved for future use.
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

Field	Details
	For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`TOTAL_MS`	**Type** Number **Description** How long it took (in milliseconds) to prepare and execute the query and to retrieve the query results. **Example** 709
`USER_ID`	**Type** Id **Description** 15-character ID of the user accessing the external system. **Example** 00530000009M943

External Data Source Callout Event Type

External Data Source Callout events represent external data callouts via the Salesforce Connect adapters for Amazon DynamoDB and Amazon Athena. This event type is available in the EventLogFile object in API version 56.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer Guide.

Fields

Field	Details
`ACTION`	**Type** String **Description** Action performed by the callout. **Possible Values** For Amazon DynamoDB data source: • query • insert • delete • update

Field	Details
	• upsert For Amazon Athena data source: • query
DATA_SOURCE_NAME	**Type** String **Description** Name of the external data source being accessed.
EVENT_TYPE	**Type** String **Description** Type of event. Value is always `ExternalDataSourceCallout`.
EXTERNAL_OBJECT	**Type** String **Description** Name of the external object being accessed.
FETCH_MS	**Type** Number **Description** How long it took (in milliseconds) to retrieve the query results from the external data source. **Example** 127
FILTER	**Type** Text **Description** Field expressions to filter which rows to return. Corresponds to `WHERE` in queries.
LIMIT	**Type** Number **Description** Maximum number of rows to return for a query. Corresponds to Limit parameter in ExecuteStatement operation for an Amazon DynamoDB data source.
MESSAGE	**Type** String **Description** Error or warning message associated with the failed call.

Field	Details
NEXT_LINK	**Type** String **Description** Next link that the callout used to request a subsequent page of rows. A next link is provided in a previous response when the response includes only part of the result set. For requests to AWS data sources, this field stores the `nextToken` parameter that contains a unique hash string.
OFFSET	**Type** Number **Description** Number of rows to skip when paging through a result set. Corresponds to `OFFSET` in queries to Amazon Athena. This field is not supported by queries to Amazon DynamoDB.
OPERATION	**Type** String **Description** The operation that's being performed.
ORDERBY	**Type** String **Description** Field or column to use for sorting query results, and whether to sort the results in ascending (default) or descending order. Corresponds to `ORDER BY` in queries. **Example** • Country ASC • CustomerName DESC
ORGANIZATION_ID	**Type** Id **Description** 15-character ID of the organization. **Example** 00D000000000123
PARENT_CALLOUT	**Type** String **Description** If the callout requested a subsequent page of rows, this field identifies the initial callout whose request resulted in the multi-page result set. **Example** 4EoZtuBzzRIXSk-ysRdf1F-1

Field	Details
PROVIDER_TYPE	**Type** String **Description** Whether the callout was made by Salesforce Connect adapter for Amazon DynamoDB or Amazon Athena. **Possible Values** • amazonDynamodb • amazonAthena
REQUEST_ID	**Type** String **Description** Unique ID of a transaction. A transaction can contain one or more events. All events in a transaction have the same REQUEST_ID. **Example** 4A13-HSKv3CKs-0FKfceaV
RESPONSE_SIZE	**Type** Number **Description** The size of the callout response, in bytes.
ROWS_FETCHED	**Type** Number **Description** Number of records fetched by the callout. The records fetched by a callout can be a subset of a large result set. **Example** 200
SEARCH	**Type** String **Description** Search query string.
SELECT	**Type** String **Description** Comma-separated list of fields being queried. Corresponds to `SELECT` in queries. To query, Salesforce Connect adapter uses PartiQL with Amazon DynamoDB and SQL with Amazon Athena.

Field	Details
	Example CustomerID,OrderDate,OrderID,ShipCity,ShipCountry
STATUS	**Type** Boolean **Description** Whether the query was successful. **Possible Values** • 1—Success • 0—Failed
STATUS_CODE	**Type** Number **Description** The HTTP response status code for the request.
TABLE_NAME	**Type** String **Description** Name of the table being queried in the AWS data source.
THROUGHPUT	**Type** Number **Description** Number of records retrieved in one second. **Example** 3025.67
TIMESTAMP	**Type** DateTime **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.

Field	Details
TOTAL_MS	**Type** Number **Description** How long it took (in milliseconds) to prepare and execute the query and to retrieve the query results.
USER_ID	**Type** Id **Description** 15-character ID of the user accessing the external data source. **Example** 00530000009M943

External OData Callout Event Type

External OData Callout events represent external data callouts via the OData 2.0 and OData 4.0 adapters for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer Guide.

Fields

Field	Details
ACTION	**Type** String **Description** Action performed by the callout. **Possible Values** • query • upsert • delete
BYTES	**Type** Number **Description** Size of the result set in bytes.
ENTITY	**Type** String **Description** Name of the external object being accessed.

Field	Details
	Example Order
`EVENT_TYPE`	**Type** String **Description** Type of event. Value is always `ExternalODataCallout`.
`EXECUTE_MS`	**Type** Number **Description** How long it took (in milliseconds) for Salesforce to prepare and execute the query. Available in API version 42.0 and later. **Example** 21
`EXPAND`	**Type** String **Description** Reserved for future use.
`FETCH_MS`	**Type** Number **Description** How long it took (in milliseconds) to retrieve the query results from the external system. Available in API version 42.0 and later. **Example** 127
`FILTER`	**Type** Text **Description** Field expressions to filter which rows to return. Corresponds to `WHERE` in SOQL queries and `$filter` in OData queries. **Example** CustomerID eq 12345
`LIBRARY`	**Type** String **Description** Reserved for future use.

Field	Details
LIMIT	**Type** Number **Description** Maximum number of rows to return for a query. Corresponds to `LIMIT` in SOQL queries and `$top` in OData queries. **Example** 200
MESSAGE	**Type** String **Description** Error or warning message associated with the failed call. **Example** The OData query result was too large, so the external data didn't load.
NEXT_LINK	**Type** String **Description** OData next link that the callout used to request a subsequent page of rows. A next link is provided in a previous response from the OData producer when the response includes only part of the result set. Available in API version 42.0 and later. However, this field isn't supported for the OData 2.0 adapter on orgs created before Spring '18. **Example** http://services.example.org/Warehouse.svc/Orders?$count=true&$select=CustomerID,OrderID,RequiredDate,ShippedDate&$top=301&$skiptoken=10447
OFFSET	**Type** Number **Description** Number of rows to skip when paging through a result set. Corresponds to `OFFSET` in SOQL queries and `$skip` in OData queries. **Example** 10
ORDERBY	**Type** String **Description** Field or column to use for sorting query results, and whether to sort the results in ascending (default) or descending order. Corresponds to `ORDER BY` in SOQL queries and `$orderby` in OData queries.

Field	Details
	Examples • ShipName • ShipName desc
ORGANIZATION_ID	**Type** Id **Description** 15-character ID of the organization. **Example** 00D000000000123
PARENT_CALLOUT	**Type** String **Description** If the callout requested a subsequent page of rows, this field identifies the initial callout whose request resulted in the multi-page result set. Available in API version 42.0 and later. However, this field isn't supported for the OData 2.0 adapter on orgs created before Spring '18. **Example** 4EoZtuBzzRIXSk-ysRdf1F-1
PROVIDER_TYPE	**Type** String **Description** Whether the OData 2.0 or OData 4.0 adapter made the callout. **Possible Values** • OData—OData 2.0 adapter • OData4—OData 4.0 adapter
RATE_LIMIT_USAGE_PERCENT	**Type** Number **Description** Consumed percentage of the org's limit of OData callouts per hour. **Example** 2.5—2.5% of the hourly callout limit has been consumed
REQUEST_ID	**Type** String **Description** Unique ID of a transaction. A transaction can contain one or more events. All events in a transaction have the same REQUEST_ID.

Field	Details
	Example 4A13-HSKv3CKs-0FKfceaV
`REQUESTS`	**Type** Number **Description** Reserved for future use.
`ROWS`	**Type** Number **Description** Total number of records in the result set. Available in API version 42.0 and later. **Example** 830
`ROWS_FETCHED`	**Type** Number **Description** Number of records fetched by the callout. The records fetched by a callout can be a subset of a large result set. Available in API version 42.0 and later. However, this field isn't supported for the OData 2.0 adapter on orgs created before Spring '18. **Example** 200
`SEARCH`	**Type** String **Description** Search query string. Corresponds to condition expressions in SOSL. **Example** contains(CustomerID,'10248') eq true or contains(ShipName,'10248') eq true
`SELECT`	**Type** String **Description** Comma-separated list of fields being queried. Corresponds to `SELECT` in SOQL queries and `$select` in OData queries. **Example** CustomerID,OrderDate,OrderID,ShipCity,ShipCountry
`STATUS`	**Type** Boolean

Field	Details
	Description Whether the query was successful. **Possible Values** • 1—Success • 0—Failed
THROUGHPUT	**Type** Number **Description** Number of records retrieved in one second. Available in API version 42.0 and later. However, this field isn't supported for the OData 2.0 adapter on orgs created before Spring '18. **Example** 3025.67
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
TOTAL_MS	**Type** Number **Description** How long it took (in milliseconds) to prepare and execute the query and to retrieve the query results.
USER_ID	**Type** Id **Description** 15-character ID of the user accessing the external system.

Field	Details
	Example 00530000009M943

EventLogFile Supported Event Types

EventLogFile

Flow Execution Event Type

Flow Execution events contain information about flows that were executed including details such as total execution time, number of interviews, and number of errors.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `FlowExecution`.
`TIMESTAMP`	**Type** String **Description** The time that the flow was executed in GMT. For example: `20210606032436.520`.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `TID:000000000000c00fff`.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.

Field	Details
USER_ID	**Type** Id **Description** The 15-character ID of the user who executed the flow through the UI or the API. For example: 00530000009M943
PROCESS_TYPE	**Type** String **Description** The type of the flow. Valid values are: • ActionCadenceAutolaunchedFlow—A flow executed when a user completes a cadence step. This value is available in API version 56.0 and later. • ActionCadenceStepFlow—A screen flow used as a cadence step. This value is available in API version 56.0 and later. • Appointments—A flow for Lightning Scheduler. This value is available in API version 44.0 and later. • AutoLaunchedFlow—A flow that doesn't require user interaction. • CheckoutFlow—A flow used in Lightning B2B Commerce to create a checkout in a store. This value is available in API version 48.0 and later. • ContactRequestFlow—A flow that lets customers request that customer support gets back to them. This flow is used to create contact request records. This value is available in API version 45.0 and later. • CustomerLifecycle—A Salesforce Surveys flow that lets you associate survey questions with different stages in customer lifecycles. This value is available in API version 49.0 and later and only when the Customer Lifecycle Designer license is enabled. • CustomEvent—A process that is invoked when it receives a platform event message. In the UI, it's an event process. This value is available in API version 41.0 and later. • EvaluationFlow—A flow for evaluating custom entry and exit conditions in an orchestration. Uses the isOrchestrationConditionMet output variable and discards values from any other output variables. This value is available in API version 54.0 and later. • FieldServiceMobile—A flow for the Field Service mobile app. This value is available in API version 39.0 and later. • FieldServiceWeb—A flow for embedded Appointment Booking. Its UI label is Field Service Embedded Flow. This value is available in API version 41.0 and later. • Flow—A flow that requires user interaction because it contains one or more screens or local actions, choices, or dynamic choices. In the UI and Salesforce Help, it's a screen flow. Screen flows can be launched from the UI, such as with a flow action, Lightning page, or web tab. • FSCLending—A flow for Financial Services Cloud Mortgage. This value is available in API version 46.0 and later.

Field	Details
	• `IndicatorResultFlow`—A flow for Outcome Management that calculates and creates indicator results for a selected indicator performance period. This value is available with the Outcome Management license in API version 60.0 and later. • `IndividualObjectLinkingFlow`—A flow that associates individuals with interactions such as voice calls, messaging sessions, or case-related emails. This value is available in API version 58.0 and later. • `InvocableProcess`—A process that can be invoked by another process or the Invocable Actions resource in REST API. This value is available in API version 38.0 and later. • `Journey`—An audience-driven flow for Marketing Cloud. This value is available in API version 57.0 and later. • `LoginFlow`—A flow for login. This value is available in API version 51.0 and later. • `LoyaltyManagementFlow`—A flow for the Loyalty Management app and can be invoked by loyalty program processes. This value is available in API version 54.0 and later. • `Orchestrator`—An orchestration that organizes flows into groups of steps contained in a series of stages. This value is available in API version 53.0 and later. • `RecommendationStrategy`—Build recommendations for your users. A recommendation launches its assigned flow. This value is available in API version 54.0 and later. See Flow Builder Strategies. • `RoutingFlow`—A flow for Salesforce Omni-Channel routing and other business logic. This value is available in API version 52.0 and later. • `Survey`—A flow for Salesforce Surveys. From the UI, this type of flow is created in Survey Builder. This value is available in API version 42.0 and later. • `SurveyEnrich`—A Salesforce Surveys flow that uses the Survey Data Mapper. From the UI, this type of flow is created in the Survey Builder and requires an associated survey flow type. This value is available in API version 49.0 or later and only when the Customer Lifecycle Designer license is enabled. • `Workflow`—A process that is invoked when a record is created or edited. In the UI and Salesforce Help, it's a record change process. These values are reserved for future use. • `ActionCadenceFlow` • `ActionPlan` • `AppProcess` • `CartAsyncFlow` • `DigitalForm` • `JourneyBuilderIntegration` • `LoginFlow` • `ManagedContentFlow` • `OrchestrationFlow` • `SalesEntryExperienceFlow` • `TransactionSecurityFlow`

Field	Details
	• `UserProvisioningFlow`
`FLOW_VERSION_ID`	**Type** Id **Description** The ID of the flow version that was executed.
`FLOW_LOAD_TIME`	**Type** Number **Description** The time in milliseconds to load the flow's metadata.
`TOTAL_EXECUTION_TIME`	**Type** Number **Description** The total time in milliseconds to start and finish all flow interviews.
`NUMBER_OF_INTERVIEWS`	**Type** Number **Description** The number of flow interviews that started after the flow version was executed.
`NUMBER_OF_ERRORS`	**Type** Number **Description** The number of errors for all flow interviews after the flow version was executed.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The time that the flow was executed in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.

Group Membership Event Type

Group Membership events capture details about changes to public group and queue membership, such as when members are added to or removed from the public group or queue.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
CLIENT_IP	**Type** String **Description** The IP address of the client that's using Salesforce services. **Example** `96.43.144.26`
CPU_TIME	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity that took place in the app server layer.
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `GroupMembership`.
GROUP_ID	**Type** Id **Description** ID of the group whose membership changed. **Example** `00GXXXXXXXXXXXX`
GROUP_TYPE	**Type** String **Description** The type of group. Valid values are: • `R`—Public group • `Q`—Queue **Example** `R`
LOGIN_KEY	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

Field	Details
	Example GeJCsym5eyvtEK2I
MEMBER_ID	**Type** Id **Description** The ID of the member added to or removed from the group. Public groups can contain individual users, other groups, or users in a specified role or territory. Queues can contain individual users, roles, public groups, territories, connections, or partner users. **Example** 005XXXXXXXXXXXX or 00GXXXXXXXXXXXX
OPERATION	**Type** String **Description** The operation that occurred, such as a member being added to or removed from a group. Valid values are: • AddedGroupMember • DeletedGroupMember **Example** DeletedGroupMember
ORGANIZATION_ID	**Type** Id **Description** The 15-character ID of the organization. **Example** 00DXXXXXXXXXXXX
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. **Example** 3nWgxWbDKWWDIk0FKfF5DV
RUN_TIME	**Type** Number **Description** The amount of time that the request took in milliseconds.

Field	Details
	Example 115
SESSION_KEY	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. **Example** `d7DEq/ANa7nNZZVD`
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. **Example** `20130715233322.670`
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). **Example** `2015-07-27T11:32:59.555Z`
URI	**Type** String **Description** The URI of the page that's receiving the request. **Example** `/home/home.jsp`
URI_ID_DERIVED	**Type** Id **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request. **Example** `005XXXXXXXXXYAY`
USER_ID	**Type** Id

Field	Details
	Description The 15-character ID of the user who's using Salesforce services through the UI or the API. **Example** `005XXXXXXXXXXX`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. **Example** `005XXXXXXXXXXXIA0`

SEE ALSO:

EventLogFile Supported Event Types

EventLogFile

Hostname Redirects Event Type

Hostname Redirect events contain details about blocked and successful redirections for your previous My Domain hostnames. The Hostname Redirects event type is available in the EventLogFile object in API version 56.0 and later.

Note: The HostnameRedirects event type is disabled by default. To enable this event type, use the `logRedirections` field on the MyDomainSettings Metadata API type or enable the **Log Redirections** setting in the Routing section of the My Domain Setup page.

This event is free for all customers with a 24-hour data retention period. The hostname redirections event is available in the API but not in the Event Monitoring Analytics app. You can also download the latest hostname redirections event log file through a button on the My Domain page.

For details about event monitoring, see the Trailhead Event Monitoring module or the REST API Developer's Guide.

Fields

Field	Details
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `HostnameRedirects`.
`TIMESTAMP`	**Type** String

Field	Details
	Description The access time of Salesforce services in GMT. **Example** `20220715233322.670`
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. **Example** `0000000062_0000x8Lz-`
`ORGANIZATION_ID`	**Type** ID **Description** The 15-character ID of the org. **Example** `00D000000000345`
`USER_ID`	**Type** ID **Description** This field is unused in the HostnameRedirects event type. The value is always null.
`RUN_TIME`	**Type** Number **Description** This field is unused in the HostnameRedirects event type. The value is always `0`.
`CPU_TIME`	**Type** Number **Description** This field is unused in the HostnameRedirects event type. The value is always null.
`URI`	**Type** String **Description** This field is unused in the HostnameRedirects event type. The value is always null.
`SESSION_KEY`	**Type** String

Field	Details
	Description This field is unused in the HostnameRedirects event type. The value is always null.
`LOGIN_KEY`	**Type** String **Description** This field is unused in the HostnameRedirects event type. The value is always null.
`MESSAGE`	**Type** String **Description** This field is unused in the HostnameRedirects event type. The value is always null.
`DOMAIN`	**Type** Url **Properties** Filter, Sort **Description** This field is unused in the HostnameRedirects event type. The value is always null.
`SOURCE_HOSTNAME`	**Type** String **Description** The hostname of the URL from which the redirection originated. **Example** If `https://`***`oldMyDomainName`***`.my.salesforce.com` is redirected to `https://`***`newMyDomainName`***`.my.salesforce.com`, the value of this field is ***`oldMyDomainName`***`.my.salesforce.com`
`TARGET_HOSTNAME`	**Type** String **Description** The hostname of the URL to which the user or API was redirected. **Example** If `https://`***`oldMyDomainName`***`.my.salesforce.com` is redirected to `https://`***`newMyDomainName`***`.my.salesforce.com`, the value of this field is ***`newMyDomainName`***`.my.salesforce.com`
`PATH`	**Type** String

Field	Details
	Description The path of the originating URL request. This path is also used in the redirection target URL. The path includes query-string parameters up to the first hash (#), if present. Any hash fragments aren't included. A hash fragment is the part of the URL that includes a hash (#) and the text that follows it. **Example** If user is redirected from `https://MyOldCompany.my.site.com/shop?q=sneakers` to `https://MyNewCompany.my.site.com/shop?q=sneakers`, the value of this field is `/shop?q=sneakers`.
`REDIRECT_REASON`	**Type** String **Description** The reason for the hostname redirect event. **Possible Values** • `Redirected due to a hostname mismatch.`—The referring hostname was redirected to the current My Domain equivalent. • `Redirection suppressed to prevent Lightning Out integration failure.`—The `*.force.com` site URL can't be redirected for use with Lightning Out. To prevent issues, the original URL was processed as-is. To avoid issues after `*.force.com` site hostname redirections are stopped, update hard-coded references to the hostname in your Lightning Out integrations. For a Lightning Out code example that uses a site hostname, see Share Lightning Out Apps with Unauthenticated Users in the Salesforce Lightning Component Library. For more information on redirections that stop in a future release, see Prepare for the End of Redirections for Non-Enhanced Domains • `Redirection was blocked because redirections for this hostname are disabled.`—For legacy `*.force.com` site hostnames, redirections are blocked when the **Redirect** ***`previousSiteHostnames`*** **to your current My Domain site URLs** Routing option is deselected on the My Domain Setup page. For other previous My Domain hostnames, only your last set of My Domain login hostnames is redirected. Those redirections are blocked when the My Domain Routing option **Redirect previous My Domain URLs to your current My Domain** is deselected or when you remove your previous My Domain.
`IS_BLOCKED_REDIRECTION`	**Type** Boolean **Description** Indicates whether the redirection was blocked. **Possible Values** • `1`—The redirection was blocked and returned an HTTP 404 response. • `0`—The redirection proceeded and returned an HTTP 301 or 307 response.

Field	Details
REFERRER	**Type** String **Description** The absolute or partial address from which the request to the SOURCE_HOSTNAME came. The Referrer-Policy HTTP Header of the request determines how much of the URL is shared. For example, if a user clicked a link to the SOURCE_HOSTNAME from a web page, and that web page is on a different domain: • if the Referrer-Policy HTTP Header is no-referrer-when-downgrade, REFERRER includes the origin, path, and query-string parameters up to the first hash (#), if present. • if the Referrer-Policy HTTP Header is strict-origin-when-cross-origin, REFERRER includes the origin only. • if the Referrer-Policy HTTP Header is same-origin, REFERRER is null. **Examples** • https://www.example.com • https://www.example.com/page/page/index.htm • https://www.example.com/page/index.htm?q="Salesforce"
ORIGIN	**Type** String **Description** The origin (protocol, hostname, and port) that caused the request to the SOURCE_HOSTNAME. For example, if a website on a different domain makes an XMLHttpRequest (XHR) to SOURCE_HOSTNAME, ORIGIN contains the base URL of that website. The port isn't included in the origin information with all requests. ORIGIN can be null in a number of situations, including but not limited to cross-origin requests and origins with a restrictive Referrer-Policy header. For example, if the request to the SOURCE_HOSTNAME is sent from a site external to Salesforce with a RequestMode of no-cors, ORIGIN is null. **Examples** • https://www.example.com • https://www.example.com:443
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). The time zone is always GMT.

Field	Details
	Example `2022-07-27T11:32:59.555Z.`
`USER_ID_DERIVED`	**Type** String **Description** This field is unused in the HostnameRedirects event type. The value is always null.
`CLIENT_IP`	**Type** String **Description** The IP address of the client that made this request. **Possible Values/Example** `111.43.144.26`
`URI_ID_DERIVED`	**Type** String **Description** This field is unused in the HostnameRedirects event type. The value is always null.

Usage

Use the information in the Hostname Redirects event log to determine the hostnames to update in your org after you deploy a change to your My Domain name. You can also use the log to develop communications to your customers and users about the changed hostnames. For example, you can encourage users to use the new hostnames and update their bookmarks.

To access the log, use the HostnameRedirects event type from the EventLogFile object. Alternatively, you can download the current hostname redirections event log by clicking **Download Redirections Log** on the My Domain Setup page.

Each row in the event log represents a redirection for a specific requested URL. Subsequent requests to the same URL within the hour following that request, however, aren't logged. If your last My Domain change included enabling enhanced domains, the log includes redirections for the old hostnames listed on My Domain URL Format Changes When You Enable Enhanced Domains in Salesforce Help. The log doesn't include redirections for generic instanced hostnames, such as `na87.salesforce.com`.

Note: To keep the size of the log file manageable, the log includes one entry for each redirected hostname and path combination within an hour. As a result, the log includes all redirected hostname and path combinations, but only includes the first redirection within each hour.

For example, if `https://MyCompany.my.site.com/shop` is redirected at 02:01 PM and `https://MyCompany.my.site.com/shop?q=sneakers` is redirected for another user at 02:02 PM, only the redirection that occurred at 02:01 PM is captured for `MyCompany.my.site.com/shop` for that hour. But if `https://MyCompany.my.site.com/help` is redirected at 2:05 PM, that redirection is captured on a new line because the `MyCompany.my.site.com/help` hostname and path combination differs from `MyCompany.my.site.com/shop`.

Similarly, if the redirection of `https://MyCompany.my.site.com/contactUs` is blocked at 07:02 AM and `https://MyCompany.my.site.com/contactUs` is redirected at 07:11 AM, only the blocked redirection for `MyCompany.my.site.com/contactUs` is captured in the log for that hour.

Only one hostname redirection log file is available at a time. When the daily incremental event log file is generated during the daily background process, the new file replaces the existing file. When you download the redirections log from the My Domain Setup page, you get the latest daily log file in CSV format.

If the log file doesn't exist, either the log generation process hasn't run yet or there's no redirection data to report for that 24-hour window. The log file is generated only when at least one redirection occurred for the day.

To collect hostname redirection logs for multiple days, schedule a daily query of the Hostname Redirects event type via REST API. For example, you can configure a cron job in Unix or a scheduled task in Windows to run the query.

Salesforce CLI Example

To use Salesforce CLI to query the Hostname redirects log, use the `sf data query` command to query the HostnameRedirects EventType.

First, download and install Salesforce CLI.

Example

This Unix example authorizes Salesforce CLI to access your org and sets `orgAlias` to your org login URL. This method prompts you to log in to your org via a browser to grant Salesforce CLI access. To query event log files, log in as a user with the View Event Log Files and API Enabled permissions.

```
sf org web login --alias orgAlias --instance-url https://MyDomainName.my.salesforce.com
```

Example response

After you authenticate with a user via a browser, this response confirms that Salesforce CLI is authorized for use in your org.

```
Successfully authorized admin@mycompany.com with org ID 00D00000000000aIW
```

Then export the HostnameRedirects log to a CSV file.

Example

This example exports the HostnameRedirects EventType to a CSV file in your org, where `orgAlias` is your org's alias within Salesforce CLI.

```
ORGALIAS=orgAlias; QUERYRESULT=$(sf data query --target-org "$ORGALIAS" --query "SELECT
 LogDate, LogFile FROM EventLogFile WHERE EventType='HostnameRedirects' ORDER BY
CreatedDate DESC LIMIT 1" --json); QUERYSTATUS=$(echo "$QUERYRESULT"|grep \"status\"|cut
 -d : -f 2|cut -d , -f 1); if [[ "$QUERYSTATUS" -eq 0 ]]; then LOGDATE=$(echo
"$QUERYRESULT"|grep LogDate|cut -d \" -f 4|cut -d T -f 1); if [[ "$LOGDATE" == "" ]];
then echo "No daily event log file exists for hostname redirects."; else
DOWNLOADPATH=$(echo "$QUERYRESULT"|grep \"url\"|cut -d \" -f 4); ORGDISPLAY=$(sf org
display --target-org "$ORGALIAS" --json 2> /dev/null); SESSION=$(echo "$ORGDISPLAY"|grep
 accessToken|cut -d \" -f 4); ORGURL=$(echo "$ORGDISPLAY"|grep instanceUrl|cut -d \" -f
 4); curl -H "Authorization: Bearer ${SESSION}" --silent ${ORGURL}${DOWNLOADPATH}/LogFile
 > HostnameRedirectEvent-${LOGDATE}.csv; fi; else echo "$QUERYRESULT"; fi
```

For more information on Salesforce CLI, see the Salesforce CLI Setup Guide, Salesforce CLI Command Reference, and the Salesforce DX Developer Guide.

REST API Example

To use REST API to query the Hostname Redirects event log, use the Query resource to retrieve field values from a record. Specify the fields you want to retrieve in the fields parameter and use the GET method of the resource.

Example

This example retrieves the HostnameRedirects event log based on `Field` and `EventType` via a GET request. Replace `token` with your access token. In a production org, replace `MyDomainName` with your My Domain name. In a sandbox, replace `MyDomainName.my.salesforce.com` with your org's My Domain login hostname.

```
curl https://MyDomainName.my.salesforce.com/services/data/v60.0/query?q=SELECT+
LogDate%2C+LogFile+FROM+EventLogFile+WHERE+EventType%3D%27HostnameRedirects%27
+ORDER+BY+CreatedDate+DESC+LIMIT+1 -H "Authorization: Bearer token"
```

Example raw response

```
{"totalSize":1,"done":true,"records":[{"attributes":
{"type":"EventLogFile","url":"/services/data/v56.0/sobjects/EventLogFile/
0AT00000003KxUSWA0"},"LogDate":"2022-08-03T00:00:00.000+0000","LogFile":"
/services/data/v56.0/sobjects/EventLogFile/0AT00000003KxUSWA0/LogFile"}]}
```

The log file can be downloaded by using curl with the same Authorization header while setting the URL path to the `LogFile` value from the output.

For more information on accessing event log files via REST API, see Using Event Monitoring in the REST API Developer Guide.

EventLogFile Supported Event Types

EventLogFile

Insecure External Assets Event Type

Insecure External Assets events contain information about external assets. External assets include images or videos accessed by users over an insecure HTTP protocol. The event lists all your Salesforce pages that contain assets hosted insecurely on third-party sites that users loaded with a Chrome, Firefox, Microsoft Edge, or Safari browser. The `INSECURE_URI` field contains the URI being used to load the asset insecurely. The Insecure External Assets event type is available in the EventLogFile object in API version 42.0 and later.

Assets over HTTP can be manipulated through man-in-the-middle and other types of attacks. These attacks can trick users into sending their Salesforce credentials to malicious sites. Always use HTTPS in your custom code and templates for any asset you're loading from external sites.

For details about event monitoring, see the Trailhead Event Monitoring module or the REST API Developer's Guide.

Fields

Field	Details
`ASSET_TYPE`	**Type** String **Description** Type of insecure asset. **Possible Values** • `Base URI` • `Connect` • `Font` • `Frame Ancestor`: External page that embeds the Salesforce page in an iframe • `Frame` • `Image` • `Media` • `Object` • `Other` • `Plugin Types` • `Script` • `Style`
`CLIENT_IP`	**Type** String

Field	Details
	Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`DOCUMENT_URI`	**Type** String **Description** URL of the page that contains the insecure asset, excluding the query parameter. **Example** https://company.my.salesforce.com/00XXXXXXXXX
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `InsecureExternalAssets`.
`INSECURE_URI`	**Type** String **Description** Insecure external asset URL being used to load an asset insecurely. For example, loading Javascript libraries using **`http:`**`//ajax.googleapis.com/` in your custom code will log an Insecure External Asset Event with the `INSECURE_URI` field set to this URL. Find this reference in your code and update it to use **`https:`**`//ajax.googleapis.com/` instead. **Example** http://pbs.twimg.com/profile_images/5699091412070816/Z4Stwts_normal.jpeg
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.

Field	Details
ORGANIZATION_ID	**Type** String **Description** The 15-character ID of the org. **Example** 00D000000000123
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
RUN_TIME	**Type** Number **Description** The amount of time that the request took in milliseconds.
SESSION_KEY	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
TYPE	**Type** String

Field	Details
	Description Type of Salesforce page. **Possible Values** • `Appserver`: Page without My Domain subdomain (for example, https://na44.salesforce.com) • `Communities`: Customer Experience Cloud site • `Email`: Email preview • `Login`: Login page (for example, https://login.salesforce.com) • `Mydomain`: Page on My Domain subdomain (for example, https://mycompany.my.salesforce.com) • `Sites`: Customer site • `Static`: Static content (for example, https://sfdcstatic.com) • `Unknown`: other type of page
`UNIQUE_ID`	**Type** String **Description** The 32-character ID of the event log file in which the insecure external asset event data is found. **Example** 44e128a5-ac7a-4c9a-be4c-224b6bf81b20
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id

Field	Details
	Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.

Usage

`UNIQUE_ID` is used by Salesforce Customer Support to troubleshoot any issues that occur.

EventLogFile Supported Event Types

EventLogFile

Insufficient Access Event Type

Insufficient Access events contain details about errors relating to insufficient record access, so that you can troubleshoot and resolve access issues for your users.

Note: Insufficient access errors resulting from bulk operations involving two or more records aren't logged.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

For more information on interpreting Insufficient Access events, see this knowledge article.

Fields

Field	Details
`ACCESS_ERROR`	**Type** String **Description** The type of insufficient access error that the user received. Valid values are: • `DATA_NOT_AVAILABLE`—The record is no longer accessible. For example, a record was deleted and moved to the Recycle Bin. • `INVALID_TYPE`—The record type doesn't exist. • `NO_ACCESS`—The user doesn't have the required access level to complete the attempted action on the record. **Example** `NO_ACCESS`
`ACTUAL_LOGGED_IN_USER_ID`	**Type** Id

Field	Details
	Description The 15-character ID of the user who initiated the action that caused the insufficient access error. For example, a user attempts to transfer ownership of a record to a teammate, but the operation fails because the teammate doesn't have the required access. In this scenario, the `ACTUAL_LOGGED_IN_USER_ID` is the user who attempted to transfer access, and the `USER_ID` is their teammate. **Example** `005XXXXXXXXXXXX`
`ENTITY_TYPE`	**Type** String **Description** The object for which the user received the insufficient access error. Access errors for the account, case, contact, and opportunity objects are supported. **Example** Account
`ERROR_DESCRIPTION`	**Type** String **Description** Description of the insufficient access error that the user received. **Example** User 005XXXXXXXXXXXX doesn't have full access for the record 001XXXXXXXXXXXX.
`ERROR_TIMESTAMP`	**Type** String **Description** The time in GMT that the insufficient access error occurred. **Example** `20130715233322.670`
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `InsufficientAccess`.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. **Example** `00DXXXXXXXXXXXX`

Field	Details
RECORD_ID	**Type** String **Description** The ID of the record that the user doesn't have access to. **Example** 001XXXXXXXXXXX
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. **Example** 3nWgxWbDKWWDIk0FKfF5DV
REQUESTED_ACCESS_LEVEL	**Type** String **Description** The access level required by the user's attempted action on the record. Valid values are: • DELETE • FULL • READ • TRANSFER • WRITE **Example** FULL
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. **Example** 20130715233322.670
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). **Example** 2015-07-27T11:32:59.555Z

Field	Details
`USER_ID`	**Type** Id **Description** The 15-character ID of the user for whom the insufficient access error occurred, either when the user couldn't access a record, the user couldn't complete an operation, or the user was the intended recipient of a record transfer that failed because the user didn't have the required access. **Example** `005XXXXXXXXXXXX`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case-insensitive ID of the user for whom the insufficient access error occurred, either when the user couldn't access a record or the user was the intended recipient of a record transfer that wasn't completed. **Example** `005XXXXXXXXXXXXIA0`

EventLogFile Supported Event Types

EventLogFile

Knowledge Article: Interpret Insufficient Access Event Logs

Knowledge Article View Event Type

Knowledge Article View events contain user activity with your knowledge base.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`ARTICLE_ID`	**Type** Id **Description** The 15-character ID of the article. For example: `00Dxx0000001gEb`.
`ARTICLE_STATUS`	**Type** Character

Field	Details
	Description Possible values are: • D—Draft • O—Online • A—Archived
ARTICLE_VERSION	**Type** Number **Description** Article version number. For example: 2.
ARTICLE_VERSION_ID	**Type** Id **Description** The 15-character ID of the article version. For example: ka0R00000005rt6.
CONTEXT	**Type** String **Description** Context of the request. **Description** Possible values are: • Apex • API • empty string
ENTITY	**Type** String **Description** Entity requested. For example: Knowledge__kav.
EVENT_TYPE	**Type** String **Description** The type of event. The value is always KnowledgeArticleView.
LANGUAGE	**Type** String

	Description iso-code of the language. For example: `en_US`/ **Example**
`LARGE_LANGUAGE_MODEL`	**Type** String **Description** The name of the large language model (LLM) that generated the knowledge article version.
`LAST_VERSION`	**Type** Boolean **Description** `True` if it is the last version. Possible values are: • `True` • `False`
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`SESSION_ID`	**Type** String **Description** Session ID of the request. For example: `gV7pCSW2vGaaJNFi3GSpuPIjNbKVbSxRvx34LJsIvuc=`. **Example**

TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. The timezone is GMT.
USER_ID	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
USER_ID_DERIVED	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `0059000000I1SNIA0`.
USER_TYPE	**Type** Character **Description** User type of the request. Possible values are: • `A`—App • `C`—Customer Portal • `P`—Partner Portal • `G`—guest •

Lightning Error Event Type

Lightning Error events represent errors that occurred during user interactions with Lightning Experience and the Salesforce mobile app. This event type is available in the EventLogFile object in API version 39.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
APP_NAME	**Type** String **Description** The name of the application that the user accessed.
BROWSER_NAME	**Type** String **Description** The name of the browser that the user accessed. **Example** Chrome, IE, Safari, Gecko
BROWSER_VERSION	**Type** String **Description** The version of the browser that the user accessed in `major.minor version` format. Some browsers don't provide a minor version.
CLIENT_GEO	**Type** String **Description** The geolocation of the client in the form of <Country>/<State|Province>. **Example** United States/California
CLIENT_ID	**Type** String **Description** The API client ID.
CLIENT_IP	**Type** String

Field	Details
	Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`COMPONENT_NAME`	**Type** String **Description** The internal name of the standard component that generated the error. The Salesforce developer assigned the name when the standard component was created. **Examples** • SaveEdit • Lead.CCPM_sendSMS • ChangeOwnerOne
`CONNECTION_TYPE`	**Type** String **Description** The type of connection. **Possible Values** • `CDMA1x` • `CDMA` • `EDGE` • `EVDO0` • `EVDOA` • `EVDOB` • `GPRS` • `HRPD` • `HSDPA` • `HSUPA` • `LTE` • `WIFI`
`DEVICE_ID`	**Type** String **Description** The unique identifier used to identify a device when tracking events. `DEVICE_ID` is a generated value that's created when the mobile app is initially run after installation.

Field	Details
DEVICE_MODEL	**Type** String **Description** The name of the device model. **Example** iPad, iPhone
DEVICE_PLATFORM	**Type** String **Description** The type of application experience in `name:experience:form` format. **Possible Values** Name • `APP_BUILDER` • `CUSTOM` • `S1` • `SFX` Experience • `BROWSER` • `HYBRID` Form • `DESKTOP` • `PHONE` • `TABLET`
DEVICE_SESSION_ID	**Type** Id **Description** The unique identifier of the user's session based on page load time. If the user reloads a page, it starts a new session. **Example** 321a1ddfaf924803a075f1e69fc87bc06f53ccd0
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `LightningError`.
LOGIN_KEY	**Type** String

Field	Details
	Description The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring. **Example** GeJCsym5eyvtEK2I
`MESSAGE`	**Type** String **Description** The error message generated.
`ORGANIZATION_ID`	**Type** String **Description** The 15-character ID of the org. **Example** 00D000000000123
`OS_NAME`	**Type** String **Description** The operating system name, derived from `USER_AGENT`. **Example** Android, iOS, OSX, Windows
`OS_VERSION`	**Type** String **Description** The operating system version, derived from `USER_AGENT`.
`PAGE_APP_NAME`	**Type** String **Description** The internal name of the application that the user accessed from the App Launcher. **Example** LightningSales
`PAGE_CONTEXT`	**Type** String **Description** Context of the page where the event occurred.

Field	Details
	Example clients:cardsContainer
PAGE_ENTITY_ID	**Type** Id **Description** The unique entity identifier of the event. **Example** 0013000000I3zJAAAZ
PAGE_ENTITY_TYPE	**Type** String **Description** The entity type of the event. **Example** Task, Account
PAGE_START_TIME	**Type** Number **Description** The time when the page was initially loaded, measured in milliseconds. **Example** 1471564788642
PAGE_URL	**Type** String **Description** Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with PAGE_URL. **Example** /sObject/0064100000JXITSAA5/view
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. **Example** 3nWgxWbDKWWDIk0FKfF5DV

Field	Details
SDK_APP_TYPE	**Type** String **Description** The mobile SDK application type. **Possible Values** • HYBRID • HYBRIDLOCAL • HYBRIDREMOTE • NATIVE • REACTNATIVE
SDK_APP_VERSION	**Type** String **Description** The mobile SDK application version number. **Example** 5.0
SDK_VERSION	**Type** String **Description** The mobile SDK version number. **Example** 2.1.0
SESSION_KEY	**Type** String **Description** The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When a user logs out and logs in again, a new session is started. **Example** cdd09305cb6babf34059e27f70e47f1b11dec868
STACK_TRACE	**Type** String **Description** The stack trace contains the location in the code where the error occurred along with the calling frames that led to the error.
TIMESTAMP	**Type** String

Field	Details
	Description The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`UI_EVENT_ID`	**Type** String **Description** ID of the Lightning event type. **Possible Values** • `ltng:error` • `ltng:interaction` • `ltng:pageView` • `ltng:performance`
`UI_EVENT_SEQUENCE_NUM`	**Type** Number **Description** An auto-incremented sequence number of the current event since the session started.
`UI_EVENT_SOURCE`	**Type** String **Description** The source of the error event. **Examples** Here are some examples of error flags returned in this field. • AuraError • Error • InvalidStateError • RangeError • ReferenceError • SecurityError • SyntaxError • TypeError

Field	Details
	• unknown
UI_EVENT_TIMESTAMP	**Type** Number **Description** The time at which this event occurred, measured in milliseconds. **Example** 1479769912796
UI_EVENT_TYPE	**Type** String **Description** The type of interaction. **Examples** • crud — Created, read, updated, or deleted the record. • reads — Read multiple records.
USER_AGENT	**Type** String **Description** The numeric code for the type of client used to make the request (for example, browser, application, or API) as a string.
USER_ID	**Type** String **Description** The 15-character ID of the user accessing Salesforce services through the UI or API. **Example** 00530000009M943
USER_ID_DERIVED	**Type** Id **Description** The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API. **Example** 00590000000I1SNIA0
USER_TYPE	**Type** String **Description** The category of user license of the user accessing Salesforce services through the UI or API.

Field	Details
	Possible Values • `A`: Automated Process • `b`: High Volume Portal • `C`: Customer Portal User • `D`: External Who • `F`: Self Service • `G`: Guest • `L`: Package License Manager • `N`: Salesforce to Salesforce • `n`: CSN Only • `O`: Power Custom • `o`: Custom • `P`: Partner • `p`: Customer Portal Manager • `S`: Standard • `X`: Salesforce Administrator

EventLogFile Supported Event Types

EventLogFile

Lightning Interaction Event Type

Lightning Interaction events track user actions in Lightning Experience and the Salesforce mobile app, such as the user clicking, tapping, or scrolling on a page. This event type is available in the EventLogFile object in API version 39.0 and later.

Warning: The Lightning Interaction Event type is a best effort logging of user interactions but is not intended to meet privacy and security audit requirements. Not all interactions or CRUD operations are tracked and data loss may occur.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`APP_NAME`	**Type** String **Description** The name of the application that the user accessed.

Field	Details
BROWSER_NAME	**Type** String **Description** The name of the browser that the user accessed. **Example** Chrome, IE, Safari, Gecko
BROWSER_VERSION	**Type** String **Description** The version of the browser that the user accessed in `major.minor version` format. Some browsers don't provide a minor version.
CLIENT_GEO	**Type** String **Description** The geolocation of the client in the form of <Country>/<State|Province>. **Example** United States/California
CLIENT_ID	**Type** String **Description** The API client ID.
CLIENT_IP	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
COMPONENT_NAME	**Type** String **Description** The internal name of the standard component that the user interacted with. The Salesforce developer assigned the name when the standard component was created. **Examples** • SaveEdit • Lead.CCPM_sendSMS • ChangeOwnerOne

Field	Details
CONNECTION_TYPE	**Type** String **Description** The type of connection. **Possible Values** • CDMA1x • CDMA • EDGE • EVDO0 • EVDOA • EVDOB • GPRS • HRPD • HSDPA • HSUPA • LTE • WIFI
DEVICE_ID	**Type** String **Description** The unique identifier used to identify a device when tracking events. DEVICE_ID is a generated value that's created when the mobile app is initially run after installation.
DEVICE_MODEL	**Type** String **Description** The name of the device model. **Example** iPad, iPhone
DEVICE_PLATFORM	**Type** String **Description** The type of application experience in name:experience:form format. **Possible Values** Name • APP_BUILDER • CUSTOM • S1

Field	Details
	• `SFX` Experience • `BROWSER` • `HYBRID` Form • `DESKTOP` • `PHONE` • `TABLET`
DEVICE_SESSION_ID	**Type** Id **Description** The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started. **Example** 321a1ddfaf924803a075f1e69fc87bc06f53ccd0
DURATION	**Type** Number **Description** The duration in milliseconds since the page start time. Warning: This field is being deprecated.
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `LightningInteraction`.
GRANDPARENT_UI_ELEMENT	**Type** String **Description** Grandparent scope of the page element where the event occurred.
LOGIN_KEY	**Type** String **Description** The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring. **Example** GeJCsym5eyvtEK2I

Field	Details
ORGANIZATION_ID	**Type** String **Description** The 15-character ID of the org. **Example** 00D000000000123
OS_NAME	**Type** String **Description** The operating system name, derived from USER_AGENT. **Example** Android, iOS, OSX, Windows
OS_VERSION	**Type** String **Description** The operating system version, derived from USER_AGENT.
PAGE_APP_NAME	**Type** String **Description** The internal name of the application that the user accessed from the App Launcher. **Example** LightningSales
PAGE_CONTEXT	**Type** String **Description** Context of the page where the event occurred. **Example** clients:cardsContainer Note: A value of UNKNOWN means that the page hasn't finished loading, so the context can't be identified.
PAGE_ENTITY_ID	**Type** Id **Description** The unique entity identifier of the event. **Example** 0013000000I3zJAAAZ

Field	Details
PAGE_ENTITY_TYPE	**Type** String **Description** The entity type of the event. **Example** Task, contacts Note: A value of UNKNOWN means that the page hasn't finished loading or the page isn't displaying a record, so the entity type can't be identified.
PAGE_START_TIME	**Type** Number **Description** The time when the page was initially loaded, measured in milliseconds. **Example** 1471564788642
PAGE_URL	**Type** String **Description** Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with PAGE_URL. **Example** /sObject/0064100000JXITSAA5/view Note: A value of UNKNOWN means that the page hasn't finished loading, so the URL can't be identified.
PARENT_UI_ELEMENT	**Type** String **Description** Parent scope of the page element where the event occurred.
RECORD_ID	**Type** String array **Description** The IDs of one or more records that the user interacted with. For more information on the user interaction, see UI_EVENT_TYPE and UI_EVENT_SOURCE fields. **Example** ["5004100000JaGGLAA3", "5004100000Dn79CAAR", "50041000007KeugAAC"]

Field	Details
RECORD_TYPE	**Type** String **Description** The type of record object that the user interacted with. **Examples** • Account • Opportunity
RELATED_LIST	**Type** String **Description** The type of related list that the user clicked. **Example** Opportunity
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. **Example** 3nWgxWbDKWWDIk0FKfF5DV
SDK_APP_TYPE	**Type** String **Description** The mobile SDK application type. **Possible Values** • HYBRID • HYBRIDLOCAL • HYBRIDREMOTE • NATIVE • REACTNATIVE
SDK_APP_VERSION	**Type** String **Description** The mobile SDK application version number. **Example** 5.0

Field	Details
SDK_VERSION	**Type** String **Description** The mobile SDK version number. **Example** 2.1.0
SESSION_KEY	**Type** String **Description** The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session is started. **Example** cdd09305cb6babf34059e27f70e47f1b11dec868
TARGET_UI_ELEMENT	**Type** String **Description** The target page element where the event occurred. **Example** label bBody truncate, tabitem-link
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
UI_EVENT_ID	**Type** String **Description** Id of the Lightning event type.

Field	Details
	Possible Values • `ltng:error` • `ltng:interaction` • `ltng:pageView` • `ltng:performance`
`UI_EVENT_SEQUENCE_NUM`	**Type** Number **Description** An auto-incremented sequence number of the current event since the session started.
`UI_EVENT_SOURCE`	**Type** String **Description** The user action on the record or records in `RECORD_ID`. This field's value indicates whether the user's action was on a single record or multiple records. For example, `read` indicates that one record was read (such as on a record detail page); `reads` indicates that multiple records were read (such as in a list view). **Examples** • click • create • delete • hover • read • update
`UI_EVENT_TIMESTAMP`	**Type** Number **Description** The time at which this event occurred, measured in milliseconds. **Example** 1479769912796
`UI_EVENT_TYPE`	**Type** String **Description** The type of interaction with the records in `RECORD_ID`. **Examples** • crud — Created, read, updated, or deleted the record. • reads — Read multiple records.

Field	Details
USER_AGENT	**Type** String **Description** The numeric code for the type of client used to make the request (for example, the browser, application, or API) as a string.
USER_ID	**Type** String **Description** The 15-character ID of the user accessing Salesforce services through the UI or API. **Example** 00530000009M943
USER_ID_DERIVED	**Type** Id **Description** The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API. **Example** 00590000000I1SNIA0
USER_TYPE	**Type** String **Description** The category of user license of the user accessing Salesforce services through the UI or API. **Possible Values** • A: Automated Process • b: High Volume Portal • C: Customer Portal User • D: External Who • F: Self Service • G: Guest • L: Package License Manager • N: Salesforce to Salesforce • n: CSN Only • O: Power Custom • o: Custom • P: Partner • p: Customer Portal Manager • S: Standard

Field	Details
	• X: Salesforce Administrator

EventLogFile Supported Event Types

EventLogFile

Lightning Logger Event Type

Lightning Logger events contain information from observed Lightning component logs. This event type is available in the EventLogFile object in API version 58.0 and later.

To enable Lightning Logger events, from Setup, in the Quick Find box, enter *event*, and then select **Event Monitoring Settings**. Turn on Lightning Logger Events.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
APP_NAME	**Type** String **Description** The name of the application the user accessed.
BROWSER_NAME	**Type** String **Description** The name of the browser that the user accessed. **Example** Chrome, IE, Safari, Gecko
BROWSER_VERSION	**Type** String **Description** The user's browser version in major.minor format. Some browsers don't provide a minor version.
CLIENT_GEO	**Type** String **Description** The geolocation of the client in the form of <Country>/<State|Province>.

Field	Details
	Example United States/California
`CLIENT_ID`	**Type** String **Description** The API client ID.
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP, such as a login from AppExchange, is shown as "Salesforce.com IP". **Example** `96.43.144.26`
`CONNECTION_TYPE`	**Type** String **Description** The type of connection. **Possible Values** • `CDMA1x` • `CDMA` • `EDGE` • `EVDO0` • `EVDOA` • `EVDOB` • `GPRS` • `HRPD` • `HSDPA` • `HSUPA` • `LTE` • `WIFI`
`DEVICE_MODEL`	**Type** String **Description** The name of the device model. **Example** iPad, iPhone

`DEVICE_PLATFORM`	**Type** String **Description** The type of application experience in `name:experience:form` format. **Possible Values** Name • `APP_BUILDER` • `CUSTOM` • `S1` • `SFX` Experience • `BROWSER` • `HYBRID` Form • `DESKTOP` • `PHONE` • `TABLET`
`DEVICE_SESSION_ID`	**Type** Id **Description** The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started. **Example** 321a1ddfaf924803a075f1e69fc87bc06f53ccd0
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `LightningLogger`.
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring. **Example** GeJCsym5eyvtEK2I

`MESSAGE`	**Type** String **Description** The message passed to the `lightning/logger log()` method. The message can be a JSON object or a string. String length is limited to 4 KB (4096 characters).
`ORGANIZATION_ID`	**Type** String **Description** The 15-character ID of the org. **Example** 00D000000000123
`OS_NAME`	**Type** String **Description** The operating system name, derived from the User Agent. **Example** Android, iOS, OSX, Windows
`OS_VERSION`	**Type** String **Description** The operating system version, derived from the User Agent.
`PAGE_CONTEXT`	**Type** String **Description** The name of the component hosting the main page content. **Example** clients:cardsContainer
`PAGE_ENTITY_ID`	**Type** Id **Description** The entity ID (if any) of the record being displayed. **Example** 0013000000I3zJAAAZ
`PAGE_ENTITY_TYPE`	**Type** String

Field	Details
	Description The entity type of the page being displayed. **Example** Task, contacts
PAGE_URL	**Type** String **Description** Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with PAGE_URL. **Example** /sObject/0064100000JXITSAA5/view
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. **Example** 3nWgxWbDKWWDIk0FKfF5DV
SDK_APP_TYPE	**Type** String **Description** The mobile SDK application type. **Possible Values** • HYBRID • HYBRIDLOCAL • HYBRIDREMOTE • NATIVE • REACTNATIVE
SDK_APP_VERSION	**Type** String **Description** The mobile SDK application version number. **Example** 5.0

`SDK_VERSION`	**Type** String **Description** The mobile SDK version number. **Example** 2.1.0
`SEQUENCE`	**Type** Number **Description** An auto-incremented sequence number of the current event since the session started.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. Use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session is started. **Example** cdd09305cb6babf34059e27f70e47f1b11dec868
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. **Example** 20130715233322.670
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). **Example** 2015-07-27T11:32:59.555Z. The timezone is GMT.
`UI_EVENT_RELATIVE_TIMESTAMP`	**Type** Number **Description** Difference in milliseconds between when the message was logged and when the browser tab was opened.

	Example 29322.23
`UI_EVENT_TIMESTAMP`	**Type** Number **Description** The time at which this event occurred, measured in milliseconds. **Example** 1479769912796
`USER_ID`	**Type** String **Description** The 15-character ID of the user accessing Salesforce services through the UI or API. **Example** 00530000009M943
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API. **Example** 00590000000I1SNIA0
`USER_TYPE`	**Type** String **Description** The category of user license of the user accessing Salesforce services through the UI or API. **Possible Values** • `A`: Automated Process • `b`: High Volume Portal • `C`: Customer Portal User • `D`: External Who • `F`: Self-Service • `G`: Guest • `L`: Package License Manager • `N`: Salesforce to Salesforce • `n`: CSN Only

Lightning Page View Event Type

Lightning Page View events represent information about the page on which the event occurred in Lightning Experience and the Salesforce mobile app. A Lightning Page View event tracks the page a user visited, how long the user spent on the page, and the load time for the page. This event type is available in the EventLogFile object in API version 39.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
APP_NAME	**Type** String **Description** The name of the application that the user accessed.
BROWSER_NAME	**Type** String **Description** The name of the browser that the user accessed. **Example** Chrome, IE, Safari, Gecko
BROWSER_VERSION	**Type** String **Description** The version of the browser that the user accessed in `major.minor version` format. Some browsers don't provide a minor version.
CLIENT_GEO	**Type** String **Description** The geolocation of the client in the form of <Country>/<State|Province>. **Example** United States/California

Field	Details
CLIENT_ID	**Type** String **Description** The API client ID.
CLIENT_IP	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
CONNECTION_TYPE	**Type** String **Description** The type of connection. **Possible Values** • `CDMA1x` • `CDMA` • `EDGE` • `EVDO0` • `EVDOA` • `EVDOB` • `GPRS` • `HRPD` • `HSDPA` • `HSUPA` • `LTE` • `WIFI`
DEVICE_ID	**Type** String **Description** The unique identifier used to identify a device when tracking events. `DEVICE_ID` is a generated value that's created when the mobile app is initially run after installation.
DEVICE_MODEL	**Type** String **Description** The name of the device model.

Field	Details
	Example iPad, iPhone
`DEVICE_PLATFORM`	**Type** String **Description** The type of application experience in `name:experience:form` format. **Possible Values** Name • `APP_BUILDER` • `CUSTOM` • `S1` • `SFX` Experience • `BROWSER` • `HYBRID` Form • `DESKTOP` • `PHONE` • `TABLET`
`DEVICE_SESSION_ID`	**Type** Id **Description** The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started. **Example** 321a1ddfaf924803a075f1e69fc87bc06f53ccd0
`DURATION`	**Type** Number **Description** The duration in milliseconds since the page start time.
`EFFECTIVE_PAGE_TIME`	**Type** Double **Description** Indicates how many milliseconds it took for the page to load before a user could interact with the page's functionality. Multiple factors can affect effective page time, such as network speed, hardware performance, or page complexity.

Field	Details
EFFECTIVE_PAGE_TIME_DEVIATION	**Type** Boolean **Description** When a deviation is detected, `EFFECTIVE_PAGE_TIME_DEVIATION` records `true`. The default value is `false`.
EFFECTIVE_PAGE_TIME_DEVIATION_ERROR_TYPE	**Type** String **Description** Indicates the origin of an error. This field is populated when EFFECTIVE_PAGE_TIME_DEVIATION_REASON contains the PAGE_HAS_ERROR value. **Possible Values** • `CUSTOM`—An error originating from the customer's system or network. • `SYSTEM`—An error originating in Salesforce.
EFFECTIVE_PAGE_TIME_DEVIATION_REASON	**Type** String **Description** The reason for deviation in page loading time. **Possible Values** • `PageInDom`—The page was loaded from a cache. • `PageHasError`—An undefined page loading error occurred. • `PageNotLoaded`—If a customer navigates away from a page while loading processes are in progress, the page doesn't finish loading. • `PreviousPageNotLoaded`—When navigating to a new page, and the previous page hasn't completed loading, the next page is considered to have a deviation. Incomplete loading processes on a previous page can affect how the next page loads. • `InteractionsBeforePageLoaded`—A user interacts with a page element before the page is fully loaded. • `PageInBackgroundBeforeLoaded`—A background loading process runs on a page. Background processes run when a user navigates away from a page to another browser tab. The browser de-prioritizes the page in the background until the user activates the page’s tab. Because a user can leave a page in the background for a long time, the page is expected to have a high Effective Page Time (EPT).
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `LightningPageView`.
GRANDPARENT_UI_ELEMENT	**Type** String

Field	Details
	Description The grandparent scope of the page element where the event occurred.
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring. **Example** GeJCsym5eyvtEK2I
`ORGANIZATION_ID`	**Type** String **Description** The 15-character ID of the org. **Example** 00D000000000123
`OS_NAME`	**Type** String **Description** The operating system name, derived from `USER_AGENT`. **Example** Android, iOS, OSX, Windows
`OS_VERSION`	**Type** String **Description** The operating system version, derived from `USER_AGENT`.
`PAGE_APP_NAME`	**Type** String **Description** The internal name of the application that the user accessed from the App Launcher. **Example** LightningSales
`PAGE_CONTEXT`	**Type** String **Description** The name of the component hosting the main content of the page.

Field	Details
	Example clients:cardsContainer
PAGE_ENTITY_ID	**Type** Id **Description** The unique entity identifier of the event. **Example** 0013000000I3zJAAAZ
PAGE_ENTITY_TYPE	**Type** String **Description** The entity type of the event. **Example** Task, contacts
PAGE_START_TIME	**Type** Number **Description** The time when the page was initially loaded, measured in milliseconds. **Example** 1471564788642
PAGE_URL	**Type** String **Description** Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with PAGE_URL. **Example** /sObject/0064100000JXITSAA5/view
PARENT_UI_ELEMENT	**Type** String **Description** The parent scope of the page element where the event occurred.
PREVPAGE_APP_NAME	**Type** String **Description** The internal name of the previous application that the user accessed from the App Launcher.

Field	Details
	Example LightningSales
`PREVPAGE_CONTEXT`	**Type** String **Description** The context of the previous page where the event occurred. **Example** clients:cardsContainer
`PREVPAGE_ENTITY_ID`	**Type** Id **Description** The unique previous page entity identifier of the event.
`PREVPAGE_ENTITY_TYPE`	**Type** String **Description** The previous page entity type of the event. **Example** Task, contacts
`PREVPAGE_URL`	**Type** String **Description** The relative URL of the previous Lightning Experience or Salesforce mobile app page that the user opened. **Example** /sObject/006410000
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. **Example** 3nWgxWbDKWWDIk0FKfF5DV
`SDK_APP_TYPE`	**Type** String **Description** The mobile SDK application type.

Field	Details
	Possible Values • HYBRID • HYBRIDLOCAL • HYBRIDREMOTE • NATIVE • REACTNATIVE
SDK_APP_VERSION	**Type** String **Description** The mobile SDK application version number. **Example** 5.0
SDK_VERSION	**Type** String **Description** The mobile SDK version number. **Example** 2.1.0
SESSION_KEY	**Type** String **Description** The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session is started. **Example** cdd09305cb6babf34059e27f70e47f1b11dec868
TARGET_UI_ELEMENT	**Type** String **Description** The target page element where the event occurred. **Example** label bBody truncate, tabitem-link
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT.

Field	Details
	For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. The timezone is GMT.
`UI_EVENT_ID`	**Type** String **Description** Id of the Lightning event type. **Possible Values** • `ltng:error` • `ltng:interaction` • `ltng:pageView` • `ltng:performance`
`UI_EVENT_SEQUENCE_NUM`	**Type** Number **Description** An auto-incremented sequence number of the current event since the session started.
`UI_EVENT_SOURCE`	**Type** String **Description** This field is being deprecated and is mostly null, except in mobile app views where it indicates the page type of views where the context is "native."
`UI_EVENT_TIMESTAMP`	**Type** Number **Description** The time at which this event occurred, measured in milliseconds. **Example** 1479769912796
`USER_AGENT`	**Type** String

Field	Details
	Description The type of client used to make the request (for example, the browser, application, or API) as a string.
USER_ID	**Type** String **Description** The 15-character ID of the user accessing Salesforce services through the UI or API. **Example** 00530000009M943
USER_ID_DERIVED	**Type** Id **Description** The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API. **Example** 00590000000I1SNIA0
USER_TYPE	**Type** String **Description** The category of user license of the user accessing Salesforce services through the UI or API. **Possible Values** • A: Automated Process • b: High Volume Portal • C: Customer Portal User • D: External Who • F: Self-Service • G: Guest • L: Package License Manager • N: Salesforce to Salesforce • n: CSN Only • O: Power Custom • o: Custom • P: Partner • p: Customer Portal Manager • S: Standard

Field	Details
	• X: Salesforce Administrator

SEE ALSO:

EventLogFile Supported Event Types

EventLogFile

Lightning Performance Event Type

Lightning Performance events track trends in Lightning Experience and Salesforce mobile app performance. This event type is available in the EventLogFile object in API version 39.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
APP_NAME	**Type** String **Description** The name of the application that the user accessed.
BROWSER_NAME	**Type** String **Description** The name of the browser that the user accessed. **Example** Chrome, IE, Safari, Gecko
BROWSER_VERSION	**Type** String **Description** The version of the browser that the user accessed in `major.minor version` format. Some browsers don't provide a minor version.
CLIENT_GEO	**Type** String **Description** The geolocation of the client in the form of <Country>/<State|Province>. **Example** United States/California

Field	Details
CLIENT_ID	**Type** String **Description** The API client ID.
CLIENT_IP	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
CONNECTION_TYPE	**Type** String **Description** The type of connection. **Possible Values** • `CDMA1x` • `CDMA` • `EDGE` • `EVDO0` • `EVDOA` • `EVDOB` • `GPRS` • `HRPD` • `HSDPA` • `HSUPA` • `LTE` • `WIFI`
DEVICE_ID	**Type** String **Description** The unique identifier used to identify a device when tracking events. `DEVICE_ID` is a generated value that's created when the mobile app is initially run after installation.
DEVICE_MODEL	**Type** String **Description** The name of the device model.

Field	Details
	Example iPad, iPhone
DEVICE_PLATFORM	**Type** String **Description** The type of application experience in `name:experience:form` format. **Possible Values** Name • APP_BUILDER • CUSTOM • S1 • SFX Experience • BROWSER • HYBRID Form • DESKTOP • PHONE • TABLET
DEVICE_SESSION_ID	**Type** Id **Description** The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started. **Example** 321a1ddfaf924803a075f1e69fc87bc06f53ccd0
DURATION	**Type** Number **Description** The duration in milliseconds since the page start time.
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `LightningPerformance`.

Field	Details
LOGIN_KEY	**Type** String **Description** The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring. **Example** GeJCsym5eyvtEK2I
ORGANIZATION_ID	**Type** String **Description** The 15-character ID of the org. **Example** 00D000000000123
OS_NAME	**Type** String **Description** The operating system name, derived from `USER_AGENT`. **Example** Android, iOS, OSX, Windows
OS_VERSION	**Type** String **Description** The operating system version, derived from `USER_AGENT`.
PAGE_START_TIME	**Type** Number **Description** The time when the page was initially loaded, measured in milliseconds. **Example** 1471564788642
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. **Example** 3nWgxWbDKWWDIk0FKfF5DV

Field	Details
SDK_APP_TYPE	**Type** String **Description** The mobile SDK application type. **Possible Values** • HYBRID • HYBRIDLOCAL • HYBRIDREMOTE • NATIVE • REACTNATIVE
SDK_APP_VERSION	**Type** String **Description** The mobile SDK application version number. **Example** 5.0
SDK_VERSION	**Type** String **Description** The mobile SDK version number. **Example** 2.1.0
SESSION_KEY	**Type** String **Description** The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session is started. **Example** cdd09305cb6babf34059e27f70e47f1b11dec868
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. For example: 20130715233322.670.

Field	Details
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
UI_EVENT_ID	**Type** String **Description** Id of the Lightning event type. **Possible Values** • ltng:error • ltng:interaction • ltng:pageView • ltng:performance Note: Any other value, such as ltng:bootstrap, is for internal usage only.
UI_EVENT_SOURCE	**Type** String **Description** The user action on the record or records. This field's value indicates whether the user's action was on a single record or multiple records. For example, read indicates that one record was read (such as on a record detail page); reads indicates that multiple records were read (such as in a list view). **Examples** • click • create • delete • hover • read • update
UI_EVENT_TIMESTAMP	**Type** Number **Description** The time at which this event occurred, measured in milliseconds. **Example** 1479769912796

Field	Details
UI_EVENT_TYPE	**Type** String **Description** The type of interaction. **Examples** • crud — Created, read, updated, or deleted the record. • reads — Read multiple records.
USER_AGENT	**Type** String **Description** The numeric code for the type of client used to make the request (for example, browser, application, or API) as a string.
USER_ID	**Type** String **Description** The 15-character ID of the user accessing Salesforce services through the UI or API. **Example** 00530000009M943
USER_ID_DERIVED	**Type** Id **Description** The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API. **Example** 00590000000I1SNIA0
USER_TYPE	**Type** String **Description** The category of user license of the user accessing Salesforce services through the UI or API. **Possible Values** • A: Automated Process • b: High Volume Portal • C: Customer Portal User • D: External Who • F: Self Service • G: Guest

Field	Details
	• L: Package License Manager • N: Salesforce to Salesforce • n: CSN Only • O: Power Custom • o: Custom • P: Partner • p: Customer Portal Manager • S: Standard • X: Salesforce Administrator

SEE ALSO:

EventLogFile Supported Event Types

EventLogFile

Login Event Type

Login events contain details about your org's user login history.

Note: Login Event Type is used by EventLogFile (ELF). It isn't a real-time event. For the LoginEvent real-time event, which is part of Real-Time Event Monitoring (RTEM), see LoginEvent in the *Platform Events Developer Guide*.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
API_TYPE	**Type** String **Description** The type of API request. Possible values are: • D—Apex Class • E—SOAP Enterprise • M—SOAP Metadata • P—SOAP Partner • S—SOAP Apex • T—SOAP Tooling • f—Feed • l—Live Agent • p—SOAP ClientSync

`API_VERSION`	**Type** String **Description** The version of the API that's being used. For example: `36.0`.
`AUTHENTICATION_METHOD_REFERENCE`	**Type** String **Description** The authentication method used by a third-party identification provider for an OpenID Connect single sign-on protocol. This field is available in API version 51.0 and later.
`BROWSER_TYPE`	**Type** String **Description** The identifier string returned by the browser used at login. Example values are: • `Go-http-client/1.1` • `Mozilla/5.0 (Macintosh; Intel Mac OS X 10.12; rv%3A50.0) Gecko/20100101 Firefox/50.0` • `Mozilla/5.0 (Macintosh; Intel Mac OS X 10_11_6) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/51.0.2704.84 Safari/537.36`
`CIPHER_SUITE`	**Type** String **Description** The TLS cipher suite used for the login. Values are OpenSSL-style cipher suite names, with hyphen delimiters. For more information, see OpenSSL Cryptography and SSL/TLS Toolkit.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`CLIENT_IP`	**Type** String

	Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`DB_TOTAL_TIME`	**Type** Number **Description** The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `Login`.
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`LOGIN_STATUS`	**Type** String **Description** The status of the login attempt. For successful logins, the value is LOGIN_NO_ERROR. All other values indicate errors or authentication issues. For details, see Login Event Type — LOGIN_STATUS Values on page 1858.
`LOGIN_SUB_TYPE`	**Type** String **Description** The type of login flow used. Possible values are: • `uiup`—UI Username-Password • `oauthpassword`—OAuth Username-Password

	• `oauthtoken`—OAuth User-Agent • `oauthhybridtoken`—OAuth User-Agent for Hybrid Apps • `oauthtokenidtoken`—OAuth User-Agent with ID Token • `oauthclientcredential`—OAuth Client Credential • `oauthcode`—OAuth Web Server • `oauthhybridauthcode`—OAuth Web Server for Hybrid Apps
`LOGIN_TYPE`	**Type** String **Description** The type of login used to access the session. Possible values are: • `7`—AppExchange • `A`—Application • `s`—Certificate-based login • `k`—Chatter Communities External User • `n`—Chatter Communities External User Third Party SSO • `r`—Employee Login to Community • `z`—Lightning Login • `l`—Networks Portal API Only • `6`—Remote Access Client • `i`—Remote Access 2.0 • `I`—Other Apex API • `R`—Partner Product • `w`—Passwordless Login • `3`—Customer Service Portal • `q`—Partner Portal Third-Party SSO • `9`—Partner Portal • `5`—SAML Idp Initiated SSO • `m`—SAML Chatter Communities External User SSO • `b`—SAML Customer Service Portal SSO • `c`—SAML Partner Portal SSO • `h`—SAML Site SSO • `8`—SAML Sfdc Initiated SSO • `E`—SelfService • `j`—Third Party SSO

Field	Details
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`REQUEST_STATUS`	**Type** String **Description** The status of the request for a page view or user interface action. Possible values are: • `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • `U`—Undefined • `A`—Authorization Error • `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • `N`—Not Found. 404 error.
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For Login Event Type, this

	field is usually null because the event is captured before a session is created. **Example** d7DEq/ANa7nNZZVD
`SOURCE_IP`	**Type** IP **Description** The source IP of the login request.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`TLS_PROTOCOL`	**Type** String **Description** The TLS protocol used for the login. **Example** There are 3 possible values. • 1.0 • 1.1 • 1.2
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID

Field	Details
	Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.
`USER_NAME`	**Type** String **Description** The username that's used for login.
`USER_TYPE`	**Type** String **Description** The category of user license. Possible values are: • `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in. • `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're

organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.

- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

Login Event Type — LOGIN_STATUS Values

When users attempt to log in to your org, the success or failure of their login attempts is tracked in event log file data. Specifically, the LOGIN_STATUS field in the Login event type contains the result of these login attempts. The data in LOGIN_STATUS can help you determine whether your users' login attempts were successful. This field is available in the Login event type in the EventLogFile object in API version 39.0 and later.

API Error Code	Details (If Available)
LOGIN_CHALLENGE_ISSUED	Failed: Computer activation required
LOGIN_CHALLENGE_PENDING	Failed: Computer activation pending
LOGIN_DATA_DOWNLOAD_ONLY	
LOGIN_END_SESSION_TXN_SECURITY_POLICY	
LOGIN_ERROR_API_TOO_OLD	Failed: API Version Removed. The API version specified for login is below the minimum supported value, and has been removed. Update to a newer, supported API version.

API Error Code	Details (If Available)
LOGIN_ERROR_APPEXCHANGE_DOWN	Unable to process your login request
LOGIN_ERROR_ASYNC_USER_CREATE	
LOGIN_ERROR_AVANTGO_DISABLED	
LOGIN_ERROR_AVANTGO_TRIAL_EXP	
LOGIN_ERROR_CLIENT_NO_ACCESS	
LOGIN_ERROR_CLIENT_REQ_UPDATE	Failed: Client update required
LOGIN_ERROR_CSS_FROZEN	
LOGIN_ERROR_CSS_PW_LOCKOUT	
LOGIN_ERROR_DUPLICATE_USERNAME	
LOGIN_ERROR_EXPORT_RESTRICTED	Restricted country
LOGIN_ERROR_GLOBAL_BLOCK_DOMAIN	Restricted domain
LOGIN_ERROR_HT_DOWN	
LOGIN_ERROR_HTP_METHD_INVALID	Failed: Invalid HTTP method
LOGIN_ERROR_INSECURE_LOGIN	Failed: Login over insecure channel
LOGIN_ERROR_INVALID_GATEWAY	Invalid gateway
LOGIN_ERROR_INVALID_ID_FIELD	
LOGIN_ERROR_INVALID_PASSWORD	Invalid password
LOGIN_ERROR_LOGINS_EXCEEDED	Maximum logins exceeded
LOGIN_ERROR_MUST_USE_API_TOKEN	Failed: API security token required
LOGIN_ERROR_MUTUAL_AUTHENTICATION	Mutual authentication failed
LOGIN_ERROR_NETWORK_INACTIVE	Invalid - Experience Cloud site offline
LOGIN_ERROR_NO_HT_ACCESS	
LOGIN_ERROR_NO_NETWORK_ACCESS	No Experience Cloud site access
LOGIN_ERROR_NO_NETWORK_INFO	
LOGIN_ERROR_NO_PORTAL_ACCESS	Invalid profile association
LOGIN_ERROR_NO_SET_COOKIES	
LOGIN_ERROR_OFFLINE_DISABLED	Offline disabled
LOGIN_ERROR_OFFLINE_TRIAL_EXP	Offline trial expired
LOGIN_ERROR_ORG_CLOSED	Organization closed
LOGIN_ERROR_ORG_DOMAIN_ONLY	Restricted domain

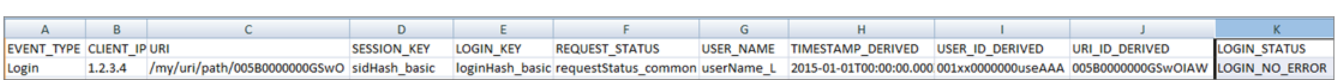
API Error Code	Details (If Available)
LOGIN_ERROR_ORG_IN_MAINTENANCE	Organization is in maintenance
LOGIN_ERROR_ORG_INACTIVE	Organization is inactive
LOGIN_ERROR_ORG_IS_DOT_ORG	Organization is a DOT
LOGIN_ERROR_ORG_LOCKOUT	Organization locked
LOGIN_ERROR_ORG_SIGNING_UP	
LOGIN_ERROR_ORG_SUSPENDED	Organization suspended
LOGIN_ERROR_OUTLOOK_DISABLED	Outlook integration disabled
LOGIN_ERROR_PAGE_REQUIRES_LOGIN	
LOGIN_ERROR_PASSWORD_EMPTY	
LOGIN_ERROR_PASSWORD_LOCKOUT	Password lockout
LOGIN_ERROR_PORTAL_INACTIVE	Invalid - Portal disabled
LOGIN_ERROR_RATE_EXCEEDED	Login rate exceeded
LOGIN_ERROR_RESTRICTED_DOMAIN	Restricted IP
LOGIN_ERROR_RESTRICTED_TIME	Restricted time
LOGIN_ERROR_SESSION_TIMEOUT	
LOGIN_ERROR_SSO_PWD_INVALID	Invalid password
LOGIN_ERROR_SSO_SVC_DOWN	Your company's authentication service is down
LOGIN_ERROR_SSO_URL_INVALID	The Single Sign-On Gateway URL is invalid
LOGIN_ERROR_STORE	
LOGIN_ERROR_STORE_DOWN	
LOGIN_ERROR_SWITCH_SFDC_INSTANCE	
LOGIN_ERROR_SWITCH_SFDC_LOGIN	
LOGIN_ERROR_SYNCOFFLINE_DISBLD	Failed: Mobile disabled
LOGIN_ERROR_SYSTEM_DOWN	
LOGIN_ERROR_UNKNOWN_ERROR	Login invalid
LOGIN_ERROR_USER_API_ONLY	Failed: API-only user
LOGIN_ERROR_USER_FROZEN	User is frozen
LOGIN_ERROR_USER_INACTIVE	User is inactive
LOGIN_ERROR_USER_NON_MOBILE	Failed: Mobile license required
LOGIN_ERROR_USER_STORE_ACCESS	

API Error Code	Details (If Available)
LOGIN_ERROR_USERNAME_EMPTY	
LOGIN_ERROR_WIRELESS_DISABLED	Wireless disabled
LOGIN_ERROR_WIRELESS_TRIAL_EXP	Wireless trial expired
LOGIN_LIGHTNING_LOGIN	Lightning Login required
LOGIN_NO_ERROR	
LOGIN_OAUTH_API_DISABLED	Failed: OAuth API access disabled
LOGIN_OAUTH_CONSUMER_DELETED	Failed: Consumer Deleted
LOGIN_OAUTH_DS_NOT_EXPECTED	Failed: Activation secret not expected
LOGIN_OAUTH_EXCEED_GET_AT_LMT	Failed: Get Access Token Limit Exceeded
LOGIN_OAUTH_INVALID_CODE_CHALLENGE	Failed: Invalid Code Challenge
LOGIN_OAUTH_INVALID_CODE_VERIFIER	Failed: Invalid Code Verifier
LOGIN_OAUTH_INVALID_DEVICE	Failed: Device Id missing or not registered
LOGIN_OAUTH_INVALID_DS	Failed: Activation secret invalid
LOGIN_OAUTH_INVALID_DSIG	Failed: Signature Invalid
LOGIN_OAUTH_INVALID_IP	Failed: IP Address Not Allowed
LOGIN_OAUTH_INVALID_NONCE	Failed: Invalid Nonce
LOGIN_OAUTH_INVALID_SIG_METHOD	Failed: Invalid Signature Method
LOGIN_OAUTH_INVALID_TIMESTAMP	Failed: Invalid Timestamp
LOGIN_OAUTH_INVALID_TOKEN	Failed: Invalid Token
LOGIN_OAUTH_INVALID_VERIFIER	Failed: Invalid Verifier
LOGIN_OAUTH_INVALID_VERSION	Failed: Version Not Supported
LOGIN_OAUTH_MISSING_DS	Activation secret missing
LOGIN_OAUTH_NO_CALLBACK_URL	Failed: Invalid Callback URL
LOGIN_OAUTH_NO_CONSUMER	Missing Consumer Key Parameter
LOGIN_OAUTH_NO_TOKEN	Missing OAuth Token Parameter
LOGIN_OAUTH_NONCE_REPLAY	Failed: Nonce Replay Detected
LOGIN_OAUTH_PACKAGE_MISSING	Package for this consumer is not installed in your organization
LOGIN_OAUTH_PACKAGE_OLD	Installed package for this consumer is out of date
LOGIN_OAUTH_UNEXPECTED_PARAM	Failed: Unexpected parameter
LOGIN_ORG_TRIAL_EXP	Trial Expired

API Error Code	Details (If Available)
LOGIN_READONLY_CANNOT_VALIDATE	
LOGIN_SAML_INVALID_AUDIENCE	Failed: Audience Invalid
LOGIN_SAML_INVALID_CONFIG	Failed: Configuration Error/Perm Disabled
LOGIN_SAML_INVALID_FORMAT	Failed: Assertion Invalid
LOGIN_SAML_INVALID_IN_RES_TO	Failed: InResponseTo Invalid
LOGIN_SAML_INVALID_ISSUER	Failed: Issuer Mismatched
LOGIN_SAML_INVALID_ORG_ID	Failed: Invalid Organization Id
LOGIN_SAML_INVALID_PORTAL_ID	Failed: Invalid Portal Id
LOGIN_SAML_INVALID_RECIPIENT	Failed: Recipient Mismatched
LOGIN_SAML_INVALID_SESSION_LEVEL	
LOGIN_SAML_INVALID_SIGNATURE	Failed: Signature Invalid
LOGIN_SAML_INVALID_SITE_URL	Failed: Invalid Site URL
LOGIN_SAML_INVALID_STATUS	Failed: Status Invalid
LOGIN_SAML_INVALID_SUB_CONFIRM	Failed: Subject Confirmation Error
LOGIN_SAML_INVALID_TIMESTAMP	Failed: Assertion Expired
LOGIN_SAML_INVALID_USERNAME	Failed: Username Or SSO Id Invalid
LOGIN_SAML_INVALID_VERSION	
LOGIN_SAML_MISMATCH_CERT	Failed: Signature Invalid/Configured Certificate Mismatch
LOGIN_SAML_MISSING_ORG_ID	Failed: Missing Organization Id for Portal login
LOGIN_SAML_MISSING_PORTAL_ID	Failed: Missing Portal Id
LOGIN_SAML_PROVISION_ERROR	Failed: SAML Provision Error
LOGIN_SAML_REPLAY_ATTEMPTED	Failed: Replay Detected
LOGIN_SAML_SITE_INACTIVE	Failed: Specified Site is Inactive
LOGIN_TWOFACTOR_REQ	Multi-factor (formerly called two-factor) is required

Usage

Use LOGIN_STATUS to determine whether your users' login attempts were successful. For example, you can determine whether a departed employee attempted to log in successfully or unsuccessfully.



A	B	C	D	E	F	G	H	I	J	K
EVENT_TYPE	CLIENT_IP	URI	SESSION_KEY	LOGIN_KEY	REQUEST_STATUS	USER_NAME	TIMESTAMP_DERIVED	USER_ID_DERIVED	URI_ID_DERIVED	LOGIN_STATUS
Login	1.2.3.4	/my/uri/path/005B0000000GSwO	sidHash_basic	loginHash_basic	requestStatus_common	userName_L	2015-01-01T00:00:00.000	001xx0000000useAAA	005B0000000GSwOIAW	LOGIN_NO_ERROR

Login As Event Type

Login As events contain details about what a Salesforce admin did while logged in as another user.

Note: Login As Event Type is used by EventLogFile (ELF). It isn't a real-time event. For the LoginAsEvent real-time event, which is part of Real-Time Event Monitoring (RTEM), see LoginAsEvent in the *Platform Events Developer Guide*.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`DELEGATED_USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or API. In this case, the user who's doing the impersonation.
`DELEGATED_USER_ID_DERIVED`	**Type** Id

Field	Details
	Description The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or API. In this case, the user who's doing the impersonation.
`DELEGATED_USER_NAME`	**Type** String **Description** The username of the user who's using Salesforce services through the UI or API. In this case, the user who's doing the impersonation.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `LoginAs`.
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.

`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id

	Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.

EventLogFile Supported Event Types

EventLogFile

Logout Event Type

Logout events contain details of user logouts.

Note: Login Event Type is used by EventLogFile (ELF). It is not a real-time event. For the LoginEvent real-time event, which is part of Real-Time Event Monitoring (RTEM), see LoginEvent in the *Platform Events Developer Guide*.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`API_TYPE`	**Type** String **Description** The type of API request. Possible values are: • `D`—Apex Class • `E`—SOAP Enterprise • `M`—SOAP Metadata • `P`—SOAP Partner • `S`—SOAP Apex • `T`—SOAP Tooling • `f`—Feed • `l`—Live Agent • `p`—SOAP ClientSync
`API_VERSION`	**Type** String **Description** The version of the API that's being used. For example: `36.0`.

`APP_TYPE`	**Type** Number **Description** The application type that was in use upon logging out. **Example Values** • `1000`: Application • `1007`: SFDC Application • `1014`: Chat • `2501`: CTI • `2514`: OAuth • `3475`: SFDC Partner Portal
`BROWSER_TYPE`	**Type** String **Description** The identifier string returned by the browser used at login. Example values are: • `Go-http-client/1.1` • `Mozilla/5.0 (Macintosh; Intel Mac OS X 10.12; rv%3A50.0) Gecko/20100101 Firefox/50.0` • `Mozilla/5.0 (Macintosh; Intel Mac OS X 10_11_6) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/51.0.2704.84 Safari/537.36`
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as “Salesforce.com IP”. For example: `96.43.144.26`.
`CLIENT_VERSION`	**Type** Number **Description** The version of the client that was in use upon logging out.
`EVENT_TYPE`	**Type** String

Field	Details
	Description The type of event. The value is always `Logout`.
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`PLATFORM_TYPE`	**Type** Number **Description** The code for the client platform. If a timeout caused the logout, this field is null. **Example Values** • `1000`: Windows • `1008`: Windows 2003 • `1013`: Windows 8.1 • `1015`: Windows 10 • `2003`: Macintosh/Apple OSX • `4000`: Linux • `5005`: Android • `5006`: iPhone • `5007`: iPad • `5200`: Android 10.0
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.

Field	Details
RESOLUTION_TYPE	**Type** Number **Description** The screen resolution of the client. If a timeout caused the logout, this field is null.
SESSION_KEY	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
SESSION_LEVEL	**Type** String **Description** The security level of the session that was used when logging out. **Possible Values** • `1`: Standard Session • `2`: High-Assurance Session
SESSION_TYPE	**Type** String **Description** The session type that was used when logging out. **Possible Values** • `A`: API • `I`: APIOnlyUser • `N`: ChatterNetworks • `Z`: ChatterNetworksAPIOnly • `C`: Content • `P`: OauthApprovalUI • `O`: Oauth2 • `T`: SiteStudio • `R`: SitePreview • `S`: SubstituteUser • `B`: TempContentExchange • `G`: TempOauthAccessTokenFrontdoor • `Y`: TempVisualforceExchange

	• `F`: TempUIFrontdoor • `U`: UI • `E`: UserSite • `V`: Visualforce • `W`: WDC_API
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`. When a customer logs out by using the **Logout** button, the `TIMESTAMP` field records the actual logout time. However, when a customer is logged out automatically, Salesforce detects the event by using a process that runs every 15 minutes. `TIMESTAMP` values can reflect a logout time up to 15 minutes later than the actual automatic logout time.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `0059000000I1SNIA0`.
`USER_INITIATED_LOGOUT`	**Type** Boolean

Field	Details
	Description The value is 1 if the user intentionally logged out of the organization by clicking the **Logout** button. If the user's session timed out due to inactivity or another implicit logout action, the value is 0.
USER_TYPE	**Type** String **Description** The category of user license of the user that logged out. **Possible Values** • A: Automated Process • b: High Volume Portal • C: Customer Portal User • D: External Who • F: Self-Service • G: Guest • L: Package License Manager • N: Salesforce to Salesforce • n: CSN Only • O: Power Custom • o: Custom • P: Partner • p: Customer Portal Manager • S: Standard • X: Salesforce Administrator

Metadata API Operation Event Type

Metadata API Operation events contain details of Metadata API retrieval and deployment requests.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details

`API_VERSION`	**Type** String **Description** The version of the API that's being used. For example: `36.0`.
`CLIENT_ID`	**Type** String **Description** The API client ID.
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `MetadataApiOperation`.
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`OPERATION`	**Type** String

	Description The operation that's being performed. **Possible Values** • `meta_deploy` • `meta_list` • `meta_retrieve` • `meta_synchronous_create` • `meta_synchronous_read` • `meta_synchronous_upsert`
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.

TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
URI	**Type** String **Description** The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.

EventLogFile Supported Event Types

EventLogFile

Multiblock Report Event Type

Multiblock Report events contain details about Joined Report reports.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
CLIENT_IP	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
CPU_TIME	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DB_TOTAL_TIME	**Type** Number **Description** The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `MultiblockReport`.
HAS_CHART	**Type** Boolean **Description** True if the report has a chart.
LOGIN_KEY	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.

`MASTER_REPORT_ID`	**Type** String **Description** The 15-character ID of the master report.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`REQUEST_STATUS`	**Type** String **Description** The status of the request for a page view or user interface action. Possible values are: • `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • `U`—Undefined • `A`—Authorization Error • `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • `N`—Not Found. 404 error.
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.

`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id

	Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.
`USER_TYPE`	**Type** String **Description** The category of user license. Possible values are: • `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in. • `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.

	• `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

EventLogFile Supported Event Types

EventLogFile

Named Credential Event Type

The Named Credential event type captures information about Apex callouts that use named credentials as their endpoints. Use this event type to audit the installed managed packages that use named credentials. If you don't recognize the package namespace in the named credential event log file, then you can investigate whether a security breach has occurred. This event type is available in the EventLogFile object in API version 53.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`CALLER_PACKAGE_NAMESPACE`	**Type** String **Description** If an Apex callout using a Named Credential endpoint is initiated from a package, then this field contains the package's namespace. If the callout isn't initiated from a package, then this field is empty. **Example** Acme
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

Field	Details
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `NamedCredential`.
LOGIN_KEY	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
NAMED_CREDENTIAL_NAME	**Type** String **Description** The name of the named credential that's the endpoint of the Apex callout. **Example** My_Named_Credential
ORGANIZATION_ID	**Type** Id **Description** The 15-character ID of the org. **Example** `00D000000000123`
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
RUN_TIME	**Type** Number **Description** The amount of time that the request took in milliseconds.
SESSION_KEY	**Type** String

Field	Details
	Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case-safe ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case-safe ID of the user who's using Salesforce services through the UI or the API.

Field	Details
	For example: `00590000000I1SNIA0`.

EventLogFile Supported Event Types

EventLogFile

One Commerce Usage Event Type

One Commerce Usage events capture information about your Commerce instance. This event type is available in the EventLogFile object in API version 51.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`BROWSER_DEVICE_TYPE`	**Type** Number **Description** A code used to identify the browser and device type. The code is in the format "BBVVVXYZ," with the following signification: • BB — Two digits that indicate the browser type. – IE: "10" – CHROME: "13" – FIREFOX: "11" – SAFARI: "14" – OPERA: "15" – ANDROID_WEBKIT: "16" – NETSCAPE: "17" – OTHER_WEBKIT: "18" – OTHER_GECKO: "19" – OTHER_KHTML: "20" – OTHER_MOBILE: "21" – SALESFORCE_DESKTOP: "22" – BLACKBERRY: "23" – GOOD_ACCESS: "24" – EDGE: "25"

Field	Details
	– SALESFORCE_MOBILE: "26" • VVV—Three digits that indicate version, leading zeroes. • XYZ—Browser-type specific flags or options. Each digit in XYZ represents a different flag depending on the BrowserType: – X=1: If the parser recognizes a "touch" browser. Here, touch means the older touch native client, not that the device supports touch. – Y=1: If the parser recognizes a browser in compatibility mode. Only for IE. – Z=1: If the browser is recognized as `MOBILE`. – Z=2: If the browser is recognized as `PHONE`. – Z=3: If the browser is recognized as `TABLET`. – Z=4: If the browser is a recognized as `MEDIA PLAYER`. – Z=6: Only for Opera Mini.
`B2B_EDITION`	**Type** String **Description** Edition of B2B Commerce. Edition can include Lightning (LB2B), CCRZ, or future flavors.
`B2B_VERSION`	**Type** String **Description** This field is optional. For the managed package, then `B2B_VERSION` includes Major, Minor, Patch revision numbers. For Lightning `B2B_VERSION` includes the optional service version.
`CLIENT_IP`	**Type** String **Description** The IP address of the client that’s using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as “Salesforce.com IP”. If the user’s session context isn't available, this field returns a blank value.
`CONTEXT_ID`	**Type** String

Field	Details
	Description The `contextId` (Key Business Domain Value) in which the operation is done. For example, for Cart, the `contextId` is `cartId`.
`CONTEXT_MAP`	**Type** String **Description** This field is optional. It holds a JSON string with additional operational context.
`CORRELATION_ID`	**Type** String **Description** This field holds correlations, such as client to server and other asynchronous calls to B2B subsystems.
`COUNT`	**Type** String **Description** The number of records impacted by this operation.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`DB_TOTAL_TIME`	**Type** Number **Description** Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.
`EFFECTIVE_ACCOUNT_ID`	**Type** String **Description** The B2B Effective Account ID in context of the operation.

Field	Details
ERROR_CODE	**Type** String **Description** The API error code that appears when an operation fails. If there is no error the value is `null`.
ERROR_MESSAGE	**Type** String **Description** Error message that appears when an operation fails. If there is no error the value is `null`.
EVENT_TYPE	**Type** String **Description** The type of event. The value is always OneCommerceUsage.
IS_RETRY	**Type** String **Description** The field is `True` if the operation resulted in a retry, otherwise it's `False`. Understanding the frequency of operation retries helps determine the health of a service. The default value is `False`.
LOGIN_KEY	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
ORGANIZATION_ID	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
OPERATION	**Type** String

Field	Details
	Description The name of the B2B service. For example: `CreateCart` or `KeywordSearch`.
`OPERATION_STAGE`	**Type** String **Description** This field is optional. Used to capture more granular operation level stages.
`OPERATION_STATE`	**Type** String **Description** This field is optional. An enum for the state of the operation. For example: `CartLocked`, `OrderCancelled`, `InProgress`, `New`, `Update`, and `Pending`.
`OPERATION_STATUS`	**Type** String **Description** Enum with the outcome of the operation. For example: `Success` or `Fail`.
`OPERATION_TIME`	**Type** String **Description** Total time of the operation in milliseconds.
`OS_VERSION`	**Type** String **Description** Code used to identify the operating system and version. The value is equal to 9999 for an unknown platform.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.

Field	Details
REQUEST_STATUS	**Type** String **Description** The status of the request for a page view or user interface action. Possible values are: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error.
RUN_TIME	**Type** Number **Description** The amount of time that the request took in milliseconds. Requests with a value over five seconds are considered long-running requests for the purposes of the Concurrent Long-Running Apex Limit. Note: HTTP callout processing time isn't included when calculating the 5-second limit. We pause the timer for the callout and resume it when the callout completes.
SERVICE_NAME	**Type** String **Description** Enum of B2B Services. For example: `Cart`, `Pricing`, `Products`, `Order`, `Search`, and so on.
SESSION_KEY	**Type** String

Field	Details
	Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id

Field	Details
	Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.
`USER_TYPE`	**Type** String **Description** The category of user license. Possible values are: • `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in. • `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal. • `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.
`WEBSTORE_ID`	**Type** String

Field	Details
	Description This field is optional. The ID of the webstore associated with the store (site).
`WEBSTORE_TYPE`	**Type** String **Description** The type of webstore. For example: `B2B`, `B2C`, and `OMS`.

Package Install Event Type

Package Install events contain details about package installation in the organization.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`EVENT_TYPE`	**Type** String

	Description The type of event. The value is always `PackageInstall`.
`FAILURE_TYPE`	**Type** String **Description** A general categorization of any error that's encountered.
`IS_MANAGED`	**Type** Boolean **Description** True if the operation is performed on a managed package.
`IS_PUSH`	**Type** Boolean **Description** True if the package was installed as a result of a push upgrade.
`IS_RELEASED`	**Type** Boolean **Description** True if the operation is performed on a released package.
`IS_SUCCESSFUL`	**Type** Boolean **Description** True if the package was successfully installed.
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`OPERATION_TYPE`	**Type** String **Description** The type of package operation. **Possible Values** • INSTALL • UPGRADE

	- EXPORT - UNINSTALL - VALIDATE_PACKAGE - INIT_EXPORT_PKG_CONTROLLER
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`PACKAGE_NAME`	**Type** String **Description** The name of the package that's being installed.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.

TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
URI	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
URI_ID_DERIVED	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
USER_ID_DERIVED	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.

EventLogFile Supported Event Types

EventLogFile

Platform Encryption Event Type

Platform Encryption event contains information about tenant secret and derived encryption key usage. This event type is available in API versions 41.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
ACTION	**Type** String **Description** The name and type of the event. **Possible Values** • TS Imported: A tenant secret generated by the Shield Key Management Service (KMS), or customer-supplied key material, imported by a customer. • TS Generated: A tenant secret generated by the Shield Key Management Service (KMS). • Key Derived: An encryption key derived from a tenant secret for encryption or decryption. • TS Wrapped: A tenant secret generated by the Shield Key Management Service (KMS), or customer-supplied key material, encrypted for storage. • Key Delivered: A data encryption key delivered for encryption or decryption. • TS Stored: A tenant secret generated by the Shield Key Management Service (KMS), or customer-supplied key material, stored encrypted in the database. • TS Read: An encrypted tenant secret generated by the Shield Key Management Service (KMS), or encrypted customer-supplied key material, that is loaded for encryption or decryption. • TS Unwrapped: An encrypted tenant secret generated by the Shield Key Management Service (KMS), or encrypted customer-supplied key material, unwrapped for use by the KMS. • TS Exported: An encrypted tenant secret exported by a customer. • TS Destroyed: A tenant secret and related data encryption key destroyed by a customer.
CLIENT_IP	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".

	For example: `96.43.144.26`.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `PlatformEncryption`.
`KEY_ID`	**Type** String **Description** The 15-character ID of the tenant secret. **Example** 02GD000000096Cb
`KEY_ID_DERIVED`	**Type** String **Description** The 18-character ID of the derived encryption key. **Example** 02GD000000096CbMAI
`KEY_TYPE`	**Type** String **Description** The type of tenant secret. **Possible Values** • Data • DeterministicData • EinsteinAnalytics • SearchIndex
`LOGIN_KEY`	**Type** String

Field	Details
	Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`METHOD`	**Type** String **Description** The string that identifies a change in tenant secret Active state. For example, tenant secrets become active when they are created, and are made inactive when they are exported. **Examples** • TS Exported: User ID • TS Generated: HSM or BYOK • TS Unwrapped: Tenant Secret or BYOK
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.

Field	Details
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

	For example: `00590000000I1SNIA0`.

EventLogFile Supported Event Types

EventLogFile

Queued Execution Event Type

Queued Execution events contain details about queued executions—for example, batch Apex.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds that it took to complete the batch apex request. This field indicates the amount of activity taking place in the app server layer, allowing you to identify pieces of Apex or Visualforce code that need refactoring.
`DB_TOTAL_TIME`	**Type** Number **Description** The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.
`ENTRY_POINT`	**Type** String

Field	Details
	Description The name of the Apex class that serves as the execution point for the batch job. **Example** TaskPhoneExtensionBatchUpdate
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `QueuedExecution`.
JOB_ID	**Type** String **Description** The ID of the batch Apex job. **Example** 7073000000lDquo
LOGIN_KEY	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
ORGANIZATION_ID	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
REQUEST_STATUS	**Type** String

Field	Details
	Description The status of the request for a page view or user interface action. Possible values are: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error.
RUN_TIME	**Type** Number **Description** The amount of time that the request took in milliseconds.
SESSION_KEY	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).

Field	Details
	For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.
`USER_TYPE`	**Type** String **Description** The category of user license. Possible values are: • `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.

Field	Details
	• `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in. • `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal. • `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

EventLogFile Supported Event Types
EventLogFile

Report Event Type

Report events contain information about what happened when a user ran a report. This event type includes all activity that's in the Report Export event type, plus more. For example, it has user activity for reports exported as both Formatted Report and Details Only output.

Note: Exporting a report directly from the report result captures the event in both the Report and Report Export logs.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`AVERAGE_ROW_SIZE`	**Type** Number

	Description The average row size of all rows in the Report event, in bytes. A large average size, coupled with a high `ROW_COUNT`, can indicate that a user is downloading information for fraudulent purposes. For example, a salesperson who downloads all sales leads before departing for a competitor. **Example** 700
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`DB_BLOCKS`	**Type** Number **Description** Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.
`DB_CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.
`DB_TOTAL_TIME`	**Type** Number **Description** The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to

	determine whether performance issues are occurring in the database layer or in your own code.
`DISPLAY_TYPE`	**Type** String **Description** The report display type, indicating the run mode of the report. Possible values are: • `D`—Dashboard • `S`—Show Details • `H`—Hide Details
`ENTITY_NAME`	**Type** String **Description** The name of the object affected by the trigger.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `Report`.
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`NUMBER_BUCKETS`	**Type** Number **Description** The number of buckets that were used in the report.
`NUMBER_COLUMNS`	**Type** Number **Description** The number of columns in the report.
`NUMBER_EXCEPTION_FILTERS`	**Type** Number

	Description The number of exception filters that are used in the report.
ORGANIZATION_ID	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
ORIGIN	**Type** String **Description** The context in which the report executed, such as from a UI (Classic, Lightning, Mobile), through an API (synchronous, asynchronous, Apex), or through a dashboard. **Possible Values** • `ReportOpenedFromMobileDashboard`: Report executed when a user clicked a dashboard component on a mobile device and drilled down to a report. • `DashboardComponentUpdated`: Report executed when a user refreshed a dashboard component. • `DashboardComponentPreviewed`: Report executed from a Lightning dashboard component preview. • `ReportRunUsingSynchronousApi`: Report executed from a synchronous API. • `ReportRunUsingAsynchronousApi`: Report executed from an asynchronous API. • `ReportRunUsingApexSynchronousApi`: Report executed from the synchronous Apex API. • `ReportRunUsingApexAsynchronousApi`: Report executed from the asynchronous Apex API. • `ReportExported`: Report executed from a printable view or report export that was not asynchronous nor an API export. • `ReportRunFromClassic`: Report executed from the Run Report option of Salesforce Classic. • `ReportRunFromMobile`: Report executed from the Run Report option of the mobile Salesforce app. • `ReportRunFromLightning`: Report executed from the Run option in Lightning Experience from a non-mobile browser. • `ReportRunFromRestApi`: Report executed from REST API.

	• `ReportPreviewed`: Report executed when a user got preview results while using the report builder. • `ReportScheduled`: Report was scheduled. • `ProbeQuery`: Report executed from a probe query. • `ReportRunFromReportingSnapshot`: Report executed through Snapshot Analytics. • `ReportExportedAsynchronously`: Report was exported asynchronously. • `ReportExportedUsingExcelConnector`: Report was exported using the Excel connector. • `ChartRenderedOnVisualforcePage`: Report executed from a rendered chart on a VisualForce Page. • `ChartRenderedInEmbeddedAnalyticsApp`: Report executed from a rendered chart in an embedded Analytics app. • `ReportRunAndNotificationSent`: Report executed through the notifications API. • `ChartRenderedOnHomePage`: Report executed from a rendered chart on the home page. • `ReportResultsAddedToWaveTrending`: Report executed when a user trended a report in CRM Analytics. • `ReportAddedToCampaign`: Report was added from an Add to Campaign action. • `ReportResultsAddedToEinsteinDiscovery`: Report executed synchronously from Einstein Discovery. • `Unknown`: Report execution origin is unknown. • `Test`: Report execution resulted from a test.
`RENDERING_TYPE`	**Type** String **Description** Describes the format of the report output in Salesforce Classic. If the report was exported in Lightning Experience, this field is blank. **Possible Values** • `W`: Web (HTML) • `E`: Email • `P`: Printable • `X`: Excel • `C`: Comma-separated values (CSV) • `J`: JavaScript Object Notation (JSON) • `D`: Dummy data

Field	Details
`REPORT_ID`	**Type** Id **Description** The 15-character ID of the report that was run.
`REPORT_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the report that was run.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`REQUEST_STATUS`	**Type** String **Description** The status of the request for a page view or user interface action. Possible values are: • `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • `U`—Undefined • `A`—Authorization Error • `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • `N`—Not Found. 404 error.
`ROW_COUNT`	**Type** Number **Description** The number of rows that were processed in the Report event. High row counts, coupled with a high `AVERAGE_ROW_SIZE`, can indicate that a user is downloading information for fraudulent purposes. For example,

	a salesperson who downloads all sales leads before departing for a competitor. **Example** 150
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`SORT`	**Type** String **Description** The sort column and order that was used in the report.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.

`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.
`USER_TYPE`	**Type** String **Description** The category of user license. Possible values are: • `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in. • `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared

with users below them in the customer portal role hierarchy.

- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

Usage

Example: Identify Large Report Exports by User

Get Report event type data from the EventLogFile object using REST:

```
/services/data/v40.0/query?q=SELECT+Id+,+EventType+,+LogFile+,+LogDate+,+LogFileLength+FROM+EventLogFile+WHERE+

    LogDate+>+Yesterday+AND+EventType+=+'Report'
```

After you download the report data to a ReportData database table, query it and filter on reports that were exported with high row counts and size:

```
SELECT USER_ID FROM ReportData WHERE (RENDERING_TYPE=C OR RENDERING_TYPE=X OR
RENDERING_TYPE=P) AND ROW_COUNT>150000 AND AVERAGE_ROW_SIZE>1500
```

SEE ALSO:

EventLogFile Supported Event Types

EventLogFile

Report Export Event Type

Report Export events contain details about reports that a user exported. For example, this event type captures when a user exports a report as Details Only output. But it doesn't capture reports that users export as Formatted Report or XLSX Detail output. For that data, see the Report event type.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`CLIENT_IP`	**Type** String

Field	Details
	Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`CLIENT_INFO`	**Type** String **Description** Information about the client that's using Salesforce services.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `ReportExport`.
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`REPORT_DESCRIPTION`	**Type** String **Description** Information about the report that was run.

REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
RUN_TIME	**Type** Number **Description** The amount of time that the request took in milliseconds.
SESSION_KEY	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
URI	**Type** String **Description** The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	**Type** ID

Field	Details
	Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.

REST API Event Type

REST API events contain details about REST-specific requests.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`CPU_TIME`	**Type** Number

	Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`DB_BLOCKS`	**Type** Number **Description** Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.
`DB_CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.
`DB_TOTAL_TIME`	**Type** Number **Description** The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.
`ENTITY_NAME`	**Type** Set **Description** The name of the object accessed by the API request. For example: `Account`, `Opportunity`, `Contact`, and so on.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `RestApi`.
`LOGIN_KEY`	**Type** String

	Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`MEDIA_TYPE`	**Type** String **Description** The media type of the response.
`METHOD`	**Type** String **Description** The HTTP method of the request. For example: `GET`, `POST`, `PUT`, and so on.
`NUMBER_FIELDS`	**Type** Number **Description** The number of fields or columns, where applicable.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`REQUEST_SIZE`	**Type** Number **Description** The size of the callout request body, in bytes.
`REQUEST_STATUS`	**Type** String **Description** The status of the request for a page view or user interface action. Possible values are: • `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.

	• `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • `U`—Undefined • `A`—Authorization Error • `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • `N`—Not Found. 404 error.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`RESPONSE_SIZE`	**Type** Number **Description** The size of the callout response, in bytes.
`ROWS_PROCESSED`	**Type** Number **Description** The number of rows that were processed in the request. For example: `150`.
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`STATUS_CODE`	**Type** Number

	Description The HTTP response status code for the request.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_AGENT`	**Type** Number **Description** The numeric code for the type of client used to make the request (for example, the browser, application, or API).
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`

`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.
`USER_TYPE`	**Type** String **Description** The category of user license. Possible values are: • `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in. • `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.

	• `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

EventLogFile Supported Event Types

EventLogFile

Sandbox Event Type

Sandbox events contain details about sandbox copies.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`CURRENT_SANDBOX_ORG_ID`	**Type** Id **Description** The 15-character ID of the current sandbox organization.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `Sandbox`.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`PENDING_SANDBOX_ORG_ID`	**Type** Id **Description** The 15-character ID of the target sandbox org.
`REQUEST_ID`	**Type** String

Field	Details
	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
SANDBOX_ID	**Type** Id **Description** The 15-character ID of the sandbox organization.
STATUS	**Type** String **Description** The status of the sandbox copy.
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
USER_ID	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
USER_ID_DERIVED	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

Field	Details
	For example: `00590000000I1SNIA0`.

SEE ALSO:

EventLogFile Supported Event Types

EventLogFile

Search Event Type

Search events contain details about the user's search query. All searches within the app, including Experience Cloud sites, are included. However, unauthenticated users won't have a unique Salesforce user ID.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `Search`.
`NUM_RESULTS`	**Type** Number **Description** Number of results returned by the search query. **Possible Values** • 0 • 25 • 1000
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`PREFIXES_SEARCHED`	**Type** String **Description** Space-separated list of key prefixes that were searched. **Example** 001 006 ka0

`QUERY_ID`	**Type** String **Description** Unique ID of the search query. **Example** -2vx8relit08r
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`SEARCH_QUERY`	**Type** String **Description** The first 100 characters of the search query. **Example** Salesforce
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`USER_ID`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

	For example: `00590000000I1SNIA0`.

EventLogFile

Search Click Event Type

Search Click events contain details about the user's interaction with the search results. All searches within the app, including Experience Cloud sites, are included. However, unauthenticated users won't have a unique Salesforce user ID.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`CLICKED_RECORD_ID`	**Type** String **Description** The 15-character ID of the result the user clicked in the search results page. **Example** a07B00000031pRV
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `SearchClick`.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`QUERY_ID`	**Type** String **Description** Unique ID of the search query. **Example** -2vx8relit08r

RANK	**Type** Number **Description** Ranking of the result clicked in the search results page. **Example** 2
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
TIMESTAMP	**Type** String **Description** The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
USER_ID	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.

EventLogFile Supported Event Types

EventLogFile

Sites Event Type

Sites events contain details of Site.com requests. Requests can originate from the browser (UI).

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`DB_TOTAL_TIME`	**Type** Number **Description** The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `Sites`.
`HTTP_HEADERS`	**Type** String **Description** The HTTP headers that were sent in the request.
`HTTP_METHOD`	**Type** String

	Description The HTTP method of the request. For example: `GET`, `POST`, `PUT`, and so on.
`IS_API`	**Type** Boolean **Description** True if this page was an API or Web Services request.
`IS_ERROR`	**Type** Boolean **Description** True if this page was an error page.
`IS_FIRST_REQUEST`	**Type** Boolean **Description** 1 if this page is the first Visualforce transaction in the request, or 0 if it isn't.
`IS_GUEST`	**Type** Boolean **Description** True if this page was a guest (unauthenticated) request.
`IS_SECURE`	**Type** Boolean **Description** True if this request is secure.
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.

`PAGE_NAME`	**Type** String **Description** The name of the Visualforce page that was requested.
`QUERY`	**Type** String **Description** The SOQL query, if one was performed.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`REQUEST_STATUS`	**Type** String **Description** The status of the request for a page view or user interface action. Possible values are: • `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • `U`—Undefined • `A`—Authorization Error • `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • `N`—Not Found. 404 error.
`REQUEST_TYPE`	**Type** String **Description** The request type. Possible values are: • `page`—a normal request for a page

Field	Details
	• `content_UI`—a content request for a page that originated in the user interface • `content_apex`—a content request initiated by an Apex call • `PDF_UI`—a request for a page in PDF format through the user interface • `PDF_apex`—a request for PDF format by an Apex call (usually a Web Service call)
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`SITE_ID`	**Type** Id **Description** The 15-character ID of the Site.com site.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String

	Description The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.
`USER_TYPE`	**Type** String **Description** The category of user license. Possible values are: • `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.

	• `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal. • `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

EventLogFile Supported Event Types
EventLogFile

SOAP API Event Type

SOAP API events contain details about your org's SOAP API request activity.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`API_TYPE`	**Type** String **Description** The type of API request. Possible values are: • `D`—Apex Class • `E`—SOAP Enterprise • `M`—SOAP Metadata • `P`—SOAP Partner • `S`—SOAP Apex • `T`—SOAP Tooling • `f`—Feed

	• `l`—Live Agent • `p`—SOAP ClientSync
`API_VERSION`	**Type** String **Description** The version of the API that's being used. For example: `36.0`.
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`CLIENT_NAME`	**Type** String **Description** The name of the client that's using Salesforce services. This field is an optional parameter that can be passed in API calls. If blank, the caller didn't specify a client in the CallOptions header.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`DB_BLOCKS`	**Type** Number **Description** Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.
`DB_CPU_TIME`	**Type** Number

Field	Details
	Description The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.
DB_TOTAL_TIME	**Type** Number **Description** The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.
ENTITY_NAME	**Type** Set **Description** The name of the object accessed by the API request. For example: `Account`, `Opportunity`, `Contact`, and so on.
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `API`.
EXCEPTION_MESSAGE	**Type** String **Description** The exception message for a SOAP API request. An exception message gives details about errors in handling an API request, such as why an API request failed. For example: `common.exception.ApiException: startDate cannot be more than 30 days ago`.
LOGIN_KEY	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.

METHOD_NAME	**Type** String **Description** The name of the calling Apex method.
ORGANIZATION_ID	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
REQUEST_SIZE	**Type** Number **Description** The size of the callout request body, in bytes.
REQUEST_STATUS	**Type** String **Description** The status of the request for a page view or user interface action. Possible values are: • `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • `U`—Undefined • `A`—Authorization Error • `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • `N`—Not Found. 404 error.

Field	Details
`RESPONSE_SIZE`	**Type** Number **Description** The size of the callout response, in bytes.
`ROWS_PROCESSED`	**Type** Number **Description** The number of rows that were processed in the request. For example: `150`.
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.

`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.
`USER_TYPE`	**Type** String **Description** The category of user license. Possible values are: • `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in. • `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared

	with users below them in the customer portal role hierarchy. • PowerPartner—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • SelfService—Users whose access is limited because they're organization customers and access the application through a self-service portal. • Standard—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

EventLogFile

Time-Based Workflow Event Type

Time-Based Workflow events contain details about queue activity monitoring.

For details about event monitoring, see the Trailhead Event Monitoring module or the REST API Developer's Guide.

Fields

Field	Details
CLIENT_IP	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CPU_TIME	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DATA	**Type** String

Field	Details
	Description The record details of time queue activity.
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `TimeBasedWorkflow`.
LOG_GROUP_ID	**Type** String **Description** Marks log records that are committed or rolled back.
LOGIN_KEY	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
NUMBER_OF_RECORDS	**Type** Number **Description** The number of processed records.
ORGANIZATION_ID	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
RUN_TIME	**Type** Number

Field	Details
	Description The amount of time that the request took in milliseconds.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`TYPE`	**Type** String **Description** The type of time-based workflow event. • `UIDEL`—An entry was deleted from the Time-Based Workflow page in Setup. • `ERRDEL`—An entry was deleted from the workflow queue, because there was an error reading the record that triggered the workflow rule. The associated time-dependent actions weren't processed. • `DELETE`—An entry was deleted from the workflow queue, because it's no longer relevant. For example, the criteria are no longer met by the associated record. If the evaluation date for the entry changed, the entry is re-added with the updated evaluation date. • `PROC`—An entry was deleted from the workflow queue after processing a time-dependent action.

URI	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
URI_ID_DERIVED	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
USER_ID_DERIVED	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `0059000000I1SNIA0`.

Transaction Security Event Type

Transaction Security events contain details about policy execution. This event type is supported in API version 55.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
CLIENT_IP	**Type** String

Field	Details
	Description The IP address of the client that's using Salesforce services. A Salesforce internal IP, such as a login from AppExchange, is shown as "Salesforce.com IP". For example: `96.43.144.26`
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`EVALUATION_TIME_MS`	**Type** Number **Description** The time in milliseconds used to evaluate the policy.
`EVENT_TIMESTAMP`	**Type** String **Description** The time at which the Transaction Security event was generated in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). This value can be earlier than TIMESTAMP_DERIVED by the amount of time taken to log the event. For example: `2015-07-27T11:32:59.555Z`
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `TransactionSecurity`.
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a given user's login session. It starts

	with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`
`POLICY_ID`	**Type** Id **Description** The 15-character ID of the policy being evaluated. For example: `00530000009M943`
`POLICY_ID_DERIVED`	**Type** Id **Description** The 18-character case-insensitive ID of the policy being evaluated. For example: `00590000000I1SNIA0`
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`
`RESULT`	**Type** String **Description** The outcome of evaluating the policy. For example: `TRIGGEREDzzz` or `NOT TRIGGERED`

`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`
`URI_ID_DERIVED`	**Type** ID

	Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`

ORGANIZATION_ID	**Type** Id **Description** The 15-character ID of the organization. For example: 00D000000000123.
REFERRER_URI	**Type** String **Description** The referring URI of the page that's receiving the request.
REQUEST_ID	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
REQUEST_STATUS	**Type** String **Description** The status of the request for a page view or user interface action. Possible values are: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error.
RUN_TIME	**Type** Number **Description** The amount of time that the request took in milliseconds.

`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For more granular URI information for Lightning Experience and the Salesforce app, see the Lightning Error, Lightning Interaction, Lightning Page View, and Lightning Performance event types. **Examples** `/aura` (Lightning Experience), `/lightning` (Lightning Experience and the Salesforce app), `/home/home.jsp` (Salesforce Classic)
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id

Field	Details
	Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.
`USER_TYPE`	**Type** String **Description** The category of user license. Possible values are: • `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in. • `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.

	• `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

EventLogFile Supported Event Types

EventLogFile

Visualforce Request Event Type

Visualforce Request events contain details of Visualforce requests. Requests can originate from the browser (UI).

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`CONTROLLER_TYPE`	**Type** Number **Description** The type of controller that's used by the requested Visualforce page. **Possible Values** • `0`: NOT_SPECIFIED—The controller type is not specified. • `1`: STANDARD—The controller is a standard controller. • `2`: CUSTOM—The controller is a custom controller or controller extension. • `3`: JAVA—For internal use only. • `4`: STANDARD_SET—The controller is a standard list controller. • `5`: SPRING—Not used.
`CPU_TIME`	**Type** Number

Field	Details
	Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DB_BLOCKS	**Type** Number **Description** Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.
DB_CPU_TIME	**Type** Number **Description** The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.
DB_TOTAL_TIME	**Type** Number **Description** The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `VisualforceRequest`.
HTTP_METHOD	**Type** String **Description** The HTTP method of the request. For example: `GET`, `POST`, `PUT`, and so on.
IS_AJAX_REQUEST	**Type** Boolean **Description** The value is `true` if the request is a partial page request.

`IS_FIRST_REQUEST`	**Type** Boolean **Description** 1 if this page is the first Visualforce transaction in the request, or 0 if it isn't.
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`MANAGED_PACKAGE_NAMESPACE`	**Type** String **Description** If the page is part of a managed package, the namespace of that package.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`PAGE_NAME`	**Type** String **Description** The name of the Visualforce page that was requested.
`QUERY`	**Type** String **Description** The query string used to access the requested Visualforce page. **Example** Let's assume that the requested Visualforce page (`/apex/myAccountDetailPage?id=001xx000003GYv6AAG`) shows details of the account whose ID is in the URL. The value of `QUERY` in this case is `?id=001xx000003GYv6AAG`.
`REQUEST_ID`	**Type** String

Field	Details
	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`REQUEST_SIZE`	**Type** Number **Description** The size of the request body, in bytes. Value is -1 if the request body content is larger than 2GB, or if the request has no body (for example, a typical GET request).
`REQUEST_STATUS`	**Type** String **Description** The status of the request for a page view or user interface action. Possible values are: • `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • `U`—Undefined • `A`—Authorization Error • `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • `N`—Not Found. 404 error.
`REQUEST_TYPE`	**Type** String **Description** The request type. Possible values are: • `page`—a normal request for a page • `content_UI`—a content request for a page that originated in the user interface • `content_apex`—a content request initiated by an Apex call • `PDF_UI`—a request for a page in PDF format through the user interface

	• `PDF_apex`—a request for PDF format by an Apex call (usually a Web Service call)
`RESPONSE_SIZE`	**Type** Number **Description** The size of the response, in bytes.
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID

	Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_AGENT	**Type** Number **Description** The numeric code for the type of client used to make the request (for example, the browser, application, or API).
USER_ID	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 0059000000I1SNIA0.
USER_TYPE	**Type** String **Description** The category of user license. Possible values are: • CsnOnly—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • CspLitePortal—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • CustomerSuccess—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • Guest—Users whose access is limited so that your customers can view and interact with your site without logging in.

	• `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal. • `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.
`VIEW_STATE_SIZE`	**Type** Number **Description** The size of the Visualforce view state, in bytes.

SEE ALSO:

EventLogFile Supported Event Types

EventLogFile

Wave Change Event Type

Wave Change events represent route or page changes made in the CRM Analytics user interface. A Wave Change event type is captured every time the user opens a new CRM Analytics asset or tab, switches between tabs, or changes dashboard pages. Wave Change events are logged when opening new tabs and switching back to previously opened tabs.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`ANALYTICS_MODE`	**Type** String **Description** The location in which the dashboard is displayed. In the Salesforce mobile app, embedded dashboards are logged as `embedded` first. When a user interacts

	with the dashboard, a full-screen dashboard is displayed to allow for user interaction, and is logged as `mobileNative`. Possible values are: • `studio`—Analytics Studio • `tab`—Analytics tab • `embedded`— Embedded in Aura or Lightning. • `embeddedInCommunities`—Embedded in Experience Cloud. • `mobileNative`—CRM Analytics mobile app for iOS/Android or Salesforce mobile app for iOS/Android
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `WaveChange`.
`IS_MOBILE`	**Type** Boolean **Description** If `true`, the dashboard is displayed in the Tableau CRM mobile app for iOS and

	Android, in the Salesforce mobile app for iOS and Android, or in a mobile browser.
`IS_NEW`	**Type** Boolean **Description** The field indicates that this action opens a new tab or goes back to a previously opened tab. If the change routes to a new page, the value of this field is true. If it routes to an existing page, this field is false.
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`PAGE_CONTEXT`	**Type** String **Description** The context of the page in which the dashboard is displayed. In the Salesforce mobile app, embedded dashboards are logged as `aura` first. When a user interacts with the dashboard, a full-screen dashboard is displayed to allow for user interaction, and is logged as `iOS` or `android`. Possible values are: • `aura`—Lightning Components • `vf`—Visualforce

	• `iOS`— CRM Analytics or Salesforce mobile app for iOS • `android`— CRM Analytics or Salesforce mobile app for Android
`PAGE_ID`	**Type** String **Description** The ID of the CRM Analytics dashboard page. This field is only available in v58.0 and higher.
`RECORD_ID`	**Type** String **Description** The Salesforce ID of the CRM Analytics object.
`REOPEN_COUNT`	**Type** Number **Description** If `IS_NEW` is false, the number of times that an existing page opens.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.
`SAVED_VIEW_ID`	**Type** String

	Description The ID of the CRM Analytics dashboard saved view.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`TAB_ID`	**Type** String **Description** The ID of the particular Analytics tab in the user interface. For example: `dashboard-0FKB0000000Ec64GDK`.
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`TYPE`	**Type** String **Description** The CRM Analytics object type.

`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`.
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.
`VIEW_MODE`	**Type** String **Description** The view mode for the CRM Analytics asset. Possible values include `view`, `edit`, `present`, `json`, or `print`.
`WAVE_SESSION_ID`	**Type** String **Description** The ID of a particular session of CRM Analytics. Use this field to determine

Field	Details
	which log lines originated from a particular session.
WAVE_TIMESTAMP	**Type** Number **Description** The time at which this log line was generated.

EventLogFile Supported Event Types

EventLogFile

Wave Download Event Type

Wave Download events represent downloads made from lens explorations and dashboard widgets in the CRM Analytics user interface. A Wave Download event type is captured when a user downloads images (.png), Microsoft® Excel® data (.xls), or comma-separated values (.csv) files.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
ASSET_ID	**Type** ID **Description** The ID of the asset the user downloads from.
ASSET_TYPE	**Type** String **Description** The type of the asset the user downloads from. **Values** • `Lens`—A *lens* is a view into a dataset used in an exploratory mode or to get insight to a specific business question. The lens can be saved and shared independently. It can also be clipped to a dashboard. • `Dashboard`—A *dashboard* is a curated set of charts, metrics, and tables based on the data in one or more lenses.
CLIENT_IP	**Type** String

Field	Details
	Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". **Example** 96.43.144.26
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`DATASET_IDS`	**Type** String **Description** Comma-separated list of IDs of utilized data sets.
`DOWNLOAD_FORMAT`	**Type** String **Description** The data format of the export. **Values** • `png`—Image • `csv`—Comma-separated values • `xls`— Microsoft Excel
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `WaveDownload`.
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. **Example** GeJCsym5eyvtEK2I
`NUMBER_OF_RECORDS`	**Type** Number

Field	Details
	Description The number of records exported.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. **Example** 00D000000000123
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. **Example** 3nWgxWbDKWWDIk0FKfF5DV
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.
`SESSION_KEY`	**Type** String **Description** The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. **Example** d7DEq/ANa7nNZZVD
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).

Field	Details
	For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`URI`	**Type** String **Description** The URI of the page that’s receiving the request. **Example** `/home/home.jsp`
`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that’s receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who’s using Salesforce services through the UI or the API. **Example** `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who’s using Salesforce services through the UI or the API. **Example** `00590000000I1SNIA0`
`USER_TYPE`	**Type** String **Description** The type of Salesforce user.
`WAVE_SESSION_ID`	**Type** String **Description** The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session.
`WAVE_TIMESTAMP`	**Type** Number

Field	Details
	Description The time at which this log line was generated.

Wave Interaction Event Type

Wave Interaction events represent route or page changes made in the CRM Analytics user interface. A Wave Interaction event type is captured when a tab is closed. It also collates the interaction statistics over the life of the tab, including total open time, read time, and so on. These statistics are aggregated as you go to other tabs and return, and logged only once when the tab is closed.

Note: Because Wave Interaction events are logged only when the tab or browser window is closed, these events might not match Wave Change events exactly if a user allows their Salesforce session to time out before closing.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
`CLIENT_IP`	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
`CPU_TIME`	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
`EVENT_TYPE`	**Type** String **Description** The type of event. The value is always `WaveInteraction`.
`LOGIN_KEY`	**Type** String **Description** The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

	For example: `GeJCsym5eyvtEK2I`.
`NUM_CLICKS`	**Type** Number **Description** The number of clicks performed on a page in the CRM Analytics user interface.
`NUM_SESSIONS`	**Type** Number **Description** The number of times a user returned to a particular page.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`READ_TIME`	**Type** Number **Description** The amount of time a user spent on a particular tab.
`RECORD_ID`	**Type** String **Description** The Salesforce ID of the CRM Analytics object.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.
`SESSION_KEY`	**Type** String

Field	Details
	Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`TAB_ID`	**Type** String **Description** The ID of the particular Analytics tab in the user interface. **Example** dashboard-0FKB0000000Ec64GDK
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`TOTAL_TIME`	**Type** Number **Description** The total amount of time a tab was open in milliseconds.
`TYPE`	**Type** String **Description** The CRM Analytics object type.
`URI`	**Type** String **Description** The URI of the page that's receiving the request. For example: `/home/home.jsp`.

`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `0059000000I1SNIA0`.
`VIEW_MODE`	**Type** String **Description** The view mode for the CRM Analytics asset. Possible values include `view`, `edit`, `present`, `json`, or `print`.
`WAVE_SESSION_ID`	**Type** String **Description** The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session.
`WAVE_TIMESTAMP`	**Type** Number **Description** The time at which this log line was generated.

EventLogFile Supported Event Types

EventLogFile

Wave Performance Event Type

Wave Performance events help you track trends in your Analytics performance.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Fields

Field	Details
CLIENT_IP	**Type** String **Description** The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`.
CPU_TIME	**Type** Number **Description** The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
EPT	**Type** Number **Description** The experienced page time in milliseconds.
EVENT_TYPE	**Type** String **Description** The type of event. The value is always `WavePerformance`.
IS_INITIAL	**Type** Boolean **Description** Indicates whether the event is for the initial load of dashboard (`true`) or not (`false`).
LOGIN_KEY	**Type** String

Field	Details
	Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`.
`NAME`	**Type** String **Description** The asset title or query string.
`ORGANIZATION_ID`	**Type** Id **Description** The 15-character ID of the organization. For example: `00D000000000123`.
`QUERY_ID`	**Type** String **Description** This field is deprecated in API version 50.0. The number of queries can be determined using the Uri Event type logs, referenced here on page 1943
`RECORD_ID`	**Type** String **Description** The Salesforce ID of the CRM Analytics object.
`REQUEST_ID`	**Type** String **Description** The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. For example: `3nWgxWbDKWWDIk0FKfF5DV`.
`RUN_TIME`	**Type** Number **Description** The amount of time that the request took in milliseconds.

`SESSION_KEY`	**Type** String **Description** The user’s unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`.
`TAB_ID`	**Type** String **Description** The ID of the particular Analytics tab in the user interface. **Example** dashboard-0FKB0000000Ec64GDK
`TIMESTAMP`	**Type** String **Description** The access time of Salesforce services in GMT. For example: `20130715233322.670`.
`TIMESTAMP_DERIVED`	**Type** DateTime **Description** The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.
`TYPE`	**Type** String **Description** The CRM Analytics object type. This field is scheduled for deprecation in v59.0. Use the new `IS_INITIAL` field to determine the log line type.
`URI`	**Type** String **Description** The URI of the page that’s receiving the request. For example: `/home/home.jsp`.

`URI_ID_DERIVED`	**Type** ID **Description** The 18-character case insensitive ID of the URI of the page that's receiving the request.
`USER_ID`	**Type** Id **Description** The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`
`USER_ID_DERIVED`	**Type** Id **Description** The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: `00590000000I1SNIA0`.
`VIEW_MODE`	**Type** String **Description** The view mode for the CRM Analytics asset. Possible values include `view`, `edit`, `present`, `json`, or `print`.
`WAVE_SESSION_ID`	**Type** String **Description** The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session.
`WAVE_TIMESTAMP`	**Type** Number **Description** The time at which this log line was generated.

EventLogFile Supported Event Types

EventLogFile

EventRelation

Represents a person (a user, lead, or contact) or a resource (such as a conference room) invited to an event. This object lets you add or remove invitees from an event and use the API to manage invitees' responses to invitations. If Shared Activities is enabled, EventRelation can also represent other objects that are related to an event. EventRelation does not support triggers, workflow, or data validation rules.

EventRelation allows a variable number of relationships and handles deleted events differently, depending on whether Shared Activities is enabled.

A non-recurring event can have up to 1,000 invitees. A recurring event can have up to 100 invitees.

If Shared Activities Isn't Enabled

- EventRelation records only represent invitees (contacts, users, and resources).
- An event can be related to one contact or lead.

If Shared Activities Is Enabled

- EventRelation records can represent:
  - Invitees (`IsInvitee=` is set to `true`)

    OR

  - Related contacts or lead (`IsParent` is set to `true`)
- An event can be related to up to 50 contacts or one lead. These people may or may not be invitees. The number of allowed invitees is not affected by the number of related contacts. If a contact or lead is also an invitee, there is one EventRelation record for that person with `IsInvitee` and `IsParent` are set to `true`.
- An event can be related to a lead, contact, resource, account, or opportunity.
- An event can be related to a custom object that has the `HasActivities` attribute set to `true`.
- If you delete an event, then relations between the event and any specified contacts, leads, and other records are also deleted.
- If you delete the EventRelation record representing a relation then the corresponding relation field may be cleared on the event.
- If you delete the EventRelation record representing the `WhoId` on an event, then another Who, if any, from the event's `EventWhoIds` field will be promoted to the `WhoId`.
- If you restore a deleted event, relations between the event and any specified contacts, leads, and records are also restored. The `WhoId`, `WhatId`, and `AccountId` field values are recalculated using the field values on EventRelation.

Whether or not Shared Activities is enabled, an event can be related to one other kind of record, such as an account, an opportunity, or a custom object.

Note:

- With API versions 26.0 and later, the EventRelation object replaces the EventAttendee object, and the EventAttendee object is no longer visible. You can still query the EventAttendee object using packages that support API versions 25.0 and earlier, or by using Apex.
- An EventRelation object can't be created for a child event.
- EventRelation includes deactivated users.
- In API versions 25.0 and earlier, you can't use `query()`, `delete()`, or `update()` with events related to more than one contact.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`AccountId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Contains the Account ID of the relation. For information on IDs, see ID Field Type. `AccountId` is visible when Shared Activities is enabled.
`EventId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Contains the ID of the event. This value can't be changed after it's been specified. This is a relationship field. **Relationship Name** Event **Relationship Type** Lookup **Refers To** Event
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is `Deleted`.
`IsInvitee`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether the relation is an invitee. • `IsInvitee` is visible while Shared Activities is being enabled, after it has been enabled, and while it is being disabled. • `IsInvitee` defaults to `true` while Shared Activities is being enabled, after it has been enabled, and while it is being disabled if `IsInvitee`, `IsParent`, and `IsWhat` are not set. This configuration ensures compatibility when Shared Activities isn't enabled and EventRelation represents event invitees only. • `IsInvitee` defaults to `false` when Shared Activities is enabled if `IsParent` is set to `true`.
`IsParent`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** `IsParent` is visible only when Shared Activities is enabled. When `false`, indicates that the relation is an invitee (a contact, lead, or user). When `true`, indicates that the relation is a Who or What, as determined by `IsWhat` field.
`IsWhat`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** `IsWhat` is visible only when Shared Activities is enabled. The value is relevant only if `IsParent` is `true`. When `IsWhat` is `true`, the relation specified by `RelationId` is a What (an account, opportunity, custom object, etc.). When `IsWhat` is `false`, the relation specified by `RelationId` is a Who (a contact, lead, or user).
`RelationId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Contains the ID of the person (User, Contact, or Lead) or the resource invited to an event. When Shared Activities is enabled, `RelationId` can also contain the ID of an account, opportunity, or other object related to an event. This value can't be changed after it's been specified. This is a polymorphic relationship field.

Field	Details
	Relationship Name Relation **Relationship Type** Lookup **Refers To** Calendar, Contact, Lead, User
`RespondedDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Indicates the most recent date and time when the invitee responded to an invitation to an event.
`Response`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Contains optional text that the invitee can enter when responding to an invitation to an event.
`Status`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the invitee status with one of the following values: • `New`: Invitee has received the invitation but hasn't yet responded. This value is the default. • `Declined`: Invitee has declined the invitation. • `Accepted`: Invitee has accepted the invitation. Note: `Uninvited` and `Maybe` aren't currently supported.

Usage

- Invitee related lists display slightly different content. In the Salesforce mobile app, the invitee related list includes invitees only, whereas in the full site, it also includes the event owner. To reproduce the full site functionality in the Salesforce mobile app, use the following API queries.

If you use Shared Activities in your Salesforce org, use this query:

```
SELECT RelationId FROM EventRelation WHERE isInvitee = true AND eventId='[Event_Id]'
```

where *Event_Id* is the child event's ID.

If you don't use Shared Activities, use this query:

```
SELECT RelationId FROM EventRelation WHERE eventId='[Event_Id]'
```

These queries get the main event's relations and display them for the given child event. To further filter the results, add a `WHERE` clause.

Assigning resource attendance status

You can add a resource to an event only when the resource is available. The only attendance status that can be assigned to resources is Accepted. Events can't be saved when resources you've added aren't available.

Create an invitee if Shared Activities is enabled (or during the process of enabling it or rolling back)

If the invitee is already a contact or lead, update `IsInvitee` to `true`.

If the invitee is not already a contact or lead, create an EventRelation object for the invitee with `IsInvitee` set to `true`.

Create an invitee if Shared Activities is not enabled

Create an EventRelation object for the invitee.

Insert a contact or lead relation

```
EventRelation er = new EventRelation(EventId = '00UD0000005zijH',
    RelationId = '003D000000Q8aeV', isParent = true, isInvitee = false);
insert er;
```

Determine what events a given invitee is attending

To determine all the events that a particular person is attending during a given time period (for example, next week), you can have a client application query the Event object for a given date range, iterate through the results, and, for each event, query the EventRelation object to determine whether the particular person (`RelationId`) has accepted an invitation to that event.

Insert an invitee relation

If `isParent`, `isWhat` and `IsInvitee` are not set, and `RelationId` is a contact, lead, user, or calendar, `IsInvitee` defaults to `true`. This means if an EventRelation isn't specifically inserted as a relation to a contact or lead, it's treated as an Invitee relation by default.

```
EventRelation er = new EventRelation(EventId = '00UD0000005zijH',
    RelationId = '003D000000Q8adV');
insert er;
```

Query relations to a contact or a lead

```
List<EventRelation> whoRelations = [SELECT Id, Relation.Name FROM
    EventRelation WHERE EventId = '00UD0000005zijD' AND isParent = true AND isWhat =
false];
```

Query invitee relations

```
List<EventRelation> inviteeRelations = [SELECT Id, Relation.Name FROM
    EventRelation WHERE EventId = '00UD0000005zijD' AND isInvitee = true];
```

Update an invitee relation to a contact or lead invitee relation

```
EventRelation er = [SELECT Id FROM EventRelation WHERE EventId =
    '00UD0000005zijD' AND isInvitee = true and isParent = false LIMIT 1];
er.isParent = true;
update er;
```

Update a contact or lead relation to a contact or lead invitee relation

```
EventRelation er = [SELECT Id FROM EventRelation WHERE EventId =
    '00UD0000005zijD' AND isParent = true and isInvitee = false LIMIT 1];
er.isInvitee = true;
update er;
```

Reproduce invitee related list functionality in the Salesforce mobile app

Invitee related lists display slightly different content in the Salesforce mobile app and the full site. In the app, the invitee related list includes invitees only, whereas in the full site, it also includes the event owner.

If you use Shared Activities in your Salesforce org, use the following query to reproduce the full site functionality in the Salesforce mobile app:

```
SELECT RelationId FROM EventRelation WHERE isInvitee = true AND eventId='[Event_Id]'
```

where *`Event_Id`* is the child event's ID.

If you don't use Shared Activities, use this query:

```
SELECT RelationId FROM EventRelation WHERE eventId='[Event_Id]'
```

These queries get the main event's relations and display them for the given child event. To further filter the results, add a `WHERE` clause.

Send email notifications

To send email notifications for a given event, query EventRelation for the event, iterate through the list, examine the status, and send email notifications to every person who accepted the invitation.

Syncing Events with Lightning Sync

Attendee statuses (Accepted or Maybe, Declined, or No Response) sync from Microsoft® Exchange or Google to Salesforce, but not from Salesforce to Exchange or Google. Be wary of creating API flows that update attendee status in Salesforce for users set up to sync both ways. Eventually the original Exchange or Google status overrides the update made in Salesforce.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

EventRelationChangeEvent (API version 44.0)

Change events are available for the object.

Event

EventWhoRelation

Overview of Salesforce Objects and Fields

EventBusSubscriber

Represents a trigger, process, or flow that's subscribed to a platform event or a change data capture event. Doesn't include CometD subscribers.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

EventBusSubscriber is read only and can only be queried. As of Summer '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field	Details
`ExternalId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID of the subscriber. For example, the trigger ID.
`LastError`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The error message that the last thrown `EventBus.RetryableException` contains. This field applies to Apex triggers only. Available in API version 43.0 and later.
`Name`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the subscribed item, such as the trigger or process name. If the subscribed item's name is "Process", at least one flow Pause element is subscribed to the event.
`Position`	**Type** int

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The replay ID of the last event that the subscriber processed.
`Retries`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of times the trigger was retried due to throwing the `EventBus.RetryableException`. This field applies to Apex triggers only. Available in API version 43.0 and later.
`Status`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates the status of the subscriber. Can be one of the following values: • `Running`—The subscriber is actively listening to events. If you modify the subscriber, the subscription continues to process events. • `Error`— The subscriber was disconnected and stopped receiving published events. A trigger reaches this state when it exceeds the number of maximum retries with the `EventBus.RetryableException`. Trigger assertion failures and unhandled exceptions don't cause the error state. We recommend limiting the retries to fewer than nine times to avoid reaching this state. When you fix and save the trigger, or for a managed package trigger, if you redeploy the package, the trigger resumes automatically from the tip, starting from new events. Also, you can resume a trigger subscription in the subscription detail page that you access from the platform event page. • `Suspended`—The subscriber is disconnected and can't receive events because a Salesforce admin suspended it or due to an internal error. You can resume a trigger subscription in the subscription detail page that you access from the platform event page. To resume a process, deactivate it and then reactivate it. If you modify the subscriber, the subscription resumes automatically from the tip, starting from new events. For more information, see View and Manage an Event's Subscribers on the Platform Event's Detail Page in the *Platform Events Developer Guide*.
`Tip`	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The replay ID of the last published event. Note: For high-volume platform events and change events, the value for Tip isn't available and is always -1.
Topic	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the subscription channel that corresponds to a platform event or change event. For a platform event, the topic name is the event name appended with `__e`, such as `MyEvent__e`. For a change event, the topic is the name of the change event, such as `AccountChangeEvent`.
Type	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The subscriber type (`ApexTrigger`). If the subscriber is a process or flow Pause element, the type is blank.

Usage

Use EventBusSubscriber to query details about subscribers to a platform event. You can get all subscribers for a particular event by filtering on the `Topic` field, as follows.

```
SELECT ExternalId, Name, Position, Status, Tip, Type
FROM EventBusSubscriber
WHERE Topic='Low_Ink__e'
```

EventRelayConfig

Represents the configuration of an event relay, which relays platform events and change data capture events from Salesforce to Amazon EventBridge. This object is available in API version 56.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

- To retrieve or query this object, you must have the View Setup and Configuration permission.
- This object is read-only. To configure an event relay, use EventRelayConfig in Tooling API or EventRelayConfig in Metadata API.

Fields

Field	Details
DestinationResourceName	**Type** string **Properties** Filter, Group, Sort **Description** The developer name of the named credential, which stores the AWS account information. The `destinationResourceName` value contains the `callout:` prefix. For example: `callout:MyRelayNamedCredential`
DeveloperName	**Type** string **Properties** Filter, Group, Sort **Description** Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is **Record Type Name**. This field is automatically generated, but you can supply your own value if you create the record using the API.
EventChannel	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The full name of the event channel used in the event relay. For example: `MyRelayChannel__chn`
Language	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort

Field	Details
	Description The language of the EventRelayConfig. Possible values are: • `da`—Danish • `de`—German • `en_US`—English • `es`—Spanish • `es_MX`—Spanish (Mexico) • `fi`—Finnish • `fr`—French • `it`—Italian • `ja`—Japanese • `ko`—Korean • `nl_NL`—Dutch • `no`—Norwegian • `pt_BR`—Portuguese (Brazil) • `ru`—Russian • `sv`—Swedish • `th`—Thai • `zh_CN`—Chinese (Simplified) • `zh_TW`—Chinese (Traditional)
MasterLabel	**Type** string **Properties** Filter, Group, Sort **Description** Label for the EventRelayConfig. In the UI, this field is Event Relay Config.
NamespacePrefix	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix associated with this object. Each Developer Edition organization that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. The namespace prefix can have one of the following values:

Field	Details
	• In Developer Edition organizations, the namespace prefix is set to the namespace prefix of the organization for all objects that support it. There is an exception if an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition organization of the package developer. • In organizations that are not Developer Edition organizations, `NamespacePrefix` is only set for objects that are part of an installed managed package. There is no namespace prefix for all other objects.
`RelayOption`	**Type** textarea **Properties** Nillable **Description** A JSON-encoded string that contains an option for resuming an event relay after the system recovers from an error. This option is used if the event relay can't resume after the last relayed event. The options available are: • `"{\"ReplayRecovery\":\"LATEST\"}"`—(Default) Start relaying events from new events received in the event bus. Use this option if you aren't interested in missed events while the relay was down. • `"{\"ReplayRecovery\":\"EARLIEST\"}"`—Resend all events stored in the event bus and relay new events thereafter. The event bus stores events for up to three days. Use this option if you want to reprocess all stored events and catch up on missed events.
`State`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The execution state of the event relay. Possible values are: • `RUN`—The event relay is running and actively relaying event messages from Salesforce to Amazon EventBridge. • `PAUSE`—An administrator paused the event relay. No events are relayed to Amazon EventBridge during this status. All current state information is saved. • `STOP`—(Default) The event relay is stopped and no events are relayed to Amazon EventBridge. All current state information is deleted.
`UsageType`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Reserved for future use.

EventRelayFeedback

Represents execution state information about an event relay from Salesforce to Amazon EventBridge for platform events and change data capture events. Query this object to get information such as the event relay status and any error message. This object is available in API version 56.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
`ErrorCode`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The error code of the last error that occurred during the relay of event messages. For a list of possible error codes and messages, see Error Codes.
`ErrorIdentifier`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The identifier of an unexpected system error that occurred during the relay of event messages.
`ErrorMessage`	**Type** textarea **Properties** Nillable **Description** The error message of the last error that occurred during the relay of event messages. For a list of possible error codes and messages, see Error Codes.

Field	Details
ErrorTime	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time in the UTC time zone when the last error occurred during the relay of event messages.
EventRelayConfigId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the event relay configuration that this feedback record is collecting the execution information of. This field is a relationship field. **Relationship Name** EventRelayConfig **Relationship Type** Lookup **Refers To** EventRelayConfig
EventRelayNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The number that identifies the EventRelayFeedback record. This field is of type Auto Number.
LastRelayedEventTime	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time in the UTC time zone when the last event was relayed to Amazon EventBridge.
RemoteResource	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The name of the partner event source associated with the event relay. It is in the format `aws.partner/salesforce.com/`***`orgID`***`/`***`channelID`***. For example: `aws.partner/salesforce.com/00DRM000000Fxts2AC/0YLRM0000004Dfg4AE`.
`Status`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The status of the event relay. Possible values are: • `ERROR`— The event relay encountered an error while running or during a state change that the administrator initiates. During the `ERROR` state, no events are relayed to Amazon EventBridge. The system attempts periodically to recover from the error. If it succeeds, the `Status` field value changes to `RUNNING` or to the new state that the administrator selected. The event relay attempts to resume sending events from the event bus from where it left off. In rare occasions, if it can't resume after the last relayed event, it uses the error recovery option in the `relayOption` field of EventRelayConfig to determine where to resume from. • `PAUSED`— An administrator paused the event relay. No events are relayed to Amazon EventBridge during this status. When an administrator resumes the event relay, events are relayed from the last position in the event bus, as long as they're within the retention window. • `RUNNING`— The event relay is running and actively relaying events from Salesforce to Amazon EventBridge. • `STOPPED`:—The event relay is stopped and no events are relayed to Amazon EventBridge. Some state information stored in EventRelayFeedback fields is deleted, such as `LastRelayedEventTime` and error fields. When the event relay is resumed, only new events are relayed. The default value is `STOPPED`.
`UsageType`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Reserved for future use.

Error Codes

This table contains the error codes and messages that a query on EventRelayFeedback can return in the `ErrorCode` and `ErrorMessage` fields.

Error Code	Error Description
`sfdc.platform.eventbus.relay.aws.partner.eventsource.invalid`	The configured event relay's AWS named credentials are invalid.
`sfdc.platform.eventbus.relay.aws.partner.eventsource.connect.error`	The configured event relay encountered an error while connecting to Amazon EventBridge.
`sfdc.platform.eventbus.relay.feature.not.supported`	The event relay is configured with an unsupported feature, such as event encryption and change data capture event enrichment.
`sfdc.platform.eventbus.relay.event.delivery.limit.error`	You've exceeded the event delivery limit for your org.
`sfdc.platform.eventbus.relay.temporarily.unavailable`	The event relay is temporarily unavailable.

EventTag

Associates a word or short phrase with an Event.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
`ItemId`	**Type** reference **Properties** Create, Filter **Description** ID of the tagged item.
`Name`	**Type** string **Properties** Create, Filter **Description** Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.

Field Name	Details
`TagDefinitionId`	**Type** reference **Properties** Filter **Description** ID of the parent TagDefinition object that owns the tag.
`Type`	**Type** picklist **Properties** Create, Filter, Restricted picklist **Description** Defines the visibility of a tag. Valid values: • `Public`—The tag can be viewed and manipulated by all users in an organization. • `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`.

Usage

EventTag stores the relationship between its parent TagDefinition and the Event being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

EventWhoRelation

Represents the relationship between an event and a lead or contacts. This derived object is a filtered version of the EventRelation on page 1972 object; that is, IsParent is *`true`* and IsWhat is *`false`*. It doesn't represent relationships to invitees or to accounts, opportunities, or other objects. This object is available in API versions 29.0 and later.

EventWhoRelation allows a variable number of relationships: one lead or up to 50 contacts. Available only if you've enabled Shared Activities for your organization.

Note: EventWhoRelation objects aren't created for child events.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
`EventId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Indicates the ID of the event.
`RelationId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Indicates the ID of the contacts or lead related to the event.
`Type`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Indicates whether the person related to the event is a contact or lead.

Usage

Apex example that queries relations to a contact or lead

```
List<EventWhoRelation> whoRelations = [SELECT Id, Relation.Name FROM
EventWhoRelation WHERE EventId = '00UD0000005zijD'];
```

SEE ALSO:

Event

EventRelation

Expense

Represents an expense linked to a work order. Service resource technicians can log expenses, such as tools or travel costs. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`AccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the account associated with the linked work order.
`Amount`	**Type** currency **Properties** Create, Filter, Sort, Update **Description** The amount of the expense.
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization.
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** A description for the expense.
`Discount`	**Type** percent **Properties** Create, Filter, Nillable, Sort, Update **Description** The percentage deducted from the `Subtotal` price. Available in version 51.0 and later.

Field	Details
ExpenseEndDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** If the expense was incurred over multiple days, the Expense End Date is the last day that the expense covers.
ExpenseNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The number that uniquely identifies the expense.
ExpenseStartDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** If the expense was incurred over multiple days, the Expense Start Date is the first day that the expense covers.
ExpenseType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The type of expense. Possible values are: • Billable • Non-Billable The default value is Billable.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.

Field	Details
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user who owns the expense record.
`Quantity`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The number of items purchased in this record. Available in version 51.0 and later.
`Subtotal`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The subtotal price calculated as the product of `Quantity` and `UnitPrice`. Available in version 51.0 and later. This is a calculated field.
`Title`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A title that identifies the expense. This field is available in API version 50.0 and later.
`TotalPrice`	**Type** currency

Field	Details
	Properties Filter, Nillable, Sort **Description** The total price of the transaction which is equal to the discounted subtotal: `Subtotal - (Discount * Subtotal)`. Available in version 51.0 and later. This is a calculated field.
`TransactionDate`	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** The day that the expense was incurred, or the payment date for the expense.
`UnitPrice`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** The price of one item on the record. Available in version 51.0 and later.
`WorkOrderId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the work order associated with the expense.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ExpenseChangeEvent (API version 55.0)
Change events are available for the object.

ExpenseFeed
Feed tracking is available for the object.

ExpenseHistory
History is available for tracked fields of the object.

ExpenseOwnerSharingRule
Sharing rules are available for the object.

ExpenseShare
Sharing is available for the object.

ExpenseReport

Represents a report that summarizes expenses. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization.
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** A description for the expense report.
ExpenseReportNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An auto-generated number identifying the expense report.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.

Field	Details
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user who owns the expense report record.
`Title`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A title that identifies the expense report.
`TotalExpenseAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of all expense entries in the report. This is a calculated field.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ExpenseReportFeed
Feed tracking is available for the object.

ExpenseReportHistory
History is available for tracked fields of the object.

ExpenseReportShare
Sharing is available for the object.

ExpenseReportEntry

Represents an entry in an expense report. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`Amount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The amount of the expense.
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization.
`ExpenseId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The expense that corresponds to the expense report entry.
`ExpenseReportEntryNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An auto-generated number identifying the expense report entry.

Field	Details
`ExpenseReportId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The expense report that's associated with the expense report entry.
`ExpenseType`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The type of expense. Possible values are: • `Billable` • `Non-Billable` The default value is `Billable`.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
`Title`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** A title that identifies the expense.
`TransactionDate`	**Type** date

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The day that the expense was incurred, or the payment date for the expense.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ExpenseReportEntryFeed
Feed tracking is available for the object.

ExpenseReportEntryHistory
History is available for tracked fields of the object.

ExpressionFilter

Represents a logical expression that's used to control the execution of macro instructions. This object is available in API version 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`ContextId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. The ID of the MacroInstruction object that contains the expression.
`FilterConditionLogic`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Optional. The filter conditions to use and the order in which to apply them. For example, '1 AND 2' evaluates condition 1 and then condition 2.

Field	Details
FilterDescription	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Optional. A description of the filter expression that helps to explain the logic to users. For example, 'Applies to New cases.'
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Optional. A label for the expression.

Usage

The ExpressionFilter object is used with the `IF` and `ELSEIF` operations in a MacroInstruction. It lets you specify a logical expression that determines whether macro instructions are executed. The object indicates whether any or all conditions must be true.

To represent the conditions that are evaluated, this object uses one or more ExpressionFilterCriteria child objects. The ExpressionFilter to be used with each criteria is specified in the ExpressionFilterCriteria's ExpressionFilterId field.

For example, to represent the following conditional statement, the ExpressionFilter object specifies the `FilterConditionLogic` field as `1 AND 2`, where 1 and 2 are ExpressionFilterCriteria objects. In this example, condition 1 is `Case.Status EQUALS New`, and condition 2 is `Case.Origin EQUALS Phone`.

```
IF (Case.Status EQUALS New) AND (Case.Origin EQUALS Phone)
      Select Email QuickAction
      Set Subject…
      Set To…
      Set Body…
      Submit
ENDIF
```

ExpressionFilterCriteria

Represents a condition in an expression that's used to control the execution of macro instructions. This object is available in API version 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`ExpressionFilterId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. The ID of the ExpressionFilter object that references this condition.
`FilterTarget`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Required. The target object or field used in the condition. For example, to create a condition that applies to new cases, use `Case.Status` as the `FilterTarget`.
`FilterTargetValue`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Optional. The value that's compared to the value of the FilterTarget. For example, to create a condition that applies to new cases, use `New` as the `FilterTargetValue`.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Optional. A label for the condition.
`Operation`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. Specifies the operator used to compare the target field and the target value. For example, to create a condition that applies to new cases, use EQUALS for the `Operation` field, as in `Case.Status EQUALS New`. • `EQUALS`

Field	Details
	• NOTEQUALS • CONTAINS • NOTCONTAIN
SortOrder	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Required. The order in which the criteria are evaluated.

Usage

ExpressionFilterCriteria is a child object of the ExpressionFilter object. Use these objects with the `IF` and `ELSEIF` operations in a MacroInstruction to control instruction execution. Each condition in a ExpressionFilterCriteria compares a target object or field to a value using a condition operator; for example, `Case.Status EQUALS New`.

ExternalAccountHierarchy

Represents the external account hierarchy, which works like a role-based hierarchy. Use ExternalAccountHierarchy to allow partner and customer users to share data with other external accounts in their hierarchy.This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have a Partner or Customer Community Plus license.

Fields

Field	Details
AccountId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the account in the external account hierarchy.

Field	Details
CurrencyISOCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Possible values are: • `GBP`— British Pound • `USD`— U.S. Dollar The default value is `USD`.
`Description`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the external account hierarchy.
`HierarchyType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Possible values are: • `CustomerPortal` — Customer • `Partner` The default value is `Partner`.
`IsAccessibleToParent`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Allows data to be shared with parent account in the account hierarchy. The default value is `true`.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description When true, the hierarchy is turned on. The default value is `false`.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the external account hierarchy.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the account owner.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the parent account.

ExternalAccountHierarchyHistory

Represents the history of changes to values in the fields of an external account hierarchy. This object is available in API version 50.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Special Access Rules

You must have a Partner or Customer Community Plus license.

Fields

Field	Details
`DataType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Possible values are: • Address • AnyType • AutoNumber • Base64 • BitVector • Boolean • Content • Currency • DataCategoryGroupReference • DateOnly • DateTime • Division • Double • DynamicEnum • Email • EncryptedBase64 • EncryptedText

Field	Details
	• EntityId • EnumOrId • ExternalId • Fax • File • HtmlMultiLineText • HtmlStringPlusClob • InetAddress • Json • Location • MultiEnum • MultiLineText • Namespace • Percent • PersonName • Phone • Raw • RecordType • SfdcEncryptedText • SimpleNamespace • StringPlusClob • Switchable_PersonName • Text • TimeOnly • Url • YearQuarter
ExternalAccountHierarchyId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the external account hierarchy.
Field	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort

Field	Details
	Description Possible values are: • Account • HierarchyType - Hierarchy Type • IsAccessibleToParent - Is Accessible to Parent • IsActive - Is Hierarchy Active • Name • Owner • Parent • Created - Created. • FeedEvent - Feed Event • IndividualMerged - Individual Merged • Locked - Record Locked • OwnerAccepted - Owner (Accepted) • OwnerAssignment - Owner (Assignment) • Unlocked - Record unlocked
`NewValue`	**Type** anyType **Properties** Nillable, Sort **Description** The updated value of the changed field.
`OldValue`	**Type** anyType **Properties** Nillable, Sort **Description** The previous value of the changed field.

ExternalClientApplication

For internal use only.

ExternalDataSource

Represents an external data source, which defines connection details for integration with data and content that are stored outside the Salesforce org. This object is available in API version 27.0 and later.

Note: All credentials stored within this entity are encrypted under a framework that is consistent with other encryption frameworks on the platform. Salesforce encrypts your credentials by auto-creating org-specific keys. Credentials encrypted using the previous encryption scheme have been migrated to the new framework.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

From API version 48.0 onwards, only authenticated internal and external users can access this object.

Fields

Field Name	Details
`AuthProviderId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Salesforce ID of the authentication provider, which defines the service that provides the login process and approves access to the external system. Only users with the “Customize Application” and “Manage AuthProviders” permissions can view this field. This field is available in API version 39.0 and later. This is a relationship field. **Relationship Name** AuthProvider **Relationship Type** Lookup **Refers To** AuthProvider
`CustomConfiguration`	**Type** textarea **Properties** Nillable **Description** A JSON-encoded configuration string that defines parameters specific to the type of external data source.

Field Name	Details
`DeveloperName`	**Type** string **Properties** Filter, Group, Sort **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.
`Endpoint`	**Type** textarea **Properties** Nillable **Description** The URL of the external system, or if that URL is defined in a named credential, the named credential URL. A named credential URL contains the scheme `callout:`, the name of the named credential, and an optional path. For example: `callout:`*`My_Named_Credential`*`/`*`some_path`*. You can append a query string to a named credential URL. Use a question mark (?) as the separator between the named credential URL and the query string. For example: `callout:`*`My_Named_Credential`*`/`*`some_path`*`?format=json`.
`isWritable`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Lets the Lightning Platform and users in this org create, update, and delete records for external objects associated with the external data source. The external object data is stored outside the org. By default, external objects are read only. Available only for Salesforce Connect external data sources. Available in API version 35.0 and later. However, with the cross-org adapter for Salesforce Connect, you can set this field to `true` only in API version 39.0 and later.
`Language`	**Type** picklist

Field Name	Details
	Properties Filter, Group, Restricted picklist, Sort **Description** The language of the `MasterLabel`.
`MasterLabel`	**Type** string **Properties** Filter, Group, Sort **Description** Master label for the external data source. This internal label doesn't get translated.
`NamedCredentialId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The Salesforce ID of the referenced named credential for an external data source. Required for Salesforce Connect adapters for Amazon DynamoDB, Amazon Athena, GraphQL, and OData 4.01. For connecting to other external data sources, the field must be null. This field is available in API version 58.0 and later. This is a relationship field. **Relationship Name** NamedCredential **Relationship Type** Lookup **Refers To** NamedCredential
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.
`PrincipalType`	**Type** picklist

Field Name	Details
	Properties Filter, Group, Restricted picklist, Sort **Description** Specifies whether the org uses one set (`NamedUser`), multiple sets (`PerUser`), or no (`Anonymous`) credentials to access the external system. Each set of credentials corresponds to a login account on the external system. Corresponds to `Identity Type` in the user interface.
`Protocol`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Specifies whether to use OAuth, password authentication, or no authentication to access the external system. Some types of external data sources support only one value. • For cloud-based Files Connect external systems, select **Oauth 2.0**. • For on-premises systems, select **Password Authentication**. • For Simple URL data sources, select **No Authentication**. Additional authentication protocols are supported for the Amazon DynamoDB, Amazon Athena, Snowflake, GraphQL, and OData 4.01 external data sources. • AwsSv4 • Basic • Custom • Jwt • JwtExchange
`Repository`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Used for SharePoint Online. An optional name of the repository in the data source. Not applicable to all data source types.
`Type`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Specifies the adapter that connects to the external system.

Usage

Define an external data source to connect to data or content that's stored outside the Salesforce org. Then create external objects, which map to the external system's data and behave similarly to custom objects.

Note: Some external data source fields rely on per-user authentication to connect with an external system. If an admin edits one of these fields, then the previously authenticated credentials can get invalidated, requiring individual users to reauthenticate.

SEE ALSO:

ExternalDataUserAuth

NamedCredential

ExternalDataUserAuth

Stores authentication settings for a Salesforce user to access an external system. The external system must be defined in an external data source or a named credential that's configured to use per-user authentication. This object is available in API version 27.0 and later.

Note: All credentials stored within this entity are encrypted under a framework that is consistent with other encryption frameworks on the platform. Salesforce encrypts your credentials by auto-creating org-specific keys. Credentials encrypted using the previous encryption scheme have been migrated to the new framework.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
`AuthProviderId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Salesforce ID of the authentication provider, which defines the service that provides the login process and approves access to the external system. Only users with the "Customize Application" and "Manage AuthProviders" permissions can view this field. This field is available in API version 39.0 and later. This is a relationship field. **Relationship Name** AuthProvider **Relationship Type** Lookup

Field Name	Details
	Refers To AuthProvider
ExternalDataSourceId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Salesforce ID of the external data source or named credential that defines the external system. This is a polymorphic relationship field. **Relationship Name** ExternalDataSource **Relationship Type** Lookup **Refers To** ExternalDataSource, NamedCredential
Password	**Type** textarea **Properties** Create, Nillable, Update **Description** Password portion of the credentials for the Salesforce user to access the external system.
Protocol	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Specifies whether to use OAuth, password authentication, or no authentication when the user accesses the external system. Additional authentication protocols are supported for the Amazon DynamoDB, Amazon Athena, Snowflake, GraphQL, and OData 4.01 external data sources. • AwsSv4 • Basic • Custom • Jwt • JwtExchange

Field Name	Details
`UserId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** ID of the Salesforce user who's accessing the external system. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User
`Username`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Username portion of the credentials for the Salesforce user to access the external system.

Usage

These authentication settings enable a Salesforce user to access an external system. The external system is defined in Salesforce as one of the following.

- External data source—Provides access to external objects, whose data is stored outside the Salesforce organization.
- Named credential—Enables the user's actions to trigger authenticated callouts to the endpoint that's specified in the named credential.

If you grant users access to the external data source or named credential via permission sets or profiles, those users can manage their own authentication settings. See Store Authentication Settings for External Systems in the Salesforce Help.

SEE ALSO:

ExternalDataSource

NamedCredential

ExternalEncryptionRootKey

Represents metadata about root keys stored in third-party key stores that are used to generate and secure keys that encrypt Salesforce data. This object is available in API version 58.0 and later.

Root keys are used to generate data encryption keys (DEKs) in Salesforce, which are in turn used to encrypt and decrypt data. Root keys are also used as wrapping keys to secure DEKs in the Salesforce database.

Supported Calls

`describeSObjects()`, `query()`, `update()`

Special Access Rules

This object is available as part of the Shield and Salesforce Platform Encryption add-on subscriptions. Access to this object also requires the Cache-Only Key Service add-on subscription.

Fields

Field	Details
`ActivatedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort, Update **Description** The date the key was activated in Salesforce.
`CreatedBy`	**Type** string **Properties** Filter, Group, Nillable, Sort, Update **Description** The email address of the user who created the root key. For example, `user@example.com`.
`Description`	**Type** string **Properties** Filter, Group, Nillable, Sort, Update **Description** The user-defined description of the root key.
`LastModifiedBy`	**Type** string **Properties** Filter, Group, Nillable, Sort, Update

Field	Details
	Description The email address of the user who most recently modified the key. For example, `user@example.com`.
`Region`	**Type** string **Properties** Filter, Group, Nillable, Sort, Update **Description** The region for the customer managed key. For example, if the `RootKeyService` is `AWS`, the region is an Amazon Web Services (AWS) region such as `us-east1`.
`RootKeyIdentifier`	**Type** string **Properties** Filter, Nillable, Sort, Update **Description** The unique key identifier from the external KMS, such as an AWS Amazon Resource Name (ARN). For example, `arn:aws:kms:us-west-2:123456789000:key/123ab456-7cd8-9012-3e4f-5gh678i901j2`
`RootKeyService`	**Type** string **Properties** Filter, Group, Nillable, Sort, Update **Description** The external key management service connected to Salesforce. For example, `AWS`.
`Status`	**Type** string **Properties** Filter, Group, Nillable, Sort, Update **Description** The status of the key. Possible values are: • `Activation Pending`—Salesforce is waiting for confirmation of a valid key policy in the external key store. • `Active`—Can be used to encrypt new DEKs and decrypt existing DEKs. • `Archived`—Can't encrypt new DEKs. Can be used to decrypt previously created DEKs. • `Canceled`—Root key activation canceled by a user.

Field	Details
	• `Inactive`—The root key, and the DEKs that it encrypts, are inaccessible. Inaccessible DEKs can't be used to decrypt data, which renders that data also inaccessible.

ExternalSocialAccount

Represents a managed social media account on a social network such as Facebook or Twitter. This object is available in API version 29.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
`AuthorizedBy`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Name of the Radian6 user who added the social account to Radian6.
`DataSourceId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** ID of the Radian6 data source for the social account.
`DefaultResponseAccountId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the managed social account to use by default when responding. This is a relationship field. **Relationship Name** DefaultResponseAccount

Field Name	Details
	Relationship Type Lookup **Refers To** ExternalSocialAccount
`DeveloperName`	**Type** string **Properties** Filter, Group, Sort **Description** The unique name of the record in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This field is automatically generated but you can supply your own value if you create the record using the API. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`ExternalAccountId`	**Type** string **Properties** Filter, Group, Sort **Description** ID of the social account on the social network.
`ExternalPictureURL`	**Type** url **Properties** Filter, Group, Nillable, Sort **Description** URL to the picture of the social account on the social network.
`IsActive`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Specifies whether the social account is active or not.

Field Name	Details
IsAuthenticated	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Specifies whether the social account is authenticated or not.
IsCaseCreationEnabled	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Specifies whether case creation for the social account is enabled or not.
IsDataSourceActive	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Specifies whether the data source is active or not.
Language	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Specifies the language of the social account.
MasterLabel	**Type** string **Properties** Filter, Group, Sort **Description** Master label for the social account. This display value is the internal label and does not get translated.
ProfileUrl	**Type** url **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description URL for the profile.
Provider	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Social network, such as Facebook or Twitter, of the social account.
ProviderUserId	**Type** string **Properties** Filter, Group, Sort **Description** User ID for the social network of the social account.
RuleId	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** ID of the Radian6 rule for the account.
SocialPropertyId	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** ID of the Radian6 social property for the account.
TopicId	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** ID of the topic for the social account.
UniqueName	**Type** string **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description Unique name for the social account.
`Username`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Username for the social account.

Usage

Although available, many of the Radian6-related fields are no longer accurate or used. We recommend using Social Engagement Resources in *Connect REST API Developer Guide*.

ExtlClntAppOauthPlcyCnfg

For internal use only.

ExtlClntAppOauthSettings

For internal use only.

ExtlClntAppPlcyCnfg

For internal use only.

FeedAttachment

Represents an attachment to a feed item, such as a file attachment or a link. Use FeedAttachment to add various attachments to one feed item. This object is available in API version 36.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `idEnabled()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- You can read, create, update, or delete a FeedAttachment only if you have the corresponding access to the associated FeedItem.
- Inline images aren't creatable, updatable, or deletable through SOAP API.

Fields

Field Name	Details
FeedEntityId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the associated feed entity that contains this attachment.
RecordId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the record that this feed attachment contains. For inline images, `RecordId` is a ContentDocument ID. For content attachments, `RecordId` is a ContentVersion ID, For feed items, `RecordId` is a FeedItem ID.
Title	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The title of this feed attachment. When `Type` is `Link`, `Title` value is the label for the attachment link. Otherwise, `Title` value isn't used.
Type	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The type of this feed attachment. Valid values are: • 0 `Content`—A content attachment. • 1 `InlineImage`—An inline image. The system creates an inline image attachment when an image is added to the body of the associated FeedItem. You can't add an inline image directly using FeedAttachment. • 2 `Link`—A link. • 3 `FeedEntity`—A feed entity, for example, a post that is shared. Available in API version 39 and later in Lightning Experience. • 4 `ChatterExtension`—a Rich Publisher App that's integrated with the Chatter publisher.

Field Name	Details
	• 5 `Record`—A record.
`Value`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** The string value of this FeedAttachment. This field is optional. If the feed attachment is a Link FeedAttachment, the value is the link URL string.

Usage

- This Apex example shows how to add an attachment to a Lead using API version 36.0 and later. First, post a feed item.

```
//create and insert post
FeedItem post = new FeedItem();
post.Body = 'HelloThere';
post.ParentId = 'ID_OF_LEAD_ENTITY';
post.Title = 'FileName';
insert post;
```

  Then insert the attachment.

```
//create and associate a content attachment to the post
FeedAttachment feedAttachment = new FeedAttachment();
feedAttachment.FeedEntityId = post.Id;
feedAttachment.RecordId = 'ID_OF_CONTENT_VERSION';
feedAttachment.Title = 'FileName';
feedAttachment.Type = 'CONTENT';
insert feedAttachment;
```

- You can create only one link attachment (`FeedAttachment` of type `Link`) per feed item.
- If the feed item type is one of the following, you can add content or link feed attachments to a FeedItem.
  - `AdvancedTextPost`
  - `TextPost`
  - `ContentPost`
  - `LinkPost`
  - `QuestionPost`
- When a `FeedAttachment` is added or removed from a feed item, Salesforce updates the type of the feed item to its most appropriate value, as follows.
  - If all content feed attachments are removed from a feed item of type `ContentPost`, the type of this feed item is updated to `TextPost`.
  - Conversely, if a content feed attachment is added to a feed item of type `TextPost`, the type of this feed item is updated to `ContentPost`.

  - If all link feed attachments are removed from a feed item of type `LinkPost`, the type of this feed item is updated to `TextPost`.
  - Conversely, if a link feed attachment is added to a feed item of type `TextPost`, the type of this feed item is updated to `LinkPost`.
  - The type of all other feed items, such as `QuestionPost` or `AdvancedTextPost` feed items, doesn't change when any feed attachments are added or removed.
  - If a content feed attachment is added to a feed item of type `LinkPost`, the feed item type is updated to `ContentPost`.
  - If all content attachments are removed from a feed item of type `ContentPost`, but there's also a link attachment, the feed item type is updated to `LinkPost`.
- Users without administrator privileges can't retrieve a FeedAttachment by its ID in a SOQL query. They can retrieve attachments by specifying the associated `FeedEntityId`, as follows:

```
SELECT Id FROM FeedAttachment WHERE FeedEntityId = 'some_feedItem_id'
```

- Alternatively, retrieve attachments by using a SOQL query on FeedItem with a subquery on the FeedAttachments child relationship, as follows.

```
SELECT Body, (SELECT RecordId, Title, Type, Value FROM FeedAttachments)
FROM FeedItem
WHERE Id = 'some_feedItem_id'
```

- FeedAttachment is not a triggerable object. You can access feed attachments in FeedItem *update* triggers by retrieving them through a SOQL query. For a trigger example, and to learn about trigger considerations for FeedAttachment, see Triggers for Chatter Objects in the *Apex Developer Guide*.

FeedComment

Represents a comment added to a feed by a user. This object is available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Note the following when working with feed comments.

- You must have read access to the feed's parent type to see a FeedComment record.
- You must be able to access the feed to add a comment.
- If the comment is related to a user record, the user can delete the comment. For example, if John Smith makes a comment on Sasha Jones' profile feed, Sasha can delete the comment.
- If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.

You can delete all feed items you created. To delete feed items you didn't create, you must have one of these permissions:

- Modify All Data

- Modify All on the object associated with the feed and delete permission on the parent feed
- Moderate Chatter

  Note: Users with the Moderate Chatter permission can delete only the feed items and comments they can see.

- Manage Unlisted Groups

  Only users with this permission can delete items in unlisted groups.

Fields

Field	Details
`CommentBody`	**Type** textarea **Properties** Create, Filter, Sort, Update **Description** The text in the comment.
`CommentType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of comment: • `ContentComment`—an uploaded file on a comment • `TextComment`—a direct text entry on a comment Before API version 24.0, a text entry was required on a comment. As of version 24.0, a text entry is optional if the `CommentType` is `ContentComment`.
`FeedItemId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the feed item containing the comment.
`HasEntityLinks`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the feed `CommentBody` includes at least one link to a record.

Field	Details
	Note: This field is available starting in API version 43.0.
`InsertedById`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the `InsertedBy` value is set to the ID of the context user. This is a relationship field. **Relationship Name** InsertedBy **Relationship Type** Lookup **Refers To** User
`IsRichText`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the feed `CommentBody` contains rich text. If you post a rich text feed comment using SOAP API, set `IsRichText` to `true` and escape HTML entities from the body. Otherwise, the comment is rendered as plain text. Rich text supports the following HTML tags: • `<p>` **Tip:** Though the ` ` tag isn't supported, you can use `<p> </p>` to create lines. • `<a>` • `<b>` • `<code>` • `<i>` • `<u>` • `<s>` • `<ul>` • `<ol>` • `<li>`

Field	Details
	• `<img>` The `<img>` tag is accessible only through the API and must reference files in Salesforce similar to this example: `<img src="sfdc://069B0000000omjh"></img>` Note: This attribute is available as of API version 38.0. In API version 38.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 37.0 and prior, all rich text appears as a plain-text representation.
`IsVerified`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Determines whether a comment on a question is marked as Company Verified. This field is available in API version 41.0 and later.
`LastEditById`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the user who last edited the feed comment.
`LastEditDate`	**Type** datetime **Properties** Create, Filter, Nillable, Sort **Description** The date the feed comment was last edited.
`ParentId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of a record associated with the feed comment. For example, if you are commenting on a change to a field on Account, `ParentId` is set to the account ID.
`RelatedRecordId`	**Type** reference **Properties** Create, Group, Nillable, Sort

Field	Details
	Description ID of the ContentVersion record associated with a `ContentComment`. This field is null for all comments except `ContentComment`. For example, set this field to an existing ContentVersion ID and set the `CommentType` to `ContentComment`.
`Revision`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** The number of times the comment was revised.
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Group, Nillable, Restricted picklist, Sort, Update **Description** Specifies whether this feed comment is published and visible to all who can access the parent feed item. To change a comment's status, the comment's parent feed item must be in a published state. This field is available in API version 38.0 and later. Possible values are: • `Published`—The comment is visible to all who can access the parent feed item. • `PendingReview`—The comment is visible to its author. Users see the parent feed item and have View All Data or Can Approve Feed Post and Comment permission also see the comment. The author can delete the comment as can users who see the comment and have Can Approve Feed Post and Comment or Modify All Data permission. If the parent feed item is published, the author can edit the comment. Users who see the comment and have Can Approve Feed Post and Comment or Modify All Data permission can also edit the comment. Users with Can Approve Feed Post and Comment or Modify All Data permission can change comment status from Published to PendingReview and from PendingReview to Published. Some actions are blocked when a feed comment is pending review: – Select as Best—When a feed comment that is marked as best answer becomes unpublished, it's removed as the best answer. If the comment is published, its best answer status is not restored. – Like and unlike • `Isolated`—The comment is visible only to admins. After an item is isolated, the author no longer has view or edit access. The admin user can edit, view, and delete isolated feed comments.

Field	Details
SystemModstamp	**Type** datetime **Properties** Defaulted on create, Filter **Description** Date and time when a user or automated process (such as a trigger) last modified this record. In this context, "trigger" refers to Salesforce code that runs to implement standard functionality, and not an Apex trigger. `SystemModstamp` is a read-only system field, available in FeedComment as of API version 37.0.
ThreadChildrenCount	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** The count of comments associated with this parent feed object. The feed object can be either a Feed Item or a Feed Comment. The count shows how many comments are directly subordinate to the parent. This field is available on the object when **Allow discussion threads** is selected in the Administration Workspace. This field is available in API version 44.0 and later.
ThreadLastUpdatedDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort **Description** The date and time the thread on this comment was last updated. This field is available on the object when **Allow discussion threads** is selected in the Administration Workspace. This field is available in API version 44.0 and later.
ThreadLevel	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** The identifier that shows the level of this Feed Comment in a thread. By default, there are a maximum of three levels in a thread. The `ThreadLevel` value shows in which of the three levels this comment falls. This field is available on the object when **Allow discussion threads** is selected in the Administration Workspace. This field is available in API version 44.0 and later.
ThreadParentId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort **Description** The identifier of the feed item that is the parent of this comment. This field is available on the object when **Allow discussion threads** is selected in the Administration Workspace. This field is available in API version 44.0 and later. This is a relationship field. **Relationship Name** ThreadParent **Relationship Type** Lookup **Refers To** FeedComment

Usage

- As of API version 23.0 and later, if you have View All Data permission, you can query FeedComment records directly without an ID filter. If you don't have View All Data permission, you can't query FeedComment records directly, with or without an ID filter.

  For example, the following query returns general information about a feed:

  ```
  SELECT ID, CreatedDate, CreatedById, CreatedBy.FirstName,
             CreatedBy.LastName, ParentId, Parent.Name, Body
  FROM FeedItem
  WHERE CreatedDate > LAST_MONTH
  ORDER BY CreatedDate DESC, Id DESC
  ```

- You can search for text in comments using SOSL. For example, the following Java class uses `search()` to find the string "foo" in any field of a record:

  ```
  public void searchSample() {
    try {
      SearchResult sr = connection.search("find {foo} in all fields " +
          "returning feedcomment(Id, FeedItemId, CommentBody)");
      // Put the results into an array of SearchRecords
      SearchRecord[] records = sr.getSearchRecords();
      // Check the length of the returned array of records to see
      // if the search found anything
      if (records != null && records.length > 0) {
        System.out.println("Found " + records.length + " comments: ");
        // Display each comment
        for (SearchRecord record : records) {
          FeedComment comment = (FeedComment) record.getRecord();
          System.out.println(comment.getId() + ": " +
              comment.getCommentBody());
        }
      } else {
        System.out.println("No records were found for the search.");
  ```

```
    }
  } catch (ConnectionException ce) {
    ce.printStackTrace();
  }
}
```

- If you use an Apex trigger to modify the `Body` of a FeedComment object, all mentions hyperlinks are converted to plain text. The mentioned users don't get email notifications.

Note: This object is hard deleted. It isn't sent to the Recycle Bin.

SEE ALSO:

Custom Object__Feed

FeedItem

FeedItem represents an entry in the feed, such as changes in a record feed, including text posts, link posts, and content posts. This object is available in API version 21.0 and later. This object replaces FeedPost.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

- You can delete all feed items you created. To delete feed items you didn't create, you must have one of these permissions:
  - Modify All Data
  - Modify All on the feed item's parent object, for example, Account for a feed item on an account feed
  - Moderate Chatter

    Note: Users with the Moderate Chatter permission can delete only the feed items and comments that they can see.

  Only users with this permission can delete items in unlisted groups.
- Guest users can't insert system field values for Chatter feeds. Even if you try to assign the CanInsertFeedSystemFields permission to a Guest User, the permission isn't granted.

Only users with the Modify All Data permission can delete a feed item of `Type TrackedChange`.

If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.

Fields

Field Name	Details
`BestCommentId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the comment marked as best answer on a question post. This is a relationship field. **Relationship Name** BestComment **Relationship Type** Lookup **Refers To** FeedComment
`Body`	**Type** textarea **Properties** Create, Nillable, Sort, Update **Description** The body of the feed item. Required when `Type` is `TextPost` or `AdvancedTextPost`. Optional when `Type` is `ContentPost` or `LinkPost`. Although a value for `Body` isn't required for the `ContentPost` type, an attachment is required. If an attachment isn't present, the type changes to `TextPost` or `AdvancedTextPost`, depending on the API version. `TextPost` and `AdvancedTextPost` do require a value for `Body`. Tip: See the `IsRichText` field for a list of HTML tags supported in the body of rich text posts.
`CommentCount`	**Type** int **Properties** Filter, Group, Sort **Description** The number of comments associated with this feed item. Tip: In a feed that supports pre-moderation, `CommentCount` isn't updated until a comment is published. For example, say that you comment on a post that already has one published comment and your comment triggers moderation. Now there are two comments on the post, but the count says

Field Name	Details
	there's only one. In a moderated feed, comments aren't counted until approved by an admin or someone with Can Approve Feed Post and Comment or Modify All Data. Feed moderation has implications on how you retrieve feed comments. In a moderated feed, rather than retrieving comments by looping through `CommentCount`, go through pagination until the end of comments is returned.
`ConnectionId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** When a PartnerNetworkConnection modifies a record that is tracked, the `CreatedBy` field contains the ID of the system administrator. The `ConnectionId` contains the ID of the PartnerNetworkConnection. Available if Salesforce to Salesforce is enabled for your org.
`ContentData`	**Type** base64 **Properties** Create, Nillable **Description** This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. This field is required if `Type` is `ContentPost`. Encoded file data in any format, and can't be 0 bytes. Setting this field automatically sets `Type` to `ContentPost`.
`ContentDescription`	**Type** textarea **Properties** Create, Nillable, Sort **Description** This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. The description of the file specified in `ContentData`.
`ContentFileName`	**Type** string **Properties** Create, Group, Nillable, Sort

Field Name	Details
	Description This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. The name of the file uploaded to the feed. Setting `ContentFileName` automatically sets `Type` to `ContentPost`.
`ContentSize`	**Type** int **Properties** Group, Nillable, Sort **Description** This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. This field is the size of the file (in bytes) uploaded to the feed. This field is read-only and is automatically determined during insert.
`ContentType`	**Type** string **Properties** Group, Nillable, Sort **Description** This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. This field is the MIME type of the file uploaded to the feed. This field is read-only and is automatically determined during insert.
`FeedPostId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** This field was removed in API version 22.0, and is available in earlier versions for backward compatibility only. ID of the associated FeedPost. A FeedPost represents the following types of changes in a feed item: changes to tracked fields, text posts, link posts, and content posts.
`HasContent`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the feed item has content.
`HasFeedEntity`	**Type** boolean

Field Name	Details
	Properties Defaulted on create, Filter, Group, Sort **Description** Indicates whether the feed item has a feed entity, for example, a post, as an attachment. Available in API version 39 and later when sharing a feed entity in Lightning Experience.
`HasLink`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the feed item has a link attached.
`HasVerifiedComment`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Determines whether a question has an answer that is marked as Company Verified. This field is available in API version 41.0 and later.
`InsertedById`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the `InsertedBy` value is set to the ID of the context user. This is a polymorphic relationship field. **Relationship Name** InsertedBy **Relationship Type** Lookup **Refers To** User
`IsClosed`	**Type** boolean

Field Name	Details
	Properties Defaulted on create, Filter, Group, Sort **Description** As of API version 43, a read-only field that indicates whether the feed item is open or closed to new actions. A value of `true` places restrictions on the actions a user can take on a feed item and its comments. For more information, see the Usage section.
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Standard system field. Indicates whether the record has been moved to the Recycle Bin (`true`) or not (`false`).
`IsRichText`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the feed item `Body` contains rich text. If you post a rich text feed comment using SOAP API, set `IsRichText` to `true` and escape HTML entities from the body. Otherwise, the post is rendered as plain text. Rich text supports the following HTML tags: • `<p>` Tip: Though the ` ` tag isn't supported, you can use `<p> </p>` to create lines. • `<a>` • `<b>` • `<code>` • `<i>` • `<u>` • `<s>` • `<ul>` • `<ol>` • `<li>` • `<img>`

Field Name	Details
	The `<img>` tag is accessible only through the API and must reference files in Salesforce similar to this example: `<img src="sfdc://069B0000000omjh"></img>` **Note:** In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation.
LastEditById	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the user who last edited the feed item.
LastEditDate	**Type** datetime **Properties** Create, Filter, Nillable, Sort **Description** The date the feed item was last edited.
LikeCount	**Type** int **Properties** Filter, Group, Sort **Description** The number of likes associated with this feed item.
LinkUrl	**Type** url **Properties** Create, Nillable, Sort **Description** The URL of a `LinkPost`.
NetworkScope	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort

Field Name	Details
	Description Specifies whether this feed item is available in the default Experience Cloud site, a specific Experience Cloud site, or all sites. This field is available in API version 26.0 and later, if digital experiences is enabled for your org. `NetworkScope` can have the following values: • `NetworkId`—The ID of the Experience Cloud site in which the FeedItem is available. If left empty, the feed item is only available in the default Experience Cloud site. • `AllNetworks`—The feed item is available in all Experience Cloud sites. Note the following exceptions for `NetworkScope`: • Only feed items with a Group or User parent can set a `NetworkId` or a null value for `NetworkScope`. • For feed items with a record parent, users can set `NetworkScope` only to `AllNetworks`. • You can't filter a feed item on the `NetworkScope` field.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the object type to which the feed item is related. For example, set this field to a `UserId` to post to someone's profile feed, or an `AccountId` to post to a specific account. This is a polymorphic relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** Account, Accreditation, ActivationTarget, ActivationTrgtIntOrgAccess, ApiAnomalyEventStore, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember,

Field Name	Details
	CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CodeSet, CollaborationGroup, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContentDocument, Contract, CoverageBenefit, CoverageBenefitItem, CredentialStuffingEventStore, CreditMemo, CreditMemoLine, Dashboard, DashboardComponent, DataStream, DelegatedAccount, DocumentChecklistItem, EngagementChannelType, EnhancedLetterhead, EnrollmentEligibilityCriteria, Event, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Identifier, Image, IndividualApplication, Invoice, InvoiceLine, Lead, Location, MarketSegment, MarketSegmentActivation, MemberPlan, MessagingSession, MktCalculatedInsight, OperatingHours, Opportunity, Order, OrderItem, OtherComponentTask, PartyConsent, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, Product2, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, ProviderSearchSyncLog, PurchaserPlan, PurchaserPlanAssn, ReceivedDocument, Report, ReportAnomalyEventStore, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SessionHijackingEventStore, Shift, Shipment, ShipmentItem, Site, SkillRequirement, SocialPost, Solution, Task, ThreatDetectionFeedback, Topic, User, Visit, VisitedParty, Visitor, VoiceCall, VolunteerProject, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup, WorkTypeGroupMember
`RelatedRecordId`	**Type** reference **Properties** Create, Group, Nillable, Sort **Description** ID of the ContentVersion record associated with a `ContentPost`. For WDC thanks posts, it's the ID of the WorkThanks object associated with a `RypplePost`. This field is typically null for all posts except `ContentPost` and `RypplePost`. For example, set this field to an existing ContentVersion ID and post it to a feed with `Type` set to `ContentPost`.
`Revision`	**Type** int

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort **Description** The revision number of the feed item.
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Group, Nillable, Restricted picklist, Sort, Update **Description** Specifies whether this feed item is published and visible to all who can access the feed. This field is available in API version 37.0 and later. Possible values are: • `Published`—The item's visible to all with access to the feed. • `PendingReview`—The item's visible to its author and users who see the item and have View All Data or Can Approve Feed Post and Comment permission. Some people can delete and edit the item. They include the author and users who see the item and have Can Approve Feed Post and Comment or Modify All Data permission. Note: These permissions don't apply when you retrieve feed items using SOQL. To filter out Pending Review feed items you must add an explicit clause. Some actions are blocked when a feed item is pending review: – Comment – Like and unlike – Bookmark – Share • `Isolated`—The item is visible only to admins. After an item is isolated, the author no longer has view or edit access. The admin user can edit, view, and delete isolated feed items.
`Title`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The title of the feed item. When the `Type` is `LinkPost`, the `LinkUrl` is the URL and this field is the link name. The `Title` field can be updated on posts of `Type QuestionPost`.

Field Name	Details
Type	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of feed item. Except for `ContentPost`, `LinkPost`, `QuestionPost`, and `TextPost`, all the FeedItem types listed here are system-generated. In most situations, we recommend that you don't create system-generated fields using Apex or our APIs. One exception is during Chatter data migrations, which can require admins to migrate system-generated post types. • `ActivityEvent`—indirectly generated event when a user or the API adds a Task associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a Task or Event associated with a case record (excluding email and call logging). For a recurring Task with CaseFeed disabled, one event is generated for the series only. For a recurring Task with CaseFeed enabled, events are generated for the series and each occurrence. • `AdvancedTextPost`—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post. • `AnnouncementPost`—Not used. • `ApprovalPost`—generated when a user submits an approval. • `BasicTemplateFeedItem`—Not used. • `CanvasPost`—a post made by a canvas app posted on a feed. • `CollaborationGroupCreated`—generated when a user creates a public group. • `CollaborationGroupUnarchived`—Not used. • `ContentPost`—a post with an attached file. • `CreatedRecordEvent`—generated when a user creates a record from the publisher. • `DashboardComponentAlert`—generated when a dashboard metric or gauge exceeds a user-defined threshold. • `DashboardComponentSnapshot`—created when a user posts a dashboard snapshot on a feed. • `LinkPost`—a post with an attached URL. • `PollPost`—a poll posted on a feed. • `ProfileSkillPost`—generated when a skill is added to a user's Chatter profile. • `QuestionPost`—generated when a user posts a question. • `ReplyPost`—generated when Chatter Answers posts a reply.

Field Name	Details
	- `RypplePost`—generated when a user creates a Thanks badge in WDC. - `TextPost`—a direct text entry on a feed. - `TrackedChange`—a change or group of changes to a tracked field. - `UserStatus`—automatically generated when a user adds a post. Deprecated. The following values appear in the `Type` picklist for all feed objects but apply only to CaseFeed: - `AttachArticleEvent`—generated event when a user attaches an article to a case. - `CallLogPost`—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event. - `CaseCommentPost`—generated event when a user adds a case comment for a case object. - `ChangeStatusPost`—generated event when a user changes the status of a case. - `ChatTranscriptPost`—generated event when Chat transcript is saved to a case. - `EmailMessageEvent`—generated event when an email related to a case object is sent or received. - `FacebookPost`—generated when a Facebook post is created from a case. Deprecated. - `MilestoneEvent`—generated when a case milestone is completed or reaches violation status. - `SocialPost`—generated when a social post is created from a case. Note: If you set `Type` to `ContentPost`, also specify `ContentData` and `ContentFileName`.
`Visibility`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Specifies whether this feed item is available to all users or internal users only. This field is available in API version 26.0 and later, if digital experiences is enabled for your org. `Visibility` can have the following values: - `AllUsers`—The feed item is available to all users who have permission to see the feed item. - `InternalUsers`—The feed item is available to internal users only. Note the following exceptions for `Visibility`:

Field Name	Details
	• For record posts, `Visibility` is set to `InternalUsers` for all internal users by default. • External users can set `Visibility` only to `AllUsers`. • `Visibility` can be updated on record posts. • The `Update` property is supported only for feed items posted on records.

Usage

- When a feed item's `IsClosed` field is set to true, some actions are blocked and others are blocked to most users. This table sets out the actions that are blocked when a feed item is closed.

Action	Availability on a Closed Conversation
Add a comment	Blocked
Answer a question	Blocked
Vote on a poll	Blocked
Edit a feed item or its comments or answers	Blocked to author; available to admins, moderators, and people with the Close Conversation Threads in Feeds permission Editing is blocked specifically for the feed item title, feed item body, and feed content body fields.
Edit a topic	Available
Delete a feed item or its comments or answers	Blocked to author; available to admins, moderators, and people with the Close Conversation Threads in Feeds permission
Publish a pending review comment (moderation)	Available to admins and moderators
Like or unlike; upvote or downvote	Available
Select or remove a best answer	Blocked to author; available to admins, moderators, and people with the Close Conversation Threads in Feeds permission
Company verify; remove verification	Available only to people with the Verify Answers to Chatter Questions permission
Flag	Available
Share	Available
Bookmark	Available
Mute and unmute	Available
Escalate to case	Available only to people permitted to escalate a feed item to a case

- This Apex example shows how to add a feed item with an attachment to a lead using API version 36.0 and later. First, post a feed item.

```
//create and insert post
FeedItem post = new FeedItem();
post.Body = 'HelloThere';
post.ParentId = 'ID_OF_LEAD_ENTITY';
post.Title = 'FileName';
insert post;
```

  Then insert the attachment.

```
//create and associate a content attachment to the post
FeedAttachment feedAttachment = new FeedAttachment();
feedAttachment.FeedEntityId = post.Id;
feedAttachment.RecordId = 'ID_OF_CONTENT_VERSION';
feedAttachment.Title = 'FileName';
feedAttachment.Type = 'CONTENT';
insert feedAttachment;
```

- If you're using API version 23.0 or later and have View All Data permission, you can directly query for a FeedItem. The following example returns the 20 most recent feed items.

```
SELECT ID, CreatedDate, CreatedById, CreatedBy.FirstName, CreatedBy.LastName, ParentId,
 Parent.Name, Body,
 (SELECT ID, FieldName, OldValue, NewValue FROM FeedTrackedChanges ORDER BY ID DESC)
FROM FeedItem
WHERE CreatedDate > LAST_MONTH
ORDER BY CreatedDate DESC
```

- If you're using an earlier API version than version 23.0, query FeedItem objects through a feed (such as AccountFeed or OpportunityFeed). The following example returns all feed items for a given account, ordered by date descending:

```
SELECT Id, Type, FeedItem.Body
FROM AccountFeed
WHERE ParentId = AccountId ORDER BY CreatedDate DESC
```

  Note: Provide the `ParentId` for API version 22.0 and earlier.

- A feed item of type `UserStatus` is automatically created when a user adds a post to update the status. You can't explicitly create a feed item of type `UserStatus`.
- The FeedItem object doesn't support aggregate functions in queries.
- If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.
- The size limit for an attachment on a feed is 2 GB.
- You can't use the content fields to update or delete the content.
- You can't filter or update the content fields.
- Deleting a feed item via the API also deletes the associated content. Likewise, undeleting a feed item restores associated content.

  Note: This object is hard deleted. It isn't sent to the Recycle Bin.

- After uploading to a feed, it's possible for an attachment or document to be deleted, marked private, or hidden by sharing rules. In this case, all content fields in a FeedItem object appear as `null` in a SOQL query.
- You can't explicitly create or delete a FeedTrackedChange record.
- Imagine that you insert a feed item or feed comment of `Type ContentPost` on a User or Group to create a file. Then the `NetworkScope` field value of the feed item is passed to the file.
- If you use an Apex trigger to modify the `Body` of a FeedItem object, all mentions hyperlinks are converted to plain text. The mentioned users don't get email notifications.
- If you insert rich text into the feed item body, make sure that the case of the opening and closing HTML tags matches. For example, `<b>This is bold text</B>` generates an error.
- To check file sharing with Apex triggers, write triggers on ContentDocumentLink instead of FeedItem. For an example, see ContentDocumentLink.
- In API version 36.0 and later, use FeedAttachment to attach one or more content items to a feed item. As a result of support for multiple attachments through FeedAttachment, all fields related to content attachments have been removed. These fields are: `ContentData`, `ContentDescription`, `ContentFileName`, `ContentSize`, and `ContentType`.
- For all API versions of FeedItem, you can't query a FeedItem object using the `System Modstamp` filter.
- When you use the FeedItem object to create a record-triggered flow, and the flow tries to update a field on the parent record, the field may not update in the UI until the page is refreshed.

FeedLike

Indicates that a user has liked a feed item. This object is available in API version 21.0 and later.

FeedLike records represent likes on posts and not likes on comments. Likes on comments can't be queried via the API. A FeedLike is a child object of an associated FeedItem, FeedTrackedChange, or object feed, such as AccountFeed.

Supported Calls

`create()`, `delete()`, `describeSObjects()`

Special Access Rules

If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.

Fields

Field Name	Details
`FeedItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the feed item that the user liked.

Field Name	Details
`FeedEntityId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of a feed item or feed comment the user liked. If the user liked a comment, `FeedEntityId` is set to the ID of the comment. If the user liked a feed item, `FeedEntityId` is set to the ID of the feed item. This field is optional. The default value is the ID of the feed item.
`InsertedById`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the `InsertedBy` value is set to the ID of the context user. This is a relationship field. **Relationship Name** InsertedBy **Relationship Type** Lookup **Refers To** User

Usage

You can't query FeedLike records directly. They can only be queried via the entity feed, such as AccountFeed.

FeedLike records represent likes on posts and not likes on comments. Likes on comments can’t be queried via the API.

FeedPollChoice

Shows the choices for a poll posted in the feed. This object is available in API version 29.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To delete feed items they didn't create, users must have one of these permissions:

- Modify All Data
- Modify All on the parent object, for example on Account for a poll on an AccountFeed
- Moderate Chatter

  Note: Users with the Moderate Chatter permission can delete only the feed items and comments they can see.

  Only users with this permission can delete items in unlisted groups.

Fields

Field Name	Details
`ChoiceBody`	**Type** textarea **Properties** Group **Description** A choice in the poll.
`FeedItemId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the feed item for the poll.
`Position`	**Type** int **Properties** Group, Sort **Description** Shows the position of the poll choice.

Usage

Use this object to query all of the choices associated with a particular poll. To view how people voted on the poll, see the FeedPollVote object.

FeedPollVote

Shows how users voted on a poll posted in the feed. This object is available in API version 29.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
`ChoiceId`	**Type** reference **Properties** Filter, Group **Description** Indicates which choice a user selected on a poll posted in a feed. This is a relationship field. **Relationship Name** Choice **Relationship Type** Lookup **Refers To** FeedPollChoice
`FeedItemId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the feed item for the poll.

Usage

Use this object to query how users voted on a particular poll.

FeedPost

FeedPost represents the following types of changes in a record feed, such as AccountFeed: text posts, link posts, and content posts. This object is available in API version 18.0 through 21.0. FeedPost is no longer available in later versions. Starting with API version 21.0, use FeedItem to represent text posts, link posts, and content posts in feeds.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `search()`

Special Access Rules

You can delete all feed items you created. To delete feed items you didn't create, you must have one of these permissions:

- "Modify All Data"
- "Modify All" on the object associated with the feed and delete permission on the parent feed
- "Moderate Chatter"

  Note: Users with the "Moderate Chatter" permission can delete only the feed items and comments they can see.

- Manage Unlisted Groups

  Only users with this permission can delete items in unlisted groups.

Only users with the Modify All Data permission can delete a feed item of `Type` `TrackedChange`.

If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.

Fields

Field	Details
`Body`	**Type** string **Properties** Create, Filter, Nillable, Sort **Description** The content of the FeedPost. Required when `Type` is `TextPost` or `AdvancedTextPost`. Optional when `Type` is `ContentPost` or `LinkPost`.
`ContentData`	**Type** base64 **Properties** Create, Nillable **Description** This field is required if `Type` is `ContentPost`. Encoded file data in any format, and can't be 0 bytes. Setting this field automatically sets `Type` to `ContentPost`.
`ContentDescription`	**Type** string **Properties** Create, Nillable, Sort

Field	Details
	Description The description of the file specified in `ContentData`.
`ContentFileName`	**Type** string **Properties** Create, Group, Nillable, Sort **Description** This field is required if `Type` is `ContentPost`. The name of the file uploaded to the feed. Setting `ContentFileName` automatically sets `Type` to `ContentPost`.
`ContentSize`	**Type** int **Properties** Group, Nillable, Sort **Description** This field is the size of the file (in bytes) uploaded to the feed. This field is read-only and is automatically determined during insert.
`ContentType`	**Type** string **Properties** Group, Nillable, Sort **Description** This field is the MIME type of the file uploaded to the feed. This field is read-only and is automatically determined during insert.
`FeedItemId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the feed containing the FeedPost.
`InsertedById`	**Type** reference **Properties** Filter, Group, Sort

Field	Details
	Description ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the `InsertedBy` value is set to the ID of the context user.
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the record has been moved to the Recycle Bin (`true`) or not (`false`). This field is a standard system field.
`LinkUrl`	**Type** url **Properties** Create, Filter, Nillable, Sort **Description** The URL of a `LinkPost`.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the object type to which the FeedPost is related. For example, set this field to a `UserId` to post to someone's profile feed, or an `AccountId` to post to a specific account.
`Title`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The title of the FeedPost. When the `Type` is `LinkPost`, the `Body` is the URL and the `Title` is the label for the link.
`Type`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description The type of FeedPost: • `UserStatus`—automatically generated when a user updates their status • `TrackedChange`—ignore • `TextPost`—a direct text entry on a feed • `LinkPost`—a URL posting on a feed • `ContentPost`—an uploaded file on a feed Note: If you set `Type` to `ContentPost`, you must specify `ContentData` and `ContentFileName`.

Usage

- You can't directly query for a FeedPost. FeedPosts are always associated with a feed item, so you can query for them through the feeds. The following example returns all feed items for a given account, ordered by date descending:

```
SELECT Id, Type, FeedPost.Body
FROM AccountFeed
WHERE ParentId = AccountId ORDER BY CreatedDate DESC
```

- A FeedPost of type `UserStatus` is automatically created when a user adds a post to update the current status. You can't explicitly create a FeedPost of type `UserStatus`.
- The size limit for an attachment on a profile, news, or record feed is 2 GB.
- You can't use the content fields to update or delete the content.
- You can't filter or update the content fields.
- Deleting a FeedPost via the API also deletes the associated content and FeedPost objects. Likewise, undeleting a FeedPost restores associated content and FeedPost objects.

  Note: This object is hard deleted. It isn't sent to the Recycle Bin.

- After uploading to a feed, it is possible for an attachment or document to be deleted, marked private, or hidden by sharing rules. In this case, all content fields in FeedPost appear as `null` in a SOQL query.
- You can't explicitly create or delete a FeedTrackedChange record.

FeedRevision

Holds the revision history of a specific feed item or comment, including a list of attributes that changed for each revision. This object is available in API version 34.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field Name	Details
Action	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Holds the type of modification to the underlying feed item or comment attribute. `Action` can have the value `Changed`.
EditedAttribute	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Identifies the part of the feed item or comment which was modified. A single revision can have many edited attributes.
FeedEntityId	**Type** reference **Properties** Filter, Group, Sort **Description** Identifies the modified feed item or comment.
IsDeleted	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the record has been moved to the Recycle Bin (`true`) or not (`false`). This field is a standard system field.
IsValueRichText	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the feed item `Body` contains rich text. If you post a rich text feed comment using SOAP API, set `IsRichText` to `true` and escape HTML entities from the body. Otherwise, the post is rendered as plain text. Rich text supports the following HTML tags:

Field Name	Details
	• `<p>` Tip: Though the ` ` tag isn't supported, you can use `<p> </p>` to create lines. • `<a>` • `<b>` • `<code>` • `<i>` • `<u>` • `<s>` • `<ul>` • `<ol>` • `<li>` • `<img>` The `<img>` tag is accessible only through the API and must reference files in Salesforce similar to this example: `<img src="sfdc://069B0000000omjh"></img>` Note: In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation.
OriginNetworkId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the Experience Cloud site in which a user modified the feed item or comment. This field is only available, if digital experiences is enabled for your org.
Revision	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The revision number of the feed item or comment.
Value	**Type** textarea **Properties** Nillable

Field Name	Details
	Description Identifies the value of the `EditedAttribute` field before the update.

Usage

This object tracks the changes made to a feed item or feed comment and stores a list of attributes that changed for each revision.

- To query the FeedRevision object, users need the View All Data permission or supply a WHERE clause on the `FeedEntityId`.

feedSignal

Attach feed signals, like `UpDownVote`, `UserVerified`, and `Verified`, to a feed post or comment. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`

Fields

Field	Details
`FeedEntityId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the Feed entity.
`FeedItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the feed post or comment. Possible values are: • `FeedItem` • `FeedComment`
`InsertedById`	**Type** reference

Field	Details
	Properties Filter, Group, Sort **Description** ID of user who inserted the signal. This is a relationship field. **Relationship Name** InsertedBy **Relationship Type** Lookup **Refers To** User
`SignalType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of signal. Possible values are: • `UpDownVote` • `UserVerified` • `Verified`
`SignalValue`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** The value of the signal. For example, for `UpDownVote`, the value specifies whether the signal is an upvote or a downvote.

FeedTrackedChange

Represents an individual field change or set of field changes. A FeedTrackedChange is a child object of a record feed, such as AccountFeed. This object is available in API version 18.0 and later.

Supported Calls

`describeSObjects()`

Fields

Field	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Defaulted on create, Group, Restricted picklist, Sort **Description** Available only for organizations with the multicurrency feature enabled. Contains the ISO currency code for the field, if `FieldName` is a currency field.
`FeedItemId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the parent feed that tracks the field change.
`FieldName`	**Type** string **Properties** Group, Sort **Description** The name of the field that was changed. Note: This field also tracks other events that are not related to an individual field for a parent feed. These events occur as the parent record advances through its pipeline. For example, a value of `leadConverted` indicates that a lead has been converted to an opportunity. For a full list of values, see Tracking of Special Events.
`NewValue`	**Type** anyType **Properties** Nillable, Sort **Description** The new value of the field that was changed.
`OldCurrencyIsoCode`	**Type** string **Properties** Group, Nillable, Sort **Description** Available only for organizations with the multicurrency feature enabled. Contains the ISO currency code for the `OldValue` field, if `FieldName` is a currency field.

Field	Details
`OldValue`	**Type** anyType **Properties** Nillable, Sort **Description** The last value of the field before it was changed.

Usage

A user can subscribe to a record or to another user. Changes to the record and updates from the users are displayed in the Chatter feed on the user's home page, which is a useful way to stay up-to-date with other users and with changes made to records in Salesforce. Feeds are available in API version 18.0 and later.

If you move a custom field to the Recycle Bin, all FeedTrackedChange records that track historical changes to the custom field are automatically deleted and are not restored if the custom-field is undeleted.

The following sections outline the difference between standard feeds and custom feeds.

Standard Feeds

A standard feed is a record feed, such as AccountFeed. FeedTrackedChange records for standard feeds can only be queried via the parent feed object.

Note the following when working with standard feed items:

- Feed items for standard feeds are read only in the API.
- A FeedTrackedChange record is visible when you have read access on the record feed, and when the field is visible in the field-level security settings.

Custom Feeds

If you want more control over the information provided in a record feed, such as AccountFeed, you can create a custom feed. A custom feed can replace or augment an existing record feed. For example, you might want to:

- Disable the standard account record feed and use an Apex trigger to generate FeedTrackedChange records for the events that you want to track in the feed instead.
- Augment the standard contact record feed by writing an API client that inserts feed items for events that are not tracked in the standard feed.

Tracking of Special Events

The `FieldName` field also tracks other events that are not related to an individual field for a parent feed. These events occur as the parent record advances through its pipeline. For example, a value of `leadConverted` indicates that a lead has been converted to an opportunity.

Valid values for the `FieldName` field for multiple objects:

- `created`

- `ownerAccepted`
- `ownerAssignment`

Additional valid values for the `FieldName` field for individual objects:

Account

- `accountCreatedFromLead`
- `accountMerged`
- `accountUpdatedByLead`
- `personAccountUpdatedByLead`

Case

- `closed`
- `ownerEscalated`

Contact

- `contactCreatedFromLead`
- `contactMerged`
- `contactUpdatedByLead`

Contract

- `contractActivation`
- `contractApproval`
- `contractConversion`
- `contractExpiration`
- `contractTermination`

Lead

- `leadConverted`
- `leadMerged`

Opportunity

- `opportunityCreatedFromLead`

SEE ALSO:

Custom Object__Feed

FieldHistoryArchive

Represents field history values for all objects that retain field history. `FieldHistoryArchive` is a big object, available only to users with the “Retain Field History” permission. This object is available in API version 29.0 and later.

Each instance of the `FieldHistoryArchive` object represents a single change in the value of a field. `FieldHistoryArchive` stores history for both standard and custom fields.

The `Field` field returns the name of the field unless the parent field or object is deleted, in which case it returns the field ID. You can use the ID to retrieve the old field and object name from the `FieldNameAfterArchival` and `ParentNameAfterArchival` fields, respectively.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field Name	Details
`ArchiveFieldName`	**Type** string **Properties** Nillable **Description** The name of the field at the time the data was archived. If the field name changed, the name is sometimes not the same for all records related to a single field.
`ArchiveParentName`	**Type** string **Properties** Nillable **Description** The name of the parent object at the time the data was archived. If the object name changed, the name is sometimes not the same for all records related to a single field.
`ArchiveParentType`	**Type** string **Properties** Nillable **Description** The type of the field at the time the data was archived. If the field type changed, the type is sometimes not the same for all records related to a single field.
`ArchiveTimestamp`	**Type** dateTime **Properties** Nillable **Description** The date and time at which the data was archived.
`CreatedById`	**Type** reference **Properties** Nillable

Field Name	Details
	Description The user ID of the user who created the original record.
`CreatedDate`	**Type** dateTime **Properties** Nillable, Sort **Description** The date and time at which the original record was created.
`Field`	**Type** picklist **Properties** Restricted picklist **Description** The name of the field that was changed. If the field is deleted from the parent object, the `Field` field contains the field ID instead.
`FieldHistoryType`	**Type** picklist **Properties** Filter, Nillable, Restricted picklist, Sort **Description** The name of the object that contains the field history. Possible values are: • `Account` • `Article` • `Asset` • `AuthorizationFormConsent` – Available in version 58.0 and later. • `Case` • `CommSubscriptionConsent` – Available in version 58.0 and later. • `Contact` • `ContactPointConsent` – Available in version 58.0 and later. • `ContactPointTypeConsent` – Available in version 58.0 and later. • `Contract` • `ContractLineItem` • `Crisis` • `Employee` • `EmployeeCrisisAssessment` • `Entitlement` • `Individual`

Field Name	Details
	• `InternalOrganizationUnit` • `Knowledge` • `Lead` • `Opportunity` • `Order` • `OrderItem` • `PartyConsent` – Available in version 58.0 and later. • `Pricebook2` • `PricebookEntry` • `Product2` • `ServiceAppointment` • `ServiceContract` • `Solution` • `WorkOrder` • `WorkOrderLineItem`
`HistoryId`	**Type** reference **Properties** Filter, Sort **Description** The ID of the relevant history object (for example, AccountHistory). This field is available in versions 42.0 and later.
`Id`	**Type** ID **Properties** Defaulted on create, Filter, idLookup **Description** The ID of the archived record. It's useful to have a field's ID for fields that you've deleted. (Field names aren't retained in history when you delete fields from Salesforce.)
`NewValue`	**Type** anyType **Properties** Nillable **Description** The new value of the modified field.

Field Name	Details
`OldValue`	**Type** anyType **Properties** Nillable **Description** The previous value of the modified field.
`ParentId`	**Type** reference **Properties** Filter, Sort **Description** The ID of the object that contains the field (the parent object).

Usage

When sorting fields, order them as follows:

1. `FieldHistoryType ASC`
2. `ParentID ASC`
3. `CreatedDate DESC`

SEE ALSO:

*Developer Guide:*Big Objects Implementation Guide

FieldChangeSnapshot

Use this virtual object to learn which opportunities' close dates changed during the specified time period. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To use FieldChangeSnapshot, set up historical trend reporting for opportunities in your org. You must also have the Pipeline Inspection user permission and the Pipeline Inspection setting enabled.

Fields

Field	Details
`CurrentValueDateOnly`	**Type** date **Properties** Filter, Group, Nillable **Description** The current value of a date field on the opportunity.
`FieldName`	**Type** string **Properties** Filter, Group **Description** The name of the field to get the change history for. Possible values are: • `CloseDate`
`ParentId`	**Type** reference **Properties** Filter, Group **Description** The ID of the opportunity to get the change history for. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** Opportunity
`ValidFrom`	**Type** dateTime **Properties** Filter **Description** The date and time that specifies the beginning of the time period.
`ValidTo`	**Type** dateTime

Field	Details
	Properties Filter **Description** The date and time that specifies the end of the time period.

Usage

Use FieldChangeSnapshot to learn about the first change made to the specified opportunity during the specified time period. Subsequent changes are not returned.

Example: Suppose that last week you changed an opportunity's close date to June 1, 2021. Assuming the opportunity had the ID '006R0000XXXXXXXXXX', the following query would return the `CurrentValueDateOnly` of June 1, 2021:

```
Select CurrentValueDateOnly from FieldChangeSnapshot where ParentID =
'006R0000XXXXXXXXXX' and FieldName = 'CloseDate' and ValidTo = LAST_WEEK AND ValidFrom
 = LAST_WEEK and CurrentValueDateOnly < 2021-07-01
```

FieldPermissions

Represents the enabled field permissions for the parent PermissionSet. This object is available in API version 24.0 and later.

To grant a user access to a field, associate a FieldPermissions record with a PermissionSet that's assigned to a user. FieldPermissions records are only supported in PermissionSet, not in Profile.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

In API version 49.0 and later, only users with the View Setup and Configuration permission can access this object.

Fields

In API version 50.0 and later, for lookup field inserts and queries, you can leave off the Id in the field name *or* include it. The rows returned always use the API name. For example:

```
Select SobjectType, Field From FieldPermissions where Field='Contact.Account'
```

and

```
Select SobjectType, Field From FieldPermissions where Field='Contact.AccountId'
```

both return

```
Contact, Contact.AccountId
```

Field Name	Details
`Field`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The field's API name. This name must be prefixed with the `SobjectType`. For example, `Merchandise__c.Description__c`
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The `Id` of the field's parent PermissionSet. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** PermissionSet
`PermissionsEdit`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** If `true`, users assigned to the parent PermissionSet can edit this field. Requires `PermissionsRead` for the same field to be `true`.
`PermissionsRead`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** If `true`, users assigned to the parent PermissionSet can view this field. A FieldPermissions record must have at minimum `PermissionsRead` set to `true`, or it will be deleted.
`SobjectType`	**Type** picklist

Field Name	Details
	Properties Create, Filter, Group, Restricted picklist, Sort **Description** The object's API name. For example, `Merchandise__c`.

Usage

FieldPermissions work similarly to ObjectPermissions. However, FieldPermissions includes a `Field` attribute to return the name of the field.

For example, the following query returns all FieldPermissions records that have at least the "Read" permission. The results include the field, object, and permission set names.

```
SELECT SobjectType, Field, PermissionsRead, Parent.Name
FROM FieldPermissions
WHERE PermissionsRead = True
```

Include the field's parent object when querying FieldPermissions. For example, to find all rows that match the Account object's `Type` field, create the following query:

```
SELECT Id, SobjectType, Field
FROM FieldPermissions
WHERE Field = 'Account.Type' AND SobjectType = 'Account'
```

To find which permission sets are backed by profiles with the Account object, you can use a query like the following example:

```
SELECT Id, ParentId, SobjectType, Field, PermissionsEdit, PermissionsRead, Parent.Name
FROM FieldPermissions
WHERE SobjectType = 'Account' and Parent.IsOwnedByProfile = true
ORDER BY SObjectType, Field
```

Both `SobjectType` and `Field` must be included in the `SELECT` line of the query. Provide the full API name of the field in the form of `SobjectType.Field` when querying for a field.

Note: When using the FieldPermission object to download records, depending on the SOQL query you use, you might not receive all expected records. Results can also appear incomplete. However, all records do download; fields that don't support field security and rows for entities not visible to the org are hidden.

Special Properties for Field Permissions

The auto-number and formula fields have special rules for how field permissions work. Both have FieldPermissions records, but inserting and updating is limited to `PermissionsRead`. `PermissionsEdit` isn't allowed for either field type, since these fields must be read-only for users.

The following field types don't return a FieldPermissions record because they are assumed to always be readable.

- `Id`
- `CreatedById`
- `CreatedDate`
- `IsDeleted`

- `LastModifiedById`
- `LastModifiedDate`
- `SystemModStamp`

The following field types don't return a FieldPermissions record because they are assumed to always be readable and writable.

- `OwnerId`
- Master-detail custom (relationship) fields
- Universally required custom fields

As a result, the following query returns no records, even though users do have some access to some of the fields.

```
SELECT Field, SobjectType, PermissionsRead
FROM FieldPermissions
WHERE Field='Id'
```

To determine if a field can return a FieldPermissions record, you can call a `describeSObject()` on the field. For example, `describeSObject('Merchandise__c')`, returns all the properties of the Merchandise custom object, including field properties. If you use a field whose `permissionable` property is `false` (like the field types listed in this section), you can't query, insert, update, or delete field permissions records, because they don't exist.

Working with Custom Activity Fields

While tasks and events are considered separate objects, they share a common set of activity custom fields. As a result, when a custom task field is created, a custom event field is also created, and vice versa. You can display the custom field on the event layout, task layout, or both event and task layouts.

Although custom activity fields are shared between tasks and events, you see separate FieldPermissions records for the task and event. However, changes made to one field permission record are automatically made to the other. For example, if you create a custom activity field, assign field permissions to it in a permission set, and run the following query, the query returns two records with the same permission value.

```
SELECT Field, Id, ParentId, PermissionsEdit, PermissionsRead, SobjectType
FROM FieldPermissions
WHERE SobjectType = 'event' OR SobjectType ='task'
```

If you then update one of the records with another set of field permission values and run the query, the same permission values for both records are returned.

Nesting Field Permissions

You can nest FieldPermissions in a PermissionSet query. For example, the following returns any permission sets where "Edit Read Only Fields" is `true`. Also, the result set includes both the "Read" and "Edit" field permission on the Merchandise object. Get similar results by nesting the SOQL with a field permission query using the relationship name for field permissions: `FieldPerms`.

```
SELECT PermissionsEditReadonlyFields,
(SELECT SobjectType, Field, PermissionsRead, PermissionsEdit
FROM FieldPerms
WHERE SobjectType = 'Merchandise__c')
FROM PermissionSet
WHERE PermissionsEditReadonlyFields = true
```

As a result, it's possible to traverse the relationship between the PermissionSet and any child-related objects (in this case, FieldPermissions). You can do this from the PermissionSet object by using the child relationship (`ObjectPerms`, `FieldPerms`, and so on) or from the child object by referencing the PermissionSet with `Parent.`***`permission_set_attribute`***.

It's important to consider when to use a conditional `WHERE` statement to restrict the result set. To query based on an attribute on the permission set object, nest the SOQL with the child relationship. However, to query based on an attribute on the child object, you must reference the permission set parent attribute in your query.

The following two queries return the same columns with different results, based on whether you use the child relationship or parent notation.

```
SELECT PermissionsEditReadonlyFields,
(SELECT SobjectType, Field, PermissionsRead, PermissionsEdit
FROM FieldPerms
WHERE SobjectType = 'Merchandise__c')
FROM PermissionSet
WHERE PermissionsEditReadonlyFields = true
```

Versus:

```
SELECT SobjectType, Field, PermissionsRead, PermissionsEdit, Parent.Name,
   Parent.PermissionsEditReadonlyFields
FROM FieldPermissions
WHERE SObjectType='Merchandise__c'
```

Muting Permissions

Field permissions with a parent muting permission set act differently than those enabled in a regular permission set. For a regular permission set, if a FieldPermissions record grants full access to a field (for example, granting read and edit access), users have full access to that field.

With muting permission sets, a FieldPermissions record defines the muting of access. So if a muting permission set is set for read and edit, the read and edit access is muted.

For example, we have a permission set and a muting permission set that controls access to the Account object's fields. Each permission set has settings for the Website field.

Regular Permission Set

Field	PermissionsRead	PermissionsEdit	Result
Account.Website	`true`	`false`	The Account.Website field is read only.
Account.Website	`true`	`true`	The Account.Website field has both read and edit permissions.

Muting Permission Set

Field	PermissionsRead	PermissionsEdit	Result
Account.Website	`false`	`true`	Edit permissions on the Account.Website fields are muted.

Field	PermissionsRead	PermissionsEdit	Result
Account.Website	`true`	`true`	Read and edit permissions on the Account.Website field are muted.

Field permissions are aggregated by combining the permissions granted by the permission set and the permissions muted by the muting permission set. For example, if you have a permission set that grants read and edit permissions for a field, and a muting permission that mutes the same field's edit permission, the result is that only the read permission is enabled.

PermissionSet

ObjectPermissions

FieldSecurityClassification

Represents a field's data sensitivity value selected from the SecurityClassification picklist. This object is available in API version 46.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To view this object, you need the Customize Application or Modify Data Classification permission.

Fields

Field Name	Details
`ApiName`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The API name of the data sensitivity picklist value. Default values: • Public • Internal • Confidential • Restricted • MissionCritical

Field Name	Details
Description	**Type** textarea **Properties** Filter, Group, Nillable, Sort **Description** The description of the data sensitivity picklist value.
IsHighRiskLevel	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates that fields with this picklist value contain data highly sensitive to your company.
MasterLabel	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The data sensitivity picklist value. Default values: • Public • Internal • Confidential • Restricted • MissionCritical
SortOrder	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The value's position in the picklist.

Usage

Use this object to return information about data sensitivity values in the SecurityClassification picklist. This object is read-only, but you can update the SecurityClassification picklist using the StandardValueSet Metadata API type.

FieldServiceMobileSettings

Represents a configuration of settings that control the Field Service iOS and Android mobile app experience. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
`AscAutomaticMode`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Describes how status changes are handled. Possible values are: • `Off`—No automatic status changes. • `Manual`—The mobile worker can cancel or update the status change. • `Timed`—The mobile worker has a time period to prevent the status change. When the timer ends, the status changes. • `Automated`—The mobile worker is notified that the status has changed.
AscCancellationTimerInSec	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** For the Timed mode only. Time that the user has to cancel the appointment status change.
AscCompletedStatus	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description Status that indicates that a mobile worker completed a service appointment. Possible values are: • `Canceled` • `Cannot Complete` • `Completed` • `Dispatched` • `In Progress` • `None` • `Scheduled`
AscOnSiteStatus	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Status that indicates that a mobile worker is at a service appointment. Possible values are: • `Canceled` • `Cannot Complete` • `Completed` • `Dispatched` • `In Progress` • `None` • `Scheduled`
AscRadiusInMeters	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Service appointment radius that can trigger a status change.
AscTimeLimitationInMin	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description A time period when status changes can occur, before an appointment's scheduled start time and after the scheduled end time. The time is applied only if IsAscTimeLimitEnabled is `true`.
AscTravelStatus	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Status that indicates that a mobile worker is traveling to a service appointment. Possible values are: • `Canceled` • `Cannot Complete` • `Completed` • `Dispatched` • `In Progress` • `None` • `Scheduled`
`BgGeoLocationAccuracy`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The accuracy of geolocation tracking of services resources while the app is running in the background. Lowering accuracy reduces battery consumption for mobile devices. Available in API version 41.0 and later. Picklist options: • `Medium`—Accurate to within about 100 meters. • `Coarse`—Accurate to within about 1 kilometer. • `Very Coarse`—Accurate to within about 3 kilometers. The default value is `Coarse`.
`BgGeoLocationMinUpdateFreqMins`	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The frequency of geolocation poling of services resources while the app is running in the background. Less frequent poling decreases battery consumption for

Field Name	Details
	mobile devices. The label in the UI is **Minimum Update Frequency of Geo Location in Minutes (Background)**. Available in API version 41.0 and later.
BrandInvertedColor	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The color of toasts and the contrast color of the floating action button.
ContrastInvertedColor	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The color of secondary backgrounds in the UI.
ContrastPrimaryColor	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The color of primary text.
ContrastQuaternaryColor	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The color of secondary lines that delineate different areas of the UI.
ContrastQuinaryColor	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The color of primary backgrounds in the UI.
ContrastSecondaryColor	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description The color of secondary text.
`ContrastTertiaryColor`	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The color of the icons on the settings screen and of primary lines that delineate different areas of the UI.
`DefaultListViewDeveloperName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The API name of the default service appointment list view on the schedule screen.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The API name of the set of field service mobile settings. Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`FeedbackPrimaryColor`	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The color of error messages.
`FeedbackSecondaryColor`	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The color of success messages.

Field Name	Details
FeedbackSelectedColor	**Type** string **Properties** Create, Defaulted on create, Group, Sort, Update **Description** The color indicating the user’s current selection.
FutureDaysInDatePicker	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The number of days into the future that a user can select from the date picker on the schedule screen.
GeoLocationAccuracy	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The accuracy of service resource geolocation tracking. Lowering accuracy reduces battery consumption for mobile devices. Picklist values: • `Fine`—Accurate to within 10 meters. • `Medium`—Accurate to within 100 meters. • `Coarse`—Accurate to within 1 kilometer. The default value is `Medium`.
GeoLocationMinUpdateFreqMins	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The minimum number of minutes between attempts to poll geolocation.
IsAscTimeLimitEnabled	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether AscTimeLimitationInMin is applied. Default is `true`

Field Name	Details
`IsAssignmentNotification`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Controls whether service appointment notifications are sent when the service resource is assigned the appointment. Default is `false`. This field is available in API version 46.0 and later.
`IsDefault`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates that the set of field service mobile settings is the default set that is automatically assigned to users. You can't make a different settings record the default, but you can modify the default settings record. Default is `false`. Available in API version 41.0 and later.
`IsDispatchNotification`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Controls whether service appointment notifications are sent when the service resource is dispatched for the appointment. Default is `false`. This field is available in API version 46.0 and later.
IsLimitedLocTrackingEnabled	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** When limited tracking for Appointment Assistant is enabled, the mobile worker's location is shown only on the way to a service appointment. The default value is `false`.
IsOptimizedImageUploadEnabled	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description Indicates whether to configure the size of images uploaded by your mobile workers. To optimize upload speeds, you can limit your file size to a defined maximum size using the OptimizeImageSizeInMb field. Resizing your images affects the resolution of your images. The default value is `false`.
`IsScheduleViewResourceAbsences`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Determines whether resource absences appear in the Schedule tab of the mobile app. This field is available in API version 55.0 and later.
`IsSendLocationHistory`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Controls whether geolocation tracking of services resources is enabled. Default is `false`.
`IsShowEditFullRecord`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Controls whether users can edit records with the field service mobile app. Default is `false`.
`IsTimeSheetEnabled`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Controls whether users can access time sheets on their mobile devices (Beta). Default is `false`.
`IsTimeZoneEnabled`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description Controls whether the time zone of timesheet entries on the mobile app is recorded. The current time zone is recorded in the `LocationTimeZone` field of the TimeSheetEntry object. Default is `false`. Available in API version 50.0 and later.
`IsUseSalesforceMobileActions`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Reserved for future use.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The localization preference for a user. The format is a two letter language code and, if there's a dialect, followed by the two letter dialect, for example, `fr` for French, and `fr_BE` for Belgian French
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The label in the UI for the set of field service mobile settings. Available in API version 41.0 and later.
`MetadataCacheTimeDays`	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The number of days that org metadata, such as layouts, is kept in the app's local cache of memory.
`NavbarBackgroundColor`	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description The color of the top bar in the app.
`NavbarInvertedColor`	**Type** string **Properties** Create, Defaulted on create, Group, Sort, Update **Description** The secondary color of the tap bar in the app.
OptimizeImageSizeInMb	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Configure the size of images uploaded by your mobile workers. To optimize upload speeds, you can limit your file size to a defined maximum size. Resizing your images affects the resolution of your images. Enter 0.2 or higher. Used only if IsOptimizedImageUploadEnabled is `true`.
`PastDaysInDatePicker`	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The number of days into the past that a user can select from the date picker on the schedule screen.
`PrimaryBrandColor`	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The main branding color used throughout the UI.
`QuickStatusChangeFlowName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The name of an existing Field Service flow with a Quick Status Change action to change the work order or service appointment status or both. This applies to

Field Name	Details
	flows invoked on the mobile app only. This field is available in API version 51.0 and later.
`RecordDataCacheTimeMins`	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The number of minutes that record data is kept in the app's local cache of memory.
`SecondaryBrandColor`	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The color of action buttons.
`TimeIntervalSetupMins`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Controls the spacing of picklist options for time values such as when creating resource absences.
`UpdateScheduleTimeMins`	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The minimum number of minutes between attempts to update a user's schedule.The user's schedule might not refresh on this cadence if the user's device isn't connected to a network or doesn't have adequate battery life.

Usage

Field Service Mobile settings allow you to create sets of settings to apply to different field service mobile users. The settings apply to both the Android and iOS versions of the app.

For example, suppose you want to accommodate workers that are color blind, or who work in dark or bright conditions. You can choose different branding options for different workers to suit their needs, and assign them to their profiles.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

FieldServiceMobileSettingsChangeEvent (API version 55.0)
Change events are available for the object.

FieldServiceOrgSettings

Represents the org settings for Field Service, such as Appointment Assistant settings. If Field Service is enabled, the org contains one read-only record of this object. This object is available in API version 51.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To see this object, Field Service must be enabled. For specified fields in the table, Appointment Assistant must also be enabled.

Fields

Field	Details
`ApptAssistantExpiration`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The expiry time in minutes of when the customer stops seeing the mobile worker's location. Appointment Assistant must also be enabled to see this field.
`ApptAssistantInfoUrl`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The page URL that enables Appointment Assistant. Appointment Assistant must also be enabled to see this field.
`ApptAssistantRadiusUnit`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description The unit of the radius of the service appointment that prompts the Last Mile event for Appointment Assistant. Appointment Assistant must also be enabled to see this field. Possible values are: • `Kilometer` • `Meter` • `Mile` • `Yard`
`ApptAssistantRadiusValue`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The radius of the service appointment that prompts the Last Mile event for Appointment Assistant. Appointment Assistant must also be enabled to see this field.
`ApptAssistantStatus`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The value that prompts the En Route event for Appointment Assistant. Appointment Assistant must also be enabled to see this field. Possible values are: • `Canceled` • `Cannot Complete` • `Completed` • `Dispatched` • `In Progress` • `None` • `Scheduled` • `TestSharing` The default value is 'None'.
`CanPopulateGoogleAddress`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Allows desktop and mobile to send geolocation and map data to Google and Apple. Available in API version 57.0 and later. The default value is `true`.
CanSendAppCenterCrashReports	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Allows Salesforce to send crash reports to Microsoft App Center. Available in API version 57.0 and later. The default value is `true`.
CanStoreMobileAnalytics	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Allows third parties to store mobile analytics. Available in API version 57.0 and later. The default value is `true`.
DeveloperName	**Type** string **Properties** Filter, Group, Sort **Description** The unique name of the object in the API. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
DoesAvlCalcInclOvertime	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Specifies whether overtime is included in work capacity availability calculations. Available in API version 59.0 and later. The default value is `false`.

Field	Details
DoesAvlCalcInclPrimOnly	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Specifies if primary members only are included in work capacity availability calculations. If the value is `false` both primary and secondary members of the service territory are included. Available in API version 59.0 and later. The default value is `false`.
Language	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The language of the field service org settings. The format for the values is a two-letter language code in small letters, for example, `fr` for French. If the language has regional dialects, add the two-letter country code in capital letters, for example, use `fr_BE` for Belgian French.
MasterLabel	**Type** string **Properties** Filter, Group, Sort **Description** The label of the field service org settings.

FiscalYearSettings

Settings to define a custom or standard fiscal year for your organization. This object has a parent-child relationship with the Period object.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Spring ’20 and later, only partner users and standard users can access this object.

Fields

Field	Details
`Description`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Description of the setting.
`EndDate`	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** End date of the fiscal year.
`IsStandardYear`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the fiscal year is a standard calendar year (`true`) or a custom fiscal year (`false`).
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** A name for the fiscal year. Limit: 80 characters.
`PeriodId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the associated fiscal period.
`PeriodLabelScheme`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description The numbering scheme used for fiscal periods.
PeriodPrefix	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The prefix of fiscal periods. For example, if `p` is the prefix, then the first period is "P1."
QuarterLabelScheme	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The numbering scheme used for fiscal quarters.
QuarterPrefix	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The prefix of fiscal quarters. For example, if "Q" is the prefix, then the fourth quarter would be "Q4."
StartDate	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** Start date of the fiscal year.
WeekLabelScheme	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The numbering scheme used for weeks.
WeekStartDay	**Type** int

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The name of the day that starts the week, for example `Monday` or `Sunday`
`YearType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates one of two types of fiscal years, Standard or Custom. Standard denotes the standard Gregorian calendar, while Custom means a fiscal year with a custom structure.

Period

Overview of Salesforce Objects and Fields

FlexQueueItem

Represents an asynchronous Apex job in the Apex flex queue. Provides information about the job type and flex queue position of the AsyncApexJob. This object is available in API version 36.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

In API version 49.0 and later, users must have the View Setup and Configuration permission to access this object.

Fields

Field Name	Description
`AsyncApexJobId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of an AsyncApexJob that's waiting in the flex queue.

Field Name	Description
	This is a relationship field. **Relationship Name** AsyncApexJob **Relationship Type** Lookup **Refers To** AsyncApexJob
`FlexQueueItemId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The primary key for this FlexQueueItem.
`JobPosition`	**Type** int **Properties** Filter, Group, Sort **Description** The position in the flex queue of the waiting job. The highest-priority job in the queue is at position 0.
`JobType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of the job. Valid values are: • `ApexToken` • `BatchApex` • `BatchApexWorker` • `Future` • `Queueable` • `ScheduledApex` • `SharingRecalculation` • `TestRequest` • `TestWorker` Currently, queries are supported only on `BatchApex` jobs.

Usage

To find the position of an AsyncApexJob in the flex queue, query `JobPosition`. For example:

```
SELECT JobPosition FROM FlexQueueItem WHERE JobType = 'BatchApex' AND AsyncApexJobId =
'707xx000000DABC'
```

To find the job at a given position, query `AsyncApexJobId`. For example:

```
SELECT AsyncApexJobId FROM FlexQueueItem WHERE JobType = 'BatchApex' AND JobPosition = '2'
```

To find all batch jobs in the flex queue, query `JobType`. To get other information about the jobs, include AsyncApexJob in your query. For example:

```
SELECT JobType, JobPosition, AsyncApexJob.ApexClass.Name, AsyncApexJob.CreatedDate,
    AsyncApexJob.CreatedBy FROM FlexQueueItem WHERE JobType='BatchApex' AND
    AsyncApexJob.ApexClass.Name LIKE '%'BatchAJob'%' ORDER BY JobPosition DESC
```

FlowDefinitionView

Represents the description of a flow definition. This object is available in API version 46.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
`ActiveVersionId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID of the active flow version.
`ApiName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The API name of the flow definition.
`Builder`	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The name of the tool that created this flow. Possible values are: • Cloud Flow Designer • Flow Builder • Swing Designer This field is available in API version 47.0 and later.
`Description`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Flow definition information, specified by the org's admin.
`DurableId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID of the flow definition.
`Environments`	**Type** multipicklist **Properties** Filter, Nillable **Description** The environment in which the flow can run. Valid values are: • `Default`—The flow can run offline or from a Visualforce component, Lightning page, flow action, or custom Aura component. • `Slack`—The flow can run in Slack and the default environment. You specify the Slack flow environment when you save the flow. This field is available in API version 55.0 and later.
`HasAsyncAfterCommitPath`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether the scheduled path runs asynchronously after a save. The default value is false. This field is available in API version 54.0 and later.
`InstalledPackageName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the installed package that includes this flow definition. This field is available in API version 47.0 and later.
`IsActive`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the latest version of the flow definition is the active flow version. This field is available in API version 47.0 and later.
`IsOutOfDate`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the active flow version is the latest version of the flow definition. This field is available in API version 47.0 and later.
`IsOverridable`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the flow is overridable. The default value is false. This field is available in API version 53.0 and later.
`IsSwingFlow`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether the flow is built with Desktop Flow Designer. This field is available in API version 49.0 and later.
`IsTemplate`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the process or flow is a template. When installed from managed packages, processes and flows can't be viewed or cloned by subscribers because of intellectual property (IP) protection. But when those processes and flows are templates, subscribers can open them in a builder, clone them, and customize the clones. This field is available in API version 47.0 and later.
`Label`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The label of the flow definition.
`LastModifiedBy`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Name of the user who last updated this flow definition. This field is available in API version 47.0 and later.
`LatestVersionId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID of the latest flow version, regardless of the flow's status.
`ManageableState`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Indicates the manageable state of the flow that is contained in a package. Possible values are: • `beta` • `deleted` • `deprecated` • `deprecatedEditable` • `installed` • `installedEditable` • `released` • `unmanaged` This field is available in API version 47.0 and later.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix associated with the flow definition.
`OverriddenById`	**Type** string **Properties** Filter, Nillable, Sort **Description** The flow that's overriding the current flow. This is a relationship field. This field is available in API version 53.0 and later. **Relationship Name** OverriddenBy **Relationship Type** Lookup **Refers To** FlowDefinitionView
`OverriddenFlowId`	**Type** string **Properties** Filter, Nillable, Sort **Description** The flow that the current flow is overriding. This is a relationship field. This field is available in API version 53.0 and later.

Field	Details
	Relationship Name OverriddenFlow **Relationship Type** Lookup **Refers To** FlowDefinitionView
`ProcessType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of the flow. Valid values are: • `ActionCadenceAutolaunchedFlow`—A flow executed when a user completes a cadence step. This value is available in API version 56.0 and later. • `ActionCadenceStepFlow`—A screen flow used as a cadence step. This value is available in API version 56.0 and later. • `Appointments`—A flow for Lightning Scheduler. This value is available in API version 44.0 and later. • `AutoLaunchedFlow`—A flow that doesn't require user interaction. • `CheckoutFlow`—A flow used in Lightning B2B Commerce to create a checkout in a store. This value is available in API version 48.0 and later. • `ContactRequestFlow`—A flow that lets customers request that customer support gets back to them. This flow is used to create contact request records. This value is available in API version 45.0 and later. • `CustomerLifecycle`—A Salesforce Surveys flow that lets you associate survey questions with different stages in customer lifecycles. This value is available in API version 49.0 and later and only when the Customer Lifecycle Designer license is enabled. • `CustomEvent`—A process that is invoked when it receives a platform event message. In the UI, it's an event process. This value is available in API version 41.0 and later. • `EvaluationFlow`—A flow for evaluating custom entry and exit conditions in an orchestration. Uses the `isOrchestrationConditionMet` output variable and discards values from any other output variables. This value is available in API version 54.0 and later. • `FieldServiceMobile`—A flow for the Field Service mobile app. This value is available in API version 39.0 and later. • `FieldServiceWeb`—A flow for embedded Appointment Booking. Its UI label is Field Service Embedded Flow. This value is available in API version 41.0 and later.

Field	Details
	• `Flow`—A flow that requires user interaction because it contains one or more screens or local actions, choices, or dynamic choices. In the UI and Salesforce Help, it's a screen flow. Screen flows can be launched from the UI, such as with a flow action, Lightning page, or web tab. • `FSCLending`—A flow for Financial Services Cloud Mortgage. This value is available in API version 46.0 and later. • `IndicatorResultFlow`—A flow for Outcome Management that calculates and creates indicator results for a selected indicator performance period. This value is available with the Outcome Management license in API version 60.0 and later. • `IndividualObjectLinkingFlow`—A flow that associates individuals with interactions such as voice calls, messaging sessions, or case-related emails. This value is available in API version 58.0 and later. • `InvocableProcess`—A process that can be invoked by another process or the Invocable Actions resource in REST API. This value is available in API version 38.0 and later. • `Journey`—An audience-driven flow for Marketing Cloud. This value is available in API version 57.0 and later. • `LoginFlow`—A flow for login. This value is available in API version 51.0 and later. • `LoyaltyManagementFlow`—A flow for the Loyalty Management app and can be invoked by loyalty program processes. This value is available in API version 54.0 and later. • `Orchestrator`—An orchestration that organizes flows into groups of steps contained in a series of stages. This value is available in API version 53.0 and later. • `RecommendationStrategy`—Build recommendations for your users. A recommendation launches its assigned flow. This value is available in API version 54.0 and later. See Flow Builder Strategies. • `RoutingFlow`—A flow for Salesforce Omni-Channel routing and other business logic. This value is available in API version 52.0 and later. • `Survey`—A flow for Salesforce Surveys. From the UI, this type of flow is created in Survey Builder. This value is available in API version 42.0 and later. • `SurveyEnrich`—A Salesforce Surveys flow that uses the Survey Data Mapper. From the UI, this type of flow is created in the Survey Builder and requires an associated survey flow type. This value is available in API version 49.0 or later and only when the Customer Lifecycle Designer license is enabled. • `Workflow`—A process that is invoked when a record is created or edited. In the UI and Salesforce Help, it's a record change process. These values are reserved for future use: • `ActionCadenceFlow` • `ActionPlan` • `AppProcess` • `CartAsyncFlow`

Field	Details
	• `DigitalForm` • `JourneyBuilderIntegration` • `LoginFlow` • `ManagedContentFlow` • `OrchestrationFlow` • `SalesEntryExperienceFlow` • `TransactionSecurityFlow` • `UserProvisioningFlow` Note: This value has significant impact on validation when saving the flow and on the flow's runtime behavior. Don't change this value unless you understand the flow properties of the specified type. Across flow versions, you can change the type only from `Flow` to `AutoLaunchedFlow` or vice versa. Before you change the flow type, make sure that the flow contains only elements, resources, and functionality that the new flow type supports.
`RecordTriggerType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Specifies what type of record changes can start the flow. Possible values are: • `Create` • `CreateAndUpdate` • `Delete` • `None` • `Update` Available only when `triggerType` is `RecordBeforeSave`. This field is available in API version 54.0 and later.
`SourceTemplateId`	**Type** string **Properties** Filter, Nillable, Sort **Description** The template that the current flow was created from. This is a relationship field. This field is available in API version 53.0 and later. **Relationship Name** SourceTemplate

Field	Details
	Relationship Type Lookup **Refers To** FlowDefinitionView
`TriggerObjectOrEventId`	**Type** string **Properties** Filter, Nillable, Sort **Description** ID of the object or platform event that triggers this flow. This field is available in API version 53.0 and later. This is a relationship field. **Relationship Name** TriggerObjectOrEvent **Relationship Type** Lookup **Refers To** EntityDefinition
`TriggerObjectOrEventLabel`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The label of the object or platform event that triggers this flow. This field is available in API version 53.0 and later.
`TriggerOrder`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The run order of a record-triggered flow, from 1 to 2,000. See "Guidelines for Defining the Run Order of Record-Triggered Flows for an Object" in Salesforce Help. Available in API version 54.0 and later.
`TriggerType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Specifies what causes the flow to run. If you exclude this field, the flow has no trigger and starts only when a user or app launches the flow. Valid values are: • `EventDrivenJourney`—Reserved for internal use. • `PlatformEvent`—The flow starts when a platform event message is received. This value is available in API version 49.0 and later. • `RecordAfterSave`—The flow starts after a record is saved. This value is available in API version 49.0 and later. • `RecordBeforeSave`—Creating and/or updating a record triggers an autolaunched flow to make additional updates to that record before it's saved to the database. This value is available in API version 48.0 and later. • `Scheduled`—The flow starts at the scheduled time. This value is available in API version 47.0 and later. Available only when `processType` is `AutoLaunchedFlow`. This field is available in API version 47.0 and later.
`VersionNumber`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The flow's version number. This field is available in API version 54.0 and later.

Usage

Use this object to query information about flow definitions.

FlowInterview

Represents a flow interview. A *flow interview* is a running instance of a flow. This object is available in API version 32.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To delete a flow interview, you must have the "Manage Flow" user permission. All other calls require the "Run Flows" user permission or the `Flow User` field enabled on the user detail page. If **Override default behavior and restrict access to enabled profiles or permission sets** is selected for an individual flow, access to that specific flow and its interviews is given to users by profile or permission set.

Fields

Field Name	Details
`CurrentElement`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The flow element at which the interview is paused.
`FlowVersionViewId`	**Type** string **Properties** Filter, Nillable, Sort **Description** This field is a relationship field. This field is available in API version 51.0 and later. **Relationship Name** FlowVersionView **Relationship Type** Lookup **Refers To** FlowVersionView
`Guid`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** Globally unique identifier for the interview.
`InterviewLabel`	**Type** string **Properties** Filter, Nillable, Sort **Description** Label for the interview. This label helps users and administrators differentiate interviews from the same flow. In the user interface, this label appears in the Paused Flow Interviews component on the user's Home tab and in the list of paused flow interviews in Setup.
`InterviewStatus`	**Type** picklist

Field Name	Details
	Properties Filter, Group, Restricted picklist, Sort **Description** Status of the interview. Valid values are: • `Completed`—This flow is complete. There are no more records to process. • `Error`—This flow has one or more errors. To resolve each error, check the error code for instructions. • `Paused`—This flow is paused. No new processes are added until the flow is resumed. • `Running`—This flow is running or is ready to run. • `VersionPaused`—This flow version is paused. No more records are processed until the flow is resumed. This value is available in API version 60.0 and later. This field is available in API version 50.0 and later.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name for the interview.
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the user who owns the interview. Only this user or an admin can resume the interview. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`PauseLabel`	**Type** string **Properties** Filter, Nillable, Sort

Field Name	Details
	Description Information about why the interview was paused. This string is entered by the user who paused the flow interview. The label is **Why Paused**.
`WasPausedFromScreen`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Whether the flow interview was paused by a user from a flow Screen element (`true`) or not (`false`). This field is available in API version 46.0 and later.

Associated Objects

This object has these associated objects. Unless noted, these objects are available in the same API version as this object.

FlowInterviewOwnerSharingRule
Sharing rules are available for the object.

FlowInterviewShare
Sharing is available for the object.

FlowInterviewLog

Represents the logs of a screen flow interview. An *interview* is an instance of a running or previously run flow.This object is available in API version 49.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

By default, only users with the View All Data permission can access the logs for flows that are run by other users. To let users access other users' flow logs, set up sharing settings with the `FlowInterviewLogOwnerSharingRule` object.

Fields

Field Name	Details
`FlowDeveloperName`	**Type** string

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** The flow's API name.
FlowInterviewGuid	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Globally unique identifier for the interview.
FlowLabel	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The flow’s label. Only shows up in API results when users query FlowInterviewLog, or when they include this field in a report.
FlowNamespace	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Namespace of the flow interview logged in the FlowInterviewLog.
FlowVersionNumber	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of the flow version for a flow definition. Flow versions are counted sequentially from 1.
InterviewDurationInMinutes	**Type** double **Properties** Filter, Nillable, Sort **Description** Total number of minutes between InterviewStartTimestamp and InterviewEndTimestamp, even if flow interview is paused.

Field Name	Details
`InterviewEndTimestamp`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the interview ended.
`InterviewStartTimestamp`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the interview started.
`InterviewStatus`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Status of the interview. Valid values are: • `Completed` • `Error` • `Paused` • `Running` • `VersionPaused`—This value is available in API version 60.0 and later.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Autogenerated name of the flow interview log record.
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort **Description** The user who owns the FlowInterviewLog record. This field is a polymorphic relationship field.

Field Name	Details
	Relationship Name Owner **Relationship Type** Lookup **Refers To** Group, User

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

FlowInterviewOwnerSharingRule
Sharing rules are available for the object.

FlowInterviewLogEntry

Represents the log of a specific element that's executed by a screen flow interview. An *interview* is an instance of a running or previously run flow. This object is available in API version 49.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

By default, only users with the View All Data permission can access the log entries for flows that are run by other users.

Fields

Field Name	Details
`DurationSinceStartInMinutes`	**Type** double **Properties** Filter, Nillable, Sort **Description** Number of minutes that elapsed since the flow interview started, even if flow interview is paused.
`ElementApiName`	**Type** string

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** API name of the flow element.
ElementDurationInMinutes	**Type** double **Properties** Filter, Nillable, Sort **Description** Number of minutes that elapsed since the element executed. For example, if a screen element takes users a long time to complete, consider simplifying the screen.
ElementLabel	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The flow element's label.
FlowInterviewLogId	**Type** reference **Properties** Filter, Group, Sort **Description** This field is a relationship field. **Relationship Name** FlowInterviewLog **Relationship Type** Lookup **Refers To** FlowInterviewLog
LogEntryTimestamp	**Type** datetime **Properties** Filter, Sort **Description** Date and time when the flow element started to execute.

Field Name	Details
LogEntryType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of screen flow user action triggered the log entry. Valid values are: • Error • FlowFinish-Finished Flow • FlowPause-Paused Flow • FlowResume-Resumed Flow • FlowStart-Started Flow • ScreenFinish-Clicked Finish • ScreenNext-Clicked Next • ScreenPrevious-Clicked Previous
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Autogenerated name of the flow interview log entry.

FlowInterviewLogOwnerSharingRule

Represents the rules for sharing a FlowInterviewLog with users other than the owner.This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
AccessLevel	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description A value that represents the type of sharing being allowed. Possible values are: • `Edit`—Read/Write • `Read`—Read Only
`Description`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** A description of the sharing rule. Maximum size is 1,000 characters.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
`GroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID representing the source group.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface.

Field	Details
`OptionsIncludeHVUOwnedRecords`	**Type** boolean **Properties** Create, Filter, Update **Description**
`OptionsIncludeRecordsOwnedByAll`	**Type** boolean **Properties** Create, Filter, Update **Description**
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID representing the target user or group that's given access.

Usage

Use this object to manage the sharing rules for FlowInterviewLog records. General sharing uses this object.

FlowInterviewOwnerSharingRule

Represents the rules for sharing a FlowInterview with users other than the owner. This object is available in API version 33.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`AccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description A value that represents the type of sharing being allowed. The possible values are: • `Read` • `Edit`—In API version 42.0 and later, when **Let users resume shared flow interviews** is enabled for your org, users can resume all flow interviews that they have edit access to.
`Description`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** A description of the sharing rule. Maximum size is 1000 characters.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
`GroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID representing the source group.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface.
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID representing the target user or group that's given access.

Usage

Use this object to manage the sharing rules for FlowInterview records. General sharing uses this object.

In API version 42.0 and later, when **Let users resume shared flow interviews** is enabled for your org, users can resume all flow interviews that they have edit access to. When that setting is disabled, only the owner or a flow admin can resume a flow interview. To disable this setting, go to your org's Process Automation Settings in Setup.

FlowInterviewShare

Represents a sharing entry on a FlowInterview. This object is available in API version 33.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field	Details
`AccessLevel`	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update **Description** Level of access that the User or Group has to the FlowInterview. The possible values are: • `Read` • `Edit`—In API version 42.0 and later, when **Let users resume shared flow interviews** is enabled for your org, users can resume all flow interviews that they have edit access to. • `All`—This value is not valid for creating or deleting records.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the FlowInterview associated with this sharing entry. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** FlowInterview
`RowCause`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited. Valid values include: • `Manual`—The User or Group has access because a user with "All" access manually shared the FlowInterview with them. • `Owner`—The User is the owner of the FlowInterview. • `Rule`—The User or Group has access via a FlowInterview sharing rule. • `GuestRule`—The User or Group has access via a FlowInterview guest user sharing rule.

Field	Details
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the User or Group that has been given access to the FlowInterview. This field can't be updated. This is a polymorphic relationship field. **Relationship Name** UserOrGroup **Relationship Type** Lookup **Refers To** Group, User

Usage

This object lets you determine which users and groups can view and edit flow interviews that are owned by other users.

In API version 42.0 and later, when **Let users resume shared flow interviews** is enabled for your org, users can resume all flow interviews that they have edit access to. When that setting is disabled, only the owner or a flow admin can resume a flow interview. To disable this setting, go to your org's Process Automation Settings in Setup.

FlowOrchestrationInstance

Represents a run-time instance of an orchestration. This object is available in API version 53.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

If sharing rules are defined for FlowOrchestrationInstance, they determine access to specific orchestration run records. Or the user must have the View All Data permission.

Fields

Field	Details
`InterviewId`	**Type** reference

Field	Details
	Properties Filter, Group, Nillable, Sort, Update **Description** The globally unique flow interview ID associated with the orchestration instance. This field is a relationship field. **Relationship Name** Interview **Relationship Type** Lookup **Refers To** FlowInterview
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The most recent time a user viewed a record related to the orchestration run. This field is available in API version 55.0 and later.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The most recent time a user viewed the orchestration run. This field is available in API version 55.0 and later.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name for the orchestration instance.
`OrchestrationDeveloperName`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The developer name of the flow definition associated with the orchestration run. This field is available in API version 55.0 and later.
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the automated process user. This field is available in API version 56.0 and later. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** User
`Status`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort, Update **Description** The status of the orchestration run. Valid values are: • `Canceled`—The orchestration instance was canceled. • `Completed`—The orchestration instance completed. • `Error`—The orchestration instance, or a stage or step within the orchestration instance, encountered an error. • `InProgress`—The orchestration instance is in progress.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

FlowOrchestrationInstanceFeed on page 39
Feed tracking is available for the object.

FlowOrchestrationInstanceHistory on page 47
History is available for tracked fields of the object.

FlowOrchestrationInstanceOwnerSharingRule on page 48
Sharing rules are available for the object. This object is available in API version 56.0 and later.

FlowOrchestrationInstanceShare on page 50

Sharing is available for the object. This object is available in API version 56.0 and later.

FlowOrchestrationLog

Represents logging data for a FlowOrchestrationInstance. This object is available in API version 54.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

If sharing rules are defined for FlowOrchestrationInstance and the Inherit orchestration run sharing rules to control orchestration run log record access setting is enabled, then orchestration run log record access is inherited from related orchestration run records. If the Inherit orchestration run sharing rules to control orchestration run log record access setting isn't enabled, a user must have the Manage Flow permission. Or the user must have the View All Data permission.

Fields

Field	Details
`AssignedTo`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** For an interactive step, the user, group, or queue assigned to a work item when the FlowOrchestrationLog relates to an interactive FlowOrchestrationStep. For a background or MuleSoft step in API version 60.0 and later, the username of the user to run the step as.
`AssigneeType`	**Type** picklist **Properties** Filter, Group, Nillable, Sort **Description** For an interactive step, the assignee type associated with an interactive step's work item. Valid values are: • `Group` • `Queue` • `User`

Field	Details
	For an background or MuleSoft step in API version 60.0 and later, the assignee type associated with the user context to run the step as. Valid values are: • `Automated Process User` • `User`
`CompletedBy`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** For an interactive step, the user that completed the work item. For a background or MuleSoft step in API version 60.0 and later, the username of the user that the step ran as.
`Context`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The situation-specific context stored in the FlowOrchestrationLog .
`Duration`	**Type** long **Properties** Filter, Group, Sort **Description** A long number that indicates the duration, in seconds, of the associated FlowOrchestrationInstance, FlowOrchestrationStage, FlowOrchestrationStep, or FlowOrchestrationWorkItem.
`FlowOrchestationInstanceId`	**Type** string **Properties** Filter, Sort, Group **Description** The FlowOrchestrationInstance associated with the FlowOrchestrationLog. This field is a relationship field. **Relationship Name** OrchestrationInstance **Relationship Type** Reference

Field	Details
	Refers To FlowOrchestrationInstance
Milestone	**Type** picklist **Properties** Filter, Group, Sort **Description** The milestone associated with the FlowOrchestrationLog. Valid values are: • CancelInstance—The associated FlowOrchestrationInstance was canceled. • DiscontinueStage—The associated FlowOrchestrationStage was discontinued. • DiscontinueStep—The associated FlowOrchestrationStep was discontinued. • EndInstance—The associated FlowOrchestrationInstance was completed successfully. • EndStage—The associated FlowOrchestrationStage was exited successfully. • EndStep—The associated FlowOrchestrationStep was exited successfully. • EndWorkItem—The associated FlowOrchestrationWorkItem was completed successfully. • FailInstance—The associated FlowOrchestrationInstance encountered an error. • FailStage—The associated FlowOrchestrationStage encountered an error. • FailStep—The associated FlowOrchestrationStep encountered an error. • ReassignWorkItem—The associated FlowOrchestrationWorkItem was reassigned. • StartInstance—The associated FlowOrchestrationInstance started. • StartStage—The associated FlowOrchestrationStage started. • StartStep—The associated FlowOrchestrationStep started. • StartWorkItem—The associated FlowOrchestrationWorkItem started.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the FlowOrchestrationLog.
OrchestrationName	**Type** string **Properties** Filter, Group, Sort **Description** The API name of the orchestration.

Field	Details
`OrchestrationVersion`	**Type** int **Properties** Filter, Group, Sort **Description** An integer for the FlowDefinitionVersion of the orchestration associated with the FlowOrchestrationLog.
`StageName`	**Type** string **Properties** Filter, Group, Sort **Description** The API name of the stage in the associated orchestration.
`StepName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The API name of the step in the associated orchestration.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

FlowOrchestrationLogFeed on page 39
Feed tracking is available for the object.

FlowOrchestrationLogHistory on page 47
History is available for tracked fields of the object.

FlowOrchestrationLogOwnerSharingRule on page 48
Sharing rules are available for the object.

FlowOrchestrationLogShare on page 50
Sharing is available for the object.

FlowOrchestrationStageInstance

Represents a run-time instance of a stage in a run-time instance of an orchestration. This read-only object is available in API version 53.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`,`getUpdated()`, `query()`, `retrieve()`

Special Access Rules

If sharing rules are defined for FlowOrchestrationStageInstance, they determine access to specific orchestration stage run records. Or the user must have the View All Data permission.

Fields

Field	Details
`Label`	**Type** string **Properties** Filter, Group, Sort **Description** The label for the flow orchestration stage instance. This label helps users and administrators differentiate between step instances from the same orchestration.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The API name for the flow orchestration stage instance.
`OrchestrationInstanceId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the FlowOrchestrationInstance associated with the orchestration stage instance. This field is a relationship field. **Relationship Name** OrchestrationInstance **Relationship Type** Lookup **Refers To** FlowOrchestrationInstance
`OwnerId`	**Type** reference

Field	Details
	Properties Filter, Group, Sort, Update **Description** The ID of the automated process user. This field is available in API version 56.0 and later. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** User
`Position`	**Type** int **Properties** Filter, Group, Sort **Description** For internal use only.
`Status`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The run status of the orchestration stage instance. Valid values are: • `Completed`—The stage instance completed. • `Discontinued`—The stage was in progress or completed when the orchestration instance encountered an error. • `Error`—The stage instance encountered an error, an instance of a background step within the stage encountered and error, or an autolaunched flow called by a background step within the stage encountered an error. • `InProgress`—The stage instance is in progress.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

FlowOrchestrationStageInstanceFeed on page 39
Feed tracking is available for the object.

FlowOrchestrationStageInstanceHistory on page 47
History is available for tracked fields of the object.

FlowOrchestrationStageInstanceOwnerSharingRule on page 48
Sharing rules are available for the object.

FlowOrchestrationStageInstanceShare on page 50
Sharing is available for the object.

FlowOrchestrationStepInstance

Represents a run-time instance of a step in a run-time instance of a stage of a run-time instance of an orchestration. This read-only object is available in API version 53.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

If sharing rules are defined for FlowOrchestrationStepInstance, they determine access to specific orchestration step run records. Or the user must have the View All Data permission.

Fields

Field	Details
`Label`	**Type** string **Properties** Filter, Group, Sort **Description** The label of the step.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The API name of the step.
`OrchestrationInstanceId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the FlowOrchestrationInstance associated with the orchestration step instance.

Field	Details
	This field is a relationship field. **Relationship Name** OrchestrationInstance **Relationship Type** Lookup **Refers To** FlowOrchestrationInstance
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort, Update **Description** The ID of the automated process user. This field is available in API version 56.0 and later. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** User
`StageInstanceId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the FlowOrchestrationStageInstance associated with the orchestration step instance. This field is a relationship field. **Relationship Name** StageInstance **Relationship Type** Lookup **Refers To** FlowOrchestrationStageInstance
`Status`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The status of the orchestration step instance. Valid values are:

Field	Details
	• `Completed`—The step instance completed. • `Discontinued`—The step instance was in progress or completed when it's associated stage instance completed, or the step was in progress or completed when the orchestration instance encountered an error. • `Error`—The step instance encountered an error or the autolaunched flow associated with a step instance encountered an error. • `InProgress`—The step instance is running, the step instance was in progress when its associated stage encountered an error, or the screen flow associated with the step instance encountered an error. • `NotStarted`—The step instance was created, but hasn't met its entry condition.
`StepType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of step. Valid values are: • `InteractiveStep`—Interactive Step • `BackgroundStep`—Background Step • `AynchronousBackgroundStep`—Asynchronous Background Step This value is available in API version 54.0 and later.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

FlowOrchestrationStepInstanceFeed on page 39
Feed tracking is available for the object.

FlowOrchestrationStepInstanceHistory on page 47
History is available for tracked fields of the object.

FlowOrchestrationStepInstanceOwnerSharingRule on page 48
Sharing rules are available for the object.

FlowOrchestrationStepInstanceShare on page 50
Sharing is available for the object.

FlowOrchestrationWorkItem

Represents a work item associated with a run-time instance of an interactive step in a run-time instance of an orchestration. This object is available in API version 54.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

An assignee can see all work item records assigned to them. If sharing rules are defined for FlowOrchestrationWorkItem, they determine access to specific orchestration work item records for users other than the assignee. Or the user must have the View All Data permission.

Fields

Field	Details
`AssigneeId`	**Type** reference **Properties** Filter, Group, Sort, Update **Description** The ID of the user, group, or queue assigned to the orchestration work item. This field is a polymorphic relationship field. **Relationship Name** Assignee **Relationship Type** Lookup **Refers To** Group (Type = Regular), Group (Type = Queue), User
`Description`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The description of the orchestration work item.
`Label`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The label of the orchestration work item.
`LastReferencedDate`	**Type** dateTime

Field	Details
	Properties Filter, Nillable, Sort **Description** The most recent time a user viewed a record related to the orchestration work item. This field is available in API version 55.0 and later.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The most recent time a user viewed the orchestration work item. This field is available in API version 55.0 and later.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The API name of the orchestration work item.
OrchestrationDeveloperName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The developer name of the flow definition associated with the orchestration instance.
OwnerId	**Type** reference **Properties** Filter, Group, Sort, Update **Description** • When the assignee is an internal user: the ID of the internal user • When the assignee is a credentialed Experience Cloud site visitor: the ID of the credentialed Experience Cloud site visitor • When the assignee is a group or queue: the ID of the automated process user This field is available in API version 56.0 and later. **Relationship Name** Owner

Field	Details
	Relationship Type Lookup **Refers To** User
RelatedRecordId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the context record, such as an account, case, or expense, that the orchestration work item is related to. An assigned user completes the associated orchestration work item on the page for this record. This field is a polymorphic relationship field. **Relationship Name** RelatedRecord **Relationship Type** Lookup **Refers To** All objects except AccountContactRelation, AccountTeamMember, ActiveScratchOrg, ActivityMetric, ActivityMetricRollup,CampaignMember, CartCheckoutSession, CartDeliveryGroup, CartDeliveryGroupMethod, ChatterActivity,CollaborationGroupMember, ContentDesignKit, ContentDesignKitVersion, ConversationBroadcastEntry,ConversationReason, ConversationReasonExcerpt, ConversationReasonGroup, CustomPersonDataTemplate,ElectronicMediaGroup, EngagementScore, Event, FeedItem, FlowOrchestrationWorkItem, FtestDelPlatform1,FtestDelPlatform2, FtestFormulaFieldRefSql,HighScaleSample, HighScaleSampleItem, LegalEntity, LocationWaitlist, LocationWaitlistedParty,LocWaitlistMsgTemplate, ManagedContentVersion, MessagingEndUser, MessagingSession, MLModel,MLModelFactor, MLModelFactorComponent, NetworkMember, NetworkMemberChunk, OpportunityContactRole,OpportunityLineItem, OpportunityScore, OpportunityTeamMember, OrgSnapshot, PaymentTermItem,RequestsForAccessSIQ, ScoreIntelligence, ScratchOrgInfo, SharingRecordCollection, SharingRecordCollectionItem,SharingRecordCollectionMember, StreamActivityAccess, Survey, SurveyMessagingChannel, SurveyPage,SurveyQuestionChoice, SurveyVersion, Task, TenantSecurityAlertRuleSelectedTenant, TenantSecurityApiAnomaly,TenantSecurityConnectedApp, TenantSecurityCredentialStuffing, TenantSecurityHealthCheckBaselineTrend,TenantSecurityHealthCheckDetail, TenantSecurityHealthCheckTrend, TenantSecurityLogin, TenantSecurityMetricDetail,TenantSecurityMetricDetailLink, TenantSecurityMobilePolicyTrend, TenantSecurityMonitorMetric,TenantSecurityNotification, TenantSecurityNotificationRule, TenantSecurityPackage, TenantSecurityPolicy,TenantSecurityPolicyChangeLog, TenantSecurityPolicyDeployment, TenantSecurityPolicySelectedTenant,TenantSecurityReportAnomaly, TenantSecuritySessionHijacking, TenantSecurityTenantChangeLog,TenantSecurityTenantInfo,

Field	Details
	TenantSecurityTrustedIpRangeTrend, TenantSecurityUserActivity, TenantSecurityUserPerm,TenantSecurityWebsite, TopicAssignment, UserExternalCredential, VoiceCall
ScreenFlow	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The screen flow associated with the orchestration work item. Possible values are: • healthcloud_pm_flows__AcceptSlots • industries_automotive__AutoIV • industries_mfg_service__MfgIv • omnichannel_chat__QueuesChat • omnichannel_chat__SkillsChat • omnichannel_messaging__MsgRouting • omnichannel_voice__VoiceRouting • opencti__SCV_Basic_Routing_Flow • runtime_appointmentbooking__Flow • runtime_appointmentbooking__Guest_Flow • runtime_appointmentbooking__In_Cancel • runtime_appointmentbooking__In_Modify • runtime_appointmentbooking__In_New • runtime_appointmentbooking__Inv_Book • runtime_appointmentbooking__Inv_Gen • runtime_appointmentbooking__Out_Modify • runtime_commerce_adj__Discount_Item • runtime_commerce_exc__Exchange_Flow • runtime_commerce_oms__Cancel_Item • runtime_commerce_oms__Create_OS • runtime_commerce_oms__Create_PE • runtime_commerce_oms__Return_Item • runtime_commerce_rma__Create_CO • runtime_commerce_rma__Return_Item_RMA • runtime_commerce_rs__Reship_FO • runtime_industries_recurrence__Orch • runtime_industries_recurrence__Schdlr • sales_channel__BroadcastArchive

Field	Details
	• `sales_channel__DealWon` • `sales_channel__DealsToWatch` • `sales_channel__HighPriorityCaseNotif` • `sales_channel__NotificationsSubflow` • `sales_channel__OpptyChgNotif` • `sales_channel__OpptyCloseDateNotif` • `sales_channel__OpptyCreateMatchAct` • `sales_channel__OpptyNextStepNotif` • `sales_channel__OpptyStageNotChgNotif` • `sales_channel__SelectFeaturedChannels` • `sales_channel__SetupBroadcastChannel` • `sales_channel__filter_users` • `sales_channel__get_single_user` • `sales_channel__invite_to_channel` • `sales_channel__slack_sales_AccountRoom` • `sales_channel__slack_sales_DealRoom` • `setup_bot__IntroBotAddCaseComment` • `setup_bot__IntroBotCreateCase` • `setup_bot__IntroBotCreateLead` • `setup_bot__IntroBotLookupCase` • `setup_bot__IntroBotPreChatContext` • `setup_order_bot__IntroBotLookupOrder` • `setup_service_experience__Create_Case` • `setup_service_experience__Reset_Pwd` • `setup_service_experience__Verify_Cust`
`ScreenFlowInputs`	**Type** textarea **Properties** Nillable **Description** The input parameters required by the screen flow.
`Status`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The status of the work item.

Field	Details
	Valid values are: • `Assigned` • `Completed`
`StepInstanceId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the flow orchestration step associated with the orchestration work item. This field is a relationship field. **Relationship Name** StepInstance **Relationship Type** Lookup **Refers To** FlowOrchestrationStepInstance

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

FlowOrchestrationWorkItemFeed on page 39
Feed tracking is available for the object.

FlowOrchestrationWorkItemHistory on page 47
History is available for tracked fields of the object.

FlowOrchestrationWorkItemOwnerSharingRule on page 48
Sharing rules are available for the object.

FlowOrchestrationWorkItemShare on page 50
Sharing is available for the object.

FlowRecord

Represents the details of a flow. This object is available in API version 58.0 and later.

Supported Calls

`delete()`, `query()`, `update()`

Special Access Rules

This object is available only in Salesforce Starter edition.

Fields

Field Name	Details
AssociatedRecordId	**Type** text **Properties** Filter, Group, Nillable, Sort, Update **Description** The ID of the record the flow is associated with.
Description	**Type** text **Properties** Filter, Group, Sort **Description** The description of the flow.
ErrorCode	**Type** text **Properties** Filter, Group, Nillable, Sort **Description** The error code if the flow element run encountered an error. This field is available in API version 59.0 and later. Valid values are: • ACTIVATING_USER_ACCOUNT_DEACTIVATED— We can't run this flow because the user who activated it has a deactivated user record. • ACTIVATING_USER_LOST_PERMISSIONS— We can't run this flow because the user that activated it no longer has permission to it. • CANNOT_PUBLISH_SEGMENT— We can't run this flow because we can't publish the segment it's using. Contact Salesforce Customer Support and ask for help with the error ID. • CANNOT_QUERY_SEGMENT_MEMBER_DATA— We can't run this flow because we can't query the segment membership data it's using. Contact Salesforce Customer Support and ask for help with the error ID. • CANNOT_REFRESH_DATA_STREAM— We can't run this flow because we can't refresh your data stream metadata. Contact Salesforce Customer Support and ask for help with the error ID.

Field Name	Details
	• `CANNOT_REFRESH_IDENTITY_RES_DATA`— We can't run this flow because we can't refresh your identity resolution data. Contact Salesforce Customer Support and ask for help with the error ID. • `CANNOT_REFRESH_IDENTITY_RES_METADATA`— We can't run this flow because we can't refresh your identity resolution metadata. Contact Salesforce Customer Support and ask for help with the error ID. • `CANNOT_UPDATE_DATASTREAM_METADATA`— We can't run this flow because we can't update your DataStream metadata. Contact Salesforce Customer Support and ask for help with the error ID. • `DATA_ACTION_STATUS_ERROR`— We can’t run this flow because we couldn’t create the data action. To try again, save and activate a new version of the flow. • `FLOW_FAILED_TO_START`— This flow failed to start. Contact Salesforce Customer Support and ask for help with the error ID.
`ErrorDetails`	**Type** text **Properties** Filter, Group, Nillable, Sort **Description** The error ID. This field is available in API version 59.0 and later.
`FlowCategory`	**Type** text **Properties** Filter, Group, Nillable, Sort **Description** The API name of a category. Sharing rules assign permissions to view and edit flows by category and subcategory. This field is available in API version 60.0 and later.
`FlowDefinition`	**Type** text **Properties** Filter, Group, Sort **Description** Represents the flow definition.
`FlowSubcategory`	**Type** text **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description The API name of a subcategory. Sharing rules assign permissions to view and edit flows by category and subcategory. This field is available in API version 60.0 and later.
`Id`	**Type** text **Properties** Filter, Group, Sort **Description** The ID of the flow.
`Name`	**Type** text **Properties** Filter, Group, Sort **Description** The label of the flow.
`OwnerId`	**Type** text **Properties** Filter, Group, Sort **Description** The ID of the user who owns the flow.
`ProgressStatus`	**Type** enum **Properties** Filter, Group, Sort **Description** The progress status of the flow. Valid values are: • `Canceled`— Indicates a flow that has been deactivated by a user who doesn't process previously added records. No additional records are added to this flow. • `Completed`— Indicates a flow that is complete. No additional records are eligible to be processed in this flow. • `Draft`— Indicates a flow that is under construction and isn't active yet. This status can be invalid because it needs additional information before it can be activated by the user.

Field Name	Details
	• `Error`— Indicates a flow that has been deactivated because it encountered an error. When the error occurs, the error details are emailed to up to 5 users with the Manage Flows permission who most recently logged into Salesforce. • `Finishing`— Indicates a flow that has been deactivated by a user, but is finishing previously added records that are eligible to run to completion. No additional records are added to this flow. • `InProgress`— Indicates a flow that is running or ready to run. • `PreparingData`— Indicates a flow that is preparing the necessary data to run. This process can take up to 2 hours. • `Scheduled`— Indicates a flow scheduled to start on the date and time selected by the user.
`ScheduledStartDate`	**Type** dateTime **Properties** Filter, Group, Sort **Description** The date and time that the flow is scheduled to start.
`Segment`	**Type** text **Properties** Filter, Group, Sort **Description** The ID of the segment used in the flow.
`Type`	**Type** enum **Properties** Filter, Group, Sort **Description** The trigger type of the flow. Specifies what causes the flow to run. Valid values are: • `Form`—The flow runs when a user submits data via a webform. This value is available in API version 60.0 and later. • `Segment`—The flow runs at the scheduled time of a segment.

FlowRecordElement

Represents a single element within a flow version. This object is available in API version 58.0 and later.

Supported Calls

`query()`

Special Access Rules

This object is available only in Salesforce Starter edition.

Fields

Field Name	Details
`ElementName`	**Type** text **Properties** None **Description** The API name of the flow element.
`FlowVersionId`	**Type** text **Properties** Filter, Group, Sort **Description** The ID of the flow version the flow element is part of.
`Id`	**Type** text **Properties** Filter, Group, Sort **Description** The ID of the flow element.

FlowRecordRelation

Represents a relationship between a record and a flow interview. When a flow interview is paused, Salesforce uses the $Flow.CurrentRecord global variable in the flow to associate the interview with a record. Available in API version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The auto-generated ID of this relation.
ParentId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The flow interview that the record is related to. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** FlowInterview
RelatedRecordId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The record that the flow interview is related to. Make sure that this field contains only one ID, and that the ID is for a valid object. Custom objects and most standard objects are supported. This is a relationship field. **Relationship Name** RelatedRecord **Relationship Type** Lookup **Refers To** Account, AccountContactRole, AccountPartner, Accreditation, ActivationTarget, ActivationTrgtIntOrgAccess, Address, AlternativePaymentMethod, Announcement, ApexTestQueueItem, AppAnalyticsQueryRequest, AppUsageAssignment, AssessmentIndicatorDefinition, AssessmentTask,

Field Name	Details
	AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, AssociatedLocation, AsyncApexJob, Attachment, AuthorizationForm, AuthorizationFormConsent, AuthorizationFormDataUse, AuthorizationFormText, Award, BackgroundOperation, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, CalendarView, Campaign, CampaignMember, CardPaymentMethod, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CaseContactRole, CaseSolution, CodeSet, CodeSetBundle, CollaborationGroup, CollaborationGroupMember, CollaborationGroupMemberRequest, CollaborationGroupRecord, CollaborationInvitation, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConferenceNumber, ConsumptionRate, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContactPointAddress, ContactPointConsent, ContactPointEmail, ContactPointPhone, ContactPointTypeConsent, ContactRequest, ContentDistribution, ContentDocument, ContentDocumentLink, ContentDocumentSubscription, ContentFolder, ContentFolderLink, ContentFolderMember, ContentNotification, ContentVersion, ContentVersionComment, ContentVersionRating, ContentWorkspaceDoc, Contract, ContractContactRole, ConversationEntry, CoverageBenefit, CoverageBenefitItem, CreditMemo, CreditMemoLine, Dashboard, DashboardComponent, DataAssessmentFieldMetric, DataAssessmentMetric, DataAssessmentValueMetric, DataStream, DataUseLegalBasis, DataUsePurpose, DelegatedAccount, DeleteEvent, DialerCallUsage, DigitalSignature, DigitalWallet, Document, DocumentChecklistItem, DuplicateRecordItem, DuplicateRecordSet, EmailMessage, EmailMessageRelation, EngagementChannelType, EnhancedLetterhead, EnrollmentEligibilityCriteria, EntitySubscription, Event, EventRelation, ExternalEvent, ExternalEventMapping, FeedAttachment, FeedComment, FeedItem, FeedPollChoice, FeedPollVote, FeedRevision, FileSearchActivity, FlowInterviewLog, FlowInterviewLogEntry, FlowStageRelation, HealthCareDiagnosis, HealthCareProcedure, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Idea, Identifier, IdentityDocument, Image, Individual, IndividualApplication, InstalledMobileApp, Invoice, InvoiceLine, Lead, ListEmail, ListEmailIndividualRecipient, ListEmailRecipientSource, Location, LocationTrustMeasure, MarketSegment, MarketSegmentActivation,

Field Name	Details
	MatchingInformation, MemberPlan, MessagingDeliveryError, MessagingEndUser, MktCalculatedInsight, MktSgmntActvtnAudAttribute, MktSgmntActvtnContactPoint, Note, OperatingHours, Opportunity, OpportunityContactRole, OpportunityLineItem, OpportunityPartner, Order, OrderItem, OrgMetric, OrgMetricScanResult, OrgMetricScanSummary, OtherComponentTask, Partner, PartyConsent, Payment, PaymentAuthAdjustment, PaymentAuthorization, PaymentGateway, PaymentGatewayLog, PaymentGroup, PaymentLineInvoice, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, Pricebook2, PricebookEntry, ProcessException, ProcessInstance, ProcessInstanceNode, Product2, ProductConsumptionSchedule, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, PromptAction, ProviderSearchSyncLog, PurchaserPlan, PurchaserPlanAssn, PushTopic, QuickText, QuickTextUsage, ReceivedDocument, Recommendation, RecordAction, Refund, RefundLinePayment, ReplyText, Report, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderItemAdjustment, ReturnOrderItemTax, ReturnOrderLineItem, SearchPromotionRule, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SetupAssistantStep, SharingRecordCollection, SharingRecordCollectionItem, SharingRecordCollectionMember, Shift, Shipment, ShipmentItem, SkillRequirement, SocialPersona, SocialPost, Solution, StreamingChannel, Task, ThreatDetectionFeedback, TimeSlot, TodayGoal, Topic, TopicAssignment, UnitOfMeasure, UserAppInfo, UserAppMenuCustomization, UserEmailPreferredPerson, UserProvAccount, UserProvAccountStaging, UserProvMockTarget, UserProvisioningLog, UserProvisioningRequest, VideoCall, VideoCallParticipant, VideoCallRecording, Visit, VisitedParty, Visitor, VoiceCall, VoiceCallRecording, VoiceVendorLine, VolunteerProject, WaveAutoInstallRequest, WaveCompatibilityCheckItem, WorkAccess, WorkBadge, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkThanks, WorkType, WorkTypeGroup, WorkTypeGroupMember

FlowRecordVersion

Represents the version of a flow. This object is available in API version 58.0 and later.

Supported Calls

`query()`

Special Access Rules

This object is available only in Salesforce Starter edition.

Fields

Field Name	Details
ActivatedAt	**Type** dateTime **Properties** Filter, Group, Sort **Description** The date and time when the flow was activated.
ActivatedBy	**Type** text **Properties** Filter, Group, Sort **Description** The ID of the user that activated the flow.
Entries	**Type** int **Properties** Filter, Group, Sort **Description** The number of entries in this flow. To use this field, your org must use Salesforce Enterprise and Unlimited Editions with Marketing Cloud Growth Edition. This field is available in API version 60.0 and later.
Errors	**Type** int **Properties** Filter, Group, Sort **Description** The number of errors in this flow. To use this field, your org must use Salesforce Enterprise and Unlimited Editions with Marketing Cloud Growth Edition. This field is available in API version 60.0 and later.
Exits	**Type** int **Properties** Filter, Group, Sort **Description** The number of exits from this flow. To use this field, your org must use Salesforce Enterprise and Unlimited Editions with Marketing Cloud Growth Edition. This field is available in API version 60.0 and later.

Field Name	Details
FlowId	**Type** text **Properties** Filter, Group, Sort **Description** The ID of the parent flow running this version.
Id	**Type** text **Properties** Filter, Group, Sort **Description** The ID of the flow version.
IsPaused	**Type** boolean **Properties** Filter, Group, Sort **Description** Indicates whether the segment-triggered flow is paused (`true`) or not (`false`). When the value is `true`, no additional records are processed until the flow is resumed. The default value is `false`. This field is available in API version 60.0 and later.
PausedDate	**Type** dateTime **Properties** Filter, Group, Sort **Description** The date and time the segment-triggered flow was paused. This field is available in API version 60.0 and later.
PausingUser	**Type** text **Properties** Filter, Group, Sort **Description** The user who paused the segment-triggered flow. This field is available in API version 60.0 and later.
ProgressStatus	**Type** enum

Field Name	Details
	Properties Filter, Group, Sort **Description** The running status of the flow. Valid values are: • `Canceled`— Specifies a flow that was deactivated by a user. The flow doesn't process previously added records and no additional records are added to this flow. • `Completed`— Indicates a flow that is complete. No additional records are eligible to be processed in this flow. • `Draft`— Indicates a flow that is under construction and isn't active yet. This status can be invalid because it needs additional information before a user can activate it. • `Error`— Indicates a flow that has been deactivated because it encountered an error. When the error occurs, the error details are emailed to up to 5 users with the Manage Flows permission who most recently logged into Salesforce. • `Finishing`— Indicates a flow that was deactivated by a user, but is finishing records previously added that are eligible to run to completion. No additional records are added to this flow. • `InProgress`— Indicates a flow that is running or ready to run. • `PreparingData`— Indicates a flow that is preparing the resources it requires to run. This process can take up to 2 hours. • `Scheduled`— Indicates a flow scheduled to start on the date and time selected by the user.
`ReasonPaused`	**Type** text **Properties** Filter, Group, Sort **Description** The reason the segment-triggered flow was paused. This field is available in API version 60.0 and later.
`ResumedDate`	**Type** dateTime **Properties** Filter, Group, Sort **Description** The date and time the segment-triggered flow resumed. This field is available in API version 60.0 and later.
`ResumingUser`	**Type** text

Field Name	Details
	Properties Filter, Group, Sort **Description** The user who resumed the segment-triggered flow. This field is available in API version 60.0 and later.
`ScheduledStartDate`	**Type** dateTime **Properties** Filter, Group, Sort **Description** The date and time the flow started. This field is available in API version 60.0 and later.
`VersionNumber`	**Type** number **Properties** Filter, Group, Sort **Description** The version number of the flow version.

FlowRecordVersionOccurrence

Represents an instance of a recurring flow that runs on a schedule. For example, a flow that runs weekly on Wednesdays creates an occurrence each time it runs. This object is available in API version 60.0 and later.

Supported Calls

`describe()`, `read()`

Fields

Field	Details
`Entries`	**Type** integer **Properties** Filter, Group, Query, Retrieve, Sort **Description** The number of entries for this occurrence.

Field	Details
Errors	**Type** integer **Properties** Filter, Group, Query, Retrieve, Sort **Description** The number of errors for this occurrence.
Exits	**Type** integer **Properties** Filter, Group, Query, Retrieve, Sort **Description** The number of exits for this occurrence.
FlowRecordId	**Type** string **Properties** Filter, Group, Query, Retrieve, Sort **Description** The ID of the associated flow record.
FlowRecordVersionId	**Type** string **Properties** Filter, Group, Query, Retrieve, Sort **Description** The ID of the associated version of the flow record.
ScheduledDate	**Type** dateTime **Properties** Filter, Group, Query, Retrieve, Sort **Description** The scheduled time and date of the occurrence.
Stopped	**Type** integer **Properties** Filter, Group, Query, Retrieve, Sort **Description** The number of flows that were stopped for this occurrence.

FlowTestResult

Represents the results for a flow test associated with a flow version. This object is available in API version 55.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To view test run details, you must have the View All Data user permission. You can view flow tests and test results without the View All Data permission.

Fields

Field	Details
`FlowDefinitionViewId`	**Type** string **Properties** Filter, Nillable, Sort **Description** The ID of the flow definition associated with the flow test result. This is a relationship field. **Relationship Name** FlowDefinitionView **Relationship Type** Lookup **Refers To** FlowDefinitionView
`FlowTestViewId`	**Type** string **Properties** Filter, Nillable, Sort **Description** The ID of the flow test associated with the flow test result. This is a relationship field. **Relationship Name** FlowTestView **Relationship Type** Lookup

Field	Details
	Refers To FlowTestView
FlowVersionNumber	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The version number for the flow.
FlowVersionViewId	**Type** string **Properties** Filter, Nillable, Sort **Description** The ID of the flow version associated with the flow test result. This is a relationship field. **Relationship Name** FlowVersionView **Relationship Type** Lookup **Refers To** FlowVersionView
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the flow test result.
OwnerId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the user who owns this test result. This is a polymorphic relationship field. **Relationship Name** Owner

Field	Details
	Relationship Type Lookup **Refers To** Group, User
`Result`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Specifies the flow test result. Possible values are: • `Error` • `Fail` • `Pass`
`TestEndDateTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the flow test ended.
`TestStartDateTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the flow test started.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

FlowTestResultShare
Sharing is available for the object.

FlowTestView

Represents the description of a flow test associated with a flow definition. This object is available in API version 55.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
`Description`	**Type** textarea **Properties** Nillable **Description** The description of the flow test associated with the flow test view.
`DurableId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID of the flow test associated with this flow test view.
`FlowDefinitionViewId`	**Type** string **Properties** Filter, Nillable, Sort **Description** The ID of the flow definition associated with the flow test view. This is a relationship field. **Relationship Name** FlowDefinitionView **Relationship Type** Lookup **Refers To** FlowDefinitionView
`FlowTestApiName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The API name of the flow test associated with the flow test view.

Field	Details
`FlowTestLabel`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The label of the flow test associated with the flow test view.

FlowStageRelation

Represents a relationship between a paused flow interview and its stages. When a flow interview is paused, Salesforce creates a FlowStageRelation record for each stage that's set to the `$Flow.CurrentStage` or `$Flow.ActiveStages` global variable. Available in API version 43.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Fields

Field	Details
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The auto-generated ID of this relation.
`ParentId`	**Type** reference **Properties** Filter, Group, Sort **Description** The flow interview that the record is related to. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup

Field	Details
	Refers To FlowInterview
`StageLabel`	**Type** string **Properties** Filter, Nillable, Sort **Description** Label for the stage. If the stage is translated, the label respects the language of the user who is querying the label.
`StageOrder`	**Type** int **Properties** Filter, Group, Sort **Description** The order of this stage when the flow interview was paused. This order may differ from the order in the stage definition. • If the type is Active, the order corresponds to the order of the stage in `$Flow.ActiveStages`. • If the type is Current and corresponds to an active stage, the order matches the order of the active stage. • If the type is Current and doesn't correspond to an active stage, the order is 0.
`StageType`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Type of stage. The valid values are: • Current: Identifies that the stage is set to `$Flow.CurrentStage`. • Active: Identifies that the stage is set to `$Flow.ActiveStages`.

Usage

You can use the FlowStageRelation records to represent the paused interview and its active and current stages visually.

For example, an Online Purchasing flow interview starts with several stages in $Flow.ActiveStages. If the interview is paused, Salesforce creates a FlowStageRelation record for each stage in `$Flow.ActiveStages` or `$Flow.CurrentStage`.

StageLabel	StageType	StageOrder
Review Cart	Active	0
Shipping Details	Active	1
Billing Details	Active	2
Payment Details	Active	3
Order Confirmation	Active	4
Shipping Details	Current	1

FlowVariableView

Represents a variable within the flow version. This object is available in API version 46.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
`ApiName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The API name of the flow variable.
`DataType`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The data type of the flow variable. Valid values are: • `Apex`—This value is available in API version 46.0 and later. • `Boolean` • `Currency` • `Date` • `DateTime`—This value is available in API version 30.0 and later. • `Number`

Field	Details
	• `Multipicklist`—This value is available in API version 34.0 and later. • `Picklist`—This value is available in API version 34.0 and later. • `String` • `sObject`
`Description`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Flow variable information, specified by the org's admin.
`DurableId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The Id of the flow variable.
`FlowVersionViewId`	**Type** string **Properties** Filter, Nillable, Sort **Description** The Id of the flow version. This is a relationship field. **Relationship Name** FlowVersionView **Relationship Type** Lookup **Refers To** FlowVersionView
`IsCollection`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether or not the flow variable is a collection of values.

Field	Details
IsInput	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicated whether or not the flow variable is available for input.
IsOutput	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether or not the flow variable is available for output.
ObjectType	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** If the data type is sObject, this field indicates which object.

Usage

Use this object to query information about flow variables. A query must be filtered by `FlowVersionViewId` to get results. Only variables with IsInput or IsOutput marked as true are visible.

FlowVersionView

Represents the version of a flow definition. This object is available in API version 46.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
ApiVersion	**Type** double

Field	Details
	Properties Filter, Nillable, Sort **Description** The API version for the flow definition. Every flow version has an API version specified at creation. This field is available in API version 50.0 and later.
`ApiVersionRuntime`	**Type** double **Properties** Filter, Nillable, Sort **Description** The API version for running the flow. This value determines which versioned run-time behavior improvements are adopted by the flow version. If not specified when the flow or flow version is created, the latest available API version is used as the API version for running the flow. When an existing flow is saved as a new flow or flow version, the existing flow's run-time API version is used in the new flow or flow version. This field is available in API version 50.0 and later.
`Description`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Flow version information, specified by the org's admin.
`DurableId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID of the flow version.
`FlowDefinitionViewId`	**Type** string **Properties** Filter, Nillable, Sort **Description** The ID of the flow definition. This field s a relationship field.

Field	Details
	Relationship Name FlowDefinitionView **Relationship Type** Lookup **Refers To** FlowDefinitionView
`IsTemplate`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the process or flow is a template. When installed from managed packages, processes and flows can't be viewed or cloned by subscribers because of intellectual property (IP) protection. But when those processes and flows are templates, subscribers can open them in a builder, clone them, and customize the clones. Available in API version 46.0 and later. Default: false
`Label`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The label of the flow version.
`ProcessType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of the flow. Valid values are: • `ActionCadenceAutolaunchedFlow`—A flow executed when a user completes a cadence step. This value is available in API version 56.0 and later. • `ActionCadenceStepFlow`—A screen flow used as a cadence step. This value is available in API version 56.0 and later. • `Appointments`—A flow for Lightning Scheduler. This value is available in API version 44.0 and later. • `AutoLaunchedFlow`—A flow that doesn't require user interaction. • `CheckoutFlow`—A flow used in Lightning B2B Commerce to create a checkout in a store. This value is available in API version 48.0 and later.

Field	Details
	• ContactRequestFlow—A flow that lets customers request that customer support get back to them. This flow is used to create contact request records. This value is available in API version 45.0 and later. • CustomerLifecycle—A Salesforce Surveys flow that lets you associate survey questions with different stages in customer lifecycles. This value is available in API version 49.0 and later and only when the Customer Lifecycle Designer license is enabled. • CustomEvent—A process that is invoked when it receives a platform event message. In the UI, it's an event process. This value is available in API version 41.0 and later. • FieldServiceMobile—A flow for the Field Service mobile app. This value is available in API version 39.0 and later. • FieldServiceWeb—A flow for embedded Appointment Booking. Its UI label is Field Service Embedded Flow. This value is available in API version 41.0 and later. • Flow—A flow that requires user interaction because it contains one or more screens or local actions, choices, or dynamic choices. In the UI and Salesforce Help, it's a screen flow. Screen flows can be launched from the UI, such as with a flow action, Lightning page, or web tab. • FSCLending—A flow for Financial Services Cloud Mortgage. This value is available in API version 46.0 and later. • FSCLending—A flow for login. This value is available in API version 51.0 and later. • IndicatorResultFlow—A flow for Outcome Management that calculates and creates indicator results for a selected indicator performance period. This value is available with the Outcome Management license in API version 60.0 and later. • IndividualObjectLinkingFlow—A screen flow that helps search for contacts, leads, person accounts, and employees and links them to support interactions. This value is available in API version 58.0 and later. • InvocableProcess—A process that can be invoked by another process or the Invocable Actions resource in REST API. This value is available in API version 38.0 and later. • LoyaltyManagementFlow—A flow for the Loyalty Management app and can be invoked by loyalty program processes. This value is available in API version 54.0 and later. • RoutingFlow—A flow for Salesforce Omni-Channel routing and other business logic. This value is available in API version 52.0 and later. • Survey—A flow for Salesforce Surveys. From the UI, this type of flow is created in Survey Builder. This value is available in API version 42.0 and later. • SurveyEnrich—A Salesforce Surveys flow that uses the Survey Data Mapper. From the UI, this type of flow is created in the Survey Builder and requires an associated survey flow type. This value is available in API version 49.0 or later and only when the Customer Lifecycle Designer license is enabled.

Field	Details
	• `Workflow`—A process that is invoked when a record is created or edited. In the UI and Salesforce Help, it's a record change process. These values are reserved for future use. • `ActionCadenceFlow` • `ActionPlan` • `AppProcess` • `CartAsyncFlow` • `DigitalForm` • `Journey` • `JourneyBuilderIntegration` • `LoginFlow` • `ManagedContentFlow` • `OrchestrationFlow` • `RecommendationStrategy` • `SalesEntryExperienceFlow` • `TransactionSecurityFlow` • `UserProvisioningFlow` This value has significant impact on validation when saving the flow and on the flow's runtime behavior. Don't change this value unless you understand the flow properties of the specified type. Across flow versions, you can change the type only from `Flow` to `AutoLaunchedFlow` or vice versa. Before you change the flow type, make sure that the flow contains only elements, resources, and functionality that the new flow type supports.
`RunInMode`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The mode that the flow runs in. Valid values are: • DefaultMode — The flow version runs in system or user context, depending on how the flow is launched. • SystemModeWithSharing — The flow version always runs in system mode with sharing. The flow respects org-wide default settings, role hierarchies, sharing rules, manual sharing, teams, and territories. But it doesn't respect object permissions, field-level access, or other permissions of the running user.
`Status`	**Type** picklist

Field	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort **Description** The flow's status. • `Active` • `Draft` • `Obsolete` • `InvalidDraft`
`VersionNumber`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The flow's version number.

Usage

Use this object to query information about flow versions. A query must be filtered by `DurableId` or `FlowDefinitionViewId` to get results.

Folder

Represents a repository for a Dashboard, Document, EmailTemplate, Macro, QuickText, or Report. Only one type of item can be contained in a folder.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

- You must have the "Modify All Data" permission to create, update, or delete document folders and email template folders.
- Guest and Customer Portal users can't access this object.
- To query this object, no special permissions are needed.
- As of API version 35.0, when a folder is shared with a role, it is only visible to users in that role. Superior roles in the role hierarchy don't gain visibility.
- If analytics folder sharing is turned on, then users need these permissions to create and manage report folders and dashboard folders:
  - "`Create Dashboard Folders`"

- "Create Report Folders"

- To use folders for macros and quick text, enable folders for these objects in Setup on the Macro Settings and Quick Text Settings pages.

Fields

Field	Details
AccessType	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. Indicates who can access the Folder. Available values include: • Hidden—Folder is hidden from everyone. • Public—Folder is accessible by all users. • Shared—Folder is accessible only by a User in a particular Group or UserRole. The API doesn't allow you to view, insert, or update which group or Role the Folder is shared with. Note: If analytics folder sharing is turned on for your organization, then this field is present but not used.
DeveloperName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is **Folder Unique Name**. Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance slows down while Salesforce generates one for each record.
IsReadonly	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether this Folder is read-only (`true`) or editable (`false`). Label is *`Read Only`*. Note: If analytics folder sharing is turned on for your organization, then this field is present but not used.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Label of the folder as it appears in the user interface. Label is **Document Folder Label**.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the parent object, if any.
`Type`	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort **Description** Required. Type of objects contained in the Folder. This field can't be updated. Available values include: • `Dashboard` • `Document` • `Email` (for Salesforce Classic email templates) • `EmailTemplate` (for Lightning email templates) • `Macro` • `QuickText` • `Report`

Usage

Only one type of item can be contained in a folder, either Dashboard, Document, EmailTemplate, Macro, QuickText, or Report.

SEE ALSO:

Overview of Salesforce Objects and Fields

FolderedContentDocument

Represents the relationship between a parent and child ContentFolderItem in a ContentWorkspace.

Supported Calls

`describeSObjects()`

Fields

Field Name	Details
`ContentDocumentId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the ContentDocument that can be in a folder. This is a relationship field.

Field Name	Details
	Relationship Name ContentDocument **Relationship Type** Lookup **Refers To** ContentDocument
ContentSize	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** File size of the ContentDocument.
FileExtension	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** File extension of the ContentDocument.
FileType	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** File type of the ContentDocument.
IsFolder	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates that the FolderedContentDocument is a folder, rather than a file.
ParentContentFolderId	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description ID of the ContentFoldr the ContentDocument resides in. This is a relationship field. **Relationship Name** ParentContentFolder **Relationship Type** Lookup **Refers To** ContentFolder
`Title`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Name of the file or folder in a ContentFolder.

ForecastingAdjustment

This object represents an individual forecast manager's adjustment for a subordinate's or child territory's forecast via a ForecastingItem. Available in API versions 26.0 and later. This object is different from the ForecastingOwnerAdjustment object, which represents forecast users' adjustments of their *own* forecasts, including territory forecasts they own.

Note: This information only applies to Collaborative Forecasts.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
AdjustedAmount	**Type** double **Properties** Create, Filter, Sort, Update **Description** The revenue amount of an individual forecast item, after an adjustment.
AdjustedQuantity	**Type** double **Properties** Create, Filter, Sort, Update **Description** The quantity amount of an individual forecast item, after an adjustment. This field is available in API version 28.0 and later.
AdjustmentNote	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A text note providing information about the adjustment. The maximum length is 255 characters. This field doesn't appear in reports.
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The currency code of the adjustment. If omitted, the default is the importing user's personal currency.
ForecastCategoryName	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The category within the sales cycle that an opportunity is assigned to based on its opportunity stage. The standard forecast categories are Pipeline, Best Case,

Field Name	Details
	Commit, Omitted, and Closed. You can add a Most Likely category and can customize forecast category names in single category rollups. The forecast categories display information for that specific category; for example, Best Case only reflects amounts in the Best Case category.
`ForecastingGroupItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** If a forecast group is assigned to the forecast type, the ID of the group value that the manager adjustment belongs to. This field is a relationship field. Available in API version 60.0 and later. **Relationship Name** ForecastingGroupItem **Relationship Type** Lookup **Refers To** ForecastingGroupItem
`ForecastingItemCategory`	**Type** picklist **Properties** Create, Filter, Group, Sort **Description** This field indicates which type of forecast rollup the manager adjustment belongs to. Depending on whether your organization uses individual forecast category rollups or cumulative forecast rollups, you have these possible values for the `ForecastingItemCategory` field. ***Individual forecast category rollups:*** • PipelineOnly - Rollup from Pipeline opportunities only. • BestCaseOnly - Rollup from Best Case opportunities only. Adjustable. • MostLikelyOnly - Rollup from Most Likely opportunities only. Adjustable. • CommitOnly - Rollup from Commit opportunities only. Adjustable. ***Cumulative forecast rollups:*** • OpenPipeline - Rollup from Pipeline + Best Case + Most Likely + Commit opportunities. • BestCaseForecast - Rollup from Best Case + Most Likely + Commit + Closed opportunities. Adjustable. • MostLikelyForecast - Rollup from Most Likely + Commit + Closed opportunities. Adjustable.

Field Name	Details
	- CommitForecast - Rollup from Commit + Closed opportunities. Adjustable. ***Either cumulative or individual forecast category rollups:*** - ClosedOnly - Rollup from Closed opportunities only. The `ForecastingItemCategory` field differs from the `ForecastCategoryName` field. - The `ForecastCategoryName` field represents the forecast category of the *underlying opportunities* rolling up to forecast amounts. In organizations using cumulative forecast rollups, the `ForecastCategoryName` field can be null because the cumulative forecast amounts include opportunities from multiple forecast categories. - The new `ForecastingItemCategory` field represents the *type of rollup* a forecast amount or adjustment is from. In organizations using individual forecast category columns, it contains the individual forecast rollup categories. In organizations using cumulative forecast rollups, it contains the cumulative rollup categories. When inserting manager adjustments, the values you insert for `ForecastCategoryName` and `ForecastingItemCategory` must be compatible with each other. In organizations using cumulative forecast rollups, the `ForecastCategoryName` is nillable. The following pairs are valid. **Individual forecast category rollups:** - `ForecastCategoryName`: BestCase, `ForecastingItemCategory`: BestCaseOnly - `ForecastCategoryName`: MostLikely, `ForecastingItemCategory`: MostLikelyOnly - `ForecastCategoryName`: Commit, `ForecastingItemCategory`: CommitOnly **Cumulative forecast category rollups:** - `ForecastCategoryName`: null, `ForecastingItemCategory`: BestCaseForecast - `ForecastCategoryName`: null, `ForecastingItemCategory`: MostLikelyForecast - `ForecastCategoryName`: null, `ForecastingItemCategory`: CommitForecast
`ForecastingItemId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the related ForecastingItem.

Field Name	Details
ForecastingTypeId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the related ForecastingType.
IsAmount	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, then the adjustment is made in a revenue amount. If `false`, then `IsQuantity` must be `true`. This field is available in API version 28.0 and later.
IsQuantity	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, then the adjustment is made in a quantity amount. If `false`, then `IsAmount` must be `true`. This field is available in API version 28.0 and later.
OwnerId	**Type** reference **Properties** Create,Defaulted on create, Filter, Group, Sort **Description** The ID of the forecast owner.
PeriodId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Period ID for the adjustment. Read only.
ProductFamily	**Type** picklist

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort **Description** The Product Family for the adjustment. Read only. This field is available in API version 29.0 and later.
`StartDate`	**Type** date **Properties** Create, Filter, Group, Sort **Description** The start of the adjustment, expressed as month and year. The date can include any day in a given month. Stored using the first date of the month.
`Territory2Id`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the territory to forecast on. Available in API version 43.0 and later.

Usage

Use this object to obtain a manager's adjustment detail for a specified ForecastingItem. The ForecastingAdjustment object is visible to all users, but only forecast managers and users above them in the forecast hierarchy can read or write ForecastingAdjustment records.

Note: Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the ForecastingType object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

SEE ALSO:

ForecastingFact

ForecastingItem

ForecastingQuota

ForecastingColumnDefinition

Represents a custom calculated column or a custom reference data column in a forecast type. This object is available in API version 56.0 and later.

For a custom calculated column, a `Formula` field value is required. For a custom reference data column, a `ReferenceField` field value is required.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The developer (API) name of the custom calculated column or custom reference data column.
`ForecastingTypeId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the forecast type. This field is a relationship field. **Relationship Name** ForecastingType **Relationship Type** Lookup **Refers To** ForecastingType
`Formula`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Required for custom calculated columns. The formula for the custom calculated column. Use API column names in your formula (such as ForecastAmount0), not column header names (such as Closed or Closed Only). The API names provided here apply to both singular and cumulative category rollups. For simplification, we included only the single category rollup column header name next to each API name.

Field	Details
	API Column Names – General • ForecastingQuotaAmount – Quota (currency) • ForecastingQuotaQuantity – Quota quantity (double) • *DeveloperName* of any custom calculated column or custom reference data column shown in the forecasts page **API Column Names for Forecast Category Columns** If the Most Likely category isn't enabled: • ForecastAmount0 or ForecastQuantity0 – Closed • ForecastAmount1 or ForecastQuantity1 – Commit • ForecastAmount2 or ForecastQuantity2 – Best Case • ForecastAmount3 or ForecastQuantity3 – Pipeline If the Most Likely category is enabled: • ForecastAmount0 or ForecastQuantity0 – Closed • ForecastAmount1 or ForecastQuantity1 – Commit • ForecastAmount1 or ForecastQuantity2 – Most Likely • ForecastAmount2 or ForecastQuantity3 – Best Case • ForecastAmount3 or ForecastQuantity4 – Pipeline **API Column Names for Adjustment Columns – Original Forecast Value Without Adjustments** If your org shows adjustments in columns, use these API column names for the original forecast value without adjustments. Adjustment columns are available in API version 60.0 and later. If the Most Likely category isn't enabled: • AmountWithoutAdjustments1 or QuantityWithoutAdjustments1 – Commit • AmountWithoutAdjustments2 or QuantityWithoutAdjustments2 – Best Case If the Most Likely category is enabled: • AmountWithoutAdjustments1 or QuantityWithoutAdjustments1 – Commit • AmountWithoutAdjustments2 or QuantityWithoutAdjustments2 – Most Likely • AmountWithoutAdjustments3 or QuantityWithoutAdjustments3 – Best Case **API Column Names for Adjustment Columns – Team Adjustment Value** If your org shows adjustments in columns, use these API column names for the team's adjusted value. Adjustment columns are available in API version 60.0 and later. If the Most Likely category isn't enabled: • AmountWithoutManagerAdjustment1 or QuantityWithoutManagerAdjustment1 – Commit • AmountWithoutManagerAdjustment2 or QuantityWithoutManagerAdjustment2 – Best Case If the Most Likely category is enabled:

Field	Details
	• AmountWithoutManagerAdjustment1 or QuantityWithoutManagerAdjustment1 – Commit • AmountWithoutManagerAdjustment2 or QuantityWithoutManagerAdjustment2 – Most Likely • AmountWithoutManagerAdjustment3 or QuantityWithoutManagerAdjustment3 – Best Case **API Column Names for Adjustment Columns – My Adjusted Value** The column that represents the adjusted value from the forecast user viewing the page is the same as the API column name for the standard forecast category. Adjustment columns are available in API version 60.0 and later. If the Most Likely category isn't enabled: • ForecastAmount1 or ForecastQuantity1 – My Commit • ForecastAmount2 or ForecastQuantity2 – My Best Case If the Most Likely category is enabled: • ForecastAmount1 or ForecastQuantity1 – My Commit • ForecastAmount1 or ForecastQuantity2 – My Most Likely • ForecastAmount2 or ForecastQuantity3 – My Best Case **API Column Names for Custom Reference Data** Use the appropriate field based on whether the custom reference data is of Currency or Number type. • ExtensionCurrency0 • ExtensionCurrency1 • ExtensionCurrency2 • ExtensionCurrency3 • ExtensionCurrency4 • ExtensionNumber0 • ExtensionNumber1 • ExtensionNumber2 • ExtensionNumber3 • ExtensionNumber4 **Supported Math Operators** • + (Add) – Calculates the sum of two values. • - (Subtract) – Calculates the difference of two values. • * (Multiply) – Multiplies its values. • / (Divide) – Divides its values. • () (Open Parenthesis and Closed Parenthesis) – Specifies that the expressions within the open parenthesis and close parenthesis are evaluated first. All other expressions are evaluated using standard operator precedence. **Supported Logical Operators**

Field	Details
	• = and == (Equal) – Evaluates if two values are equivalent. The = and == operators are interchangeable. • <> and != (Not Equal) – Evaluates if two values aren't equivalent. • < (Less Than) – Evaluates if a value is less than the value that follows this symbol. • > (Greater Than) – Evaluates if a value is greater than the value that follows this symbol. • <= (Less Than or Equal) – Evaluates if a value is less than or equal to the value that follows this symbol. • >= (Greater Than or Equal) – Evaluates if a value is greater than or equal to the value that follows this symbol. **Supported Functions** • IF – Determines if expressions are true or false. Returns a given value if true and another value if false. • NULL can be used as a constant. For example, `IF((expression) < 0, NULL, (expression))`. **Example** The following formula calculates gap to quota: `ForecastingQuotaAmount - ForecastAmount0`
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the custom calculated column or custom reference data column.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The label for this object, which displays in Setup and in the column header on the forecasts page. The label is in the default language locale for the organization. If there's no default language locale, the label is in en_US.
`ReferenceField`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Required for custom reference data columns. The number or currency custom field from the ForecastingCustomData object. For example,

Field	Details
	`ForecastingCustomData.Realized_Revenue__c`. Data from this field appears in a column in the forecasts summary. This field is available in API version 58.0 and later.
`ResultField`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The field name to represent the custom calculated column or custom reference data column result. Possible values are: **Custom Calculated Column Result** • CalculatedAmount0 or CalculatedQuantity0 • CalculatedAmount1 or CalculatedQuantity1 • CalculatedAmount2 or CalculatedQuantity2 • CalculatedAmount3 or CalculatedQuantity3 • CalculatedAmount4 or CalculatedQuantity4 If the formula's result is null or invalid, "-" is the value. For example, if the formula divided by 0. If you want to show "-" for 0 or negative values in your forecast, use the IF function in your formula to detect 0 or negative numbers. **Custom Reference Data Column Result** Use the appropriate field based on whether your column output is of Currency or Number type. • ExtensionCurrency0 or ExtensionNumber0 • ExtensionCurrency1 or ExtensionNumber1 • ExtensionCurrency2 or ExtensionNumber2 • ExtensionCurrency3 or ExtensionNumber3 • ExtensionCurrency4 or ExtensionNumber4

Usage

Each forecast type can include any combination of custom calculated columns and reference data columns, as long as they don't exceed five in number. For example, a forecast type can have two custom calculated columns and three custom reference data columns.

Custom calculated columns can't be adjusted and aren't included in rollups. In the UI, custom calculated columns can't indicate changes in the last 7 days.

If you have at least one custom calculated column in an active or inactive forecast type, you can't do the following until you've removed the column.

- Switch from single category to cumulative rollups in Forecast Settings
- Enable the Most Likely category
- Disable Show Quotas (only if your custom calculated column's formula refers to a quota value)

ForecastingColumnDefinitionLocalization

Represents the translated value of a custom calculated column or custom reference data column label when the Translation Workbench is enabled for your organization. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Translation Workbench must be enabled for your org.

Fields

Field	Details
`Language`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The language of the translated label. Possible values are: • `af`—Afrikaans • `am`—Amharic • `ar`—Arabic • `ar_AE`—Arabic (United Arab Emirates) • `ar_BH`—Arabic (Bahrain) • `ar_DZ`—Arabic (Algeria) • `ar_EG`—Arabic (Egypt) • `ar_IQ`—Arabic (Iraq) • `ar_JO`—Arabic (Jordan) • `ar_KW`—Arabic (Kuwait) • `ar_LB`—Arabic (Lebanon) • `ar_LY`—Arabic (Libya) • `ar_MA`—Arabic (Morocco) • `ar_OM`—Arabic (Oman) • `ar_QA`—Arabic (Qatar) • `ar_SA`—Arabic (Saudi Arabia) • `ar_SD`—Arabic (Sudan)

Field	Details
	• `ar_SY`—Arabic (Syria) • `ar_TN`—Arabic (Tunisia) • `ar_YE`—Arabic (Yemen) • `bg`—Bulgarian • `bn`—Bengali • `bs`—Bosnian • `ca`—Catalan • `cs`—Czech • `cy`—Welsh • `da`—Danish • `de`—German • `de_AT`—German (Austria) • `de_BE`—German (Belgium) • `de_CH`—German (Switzerland) • `de_LU`—German (Luxembourg) • `el`—Greek • `el_CY`—Greek (Cyprus) • `en_AE`—English (United Arab Emirates) • `en_AU`—English (Australian) • `en_BE`—English (Belgium) • `en_CA`—English (Canadian) • `en_CY`—English (Cyprus) • `en_DE`—English (Germany) • `en_GB`—English (UK) • `en_HK`—English (Hong Kong) • `en_IE`—English (Ireland) • `en_IL`—English (Israel) • `en_IN`—English (Indian) • `en_MT`—English (Malta) • `en_MY`—English (Malaysian) • `en_NL`—English (Netherlands) • `en_NZ`—English (New Zealand) • `en_PH`—English (Philippines) • `en_SG`—English (Singapore) • `en_US`—English • `en_ZA`—English (South Africa) • `eo`—Esperanto (Pseudo) • `es`—Spanish

Field	Details
	• es_AR—Spanish (Argentina) • es_BO—Spanish (Bolivia) • es_CL—Spanish (Chile) • es_CO—Spanish (Colombia) • es_CR—Spanish (Costa Rica) • es_DO—Spanish (Dominican Republic) • es_EC—Spanish (Ecuador) • es_GT—Spanish (Guatemala) • es_HN—Spanish (Honduras) • es_MX—Spanish (Mexico) • es_NI—Spanish (Nicaragua) • es_PA—Spanish (Panama) • es_PE—Spanish (Peru) • es_PR—Spanish (Puerto Rico) • es_PY—Spanish (Paraguay) • es_SV—Spanish (El Salvador) • es_US—Spanish (United States) • es_UY—Spanish (Uruguay) • es_VE—Spanish (Venezuela) • et—Estonian • eu—Basque • fa—Farsi • fi—Finnish • fr—French • fr_BE—French (Belgium) • fr_CA—French (Canadian) • fr_CH—French (Switzerland) • fr_LU—French (Luxembourg) • fr_MA—French (Morocco) • ga—Irish • gu—Gujarati • haw—Hawaiian • hi—Hindi • hmn—Hmong • hr—Croatian • ht—Haitian Creole • hu—Hungarian • hy—Armenian

Field	Details
	• in—Indonesian • is—Icelandic • it—Italian • it_CH—Italian (Switzerland) • iw—Hebrew • iw_EO—Esperanto RTL (Pseudo) • ja—Japanese • ji—Yiddish • ka—Georgian • kk—Kazakh • kl—Greenlandic • km—Khmer • kn—Kannada • ko—Korean • lb—Luxembourgish • lt—Lithuanian • lv—Latvian • mi—Te reo • mk—Macedonian • ml—Malayalam • mr—Marathi • ms—Malay • mt—Maltese • my—Burmese • nl_BE—Dutch (Belgium) • nl_NL—Dutch • no—Norwegian • pa—Punjabi • pl—Polish • pt_BR—Portuguese (Brazil) • pt_PT—Portuguese (European) • rm—Romansh • ro—Romanian • ro_MD—Romanian (Moldova) • ru—Russian • ru_AM—Russian (Armenia) • ru_BY—Russian (Belarus) • ru_KG—Russian (Kyrgyzstan)

Field	Details
	- ru_KZ—Russian (Kazakhstan) - ru_LT—Russian (Lithuania) - ru_MD—Russian (Moldova) - ru_PL—Russian (Poland) - ru_UA—Russian (Ukraine) - sh—Serbian (Latin) - sh_ME—Montenegrin - sk—Slovak - sl—Slovene - sm—Samoan - sq—Albanian - sr—Serbian (Cyrillic) - sv—Swedish - sw—Swahili - ta—Tamil - te—Telugu - th—Thai - tl—Tagalog - tr—Turkish - uk—Ukrainian - ur—Urdu - vi—Vietnamese - xh—Xhosa - zh_CN—Chinese (Simplified) - zh_HK—Chinese (Hong Kong) - zh_MY—Chinese (Malaysia) - zh_SG—Chinese (Singapore) - zh_TW—Chinese (Traditional) - zu—Zulu
NamespacePrefix	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation.

Field	Details
	The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the related custom column definition. This field is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** ForecastingColumnDefinition
`Value`	**Type** textarea **Properties** Create, Filter, Sort, Update **Description** The translated label of the custom calculated column or custom reference data column.

ForecastingCustomData

Represents forecast data from external sources to display in the forecasts page. For example, risk or last year's revenue. This object is available in API version 58.0 and later.

This object doesn't support forecast rollups or adjustments. Number and currency columns are supported only.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Available in Enterprise Edition and above, and in Professional Edition with an add-on license. Access to this object requires the Manage Forecasts Custom Data user permission.

Fields

Field	Details
`ForecastOwnerId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the forecast owner. This field is a relationship field. **Relationship Name** ForecastOwner **Relationship Type** Lookup **Refers To** User
`ForecastingGroupItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** If a forecast group is assigned to the forecast type, the ID of the group value that the custom data belongs to. This field is a relationship field. Available in API version 60.0 and later. **Relationship Name** ForecastingGroupItem **Relationship Type** Lookup **Refers To** ForecastingGroupItem
`ForecastingTypeId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the forecast type. This field is a relationship field.

Field	Details
	Relationship Name ForecastingType **Relationship Type** Lookup **Refers To** ForecastingType
`PeriodId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Read only. Period ID for the custom data. This field is a relationship field. **Relationship Name** Period **Relationship Type** Lookup **Refers To** Period
`ProductFamily`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort **Description** The user-defined product family available to forecast on. Each product family is unique. Possible values are: • *`[user-defined]`*—For example, `Electronics` or `Appliances`. • `None`
`StartDate`	**Type** date **Properties** Create, Filter, Group, Sort **Description** The start of the custom data, expressed as month and year. The date can include any day in a given month. Stored using the first date of the month.
`Territory2Id`	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort **Description** The ID of the territory to forecast on.

Usage

Each record displays as a custom column on the forecasts summary page.

ForecastingDisplayedFamily

Represents the table in Forecasts Settings where an admin selects the product families that users can forecast on in Lightning Experience. This object is available in API version 40.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
`DisplayPosition`	**Type** int **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The order in which product families are displayed on the forecasts page. Each value is unique to a product family.
`ProductFamily`	**Type** picklist **Properties** Filter, Group, Sort **Description** The product family available to forecast on. Each product family is unique.

ForecastingFact

This is a read-only object linking a ForecastingItem with its opportunities, such as opportunities that share the same owner or forecast category and have a closing date within the period of the forecasting item. Available in API versions 26 and greater.

Note: This information only applies to Collaborative Forecasts.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
`ForecastCategoryName`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** A forecast category is the category within the sales cycle to which an opportunity is assigned based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted (not included in forecasts), and Closed. Salesforce admins can customize the forecast category names.
`ForecastedObjectId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Contains the Split ID of the forecasted OpportunitySplit object if the forecast data source is opportunity splits or the OpportunityLineItem ID of the forecasted opportunity if the data source is product families. If the data source is product families and the opportunity has no line item, this field is null. If the forecast data source is opportunities, this field is null. This field is available in API version 29 and later. Read-only.
`ForecastedSubObjectId`	**Type** reference

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** Possible values: • If the forecast data source is OpportunityLineItemSplit, and the opportunity has line items and line item splits, then this field contains the ID of the forecasted OpportunityLineItemSplit object. • If the forecast data source is OpportunityLineItemSplit, and the opportunity has line items but no line item splits, this field contains the ID of the forecasted OpportunitySplit object. • If the forecast data source is OpportunityLineItemSchedule, this field contains the OpportunityLineItemSchedule ID of the forecasted opportunity. • If the forecast data source is OpportunityLineItemSplit and the opportunity has no line item, this field is null. • If the forecast data source is OpportunityLineItemSchedule and the opportunity has no line item, this field is null. This field is available in API version 58.0 and later. Read-only. This field is a polymorphic relationship field. **Relationship Name** null **Relationship Type** Lookup **Refers To** OpportunityLineItem, OpportunityLineItemSplit
`ForecastingItemId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the ForecastingItem.
`ForecastingTypeId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the related ForecastingType.
`OpportunityId`	**Type** reference

Field Name	Details
	Properties Filter, Group, Sort **Description** The opportunity ID.
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the opportunity owner.
`PeriodId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Period ID for the forecast.
`TargetValue`	**Type** double **Properties** Filter, Nillable, Sort **Description** Target value of the forecast amount.
`Territory2Id`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the territory to forecast on. Available in API version 43 and later.

Usage

Use this object to get information about opportunities linked to forecasting items.

Note: Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the ForecastingType object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

SEE ALSO:
ForecastingAdjustment
ForecastingItem
ForecastingQuota

ForecastingFilter

Represents the custom filter for including or excluding data from opportunity forecasts. This object is available in API version 54.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts permission OR Allow Forecasting permission OR delegated forecast manager status can access this object.

Fields

Field Name	Details
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The developer name of the forecast filter.
`FilterLogic`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The logic that controls the evaluation of conditions. Only `AND` is supported. For example, `1 AND 2 AND 3`.

Field Name	Details
ForecastingTypeId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the forecast type. Can be linked only to forecast types created in Summer ’21 and later. This is a relationship field. **Relationship Name** ForecastingType **Relationship Type** Lookup **Refers To** ForecastingType
ForecastingTypeSourceId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the forecast type source. Can be linked only to forecast type sources created in Summer ’21 or later and with a forecast source definition with source object of 'Opportunity.' This is a relationship field. **Relationship Name** ForecastingTypeSource **Relationship Type** Lookup **Refers To** ForecastingTypeSource
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the forecast filter.
MasterLabel	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Sort, Update **Description** The label for this object, which displays in Setup. The label is in the default language locale for the organization. If there's no default language locale, the label is in en_US.

ForecastingFilterCondition

Represents the custom filter condition logic for including or excluding data from opportunity forecasts. This object is available in API version 54.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts permission OR Allow Forecasting permission OR delegated forecast manager status can access this object.

Fields

Field Name	Details
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The developer name of the forecast filter condition.
`FieldName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The name of the opportunity field to be filtered.

Field Name	Details
ForecastingFilterId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the forecast filter. This is a relationship field. **Relationship Name** ForecastingFilter **Relationship Type** Lookup **Refers To** ForecastingFilter
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the forecast filter condition.
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The label for this object, which displays in Setup. The label is in the default language locale for the organization. If there's no default language locale, the label is in en_US.
Operation	**Type** string **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The operator in the filter condition. Possible values are: • equals • greaterOrEqual – greater than or equal to • greaterThan • lessOrEqual – less than or equal to

Field Name	Details
	• lessThan • notEqual
`SortOrder`	**Type** int **Properties** Create, Filter, Group, Sort **Description** The index value for the condition. This value represents the condition in the FilterLogic field in the ForecastingFilter object. For example, 1.
`Value`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The value of the filter condition. If multiple values are specified, they must be separated by a comma delimiter. Note: If you have multiple currencies enabled, and add a custom filter on a currency field as part of your forecast type definition, the corporate currency at the time the filter was created is used. If you have a single currency enabled, the absolute value is used in your filter condition.

Usage

A forecast type can contain up to three filter conditions.

ForecastingGroup

Represents groups used to roll up forecast totals on the forecasts page. For example, group forecasts by industry or sales type. This object is available in API version 60.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Available for forecast types created in Spring '24 or later and that are based on the Opportunity and Opportunity Product objects.

You can only add groups to new forecast types.

Fields

Field	Details
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The developer (API) name of the forecast group.
GroupField	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The field name of the custom picklist used as a group. Possible values include custom, single-selection picklists available in `SourceObject`.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the custom picklist identified as the group.
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The label for this object, which displays in Setup. The label is in the default language locale for the organization. If there's no default language locale, the label is in en_US.
SourceObject	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The entity the picklist used for the forecast group is on. Possible values are:

Field	Details
	• `Opportunity` • `OpportunityLineItem` • `Product2`

Usage

Each forecast group can apply to only one forecast type.

ForecastingGroupItem

Represents the value within the picklist that is specified as the forecasting group for a forecast type. For example, if you have a forecasting group that identifies the industry an opportunity is part of, this object represents the value in the the industry picklist that's chosen to be part of the group. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`DisplayPosition`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** Indicates the order in which the value displays among other values in the group on the forecasts page.
`ForecastingGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** This field is a relationship field. **Relationship Name** ForecastingGroup **Relationship Type** Lookup

Field	Details
	Refers To ForecastingGroup
`SourceValueApiName`	**Type** string **Properties** Create, Filter, Nillable, Sort **Description** The API name that's derived from the group value.
`SourceValueLabel`	**Type** string **Properties** Filter, Nillable, Sort **Description** The label that's derived from the group value.
`SourceValueTranslatedLabel`	**Type** string **Properties** Filter, Nillable, Sort **Description** If one exists, the translated version of the group value.

Usage

New forecast types based on opportunities or opportunity products can include a forecasting group. This group is based on a custom, single-selection picklist that's defined on the Opportunity, OpportunityLineItem, or Product2 objects. The picklist that's chosen for the group can contain more values than are needed for the type.

ForecastingItem

This is a read-only object used for individual forecast amounts. Users see amounts based on their perspectives and forecast roles. The amounts users see include one of the following when forecasting in revenue: `AmountWithoutAdjustments`, `AmountWithoutManagerAdjustment`, `ForecastAmount`, `OwnerOnlyAmount`. The amounts users see include one of the following when forecasting in quantity: `QuantityWithoutAdjustments`, `QuantityWithoutManagerAdjustment`, `ForecastQuantity`, `OwnerOnlyQuantity`. Available in API version 26.0 and later.

Other users can see the ForecastingItem object, but not its records. See these access guidelines.

- Users with the "View All Forecasts" permission have access to all ForecastingItem fields.
- Users without the "View All Forecasts" permission have access to all fields for their own subordinates and child territories.

Note: This information only applies to Collaborative Forecasts.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
`AmountWithoutAdjustments`	**Type** double **Properties** Filter, Sort, Nillable **Description** The sum of a person's owned revenue opportunities and the person's subordinates' and child territories' opportunities, without adjustments. Subordinates include everyone reporting up to a person in the role-based forecast hierarchy. This amount is visible only on reports.
`AmountWithoutManagerAdjustment`	**Type** double **Properties** Filter, Sort, Nillable **Description** The forecast number as seen by the forecast owner. This is the sum of the owner's revenue opportunities and the owner's subordinates' and child territories' opportunities, including adjustments made by the forecast owner on the owner's or subordinates' and child territories' forecasts. It doesn't include adjustments made by forecast managers above the owner in the forecast hierarchy.
`AmountWithoutOwnerAdjustment`	**Type** double **Properties** Filter, Sort, Nillable **Description** The forecast amount as seen by the forecast owner without the owner's adjustment. This is the sum of the subordinate's and child territories' opportunities,

Field Name	Details
	including adjustments made by their manager or by the subordinate themselves, plus the rollup of the owner's own opportunities. *It doesn't include adjustments made by the forecast owner.*
ForecastAmount	**Type** double **Properties** Filter, Sort, Nillable **Description** The revenue forecast from the forecast manager's perspective and the sum of the owner's and subordinates' and child territories' opportunities, including all forecast adjustments.
ForecastCategoryName	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** A forecast category is the category within the sales cycle to which an opportunity is assigned based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted (not included in forecasts), and Closed. Salesforce admins can add a Most Likely category and can customize the forecast category names in single category rollups. Change the forecast category name only. Changing a forecast category's API name can have unintended results.
ForecastQuantity	**Type** double **Properties** Filter, Sort, Nillable **Description** The quantity forecast from the forecast manager's perspective and the sum of the owner's and subordinates' opportunities, including all forecast adjustments. This field is available in API version 28 and later.
ForecastingGroupItemId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** If a forecast group is assigned to the forecast type, the ID of the group value that the forecast total belongs to. This field is a relationship field. Available in API version 60.0 and later.

Field Name	Details
	Relationship Name ForecastingGroupItem **Relationship Type** Lookup **Refers To** ForecastingGroupItem
`ForecastingItemCategory`	**Type** picklist **Properties** Filter, Group, Sort **Description** This field indicates which type of forecast rollup the forecasting item belongs to. Depending on whether your organization uses individual forecast category rollups or cumulative forecast rollups, you have these possible values for the `ForecastingItemCategory` field. ***Individual forecast category rollups:*** • PipelineOnly - Rollup from Pipeline opportunities only. • BestCaseOnly - Rollup from Best Case opportunities only. Adjustable. • MostLikelyOnly - Rollup from Most Likely opportunities only. Adjustable. • CommitOnly - Rollup from Commit opportunities only. Adjustable. ***Cumulative forecast rollups:*** • OpenPipeline - Rollup from Pipeline + Best Case + Most Likely + Commit opportunities. • BestCaseForecast - Rollup from Best Case + Most Likely + Commit + Closed opportunities. Adjustable. • MostLikelyForecast - Rollup from Most Likely + Commit + Closed opportunities. Adjustable. • CommitForecast - Rollup from Commit + Closed opportunities. Adjustable. ***Either cumulative or individual forecast category rollups:*** • ClosedOnly - Rollup from Closed opportunities only. The `ForecastingItemCategory` field differs from the `ForecastCategoryName` field. • The `ForecastCategoryName` field represents the forecast category of the *underlying opportunities* rolling up to forecast amounts. In organizations using cumulative forecast rollups, the `ForecastCategoryName` field can be null because the cumulative forecast amounts include opportunities from multiple forecast categories. • The new `ForecastingItemCategory` field represents the *type of rollup* a forecast amount or adjustment is from. In organizations using

Field Name	Details
	individual forecast category columns, it contains the individual forecast rollup categories. In organizations using cumulative forecast rollups, it contains the cumulative rollup categories.
ForecastingTypeId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the related ForecastingType.
HasAdjustment	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** A flag that indicates if the forecasting item includes a *manager* adjustment. This flag is true only when the item includes an adjustment and the user performing the query has read access to the adjustment.
HasOwnerAdjustment	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** A flag that indicates if the forecasting item includes an *owner* adjustment. This flag is true only when the item includes an adjustment and the user performing the query has read access to the adjustment. Available in API version 33.0 and later.
IsAmount	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** True indicates that the adjustment is made in a revenue amount. If false, then `IsQuantity` must be true. This field is available in API version 28.0 and later.
IsQuantity	**Type** boolean

Field Name	Details
	Properties Defaulted on create, Filter, Group, Sort **Description** True indicates that the adjustment is made in a quantity amount. If false, then `IsAmount` must be true. This field is available in API version 28.0 and later.
`IsUpToDate`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** A flag indicating whether a specific forecasting item reflects current information. For example, if users are making adjustments that are in process, the item won't be up to date.
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the forecast owner.
`OwnerOnlyAmount`	**Type** double **Properties** Filter, Sort, Nillable **Description** The sum of a person's revenue opportunities, without adjustments.
`OwnerOnlyQuantity`	**Type** double **Properties** Filter, Sort, Nillable **Description** The sum of a person's quantity opportunities, without adjustments. This field is available in API version 28.0 and later.
`ParentForecastingItemId`	**Type** reference

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** The ID of the ForecastingItem that the current item rolls up to.
`PeriodId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Period ID for the forecast.
`ProductFamily`	**Type** picklist **Properties** Filter, Group, Nillable, Sort **Description** The product family of the forecast item. This field is available in API version 29.0 and later. Read only.
`QuantityWithoutAdjustments`	**Type** double **Properties** Filter, Nillable, Sort **Description** The sum of a person's owned quantity opportunities and also his or her subordinates' opportunities, without adjustments. Subordinates include everyone reporting up to a person in the forecast hierarchy. This field is available in API version 28.0 and later.
`QuantityWithoutManagerAdjustment`	**Type** double **Properties** Filter, Nillable, Sort **Description** The forecast number as seen by the forecast owner. This is the sum of the owner's quantity opportunities and subordinates' opportunities, including adjustments made on the subordinates' forecasts. It doesn't include adjustments made by forecast managers above the owner in the forecast hierarchy. This field is available in API version 28 and later.

Field Name	Details
`QuantityWithoutOwnerAdjustment`	**Type** double **Properties** Filter, Nillable, Sort **Description** The forecast quantity as seen by the forecast owner without the owner's adjustment. This is the sum of the subordinate's opportunities, including adjustments made by their manager or by the subordinate themselves, plus the rollup of the owner's own opportunities. *It doesn't include adjustments made by the forecast owner*. This field is available in API version 38.0 and later.
`SubordinateOverrides`	**Type** int **Properties** Filter, Group, Sort **Description** The total number of adjustments made to a forecast down the hierarchical chain. For example, User A has a forecast without adjustments. If User A adjusts User B's forecast, User A's `SubordinateOverrides` value is 1. Then if User B adjusts User C's forecast, User A's `SubordinateOverrides` value is 2. If User A removes his adjustment from User B's forecast, User A's `SubordinateOverrides` value is 1. This field is available in API version 38.0 and later.
`Territory2Id`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the territory to forecast on. Available in API version 43.0 and later.

Usage

Use this object to obtain individual forecast amounts, either with or without adjustments, based on a user's perspective and forecast role. The ForecastingItem object is visible to all users, but only forecast managers and users above them in the forecast hierarchy can read or write ForecastingAdjustment records.

Note: Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the ForecastingType object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

SEE ALSO:

ForecastingAdjustment

ForecastingFact

ForecastingQuota

ForecastingOwnerAdjustment

This object represents an individual forecast user's adjustment of their *own* forecast, including territory forecasts they own, via a ForecastingItem. Available in API versions 33.0 and later. This object is different from the ForecastingAdjustment object, which represents managers' adjustments of *subordinates'* and child territories' forecasts.

Note: This information only applies to Collaborative Forecasts.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The currency code of the adjustment. If omitted, the default is the importing user's personal currency.
`ForecastCategoryName`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort

Field Name	Details
	Description The category within the sales cycle that an opportunity is assigned to based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted, and Closed. You can add a Most Likely category and can customize forecast category names in single category rollups. The forecast categories display information for that specific category; for example, Best Case only reflects amounts in the Best Case category.
`ForecastOwnerId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the forecast owner.
`ForecastingGroupItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** If a forecast group is assigned to the forecast type, the ID of the group value that the owner adjustment belongs to. This field is a relationship field. Available in API version 60.0 and later. **Relationship Name** ForecastingGroupItem **Relationship Type** Lookup **Refers To** ForecastingGroupItem
`ForecastingItemCategory`	**Type** picklist **Properties** Create, Filter, Group, Sort **Description** This field indicates which type of forecast rollup the owner adjustment belongs to. Depending on whether your organization uses individual forecast category rollups or cumulative forecast rollups, you have these possible values for the `ForecastingItemCategory` field. ***Individual forecast category rollups:*** • PipelineOnly - Rollup from Pipeline opportunities only.

Field Name	Details
	• BestCaseOnly - Rollup from Best Case opportunities only. Adjustable. • MostLikelyOnly - Rollup from Most Likely opportunities only. Adjustable. • CommitOnly - Rollup from Commit opportunities only. Adjustable. ***Cumulative forecast rollups:*** • OpenPipeline - Rollup from Pipeline + Best Case + Most Likely + Commit opportunities. • BestCaseForecast - Rollup from Best Case + Most Likely + Commit + Closed opportunities. Adjustable. • MostLikelyForecast - Rollup from Most Likely + Commit + Closed opportunities. Adjustable. • CommitForecast - Rollup from Commit + Closed opportunities. Adjustable. ***Either cumulative or individual forecast category rollups:*** • ClosedOnly - Rollup from Closed opportunities only. The `ForecastingItemCategory` field differs from the `ForecastCategoryName` field. • The `ForecastCategoryName` field represents the forecast category of the *underlying opportunities* rolling up to forecast amounts. In organizations using cumulative forecast rollups, the `ForecastCategoryName` field can be null because the cumulative forecast amounts include opportunities from multiple forecast categories. • The new `ForecastingItemCategory` field represents the *type of rollup* a forecast amount or adjustment is from. In organizations using individual forecast category columns, it contains the individual forecast rollup categories. In organizations using cumulative forecast rollups, it contains the cumulative rollup categories. When inserting owner adjustments, the values you insert for `ForecastCategoryName` and `ForecastingItemCategory` must be compatible with each other. In organizations using cumulative forecast rollups, the `ForecastCategoryName` is nillable. These are the valid pairs. **Individual forecast category rollups:** • `ForecastCategoryName`: BestCase, `ForecastingItemCategory`: BestCaseOnly • `ForecastCategoryName`: Commit, `ForecastingItemCategory`: CommitOnly **Cumulative forecast category rollups:** • `ForecastCategoryName`: null, `ForecastingItemCategory`: BestCaseForecast • `ForecastCategoryName`: null, `ForecastingItemCategory`: CommitForecast

Field Name	Details
ForecastingItemId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the related ForecastingItem.
ForecastingTypeId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the related ForecastingType.
IsAmount	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, then the adjustment is made in a revenue amount. If `false`, then `IsQuantity` must be `true`.
IsQuantity	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, then the adjustment is made in a quantity amount. If `false`, then `IsAmount` must be `true`.
OwnerAdjustedAmount	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** The revenue amount of an individual forecast item, after an adjustment.
OwnerAdjustedQuantity	**Type** double

Field Name	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** The quantity amount of an individual forecast item, after an adjustment.
OwnerAdjustmentNote	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A text note providing information about the adjustment. The maximum length is 255 characters. This field does not appear in reports.
PeriodId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Period ID for the adjustment. Read only.
ProductFamily	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort **Description** The Product Family for the adjustment. Read only.
StartDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort **Description** The start of the adjustment, expressed as month and year. The date can include any day in a given month. Stored using the first date of the month.
Territory2Id	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort

Field Name	Details
	Description The ID of the territory to forecast on. Available in API version 43.0 and later.

Usage

Use this object to obtain a user's adjustment details for a specified ForecastingItem in their own forecast.

Note: Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the ForecastingType object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

ForecastingQuota

This object represents an individual user's or territory's quota for a specified time period. The "Manage Quotas" user permission is required for creating, updating, or deleting quotas. (Users can only edit their subordinates' or child territories' quotas, not their own.) The "View All Forecasts" permission is required to view any user's forecast, regardless of the forecast hierarchy. Available in API versions 25.0 and later. Forecast managers can view the forecasts of subordinates and territories below them in the forecast hierarchy.

Note: This information only applies to Collaborative Forecasts.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update

Field Name	Details
	Description The currency code of the quota. If omitted, the default is the importing user's personal currency.
`ForecastingGroupItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** If a forecast group is assigned to the forecast type, the ID of the group value that the quota belongs to. This field is a relationship field. Available in API version 60.0 and later. **Relationship Name** ForecastingGroupItem **Relationship Type** Lookup **Refers To** ForecastingGroupItem
`ForecastingTypeId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the related ForecastingType.
`IsAmount`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, then the adjustment is made in a revenue amount. If `false`, then `IsQuantity` must be `true`. This field is available in API version 28.0 and later.
`IsQuantity`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description If `true`, then the adjustment is made in a quantity amount. If `false`, then `IsAmount` must be `true`. This field is available in API version 28.0 and later.
`PeriodId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Period ID for the quota. Read only.
`ProductFamily`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort **Description** The product family for the quota. This field is available in API version 29.0 and later.
`QuotaAmount`	**Type** currency **Properties** Create, Filter, Sort, Update **Description** The revenue quota amount for an individual user or territory and for a specific period.
`QuotaOwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID that identifies the quota owner.
`QuotaQuantity`	**Type** double **Properties** Create, Filter, Sort, Update

Field Name	Details
	Description The quantity quota amount for an individual user and for a specific period. This field is available in API version 28.0 and later.
StartDate	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** The start of the quota, expressed as month and year. The date can include any day in a given month. Stored using the first date of the month.
Territory2Id	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the territory to forecast on. Available in API version 43.0 and later.

Usage

Use this object to get an individual user's or territory's quota for a specified time period.

Note: Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the ForecastingType object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

SEE ALSO:

- ForecastingAdjustment
- ForecastingFact
- ForecastingItem

ForecastingShare

Represents forecasts shared between a forecast manager and a user. Available in API version 44.0 and later.

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasting.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
`AccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Whether the user you're sharing your forecasts with can view and adjust the forecasts or view only. This field is new since the pilot. Picklist values: • `ViewAndEdit` • `ViewOnly`
`SharedForecastManagerRoleId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of either of the following: • The role of the manager whose forecasts you want to share. • The territory whose forecasts you want to share.
`RoleType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of hierarchy associated with the forecast share. • `R` - Role-based • `T` - Territory-based • `Y` - Territory2-based

Field Name	Details
UserOrGroupId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the user with whom the forecast is shared.

Usage

Use this object to let any stakeholder at your company view and adjust forecast managers' forecasts.

ForecastingSourceDefinition

Represents the object, measure, date type, and hierarchy that a forecast uses to project sales. This object is available in API version 52.0 and later.

Note: The information in this topic applies only to forecast types created in Summer '21 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
CategoryField	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Name of the forecast category that is associated with the forecast type. Possible values are: • `Opportunity.ForecastCategoryName`
DateField	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Field that is used for the forecast type's date type. For example, the CloseDate field on Opportunity is used for opportunity close date-based forecast types. Possible values are: • `Opportunity.CloseDate` • `OpportunityLineItem.ServiceDate` • `OpportunityLineItemSchedule.ScheduleDate`
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The developer name of the forecasting source definition. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`FamilyField`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Use this field to group forecasts by product family. Possible values are: • `Product2.Family`
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Language of the forecasting source definition. For example, English.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. Controlling label for this forecasting source definition.
`MeasureField`	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Field that is used for the forecast type's measure. For example, the Amount field on Opportunity is associated with revenue-based forecast types. Possible values are*: • `Opportunity.Amount` • `Opportunity.`***`Custom`*** • `Opportunity.TotalOpportunityQuantity` • `OpportunityLineItem.`***`Custom`*** • `OpportunityLineItem.Quantity` • `OpportunityLineItem.TotalPrice` • `OpportunityLineItemSchedule.`***`Custom`*** • `OpportunityLineItemSchedule.Quantity` • `OpportunityLineItemSchedule.Revenue` • `OpportunitySplit.`***`Custom`*** • `OpportunitySplit.SplitAmount` *Where ***`Custom`*** represents the name of the custom field that a forecast type's measure is based on. Example: Use `Megawatts__c` to forecast energy consumption.
`SourceObject`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Object associated with this forecasting source definition. Possible values are: • `Opportunity` • `OpportunityLineItem` • `OpportunityLineItemSchedule` • `OpportunitySplit` • `Product2`
`Territory2Field`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** For a territory-based forecast type, indicates the field that is used for territory information.

Field	Details
	Possible values are: • `Opportunity.Territory2Id` For user role-based forecast types, this value is `null`.
`UserField`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Specifies who owns the forecast. Possible values are: • `Opportunity.OwnerId` • `OpportunitySplit.SplitOwnerId`

Usage

Use ForecastingSourceDefinition to define a forecast type's structure. A forecasting source definition is joined via `ForecastingTypeSource` to `ForecastingType`.

In this example, a user role-based forecast type called Custom Amount Forecast is based on the Amount and Close Date fields on opportunities.

```
ForecastingType type = new  sforce.SObject("ForecastingType");
type.DeveloperName = "Custom_Amount_Forecast";
type.MasterLabel = "Custom Amount Forecast";
type.IsAmount = true;
type.IsQuantity = false;
type.RoleType = "R";
type.DateType = "OpportunityCloseDate";
String typeId = insert(type);

ForecastingSourceDefinition sourceDefinition = new
sforce.SObject("ForecastingSourceDefinition")
sourceDefinition.DeveloperName = "Custom Amount Source";
sourceDefinition.MasterLabel = "Custom_Amount_Source";
sourceDefinition.SourceObject = "Opportunity";
sourceDefinition.MeasureField = "Opportunity.Amount";
sourceDefinition.DateField = "Opportunity.CloseDate";
sourceDefinition.UserField = "Opportunity.OwnerId";
sourceDefinition.CategoryField = "Opportunity.ForecastCategoryName";
String sourceDefinitionId = insert(sourceDefinition);

ForecastingTypeSource typeSource = new sforce.SObject("ForecastingTypeSource");
typeSource.MasterLabel = "Custom Amount Type Source";
typeSource.DeveloperName = "Custom_Amount_Type_Source";
typeSource.ForecastingTypeId = typeId;
typeSource.ForecastingSourceDefinitionId = sourceDefinitionId;
```

```
typeSource.SourceGroup = 1;
insert(typeSource);
```

ForecastingSrcRecJudgment

Represents forecast managers' judgment of whether they consider an opportunity-related deal to be certain to close. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The currency code of the judgment. If omitted, the default is USD.
`JudgmentOwnerId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the forecast manager. This field is a relationship field. **Relationship Name** JudgmentOwner **Relationship Type** Lookup **Refers To** User
`JudgmentValue`	**Type** picklist **Properties** Create, Filter, Group, Sort, Update

Field	Details
	Description Whether the deal is likely to close (`IN`) or not (`OUT`).
`ReferenceObjectId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the opportunity-related object. This field is a polymorphic relationship field. **Relationship Name** ReferenceObject **Relationship Type** Lookup **Refers To** Opportunity
`Territory2Id`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the territory that the judgment is on. This field is a polymorphic relationship field. **Relationship Name** ReferenceObject **Relationship Type** Lookup **Refers To** Territory2

ForecastingType

Used to identify the forecast type associated with `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingQuota`, `ForecastingFact`, and `ForecastingItem` objects. Available in API version 30.0 and greater.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`. `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
`CanDisplayQuotas`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Indicates whether a forecast type can show quota information. The default value is `false`. Available in API version 38.0 and later.
`DateType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The date type that forecast amounts are based on. These values are available for forecast types that were available before Summer '21. • `OpportunityCloseDate`: Base forecasts on opportunity close dates. • `ProductDate`: Base forecasts on opportunity product line item dates, if available. • `ScheduleDate`: Base forecasts on opportunity product schedule dates, if available. These values are available in API version 52.0 and later in Performance Edition and in Unlimited Edition with the Sales Cloud. • `OLIMeasureCloseDateOnly`: Base forecasts on opportunity close dates. • `ProductDateOnly`: Base forecasts on opportunity product line item dates, if available. • `ScheduleDateOnly`: Base forecasts on opportunity product schedule dates, if available. These values to create forecasts on custom date fields are available in API version 57.0 and later in Performance, Professional, Enterprise, and Unlimited Edition with the Sales Cloud.

Field Name	Details
	• `OLIMeasureOppCustomDateOnly`: Base forecasts on custom opportunity dates, if available. • `OpportunityCustomDate`: Base forecasts on custom opportunity dates. The custom date field used must be on the opportunity object and based on the date type.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The name of the forecasting type. The `DeveloperName` is called `name` in the Metadata API and Forecasting Type in custom reports.
`ForecastingGroupID`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** Indicates whether the forecasting type has a group assignment, and if so, the name of the group. This field is a relationship field. Available in API version 60.0 and later. **Relationship Name** ForecastingGroup **Relationship Type** Lookup **Refers To** ForecastingGroup
`HasAdjustments`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether forecast managers can adjust forecasts of their immediate subordinates and child territories. The default value is `false`. Available in API version 60.0 and later.
`HasOwnerAdjustments`	**Type** boolean

Field Name	Details
	Properties Defaulted on create, Filter, Group, Sort **Description** Indicates whether all forecast users can adjust their own forecasts, including the territory forecasts that they own. The default value is `false`. Available in API version 60.0 and later.
`HasProductFamily`	**Type** boolean **Properties** Create, Defaulted on create, Group **Description** Indicates whether a forecasts view includes product families. The default value is `false`. Available in API version 40.0 and later.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the forecasting type is enabled. The default value is `false`.
`IsAmount`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Indicates whether the forecasting type is based on the revenue measure. The default value is `false`.
`IsPlatformType`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates a legacy forecast type that wasn't available before Summer '21.The default value is `false`. Available in API version 52.0 and later.
`IsQuantity`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description Indicates whether the forecasting type is based on the quantity measure. The default value is `false`.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the forecasting type.
`LastActivatedDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort **Description** The date when a forecast type was activated. Read only. Available in API version 53.0 and later.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Controlling label for this forecasting type value. This display value is the internal label that doesn't get translated.
`OpportunitySplitTypeId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** Indicates whether the forecasting type has a split type, and if so, the name of the split type. This field is a relationship field. Available in API version 41.0 and later. **Relationship Name** OpportunitySplitType **Relationship Type** Lookup **Refers To** OpportunitySplitType

Field Name	Details
OpptyLineItemSplitTypeId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** Indicates whether the forecasting type has a product split type, and if so, the name of the product split type. This field is a relationship field. Available in API version 58.0 and later. **Relationship Name** OpptyLineItemSplitType **Relationship Type** Lookup **Refers To** OpptyLineItemSplitType
RoleType	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Indicates whether the role type has a forecasting type, and if so, which forecasting type. Available in API version 41.0 and later. Possible values are: • R—User role-based forecasting type • T—Territory1-based forecasting type; not used • Y—Territory2-based forecasting type
Territory2ModelId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** Indicates whether the forecasting type has a Territory2 model, and if so, the name of the Territory2 model. Available in API version 41.0 and later.

ForecastingTypeSource

Maps a forecasting source definition to a forecast type. This object is available in API version 52.0 and later.

Note: The information in this topic applies only to forecast types created in Summer '21 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The developer name of the forecasting type source. **Note:** Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`ForecastingSourceDefinitionId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the forecasting source definition. This field is a relationship field. **Relationship Name** ForecastingSourceDefinition **Relationship Type** Lookup **Refers To** ForecastingSourceDefinition
`ForecastingTypeId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the forecast type. Can be linked only to forecast types created in Summer '21 and later. This field is a relationship field. **Relationship Name** ForecastingType

Field	Details
	Relationship Type Lookup **Refers To** ForecastingType
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Language of the forecasting type source.
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. Controlling label for this forecasting type source.
ParentSourceDefinitionId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** For forecast types not based on the opportunity object and not based on a custom measure, this value represents the parent ForecastingSourceDefinition of the linked ForecastingSourceDefinition. This field is a relationship field. • Opportunity Product is the parent of Opportunity. • Opportunity Split is the parent of Opportunity. • Line Item Schedule is the parent of Opportunity Product. **Relationship Name** ParentSourceDefinition **Relationship Type** Lookup **Refers To** ForecastingSourceDefinition
RelationField	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Represents the field linking the source objects of the parent ForecastingSourceDefinition to the child ForecastingSourceDefinition. Possible values are: • `OpportunityLineItem.OpportunityId` • `OpportunityLineItem.Product2Id` • `OpportunityLineItemSchedule.OpportunityLineItemId` • `OpportunitySplit.OpportunityId`
`SourceGroup`	**Type** int **Properties** Create, Filter, Group, Sort **Description** Required. Represents a grouping of forecasting source definitions.

Usage

Use this object to define a forecast type's structure. This junction object links `ForecastingSourceDefinition` to `ForecastingType`.

For an example, see ForecastingSourceDefinition.

ForecastingUserPreference

Represents the forecasting selections that a user has made, such as display options, date range, forecasting type, and currency.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
ExternalId	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A unique system-generated numerical identifier for the user.
ForecastingDisplayedTypeId	**Type** reference **Properties** Create, Group, Sort, Update **Description** An identifier for the forecasting type that's displayed.
ForecastingPeriodDuration	**Type** int **Properties** Create, Group, Nillable, Sort, Update **Description** How long the forecasting period lasts.
ForecastingPeriodType	**Type** picklist **Properties** Create, Group, Nillable, Restricted picklist, Sort, Update **Description** The forecasting period's type. Valid values include: Month, Quarter, Week, or Year
ForecastingStartPeriod	**Type** int **Properties** Create, Group, Nillable, Sort, Update **Description** The date when the forecasting period begins.
ForecastingViewCurrency	**Type** string

Field Name	Details
	Properties Create, Group, Nillable, Sort, Update **Description** The currency shown on the forecasts page.
`IsForecastingHideZeroRows`	**Type** boolean **Properties** Create, Defaulted on create, Group, Sort, Update **Description** Whether the forecasts page shows zero-value rows.
`IsForecastingShowQuantity`	**Type** boolean **Properties** Create, Defaulted on create, Group, Sort, Update **Description** Whether the forecasts page shows forecast quantity.
`IsHideForecastingGuidedTour`	**Type** boolean **Properties** Create, Defaulted on create, Group, Sort, Update **Description** Whether the forecasts page shows the guided tour.
`IsHideForecastingQuotaColumn`	**Type** boolean **Properties** Create, Defaulted on create, Group, Sort, Update **Description** Whether the forecasts page shows a quota column.
`IsShowForecastingChangeSignals`	**Type** boolean **Properties** Create, Defaulted on create, Group, Sort, Update **Description** Whether the forecasts page shows changes in the last 7 days.

Field Name	Details
IsShowForecastingQuotaAttainment	**Type** boolean **Properties** Create, Defaulted on create, Group, Sort, Update **Description** Whether the forecasts page shows quota attainment information.

FormulaFunction

Represents a function used when building a formula, including examples and uses. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
CategoryId	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID of the FormulaFunctionCategory. This is a relationship field. **Relationship Name** Category **Relationship Type** Lookup **Refers To** FormulaFunctionCategory
Description	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Description of the formula function.

Field	Details
`DurableId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Unique identifier for the field. Always retrieve this value before using it, as the value isn't guaranteed to stay the same from one release to the next. To simplify queries, use this field.
`ExampleString`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Describes the function and what arguments you can use with it.
`IsAllowedInEntityContext`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether you can use the formula function on an Entity (`true`) or not (`false`). For example, you cannot use the PRIORVALUE function in a custom Account formula field. The default value is `false`. This field is removed in API version 48.0 and later. Use the FormulaFunctionAllowedType on page 2228 object instead.
`IsAllowedInFlowContext`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the formula function is allowed in a Flow (`true`) or not (`false`). The default value is `false`. This field is removed in API version 48.0 and later. Use the FormulaFunctionAllowedType on page 2228 object instead.
`IsAllowedInVisualforceContext`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the formula function is allowed in Visualforce (`true`) or not (`false`). The default value is `false`. This field is removed in API version 48.0 and later. Use the FormulaFunctionAllowedType on page 2228 object instead.

Field	Details
`Label`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The formula function label that appears in the user interface.
`Name`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the formula function.

Usage

Query FormulaFunction to search for available formula functions, such as `AND()`, `ISBLANK()`, `MAX()`, `MIN()`, and others.

FormulaFunctionAllowedType

Represents the functions that are supported in the given formula context. This object is available in API version 48.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
`DurableId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Unique identifier for the field. Always retrieve this value before using it, as the value isn't guaranteed to stay the same from one release to the next. To simplify queries, use this field.
`FunctionId`	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** Unique identifier for the supported function. This is a relationship field. **Relationship Name** Function **Relationship Type** Lookup **Refers To** FormulaFunction
`Type`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The name of the formula type in which the function is supported. Possible values are: • `FLOW` • `VALIDATION` • `VISUALFORCE`

FormulaFunctionCategory

Represents the category to which a formula belongs when building a formula. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
`DurableId`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description Unique identifier for the field. Always retrieve this value before using it, as the value isn't guaranteed to stay the same from one release to the next. To simplify queries, use this field.
`Label`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Label of the FormulaFunctionCategory that appears in the user interface.
`Name`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Name of the FormulaFunctionCategory.

Usage

Query FormulaFunctionCategory to search for categories of available formula functions, such as `Math`, `Logical`, `Date and Time`, and others.

FulfillmentOrder

Represents a group of products, fees, and delivery charges on a single order that share the same fulfillment location, delivery method, and recipient. The FulfillmentOrderLineItems belonging to a FulfillmentOrder are associated with OrderItemSummary objects belonging to a single OrderSummary. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs.

Fields

Field	Details
AccountId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the Account or Person Account associated with the FulfillmentOrder. It represents the shopper in the storefront. This field is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
BillToContactId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the Contact associated with the FulfillmentOrder. It represents the shopper in the storefront when not using person accounts. This field is available in API version 49.0 and later. This field is a relationship field. **Relationship Name** BillToContact **Relationship Type** Lookup **Refers To** Contact
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only for orgs with the multicurrency feature enabled. ISO code for the currency of the OrderSummary associated with the FulfillmentOrder. Possible values are:

Field	Details
	• DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar The default value is USD. This field is available in API version 49.0 and later.
DeliveryMethodId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the DeliveryMethod used for this FulfillmentOrder. This field is a relationship field. **Relationship Name** DeliveryMethod **Relationship Type** Lookup **Refers To** OrderDeliveryMethod
FulfilledFromLocationId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the Location handling this FulfillmentOrder. This field is a relationship field. **Relationship Name** FulfilledFromLocation **Relationship Type** Lookup **Refers To** Location
FulfilledToAddress	**Type** address **Properties** Filter, Nillable

Field	Details
	Description Address of the recipient.
`FulfilledToCity`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Recipient address city.
`FulfilledToCountry`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Recipient address country.
`FulfilledToEmailAddress`	**Type** email **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Email address of the recipient.
`FulfilledToGeocodeAccuracy`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Accuracy of the geocode for the recipient address. Possible values are: • `Address` • `Block` • `City` • `County` • `ExtendedZip` • `NearAddress` • `Neighborhood` • `State` • `Street`

Field	Details
	• `Unknown` • `Zip`
`FulfilledToLatitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with FulfilledToLongitude to specify the precise geolocation of the recipient address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
`FulfilledToLongitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with FulfilledToLatitude to specify the precise geolocation of the recipient address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
`FulfilledToName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Name on the recipient address.
`FulfilledToPhone`	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Phone number of the recipient.
`FulfilledToPostalCode`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Recipient address postal code.
`FulfilledToState`	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Recipient address state.
`FulfilledToStreet`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Recipient address street.
`FulfillmentOrderNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** ID of the FulfillmentOrder.
`GrandTotalAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total, including adjustments and tax, of the products, fees, and delivery charges on the FulfillmentOrder. This amount includes all FulfillmentOrderLineItems associated with the FulfillmentOrder. This amount is equal to TotalAmount + TotalTaxAmount.
`InvoiceId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the Invoice associated with the FulfillmentOrder. This field is a relationship field. **Relationship Name** Invoice **Relationship Type** Lookup **Refers To** Invoice

Field	Details
IsReship	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the FulfillmentOrder is for a reshipment. The default value is false. This field is available in API version 53.0 and later.
IsSuspended	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the FulfillmentOrder is suspended. The default value is false.
ItemCount	**Type** double **Properties** Filter, Nillable, Sort **Description** Sum of the quantities of the FulfillmentOrderLineItems included in the FulfillmentOrder.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.
OrderId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort

Field	Details
	Description ID of the original Order that generated the FulfillmentOrder. This field is a relationship field. **Relationship Name** Order **Relationship Type** Lookup **Refers To** Order
OrderSummaryId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the OrderSummary associated with the FulfillmentOrder. This field is a relationship field. **Relationship Name** OrderSummary **Relationship Type** Lookup **Refers To** OrderSummary
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the User who currently owns this FulfillmentOrder. Default value is the User logged in to the API to perform the create. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
Status	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Sort, Update **Description** Status of the FulfillmentOrder. Each status corresponds to one status category, shown here in parentheses. You can customize the status picklist to represent your business processes, but the status category picklist is fixed because processing is based on those values. If you customize the status picklist, include at least one status value for each status category. Default values are: • `Allocated` (Activated) • `Assigned` (Fulfilling) • `Cancelled` (Cancelled) • `Draft` (Draft) • `Fulfilled` (Closed) • `Pick Complete` (Fulfilling) This value is available in API v56.0 and later. • `Pickpack` (Fulfilling) • `Printed` (Fulfilling) This value is available in API v56.0 and later. • `Rejected` (Rejected) This value is available in API v56.0 and later.
StatusCategory	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Status category of the FulfillmentOrder. Processing of the FulfillmentOrder depends on this value. Each status category corresponds to one or more statuses. Possible values are: • `ACTIVATED`—Activated • `CANCELLED`—Cancelled • `CLOSED`—Closed • `DRAFT`—Draft • `FULFILLING`—Fulfilling • `REJECTED`—Rejected This value is available in API v56.0 and later.
TaxLocaleType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description The system used to handle tax on the original Order associated with the FulfillmentOrder. Gross usually applies to taxes like value-added tax (VAT), and Net usually applies to taxes like sales tax. Possible values are: • `Gross` (displays most prices and taxes as combined values) • `Net` (displays most prices and taxes as separate values) This field is available in API version 49.0 and later.
`TotalAdjustmentAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the price adjustments applied to the products on the FulfillmentOrder. This value only includes adjustments to FulfillmentOrderLineItems of type code Product, not adjustments to delivery charges or fees.
`TotalAdjustment AmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the price adjustments applied to the products on the FulfillmentOrder, inclusive of tax. This value only includes adjustments to FulfillmentOrderLineItems of type code Product. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount. This field is available in API version 49.0 and later.
`TotalAdjustmentTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalAdjustmentAmount.
`TotalAmount`	**Type** currency **Properties** Filter, Nillable, Sort

Field	Details
	Description Adjusted total, not including tax, of the FulfillmentOrderLineItems, including products, fees, and delivery charges, on the FulfillmentOrder.
`TotalDeliveryAdjustAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the price adjustments applied to the delivery charges on the FulfillmentOrder. This value only includes adjustments to FulfillmentOrderLineItems of type Delivery Charge.
`TotalDeliveryAdjustAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the price adjustments applied to the delivery charges on the FulfillmentOrder, inclusive of tax. This value only includes adjustments to FulfillmentOrderLineItems of type Delivery Charge. This amount is equal to TotalDeliveryAdjustAmount + TotalDeliveryAdjustTaxAmount. This field is available in API version 49.0 and later.
`TotalDeliveryAdjustTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalDeliveryAdjustAmount.
`TotalDeliveryAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of the delivery charges on the FulfillmentOrder. This value only includes FulfillmentOrderLineItems of type Delivery Charge.
`TotalDeliveryAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort

Field	Details
	Description Total amount of the delivery charges on the FulfillmentOrder, inclusive of tax. This value only includes FulfillmentOrderLineItems of type Delivery Charge. This amount is equal to TotalDeliveryAmount + TotalDeliveryTaxAmount. This field is available in API version 49.0 and later.
`TotalDeliveryTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalDeliveryAmount.
`TotalFeeAdjustAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the price adjustments applied to the fees on the FulfillmentOrder. This value only includes adjustments to FulfillmentOrderLineItems of type Fee. This field is available in API version 56.0 and later.
`TotalFeeAdjustAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the price adjustments applied to the fees on the FulfillmentOrder, inclusive of tax. This value only includes adjustments to FulfillmentOrderLineItems of type Fee. This amount is equal to TotalFeeAdjustAmount + TotalFeeAdjustTaxAmount. This field is available in API version 56.0 and later.
`TotalFeeAdjustTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalFeeAdjustAmount. This field is available in API version 56.0 and later.

Field	Details
TotalFeeAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the fees on the FulfillmentOrder, excluding adjustments and tax. This value only includes FulfillmentOrderLineItems of type Fee. This field is available in API version 56.0 and later.
TotalFeeAmtWithTax	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total price of the fees on the FulfillmentOrder, inclusive of tax. This value only includes FulfillmentOrderLineItems of type Fee. This amount is equal to TotalFeeAmount + TotalFeeTaxAmount. This field is available in API version 56.0 and later.
TotalFeeTaxAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalFeeAmount. This field is available in API version 56.0 and later.
TotalProductAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total price of the products on the FulfillmentOrder, excluding order adjustments, delivery charges, and fees. This value only includes FulfillmentOrderLineItems of type code Product.
TotalProductAmtWithTax	**Type** currency **Properties** Filter, Nillable, Sort

Field	Details
	Description Total price of the products on the FulfillmentOrder, inclusive of tax. This value only includes FulfillmentOrderLineItems of type code Product. This amount is equal to TotalProductAmount + TotalProductTaxAmount. This field is available in API version 49.0 and later.
`TotalProductTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalProductAmount.
`TotalTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalAmount.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Type of the FulfillmentOrder. Each type corresponds to one type category, shown here in parentheses. You can customize the type picklist to represent your business processes, but the type category picklist is fixed because processing is based on those values. If you customize the type picklist, include at least one type value for each type category. Default values are: • `Download` (Digital) • `Email` (Digital) • `In Store Pickup` (Physical) • `Retail Store` (Physical) • `Supplier` (Drop Ship) • `Warehouse` (Physical)
`TypeCategory`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Type category of the FulfillmentOrder. Processing of the FulfillmentOrder depends on this value. Each type category corresponds to one or more types. Possible values are: • `DIGITAL`—Digital • `DROPSHIP`—Drop Ship • `PHYSICAL`—Physical

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

FulfillmentOrderFeed
Feed tracking is available for the object.

FulfillmentOrderOwnerSharingRule
Sharing rules are available for the object.

FulfillmentOrderShare
Sharing is available for the object.

SEE ALSO:

FulfillmentOrderLineItem

Order

OrderSummary

FulfillmentOrderItemAdjustment

Represents a price adjustment on a FulfillmentOrderLineItem. Corresponds to an OrderItemAdjustmentLineSummary associated with the corresponding OrderItemSummary. This object is available in API version 48.0 and later.

This object is used for calculations and doesn't have a default record page.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs.

Fields

Field	Details
Amount	**Type** currency **Properties** Create, Filter, Sort **Description** Amount, not including tax, of the adjustment.
CampaignName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Campaign associated with the adjustment.
CouponName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Coupon associated with the adjustment.
CurrencyIsoCode	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** ISO code for the currency of the FulfillmentOrderLineItem to which the adjustment applies. The default value is USD. Possible values are: • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar This field is available in API version 49.0 and later.
Description	**Type** textarea **Properties** Create, Nillable, Update

Field	Details
	Description Text description of the adjustment.
FulfillmentOrderId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the FulfillmentOrder associated with the FulfillmentOrderLineItem to which the adjustment applies.
FulfillmentOrderItemAdjustmentNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** ID of the FulfillmentOrderLineItemAdjustment.
FulfillmentOrderLineItemId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the FulfillmentOrderLineItem to which this adjustment applies.
OrderItemAdjustLineSummaryId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the OrderItemAdjustmentLineSummary associated with the adjustment.
PromotionName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Promotion associated with the adjustment.
TotalAmtWithTax	**Type** currency

Field	Details
	Properties Filter, Nillable, Sort **Description** Total amount of the adjustment, inclusive of tax. This amount is equal to Amount + TotalTaxAmount. This field is available in API version 49.0 and later.
`TotalTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the Amount.

FulfillmentOrderItemTax

FulfillmentOrderLineItem

OrderItemAdjustmentLineSummary

FulfillmentOrderItemTax

Represents the tax on a FulfillmentOrderLineItem or FulfillmentOrderItemAdjustment. Corresponds to an OrderItemTaxLineItemSummary. This object is available in API version 48.0 and later.

This object is used for calculations and doesn't have a default record page.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs.

Fields

Field	Details
`Amount`	**Type** currency **Properties** Create, Filter, Sort **Description** Amount of tax represented by the FulfillmentOrderItemTax.
`CurrencyIsoCode`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** ISO code for the currency of the FulfillmentOrderLineItem to which the tax applies. The default value is USD. Possible values are: • `DKK`—Danish Krone • `EUR`—Euro • `GBP`—British Pound • `USD`—U.S. Dollar This field is available in API version 49.0 and later.
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the FulfillmentOrderItemTax.
`FulfillmentOrderId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the associated FulfillmentOrder.
`FulfillmentOrderItemAdjustId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort

Field	Details
	Description If this object represents tax on an adjustment, this value is the ID of the FulfillmentOrderItemAdjustment to which the tax applies. If this value is null, the adjustment applies to a FulfillmentOrderLineItem.
FulfillmentOrderItemTaxNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** ID of the FulfillmentOrderItemTax.
FulfillmentOrderLineItemId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** If this object represents tax on a FulfillmentOrderLineItem, this value is the ID of that FulfillmentOrderLineItem. If this object represents tax on an adjustment, this value is the ID of the FulfillmentOrderLineItem to which the adjustment applies.
OrderItemTaxLineItemSummaryId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the OrderItemTaxLineItemSummary associated with the OrderItemSummary that corresponds to the FulfillmentOrderLineItem to which the tax applies.
Rate	**Type** percent **Properties** Create, Filter, Nillable, Sort, Update **Description** Tax rate used to calculate the Amount.
TaxEffectiveDate	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** Date on which the Amount was calculated. Important due to tax rate changes over time.

Field	Details
Type	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates whether the Amount is actual or estimated. Possible values are: • `Actual` • `Estimated`

SEE ALSO:
FulfillmentOrder
FulfillmentOrderItemAdjustment
FulfillmentOrderLineItem
OrderItemTaxLineItemSummary

FulfillmentOrderLineItem

Represents a product or delivery charge belonging to a FulfillmentOrder. Corresponds to an OrderItemSummary. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs.

Fields

Field	Details
CurrencyIsoCode	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description Available only for orgs with the multicurrency feature enabled. ISO code for the currency of the FulfillmentOrder associated with the FulfillmentOrderLineItem. Possible values are: • `DKK`—Danish Krone • `EUR`—Euro • `GBP`—British Pound • `USD`—U.S. Dollar The default value is `USD`. This field is available in API version 49.0 and later.
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the FulfillmentOrderLineItem.
`EndDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort **Description** End date of the FulfillmentOrderLineItem.
`FulfillmentOrderId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the FulfillmentOrder associated with the FulfillmentOrderLineItem. This field is a relationship field. **Relationship Name** FulfillmentOrder **Relationship Type** Lookup **Refers To** FulfillmentOrder

Field	Details
FulfillmentOrderLineItemNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** ID of the FulfillmentOrderLineItem.
GrossUnitPrice	**Type** currency **Properties** Create, Filter, Nillable, Sort **Description** Unit price, including tax, of the FulfillmentOrderLineItem. This value is equal to TotalPrice + TotalTaxAmount. This field is available in API version 49.0 and later.
IsReship	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the FulfillmentOrderLineItem belongs to a reshipment. The default value is false. This field is available in API version 53.0 and later.
OrderItemId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the original OrderItem for the OrderItemSummary associated with the FulfillmentOrderLineItem. This field is a relationship field. **Relationship Name** OrderItem **Relationship Type** Lookup **Refers To** OrderItem

Field	Details
OrderItemSummaryId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the OrderItemSummary associated with the FulfillmentOrderLineItem. This field is a relationship field. **Relationship Name** OrderItemSummary **Relationship Type** Lookup **Refers To** OrderItemSummary
OriginalQuantity	**Type** double **Properties** Create, Filter, Sort **Description** Original quantity of the FulfillmentOrderLineItem.
Product2Id	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the product represented by the FulfillmentOrderLineItem. This field is a relationship field. **Relationship Name** Product2 **Relationship Type** Lookup **Refers To** Product2
Quantity	**Type** double **Properties** Create, Filter, Sort, Update

Field	Details
	Description Current quantity of the FulfillmentOrderLineItem. Equal to the original quantity minus any canceled quantity.
`QuantityUnitOfMeasure`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** Unit of measure of the quantity, for example: unit, gallon, ton, or case.
`RejectedQuantity`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used by the Distributed Order Management package and Store Fulfillment app to store the quantity that has been rejected by a fulfillment location. This field is available in API version 57.0 and later.
`RejectReason`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** If the FulfillmentOrderLineItem was rejected by a fulfillment location, the reason for the rejection. Default values are: • `Damaged` • `Just Sold` • `Other` • `Out of Packing Supplies` • `Out of Stock` This field is available in API version 56.0 and later.
`ReshipReason`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** If the FulfillmentOrderLineItem belongs to a reshipment, the reason for the reshipment.

Field	Details
	Default values are: • `Damaged` • `Lost` • `Unknown` • `Wrong Item` This field is available in API version 53.0 and later.
`ServiceDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort **Description** Service or start date of the FulfillmentOrderLineItem.
`TotalAdjustmentAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of any price adjustments applied to the FulfillmentOrderLineItem.
`TotalAdjustmentAmountWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the price adjustments applied to the FulfillmentOrderLineItem, inclusive of tax. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount. This field is available in API version 49.0 and later.
`TotalAdjustmentTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalAdjustmentAmount.
`TotalAmount`	**Type** currency **Properties** Filter, Nillable, Sort

Field	Details
	Description Total, including adjustments and tax, of the FulfillmentOrderLineItem.
`TotalLineAmount`	**Type** currency **Properties** Create, Defaulted on create, Filter, Nillable, Sort **Description** Total, not including adjustments or tax, of the FulfillmentOrderLineItem.
`TotalLineAmountWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total price of the FulfillmentOrderLineItem, inclusive of tax. This amount is equal to TotalLineAmount + TotalLineTaxAmount. This field is available in API version 49.0 and later.
`TotalLineTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalLineAmount.
`TotalPrice`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total, including adjustments but not tax, of the FulfillmentOrderLineItem. Equal to UnitPrice times Quantity.
`TotalTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalPrice.

Field	Details
Type	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Type of the FulfillmentOrderLineItem. Matches the type of the associated OrderItemSummary. Delivery Charge indicates that the FulfillmentOrderLineItem represents a delivery charge. Fee indicates that it represents another type of fee, such as a return fee. Order Product indicates that it represents any other type of product, service, or charge. Each type corresponds to one type code, shown here in parentheses. Possible values are: • `Delivery Charge` (Charge) • `Fee` (Charge) This value is available in API v56.0 and later. • `Order Product` (Product)
TypeCode	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Type code of the FulfillmentOrderLineItem. Matches the type code of the associated OrderItemSummary. Processing depends on this value. Charge indicates that the FulfillmentOrderLineItem represents a charge or fee. Product indicates that it represents any other type of product, service, or charge. A type code can be associated with one or more types. Possible values are: • `Charge` • `Product`
UnitPrice	**Type** currency **Properties** Create, Defaulted on create, Filter, Nillable, Sort

Field	Details
	Description Unit price of the FulfillmentOrderLineItem.

OrderItemSummary

FunctionConnection

Represents a connection between an org and Salesforce Functions. This object is available in API version 52.0 and later.

In API version 53.0, the name of this object was changed from SfFunctionsConnection to FunctionConnection.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`Error`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The error string, if any, for the connection between the org and Salesforce Functions.
`FunctionsAccountLoginOrg`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The Salesforce Functions account login org.
`FunctionsAccountName`	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The Salesforce Functions account name.
`FunctionsAccountUuid`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** The unique Salesforce Functions account UUID. This is a generated ID that is not in Salesforce object ID format.
`Sequence`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort **Description** Sequence number for the record.
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The status of the connection between the org and Salesforce Functions. Possible values are: • `Attempted` • `None` • `TrustedBiDirection` • `TrustedUniDirection` The default value is 'None'. `TrustedBiDirection` indicates the connection is fully established.

Usage

FunctionConnection is not intended for direct use and should be treated as a read-only object that represents the current connection information between your org and Salesforce Functions. To create and manage connections between your org and Salesforce Functions use the steps and commands described in the Salesforce Functions developer documentation.

FunctionConnection is not supported in Trialforce templates or org snapshots.

FunctionInvocationRequest

Represents invocation information for a Salesforce Function. This object is available in API version 51.0 and later.

When a Salesforce Function is invoked using the Apex `functions.Function` invoke methods, a FunctionInvocationRequest record is created that contains information on the status and results of the invocation.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `undelete()`, `update()`

Fields

Field	Details
`CallbackStatus`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The status of the callback for asynchronous invocations. This field is new in API version 52.0. Possible values are: • `Completed` - Not used for the Salesforce Functions beta. • `Enqueued` - The Function has completed (either successfully or unsuccessfully), and the callback has been enqueued for asynchronous execution in the Salesforce org. • `Failed` - Not used for the Salesforce Functions beta. • `PendingResponse` - The Function has not yet completed, so the callback has not been called yet. The default value is 'PendingResponse'.
`ExecutionTime`	**Type** long **Properties** Filter, Group, Nillable, Sort, Update **Description** The execution time of the Function in milliseconds.
`ExtendedResponse`	**Type** textarea **Properties** Nillable, Update **Description** JSON object with additional information about the result of the Function execution.

Field	Details
FunctionName	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Name of the Function that was invoked. This name is case-sensitive and uses the format "`project name-function name`"
InvokingNamespacePrefix	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Prefix of the namespace that invokes the function. A namespace can invoke the global function using an installed package via Apex.
NamespacePrefix	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. This object is available in API version 53.0 and later. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the `namespacePrefix__componentName` notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
OwnerId	**Type** reference **Properties** Filter, Group, Sort, Update **Description** The owner of the FunctionInvocationRequest. This is a polymorphic relationship field.

Field	Details
	Relationship Name Owner **Relationship Type** Lookup **Refers To** Group, User
ResponseBody	**Type** base64 **Properties** Nillable, Update **Description** Response body of the invoked Function.
ResponseContentType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Content type of the response body of the invoked Function. For example, the content type could be `application/json`, `text/csv`, or various other values depending on what the Function returned.
ResponseLength	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Length of the response body.
ResponseName	**Type** string **Properties** Filter, Group, Nillable, Sort, Update **Description** Name of response, not currently used.
ResponseUncompressedLength	**Type** int **Properties** Filter, Group, Nillable, Sort, Update

Field	Details
	Description Uncompressed length of the Function response, if the response content was compressed.
`StackTrace`	**Type** textarea **Properties** Nillable, Update **Description** If there was an error invoking the function, this field contains the Function stack trace.
`Status`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Status of the invoked Function. Functions that are invoked asynchronously can be in a queued `InProgress` state before they are invoked. Possible values are: • `Dispatched` - Not used for the Salesforce Functions beta. • `Error` - The Function failed to execute due to either an error starting the Function, or an error while the Function was running. • `FunctionInProgress` - The Function invocation has been sent to the Salesforce Functions compute environment, and is running. • `InProgress` - The Function invocation request has been enqueued. • `New` - The Function invocation request has been created, but not enqueued yet. • `Success` - The Function has completed execution. For status on whether the callback has been called, see the CallbackStatus field. The default value is 'New'.

Usage

Treat FunctionInvocationRequest records as read-only records used to get information about a specific Function invocation. To invoke Functions, use the Apex `functions.Function` class invoke methods.

FunctionInvocationRequest is not supported in Trialforce templates or org snapshots.

FunctionReference

Represents a deployed Salesforce Function associated with an org. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`Access`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The label for whether managed components can access across namespaces. Possible values are: • `Global`—The managed components can access across namespaces. • `Public`—The managed components can access within the same namespace. The default value is `Public`.
`Description`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the Function.
`FunctionName`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The developer name of the Function. This name is case sensitive and uses the format "`project name-function name`". This field is unique within your organization.
`ImageReference`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Stores details about an image associated with a function. This is internal only, used by packaging only, and should not be editable or set by the customer.

Field	Details
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language code for the Function, such as “en_US”.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The master label for the Function.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. This object is available in API version 53.0 and later. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the `namespacePrefix__componentName` notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field’s value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

Usage

Treat FunctionReference records as read-only records used to get information about a specific Function associated with your org. To invoke Functions, use the Apex `functions.Function` class invoke methods. To deploy and associate Functions with your org, use Salesforce CLI commands associated with Functions, as described in the Salesforce Functions developer documentation.

FunctionReference is not supported in Trialforce templates or org snapshots.

GeoCountry

Represents a country. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The GeoCountry object is available if B2B Commerce or D2C Commerce is enabled.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A brief description of this record.
`IsoCode`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort **Description** Two-letter ISO code of the country as defined in the org's State-Country picklist. This field is unique within your organization
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed data in this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible the user accessed data in this record or list view but didn't view it directly.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The name of the country that corresponds with the ISO code.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the GeoCountry record. By default, the asset owner is the user who created the record. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

GeoCountryOwnerSharingRule on page 48
Sharing rules are available for the object.

GeoCountryShare on page 50
Sharing is available for the object.

SEE ALSO:

GeoState

TaxGeoConfig

GeoState

Represents a state. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The GeoState object is available if B2B Commerce or D2C Commerce is enabled.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A brief description of this record.
`GeoCountryId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the GeoCountry associated with this GeoState. This field is a relationship field. **Relationship Name** GeoCountry **Relationship Type** Lookup **Refers To** GeoCountry
`IsoCode`	**Type** string **Properties** Create, Filter, Group, Sort

Field	Details
	Description Two-letter ISO code of the state as defined in the org's State-Country picklist. This field is unique within your organization
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed data in this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it's possible the user accessed data in this record or list view but didn't view it directly.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The name of the state that corresponds with the ISO code.

GeoCountry

GtwyProvPaymentMethodType

The gateway provider payment method type allows integrators and payment providers to choose an active payment to receive an order's payment data rather than allowing the Salesforce Order Management platform to select a default payment method. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

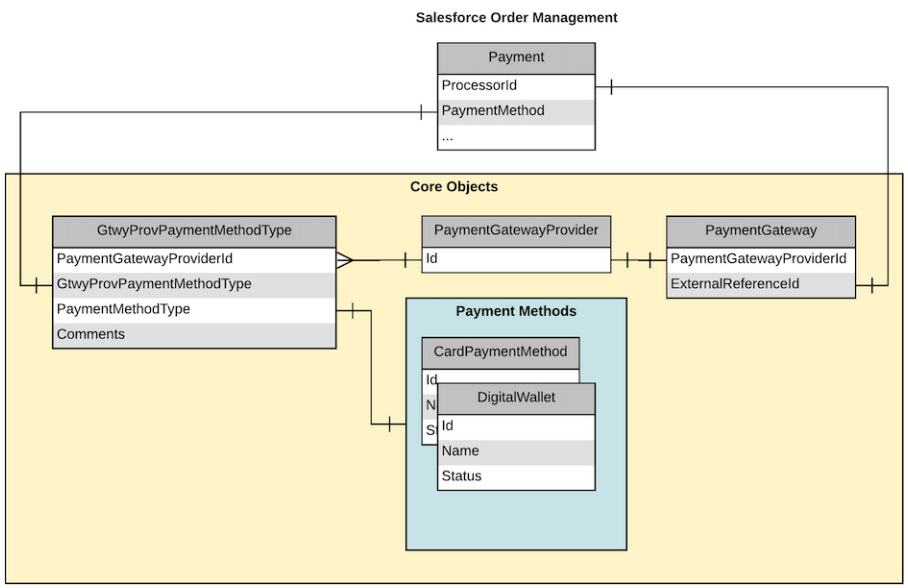
Field	Details
`Comments`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Users can provide additional details about the gateway provider payment method type record. Supports a maximum of 1000 characters.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, Salesforce generates one for each record, which slows performance.
`GtwyProviderPaymentMethodType`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Links the Salesforce payment method to the payment method used in the Salesforce Order Management storefront. Your payment gateway integration uses this field when finding a payment method to link to a payment. The value of `GtwyProviderPaymentMethodType` must match the payment method value sent to the order's Payment Instrument in Salesforce Order Management. Listed below are several examples of payment method values that Salesforce could receive from Salesforce Order Management. • `CREDIT_CARD` • `BASIC_CREDIT` • `CreditCard` • `GooglePay`

Field	Details
	• `ApplePay`
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Language of the payment gateway integration.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. The gateway provider payment method type name that appears in the user interface.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Namespace of the payment gateway integration classes.
`PaymentGatewayProviderId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Specifies the payment gateway provider that Salesforce Order Management should use when processing payments. One payment gateway provider can be related to multiple payment method types. This is a relationship field.

Field	Details
	Relationship Name PaymentGatewayProvider **Relationship Type** Lookup **Refers To** PaymentGatewayProvider
`PaymentMethodType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Specifies the type of payment method used on an order in Salesforce Order Management. Possible values are: • `AlternativePaymentMethod` • `CardPaymentMethod` • `DigitalWallet`
`RecordTypeId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the record type entity related to the gateway provider payment method type. This is a relationship field. **Relationship Name** RecordType **Relationship Type** Lookup **Refers To** RecordType

Usage

The Salesforce Order Management payment record must have a `ProcessorId` field with the same value as the payment gateway's `ExternalReferenceId` field. The gateway provider payment method type record must have a `PaymentMethodType` field that looks up to the payment method that you want to associate to your payment. Finally, the payment gateway and gateway provider payment method type must have matching `PaymentGatewayProviderId` fields. When you've established these relationships, the payment record can infer your payment method from the gateway provider payment method type record.



Goal

The Goal object represents the components of a goal such as its name, description, and status.

Note: The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`CompletionDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The completion date of the goal.
`Description`	**Type** textarea

Field Name	Details
	Properties Create, Nillable, Update **Description** The description of the goal. The maximum length is 65,535 characters.
`DueDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The date the goal is due.
`ImageUrl`	**Type** url **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The URL for the goal image. The image must be stored in Documents and set as externally available. Applicable only to Goal objects of `Type`: Goal.
`IsKeyCompanyGoal`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the goal is a key company goal.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp that indicates when a user last viewed a record that is related to this goal.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field Name	Details
	Description The timestamp that indicates when a user last viewed this goal. If this value is null, this record might have been only referenced (`LastReferencedDate`) and not viewed.
`Name`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The name of the goal. The maximum length is 255 characters.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the user who owns the goal.
`Progress`	**Type** percent **Properties** Filter, Nillable, Sort **Description** The progress of the goal measured as a percentage.
`StartDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The start date of the goal.
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The status of the goal. Possible values: • Draft

Field Name	Details
	• Published • Completed • Canceled • Not Completed

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

GoalFeed
Feed tracking is available for the object.

GoalHistory
History is available for tracked fields of the object.

GoalOwnerSharingRule
Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

GoalShare
Sharing is available for the object.

GoalLink

Represents the relationship between two goals. This is a many-to-many relationship, meaning that each goal can link to many other goals.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort **Description** The auto-generated name of the goal link.

Field Name	Details
ParentGoalId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the parent goal.
SubgoalId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the subgoal.

GoogleDoc

Represents a link to a Google Document. This object is available in API version 14.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available in **All** Editions except **Database.com** for Google Apps Premier Edition accounts. See the Salesforce online help for more information.

Fields

Field	Details
Name	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The name of the Google document.
Owner	**Type** reference

Field	Details
	Properties Create, Defaulted on create, Filter, Nillable, Update **Description** The ID of the user who currently owns this Google Document. Default value is the user logged in to the API to perform the create.
`ParentId`	**Type** reference **Properties** Create, Filter **Description** Required. ID of the attachment's parent object. The following objects are supported as parents of Google documents: Account, Asset, Campaign, Case, Contact, Contract, Custom Object Behavior, Lead, Opportunity, Product2, and Solution.
`Url`	**Type** string **Properties** Create, Filter, Nillable, Update **Description** The URL of the Google document.

Group

A set of User records.

Groups are sets of users. They can contain individual users, other groups, the users in a particular role or territory, or the users in a particular role or territory plus all the users below that role or territory in the hierarchy.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `search()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
`DefaultDivision`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** This record's default division. Only applicable if divisions are enabled.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. This name is unique by group type and corresponds to **Group Name** in the user interface. This field is available in API version 24.0 and later. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. Only your Salesforce org's internal users can access this field.
`DoesIncludeBosses`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether records shared with users in this group are also shared with users higher in the role hierarchy (`true`) or not (`false`). This field is only available for public groups. This field corresponds to the Grant Access Using Hierarchies checkbox in Setup. This field is available in API version 18.0 and later.
`DoesSendEmailToMembers`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether the email is sent (`true`) or not sent (`false`) to the group members. The email is sent to queue members as well.
`Email`	**Type** email **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Email address for a group of type Case. Applies only for a case queue.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. Name of the group. Corresponds to **Label** on the user interface.
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the user who owns the group. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Organization, User
`QueueRoutingConfigId`	**Type** reference **Properties** Create, Delete, Query, Retrieve, Update **Description** The ID of the queue routing configuration associated with the queue.
`RelatedId`	**Type** reference

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** Represents the ID of the associated groups. For groups of type "Role," the ID of the associated UserRole. The `RelatedId` field is polymorphic. This is a polymorphic relationship field. **Relationship Name** Related **Relationship Type** Lookup **Refers To** User, UserRole
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Required. Type of the group. One of the following values: • `AllCustomerPortal`—Public group that includes all Customer Portal or Customer Community Plus users. This type is only available when a Customer Portal or a Customer Site is enabled for your org. • `ChannelProgramGroup`—Public group for partners in a channel program. • `CollaborationGroup`—Chatter group. • `Manager`—Public group that includes a user's direct and indirect managers. This group is read-only. • `ManagerAndSubordinatesInternal`—Public group that includes a user and the user's direct and indirect reports. This group is read-only. • `Organization`—Public group that includes all the User records in the organization. This group is read-only. • `Participant`—Compliant Data Sharing group that includes internal users who have the Use Compliant Data Sharing permission. A group can contain other participant groups only, or a group can contain both internal users with the Use Compliant Data Sharing permission and other participant groups. This value is only available when Compliant Data Sharing is enabled for your org. • `PRMOrganization`—Public group that includes all the partners in an organization that has the partner site or portal feature enabled. • `Queue`—Public group that includes all the User records that are members of a queue. • `Regular`—Standard public group. When you `create()` a group, its type must be `Regular`, unless a partner site or portal is enabled for the organization, in which case the type can be `Regular` or `PRMOrganization`.

Field	Details
	• `Role`—Public group that includes all the User records in a particular UserRole. • `RoleAndSubordinates`—Public group that includes all the User records in a particular UserRole and all the User records in any subordinate UserRole. • `RoleAndSubordinatesInternal`—Public group that includes all the User records in an internal UserRole, excluding customer and partner roles, and all the User records in any subordinate internal UserRole. • `Territory`—Public group that includes all the User records in an organization that has the territory feature enabled. • `TerritoryAndSubordinates`—Public group that includes all the User records in a particular UserRole and all the User records in any subordinateUserRole in an organization that has the territory feature enabled. Only `Personal`, `Regular`, and `Queue` can be used when creating a group. The other values are reserved.

Usage

Unlike users, this object can be deleted.

Only public groups are accessible via the API. Personal groups are not available.

In API version 34.0 and later, you can query a group using `Related.Name` to retrieve the group's name. `Related.Name` is supported for public groups, user roles, territories, manager groups, and user names.

In API version 13.0 and later, if you delete a public group, it is deleted even if it has been used in sharing, consistent with the behavior for UserRole. In versions before 13.0, such sharing prevents the record from being deleted.

GroupMember

Overview of Salesforce Objects and Fields

GroupMember

Represents a User or Group that is a member of a public group.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
`GroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the Group. This is a relationship field. **Relationship Name** Group **Relationship Type** Lookup **Refers To** Group
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the User or Group that is a direct member of the group.

Usage

If your group contains more than 10,000 members, for improved performance, adjust group membership using the GroupMember API object instead of the group's detail page in Setup.

A record exists for every User or Group who is a direct member of a public group whose `Type` field is set to Regular. User records that are indirect members of Regular public groups are not listed as group members. A User can be an indirect member of a group if he or she is in a UserRole above the direct group member in the hierarchy, or if he or she is a member of a group that is included as a subgroup in that group.

If you attempt to create a record that matches an existing record, system simply returns the existing record.

Overview of Salesforce Objects and Fields

GuestBuyerProfile

Represents a store's guest buyer profile, which allows unauthenticated buyers to browse the store. This object is available in API version 51.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Fields

Field	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Currency displayed to the guest buyer when they're viewing the store. Possible values are: • `USD`—U.S. Dollar
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Detailed description of the profile. Includes information like which store the profile is used in.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The last date and time when one or more of the fields were modified
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The last date and time when one or more of the fields were viewed
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description The name of the guest buyer profile. Including a reference to the store helps with later identification.

HashtagDefinition

HashtagDefinition represents hashtag (#) topics in public Chatter posts and comments. Public posts and comments include those on profiles and in public groups, but not those on records or in private groups. This object is available in API version 26.0 and later.

Important: Starting in Spring '16, API access to HashtagDefinition is disabled across all API versions. Any integrations relying on API queries to this object stop working. You can continue to use hashtags in posts and comments, and the hashtags continue to create corresponding topics. We recommend that you redirect all API queries and reports using the HashtagDefinition object to use the Topic object instead. For more information, see Retiring the Legacy HashtagDefinition Object—FAQs.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field Name	Details
`HashtagCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of times a hashtag topic is used.
`Name`	**Type** string **Properties** Filter, Nillable, Sort **Description** The string of characters following the hashtag (#) in a hashtag topic.
`NameNorm`	**Type** string **Properties** Filter, Nillable, Sort

Field Name	Details
	Description The string of characters following the hashtag (#) in a hashtag topic, normalized to remove capitalization and punctuation.
`NetworkId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Identifier of the community to which the HashtagDefinition belongs. This field is available only if digital experiences is enabled in your org.

Usage

Use this object to identify public hashtag topics and see how often they're used.

Topic

HealthCareDiagnosis

Represents information related to industry-standard healthcare diagnosis codes.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`Category`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Indicates the category for this diagnosis such as newborn, pediatric, maternity, or adult.

Field Name	Details
Code	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Industry-standard diagnosis code.
CodeDescription	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the diagnosis code.
CodeType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Type of diagnosis code represented in the record such as ICD-9 or ICD-10.
EffectiveDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Start date for the code.
EndDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** End date for the code.
Gender	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description Indicates whether this diagnosis is for males, females, or all genders.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the diagnosis code is available for use.
`IsComplicationOrComorbidity`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether this diagnosis is used to represent a complication or comorbidity.
`IsHospitalAcquiredCondition`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether this diagnosis represents a condition acquired while in the hospital.
`IsMajorComplicationOrComorbidity`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether this diagnosis is used to represent a major complication or comorbidity.
`IsPresentOnAdmissionExempt`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description Indicates whether diagnosis code is exempt from the diagnosis present on admission requirement.
IsPrimaryDiagnosis	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether diagnosis code can be used as primary diagnosis only, or can be used in any diagnosis sequence.
IsUnacceptablePrincipalDxIpAdmit	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether diagnosis code is an unacceptable principal diagnosis for inpatient admission per Medicare Code Edits.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it’s possible that this record was referenced (LastReferencedDate) and not viewed.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update

Field Name	Details
	Description The name of the code that displays in search and lookup fields. Salesforce recommends using the code along with the description to populate this field. For example, use <Code>: <Description> or <Code>-<Description> such as (E08.37X9 - Diabetes mellitus due to underlying condition).
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user who owns this record. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

HealthCareDiagnosisChangeEvent (API version 60.0)
Change events are available for the object.

HealthCareDiagnosisHistory
History is available for tracked fields of the object.

HealthCareDiagnosisOwnerSharingRule
Sharing rules are available for the object.

HealthCareDiagnosisShare
Sharing is available for the object.

HealthCareProcedure

Represents information related to industry-standard healthcare procedure codes.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Category	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Category of the procedure code such as anesthesia, surgery, radiology, and so on.
Code	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Industry standard procedure code such as CPT or HCPCS.
CodeDescription	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the procedure code.
CodeShortDescription	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Short description of the procedure code.
CodeType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Type of procedure code represented in the record such as CPT or HCPCS.
EffectiveDate	**Type** date

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Start date for the code.
`EndDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** End date for the code.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the diagnosis code is available for use.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update

Field Name	Details
	Description The name of the code that displays in search and lookup fields. Salesforce recommends using the code along with the description to populate this field. For example, use <Code>: <Description> or <Code>-<Description> such as 95115: Allergy injection.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user who owns this record. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

HealthCareProcedureChangeEvent (API version 60.0)
Change events are available for the object.

HealthCareProcedureHistory
History is available for tracked fields of the object.

HealthCareProcedureOwnerSharingRule
Sharing rules are available for the object.

HealthCareProcedureShare
Sharing is available for the object.

Holiday

Represents a period of time during which your customer support team is unavailable. Business hours and escalation rules associated with business hours are suspended during any holidays with which they are affiliated.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can’t access this object.

All users, even those without the “View Setup and Configuration” user permission, can view holidays via the API.

Fields

Field	Details
`ActivityDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** If the Holiday `IsAllDay` flag is set to `true` (indicating that it is an all-day holiday), then the holiday due date information is contained in the `ActivityDate` field. This field is a date field with a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone. The timestamp is not relevant, and you should not attempt to alter it to account for any time zone differences.
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Text description of the holiday.
`EndTimeInMinutes`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The end time of the holiday in minutes.
`IsAllDay`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether the duration of the holiday is all day (`true`) or not (`false`).
`IsRecurrence`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the holiday is scheduled to repeat itself (`true`) or only occurs once (`false`). This is a read only field on update, but not on create. If this field value is `true`, then any recurrence fields associated with the given recurrence type must be populated.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the holiday.
`RecurrenceDayOfMonth`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The day of the month on which the holiday repeats.
`RecurrenceDayOfWeekMask`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The day or days of the week on which the holiday repeats. This field contains a bitmask. For each day of the week, the values are as follows: • Sunday = `1` • Monday = `2` • Tuesday = `4` • Wednesday = `8` • Thursday = `16` • Friday = `32` • Saturday = `64`

Field	Details
	Multiple days are represented as the sum of their numerical values. For example, Tuesday and Thursday = 4 + 16 = 20.
RecurrenceEndDateOnly	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The last date on which the holiday repeats. For multiday recurring events, this is the day on which the last occurrence starts.
RecurrenceInstance	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The frequency of the recurring holiday. For example, `2nd` or `3rd`.
RecurrenceInterval	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The interval between recurring holidays.
RecurrenceMonthOfYear	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The month of the year on which the event repeats.
RecurrenceStartDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The date when the recurring holiday begins. Must be a date and time before `RecurrenceEndDateOnly`.
RecurrenceType	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates how often the holiday repeats. For example, daily, weekly, or every Nth month (where "Nth" is defined in `RecurrenceInstance`).
`StartTimeInMinutes`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The start time of the holiday in minutes.

Usage

Use this object to view and update holidays, which specify dates and times at which associated business hours and escalation rules are suspended.

IconDefinition

Represents the icon-related metadata for a custom tab. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field Name	Details
`ContentType`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The tab icon's content type, for example, "image/png."
`DurableId`	**Type** string

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** A unique virtual Salesforce ID for the icon.
`Height`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The tab icon’s height in pixels. If the icon content type is an SVG type, height and width values are not used.
`TabDefinitionId`	**Type** string **Properties** Filter, Nillable, Sort **Description** The `TabDefinition` ID. This is a relationship field. **Relationship Name** TabDefinition **Relationship Type** Lookup **Refers To** TabDefinition
`Theme`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The icon’s theme.
`Url`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The fully qualified URL for this icon.

Field Name	Details
Width	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The tab icon's width in pixels. If the icon content type is an SVG type, height and width values are not used.

Idea

Represents an idea on which users are allowed to comment and vote, for example, a suggestion for an enhancement to an existing product or process. This object is available in API version 12 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Note: For other standard objects, the `describeLayout()` call returns the `recordTypeMappings` section that contains the layout ID and picklist values for each record type. However, the `recordTypeMappings` section and the fields it includes are not available for the Idea object.

When performing a SOSL search on Idea objects, IdeaComment objects are also searched.

Fields

Field	Details
AttachmentBody	**Type** base64 **Properties** Create, Nillable, Update **Description** File data for the attachment. This field is available in API version 28.0 and later.
AttachmentContentType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Type of the attachment. This field is available in API version 28.0 and later.

Field	Details
AttachmentLength	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Size of the attachment in bytes. This field is available in API version 28.0 and later.
AttachmentName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Name of the attachment. This field is available in API version 28.0 and later.
Body	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the Idea.
Categories	**Type** multipicklist **Properties** Create, Filter, Nillable, Update **Description** Customizable multi-select picklist used to organize Ideas into logical groupings. Note: This field is only available if your organization has the `Categories` field enabled. This field is enabled by default in organizations created after API version 14 was released. If the `Categories` field is enabled, API versions 13 and earlier do not have access to either the `Categories` or `Category` fields.
Category	**Type** picklist **Properties** Create, Filter, Nillable, Update **Description** Customizable picklist of values used to organize Ideas into logical groupings. Note: This field is not available if your organization has the multi-select `Categories` field enabled.

Field	Details
CommunityId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The zone ID associated with the idea. Once you create an idea, you can't change the zone ID associated with that idea. Note: API version 12 does not support zone ID. If you create an idea in version 12, your idea is automatically posted to the oldest zone that you have permission to access. This is a relationship field. **Relationship Name** Community **Relationship Type** Lookup **Refers To** Community
CreatorFullPhotoUrl	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** URL of the user's profile photo. This field is available in API version 28.0 and later.
CreatorName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Name of the user who posted the idea or commented on the idea. This field is available in API version 28.0 and later.
CreatorSmallPhotoUrl	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** URL of the user's thumbnail photo. This field is available in API version 28.0 and later.

Field	Details
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
IdeaThemeID	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Identifies the idea theme associated with the idea.
IsDeleted	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
IsHtml	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Read-only. If this value is `true`, your organization has the Ideas HTML editor enabled, and the Idea `Body` may contain HTML. If this value is `false`, the HTML editor is disabled and the Idea `Body` only contains regular text.
IsMerged	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Read only. Indicates whether the idea has been merged with a parent idea (`true`) or not (`false`). You can't vote for or add comments to a merged idea. Note: In API version 27, `IsMerged` replaces `IsLocked`. Existing formula fields that use `IsLocked` must be edited to use `IsMerged`.

Field	Details
LastCommentDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time the last comment (child IdeaComment object) was added.
LastCommentId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Read only. The ID of the last comment (child IdeaComment object). This is a relationship field. **Relationship Name** LastComment **Relationship Type** Lookup **Refers To** IdeaComment
LastReferencedDate	**Type** date **Properties** Filter, Nillable, Sort, Update **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** date **Properties** Filter, Nillable, Sort, Update **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed.
NumComments	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort

Field	Details
	Description The number of comments (child IdeaComment objects) that users have submitted for the given idea.
`ParentIdeaId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID associated with this idea's parent idea. When multiple ideas are merged together, one idea becomes the parent (master) of the other ideas. The `ParentIdeaId` is automatically set when you merge ideas. This is a relationship field. **Relationship Name** ParentIdea **Relationship Type** Lookup **Refers To** Idea
`RecordTypeId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the record type assigned to this object. This is a relationship field. **Relationship Name** RecordType **Relationship Type** Lookup **Refers To** RecordType
`Status`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Customizable picklist of values used to specify the status of an idea.

Field	Details
Title	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The descriptive title of the idea.
VoteScore	**Type** double **Properties** Filter, Nillable, Sort **Description** The internal score of the Idea, used to sort Ideas on the Popular tab in the application user interface. The internal algorithm that determines the score gives older votes less weight than newer votes, simulating exponential decay. The score itself does not display in the application user interface. Note: Unlike other fields of type double, you can't use a SOQL aggregate function with this field.
VoteTotal	**Type** double **Properties** Filter, Nillable, Sort **Description** An Idea's total number of points. Each vote a user makes is worth ten points, therefore the value of this field is ten times the number of votes an idea has received. Note: Unlike other fields of type double, you can't use a SOQL aggregate function with this field.

Note: If you are importing Idea data and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself..

Usage

Use this object to track ideas, which are written suggestions on which users can vote and comment.

SEE ALSO:

IdeaComment

Vote

IdeaComment

Represents a comment that a user has submitted in response to an idea.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Note: When performing a SOSL search on IdeaComment objects, Idea objects are also searched.

Fields

Field	Field Type
CommentBody	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Body of the submitted comment.
CommunityId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The zone ID associated with the idea. Once you create an idea, you can't change the zone ID associated with that idea. Note: API version 12 does not support zone ID. If you create an idea in version 12, your idea is automatically posted to the oldest zone that you have permission to access.
CreatorFullPhotoUrl	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** URL of the user's profile photo. This field is available in API version 28.0 and later.
CreatorName	**Type** string

Field	Field Type
	Properties Filter, Group, Nillable, Sort **Description** Name of the user who posted the idea or commented on the idea. This field is available in API version 28.0 and later.
`CreatorSmallPhotoUrl`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** URL of the user's thumbnail photo. This field is available in API version 28.0 and later.
`IdeaId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the idea on which this comment was made. This is a relationship field. **Relationship Name** Idea **Relationship Type** Lookup **Refers To** Idea
`IsHtml`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Read-only. If this value is `true`, your organization has the Ideas HTML editor enabled, and the `CommentBody` field may contain HTML. If this value is `false`, the HTML editor is disabled and the `CommentBody` field only contains regular text.
`UpVotes`	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Field Type
	Description Total number of up votes for the question.

Note: If you import these records, and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself.

Usage

Use this object to track comments on ideas, which are users' text responses to ideas.

SEE ALSO:

Idea

Vote

IdeaReputation

Represents a collection of statistics and scores derived from a user's activity within an Ideas zone or internal organization. This object is available in API version 28.0 and later.

Supported Calls

`query()`, `retrieve()`,

Fields

Field	Details
`CommentCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of comments a user has created in a zone or the internal organization. This number excludes comments the user creates on his or her own idea.
`CommentsReceivedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The number of comments a user has received in a zone or the internal organization.
`ContextId`	**Type** reference **Properties** Filter, Group, Namepointing, Nillable, Sort **Description** The ID of the zone or internal organization.
`DownVotesGivenCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of down votes a user has given in a zone or the internal organization.
`DownVotesReceivedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of down votes a user has received in a zone or the internal organization.
`IdeaCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of ideas a user has created in a zone or the internal organization.
`ReputationLevel`	**Type** string **Properties** Nillable **Description** The reputation level that a user has achieved based on their score in a zone or within an organization.
`Score`	**Type** double

Field	Details
	Properties Filter, Nillable, Sort **Description** The total score of a user's activity within a zone or within an organization.
UpVotesGivenCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of up votes a user has given in a zone or the internal organization. This number doesn't include the default vote the system applies when the user creates the idea.
UpVotesReceivedCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of up votes a user has received in a zone or the internal organization.
UserId	**Type** reference **Properties** Filter, Group, Sort **Description** The user ID associated with the reputation.

Usage

Use to query a user's reputation within a zone.

IdeaReputationLevel

Represents a reputation level within an Ideas zone or internal organization and is used by the system to calculate reputation. You can create up to 25 levels per zone or internal organization. This object is available in API version 28.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
`ContextId`	**Type** reference **Properties** Create, Filter, Group, Namepointing, Sort, Update **Description** The ID of the zone or internal organization.
`Name`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Name of the reputation level. The name must be unique within the zone or internal organization. Maximum size is 50 characters.
`Threshold`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** Minimum number of points for this level. The threshold must be unique within the zone or internal organization and must be greater than or equal to zero.

Usage

Use to create or edit reputation levels for an Ideas zone or internal organization.

IdeaTheme

Represents an invitation to zone members to submit ideas that are focused on a specific topic. This object is available in API version 26 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`,

Fields

Field Name	Details
Categories	**Type** multipicklist **Properties** Create, Filter, Nillable, Update **Description** Customizable multi-select picklist used to organize ideas and idea themes into logical groupings.
CommunityId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, **Description** The zone ID associated with the idea theme.
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the idea theme.
EndDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Date marking the end of the idea theme.
LastReferencedDate	**Type** date

Field Name	Details
	Properties Filter, Nillable, Sort, Update **Description** The timestamp for when the current user last viewed a record related to this record.
`StartDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Date that the idea theme begins.
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Customizable picklist of values used to specify the status of the idea theme.
`Title`	**Type** string **Properties** Create, Filter, Group, idLookup, Namefield, Sort, Update **Description** Title of the idea theme.

Usage

Use the object to track ideas that are submitted to an idea theme.

IdpEventLog

Represents the Identity Provider Event Log. This log records both problems and successes with inbound SAML or OpenID Connect authentication requests from another app provider. It also records outbound SAML responses when Salesforce is acting as an identity provider. This object is available in API version 39.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
AppId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the app provider seeking authentication.
AuthSessionId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the authentication session.
ErrorCode	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The error code for the authentication issue. Possible values are: • `AppAccessDenied`—Error: App access denied • `AppBlocked`—Error: App blocked • `ClientUnapproved`—Error: Invalid grant • `CodeExpired`—Error: Expired authorization code • `ForceAuthNLogout`—User logged out due to forced authentication request • `InternalError`—Error: Internal Error • `InvalidAuthnRequest`—Error: Unable to parse AuthnRequest from service provider • `InvalidClientCredentials`—Error: Invalid client credentials • `InvalidCode`—Error: Invalid authorization code • `InvalidDeviceId`—Error: Invalid device ID • `InvalidIdpEndpoint`—Error: Invalid Identity Provider Endpoint URL • `InvalidIssuer`—Error: Invalid Issuer • `InvalidScope`—Error: Invalid scope(s) • `InvalidSessionLevel`—Error: Invalid session level • `InvalidSettings`—Error: IdP certificate is invalid or does not exist • `InvalidSignature`—Error: Invalid Signature

Field	Details
	• `InvalidSp`—Error: Misconfigured or invalid service provider • `InvalidSpokeSp`—Error: Invalid spoke SP settings • `InvalidUserCredentials`—Error: Invalid user credentials • `NoAccess`—Error: User does not have access to this service provider • `NoCustomAttrValue`—Error: User does not have a value for the subject custom attribute • `NoCustomField`—Error: Custom field not found • `NoSpokeId`—Error: No Spoke ID found • `NoSubdomain`—Error: Org has not configured My Domains yet • `NoUserFedId`—Error: User does not have a Federation Identifier selected • `OauthError`—OAuth Error • `Success` • `UnableToResolve`—Error: Unable to resolve request into a Service Provider • `UnknownError`—Unknown Error
`IdentityUsed`	**Type** string **Properties** Filter, Nillable, Sort **Description** The identity (username) of the user being authenticated.
`InitiatedBy`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The code describing how the authentication request was initiated. Possible values are: • `IdP`—IdP-Initiated SAML • `OauthAuthorize`—OAuth Authorization • `OauthTokenExchange`—OAuth Token Exchange • `SP`—SP-Initiated SAML
`OptionsHasLogoutUrl`	**Type** boolean **Properties** Filter

Field	Details
	Description Whether a logout URL has been assigned to the app. This URL is where users are redirected when they log out.
`SamlEntityUrl`	**Type** string **Properties** Filter, Sort **Description** The authentication URL of the SAML provider.
`SsoType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of SSO. Options are: • 0–SAML • 1–OpenID Connect
`Timestamp`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time on which the event occurred.
`UserId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user seeking authentication.

IframeWhiteListUrl

Represents a list of trusted external domains that you allow to frame your Embedded Service, Surveys, and Visualforce pages. This object is available in API version 45.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
`Context`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of content in the iframe. Valid values are: • `Surveys` • `VisualforcePages` • `EmbeddedService`—Available in API versions 51.0 to 57.0.
`Url`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The unique domain that is allowed to frame your Visualforce pages and surveys. Accepts these formats: example.com, *example.com, and https://example.com.

Usage

To use this object for framing Visualforce pages, on Session Settings in Setup, select **Enable clickjack protection for customer Visualforce pages** either **with headers disabled** or **with standard headers**. These options both allow framing of Visualforce pages on trusted external domains and provide clickjack protection.

Alternatively, you can customize session settings via the SecuritySettings Metadata API type. To use the IframeWhiteListUrl object, set either the `enableClickjackNonsetupUser` or `enableClickjackNonsetupUserHeaderless` field to `true`. For more information, see SecuritySettings in the Metadata API Developer Guide.

Image

Represents the details of an image. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`AlternateText`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Accessibility text to explain the image in words.
`CapturedAngle`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Angle at which the image was captured.
`ContentDocumentId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Unique identifier of the content document where image is stored. This is a relationship field. **Relationship Name** ContentDocument **Relationship Type** Lookup **Refers To** ContentDocument
`ImageClass`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The image category.

Field	Details
	Possible values are: • FOOD • LOGOS • OBJECTS • SCENES
ImageClassObjectType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The type of image. Used in Einstein Object Detection to identify whether the image is used to detect objects or build a model. Possible values are: • DETECTION—Actual Image • FEEDBACK • TRAINING
ImageViewType	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Orientation of the image.
IsActive	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if an image is active. The default value is False. An active image can be used for building or updating a model in Einstein Object Detection.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date on which the image was last referenced.

Field	Details
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date on which the image was last viewed.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** Name of the record.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Unique identifier of the record owner. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
Title	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Title of the image.
Url	**Type** url **Properties** Create, Filter, Nillable, Sort, Update **Description** Public URL of the image file.

Incident

An Incident is any unplanned business interruption that has wide-sweeping impacts and requires an urgent fix. This object contains the details of the incident, documenting the history of the incident from registration to closure. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`Category`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The type of incident.
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** A description of the incident. This field can store up to 32 KB of data, but only the first 255 characters appear in reports.
`DetectedDateTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time (in UTC) when the incident was first detected.
`EndDateTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time (in UTC) when the incident ended.

Field	Details
`Impact`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The incident's impact. Possible values are: • `High` • `Low` • `Medium` The default value is 'High'.
`IncidentNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The unique, system-generated number for the incident.
`IsMajorIncident`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the incident is business-critical. If set to `true`, the incident is widespread and business-critical. The default value is `false`.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time (in UTC) when the current user last accessed this record, a list view, or another related record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The date and time (in UTC) when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** A polymorphic relationship field that represents the user or group assigned to resolve the incident. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`ParentIncidentId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The unique ID of an incident above one or more related incidents in an incident hierarchy. This is a relationship field. **Relationship Name** ParentIncident **Relationship Type** Lookup **Refers To** Incident
`Priority`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The impact and urgency of the incident. Possible values are: • `Critical`

Field	Details
	• `High` • `Low` • `Moderate` The default value is 'Critical'.
`PriorityOverrideReason`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The reason why a priority should be changed or edited.
`ReportedMethod`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates how the incident was reported to customer service.
`ResolutionDateTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time (in UTC) when the incident was resolved.
`ResolutionSummary`	**Type** textarea **Properties** Create, Nillable, Update **Description** A description of possible steps to resolve the incident.
`ResolvedById`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The unique ID of the user who resolved the incident. This is a relationship field.

Field	Details
	Relationship Name ResolvedBy **Relationship Type** Lookup **Refers To** User
`StartDateTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time (in UTC) when the incident began.
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Any custom or granular stages a customer may want to track. Possible values are: • `Completed` • `In Progress` • `New` • `Open` • `Problem Created` • `Resolved` The default value is 'New'.
`StatusCode`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The incident's status. Possible values are: • `Completed` • `InProgress` • `New` • `Open`

Field	Details
	• `ProblemCreated` • `Resolved` The default value is 'New'.
`SubCategory`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The type of incident. One level deeper than Category. Administrators set field values.
`Subject`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** A brief description of the incident.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The type of incident, for example, question or problem. Administrators set field values.
`Urgency`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** A measure of how long the resolution can be delayed until an incident, problem, or change has a significant business impact. Possible values are: • `High` • `Low` • `Medium` The default value is 'High'.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

IncidentChangeEvent on page 52
Change events are available for the object.

IncidentFeed on page 39
Feed tracking is available for the object.

IncidentHistory on page 47
History is available for tracked fields of the object.

IncidentOwnerSharingRule on page 48
Sharing rules are available for the object.

IncidentShare on page 50
Sharing is available for the object.

IncidentRelatedItem

Represents a junction object that relates an Incident to an Asset or Product. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`AssetId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The Asset ID that's linked to the Incident. This field is a relationship field. **Relationship Name** Asset **Relationship Type** Lookup **Refers To** Asset

Field	Details
`Comment`	**Type** textarea **Properties** Create, Nillable, Update **Description** A description of the incident as it relates to the item.
`ImpactLevel`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The related item's impact on the incident. Possible values are: • `High` • `Low` • `Medium` The default value is `High`.
`ImpactType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The effect of the related item on business operations. Possible values are: • `Business-Blocking` • `Not Business-Blocking` • `Partially Business-Blocking` The default value is `Business-Blocking`.
`IncidentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The Incident ID that's linked to the Asset. This field is a relationship field.

Field	Details
	Relationship Name Incident **Relationship Type** Lookup **Refers To** Incident
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The auto-generated ID of the incident-related item.
Product2Id	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The product (Product2) ID that's linked to the Incident.. This field is a relationship field. **Relationship Name** Product2 **Relationship Type** Lookup **Refers To** Product2

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

IncidentRelatedItemChangeEvent on page 52
Change events are available for the object.

IncidentRelatedItemFeed on page 39
Feed tracking is available for the object.

IncidentRelatedItemHistory on page 47
History is available for tracked fields of the object.

Individual

Represents a customer's data privacy and protection preferences. Data privacy records based on the Individual object store your customers' preferences. Data privacy records are associated with related leads, contacts, person accounts, and users. This object is available in API version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `merge()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- This object is available if Data Protection and Privacy is enabled.

Fields

Field Name	Details
`BirthDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The customer's birthdate.
`CanStorePiiElsewhere`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indication that you can store the customer's personally identifiable information (PII) outside of their legislation area. For example, you could store an EU citizen's PII data in the US.
`ChildrenCount`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of children the customer has.
`ConsumerCreditScore`	**Type** int

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The person's credit score (for example, 740).
`ConsumerCreditScoreProviderName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The name of the company that provided the credit score.
`ConvictionsCount`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of convictions for the customer.
`DeathDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The customer's death date.
`FirstName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The customer's first name. Maximum size is 40 characters.
`HasOptedOutGeoTracking`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Preference to not track geolocation on mobile devices.
`HasOptedOutProcessing`	**Type** boolean

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** Preference to not process personal data, which can include collecting, storing, and sharing personal data.
HasOptedOutProfiling	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Preference to not process data for predicting personal attributes, such as interests, behavior, and location.
HasOptedOutSolicit	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Preference to not solicit products and services.
HasOptedOutTracking	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Preference to not track customer web activity and whether the customer opens email sent through Salesforce.
IndividualsAge	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates whether the customer is considered to be a minor.
InfluencerRating	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description A measure of the person's influence, irrespective of how we do business with them.
`IsHomeOwner`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the customer owns a home.
`LastName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. The customer’s last name. Maximum size is 80 characters.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record.
`MasterRecordId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** If this object was deleted as the result of a merge, this field contains the ID of the record that was kept. If this object was deleted for any other reason, or hasn’t been deleted, the value is `null`. This is a relationship field. **Relationship Name** MasterRecord **Relationship Type** Lookup **Refers To** Individual

Field Name	Details
MilitaryService	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates whether the customer has served in the military.
Name	**Type** string **Properties** Filter, Group, Sort **Description** Concatenation of `FirstName` and `LastName`. Maximum size is 203 characters, including whitespaces.
Occupation	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The customer’s occupation. Maximum size is 150 characters.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner of the account associated with this customer. This is a relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** User
Salutation	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The title for addressing the customer, such as Dr. or Mrs.
`SendIndividualData`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Preference to export personal data for delivery to the customer.
`ShouldForget`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Preference to delete records and personal data related to this customer.
`Website`	**Type** url **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The URL for the customer's website.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

IndividualChangeEvent (API version 47.0)
Change events are available for the object.

IndividualHistory
History is available for tracked fields of the object.

IndividualShare
Sharing is available for the object.

IndividualApplicationItem

Captures individual application input data that is used during run-time. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only with the EAndU Cloud Program Access permission set.

Fields

Field	Details
`IndividualApplicationId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The Individual Application parent object associated with the Individual Application Item. This field is a relationship field. **Relationship Name** IndividualApplication **Relationship Type** Lookup **Refers To** IndividualApplication
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the object related to the Individual Application.
`RelatedItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The related object associated with the Individual Application Item. This field is a polymorphic relationship field. **Relationship Name** RelatedItem

Field	Details
	Relationship Type Lookup **Refers To** Benefit, ProgramProduct
`Status`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Specifies the approval status of the Individual Application. Possible values are: • `Approved` • `Declined` • `In Progress` • `Pending`

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

IndividualApplicationItemChangeEvent
Change events are available for the object.

IndividualApplicationItemFeed
Feed tracking is available for the object.

IndividualApplicationItemHistory
History is available for tracked fields of the object.

IndividualApplicationItemOwnerSharingRule
Sharing rules are available for the object.

IndividualApplicationItemShare
Sharing is available for the object.

IndividualHistory

Represents the history of changes to values in the fields of a data privacy record, based on the Individual object. This object is available in versions 42.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Special Access Rules

- This object is available if Data Protection and Privacy is enabled.
- The Individual object isn't available to Customer Community, Partner Community, and Customer Portal users.

Fields

Field Name	Details
`DataType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Data type of the field that was changed.
`Field`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The name of the changed field.
`IndividualId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the data privacy record. Label is **Individual ID**. This is a relationship field. **Relationship Name** Individual **Relationship Type** Lookup **Refers To** Individual
`NewValue`	**Type** anyType **Properties** Nillable, Sort

Field Name	Details
	Description The updated value of the changed field.
`OldValue`	**Type** anyType **Properties** Nillable, Sort **Description** The previous value of the changed field.

Usage

Use this object to identify changes to data privacy records.

This object respects field-level security on the parent object.

IndividualShare

Represents a list of access levels to a data privacy record along with an explanation of the access level. For example, if you have access to a record because you own it, the `IndividualAccessLevel` is `All` and `RowCause` is Owner. This object is available in API version 42.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- This object is available if Data Protection and Privacy is enabled.
- The Individual object isn't available to Customer Community, Partner Community, and Customer Portal users.

Fields

Field Name	Details
`IndividualAccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Level of access that the user or group has to the data privacy record. The possible values include: • `Read` • `Edit` • `All` (Except for create or update.) Set this field to an access level that's higher than your default access level for individuals.
`IndividualId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the Individual associated with this sharing entry. This field isn't available for updates. This is a relationship field. **Relationship Name** Individual **Relationship Type** Lookup **Refers To** Individual
`RowCause`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited. Valid values include: • `Manual`—The User or Group has access because a user with "All" access manually shared the data privacy record with them.

Field Name	Details
	• `Owner`—The User is the owner of the data privacy record. • `Rule`—The User or Group has access to the data privacy record via an Individual sharing rule. • `LpuImplicit`—The User has access to records owned by high-volume Experience Cloud site users via a share group.
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the User or Group that has been given access to the data privacy record. This field isn't available for updates. This is a polymorphic relationship field. **Relationship Name** UserOrGroup **Relationship Type** Lookup **Refers To** Group, User

Usage

This object lets you determine which users and groups can view or edit Individual records owned by other users.

InternalOrganizationUnit

Represents an organization that an Employee belongs to. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, you have either a Workplace Command Center permission set license and the Provides access to Workplace Command Center features system permission, or the Employee Management and Employee User add-on licenses. This object is also available with the Referral Marketing license.

Fields

Field	Details
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A description of the organization the Employee is working in.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
`OrganizationCode`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. The code of the organization the Employee is working in.
`OrganizationName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The name of the organization the Employee is working in.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description The ID of the user who currently owns this record. Default value is the user logged in to the API to perform the create operation.
ParentOrganizationId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A reference to the parent organization.
Type	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Specifies whether the record is for an internal or an external organization. This field is available in API version 60.0 and later. Possible values are: • EXTERNAL_BUSINESS_UNIT • INTERNAL_ORGANIZATION

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

InternalOrganizationUnitHistory (API version 49.0)
History is available for tracked fields of the object.

InternalOrganizationUnitOwnerSharingRule
Sharing rules are available for the object.

InternalOrganizationUnitShare (API version 49.0)
Sharing is available for the object.

Invoice

Represents a financial document describing the total amount a buyer must pay for goods or services provided. This object is available in API version 48.0 and later.

Users can edit non-posted invoices. Posted invoices can't be deleted. After an invoice is posted, users can make payments against it to reduce its balance.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

Special Access Rules

To access these entities, your org must have a Salesforce Order Management or D2C Commerce license. These entities are available only in Lightning Experience.

Fields

Field	Details
`Balance`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The outstanding balance for this invoice. Equal to the invoice's total amount with tax, ignoring payments and adjustments.
`BillToContactId`	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** Inherited from the account's Bill to Account. This field is a relationship field. **Relationship Name** BillToContact **Relationship Type** Lookup **Refers To** Contact
`BillingAccountId`	**Type** reference **Properties** Filter, Group, Sort, Update

Field	Details
	Description The customer account for this invoice. This field is a relationship field. **Relationship Name** BillingAccount **Relationship Type** Lookup **Refers To** Account
`CurrencyIsoCode`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Three-letter ISO 4217 currency code associated with the invoice. The default value is `USD`. This field is available in API version 55.0 and later.
`DaysInvoiceOpen`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Number of days since the invoice was created before it was paid. This field is a calculated field. This field is available in API version 55.0 and later.
`DaysInvoiceOverdue`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Number of days since the date when payment was due. This field is a calculated field. This field is available in API version 55.0 and later.
`Description`	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort, Update **Description** Users can add more information about this invoice. Maximum of 1,000 characters.
`DocumentNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** System-generated number that is used to organize financial documents. Can be sequential or random.
`DueDate`	**Type** date **Properties** Filter, Group, Sort, Update **Description** The customer must pay the invoice by the due date. Unpaid invoices past the due date can be sent to collections.
`FullSettlementDate`	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** Date when the invoice is paid in full. This field is available in API version 55.0 and later.
`InvoiceBatchRunId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Id of the invoice batch run that generated this invoice. This field is a relationship field. This field is available in API version 55.0 and later. **Relationship Name** InvoiceBatchRun **Relationship Type** Lookup

Field	Details
	Refers To InvoiceBatchRun
`InvoiceDate`	**Type** date **Properties** Filter, Group, Sort, Update **Description** The date that the invoice was posted. Used with payment terms to determine the invoice's `DueDate`. For example, an invoice with an `InvoiceDate` of 04/01 and Net 30 payment terms would have a `DueDate` of 05/01.
`InvoiceNumber`	**Type** string **Properties** Filter, Group, Nillable, Sort, Update **Description** System-created unique ID for this invoice.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view. This field is available in API version 55.0 and later.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view. If this value is null, it's possible the user accessed this record or list view (`LastReferencedDate`) but didn't view it. This field is available in API version 55.0 and later.
`NetCreditsApplied`	**Type** currency **Properties** Filter, Nillable, Sort

Field	Details
	Description Represents the net credits applied to an invoice. Calculated by subtracting the sum of all unapplied lines from the sum of all applied lines. This field is a calculated field. This field is available in API version 55.0 and later.
`NetPaymentsApplied`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Represents net payments applied to an invoice. Calculated by subtracting the sum of unapplied payments from the sum of payments applied to the invoice. This field is a calculated field. This field is available in API version 55.0 and later.
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort, Update **Description** The user who owns an invoice record. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`PaymentTermId`	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** ID of the payment term used on this invoice. This field is a relationship field. This field is available in API version 55.0 and later. **Relationship Name** PaymentTerm **Relationship Type** Lookup **Refers To** PaymentTerm

Field	Details
ReferenceEntityId	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** The ID of the order or order summary that created this invoice. This field is a polymorphic relationship field. **Relationship Name** ReferenceEntity **Relationship Type** Lookup **Refers To** Order, OrderSummary
SettlementStatus	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The state of the invoice's payment. Possible values are: • `Not Applicable` • `Not Settled` • `Partially Settled` • `Settled` This field is available when Subscription Management is enabled. This field is available in API version 55.0 and later.
Status	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The state of the invoice. Possible values are: • `Canceled`: Indicates that the invoice was generated and later canceled. • `Error`: Indicates that an error occurred when processing the invoice. • `Pending`: Indicates that the invoice is being processed. • `Posted`: Indicates that the invoice has been generated and sent to the customer.

Field	Details
	• `Void In Progress`: Indicates that the invoice is pending a status change. • `Voided`: The invoice's status after the API successfully voids the invoice.
`TaxLocaleType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The system used to handle tax on the original Order associated with the Invoice. Gross usually applies to taxes like value-added tax (VAT), and Net usually applies to taxes like sales tax. This field is available when Order Management or B2B Commerce is enabled. Possible values are: • Gross: Displays most prices and taxes as combined values • Net: Displays most prices and taxes as separate values This field is available in API version 56.0 and later.
`TotalAdjustmentAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of the invoice's adjustment line amounts.
`TotalAdjustmentAmountWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of the amount fields on the invoice's adjustment-type invoice lines, including tax. This field is available in API version 55.0 and later.
`TotalAdjustmentTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The total amount of tax applied to the invoice line's adjustment lines. This field is available in API version 55.0 and later.
`TotalAmount`	**Type** currency

Field	Details
	Properties Filter, Nillable, Sort **Description** The sum `TotalAmount` values on the invoice's lines. This field is a calculated field.
`TotalAmountWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of `TotalAmountWithTax` values on the invoice's lines.
`TotalChargeAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of the invoice's charges. This field is a calculated field.
`TotalChargeAmountWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of the amount fields on the invoice's charge-type invoice lines, including tax. This field is available in API version 55.0 and later.
`TotalChargeTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The total amount of tax applied to the invoice's charge lines. This field is available in API version 55.0 and later.
`TotalConvertedNegAmount`	**Type** currency **Properties** Filter, Nillable, Sort

Field	Details
	Description The sum of all negative invoice lines that were converted to a credit memo. For example, if one negative invoice line was for -$10 and one was for -$15, the total amount that's converted to a credit memo would be -$25. This field is a calculated field. This field is available when Subscription Management is enabled. This field is available in API version 56.0 and later.
`TotalTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of `TaxAmount` values on the invoice lines. This field is a calculated field.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

InvoiceFeed **on page 39**
Feed tracking is available for the object.

InvoiceHistory **on page 47**
History is available for tracked fields of the object.

InvoiceOwnerSharingRule **on page 48**
Sharing rules are available for the object.

InvoiceShare **on page 50**
Sharing is available for the object.

InvoiceAddressGroup

Stores the buyer's address information. This object is available in API version 50.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`

Special Access Rules

This object is available when Subscription Management is enabled.

Fields

Field	Details
Address	**Type** address **Properties** Filter, Nillable **Description** Buyer's address. Compound field that summarizes the invoice address group's address component fields.
City	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The buyer's city.
Country	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The buyer's country.
GeocodeAccuracy	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The accuracy rating for the geocode of the address group. The accuracy rating contains information about the location of a latitude and longitude.
InvoiceAddressGroupNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description An auto-generated number, such as DOC-000001.
InvoiceId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the invoice associated with the address group. This field is a relationship field. **Relationship Name** Invoice **Relationship Type** Lookup **Refers To** Invoice
Latitude	**Type** double **Properties** Filter, Nillable, Sort **Description** The buyer's latitude.
Longitude	**Type** double **Properties** Filter, Nillable, Sort **Description** The buyer's longitude.
PostalCode	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The buyer's postal code or ZIP code.
State	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The buyer's state.
`Street`	**Type** textarea **Properties** Filter, Group, Nillable, Sort **Description** The buyer's street.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

InvoiceAddressGroupHistory on page 47
History is available for tracked fields of the object.

InvoiceBatchRun

Represents a batch processing job in Subscription Management. During an invoice batch run, all billing schedules that meet the specified criteria are processed, resulting in the generation of invoices. This object is available in API version 55.0 and later.

An invoice batch run is controlled by a scheduler, which tells the system to start the run at a scheduled date and time. The scheduler also includes matching criteria, which are used to evaluate the billing schedules. Billing schedules that meet the specified criteria are included for processing in the invoice batch run.

When an invoice batch run is started, Subscription Management:

1. Evaluates the billing schedule to see if it meets the criteria for inclusion in the batch invoice run.
2. Generates an invoice record with a pending state.
3. Makes calls to an external tax provider.
4. Adds the tax to the invoice.
5. Summarizes information about the billing schedules that were included in the invoice batch run and displays this information in the Invoice Batch Run record.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

This object is available when Subscription Management is enabled.

Fields

Field	Details
`BillingBatchSchedulerId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the related billing batch scheduler. This field is a relationship field. **Relationship Name** BillingBatchScheduler **Relationship Type** Lookup **Refers To** BillingBatchScheduler
`Comments`	**Type** textarea **Properties** Filter, Nillable, Sort, Update **Description** Optional user-defined information about the scheduler.
`CompletionTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Timestamp when the invoice batch run finished processing.
`InvoiceBatchRunNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** System-generated sequential number.

Field	Details
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the invoice batch run was last modified. Its UI label is Last Modified Date.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the invoice batch run was last viewed.
OwnerId	**Type** reference **Properties** Filter, Group, Sort, Update **Description** System-generated field. The ID of the user who created the BillingBatchScheduler record. Its UI label is Owner. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
RecoveryStatus	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates the state of the invoice batch run recovery process. This field is available in API version 56.0 and later. Possible values are: • `CompletelyRecovered`—All billing schedules included in the recovery run were reset to *`Ready for Invoicing`*. These billing schedules are included in the next scheduled invoice batch run.

Field	Details
	• `PartiallyRecovered`—Some, but not all, billing schedules that were part of the recovery run were reset to *`Ready for Invoicing`*. The billing schedules that were recovered are included in the next scheduled invoice batch run. The billing schedules that weren't successfully recovered must be manually reset to *`Ready for Invoicing`* so they can be processed. • `RecoveryFailed`—The recovery job was unsuccessful. This value is available in API version 57.0 and later. • `RecoveryStarted`—The recovery job is in process.
`StartTime`	**Type** dateTime **Properties** Filter, Sort **Description** Timestamp when the invoice batch run started processing.
`Status`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The state of the invoice batch run. Possible values are: • `Canceled`—This value is available in API version 57.0 and later. • `Completed` • `Failed` • `Started` • `Stopped`—This value is available in API version 57.0 and later. The default value is `Started`.
`TotalBillSchedRecovered`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of billing schedules that were part of the recovery run that were reset to *`Ready for Invoicing`*. These billing schedules are included in the next scheduled invoice batch run. This field is available in API version 57.0 and later.

Field	Details
TotalBillSchedUnrecovered	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of billing schedules that were part of the recovery run that were not reset to *Ready for Invoicing*. These billing schedules that weren't successfully recovered must be manually reset to *Ready for Invoicing* so they can be processed. This field is available in API version 57.0 and later.
TotalBillingSchedulesFailed	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of billing schedules that weren't successfully processed. When a billing schedule isn't successfully processed, then the system doesn't generate an invoice for it. For details about errors, check the Revenue Transaction Error Log. This field is available in API version 56.0 and later.
TotalBsSuccessfullyProcessed	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of billing schedules for which the system was able to generate and process invoices. This field is available in API version 56.0 and later.
TotalFilteredBillingSchedules	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of billing schedules that met the invoice run scheduler's matching criteria. The matching criteria specify which billing schedules are included in the invoice batch run. Its field label is Total Matching Billing Schedules. This field is available in API version 56.0 and later.
TotalInvSuccessfullyProcessed	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The total number of invoices that were successfully processed. This field is available in API version 56.0 and later.
`TotalInvoicedAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The total amount of income including taxes that is represented by the successfully processed invoices. This field is available in API version 56.0 and later.
`TotalInvoicesCanceled`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of invoices that were not processed. To find out what went wrong, check the Revenue Transaction Error Log. Fix the errors, then run the invoice batch run recovery process. This field is available in API version 57.0 and later.
`TotalInvoicesFailed`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of invoices that weren’t processed successfully. To find out what went wrong, check the Revenue Transaction Error Log. Then fix the errors and run the invoice batch run recovery process. This field is available in API version 56.0 and later.
`TotalInvoicesGenerated`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of invoices that were generated from the billing schedules that were processed by the invoice batch run. This field is available in API version 56.0 and later.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

InvoiceBatchRunChangeEvent on page 52
Change events are available for the object.

InvoiceBatchRunFeed on page 39
Feed tracking is available for the object.

InvoiceBatchRunHistory on page 47
History is available for tracked fields of the object.

InvoiceBatchRunOwnerSharingRule on page 48
Sharing rules are available for the object.

InvoiceBatchRunShare on page 50
Sharing is available for the object.

InvoiceBatchRunRecovery

Provides information about an invoice batch run recovery procedure. This object is available in API version 57.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

This object is available when Subscription Management is enabled.

Fields

Field	Details
`Comments`	**Type** textarea **Properties** Filter, Nillable, Sort, Update **Description** Optional user-defined information about the scheduler.
`CompletionTime`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp when the invoice batch run recovery procedure was completed.
`InvoiceBatchRunId`	**Type** reference **Properties** Filter, Group, Sort **Description** The unique identifier of the invoice batch run related to this recovery run. This field is a relationship field. **Relationship Name** InvoiceBatchRun **Relationship Type** Lookup **Refers To** InvoiceBatchRun
`InvoiceBatchRunRecoveryNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The unique identifier of the invoice batch run recovery process.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it’s possible that the user indirectly accessed this record (`LastReferencedDate`), but did not view it.

Field	Details
StartTime	**Type** dateTime **Properties** Filter, Sort **Description** The timestamp when the invoice batch run recovery started.
Status	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The final state of the invoice batch run recovery process. Possible values are: • Completed—The recovery run successfully reset all billing schedules to *Ready for Invoicing*. • CompletedWithErrors—Some, but not all, billing schedules included in the recovery run were reset to *Ready for Invoicing*. The billing schedules that were recovered are included in the next scheduled invoice batch run. The billing schedules that weren't successfully recovered must be manually reset to *Ready for Invoicing* so they can be processed. • Failed—The recovery run was unable to complete the reset process. • Started—Indicates that the recovery run reset process began, is ongoing, and has not yet produced a result. The default value is Started.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

InvoiceBatchRunRecoveryChangeEvent on page 52
Change events are available for the object.

InvoiceBatchRunRecoveryFeed on page 39
Feed tracking is available for the object.

InvoiceBatchRunRecoveryHistory on page 47
History is available for tracked fields of the object.

InvoiceBatchRunRecoveryOwnerSharingRule on page 48
Sharing rules are available for the object.

InvoiceBatchRunRecoveryShare on page 50
Sharing is available for the object.

InvoiceLine

Represents the amount that a buyer must pay for a product, service, or fee. Invoice lines are created based on the amount of an order line. This object is available in API version 48.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

Special Access Rules

This object is available when Order Management or Subscription Management is enabled.

Fields

Field	Details
`AdjustmentAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Sum of adjustments made to the invoice line.
`AdjustmentAmountWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Sum of adjustment amounts, including associated taxes related to the invoice line.
`AdjustmentTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Sum of tax adjustments to the invoice line. This field is available in API version 55.0 and later.
`BillingAddressId`	**Type** reference

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** Lookup field to an InvoiceAddressGroup containing the billing address for the invoice line. Assign one InvoiceAddressGroup to the invoiceLine's BillingAddressID, and another InvoiceAddressGroup to the invoiceLine's ShippingAddressId. This field is a relationship field. This field is available in API version 55.0 and later. **Relationship Name** BillingAddress **Relationship Type** Lookup **Refers To** InvoiceAddressGroup
`BillingScheduleId`	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** ID of the billing schedule for the invoice line. This field is a relationship field. This field is available in API version 55.0 and later. **Relationship Name** BillingSchedule **Relationship Type** Lookup **Refers To** BillingSchedule
`ChargeAmount`	**Type** currency **Properties** Filter, Nillable, Sort, Update **Description** Sum of charges made to the invoice line.
`ChargeAmountWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Amount on a charge invoice line, including tax.

Field	Details
	This field is available in API version 55.0 and later.
`ChargeTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax to be applied on a charge invoice line. This field is available in API version 55.0 and later.
`ConvertedNegAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The amount from an invoice line that is converted to credit. This field is available in API version 56.0 and later.
`CurrencyIsoCode`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Three-letter ISO 4217 currency code associated with the invoice line. The default value is USD. This field is available in API version 55.0 and later.
`Description`	**Type** string **Properties** Filter, Group, Nillable, Sort, Update **Description** Description of the invoice line.
`GroupReferenceEntityItemId`	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** Grouping field for adjustment line items. This field is a polymorphic relationship field.

Field	Details
	Relationship Name GroupReferenceEntityItem **Relationship Type** Lookup **Refers To** OrderItem, OrderItemAdjustmentLineItem
InvoiceId	**Type** reference **Properties** Filter, Group, Sort **Description** The invoice that contains this invoice line. This field is a relationship field. **Relationship Name** Invoice **Relationship Type** Lookup **Refers To** Invoice
InvoiceLineEndDate	**Type** date **Properties** Filter, Group, Sort, Update **Description** For invoice lines made from a time-based service, the end date of the billing for the service.
InvoiceLineStartDate	**Type** date **Properties** Filter, Group, Sort, Update **Description** For invoice lines made from a time-based service, the first date of the billing for the service.
InvoiceStatus	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** State of the invoice line. Inherited from the invoice’s status.

Field	Details
LineAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** The amount of the invoice line. This field is a calculated field. This field is available in API version 55.0 and later.
Name	**Type** string **Properties** Filter, Group, idLookup, Sort, Update **Description** Name of the invoice line.
Product2Id	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** The product that was charged or ordered to create the invoice line. This field is a relationship field. **Relationship Name** Product2 **Relationship Type** Lookup **Refers To** Product2
Quantity	**Type** double **Properties** Filter, Nillable, Sort, Update **Description** Number of units of the order product that created the invoice line.
ReferenceEntityItemId	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update

Field	Details
	Description The order item or adjustment item that created the invoice line. This field is a polymorphic relationship field. **Relationship Name** ReferenceEntityItem **Relationship Type** Lookup **Refers To** OrderItem, OrderItemAdjustmentLineItem
ReferenceEntityItemType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The type of transaction that created the invoice line. Possible values are: • `DeliveryCharge`—Charge • `Fee`—Charge. This value is available in API version 56.0 and later. • `OrderProduct`—Product
ReferenceEntityItemTypeCode	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The type of object that created the invoice line. Possible values are: • `Charge` • `Product`
RelatedLineId	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** The original invoice line that was adjusted or taxed. This field is a relationship field. **Relationship Name** RelatedLine

Field	Details
	Relationship Type Lookup **Refers To** InvoiceLine
ShippingAddressId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the shipping address associated with the invoice line. This field is a relationship field. This field is available in API version 55.0 and later. **Relationship Name** ShippingAddress **Relationship Type** Lookup **Refers To** InvoiceAddressGroup
TaxAmount	**Type** currency **Properties** Filter, Nillable, Sort, Update **Description** Total tax for the invoice line.
TaxCode	**Type** string **Properties** Filter, Group, Nillable, Sort, Update **Description** The code used to calculate tax rate for the invoice line.
TaxDocumentNumber	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Represents the latest record in the external tax engine in which this invoice line item is included. This field is available in API version 55.0 and later.

Field	Details
TaxEffectiveDate	**Type** date **Properties** Filter, Group, Nillable, Sort, Update **Description** The date used to calculate the invoice line's `TaxAmount`.
TaxName	**Type** string **Properties** Filter, Group, Nillable, Sort, Update **Description** User-defined name for the applied tax.
TaxRate	**Type** percent **Properties** Filter, Nillable, Sort, Update **Description** Percentage value used for calculating tax.
TaxTransactionNumber	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Represents the transaction in the external tax engine in which the taxes for the line were calculated for the invoice line. This field is available in API version 55.0 and later.
TaxTreatmentId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The tax treatment used on this invoice line. This field is a relationship field. This field is available in API version 55.0 and later. **Relationship Name** TaxTreatment **Relationship Type** Lookup

Field	Details
	Refers To TaxTreatment
Type	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Shows the type of transaction for the invoice line. Possible values are: • Adjustment • Charge • Tax
UnitPrice	**Type** currency **Properties** Filter, Nillable, Sort, Update **Description** Price for one unit of the item on the invoice line.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

InvoiceLineFeed on page 39
Feed tracking is available for the object.

InvoiceLineHistory on page 47
History is available for tracked fields of the object.

InvoiceLineOwnerSharingRule on page 48
Sharing rules are available for the object.

InvoiceLineShare on page 50
Sharing is available for the object.

JobProfile

Represents a job profile used for shift scheduling. This object is available in API versions 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service or Workforce Engagement must be enabled.

Fields

Field	Details
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the current user last viewed a related record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the current user last viewed this record.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the job profile.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner of the job profile.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

JobProfileFeed
Feed tracking is available for the object.

JobProfileHistory
History is available for tracked fields of the object.

JobProfileOwnerSharingRule
Sharing rules are available for the object.

JobProfileShare
Sharing is available for the object.

JobProfileQueueGroup

JobProfileQueueGroup defines the mapping between Queue and JobProfile and configurations for capacity plans in Workforce Engagement. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Org must have the Workforce Engagement, Workforce Engagement Configuration, and Omni org preferences enabled. User must have the Workforce Engagement Analyst or Planner user permission set.

Fields

Field	Details
`AnswerTime`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The answer time (in seconds) for a specific group.
`CapacityPerJobProfile`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The max number of work units that an agent can handle for a specific job profile.

Field	Details
GroupCapacity	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The distributed number of work units among groups to which a specific job profile is associated.
GroupId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Identifies the group or queue record. This is a relationship field. **Relationship Name** Group **Relationship Type** Lookup **Refers To** Group
JobProfileId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Identifies the job profile record. This is a relationship field. **Relationship Name** JobProfile **Relationship Type** Lookup **Refers To** JobProfile
JobProfileShrinkage	**Type** double **Properties** Create, Filter, Sort, Update

Field	Details
	Description The shrinkage for a specific job profile.
Priority	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The priority of a group per job profile.
ServiceLevelAgreementPerc	**Type** double **Properties** Create, Filter, Sort, Update **Description** The expected SLA percentage for a specific group.
WorkType	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** A type of group, indicating whether a queue is synchronous or asynchronous. Possible values are: • `A`—Async • `S`—Sync The default value is 'S'.

Knowledge__Feed

Represents the feed for a knowledge article. This object is available in API version 39.0 and later.

For additional information about feeds, see FeedItem on page 2030.

Note: By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the Knowledge__kav object in Object Manager.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Lightning Knowledge must be enabled in your org.

Fields

Field	Details
`BestCommentId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the comment marked as best answer on a question post.
`Body`	**Type** textarea **Properties** Nillable, Sort **Description** The body of the feed item. Required when `Type` is `TextPost` or `AdvancedTextPost`. Optional when `Type` is `ContentPost` or `LinkPost`. Although a value for `Body` is not required for the `ContentPost` type, an attachment is required. If an attachment isn't present, the type changes to `TextPost` or `AdvancedTextPost`, depending on the API version. `TextPost` and `AdvancedTextPost` do require a value for `Body`. Tip: See the `IsRichText` field for a list of HTML tags supported in the body of rich text posts.
`CommentCount`	**Type** int **Properties** Filter, Group, Sort **Description** The number of comments associated with this feed item. Tip: In a feed that supports pre-moderation, `CommentCount` isn't updated until a comment is published. For example, say that you comment on a post that already has one published comment and your comment triggers moderation. Now there are two comments on the post, but the count says there's only one. In a moderated feed, comments aren't counted until approved by an admin or someone with Can Approve Feed Post and Comment or Modify All Data. Feed moderation has implications on how you retrieve feed comments. In a moderated feed, rather than retrieving comments by looping through `CommentCount`, go through pagination until the end of comments is returned.

Field	Details
`InsertedById`	**Type** reference **Properties** Group, Nillable, Sort **Description** ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the `InsertedBy` value is set to the ID of the context user.
`IsRichText`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the feed item `Body` contains rich text. If you post a rich text feed comment using SOAP API, set `IsRichText` to `true` and escape HTML entities from the body. Otherwise, the post is rendered as plain text. Rich text supports the following HTML tags: • `<p>` Tip: Though the ` ` tag isn't supported, you can use `<p> </p>` to create lines. • `<a>` • `<b>` • `<code>` • `<i>` • `<u>` • `<s>` • `<ul>` • `<ol>` • `<li>` • `<img>` The `<img>` tag is accessible only through the API and must reference files in Salesforce similar to this example: `<img src="sfdc://069B0000000omjh"></img>` Note: In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation.
`LikeCount`	**Type** int

Field	Details
	Properties Filter, Group, Sort **Description** The number of likes associated with this feed item.
`LinkUrl`	**Type** url **Properties** Nillable, Sort **Description** The URL of a `LinkPost`.
`ParentId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the Knowledge article to which the feed item is related.
`RelatedRecordId`	**Type** reference **Properties** Group, Nillable, Sort **Description** ID of the ContentVersion record associated with a `ContentPost`. For WDC thanks posts, it's the ID of the WorkThanks object associated with a `RypplePost`. This field is typically null for all posts except `ContentPost` and `RypplePost`. For example, set this field to an existing ContentVersion ID and post it to a feed with `Type` set to `ContentPost`.
`Title`	**Type** string **Properties** Group, Nillable, Sort **Description** The title of the feed item. When the `Type` is `LinkPost`, the `LinkUrl` is the URL and this field is the link name. The `Title` field can be updated on posts of `Type` `QuestionPost`.
`Type`	**Type** picklist

Field	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of feed item. Except for `ContentPost`, `LinkPost`, and `TextPost`, don't create feed items of other types directly from the API. • `ActivityEvent`—indirectly generated event when a user or the API adds a Task associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a Task or Event associated with a case record (excluding email and call logging). For a recurring Task with CaseFeed disabled, one event is generated for the series only. For a recurring Task with CaseFeed enabled, events are generated for the series and each occurrence. • `AdvancedTextPost`—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post. • `AnnouncementPost`—Not used. • `ApprovalPost`—generated when a user submits an approval. • `BasicTemplateFeedItem`—Not used. • `CanvasPost`—a post made by a canvas app posted on a feed. • `CollaborationGroupCreated`—generated when a user creates a public group. • `CollaborationGroupUnarchived`—Not used. • `ContentPost`—a post with an attached file. • `CreatedRecordEvent`—generated when a user creates a record from the publisher. • `DashboardComponentAlert`—generated when a dashboard metric or gauge exceeds a user-defined threshold. • `DashboardComponentSnapshot`—created when a user posts a dashboard snapshot on a feed. • `LinkPost`—a post with an attached URL. • `PollPost`—a poll posted on a feed. • `ProfileSkillPost`—generated when a skill is added to a user's Chatter profile. • `QuestionPost`—generated when a user posts a question. • `ReplyPost`—generated when Chatter Answers posts a reply. • `RypplePost`—generated when a user creates a Thanks badge in WDC. • `TextPost`—a direct text entry on a feed. • `TrackedChange`—a change or group of changes to a tracked field. • `UserStatus`—automatically generated when a user adds a post. Deprecated. The following values appear in the `Type` picklist for all feed objects but apply only to CaseFeed: • `AttachArticleEvent`—generated event when a user attaches an article to a case. • `CallLogPost`—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event.

Field	Details
	• `CaseCommentPost`—generated event when a user adds a case comment for a case object. • `ChangeStatusPost`—generated event when a user changes the status of a case. • `ChatTranscriptPost`—generated event when Chat transcript is saved to a case. • `EmailMessageEvent`—generated event when an email related to a case object is sent or received. • `FacebookPost`—generated when a Facebook post is created from a case. Deprecated. • `MilestoneEvent`—generated when a case milestone is completed or reaches violation status. • `SocialPost`—generated when a social post is created from a case. Note: If you set `Type` to `ContentPost`, also specify `ContentData` and `ContentFileName`.

Knowledge__ka

Provides access to the concrete object that represents a Knowledge article, the parent object for article versions. This object is available in API version 39.0 and later.

> Note: By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the Knowledge__kav object in Object Manager.

This object is derived from KnowledgeArticle on page 2394.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `undelete()`

Special Access Rules

Lightning Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license.

Fields

Field	Details
`ArchivedById`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user who archived the article.

Field	Details
ArchivedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the article was archived.
ArticleNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The unique number automatically assigned to the article when it's created. You can't change the format or value for this field.
CaseAssociationCount	**Type** int **Properties** Filter, Group, Sort **Description** The number of cases attached to the article.
FirstPublishedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the article was first published.
LastPublishedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the article was last published.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.
`MasterLanguage`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The article's original language. Only accessible if your knowledge base supports multiple languages.
`MigratedToFromArticle`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID for the corresponding pre- or post-migration article. Contains values only in orgs that migrate from Knowledge in Salesforce Classic to Lightning Knowledge. This field is available in API version 45.0 and later.
`TotalViewCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Total number of views for this article. This field is available in API version 39.0 and later.

Knowledge__kav

Provides access to the concrete object that represents a Knowledge article version. This object is available in API version 39.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Note: By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the Knowledge__kav object in Object Manager.

This object is derived from KnowledgeArticleVersion on page 2397.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Lightning Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license.

Fields

Field	Details
`ArchivedById`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user who archived the article.
`ArchivedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date the article version was archived.
`ArticleArchivedById`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user who archived the article.
`ArticleArchivedDate`	**Type** dateTime

Field	Details
	Properties Filter, Nillable, Sort **Description** The date the article was archived.
`ArticleCaseAttachCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of cases where this article is attached.
`ArticleCreatedById`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user who created the article.
`ArticleCreatedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date the article was created.
`ArticleMasterLanguage`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The article's original language. Only accessible if your knowledge base supports multiple languages.
`ArticleNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort **Description** The unique number automatically assigned to the article when it's created. You can't change the format or value for this field.

Field	Details
ArticleTotalViewCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Total number of views for the article.
AssignedById	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user who assigned the article.
AssignedToId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user assigned to the article.
AssignmentDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date the article was assigned to a user.
AssignmentDueDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The due date when an article is assigned.
AssignmentNote	**Type** textarea **Properties** Filter, Nillable, Sort **Description** Notes to the assignee from the user who assigned the article.

Field	Details
FirstPublishedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the article was first published.
IsLatestVersion	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the article is the most current version. (`true`) or not (`false`). This field can be `true` on the online or published version, a draft version in the primary language, a draft version in a translation, and the latest archived version. However, you can't filter by (PublishState='Online') and (IsLatestVersion=false) because the online version is also the latest version. This field is available in API version 24.0 and later.
IsMasterLanguage	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the article has one or more translations associated with it (`true`) or not (`false`).
IsOutOfDate	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the source article has been updated since this translated version was created (`true`) or not (`false`).
IsVisibleInApp	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Required. Indicates whether the article is visible in the Articles tab (`true`) or not (`false`).

Field	Details
IsVisibleInCsp	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Required. Indicates whether the article is visible in the Customer Portal (`true`) or not (`false`).
IsVisibleInPkb	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Required. Indicates whether the article is visible in the public knowledge base (`true`) or not (`false`).
IsVisibleInPrm	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Required. Indicates whether the article is visible in the partner portal (`true`) or not (`false`).
KnowledgeArticleId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the article independent from its version. The value for this field is retrieved from the `Id` field of the KnowledgeArticle object.
Language	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The language that the article is written in, such as `French` or `Chinese (Traditional).` Querying or searching articles in SOSL require that you specify the `Language` field in the WHERE clause. The language must be the same for all article types.

Field	Details
	Before API version 47.0, you must include the `Language` field to filter queries on Knowledge article versions. In API version 47.0 and later, you can filter queries on Knowledge article versions with or without `Language` depending on what you are querying.
`LastPublishedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the article was last published.
`MasterVersionId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the source article, if the article is the translation of a source article. Only accessible if your knowledge base supports multiple languages.
`MigratedToFromArticleVersion`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID for the corresponding pre- or post-migration article version. Contains values only in orgs that migrate from Classic to Lightning Knowledge. Available in API version 43.0 and later.
`NextReviewDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the article must next be reviewed for accuracy. Available in API version 58.0 and later.
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the article's owner.

Field	Details
PublishStatus	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The publication status for the article: • Draft: any draft articles. • Online: articles published in Salesforce Knowledge. • Archived: archived articles. A user must have the "Manage Articles" permission enabled to use Online. Article queries and searches in SOQL or SOSL require that you specify either the PublishStatus or the Id field in the WHERE clause. You can search for only one publication status per article type in a single SOSL query. When searching for articles with a PublishStatus of Archived, also check that IsLatestVersion equals false in your WHERE clause.
RecordTypeId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the API Name that describes the type of article. Use the record type to determine the article structure and other settings for different types of content.
SourceId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the source from which the article was created (Case or Reply). This field is only accessible from the API and isn't visible in the Salesforce UI.
Summary	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Summary of the article. Maximum size is 1000 characters.
Title	**Type** string

Field	Details
	Properties Create, Defaulted on create, Filter, Group, idLookup, Sort, Update **Description** Required. Article's title. Maximum size is 255 characters.
`TranslationCompletedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date and time when the article was last translated. Only accessible if your knowledge base supports multiple languages.
`TranslationExportedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date and time when the article was last exported for translation. Only accessible if your knowledge base supports multiple languages.
`TranslationImportedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date and time when the article was last imported for translation. Only accessible if your knowledge base supports multiple languages.
`UrlName`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. Represents the article's URL. Can contain alphanumeric characters and hyphens but can't begin or end with a hyphen. Use a unique value regardless of context. (For example, a unique value allows you to get expected results when running an Apex test with `SeeAllData` set to `false`.) `UrlName` is case-sensitive and its maximum size is 255 characters.
`ValidationStatus`	**Type** picklist

Field	Details
	Properties Defaulted on create, Filter, Group **Description** Shows whether the content of the article has been validated. Possible values are `Validated` and `Not Validated`. The default value is `Not Validated`. This field is available in API version 24.0 or later.
`VersionNumber`	**Type** int **Properties** Group, Sort **Description** The number assigned to a version of an article. This field is available in API version 24.0 and later.

Knowledge__DataCategorySelection

Represents a data category that classifies an article. This object is available in API version 39.0 and later.

Note: By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the Knowledge__kav object in Object Manager.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Lightning Knowledge must be enabled in your org.

Fields

Field	Details
`DataCategoryGroupName`	**Type** datacategorygroupreference **Properties** Create **Description** Unique name of the data category group which has categories associated with the article.

Field	Details
DataCategoryName	**Type** datacategorygroupreference **Properties** Create **Description** Unique name of the data category associated with the article.
ParentId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the article associated with the data category selection.

Usage

Every article in Salesforce Knowledge can be categorized. A data category selection represents a category that has been selected to classify an article. You can use this object to query and manage article categorization in your organization. Client applications can create a categorization for an article with a Draft status. They can also delete and query article categorizations.

Note: When using this object to classify an article, you can't select both a category (for example USA) and one of its descendants (California) or ascendant categories (North America). In this case, only the first category is selected.

KnowledgeableUser

Represents a user identified as knowledgeable about a specific topic, and ranks them relative to other knowledgeable users. This object is available in API version 31.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
NetworkId	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description ID of the Experience Cloud site the topic exists in. This field is available only if digigal experiences is enabled for your org.
`RawRank`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Rank of this user's knowledge on the topic relative to other users.
`TopicId`	**Type** reference **Properties** Filter, Group, Sort **Description** Unique ID for the topic in Salesforce.
`UserId`	**Type** reference **Properties** Filter, Group, Sort **Description** Unique ID for the user in Salesforce.

KnowledgeArticle

Provides read-only access to an article and the ability to delete the primary article. This object is available in API version 19.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Unlike KnowledgeArticleVersion, the ID of a KnowledgeArticle record is identical irrespective of the article's version (status).

Knowledge__ka on page 2381 is derived from this object.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license.

Fields

Field Name	Details
`ArchivedById`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user who archived the article.
`ArchivedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the article was archived.
`ArticleNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The unique number automatically assigned to the article when it's created. You can't change the format or value for this field.
`CaseAssociationCount`	**Type** int **Properties** Filter, Group, Sort **Description** The number of cases attached to the article.
`FirstPublishedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the article was first published.

Field Name	Details
LastPublishedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the article was last published.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
MasterLanguage	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The article's original language. Only accessible if your knowledge base supports multiple languages.
MigratedToFromArticle	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID for the corresponding pre- or post-migration article. Contains values only in orgs that migrate from Knowledge in Salesforce Classic to Lightning Knowledge. This field is available in API version 45.0 and later.

Field Name	Details
`TotalViewCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Total number of views for this article. This field is available in API version 39.0 and later.

Usage

Use this object to query or retrieve articles. KnowledgeArticle can be used in a SOQL clause, but doesn't provide access to the fields from the article. Provides read-only access to an article and the ability to delete the primary article.

Usage for SOQL with KnowledgeArticle

To expose the `migrated_to_from_id` column on **KnowledgeArticle** and **KnowledgeArticleVersion** to the sObject API: expose **MigratedToFromArticle** in **KnowledgeArticle**.

For SOQL:

- To filter by `MigratedToFromArticle`, remove any other filters.
- When filtering by `MigratedToFromArticle`, use the '=' or 'IN' operator.
- When filtering by `MigratedToFromArticle`, the value can't be null or empty.

SEE ALSO:

KnowledgeArticleVersion

KnowledgeArticleVersion

Provides a global view of standard article fields across all types of articles depending on their version. This object is available in API version 18.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Use this object to:

- Query or search generically across multiple types of articles.
- Filter on a specific version.
- Update standard fields, those fields that are updateable, in draft versions.

When you query on the archived article, the results include both the article and the article's archived versions.

Knowledge__kav on page 2383 is derived from this object.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`

Note:

- You can only update draft versions.
- You can't update draft translations with the `knowledgeManagement` REST API.
- For Lightning Knowledge, to create, update, or delete a Knowledge article version, use the call on Knowledge__kav. For example, to delete, use `Knowledge__kav.delete()`.
- For Knowledge in Salesforce Classic, to create, update, or delete a Knowledge article version, use the call on *`ArticleType`*`__kav`, where *`ArticleType`* is the name of the article's type. For example, to delete, use `ArticleType__kav.delete()`.

Special Access Rules

Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license.

Fields

Field Name	Details
`ArchivedById`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user who archived the article.
`ArchivedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date the article version was archived.
`ArticleArchivedById`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user who archived the article.

Field Name	Details
ArticleArchivedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date the article was archived.
ArticleCaseAttachCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of cases where this article is attached.
ArticleCreatedById	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user who created the article.
ArticleCreatedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date the article was created.
ArticleMasterLanguage	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The article's original language. Only accessible if your knowledge base supports multiple languages.
ArticleNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort

Field Name	Details
	Description The unique number automatically assigned to the article when it's created. You can't change the format or value for this field.
`ArticleTotalViewCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Total number of views for the article.
`ArticleType`	**Type** string **Properties** Defaulted on create,Filter **Description** Indicates the API Name of the article type. The `ArticleType` is assigned to the article when it's created. You can't change the value of this field. This field is available in orgs using Knowledge in Salesforce Classic in API version 26.0 and later.
`AssignedById`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user who assigned the article.
`AssignedToId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user assigned to the article.
`AssignmentDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date the article was assigned to a user.

Field Name	Details
AssignmentDueDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The due date when an article is assigned.
AssignmentNote	**Type** textarea **Properties** Filter, Nillable, Sort **Description** Notes to the assignee from the user who assigned the article.
FirstPublishedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the article was first published.
IsLatestVersion	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the article is the most current version. (`true`) or not (`false`). This field can be `true` on the online or published version, a draft version in the primary language, a draft version in a translation, and the latest archived version. However, you can't filter by (PublishState='Online') and (IsLatestVersion=false) because the online version is also the latest version. This field is available in API version 24.0 and later.
IsMasterLanguage	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the article has one or more translations associated with it (`true`) or not (`false`). Only accessible if your knowledge base supports multiple languages.

Field Name	Details
IsOutOfDate	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the source article has been updated since this translated version was created (`true`) or not (`false`). Only accessible if your knowledge base supports multiple languages.
IsVisibleInApp	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Required. Indicates whether the article is visible in the Articles tab (`true`) or not (`false`).
IsVisibleInCsp	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Required. Indicates whether the article is visible in the Customer Portal (`true`) or not (`false`).
IsVisibleInPkb	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Required. Indicates whether the article is visible in the public knowledge base (`true`) or not (`false`).
IsVisibleInPrm	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Required. Indicates whether the article is visible in the partner portal (`true`) or not (`false`).

Field Name	Details
KnowledgeArticleId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the article independent from its version. The value for this field is retrieved from the `Id` field of the KnowledgeArticle object.
Language	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The language that the article is written in, such as `French` or `Chinese (Traditional)`. Querying or searching articles in SOSL require that you specify the `Language` field in the WHERE clause. The language must be the same for all article types. Before API version 47.0, you must include the `Language` field to filter queries on Knowledge article versions. In API version 47.0 and later, you can filter queries on Knowledge article versions with or without `Language` depending on what you are querying.
LastPublishedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the article was last published.
MasterVersionId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the source article, if the article is the translation of a source article. Only accessible if your knowledge base supports multiple languages.
MigratedToFromArticleVersion	**Type** string **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description The ID for the corresponding pre- or post-migration article version. Contains values only in orgs that migrate from Classic to Lightning Knowledge. Available in API version 43.0 and later.
`NextReviewDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the article must next be reviewed for accuracy. Available in API version 58.0 and later.
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the article's owner.
`PublishStatus`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The publication status for the article: • `Draft`: any draft articles. • `Online`: articles published in Salesforce Knowledge. • `Archived`: archived articles. A user must have the “Manage Articles” permission enabled to use `Online`. Article queries and searches in SOQL or SOSL require that you specify either the `PublishStatus` or the `Id` field in the WHERE clause. You can search for only one publication status per article type in a single SOSL query. When searching for articles with a `PublishStatus` of `Archived`, also check that `IsLatestVersion` equals `false` in your WHERE clause.
`SourceId`	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description ID of the source from which the article was created (Case or Reply).
`Summary`	**Type** textarea **Properties** Filter, Nillable, Sort **Description** Summary of the article. Maximum size is 1000 characters.
`Title`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Required. Article's title. Maximum size is 255 characters.
`TranslationCompletedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date and time when the article was last translated. Only accessible if your knowledge base supports multiple languages.
`TranslationExportedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date and time when the article was last exported for translation. Only accessible if your knowledge base supports multiple languages.
`TranslationImportedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date and time when the article was last imported for translation. Only accessible if your knowledge base supports multiple languages.

Field Name	Details
UrlName	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Required. Represents the article's URL. Can contain alphanumeric characters and hyphens but can't begin or end with a hyphen. This value should be unique regardless of context. (For example, a unique value allows you to get expected results when running an Apex test with `SeeAllData` set to `false`.) `UrlName` is case-sensitive and its maximum size is 255 characters.
ValidationStatus	**Type** picklist **Properties** Defaulted on create, Filter, Group **Description** Shows whether the content of the article has been validated. Possible values are `Validated` and `Not Validated`. The default value is `Not Validated`. This field is available in API version 24.0 or later.
VersionNumber	**Type** int **Properties** Group, Sort **Description** The number assigned to a version of an article. This field is available in API version 24.0 and later.

Usage

Use this object to query, retrieve, or search for articles across all types of articles depending on their version. You can update draft primary articles. Also, you can delete articles that aren't drafts. Client applications can use KnowledgeArticleVersion with `describeDataCategoryGroups()` and `describeDataCategoryGroupStructures()` to return the category groups and the category structure associated with Salesforce Knowledge.

To access an article independent of its version, use the KnowledgeArticle object.

In Lightning Knowledge, the type of article is determined by the `RecordType` field on the concrete derived object (for example, Knowledge__kav on page 2383). For Knowledge in Salesforce Classic, the type of article is determined by the `ArticleType` field and the concrete derived object uses the prefix of the article type name (for example, FAQ__kav for the FAQ article type).

SOQL Samples

The following SOQL clause uses KnowledgeArticleVersion to query all published articles from all articles complying with the classification specified in the WITH DATA CATEGORY clause:

```
SELECT Title, Summary
FROM KnowledgeArticleVersion
WHERE PublishStatus='Online'
AND Language = 'en_US'
WITH DATA CATEGORY Geography__c ABOVE_OR_BELOW europe__c AND Product__c BELOW All__c
```

The following SOQL clause for Lightning Knowledge uses the `Offer` record type to limit the query to all draft articles:

```
SELECT Id, Title
FROM Knowledge__kav
WHERE PublishStatus='Draft'
AND Language = 'en_US'
AND RecordTypeId = '<specify RecordTypeId for Offer here>'
WITH DATA CATEGORY Geography__c AT (france__c,usa__c) AND Product__c ABOVE dsl__c
```

The following SOQL clause for Salesforce Classic uses the `Offer` article type to limit the query to all draft articles:

```
SELECT Id, Title
FROM Offer__kav
WHERE PublishStatus='Draft'
AND Language = 'en_US'
WITH DATA CATEGORY Geography__c AT (france__c,usa__c) AND Product__c ABOVE dsl__c
```

The following SOQL clause uses KnowledgeArticleVersion to query the IDs of all archived versions of a particular article:

```
SELECT Id
FROM KnowledgeArticleVersion
WHERE PublishStatus='Archived'
AND IsLatestVersion=false
AND KnowledgeArticleId='kA1D00000001PQ6KAM'
```

SOQL and SOSL with KnowledgeArticleVersion

- Filter on a single value of `PublishStatus` for best results. To find all versions of each article, omit the `PublishStatus` filter, but do filter on one or more master key IDs. To retrieve all archived versions for a given article, specify a SOQL filter where `IsLatestVersion` is `false`.
- In API version 46.0 and earlier, queries without a filter on `PublishStatus` return published articles by default. In API version 47.0 and later, draft, published, and archived articles are returned when Lightning Knowledge is enabled.
- To support security, only users with the “View Draft Articles” permission see articles whose `PublishStatus` value is `Draft`. Similarly, only users with the “View Archived Articles” permission see articles whose `PublishStatus` value is `Archived`
- Archived article versions are stored in the ***`Knowledge`***`__kav` object. To query archived article versions, specify the article `Id` and set `IsLatestVersion='0'`.
- You can’t use binding variables in Apex SOQL statements with KnowledgeArticleVersion objects. For example, the following SOQL statement causes a compilation error.

```
final String PUBLISH_STATUS_ONLINE = 'Online';
List<Knowledge__kav> articles = [
SELECT Id FROM Knowledge__kav
```

```
WHERE PublishStatus = :PUBLISH_STATUS_ONLINE
];
```

Instead, use dynamic SOQL as follows. See Dynamic SOQL in *Apex Developer Guide*.

```
final String PUBLISH_STATUS_ONLINE = 'Online';
final String q = 'SELECT Id, PublishStatus FROM Knowledge__kav
WHERE PublishStatus = :PUBLISH_STATUS_ONLINE';
List<Knowledge__kav> articles = Database.query(q);
```

Other Usage for SOQL and SOSL with KnowledgeArticleVersion

To expose the *migrated_to_from_id* on **KnowledgeArticle** and **KnowledgeArticleVersion** to the sObject API: expose **MigratedToFromArticleVersion** in **KnowledgeArticleVersion**.

- For SOQL:
  - To filter by **MigratedToFromArticleVersion**, remove any other filters.
  - When filtering by **MigratedToFromArticleVersion**, use the '=' or 'IN' operator.
  - When filtering by **MigratedToFromArticleVersion**, the value can't be null or empty.
- SOSL doesn't support **MigratedToFromArticleVersion**.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

KnowledgeArticleVersionHistory
History is available for tracked fields of the object.

SEE ALSO:

KnowledgeArticle

KnowledgeArticleViewStat

KnowledgeArticleVoteStat

KnowledgeArticleVersionHistory

Enables read-only access to the full history of an article. This object is available in API version 25.0 and later.

Knowledge__VersionHistory is derived from this object. To access this derived object, turn on field history tracking for Knowledge objects.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Special Access Rules

Knowledge must be enabled in your org. This object respects field, entity, and record-level security. You must have at least "Read" permission on the article type or the field to access its history. For data category security, Salesforce determines access based on the categorization of the online version of an article. If there is no online version, then security is applied based on the archived version, followed by the security of the draft version.

Fields

Field Name	Details
`DataType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of data that is tracked in the history table. This field is available in API version 50.0 and later.
`EventType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of event that is tracked in the history table.
`FieldName`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Name of the tracked field.
`Language`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The language that the article is written in, such as `French` or `Chinese (Traditional)`. Querying or searching articles in SOSL requires that you specify the `Language` field in the WHERE clause. The language must be the same for all article types.

Field Name	Details
NewValue	**Type** anyType **Properties** Nillable, Sort **Description** The new value of the field that was changed.
OldValue	**Type** anyType **Properties** Nillable, Sort **Description** The most recent value of the field before it was changed.
ParentId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the article.
ParentSobjectType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of object that contains the field.
VersionId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID assigned to a version of the article.
VersionNumber	**Type** int **Properties** Filter, Group, Sort

Field Name	Details
	Description The number assigned to a version of an article. This field is available in API version 24.0 and later.

Usage

Use this object to query events in the history of an article. For example, you can retrieve the number of edits a particular user has made to an article, how many times the article has been published, and so on.

KnowledgeArticleViewStat

Provides statistics on the number of views for the specified article across all article types. The view count statistics are for published and archived articles only. View counts for draft articles are not tracked. This object is read-only and available in API version 20.0 and later.

Knowledge__ViewStat is derived from this object.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Knowledge must be enabled in your org. Users must have access to the published and archived versions of an article to retrieve its views. For more information on published and archived article versions, see the `PublishStatus` field in KnowledgeArticleVersion.

Fields

Field Name	Details
`Channel`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The channel where the article is viewed: • `AllChannels` for article views across all channels. • `App` for the internal Salesforce Knowledge application. • `Pkb` for article views in the public knowledge base. • `Csp` for Customer Portal. • `Prm` for article view in partner portal.

Field Name	Details
NormalizedScore	**Type** double **Properties** Filter, Nillable, Sort **Description** Article's weighted views in the selected channel. The article with most views has a score of 100. Other article views are then calculated relative to this highest view score. For example, if the best read article has 2000 views and another has 1000. The first one gets a score of 100 while the second gets 50.
ParentId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the viewed article. This corresponds to a KnowledgeArticle record.
ViewCount	**Type** int **Properties** Filter, Group, Sort **Description** The number of unique views a published or archived article has received in the selected channel. An article with a high number of views may not always have a high normalized score. The normalized score for an article is calculated based on views over time, with more recent views earning a higher score. This field is available in API version 27.0 and later.

Usage

Use this object to query or retrieve statistics for article views.

Alternatively, client applications can use the article type `API Name` followed by `__ViewStat` to query or retrieve most viewed articles from a specific article type.

SOQL Samples

The following SOQL clause uses KnowledgeArticleViewStat to query all the article views in Salesforce Knowledge and return the related articles:

```
SELECT Id, NormalizedScore, Parent.Id
        FROM KnowledgeArticleViewStat where Channel = 'App'
        ORDER BY NormalizedScore
```

Use the following clause to restrict your query to Offer articles for the `Offer` article type:

```
SELECT Id, NormalizedScore, Parent.Id
        FROM Offer__ViewStat where Channel = 'App'
        ORDER BY NormalizedScore
```

SEE ALSO:

KnowledgeArticle

KnowledgeArticleVersion

KnowledgeArticleVoteStat

KnowledgeArticleVoteStat

Provides the weighted rating for the specified article on a scale of 1 to 5 across all article types. This object is read-only and available in API version 20.0 and later.

Knowledge__VoteStat is derived from this object.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Knowledge must be enabled in your org. Users must have access to the published version of an article to retrieve its votes. For more information on published article version, see the `PublishStatus` field in KnowledgeArticleVersion

Fields

Field Name	Details
`Channel`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The channel where the article is rated: • `AllChannels` for article views across all channels. • `App` for the internal Salesforce Knowledge application. • `Pkb` for article views in public knowledge base. • `Csp` for Customer Portal. • `Prm` for article view in partner portal.

Field Name	Details
`NormalizedScore`	**Type** double **Properties** Filter, Nillable, Sort **Description** Article's weighted score on a scale of 1 to 5. A higher score means more votes. Articles without recent votes trend towards an average rating of three stars.
`ParentId`	**Type** reference **Properties** Filter, Group, Sort **Description** The rated article. This corresponds to a KnowledgeArticle record.

Usage

Use this object to query or retrieve the rating for an article.

Alternatively, client applications can use the article type `API Name` followed by `__VoteStat` to query or retrieve the rating for an article for a specific article type.

SOQL Samples

See KnowledgeArticleViewStat.

SEE ALSO:

KnowledgeArticle

KnowledgeArticleVersion

KnowledgeArticleViewStat

LandingPage

Represents an Account Engagement landing page. A landing page is a web page that a visitor reaches after clicking a link or advertisement. Landing pages can be created in Account Engagement and synced to Salesforce or created on the Landing Page object in Account Engagement Lightning App. This object is available in API version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, your org must use Account Engagement and users need the CRM User or Sales User permission set. To create, update, or delete a builder landing page, the Use Account Engagement Content Experience permission set is required.

Fields

Field Name	Details
`CampaignId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the related campaign.
`ContentLastSaved`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time of the last time someone changed and saved the landing page Name, Campaign, Content, IsHideFromSearchEngineIndex, or Vanity URL fields. This field is available in API version 53.0 and later.
`ContentLastSavedById`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The user who last changed and saved the Content body. This is a relationship field. This field is available in API version 53.0 and later. **Relationship Name** ContentLastSaved **Relationship Type** Lookup **Refers To** User
`FallbackUrl`	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The URL used to redirect viewers after the landing page is unpublished. This field is available in API version 54.0 and later.
FooterCode	**Type** textarea **Properties** Create, Nillable, Update **Description** `<Script>`, `<style>`, and `<link>` code added before the landing page's closing body tag. This field is available in API version 54.0 and later.
FormErrorRate	**Type** percent **Properties** Filter, Group, Sort **Description** The percentage of errors made on the landing page form. Calculated as total errors divided by total views.
FormSubmissionRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of form submissions based on the total number of landing page views.
HeaderCode	**Type** textarea **Properties** Create, Nillable, Update **Description** `<Script>`, `<style>`, and `<link>` code added to the head tag of the landing page. This field is available in API version 54.0 and later.
IsHideFromSearchEngineIndex	**Type** boolean

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the landing page is hidden from search engine indexing. The default value is `false`. This field is available in API version 53.0 and later.
`LastPublished`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time of the last time someone published the landing page. This field is available in API version 53.0 and later.
`LastPublishedById`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The user who last published the landing page. This is a relationship field. This field is available in API version 53.0 and later. **Relationship Name** LastPublished **Relationship Type** Lookup **Refers To** User
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Indicates when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field Name	Details
	Description The date and time when the current user last viewed this record. If this value is null, this record might only have been referenced (see `LastReferencedDate`) and not viewed. This field is available in API version 53.0 and later.
`Name`	**Type** string **Properties** Filter, Group, Sort **Description** The name of the landing page.
`PublicLink`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The URL where the landing page is available. This field is available in API version 53.0 and later.
`Source`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates where the landing page was created. The default value is `Salesforce`. This field is available in API version 53.0 and later.
`Status`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates the state of the landing page: `Draft`, `Published`, or `Published (Changes Pending)`. The default value is `Draft`. This field is available in API version 53.0 and later.
`TotalFormErrors`	**Type** int

Field Name	Details
	Properties Defaulted on create, Filter, Group, Nillable, Sort **Description** The total number of times a visitor or prospect enters an invalid email address or leaves a required field blank on a landing page form.
`TotalFormSubmissions`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The number of times a form on the landing page has been submitted.
`TotalTrackedLinkClicks`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The number of times prospects clicked a link on the landing page's thank you page.
`TotalViews`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The total number of times visitors and prospects viewed your landing page. This total includes multiple views from the same person.
`UniqueFormErrors`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The number of individual visitors and prospects who made an error on the form. This metric doesn't include multiple errors from the same person.
`UniqueFormSubmissions`	**Type** int

Field Name	Details
	Properties Defaulted on create, Filter, Group, Nillable, Sort **Description** The number of individual visitors who submitted a form on the landing page. This metric doesn't include multiple submissions from the same person.
`UniqueTrackedLinkClicks`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The number of times a prospect clicked a link on the landing page's thank you page. This metric doesn't include multiple clicks of the same link.
`UniqueViews`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The number of individual visitors and prospects who viewed your landing page. This metric doesn't include multiple views from the same person.
`VanityUrl`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The custom path that's appended to tracker domains to create a vanity URL. This field doesn't support scheme or domain values. This field is available in API version 53.0 and later.

Associated Objects

This object has the following associated objects. Unless otherwise noted, they're available in the same API version as this object.

LandingPageChangeEvent (API version 44.0)
Change events are available for the object.

LandingPageFeed
Feed tracking is available for the object.

Lead

Represents a prospect or lead.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `merge()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`ActionCadenceAssigneeId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the sales rep designated to work the lead through their assigned cadence. This field is available in API version 48.0 if you enabled Sales Engagement
`ActionCadenceId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the lead's assigned cadence. This field is available in API version 48.0 if you enabled Sales Engagement.
`ActivityMetricId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the related activity metric. This field is available in API version 48.0 if you enabled Sales Engagement.
`Address`	**Type** address **Properties** Filter, Nillable **Description** The compound form of the address. Read-only. For details on compound address fields, see Address Compound Fields.

Field	Details
`AnnualRevenue`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** Annual revenue for the lead's company.
`City`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** City for the lead's address.
`CleanStatus`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the record's clean status compared with Data.com. Values include: `Matched`, `Different`, `Acknowledged`, `NotFound`, `Inactive`, `Pending`, `SelectMatch`, or `Skipped`. Several values for `CleanStatus` appear with different labels on the lead record. • `Matched` appears as `In Sync` • `Acknowledged` appears as `Reviewed` • `Pending` appears as `Not Compared`
`Company`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Required. The lead's company. Note: If person account record types have been enabled, and if the value of `Company` is null, the lead converts to a person account.
`CompanyDunsNumber`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The Data Universal Numbering System (D-U-N-S) number, which is a unique, nine-digit number assigned to every business location in the Dun & Bradstreet database that has a unique, separate, and distinct operation. Industries and companies use D-U-N-S numbers as a global standard for business identification and tracking. Maximum size is 9 characters. Note: This field is only available to organizations that use Data.com Prospector or Data.com Clean.
`ConnectionReceivedId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.
`ConnectionSentId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.
`ConvertedAccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** Object reference ID that points to the account into which the lead converted. This is a relationship field. **Relationship Name** ConvertedAccount **Relationship Type** Lookup **Refers To** Account
`ConvertedContactId`	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort **Description** Object reference ID that points to the contact into which the lead converted. This is a relationship field. **Relationship Name** ConvertedContact **Relationship Type** Lookup **Refers To** Contact
`ConvertedDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort **Description** Date on which this lead was converted.
`ConvertedOpportunityId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** Object reference ID that points to the opportunity into which the lead has been converted. This is a relationship field. **Relationship Name** ConvertedOpportunity **Relationship Type** Lookup **Refers To** Opportunity
`Country`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The lead’s country.

Field	Details
CountryCode	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ISO country code for the lead's address.
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** The lead's description.
Division	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.
Email	**Type** email **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** The lead's email address.
EmailBouncedDate	**Type** dateTime

Field	Details
	Properties Filter, Nillable, Sort, Update **Description** If bounce management is activated and an email sent to the lead bounced, the date and time of the bounce. Note: Email bounce functionality isn't triggered by record updates, including updates to this field.
EmailBouncedReason	**Type** string **Properties** Filter, Group, Nillable, Sort, Update **Description** If bounce management is activated and an email sent to the lead bounced, the reason for the bounce. Note: Email bounce functionality isn't triggered by record updates, including updates to this field.
Fax	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The lead's fax number.
FirstCallDateTime	**Type** datetime **Properties** Filter, Nillable, Sort **Description** The date and time of the first call placed to the lead. This field is available in API version 48.0 if you enabled Sales Engagement.
FirstEmailDateTime	**Type** datetime **Properties** Filter, Nillable, Sort **Description** The date and time of the first email sent to the lead. This field is available in API version 48.0 if you enabled Sales Engagement.

Field	Details
FirstName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The lead's first name up to 40 characters.
GenderIdentity	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The lead's internal experience of their gender, which may or may not correspond to their designated sex at birth.
HasOptedOutOfEmail	**Type** boolean **Properties** Create, Defaulted on create, Filter, Update **Description** Indicates whether the lead doesn't want to receive email from Salesforce (`true`) or does (`false`). Label is **Email Opt Out**.
HasOptedOutOfFax	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the lead doesn't want to receive faxes from Salesforce (`true`) or does (`false`). Label is **FaxOpt Out**.
GeocodeAccuracy	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Accuracy level of the geocode for the address. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
IndividualId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** ID of the data privacy record associated with this lead. This field is available if you enabled Data Protection and Privacy in Setup. **Relationship Name** Individual **Relationship Type** Lookup **Refers To** Individual
`Industry`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Industry in which the lead works.
`IsConverted`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Indicates whether the lead has been converted (`true`) or not (`false`). Label is **Converted**.
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
`IsUnreadByOwner`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** If true, lead has been assigned, but not yet viewed. See Unread Leads for more information. Label is **Unread By Owner**.

Field	Details
`Jigsaw`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** References the ID of a contact in Data.com. If a lead has a value in this field, it means that a contact was imported as a lead from Data.com. If the contact (converted to a lead) wasn't imported from Data.com, the field value is null. Maximum size is 20 characters. Available in API version 22.0 and later. Label is **Data.com Key**. Important: The `Jigsaw`field is exposed in the API to support troubleshooting for import errors and reimporting of corrected data. Don't modify the value in the `Jigsaw` field.
`LastActivityDate`	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** Value is the most recent of either: • Due date of the most recent event logged against the record. • Due date of the most recently closed task associated with the record.
`LastName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. Last name of the lead up to 80 characters.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** datetime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.
`Latitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `Longitude` to specify the precise geolocation of an address. Acceptable values are numbers between –90 and 90 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
`Longitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `Latitude` to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
`LeadSource`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The lead's source.
`MasterRecordId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** If this record was deleted as the result of a merge, this field contains the ID of the record that was kept. If this record was deleted for any other reason, or hasn't been deleted, the value is `null`. Note: When using Apex triggers to determine which record was deleted in a merge event, this field's value is the ID of the record that remains in `Trigger.old`. In `Trigger.new`, the value is `null`. This is a relationship field.

Field	Details
	Relationship Name MasterRecord **Relationship Type** Lookup **Refers To** Lead
`MiddleName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The lead's middle name up to 40 characters. To enable this field, ask Salesforce Customer Support for help.
`MobilePhone`	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The lead's mobile phone number.
`Name`	**Type** string **Properties** Filter, Group, Sort **Description** Concatenation of `FirstName`, `MiddleName`, `LastName`, and `Suffix` up to 203 characters, including whitespaces.
`NumberOfEmployees`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Number of employees at the lead's company. Label is **Employees**.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description ID of the lead's owner. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`PartnerAccountId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the partner account for the partner user that owns this lead. Available if Partner Relationship Management is enabled or if digital experiences is enabled and you have partner portal licenses. Note: If you're uploading leads using API version 15.0 or earlier, and one of the leads in the batch has a partner user as the owner, the `Partner Account` field on all leads in the batch is set to that partner user's account regardless of whether the partner user is the owner. In version 16.0, the `Partner Account` field is set to the appropriate account for the partner user that owns the lead. If the owner of the lead isn't a partner user, this field remains empty.
`Phone`	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The lead's phone number.
`PhotoUrl`	**Type** url **Properties** Filter, Group, Nillable, Sort **Description** Path to be combined with the URL of a Salesforce instance (*Example:* https://`yourInstance`.salesforce.com/) to generate a URL to request the social network profile image associated with the lead. Generated URL returns an HTTP redirect (code 302) to the social network profile image for the lead.

Field	Details
	Empty if Social Accounts and Contacts isn't enabled or if Social Accounts and Contacts has been disabled for the requesting user.
PostalCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Postal code for the address of the lead. Label is **Zip/Postal Code**.
Pronouns	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The lead's personal pronouns, reflecting their gender identity. Others can use these pronouns to refer to the lead in the third person. The entry is selected from a picklist of available values, which the administrator sets. Maximum 40 characters.
Rating	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Rating of the lead.
RecordTypeId	**Type** reference **Properties** Create, Filter, Nillable, Update **Description** ID of the record type assigned to this object.
Salutation	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Salutation for the lead.
ScoreIntelligenceId	**Type** reference

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The ID of the intelligent field record that contains lead score.
`State`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** State for the address of the lead.
`StateCode`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ISO state code for the lead's address.
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Status code for this converted lead. Status codes are defined in `Status` and represented in the API by the LeadStatus object.
`Street`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Street number and name for the address of the lead.
`Suffix`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The lead's name suffix up to 40 characters. To enable this field, ask Salesforce Customer Support for help.

Field	Details
`Title`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Title for the lead, such as CFO or CEO. The maximum size is 128 characters. When converting a lead to a person account, the coversion fails if the lead Title field contains more than 80 characters.
`Website`	**Type** url **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Website for the lead.

Note: If you import lead data and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself.

Converted Leads

Leads have a special state to indicate that they've been converted into an account, a contact, and an opportunity. Your client application can convert leads via the `convertLead()` call. Users can also convert leads in Salesforce. After a lead has been converted, it's read-only. However, you can query converted lead records. Only users with the View and Edit Converted Leads permission can update converted lead records.

Leads have several fields that indicate their converted status. These special fields are set when converting the lead in the user interface.

- `ConvertedAccountId`
- `ConvertedContactId`
- `ConvertedDate`
- `ConvertedOpportunityId`
- `IsConverted`
- `Status`

Note: If person account record types have been enabled, and if the value of `Company` is null, the lead converts to a person account.

Unread Leads

Leads have a special state to indicate that they haven't been viewed or edited by the lead owner. In Salesforce, it's helpful for users to know which leads have been assigned to them but that they haven't touched yet. `IsUnreadByOwner` is `true` if the lead owner hasn't yet viewed or edited the lead, and `false` if the lead owner has viewed or edited the lead at least one time.

Lead Status Picklist

Each `Status` value corresponds to either a converted or unconverted status in the lead status picklist, as defined in the user interface. To obtain the lead status values in the picklist, a client application can query LeadStatus.

You can't convert a lead via the API by changing `Status` to one of the converted lead status values. When you convert qualified leads into an account, contact, and opportunity, you can select one of the converted status types for the lead. Leads with a converted status type are no longer available in the Leads tab, although you can include them in reports.

Usage

To update a lead or to convert one with `convertLead()`, log in to your client application with the "Edit" permission on leads.

When you create, update, or upsert a lead, your client application can have the lead assigned to multiple user records based on assignment rules that have been configured in Salesforce.

To use this feature, your client application needs to set either of the following options (but not both) in the AssignmentRuleHeader used in create or update:

Field	Field Type	Details
`assignmentRuleId`	reference	ID of the assignment rule to use. Can be an inactive assignment rule. If unspecified and `useDefaultRule` is `true`, then the default assignment rule is used. To find the ID for a given assignment rule, query the AssignmentRule object (specifying `RuleType="leadAssignment"`), iterate through the returned AssignmentRule records, find the one you want to use, retrieve its ID, and then specify its ID in this field in the AssignmentRuleHeader.
`useDefaultRule`	boolean	Specifies whether to use the default rule for rule-based assignment (`true`) or not (`false`). Default rules are assigned in the user interface.

Java Sample

The following Java sample shows how to automatically assign a newly created lead.

```
package wsc;

import com.sforce.soap.enterprise.Connector;
import com.sforce.soap.enterprise.EnterpriseConnection;
import com.sforce.ws.ConnectionException;
import com.sforce.ws.ConnectorConfig;
import com.sforce.soap.enterprise.sobject.Lead;
import com.sforce.soap.enterprise.QueryResult;
import com.sforce.soap.enterprise.SaveResult;
import com.sforce.soap.enterprise.sobject.SObject;

public class LeadAssignment {

    static final String USERNAME = "REPLACE USER NAME";
    static final String PASSWORD = "REPLACE PASSWORD";
    static EnterpriseConnection connection;
```

```
    static LeadAssignment _leadAssignment;

    // Main
    public static void main(String[] args)
    {
        // Establish connection and login
        ConnectorConfig config = new ConnectorConfig();
        config.setUsername(USERNAME);
        config.setPassword(PASSWORD);
        try {
            connection = Connector.newConnection(config);
            System.out.println("Logged in, endpoint: " + config.getAuthEndpoint());
        } catch (ConnectionException e1) {
            e1.printStackTrace();
        }

        // Create lead
        _leadAssignment = new LeadAssignment();
        try {
            _leadAssignment.CreateLead();
        } catch (Exception e) {
            e.printStackTrace();
        }

        // Logout
        try {
            connection.logout();
            System.out.println("Logged out");
        } catch (ConnectionException ce) {
            ce.printStackTrace();
        }
    }

    public void CreateLead() throws ConnectionException
    {
        // Create a new Lead and assign various properties
        Lead lead = new Lead();

        lead.setFirstName("Joe");
        lead.setLastName("Smith");
        lead.setCompany("ABC Corporation");
        lead.setLeadSource("API");
        // The lead assignment rule will assign any new leads that
        // have "API" as the LeadSource to a particular user

        // In this sample we will look for a particular rule and if found
        // use the id for the lead assignment. If it is not found we will
        // instruct the call to use the current default rule. You can't use
        // both of these values together.
        QueryResult qr = connection.query("SELECT Id FROM AssignmentRule WHERE Name = " +

                                 "'Mass Mail Campaign' AND SobjectType = 'Lead'");
        if (qr.getSize() == 0) {
            connection.setAssignmentRuleHeader(null, true);
```

```
        } else {
            connection.setAssignmentRuleHeader(qr.getRecords()[0].getId(), false);
        }

        // Every operation that results in a new or updated lead will
        // use the specified rule until the header is removed from the
        // connection.
        SaveResult[] sr = connection.create(new SObject[] {lead});
        for (int i=0;i<sr.length;i++) {
            if (sr[i].isSuccess()) {
                System.out.println("Successfully created lead with id of: " +
                                   sr[i].getId() + ".");
            } else {
                System.out.println("Error creating lead: " +
                                   sr[i].getErrors()[0].getMessage());
            }
        }

        // This call effectively removes the header, the next lead will
        // be assigned to the default lead owner.
        connection.clearAssignmentRuleHeader();
    }
}
```

C# Sample

The following C# sample shows how to automatically assign a newly created lead.

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
using System.ServiceModel;
using LeadSample.sforce;

namespace LeadSample
{
    class LeadAssignment
    {
        private static SoapClient client;
        private static SoapClient apiClient;
        private static SessionHeader header;
        private static LoginResult loginResult;
        private static readonly string Username = "REPLACE USERNAME";
        private static readonly string Password = "REPLACE PASSWORD AND SECURITY TOKEN";

        // Create the proxy binding and login
        private LeadAssignment()
        {
            client = new SoapClient();

            try
            {
```

```
                loginResult = client.login(null, Username, Password);
            }
            catch (Exception e)
            {
                Console.WriteLine("Unexpected login error: " + e.Message);
                Console.WriteLine(e.StackTrace);
                return;
            }
            // Access API endpoint and create new client
            header = new SessionHeader();
            header.sessionId = loginResult.sessionId;
            apiClient = new SoapClient("Soap", loginResult.serverUrl);
        }

        [STAThread]
        static void Main(string[] args)

        out sr);
    foreach (SaveResult s in sr)
    {
        if (s.success)
        {
            Console.WriteLine("Successfully created Lead with ID: {0}", s.id);
        }
        else
        {
            Console.WriteLine("Error creating Lead: {0}", s.errors[0].message);
        }
```

```
                }
            }
        }
}
```

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

LeadChangeEvent (API version 44.0)
Change events are available for the object.

LeadFeed (API version 18.0)
Feed tracking is available for the object.

LeadHistory
History is available for tracked fields of the object.

LeadOwnerSharingRule
Sharing rules are available for the object.

LeadShare
Sharing is available for the object.

LeadCleanInfo

Stores the metadata Data.com Clean uses to determine a lead record's clean status. Helps you automate the cleaning or related processing of lead records.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see Data.com Prospector and Clean Retirement.

Lead Clean Info provides a snapshot of the data in your Salesforce lead record and its matched Data.com record at the time the Salesforce record was cleaned.

Lead Clean Info includes a number of bit vector fields, whose component fields each correspond to individual object fields and provide related data or status information about those fields. For example, the bit vector field `IsDifferent` has an `IsDifferentTitle` field. If the `IsDifferentTitle` field's value is `False`, that means the `Title` field value is *the same* on the Salesforce lead record and its matched Data.com record.

LeadCleanInfo bit vector fields include:

- `CleanedBy` indicates who (a user) or what (a Clean job) cleaned the lead record.
- `IsDifferent` indicates whether or not a field on the lead record has a value that differs from the corresponding field on the matched Data.com record.
- `IsFlaggedWrong` indicates whether or not a field on the lead record has a value that is flagged as wrong to Data.com.
- `IsReviewed` indicates whether or not a field on the lead record is in a `Reviewed` state, which means that the value was reviewed but not accepted..

Their individual bits are defined here

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Fields

Field Name	Details
`Address`	**Type** address **Properties** Filter, Nillable **Description** The compound form of the address. Read-only. See Address Compound Fields for details on compound address fields.
`AnnualRevenue`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Estimated annual revenue of the lead.
`City`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Details for the billing address of the lead.
`CleanedByJob`	**Type** boolean **Properties** Filter

Field Name	Details
	Description Indicates whether the lead record was cleaned by a Data.com Clean job (`true`) or not (`false`).
`CleanedByUser`	**Type** boolean **Properties** Filter **Description** Indicates whether the lead record was cleaned by a Salesforce user (`true`) or not (`false`).
`CompanyDunsNumber`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The Data Universal Numbering System (D-U-N-S) number is a unique, nine-digit number assigned to every business location in the Dun & Bradstreet database that has a unique, separate, and distinct operation. D-U-N-S numbers are used by industries and organizations around the world as a global standard for business identification and tracking.
`CompanyName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the company.
`ContactStatusDataDotCom`	**Type** picklist **Properties** Filter, Group, Nillable, Sort **Description** The status of the contact associated with the lead per Data.com. Values are: `Contact is Active per Data.com`, `Phone is Wrong per Data.com` , `Email is Wrong per Data.com`, `Phone and Email are Wrong per Data.com`, `Contact Not at Company per Data.com`, `Contact is Inactive per Data.com`, `Company this contact belongs to is out of business per Data.com`, `Company this contact belongs to never`

Field Name	Details
	`existed per Data.com` or `Email address is invalid per Data.com`.
`Country`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Details for the billing address of the lead.
`DandBCompanyDunsNumber`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The D-U-N-S Number on the D&B Company record (if any) that is linked to the lead.
`DataDotComCompanyId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID Data.com maintains for the company associated with the lead.
`DataDotComId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID Data.com maintains for the contact associated with the lead.
`Email`	**Type** email **Properties** Filter, Group, Nillable, Sort **Description** The lead’s email address.
`FirstName`	**Type** string

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** The lead's first name.
Industry	**Type** picklist **Properties** Filter, Group, Nillable, Sort **Description** The industry the lead belongs to.
IsDifferentAnnualRevenue	**Type** boolean **Properties** Filter **Description** Indicates whether the lead's AnnualRevenue field value is different from the corresponding value on its matched Data.com record (true) or not (false).
IsDifferentCity	**Type** boolean **Properties** Filter **Description** Indicates whether the lead's City field value is different from the corresponding value on its matched Data.com record (true) or not (false).
IsDifferentCompanyDunsNumber	**Type** boolean **Properties** Filter **Description** Indicates whether the lead's Company D-U-N-S Number field value is different from the corresponding value on its matched Data.com record (true) or not (false).
IsDifferentCompanyName	**Type** boolean **Properties** Filter

Field Name	Details
	Description Indicates whether the lead's `Company Name` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`).
`IsDifferentCountry`	**Type** boolean **Properties** Filter **Description** Indicates whether the lead's `Country` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`).
`IsDifferentCountryCode`	**Type** boolean **Properties** Filter **Description** Indicates whether the account's `Country Code` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`).
`IsDifferentDandBCompanyDunsNumber`	**Type** boolean **Properties** Filter **Description** Indicates whether the lead's `D&B Company D-U-N-S Number` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`).
`IsDifferentEmail`	**Type** boolean **Properties** Filter **Description** Indicates whether the lead's `Email` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`).
`IsDifferentFirstName`	**Type** boolean **Properties** Filter

Field Name	Details
	Description Indicates whether the lead's `First Name` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`).
`IsDifferentIndustry`	**Type** boolean **Properties** Filter **Description** Indicates whether the lead's `Industry` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`).
`IsDifferentLastName`	**Type** boolean **Properties** Filter **Description** Indicates whether the lead's `Last Name` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`).
`IsDifferentNumberOfEmployees`	**Type** boolean **Properties** Filter **Description** Indicates whether the lead's `No. of Employees` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`).
`IsDifferentPhone`	**Type** boolean **Properties** Filter **Description** Indicates whether the lead's `Phone` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`).
`IsDifferentPostalCode`	**Type** boolean **Properties** Filter

Field Name	Details
	Description Indicates whether the lead's `Postal Code` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`).
`IsDifferentState`	**Type** boolean **Properties** Filter **Description** Indicates whether the lead's `State` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`).
`IsDifferentStateCode`	**Type** boolean **Properties** Filter **Description** Indicates whether the account's `State Code` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`).
`IsDifferentStreet`	**Type** boolean **Properties** Filter **Description** Indicates whether the lead's `Street` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`).
`IsDifferentTitle`	**Type** boolean **Properties** Filter **Description** Indicates whether the lead's `Title` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`).
`IsFlaggedWrongAddress`	**Type** boolean **Properties** Filter, Update

Field Name	Details
	Description Indicates whether the lead's `Address` field value is flagged as wrong to Data.com (`true`) or not (`false`).
`IsFlaggedWrongAnnualRevenue`	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the lead's `Annual Revenue` field value is flagged as wrong to Data.com (`true`) or not (`false`).
`IsFlaggedWrongCompanyDunsNumber`	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the lead's `Company D-U-N-S Number` field value is flagged as wrong to Data.com (`true`) or not (`false`).
`IsFlaggedWrongCompanyName`	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the lead's `Company Name` field value is flagged as wrong to Data.com (`true`) or not (`false`).
`IsFlaggedWrongEmail`	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the lead's `Email` field value is flagged as wrong to Data.com (`true`) or not (`false`).
`IsFlaggedWrongIndustry`	**Type** boolean **Properties** Filter, Update

Field Name	Details
	Description Indicates whether the lead's `Industry` field value is flagged as wrong to Data.com (`true`) or not (`false`).
`IsFlaggedWrongName`	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the lead's `Name` field value is flagged as wrong to Data.com (`true`) or not (`false`).
`IsFlaggedWrongNumberOfEmployees`	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the lead's `No. of Employees` field value is flagged as wrong to Data.com (`true`) or not (`false`).
`IsFlaggedWrongPhone`	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the lead's `Phone` field value is flagged as wrong to Data.com (`true`) or not (`false`).
`IsFlaggedWrongTitle`	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the lead's `Title` field value is flagged as wrong to Data.com (`true`) or not (`false`).
`IsInactive`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description Indicates whether the lead has been reported to Data.com as *Inactive* (true) or not (false).
IsReviewedAddress	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the lead's Address field value is in a Reviewed state (true) or not (false).
IsReviewedAnnualRevenue	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the lead's Annual Revenue field value is in a Reviewed state (true) or not (false).
IsReviewedCompanyDunsNumber	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the lead's Company D-U-N-S Number field value is in a Reviewed state (true) or not (false).
IsReviewedCompanyName	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the lead's Company Name field value is in a Reviewed state (true) or not (false).
IsReviewedDandBCompanyDunsNumber	**Type** boolean **Properties** Filter, Update

Field Name	Details
	Description Indicates whether the lead's `D&B Company D-U-N-S Number` field value is in a `Reviewed` state (`true`) or not (`false`).
`IsReviewedEmail`	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the lead's `Email` field value is in a `Reviewed` state (`true`) or not (`false`).
`IsReviewedIndustry`	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the lead's `Industry` field value is in a `Reviewed` state (`true`) or not (`false`).
`IsReviewedName`	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the lead's `Name` field value is in a `Reviewed` state (`true`) or not (`false`).
`IsReviewedNumberOfEmployees`	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the lead's `No. of Employees` field value is in a `Reviewed` state (`true`) or not (`false`).
`IsReviewedPhone`	**Type** boolean **Properties** Filter, Update

Field Name	Details
	Description Indicates whether the lead's `Phone` field value is in a `Reviewed` state (`true`) or not (`false`).
`IsReviewedTitle`	**Type** boolean **Properties** Filter, Update **Description** Indicates whether the lead's `Title` field value is in a `Reviewed` state (`true`) or not (`false`).
`LastMatchedDate`	**Type** dateTime **Properties** Filter, Sort **Description** The date the lead record was last matched and linked to a Data.com record.
`LastName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The lead's last name.
`LastStatusChangedById`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of who or what last changed the record's `Clean Status` field value: a Salesforce user or a Clean job.
`LastStatusChangedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date on which the record's `Clean Status` field value was last changed.

Field Name	Details
Latitude	**Type** double **Properties** Filter, Nillable, Sort **Description** Used with Longitude to specify the precise geolocation of a billing address. Data not currently provided.
LeadId	**Type** reference **Properties** Filter, Group, Sort **Description** The unique, system-generated ID assigned when the lead record was created.
Longitude	**Type** double **Properties** Filter, Nillable, Sort **Description** Used with Latitude to specify the precise geolocation of a billing address. Data not currently provided.
Name	**Type** string **Properties** Filter, Group, Sort, Update **Description** Field label is **Lead Clean Info Name**. The name of the lead. Maximum size is 255 characters.
NumberOfEmployees	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of employees working at the lead.
Phone	**Type** phone **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description The phone number for the lead.
`PostalCode`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Details for the billing address of the lead.
`State`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Details for the billing address of the lead.
`Street`	**Type** textarea **Properties** Filter, Group, Nillable, Sort **Description** Details for the billing address of the lead.
`Title`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The lead's title.

Usage

Developers can create triggers that read the Lead Clean Info fields to help automate the cleaning or related processing of lead records.

LeadDailyMetric

Represents the daily engagement metrics for a lead. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Sales Engagement must be enabled.

Fields

Field	Details
AllCallsCallBackLater	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the day for this lead with the call result Call Back Later.
AllCallsLeftVoicemail	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the day for this lead with the call result Left Voicemail.
AllCallsMeaningfulConnect	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the day for this lead with the call result Meaningful Connect.
AllCallsNotInterested	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the day for this lead with the call result Not Interested.
AllCallsUncategorized	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The number of calls in the day for this lead with no call result specified.
`AllCallsUnqualified`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the day for this lead with the call result Unqualified.
`AllEmailsBouncedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total of hard and soft bounced emails for this lead in the day. This is a calculated field.
`AllEmailsDeliveredCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of successfully delivered emails for this lead in the day. This is a calculated field.
`AllEmailsDeliveredRate`	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of tracked emails sent that were successfully delivered to this lead. This field is a calculated field.
`AllEmailsHardBouncedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of hard bounced emails for this lead in the day.

Field	Details
AllEmailsOutOfOfficeCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails that triggered an out of office reply for this lead in the day.
AllEmailsSentCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent to this lead in the day. This is a calculated field.
AllEmailsSoftBouncedCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails soft bounced for this lead in the day.
AllEmailsTrackedSentCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent to this lead with engagement tracking enabled in the day.
AllEmailsUntrackedSentCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent to this lead without engagement tracking enabled in the day.
AllTotalCallsCount	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The total number of calls to this lead with all call results in the day. This is a calculated field.
DailyCutOffTimeStamp	**Type** dateTime **Properties** Filter, Sort **Description** The time of day when each 24-hour metrics period starts and ends.
Date	**Type** date **Properties** Filter, Group, Sort **Description** The date on which the engagement occurred.
DateInt	**Type** int **Properties** Filter, Group, idLookup, Sort **Description** The date on which the engagement occurred, in yyyymmdd format.
HardBounceTrackableSends	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent to this lead with hard bounce tracking.
InboundEngagementsCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of inbound engagements for this lead in the day. This field is a calculated field. The value is the sum of `UniqueEmailsOpenedCount`, `UniqueEmailsRepliedCount`, and `UniqueEmailsLinkClickedCount`. Available in API version 58.0 and later.

Field	Details
IsLocked	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the daily metric record is locked or not. The default value is `false`.
LeadId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the related lead. This is a relationship field. **Relationship Name** Lead **Relationship Type** Lookup **Refers To** Lead
MayEdit	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the daily metric record can be edited or not. The default value is `false`.
LinkClickTrackableSends	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent to this lead with link click tracking.
OpenTrackableSends	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The number of emails sent to this lead with open tracking.
`OutOfOfficeTrackableSends`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent to this lead with out-of-office tracking.
`OutboundEngagementsCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of outbound engagements for this lead in the day. This field is a calculated field. The value is the sum of `AllTotalCallsCount` and `AllEmailsDeliveredCount`. Available in API version 58.0 and later.
`ReplyTrackableSends`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent to this lead with reply tracking.
`SoftBounceTrackableSends`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent to this lead with soft bounce tracking.
`TrackableSendHardBounceRate`	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of emails sent to this lead with hard bounce tracking that hard bounced. This field is a calculated field.

Field	Details
TrackableSendLinkClickRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of emails sent to this lead with link tracking that had link clicks. This field is a calculated field.
TrackableSendOpenRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of emails sent to this lead with open tracking that were opened by the recipient. This field is a calculated field.
TrackableSendOutOfOfficeRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of emails sent to this lead with out-of-office tracking that received out-of-office replies. This field is a calculated field.
TrackableSendReplyRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of emails sent to this lead with reply tracking that received replies. This field is a calculated field.
TrackableSendSoftBounceRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of emails sent to this lead with soft bounce tracking that soft bounced. This field is a calculated field.
UniqueEmailsLinkClickedCount	**Type** int

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The number of individual emails in which the lead clicked a link in the day.
`UniqueEmailsOpenedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of individual emails opened by the lead in the day.
`UniqueEmailsRepliedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of individual emails replied to by the lead in the day.

LeadMonthlyMetric

Represents the monthly engagement metrics for a lead. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Sales Engagement must be enabled.

Fields

Field	Details
`AllCallsCallBackLater`	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The number of calls in the month for this lead with the call result Call Back Later.
AllCallsLeftVoicemail	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the month for this lead with the call result Left Voicemail.
AllCallsMeaningfulConnect	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the month for this lead with the call result Meaningful Connect.
AllCallsNotInterested	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the month for this lead with the call result Not Interested.
AllCallsUncategorized	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the month for this lead with no call result specified.
AllCallsUnqualified	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of calls in the month for this lead with the call result Unqualified.
AllEmailsBouncedCount	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The total of hard and soft bounced emails for this lead in the month. This is a calculated field.
`AllEmailsDeliveredCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of successfully delivered emails for this lead in the month. This is a calculated field.
`AllEmailsHardBouncedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of hard bounced emails for this lead in the month.
`AllEmailsOutOfOfficeCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails that triggered an out of office reply for this lead in the month.
`AllEmailsSentCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent to this lead in the month. This is a calculated field.
`AllEmailsSoftBouncedCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails soft bounced for this lead in the month.

Field	Details
AllEmailsTrackedSentCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent to this lead with engagement tracking enabled in the month.
AllEmailsUntrackedSentCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of emails sent to this lead without engagement tracking enabled in the month.
AllTotalCallsCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of calls to this lead with all call results in the month. This is a calculated field.
IsLocked	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the monthly metric record is locked or not. The default value is `false`.
LeadId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the related lead. This is a relationship field. **Relationship Name** Lead **Relationship Type** Lookup

Field	Details
	Refers To Lead
MayEdit	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the monthly metric record can be edited or not. The default value is `false`.
Month	**Type** date **Properties** Filter, Group, Sort **Description** The month in which the engagement occurred.
MonthInt	**Type** int **Properties** Filter, Group, idLookup, Sort **Description** The month in which the engagement occurred, in yyyymm format.
UniqueEmailsLinkClickedCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of individual emails in which the lead clicked a link in the month.
UniqueEmailsOpenedCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of individual emails opened by the lead in the month.
UniqueEmailsRepliedCount	**Type** int

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The number of individual emails replied to by the lead in the month.

LeadOwnerSharingRule

Represents the rules for sharing a lead with users other than the owner.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The SharingRules Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.
`DeveloperName`	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface.

Field	Details
	This field is available in API version 24.0 and later. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
`GroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID representing the source group. Leads owned by users in the source group trigger the rule to give access.
`LeadAccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** A value that represents the type of sharing being allowed. The possible values are: • `Read` • `Edit`
`Name`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface.
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID representing the target user or group. The target user or group is being given access.

Usage

Use these objects to manage the sharing rules for leads. General sharing and Territory-related sharing use this object.

Note: The original territory management feature is now unavailable. For more information, see The Original Territory Management Module Will Be Retired in the Summer '21 Release. The information in this topic applies to the original territory management feature only, and not to Enterprise Territory Management.

LeadStatus

Metadata API Developer Guide: SharingRules

LeadShare

Represents a sharing entry on a Lead.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users with access to the Lead object can access this object.

Fields

The properties available for some fields depend on the default org-wide sharing settings. The properties listed are true for the default settings of such fields.

Field	Details
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.

Field	Details
LeadAccessLevel	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Level of access that the User or Group has to the Lead. The possible values are: • Read • Edit • All This value is not valid when creating or updating these records. This field must be set to an access level that is higher than the organization's default access level for leads.
LeadId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the Lead associated with this sharing entry. This field can't be updated. This is a relationship field. **Relationship Name** Lead **Relationship Type** Lookup **Refers To** Lead
RowCause	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is Manual. If no value is specified, the field defaults to Manual. All other RowCause values are read-only. After the sharing entry is created, this field can't be edited. Values include: • Manual—The User or Group has access because a user with "All" access manually shared the Lead with them. • Owner—The User is the owner of the Lead. • Rule—The User or Group has access via a Lead sharing rule. • GuestRule—The User or Group has access via a Lead guest user sharing rule.

Field	Details
	• `LpuImplicit`—The User has access to records owned by high-volume Experience Cloud site users via a share group. • `ARImplicit`—The User, who belongs to a partner or customer account, has access to the Lead via an account relationship data sharing rule.
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the User or Group that has been given access to the Lead. This field can't be updated. This is a polymorphic relationship field. **Relationship Name** UserOrGroup **Relationship Type** Lookup **Refers To** Group, User

Usage

This object allows you to determine which users and groups can view or edit leads owned by other users.

If you attempt to create a record that matches an existing record, the existing record is returned.

LeadStatus

Represents the status of a Lead, such as Open, Qualified, or Converted.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ApiName	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Uniquely identifies a picklist value so it can be retrieved without using an id or primary label.
IsConverted	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether this lead status value represents a converted lead (`true`) or not (`false`). Multiple lead status values can represent a converted lead.
IsDefault	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether this is the default lead status value (`true`) or not (`false`) in the picklist.
MasterLabel	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Label for this lead status value. This display value is the internal label that does not get translated.
SortOrder	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Number used to sort this value in the lead status picklist. These numbers are not guaranteed to be sequential, as some previous lead status values might have been deleted.

Usage

This object represents a value in the lead status picklist (see Lead Status Picklist). The lead status picklist provides additional information about the status of a Lead, such as whether a given status value represents a converted Lead. Query this object to retrieve the set of values in the lead status picklist, and then use that information while processing Lead objects to determine more information about a given lead. For example, the application could test whether a given lead is converted based on its Status value and the value of the `IsConverted` property in the associated LeadStatus record.

LeadOwnerSharingRule
LeadShare

LeadTag

Associates a word or short phrase with a Lead.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
`ItemId`	**Type** reference **Properties** Create, Filter **Description** ID of the tagged item.
`Name`	**Type** string **Properties** Create, Filter **Description** Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
`TagDefinitionId`	**Type** reference **Properties** Filter

Field Name	Details
	Description ID of the parent TagDefinition object that owns the tag.
`Type`	**Type** picklist **Properties** Create, Filter, Restricted picklist **Description** Defines the visibility of a tag. Valid values: • `Public`—The tag can be viewed and manipulated by all users in an organization. • `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`.

Usage

LeadTag stores the relationship between its parent TagDefinition and the Lead being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

LearningContent

Represents a Trailhead or enablement site (myTrailhead) module assigned to a user. This object is available in API version 54.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

Important: This object is used only with Workforce Engagement.

- The org must have a Workforce Engagement license.
- The org must have an Enablement Sites (myTrailhead) license.
- The user must have at least one Workforce Engagement permission set assigned to them: Workforce Engagement Admin, Workforce Engagement Analyst, Workforce Engagement Planner, Workforce Engagement Agent.

Fields

Field	Details
ApiName	**Type** string **Properties** Filter, Group, Nillable **Description** The module's human-readable API name, such as `pure-aloe-sales-strategies`.
AvailablePointCount	**Type** int **Properties** Group, Nillable **Description** The maximum points that a user can earn on their profile by completing the module. This value is the sum of points that the content creator assigns to the module's units.
ContainsAssessmentType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist **Description** Specifies the type of assessment that the content's units include. Possible values are: • `MultipleChoiceQuiz`—All the content's units have multiple-choice quizzes. • `HandsOnChallenge`—At least one unit has a hands-on challenge.
ContentType	**Type** picklist **Properties** Group, Nillable, Restricted picklist **Description** The type of content assigned to the user. Possible values are: • `Module`—The content is a Trailhead or enablement site (myTrailhead) module
ContentUrl	**Type** url **Properties** Group, Nillable

Field	Details
	Description The absolute URL to the content, such as `https://purealoe.my.trailhead.com/en/content/sales-team-enablement/modules/pure-aloe-sales-strategies`
`Description`	**Type** string **Properties** Nillable **Description** The module's description.
`DurationCount`	**Type** int **Properties** Group, Nillable **Description** The total time, in minutes, for a learner to complete all units in the module. This value is the sum of the estimated times that the content creator assigns to the module's units.
`ExternalId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The GUID that Trailhead uses to reference the module.
`ImageUrl`	**Type** url **Properties** Group, Nillable **Description** The absolute URL to the module's badge art image file.
`IsPublic`	**Type** boolean **Properties** Defaulted on create, Filter, Group **Description** Indicates whether the content is public Trailhead content (`true`) or private enablement site (myTrailhead) content (`false`). The default value is `false`.

Field	Details
`Title`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The module's title.

PersonTraining

LearningItem

Represents an item that requires users to take action, including a Learning Paths entry, an Enablement program, or an exercise with linked content in an Enablement program. For Learning Paths, users are assigned a learning item to complete. For Enablement programs and exercises, users are assigned a program or can self-enroll in shared programs. This object is available in API version 58.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a supported Partner Relationship Management (PRM) add-on license.

Fields

Field	Details
`EnablementProgramId`	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description ID of an Enablement program that contains the outcome, milestone, or exercise. This field is a relationship field. **Relationship Name** EnablementProgram **Relationship Type** Lookup **Refers To** EnablementProgram
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the owner of the program. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`Type`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of learning item. Possible values are: • `EnablementProgram` • `LearningContent`—Trailhead Module • `LearningLesson`—Lesson • `LearningLink`—Link • `LearningPractice`—Practice • `Prompt`

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

LearningItemOwnerSharingRule on page 48 (API version 60.0)
Sharing rules are available for the object.

LearningItemShare on page 50 (API version 60.0)
Sharing is available for the object.

LearningItemAssignment

Represents the assignment of a Learning Paths entry to users or groups or the enrollment of an Enablement program for a specific user. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a supported Partner Relationship Management (PRM) add-on license.

Fields

Field	Details
`AssigneeId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the user or group assigned to the learning item. This field is a relationship field. **Relationship Name** Assignee **Relationship Type** Lookup **Refers To** User

Field	Details
AssignmentStatus	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The status of assigning an Enablement program to a user. Possible values are: • `Failed` • `InProgress` • `Succeeded`
DueDate	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** The date that the assignment is due for the user or group.
EnrollmentType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of enrollment for a user in an Enablement program. Possible values are: • `Assigned` • `SelfEnrolled`
IsOverdue	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the assigned learning item is overdue (`true`) or not (`false`). The default value is `false`. This field is a calculated field.
LearningItemId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the learning item. This field is a relationship field.

Field	Details
	Relationship Name LearningItem **Relationship Type** Lookup **Refers To** LearningItem
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** ID of the user who assigned the learning item. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`StartDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort **Description** The date that the learning item was assigned to the user or group.

Usage

You can assign a learning item to a user programmatically by querying the program and user, and then inserting a record into LearningItemAssignment.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

LearningItemAssignmentOwnerSharingRule on page 48 (API version 60.0)
Sharing rules are available for the object.

LearningItemAssignmentShare on page 50 (API version 60.0)
Sharing is available for the object.

LearningItemProgress

Represents the progress that a user has made towards completing an assigned learning item, such as a Learning Paths entry or Enablement program. This object is available in API version 60.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a supported Partner Relationship Management (PRM) add-on license.

Fields

Field	Details
CompletedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the user completed the learning item.
CompletedOnDay	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Number of days that the user took to complete the learning item.
CompletedPercent	**Type** percent **Properties** Filter, Sort **Description** Percentage of the learning item that's complete.

Field	Details
DaysInProgress	**Type** int **Properties** Nillable **Description** Number of days that have elapsed since the learning item was assigned.
LearningItemId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the learning item. This field is a relationship field. **Relationship Name** LearningItem **Relationship Type** Lookup **Refers To** LearningItem
OwnerId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the owner of the learning item. This field is a relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** User
ProgressStatus	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Status of the learning item assignment. Possible values are: • Behind • Completed

Field	Details
	• `CompletedLate` • `CompletedOnTime` • `InProgress` • `NoLongerTracking` • `NotStarted` • `OnTrack` • `Overdue` For details, see Completion Statuses in Enablement Analytics.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

LearningItemProgressChangeEvent on page 52
Change events are available for the object.

LearningItemProgressOwnerSharingRule on page 48
Sharing rules are available for the object.

LearningItemProgressShare on page 50
Sharing is available for the object.

LearningItemSubmission

Represents a link to a resource, such as a video recording, that a an Enablement user submits as part of a Feedback Request exercise in an Enablement program. For example, when a sales rep submits a recording of their sales pitch for review, this object stores the link to the recording. This object is available in API version 59.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

A learning item submission record is created when users take an Enablement program that includes a Feedback Request exercise. The Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.

Fields

Field	Details
LearningItemId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the learning item assigned to the Enablement user, where the type of the learning item is LearningPractice. Corresponds to the Feedback Request exercise. This field is a relationship field. **Relationship Name** LearningItem **Relationship Type** Lookup **Refers To** LearningItem
OwnerId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the owner of the learning item submission. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
Url	**Type** url **Properties** Filter, Sort **Description** URL of the content that the Enablement user wants feedback on. For example, a link to a video recording of a sales rep’s practice pitch.

Usage

```
SELECT Id, LearningItemId, OwnerId, Url FROM LearningItemSubmission
```

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

LearningItemSubmissionOwnerSharingRule on page 48
Sharing rules are available for the object.

LearningItemSubmissionShare on page 50
Sharing is available for the object.

LearningPractice

Represents a Feedback Request exercise that an Enablement admin adds to a program, where a user invites a peer, trusted coach, or expert to provide feedback. For example, a sales rep practices their sales pitch and requests a review. This object is available in API version 59.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.

Fields

Field	Details
`Description`	**Type** string **Properties** Filter, Sort **Description** Instructions to the user to provide context for completing the Feedback Request exercise. For example, `Record yourself giving a sales pitch and request feedback from your peers.`

Field	Details
InviteeQuantity	**Type** int **Properties** Defaulted on create, Filter, Group, Sort **Description** The number of peers who the Enablement user is required to invite for giving feedback. Each peer receives an invitation to the assessment survey associated with the Feedback Request exercise.
LearningItemId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the learning item. This field is a relationship field. **Relationship Name** LearningItem **Relationship Type** Lookup **Refers To** LearningItem
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the Feedback Request exercise. For example, `Practice Your Sales Pitch`.
SurveyId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the assessment survey that the Enablement user sends when they request feedback. This field is a relationship field. **Relationship Name** Survey **Relationship Type** Lookup

Field	Details
	Refers To Survey

Usage

```
SELECT Id, Name, Description, SurveyId, LearningItemId, InviteeQuantity FROM LearningPractice
```

LegalEntity

Represents the way an organization is structured. An organization can be a single legal entity or it can comprise more than one legal entity. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Salesforce Billing.

Fields

Field	Details
CompanyName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The name of the company that this legal entity represents.
Description	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The description of the legal entity.
LastReferencedDate	**Type** datetime

Field	Details
	Properties Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** datetime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, it’s possible that this record was referenced (`LastReferencedDate`) and not viewed.
`LegalEntityAddress`	**Type** address **Properties** Filter, Nillable **Description** The address of the company that this legal entity represents. This field is a compound field of type Address and combines these fields: LegalEntityCity, LegalEntityCountry, LegalEntityGeocodeAccuracy, LegalEntityLatitude, LegalEntityLongitude, LegalEntityPostalCode, LegalEntityState, and LegalEntityStreet. For more information, see Address Compound Fields.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the legal entity.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the record owner.
`Status`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description The status of the legal entity. Possible values are: • `Active` • `Inactive`

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

LegalEntityFeed
Feed tracking is available for the object.

LegalEntityHistory
History is available for tracked fields of the object.

LegalEntityOwnerSharingRule
Sharing rules are available for the object.

LegalEntityShare
Sharing is available for the object.

LicenseDefinitionCustomPermission (Developer Preview)

Represents a licensed custom permission that controls access to a license's features when included in a custom permission set license definition. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access LicenseDefinitionCustomPermission, you must have the Partner Licensing Platform developer preview enabled. To participate in this developer preview, submit a participation request via the Partner Licensing Platform Developer Preview Partner Community group.

Note: The Partner Licensing Platform is available as a developer preview. The Partner Licensing Platform isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. All commands, parameters, and other features are subject to change or deprecation at any time, with or without notice. Don't implement functionality developed with these commands or tools in your production package.

Fields

Field	Details
LicenseDefinitionId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the custom permission set license definition that contains the licensed custom permission. This is a relationship field. **Relationship Name** LicenseDefinition **Relationship Type** Lookup **Refers To** PermissionSetLicenseDefinition
LicensedCustomPermissionId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the licensed custom permission that you're including in the permission set license definition. On the CustomPermission object, the `isLicensed` field must equal true. This is a relationship field. **Relationship Name** LicensedCustomPermission **Relationship Type** Lookup **Refers To** CustomPermission

Usage

For more information, see the Partner Licensing Platform Developer Guide (Developer Preview).

LightningExperienceTheme

Represents information for a theme in Lightning Experience. This object is available in API Version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`DefaultBrandingSetId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the default branding set. This is a relationship field. **Relationship Name** DefaultBrandingSet **Relationship Type** Lookup **Refers To** BrandingSet
`Description`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** The description of the theme. Limit: 1,000 characters.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the theme in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The label corresponds to the theme name in the user interface. Limit: 70 characters. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.

Field	Details
	Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Required. Language of the label. Possible values are: • da (Danish) • de (German) • en_US (English) • es (Spanish) • es_MX (Spanish - Mexico) • fi (Finnish) • fr (French) • it (Italian) • ja (Japanese) • ko (Korean) • nl_NL (Dutch) • no (Norwegian) • pt_BR (Portuguese (Brazil)) • ru (Russian) • sv (Swedish) • th (Thai) • zh_CN (Chinese - Simplified) • zh_TW (Chinese - Traditional)
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. The name of the theme. Specify up to 70 characters.
NamespacePrefix	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
ShouldOverrideLoadingImage	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether a custom image overrides the Salesforce loading image (`true`) or not (`false`).

LightningOnboardingConfig

Represents the feedback provided when users switch from Lightning Experience to Salesforce Classic. Admins can customize the question, how frequently the form appears, and where the feedback is stored in Chatter from the Adoption Assistance page in Lightning Experience Setup. Available in API version 47.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

See Switch to Salesforce Classic Feedback Form in Salesforce Help for more details.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`CollaborationGroupId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the Chatter Group where the user feedback is posted. This is a relationship field. **Relationship Name** CollaborationGroup **Relationship Type** Lookup **Refers To** CollaborationGroup
`CustomQuestion`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** Text of the custom question added by the admin. Maximum of 1,000 characters.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.

Field	Details
FeedbackFormDaysFrequency	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of days between showing the feedback form when a user switches. A value of 0 indicates that the form is shown for every switch. Maximum of 30.
IsCustom	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates if a feedback form includes a custom question yes or not no.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the language used in the org where the feedback form was created.
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The label for the prompt. Maximum of 80 characters.
PromptDelayTime	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the amount of time in seconds to delay between instances of all prompts, both org- and Salesforce-created. Minimum of 0 hours and 0 minutes. Maximum of 99 hours and 59 minutes.
SendFeedbackToSalesforce	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates if the user feedback can be shared with Salesforce. If `yes`, share the feedback with Salesforce. If `no`, the feedback is only shared in the Chatter Group chosen when customizing the form. The default value is `false`.

LightningToggleMetrics

Represents users who switched from Lightning Experience back to Salesforce Classic. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Not available in sandbox orgs.

Fields

Field Name	Details
`Action`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** User switched from Lightning Experience to Salesforce Classic or from Salesforce Classic to Lightning Experience.
`MetricsDate`	**Type** date **Properties** Filter, Group, Sort **Description** Date user switched.
`RecordCount`	**Type** int **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description Number of user switches.
`UserId`	**Type** reference **Properties** Filter, Group, Sort **Description** UserId of user who switched. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

LightningUsageByAppTypeMetrics

Represents number of users on Lightning Experience and Salesforce Mobile. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Not available in sandbox orgs.

Fields

Field Name	Details
`AppExperience`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** User's app (Lightning Experience or Salesforce Mobile).

Field Name	Details
MetricsDate	**Type** date **Properties** Filter, Group, Sort **Description** Date user accessed Lightning Experience or Salesforce Mobile.
UserId	**Type** reference **Properties** Filter, Group, Sort **Description** UserId for user accessing Lightning Experience or Salesforce Mobile. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

LightningUsageByBrowserMetrics

Represents Lightning Experience usage grouped by user's browser. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Not available in sandbox orgs.

Fields

Field Name	Details
Browser	**Type** string

Field Name	Details
	Properties Filter, Group, Nillable, Sort **Description** Browser used to access Lightning Experience.
MetricsDate	**Type** date **Properties** Filter, Group, Sort **Description** Date user accessed Lightning Experience.
PageName	**Type** string **Properties** Filter, Group, Sort **Description** Page user viewed in Lightning Experience.
TotalCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Total number of pages accessed in Lightning Experience.

LightningUsageByPageMetrics

Represents standard pages users viewed most frequently in Lightning Experience. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Not available in sandbox orgs.

Fields

Field Name	Details
`MetricsDate`	**Type** date **Properties** Filter, Group, Sort **Description** Date user viewed page in Lightning Experience.
`PageName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Name of page user viewed.
`TotalCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Total number of pages viewed.
`UserId`	**Type** reference **Properties** Filter, Group, Sort **Description** UserId of user who viewed page. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

LightningUsageByFlexiPageMetrics

Represents custom pages users viewed most frequently in Lightning Experience. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Not available in sandbox orgs.

Fields

Field Name	Details
`FlexiPageNameOrId`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Name or Id of custom page user viewed in Lightning Experience.
`FlexiPageType`	**Type** string **Properties** Filter, Group, Sort **Description** Custom page type.
`MetricsDate`	**Type** date **Properties** Filter, Group, Sort **Description** Date user viewed page in Lightning Experience.
`TotalCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Total number of custom pages viewed.

LightningExitByPageMetrics

.Represents standard pages users switched from Lightning Experience to Salesforce most frequently. This object is available in API version 44.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Not available in sandbox orgs.

Fields

Field Name	Details
`MetricsDate`	**Type** date **Properties** Filter, Group, Sort **Description** Date user viewed page in Lightning Experience.
`PageName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Name of page user viewed.
`RecordCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Total number of pages where the switch occured.
`UserId`	**Type** reference **Properties** Filter, Group, Sort

Field Name	Details
	Description UserId of user who viewed page. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

LinkedArticle

Represents a knowledge article that is attached to a work order, work order line item, or work type. This object is available in API version 37.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Knowledge must be enabled in your org. Field Service must be enabled. Only users that have access to the Knowledge article and the parent record linked to it can access this object.

In Knowledge in Salesforce Classic, only Field Service objects such as Work Order, Work Type, and Work Order Line Item are supported for linked articles. In Lightning Knowledge, other social objects such as Chat, Messaging, Voice Call, and Social Post are supported for linked articles.

To call `update()` to attach or detach articles, enable the Read user permission on the Knowledge object and the Edit user permission on the object whose article you update. Available in API version 58.0 and later.

Fields

Field Name	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field Name	Details
	Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
KnowledgeArticleId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the Knowledge article attached to the record. The label in the user interface is Knowledge Article ID.
KnowledgeArticleVersionId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The version of the Knowledge article attached to the record. This field lists the title of the attached version and links to the version. The label in the user interface is Article Version. When you attach an article to a work order, that version of the article stays associated with the work order, even if later versions are published. If needed, you can detach and reattach an article to a work order to link the latest version.
LinkedEntityId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the record that the Knowledge article is attached to. The label in the user interface is Linked Record ID.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The title of the article. The label in the user interface is Article Title.
RecordTypeId	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the article's record type, if used. This field is only available for Lightning Knowledge.
`Type`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** (Read only) The type of record that the Knowledge article is attached to. For example, work order. The label in the user interface is Linked Object Type.

Usage

Admins can customize linked articles' page layouts, fields, validation rules, and more from the Linked Articles page in Setup.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

LinkedArticleFeed
Feed tracking is available for the object.

LinkedArticleHistory
History is available for tracked fields of the object.

LinkedArticleFeed

Represents the comment feed on a linked article. This object is available in API version 39.0 and later.

For additional information about feeds, see FeedItem on page 2030.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Knowledge must be enabled in your org.

Fields

Field	Details
`BestCommentId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the comment marked as best answer on a question post.
`Body`	**Type** textarea **Properties** Nillable, Sort **Description** The body of the feed item. Required when `Type` is `TextPost` or `AdvancedTextPost`. Optional when `Type` is `ContentPost` or `LinkPost`. Although a value for `Body` is not required for the `ContentPost` type, an attachment is required. If an attachment isn't present, the type changes to `TextPost` or `AdvancedTextPost`, depending on the API version. `TextPost` and `AdvancedTextPost` do require a value for `Body`. Tip: See the `IsRichText` field for a list of HTML tags supported in the body of rich text posts.
`CommentCount`	**Type** int **Properties** Filter, Group, Sort **Description** The number of comments associated with this feed item.
`InsertedById`	**Type** reference **Properties** Group, Nillable, Sort **Description** ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the `InsertedBy` value is set to the ID of the context user.
`IsRichText`	**Type** boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort **Description** Indicates whether the feed item `Body` contains rich text. If you post a rich text feed comment using SOAP API, set `IsRichText` to `true` and escape HTML entities from the body. Otherwise, the post is rendered as plain text. Rich text supports the following HTML tags: • `<p>` Tip: Though the ` ` tag isn't supported, you can use `<p> </p>` to create lines. • `<a>` • `<b>` • `<code>` • `<i>` • `<u>` • `<s>` • `<ul>` • `<ol>` • `<li>` • `<img>` The `<img>` tag is accessible only through the API and must reference files in Salesforce similar to this example: `<img src="sfdc://069B0000000omjh"></img>` Note: In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation.
`LikeCount`	**Type** int **Properties** Filter, Group, Sort **Description** The number of likes associated with this feed item.
`LinkUrl`	**Type** url **Properties** Nillable, Sort **Description** The URL of a `LinkPost`.

Field	Details
ParentId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the object type to which the feed item is related. For example, set this field to a UserId to post to someone's profile feed, or an AccountId to post to a specific account.
RelatedRecordId	**Type** reference **Properties** Group, Nillable, Sort **Description** ID of the ContentVersion record associated with a ContentPost. For WDC thanks posts, it's the ID of the WorkThanks object associated with a RypplePost. This field is typically null for all posts except ContentPost and RypplePost. For example, set this field to an existing ContentVersion ID and post it to a feed with Type set to ContentPost.
Title	**Type** string **Properties** Group, Nillable, Sort **Description** The title of the feed item. When the Type is LinkPost, the LinkUrl is the URL and this field is the link name. The Title field can be updated on posts of Type QuestionPost.
Type	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of feed item. Except for ContentPost, LinkPost, and TextPost, don't create feed items of other types directly from the API. • ActivityEvent—indirectly generated event when a user or the API adds a Task associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a Task or Event associated with a case record (excluding email and call logging). For a recurring Task with CaseFeed disabled, one event is generated for the series only. For a recurring Task with CaseFeed enabled, events are generated for the series and each occurrence.

Field	Details
	• `AdvancedTextPost`—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post. • `AnnouncementPost`—Not used. • `ApprovalPost`—generated when a user submits an approval. • `BasicTemplateFeedItem`—Not used. • `CanvasPost`—a post made by a canvas app posted on a feed. • `CollaborationGroupCreated`—generated when a user creates a public group. • `CollaborationGroupUnarchived`—Not used. • `ContentPost`—a post with an attached file. • `CreatedRecordEvent`—generated when a user creates a record from the publisher. • `DashboardComponentAlert`—generated when a dashboard metric or gauge exceeds a user-defined threshold. • `DashboardComponentSnapshot`—created when a user posts a dashboard snapshot on a feed. • `LinkPost`—a post with an attached URL. • `PollPost`—a poll posted on a feed. • `ProfileSkillPost`—generated when a skill is added to a user's Chatter profile. • `QuestionPost`—generated when a user posts a question. • `ReplyPost`—generated when Chatter Answers posts a reply. • `RypplePost`—generated when a user creates a Thanks badge in WDC. • `TextPost`—a direct text entry on a feed. • `TrackedChange`—a change or group of changes to a tracked field. • `UserStatus`—automatically generated when a user adds a post. Deprecated. The following values appear in the `Type` picklist for all feed objects but apply only to CaseFeed: • `AttachArticleEvent`—generated event when a user attaches an article to a case. • `CallLogPost`—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event. • `CaseCommentPost`—generated event when a user adds a case comment for a case object. • `ChangeStatusPost`—generated event when a user changes the status of a case. • `ChatTranscriptPost`—generated event when Chat transcript is saved to a case. • `EmailMessageEvent`—generated event when an email related to a case object is sent or received. • `FacebookPost`—generated when a Facebook post is created from a case. Deprecated. • `MilestoneEvent`—generated when a case milestone is completed or reaches violation status. • `SocialPost`—generated when a social post is created from a case.

Field	Details
	Note: If you set `Type` to `ContentPost`, also specify `ContentData` and `ContentFileName`.

LinkedArticleHistory

Represents the history of changes made to tracked fields on a linked article. This object is available in API version 37.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Special Access Rules

Knowledge must be enabled in your org.

Fields

Field Name	Details
`DataType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Data type of the field that was changed.
`Field`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The name of the field that was changed.
`LinkedArticleId`	**Type** reference **Properties** Filter, Group, Sort

Field Name	Details
	Description The ID of the tracked linked article. The history is displayed on the detail page for this record.
`NewValue`	**Type** anyType **Properties** Nillable, Sort **Description** The new value of the field that was changed.
`OldValue`	**Type** anyType **Properties** Nillable, Sort **Description** The value of the field before it was changed.

ListEmail

Represents a list email sent from Salesforce, or sent from Account Engagement and synced to Salesforce. When the list email is sent, the recipients are generated by combining recipients in ListEmailIndividualRecipients and ListEmailRecipientSource. Duplicate and other invalid recipients are removed. The result is the recipients sent any given list email. ListEmail has a one-to-many relationship with ListEmailRecipientSource and ListEmailIndividualRecipient. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`ActionCadenceStepId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the action cadence step that generated a list email record. Used for automated emails in Sales Engagement.

Field	Details
	Users must have the Sales Engagement Cadence Creator or Sales Engagement User permission enabled. This field is available in API version 54.0 and later. **Relationship Name** ActionCadenceStep **Relationship Type** Lookup **Refers To** ActionCadenceStep
CampaignId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the related campaign. This field is available in API version 42.0 and later. This is a relationship field. **Relationship Name** Campaign **Relationship Type** Lookup **Refers To** Campaign
ClickThroughRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of visitors who click links contained in emails delivered (sent minus bounces) to them. Multiple clicks for a same link are counted. This field is available in API version 41.0 and later. To access this field, your org must useAccount Engagement and users need the CRM User or Sales User permission set.
ClickToOpenRatio	**Type** percent **Properties** Filter, Nillable, Sort

Field	Details
	Description The number of unique clicks divided by unique HTML opens. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
`DeliveryRate`	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of the emails that were delivered compared to the number that bounced (soft and hard). Note: this data includes emails that were delivered to the recipient's spam folder. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
`EmailContentId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the email content record associated with the list email. This field is available in API version 50.0 or later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
`FromAddress`	**Type** textarea **Properties** Create, Filter, Update **Description** Read-only except when the list email is in a draft state. Validated against user's addresses.
`FromName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Read-only except when the list email is in a draft state. Validated against user's addresses. This field is null for emails sent from Account Engagement.

Field	Details
`HasAttachment`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Read-only. Defaulted on create and update. Value is `true` if the list email has an attachment. This field is null for emails sent from Account Engagement.
`HtmlBody`	**Type** textarea **Properties** Create, Nillable, Update **Description** The body of the list email. This field is null for emails sent from Account Engagement. List emails can contain up to 32,000 characters for the body. These limits include visible characters and other characters in the email, including markup.
`IsTracked`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates if email tracking was on when the list email was sent. This field is blank for emails sent from Account Engagement and synced to Salesforce. This field is null for emails sent from Account Engagement.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp that indicates when the current user last viewed a record that is related to this list email. This field is null for emails sent from Account Engagement.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. This field is null for emails sent from Account Engagement.

Field	Details
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Read-only except when the list email is in a draft state.
OpenRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of unique HTML opens compared to the total number of emails delivered (sent minus bounces). This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
OptOutRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of users that have opted out compared to the total number of emails sent. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** References Group and User. This field is null for emails sent from Account Engagement. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User

Field	Details
`ProgramName`	**Type** string **Properties** Filter, Group, Nillable **Description** The name of an Engagement Studio program where an automated email originates. Reserved for future use. This field is available in API version 46.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
`ScheduledDate`	**Type** dateTime **Properties** CreateFilter, Nillable, Sort, Update **Description** Read-only. If null and `Status` is set to Scheduled` defaults to created time.
`SentVia`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates whether the email was sent from Salesforce or Account Engagement. The allowed values are `Salesforce` or `Pardot` or `MessagingService`. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
`SpamComplaintRate`	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of spam complaints compared to the total number of emails sent. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
`Status`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description Read-only except when the list email is in a draft state. Changing the status to Scheduled causes the list email to be sent. Valid values: • `Draft` • `Scheduled` • `Sent` • `Limit Error` • `Cancelled`
`Subject`	**Type** textarea **Properties** Create, Filter, Nillable, Update **Description** Read-only except when the list email is in a draft state. This field is null for emails sent from Account Engagement. List emails can contain up to 3,000 characters for the subject. These limits include visible characters and other characters in the email, including markup.
`TextBody`	**Type** textarea **Properties** Create, Nillable, Update **Description** Read-only except when the list email is in a draft state. This field is null for emails sent from Account Engagement.
`TotalDelivered`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total number of emails minus hard and soft bounces. Note: this data includes emails that were delivered to the recipient's spam folder. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
`TotalHardBounced`	**Type** int

Field	Details
	Properties Defaulted on create, Filter, Group, Nillable, Sort **Description** The total number of emails that permanently bounced back to the sender because the address is invalid. A hard bounce can occur because the domain name doesn't exist or because the recipient is unknown. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
`TotalOpens`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The total number of times a prospect's email client loaded the images in the HTML version of the email. We also record an open if the prospect clicks a link within the HTML or text email without downloading images. A click indicates that they viewed the message. Some email clients (Outlook, Apple Mail, Thunderbird) don't display images by default. Account Engagement counts an open each time the images load. This field is available in API version 41.0 and later. To access this field. users need the Sales Engagement User permission set or your org must use Account Engagement and users need the CRM User or Sales User permission set.
`TotalOutOfOffice`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The total number of replies received with an out-of-office message. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the Salesforce Engage permission set.
`TotalReplies`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The total number of replies received. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the Salesforce Engage permission set.

Field	Details
TotalSent	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** Read-only. The total number of list emails sent, including bounced, opted-out, and invalid To: addresses.
TotalSoftBounced	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The total number of times a recipient’s mail server acknowledged the email, but returned it to the sender. Sometimes it is because the recipient's mailbox is full or the mail server is temporarily unavailable. A soft bounce message can sometimes be deliverable at another time. After 5 soft bounces, Account Engagement opts the prospect out of emails. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
TotalSpamComplaints	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The total number of prospects that reported the email as spam. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
TotalTrackedLinkClicks	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The number of times prospects clicked a link in the email. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
Type	**Type** picklist

Field	Details
	Properties Filter, Group, Nillable, Restricted picklist **Description** The type of email sent: list email or automated email. Reserved for future use. This field is available in API version 46.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
UniqueClickThroughRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of visitors who clicked a link contained in an email. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
UniqueOpens	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The number of prospects who loaded the images in the HTML version of the email. The Unique Opens category counts each recipient one time only, even if the prospect loaded images several times. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
UniqueOptOuts	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** Unique opt-outs represent the total number of prospects that have clicked the link to unsubscribe or opted out of all emails in the Email Preference Center. These prospects are removed from future email sends. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
UniqueReplies	**Type** int

Field	Details
	Properties Defaulted on create, Filter, Group, Nillable, Sort **Description** The total number of unique replies. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the Salesforce Engage permission set.
`UniqueTrackedLinkClicks`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The number of times a prospect clicked a link in the email. This metric doesn't include multiple clicks of the same link. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

AccountChangeEvent (API version 44.0)
Change events are available for the object.

ListEmailOwnerSharingRule
Sharing rules are available for the object.

ListEmailShare
Sharing is available for the object.

ListEmailIndividualRecipient

For a list email in Salesforce, represents a recipient. Each record represents a link from a list email to exactly one recipient for that list email. Recipients can be contacts, leads, or campaign members. Has a one-to-many relationship with ListEmail. This object is available in API version 44.0 and later.

The visibility and accessibility of this object is inherited from the related list email.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ActionCadenceStepTrackerId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Understand which action cadence step tracker the list email individual recipient is related to. Used for automated emails in Sales Engagement. Users must have the Sales Engagement Cadence Creator or Sales Engagement User permission enabled. This field is available in API version 54.0 and later. **Relationship Name** ActionCadenceStepTracker **Relationship Type** Lookup **Refers To** ActionCadenceStepTracker
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Possible values are: • `EUR` (Euro) • `INR` (Indian Rupee) • `USD` (US Dollars)
ListEmailId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The related list email record. Required on record creation; read-only otherwise. This is a relationship field. **Relationship Name** ListEmail **Relationship Type** Lookup

Field	Details
	Refers To ListEmail
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The auto-generated name of the list email recipient source.
`RecipientId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** the contact, lead, person account, or campaign member ID of the individual list email recipient. This is a relationship field. **Relationship Name** Recipient **Relationship Type** Lookup **Refers To** CampaignMember, Contact, Lead

Usage

ListEmailRecipientSource

For a list email in Salesforce, represents the dynamically defined sources of recipient email addresses. Each record represents a link to a single list view or campaign that is examined when the list email is sent. Has a one-to-many relationship with ListEmail. This object is available in API version 41.0 and later.

The visibility and accessibility of this object is inherited from the related list email.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `getDeleted()`, `getUpdated()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`ListEmailId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The related list email record. Required on record creation; read-only otherwise. This is a relationship field. **Relationship Name** ListEmail **Relationship Type** Lookup **Refers To** ListEmail
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The auto-generated name of the list email recipient source.
`SourceListId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Required. The id of a list view to send the list email to. Read-only except when list email is in draft state. This is a polymorphic relationship field. **Relationship Name** SourceList **Relationship Type** Lookup **Refers To** Campaign, ListView, Topic
`SourceType`	**Type** reference

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. Read-only except when list email is in draft state. Valid values: • Include

ListView

Represents a list view. A list view specifies a set of records for an object, based on specific criteria. This object is available in API version 32.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

Fields

Name	Details
`DeveloperName`	**Type** string **Properties** Filter, Group, Sort **Description** The fully qualified developer name of the list view.
`IsSoqlCompatible`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Whether the list view can be used with SOQL..
`LastModifiedById`	**Type** User **Properties** Filter, Sort **Description** The ID of the user who last modified the list view.

Name	Details
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the list view was last referenced, with a precision of one second.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the list view was last viewed, with a precision of one second.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the list view.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace of the list view.
`SobjectType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The API name of the sObject for the list view.

ListViewChart

Represents a graphical chart that's displayed on Salesforce for Android, iOS, and mobile web list views. The chart aggregates data that is filtered based on the list view that's currently displayed. This object is available in API version 33.0 and later and is accessible by portal users.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Name	Description
AggregateField	**Type** picklist **Properties** Create, Filter, Group, Nillable, Query, Restricted picklist, Retrieve, Sort, Update **Description** The field that's used for calculating data on each group. `AggregateField` can't be the same as `GroupingField`.
AggregateType	**Type** picklist **Properties** Create, Filter, Group, Query, Restricted picklist, Retrieve, Sort, Update **Description** The type of calculations to run on each group. The supported `AggregateType` values are `Count`, `Sum`, and `Avg`.
ChartType	**Type** picklist **Properties** Create, Filter, Group, Query, Restricted picklist,Retrieve, Sort, Update **Description** The type of chart to create. The supported chart types are horizontal bar chart, vertical bar chart, and donut chart.
DeveloperName	**Type** string **Properties** Create, Filter, Group, Query, Retrieve, Sort, Update **Description** The fully qualified developer name of the chart. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
GroupingField	**Type** picklist

Name	Description
	Properties Create, Filter, Group, Nillable, Query, Restricted picklist, Retrieve, Sort, Update **Description** The field that's used to divide the data into collections. The field must be supported by SOQL `GROUP BY` functionality. `GroupingField` can't be the same as `AggregateField`.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the `MasterLabel`.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Query, Retrieve, Sort, Update **Description** The label for the chart.
`OwnerId`	**Type** reference **Properties** Create, Filter, Group, Query, Retrieve, Sort, Update **Description** The ID of the user who owns the chart. This is a relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** User
`SobjectType`	**Type** picklist **Properties** Create, Filter, Group, Query, Restricted picklist, Retrieve, Sort **Description** The API name of the sObject for the chart.

ListViewChartInstance

Retrieves metadata for all standard and custom charts for a given entity in context of a given list view. This object is available in API versions 34.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field Name	Details
`AggregateField`	**Type** string **Properties** Filter, Group, Sort **Description** The field that's used for calculating data on each group. `AggregateField` can't be the same as `GroupingField`.
`AggregateType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of calculations to run on each group. The supported `AggregateType` values are `Count`, `Sum`, and `Avg`.
`ChartType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of chart to create. The supported chart types are horizontal bar chart, vertical bar chart, and donut chart.
`DataQuery`	**Type** textarea **Properties** Filter, Nillable, Sort **Description** The SOQL query that can be executed to fetch the data for drawing a chart.

Field Name	Details
DataQueryWithoutUserFilters	**Type** textarea **Properties** Filter, Nillable, Sort **Description** The SOQL query that can be executed to fetch the data for drawing a chart, without user filters. Available in API v43.0 and later.
DeveloperName	**Type** string **Properties** Filter, Group, Sort **Description** API name of the chart. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
ExternalId	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Reserved for future use.
GroupingField	**Type** string **Properties** Filter, Group, Sort **Description** The field that's used to divide the data into collections. The field has to be supported by SOQL `GROUP BY` functionality. `GroupingField` can't be the same as `AggregateField`.
IsDeletable	**Type** boolean

Field Name	Details
	Properties Defaulted on create, Filter, Group, Sort **Description** Indicates if the chart can be deleted.
`IsEditable`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates if the chart can be edited. Standard charts are not editable.
`IsLastViewed`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates if a chart is the last viewed by a user.
`Label`	**Type** string **Properties** Filter, Group, Sort **Description** The display name of the chart.
`ListViewChartId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the chart created by a user. For standard charts, this is null. This is a relationship field. **Relationship Name** ListViewChart **Relationship Type** Lookup **Refers To** ListViewChart

Field Name	Details
ListViewContextId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the list view in context of which the chart is generated. Required to query `ListViewChartInstance`. This is a relationship field. **Relationship Name** ListViewContext **Relationship Type** Lookup **Refers To** ListView
SourceEntity	**Type** string **Properties** Filter, Group, Sort **Description** API name of the entity to which the chart is related. Required to query `ListViewChartInstance`.

Usage

Example 1. Retrieve all custom and standard charts for Account entity for All Accounts list view

```
SELECT AggregateField, AggregateType, ChartType, DataQuery, DeveloperName, ExternalId,
 GroupingField, Id, IsDeletable, IsEditable, IsLastViewed, Label, ListViewChartId,
ListViewContextId, SourceEntity FROM ListViewChartInstance WHERE SourceEntity='Account'
 and ListViewContextId='00BR0000000U8Hr'
```

Example 2. Retrieve metadata for a specific custom chart by ID for Account entity and All Accounts list view

```
SELECT AggregateField, AggregateType, ChartType, DataQuery, DeveloperName, ExternalId,
 GroupingField, Id, IsDeletable, IsEditable, IsLastViewed, Label, ListViewChartId,
ListViewContextId, SourceEntity FROM ListViewChartInstance WHERE SourceEntity='Account'
 and ListViewContextID='00BR0000000U8Hr' and ListViewChartId='0DdR00000004CBxKAM'
```

Example 3. Retrieve metadata for a specific standard chart by its developer name for Account entity and All Accounts list view

```
SELECT AggregateField, AggregateType, ChartType, DataQuery, DeveloperName, ExternalId,
 GroupingField, Id, IsDeletable, IsEditable, IsLastViewed, Label, ListViewChartId,
ListViewContextId, SourceEntity FROM ListViewChartInstance WHERE SourceEntity='Account'
 and ListViewContextID='00BR0000000U8Hr' and DeveloperName='AccountsByIndustry'
```

LiveAgentSession

This object is automatically created for each Chat session and stores information about the session. This object is available in API versions 28.0 and later.

Note: Standard fields for the LiveAgentSession object can only be modified if your administrator has given you editing permissions for these records.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`

Fields

Field Name	Details
`AgentId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the agent associated with the session.
`ChatReqAssigned`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of chat requests that were assigned to an agent during a session.
`ChatReqDeclined`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of chat requests that were declined by an agent during a session.
`ChatReqEngaged`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of chats in which an agent was engaged during a session.

Field Name	Details
ChatReqTimedOut	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of chat requests that timed out in an agent's queue during a session.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the session record was last referenced.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the session record was last viewed.
LoginTime	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The date and time an agent logged in during the session.
LogoutTime	**Type** dateTime **Properties** Create, Filter, Sort, Update **Description** The date and time an agent logged out during a session.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookupSort **Description** The name of the session.

Field Name	Details
NumFlagLoweredAgent	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of assistance flags lowered by the agent.
NumFlagLoweredSupervisor	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of assistance flags lowered by the supervisor.
NumFlagRaised	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of assistance flags raised by the agent.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of the session record.
TimeAtCapacity	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The amount of time an agent spent with the maximum number of chats in his or her queue.
TimeIdle	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The amount of time an agent spent idle during the session.
`TimeInAwayStatus`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The amount of time an agent spent with a status of “Away” during a session.
`TimeInChats`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The amount of time an agent spent engaged in chats during a session.
`TimeInOnlineStatus`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The amount of time an agent spent with a status of “Online” during a session.

Usage

Use this object to query and manage chat session records.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

LiveAgentSessionHistory
History is available for tracked fields of the object.

LiveAgentSessionOwnerSharingRule
Sharing rules are available for the object.

LiveAgentSessionShare
Sharing is available for the object.

LiveAgentSessionHistory

This object is automatically created for each Chat session and stores information about changes made to the session. This object is available in API versions 28.0 and later.

Note: Standard fields for the LiveAgentSession object can only be modified if your administrator has given you editing permissions for these records.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Fields

Field Name	Details
`DataType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Data type of the field that was changed.
`Field`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The name of the field that was changed in a session record.
`LiveAgentSessionId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the session record that was changed.
`NewValue`	**Type** anyType **Properties** Nillable, Sort **Description** The new value of the field that was changed.

Field Name	Details
`OldValue`	**Type** anyType **Properties** Nillable, Sort **Description** The original value of the field that was changed.

Usage

Use this object to identify changes to chat session records.

LiveAgentSessionShare

This object is automatically created for each Chat session and stores information about the session. This object is available in API versions 28.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Note: Standard fields for the LiveAgentSession object can only be modified if your administrator has given you editing permissions for these records.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field Name	Details
`AccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update

Field Name	Details
	Description Level of access that the User or Group has to the LiveAgentSession. The possible values are: • `Read` • `Edit` • `All` (This value is not valid for `create()` or `update()` calls.) This value must be set to an access level that is higher than the organization's default access level for chat transcripts.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the parent object, if any.
`RowCause`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited. Values can include: • `Manual`—The User or Group has access because a user with "All" access manually shared the LiveAgentSession with them. • `Owner`—The User is the owner of the LiveAgentSession or is in a role above the LiveAgentSession owner in the role hierarchy.
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the user or group that has been given access to the LiveAgentSession.

Usage

This object lets you determine which users and groups can view and edit LiveAgentSession records owned by other users.

If you attempt to create a new record that matches an existing record, the `create()` call updates any modified fields and returns the existing record.

LiveChatBlockingRule

Represents a rule for blocking chat visitors' IP addresses from starting new chats with agents. This object is available in API version 34.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To create a new rule, you must be logged in with the "Customize Application" permission or as a system administrator.

Fields

Field Name	Details
`Description`	**Type** string **Properties** Create, Nillable **Description** The description of the blocking rule—for example, the reason why the given IP address or range of addresses is being banned from starting new chats.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.

Field Name	Details
	Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`FromIpAddress`	**Type** string **Properties** Create, Filter, Group, Sort **Description** The IP address of the user that you want to block, or the beginning of the range of IP addresses you want to block. If you want to block a range of IP addresses, indicate the end of the range in the `ToIpAddress` field. If you don't indicate an IP address in the `ToIpAddress` field, the only IP address that will be blocked is the IP address in the `FromIpAddress` field.
`Language`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The language of the blocking rule.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort **Description** Label for the blocking rule.
`ToIpAddress`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** (Optional) The end of the range of IP addresses that you want to block. The range begins with and includes the IP address in the `FromIpAddress` field, and it ends with and includes the IP address in the `ToIpAddress` field.

Usage

Use this object to query and manage rules for blocking customers from starting new chats with agents.

LiveChatObjectAccessConfig

Represents the action you can perform on a specified object by the Chat API. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, enable Chat. To see the list of objects you can find or create in the UI using this API, enable the "Turns on findOrCreate in chat API" permission. You can find this permission in the Chat Settings page of the Setup UI.

Fields

Field	Details
`AccessType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The API action you can perform on the object specified in `SobjectType`. Possible values are: • `Create` • `Find`
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the associated LiveChatObjectAccessDefinition record. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** LiveChatObjectAccessDefinition
`SobjectType`	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update **Description** The object that the action specified by `AccessType` applies to. Possible values are all standard and custom objects. Custom objects are available as picklist values in API version 55.0 and later.

SEE ALSO:

LiveChatObjectAccessDefinition

LiveChatObjectAccessDefinition

Represents the parent record for one or more LiveChatObjectAccessConfig objects. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, enable Chat. To see the list of objects you can find or create in the UI using this API, enable the "Turns on findOrCreate in chat API" permission. You can find this permission in the Chat Settings page of the Setup UI.

Fields

Field	Details
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. The name: • must be 40 characters or fewer • must begin with a letter • can contain only underscores and alphanumeric characters • can't include spaces • can't end with an underscore • can't contain 2 consecutive underscores

Field	Details
	In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The combined language and locale ISO code, which controls the language for labels displayed in an application. Possible values are: • `da`—Danish • `de`—German • `en_US`—English • `es`—Spanish • `es_MX`—Spanish (Mexico) • `fi`—Finnish • `fr`—French • `it`—Italian • `ja`—Japanese • `ko`—Korean • `nl_NL`—Dutch • `no`—Norwegian • `pt_BR`—Portuguese (Brazil) • `ru`—Russian • `sv`—Swedish • `th`—Thai • `zh_CN`—Chinese (Simplified) • `zh_TW`—Chinese (Traditional)
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The label for this object's record. This display value is the internal label that doesn't get translated.

LiveChatButton

Represents a button that allows visitors to request chats with Chat users. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
`Animation`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The type of animation used when an automated chat invitation appears on-screen. For automated chat invitations only. Available in API version 29.0 and later. Possible values are: • `Appear` • `Custom` • `Fade` • `Slide`
`AutoGreeting`	**Type** textarea **Properties** Create, Filter, Nillable, Sort, Update **Description** The text that is automatically sent from an agent to a visitor when a chat session starts. Note: A greeting message in the `AutoGreeting` field of the LiveChatButton object overrides individual users' greeting messages in the `AutoGreeting` field in the LiveChatUserConfig object.
`ChasitorIdleTimeout`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The amount of time a customer has to respond to an agent message before the chat times out.

Field Name	Details
`ChasitorIdleTimeoutWarning`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The amount of time a customer has to respond to an agent message before a warning appears and a timer begins a countdown. This value must be shorter than the `ChasitorIdleTimeout` value. We recommend at least 30 seconds shorter.
`ChatPageId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The record ID of the custom VisualForce page that contains the custom chat window code. This field is a relationship field. **Relationship Name** ChatPage **Relationship Type** Lookup **Refers To** ApexPage
`CustomAgentName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The custom name of the agent associated with the button. Available in API version 29.0 and later. Note: A custom agent name in the `CustomAgentName` field of the LiveChatButton object overrides individual users' custom agent name in the `CustomAgentName` field in the LiveChatUserConfig object.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update

Field Name	Details
	Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.
`HasQueue`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Determines whether or not to allow queing incoming chat requests until an agent is available. The default value is `false`.
`InviteEndPosition`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The position on screen where an automated chat invitation's animation ends. Note: You don't need to select an end position for your automated chat invitation if you use a custom animation. For automated chat invitations only. Available in API version 29.0 and later. Possible values are: • `Bottom` • `BottomLeft` • `BottomRight` • `Center` • `Left` • `Right` • `Top` • `TopLeft`

Field Name	Details
	• `TopRight`
`InviteImageId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The record ID of the static image resource displayed on your automated chat invitation. For automated chat invitations only. Available in API version 29.0 and later. This field is a relationship field. **Relationship Name** InviteImage **Relationship Type** Lookup **Refers To** StaticResource
`InviteStartPosition`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort , Update **Description** The position on screen where an automated chat invitation's animation begins. Note: You don't need to select a start position for your automated chat invitation if you use a custom animation. For automated chat invitations only. Available in API version 29.0 and later. Possible values are: • `Bottom` • `BottomLeft` • `BottomLeftBottom` • `BottomLeftLeft` • `BottomRight` • `BottomRightBottom` • `BottomRightRight` • `Left` • `Top` • `Right` • `TopLeft` • `TopLeftLeft`

Field Name	Details
	• `TopLeftTop` • `TopRight`—Top Right • `TopRightRight` • `TopRightTop`
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** For automated chat invitations, specifies whether an automated chat invitation is active or not. The default value is `false`.
`IsRoutingFlowEnabled`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Specifies whether routing flow is enabled or not. The default value is `false`.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the chat. Possible values are: • `da`—Danish • `de`—German • `en_US`—English • `es`—Spanish • `es_MX`—Spanish (Mexico) • `fi`—Finnish • `fr`—French • `it`—Italian • `ja`—Japanese • `ko`—Korean • `nl_NL`—Dutch

Field Name	Details
	• `no`—Norwegian • `pt_BR`—Portuguese (Brazil) • `ru`—Russian • `sv`—Swedish • `th`—Thai • `zh_CN`—Chinese (Simplified) • `zh_TW`—Chinese (Traditional)
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Label for the chat button.
`NumberOfReroutingAttempts`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Specifies the number of times a chat request can be rerouted to available agents if all agents reject the chat request.
`OfflineImageId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The record ID of the static image resource that is displayed when the button is offline (inactive). This field is a relationship field. **Relationship Name** OfflineImage **Relationship Type** Lookup **Refers To** StaticResource
`OnlineImageId`	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The record ID of the static image resource that is displayed when the button is online (active). This field is a relationship field. **Relationship Name** OnlineImage **Relationship Type** Lookup **Refers To** StaticResource
`OptionsHasChasitorIdleTimeout`	**Type** boolean **Properties** Create, Filter, Update **Description** Specifies whether Customer Time-Out is enabled.
`OptionsHasInviteAfterAccept`	**Type** boolean **Properties** Create, Filter, Update **Description** Specifies whether an automated chat invitation can be sent to a customer after that customer has accepted a prior automated chat invitation (`true`) or not (`false`). For automated chat invitations only. Available in API version 29.0 and later.
`OptionsHasInviteAfterReject`	**Type** boolean **Properties** Create, Filter, Update **Description** Specifies whether an automated chat invitation can be sent to a customer after that customer has rejected a prior automated chat invitation (`true`) or not (`false`). For automated chat invitations only. Available in API version 29.0 and later.
`OptionsHasRerouteDeclinedRequest`	**Type** boolean

Field Name	Details
	Properties Create, Filter, Update **Description** Specifies whether a chat request that has been rejected by all available agents should be rerouted to available agents again (`true`) or not (`false`).
`OptionsIsAutoAccept`	**Type** boolean **Properties** Create, Filter, Update **Description** Specifies whether a chat request should be automatically accepted by the agent it's assigned to (`true`) or not `false`). For chat buttons and automated chat invitations with `RoutingType` set to `Most Available` or `Least Active`. Available in API version 30.0 and later.
`OptionsIsInviteAutoRemove`	**Type** boolean **Properties** Create, Filter, Update **Description** Specifies whether an automated chat invitation should be automatically removed from the screen after a certain amount of time (`true`) or not (`false`). For automated chat invitations only. Available in API version 29.0 and later.
`OverallQueueLength`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The maximum number of chat requests allowed to queue.
`PerAgentQueueLength`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The maximum number of chat requests allowed to queue for each agent with the required skill.
`PostchatPageId`	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The record ID of the custom VisualForce page displayed when the chat ends. This field is a relationship field. **Relationship Name** PostchatPage **Relationship Type** Lookup **Refers To** ApexPage
`PostchatUrl`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The URL the user is directed to after the chat ends.
`PrechatFormPageId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The record ID of the custom VisualForce page displayed before the chat begins. This field is a relationship field. **Relationship Name** PrechatFormPage **Relationship Type** Lookup **Refers To** ApexPage
`PrechatFormUrl`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The URL the user is directed to before the chat begins.

Field Name	Details
PushTimeout	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of seconds an agent has to answer a chat request before it's routed to the next available agent.
QueueId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The record ID of the queue used for this chat button. This field is a relationship field. **Relationship Name** Queue **Relationship Type** Lookup **Refers To** Group
RoutingConfigurationId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The record ID of the routing configuration used for this chat button. This field is a relationship field. **Relationship Name** RoutingConfiguration **Relationship Type** Lookup **Refers To** QueueRoutingConfig
RoutingType	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update

Field Name	Details
	Description How chat requests are routed to agents. The values are: • `Choice`—Incoming chat requests are added to the queue in Live Agent in the Salesforce console and are available to any agent with the required skill. • `Least Active`—Incoming chats are routed to the agent with the required skill who has the fewest active chats. • `Most Available`—Incoming chats are routed to the agent with the required skill and the greatest difference between chat capacity and active chat sessions. For example, if Agent A and Agent B each have a chat capacity of five, and Agent A has three active chat sessions while Agent B has one, incoming chats will be routed to Agent B. • `Omni`—Incoming chats are routed using Omni-Channel queues.
`SiteId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The record ID of the site used for loading static resources and custom VisualForce pages. This field is a relationship field. **Relationship Name** Site **Relationship Type** Lookup **Refers To** Site
`SkillId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The record ID of the skill used to route incoming chat requests. To associate multiple skills with a chat button, reference one skill in the `SkillId` field and use LiveChatButtonSkill junction objects for the remaining skills. This field is a relationship field. **Relationship Name** Skill **Relationship Type** Lookup

Field Name	Details
	Refers To Skill
TimeToRemoveInvite	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of seconds an automated invitation stays on-screen before it is automatically removed. For automated chat invitations only. Available in API version 29.0 and later.
Type	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of element to display to customers. Possible values are: • Invite—Automated invitation • Standard—Chat button
WindowLanguage	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language used for standard chat windows. Custom chat windows use the language of the user's browser. Possible values are: • da—Danish • de—German • en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean

Field Name	Details
	• `nl_NL`—Dutch • `no`—Norwegian • `pt_BR`—Portuguese (Brazil) • `ru`—Russian • `sv`—Swedish • `th`—Thai • `zh_CN`—Chinese (Simplified) • `zh_TW`—Chinese (Traditional)

Usage

Use this object to query and manage chat buttons and automated chat invitations.

LiveChatButtonDeployment

Associates an automated chat invitation with a specific deployment. This object is available in API versions 28.0 and later.

Supported Calls

`create()`, `delete()` `query()`, `update()`, `retrieve()`

Fields

Field Name	Details
`ButtonId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the automated invitation associated with the deployment.
`DeploymentId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the deployment that will feature the automated invitation.

Usage

Use this object to associate automated chat invitations with specific deployments.

LiveChatButtonSkill

Represents all the skills available to a LiveChatButton except the one currently assigned. To retrieve the skill currently assigned, query LiveChatButton. This object is available in API version 25.0 and later.

Supported Calls

`create()`, `delete()`, `update()`, `query()`

Fields

Field Name	Details
`ButtonID`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The record ID of the button.
`SkillID`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The record ID of the skill.

Usage

Use this object to assign a specific skill to a specific button for multi-skill routing. For example:

```
String myButtonId = "button_Id";
String myButtonDevName = "button_DeveloperName";
List<String> skillIds = new List<String>();

//Get one skill ID from button
for(LiveChatButton lcb : [SELECT SkillId FROM LiveChatButton WHERE DeveloperName =:
myButtonDevName]) {
    skillIds.add(lcb.SkillId);
}
//Get remaining skills from LiveChatButtonSkill join object
```

```
for(LiveChatButtonSkill lcbs : [SELECT SkillID FROM LiveChatButtonSkill WHERE ButtonId =:
myButtonId]) {
    skillIds.add(lcbs.SkillId);
}
//Retrieve all skills into a single list
List<Skill> skills = [SELECT Id, DeveloperName FROM Skill WHERE Id IN :SkillIds];
```

LiveChatDeployment

Represents the general settings for deploying Live Agent on a website. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `query()`, `update()`, `retrieve()`

Fields

Field Name	Details
`BrandingId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The record ID of the static image resource that's displayed in the chat window.
`ConnectionTimeoutDuration`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** Indicates the amount of time before the chat times out, in seconds.
`ConnectionWarningDuration`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** Indicates the amount of time before a time-out warning is displayed to the agent, in seconds.
`DeveloperName`	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Sort **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`Domains`	**Type** textarea **Properties** Create, Filter (unavailable in API version 25.0 and later), Nillable, Sort (unavailable in API version 25.0 and later) **Description** A comma-separated list of domains the deployment is allowlisted for. Leave this blank to allow the deployment to be used on any domain.
`HasTranscriptSave`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Determines whether visitors can download and save transcripts from the chat window.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The language of the deployment.

Field Name	Details
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort **Description** The name of the deployment
MobileBrandingId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The record ID of the static image resource displayed in the mobile version of the chat window.
OptionsHasPrechatApi	**Type** boolean **Properties** Create, Filter **Description** Determines whether developers can access the Pre-Chat API.
SiteId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The record ID of the site used for loading static resources.
WindowTitle	**Type** string **Properties** Create, Filter, Group, Sort **Description** The text displayed in the title bar of the browser window used to launch the chat window.

Usage

Use this object to query and manage live chat deployments.

LiveChatSensitiveDataRule

Represents a rule for masking or deleting data of a specified pattern. Written as a regular expression (regex). This object is available in API version 35.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `update()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field Name	Details
`ActionType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The action to take on the text (remove or replace) when the sensitive data rule is triggered.
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** The description of the sensitive data rule—for example, "Block social security numbers."
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the

Field Name	Details
	object's name in a managed package and the changes are reflected in a subscriber's organization. **Note:** When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. **Note:** Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`EnforceOn`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** Determines the roles on which the rule is enforced. The value is determined using bitwise OR operation. There are seven possible values: 1. Rule enforced on Agent 2. Rule enforced on Visitor 3. Rule enforced on Agent and Visitor 4. Rule enforced on Supervisor 5. Rule enforced on Agent and Supervisor 6. Rule enforced on Visitor and Supervisor 7. Rule enforced on Agent, Visitor, and Supervisor
`IsEnabled`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Specifies whether a sensitive data rule is active (`true`) or not (`false`). Default value (if none is provided) is `false`.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the sensitive data rule.
`MasterLabel`	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Sort, Update **Description** Label for the sensitive data rule.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
`Pattern`	**Type** textarea **Properties** Create, Update **Description** The pattern of text blocked by the rule. Written as a JavaScript regular expression (regex).
`Priority`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the priority level of a Chat.
`Replacement`	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The string of characters that replaces the blocked text (if `ActionType` *`Replace`* is selected).

Usage

Use this object to mask or delete data of specified patterns, such as credit card, social security, phone and account numbers, or even profanity.

LiveChatTranscript

This object is automatically created for each Live Agent chat session and stores information about the session. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`Abandoned`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The amount of time in seconds an incoming chat request remained unanswered by an agent before the chat was disconnected by the customer.
`AccountId`	**Type** ID **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the account associated with the chat transcript.

Field Name	Details
AverageResponseTimeOperator	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The agent's average response time (in seconds) to chat messages from the visitor.
AverageResponseTimeVisitor	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The visitor's average response time (in seconds) to chat messages from the agent.
Body	**Type** textarea **Properties** Create, Nillable, Update **Description** The contents of the chat.
Browser	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The browser the visitor used for the chat.
BrowserLanguage	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The language of the visitor's browser.
CaseID	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the case associated with the chat transcript.

Field Name	Details
ChatDuration	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total duration of the chat in seconds.
ChatKey	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort **Description** The session ID of the chat before it is persisted. ChatKey can be used with advanced integrations in the Salesforce console. This field is available in API version 25.0 and later.
ContactID	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the contact associated with the chat transcript.
EndedBy	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The way the chat was ended: by the operator, the visitor, or the system.
EndTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The time the chat ended.
IpAddress	**Type** string **Properties** Create, Filter, Nillable, Sort, Update

Field Name	Details
	Description The auto-populated visitor's IP address. Do not edit. Create a custom field if you need an IP address field for your use case.
`IsChatbotSession`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Whether the visitor is chatting with a chatbot (`true`) or not (`false`).
`LastReferencedDate`	**Type** date **Properties** Filter, Nillable, Sort, Update **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** date **Properties** Filter, Nillable, Sort, Update **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed.
`LeadID`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the lead associated with the chat transcript.
`LiveChatButtonID`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the LiveChatButton the chat session originated from.

Field Name	Details
LiveChatDeploymentID	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the LiveChatDeployment the chat session originated from.
LiveChatVisitorID	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the visitor associated with the chat transcript.
Location	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The auto-populated best-guess approximation of the visitor's location. Do not edit.
MaxResponseTimeOperator	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The maximum time in seconds it took an agent to respond to a chat visitor's message.
MaxResponseTimeVisitor	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The maximum time in seconds it took a customer to respond to an agent's message.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort

Field Name	Details
	Description The name of the transcript.
OperatorMessageCount	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of messages sent by one or more agents during the chat.
OwnerID	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the operator who participated in the chat last; for missed chats, this is a system user.
Platform	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The visitor's operating system platform.
ReferrerUri	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The auto-populated URI where the chat request originated. Do not edit.
RequestTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The time the visitor requested the chat.
ScreenResolution	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The visitor's screen resolution.
SkillId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The auto-populated record ID of the primary Skill associated with the LiveChatButton the chat session originated from. Do not edit. To associate multiple skills with a LiveChatTranscript, use LiveChatTranscriptSkill junction objects.
StartTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The time the chat started.
Status	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The final status of the chat: completed, missed, or blocked.
SupervisorTranscriptBody	**Type** textarea **Properties** Create, Nillable, Update **Description** The text body of the supervisor's chat transcript.
UserAgent	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The visitor's user agent string.

Field Name	Details
VisitorMessageCount	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of messages sent by the visitor during the chat.
VisitorNetwork	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The network or service provider the chat visitor used for the chat.
WaitTime	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The total amount of time in seconds a chat request was waiting to be accepted by an agent.

Usage

Use this object to query and manage live chat transcripts.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

LiveChatTranscriptChangeEvent (API version 44.0)
Change events are available for the object.

LiveChatTranscriptFeed (API version 47.0)
Feed tracking is available for the object.

LiveChatTranscriptHistory
History is available for tracked fields of the object.

LiveChatTranscriptOwnerSharingRule (API version 29.0)
Sharing rules are available for the object.

LiveChatTranscriptShare
Sharing is available for the object.

LiveChatTranscriptEvent

Captures specific events that occur over the lifetime of a chat. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`AgentId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the agent associated with the event.
`Detail`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** Details associated with the event.
`LastReferencedDate`	**Type** date **Properties** Filter, Nillable, Sort, Update **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** date **Properties** Filter, Nillable, Sort, Update **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.

Field Name	Details
`LiveChatTranscriptId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the live chat transcript associated with the event.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the event.
`Time`	**Type** dateTime **Properties** Create, Filter, Sort **Description** The time at which the event happened.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The kind of event that occurred. • `Accept`—Accepted • `AgentBlocked`—Blocked by Agent • `AlertCriticalWaitChat`—Critical Wait Alert Time Reached • `CancelBlocked`—Cancel (Blocked) • `CancelNoAgent`—Cancel (No Agent) • `CancelNoQueue`—Cancel (No Queue) • `CancelVisitor`—Canceled by Visitor • `ChasitorIdleTimeout`—Visitor Idle Time-Out • `ChasitorIdleTimeoutWarningCleared`—Visitor Idle Time-Out Warning Cleared • `ChasitorIdleTimeoutWarningTriggered`—Visitor Idle Time-Out Warning Appeared • `ChatRequest`—Chat Requested

Field Name	Details
	- `ChatResumedAfterTransfer`—Chat resumed - `ChatbotEndChat`—Chatbot end chat - `ChatbotEndedChatByAction`—Conversation ended by automated action - `ChatbotEstablished`—Accepted by Chatbot - `ChatbotNotEstablished`—Chatbot Request Failed - `ChoiceRoute`—Routed (Choice) - `ClearCriticalWaitChat`—Critical Wait Alert Cleared - `ConferenceRequest`—Chat Conference Requested - `ConferenceRequestCanceled`—Chat Conference Canceled - `ConferenceRequestDeclined`—Chat Conference Declined - `ConnectionTimeout`—Visitor connection timed out. Available in API version 38.0 and later. - `ConnectionWarning`—Warning that visitor hasn't been connected for some time and that the connection times out soon. Available in API version 38.0 and later. - `DeclineManual`—Decline (Manual) - `DeclineTimeout`—Decline (Timeout) - `EndAgent`—Ended by Agent - `EndVisitor`—Ended by Visitor - `Enqueue`—Queued - `FileCanceledAgent`—File Transfer Canceled by Agent - `FileCanceledChasitor`—File Transfer Canceled by Visitor - `FileTransferFailure`—File Transfer Failure - `FileTransferRequested`—File Transfer Requested by Agent - `FileTransferSuccess`—File Transfer Success - `FileTransferToChasitor`—File Transfer Initiated by Agent - `FlagLoweredAgent`—Flag Lowered by Agent - `FlagLoweredSupervisor`—Flag Lowered by Supervisor - `FlagRaised`—Flag Raised - `LeaveAgent`—Agent Left - `LeaveVisitor`—Visitor Left - `OperatorJoinedConference`—Agent Joined Conference - `OperatorLeftConference`—Agent Left Conference - `Other` - `PushAssignment`—Routed (Push) - `SensitiveDataAgent`—Sensitive data blocked (Agent) - `SensitiveDataSupervisor`—Sensitive data blocked (Supervisor) - `SensitiveDataVisitor`—Sensitive data blocked (Visitor)

Field Name	Details
	• `Transfer`—Transfer Accepted • `TransferCancelled`—Transfer Request Canceled • `TransferDeclined`—Transfer Request Declined • `TransferRequest`—Transfer Requested • `TransferToBotFailed`—Transfer to bot failed • `TransferToButtonFailed`—Transfer to button failed • `TransferToQueueFailed`—Transfer to queue failed • `TransferredToBot`—Transferred to bot • `TransferredToButton`—Transferred to button • `TransferredToQueue`—Transferred to queue • `TransferredToSbrSkill`—Transferred to skill • `TransferredToSbrSkillFailed`—Transfer to skill failed • `Unassigned`

Usage

Use this object to query and manage live chat transcript events.

Note: LiveChatTranscriptEvent records are inserted after the chat is closed and the LiveTranscript record updated). However, the trigger on the LiveChatTranscriptEvent sObject fires separately on each LiveChatTranscriptEvent record within the same transaction.

All the LiveChatTranscriptEvent records are inserted in a single transaction but one by one. For example, the trigger is executed for each individual record.

```
trigger LCTE on LiveChatTranscriptEvent (before insert) {
     // Trigger.New will have only 1 record at a time and trigger will execute for
individual record
     for(LiveChatTranscriptEvent l : Trigger.New)
     system.debug(l.Type + '>>' +l.Detail);
     }
```

To avoid hitting any governors and limits, design your functionality considering this behavior. You can execute the logic by filtering the records based on the `Type` field of LiveChatTranscriptEvent.

LiveChatTranscriptShare

Represents a sharing entry on a LiveChatTranscript object. This object is available in API version 24.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `query()`, `retrieve()update()`, `upsert()`

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field Name	Details
`AccessLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Level of access that the User or Group has to the LiveChatTranscript. The possible values are: • `Read` • `Edit` • `All` (This value is not valid for `create()` or `update()` calls.) This value must be set to an access level that is higher than the organization's default access level for live chat transcripts.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the parent object, if any
`RowCause`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited. Values can include: • `Manual`—The User or Group has access because a user with "All" access manually shared the LiveChatTranscript with them.

Field Name	Details
	• `Owner`—The User is the owner of the LiveChatTranscript or is in a role above the LiveChatTranscript owner in the role hierarchy.
`UserOrGroupID`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the User or Group that has been given access to the LiveChatTranscript.

Usage

This object lets you determine which users and groups can view and edit LiveChatTranscript records owned by other users.

If you attempt to create a new record that matches an existing record, the `create()` call updates any modified fields and returns the existing record.

LiveChatTranscriptSkill

Represents a join between LiveChatTranscript and Skill. This object is available in API version 25.0 and later.

Supported Calls

`create()`, `delete()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

Fields

Field Name	Details
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the transcript.
`SkillId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The record ID of the skill.

Field Name	Details
TranscriptId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The record ID of the transcript.

Usage

Use this object to assign a specific skill to a specific transcript for multi-skill routing.

LiveChatUserConfig

Represents a setting that controls the console settings for Chat users. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field Name	Details
AutoGreeting	**Type** textarea **Properties** Create, Nillable **Description** The text that is automatically sent from an agent to a visitor when a chat session starts.
Capacity	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** Limits the amount of active chat sessions an agent can engage in.

Field Name	Details
CriticalWaitTime	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** The amount of time before a chat flashes to alert an agent to answer it.
CustomAgentName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The custom name of the agent associated with the Live Agent configuration.
DeveloperName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
HasLogoutSound	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Determines whether a sound plays when an agent logs out of the console.
HasNotifications	**Type** boolean

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Sort **Description** Determines whether desktop notifications are enabled for the configuration. Available in API version 25.0 and later.
HasRequestSound	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Determines whether a sound plays when a chat request comes in.
HasSneakPeek	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Determines whether an agent sees a real-time preview of the messages typed by a visitor.
HasTransferConferenceGreeting	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Determines whether to enable sending an autogreeting when you transfer to another agent or invite an agent to a conference chat. The default value is `false`. Available in API version 53.0 and later.
IsAutoAwayOnDecline	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Determines whether agents' status is automatically changed to Away when they decline a chat request. Available in API version 26.0 and later.
Language	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort

Field Name	Details
	Description The language of the configuration.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort **Description** The name of the configuration.
`OptionsHasAgentFileTransfer`	**Type** boolean **Properties** Create, Filter **Description** Determines whether agents can initiate a file transfer from a chat customer. Available in API version 31.0 and later.
`OptionsHasAgentSneakPeek`	**Type** boolean **Properties** Create, Filter **Description** Determines whether Sneak Peek is enabled for agents. Available in API version 29.0 and later.
`OptionsHasAssistanceFlag`	**Type** boolean **Properties** Create, Filter **Description** Determines whether assistance flags are enabled for agents. Available in API version 29.0 and later.
`OptionsHasChatConferencing`	**Type** boolean **Properties** Create, Filter **Description** Determines whether agents can invite other agents into a customer chat. Available in API version 34.0 and later.

Field Name	Details
OptionsHasChatMonitoring	**Type** boolean **Properties** Create, Filter **Description** Determines whether supervisors can view agents' ongoing chats. Available in API version 29.0 and later.
OptionsHasChatTransferToAgent	**Type** boolean **Properties** Create, Filter **Description** Specifies whether an agent can transfer a chat directly to another agent. Available in API version 36.0 and later.
OptionsHasChatTransferToButton	**Type** boolean **Properties** Create, Filter **Description** Specifies whether an agent can transfer a chat to an agent assigned to a particular chat button. Available in API version 36.0 and later.
OptionsHasChatTransferToSkill	**Type** boolean **Properties** Create, Filter **Description** Specifies whether an agent can transfer a chat to agents assigned to a particular skill. Available in API version 36.0 and later.
OptionsHasTransferConferenceGreeting	**Type** boolean **Properties** Create, Filter, Update **Description** Specifies whether an agent can transfer a chat to an autogreeting or conference greeting. Available in API version 53.0 and later.
OptionsHasVisitorBlocking	**Type** boolean

Field Name	Details
	Properties Create, Filter **Description** Determines whether an agent can block IP addresses of troublesome visitors. Available in API version 34.0 and later.
`OptionsHasWhisperMessage`	**Type** boolean **Properties** Create, Filter **Description** Determines whether supervisors can send private messages to agents within an agent's chat with a customer. Available in API version 29.0 and later.
`OptionsIsAutoAwayOnPushTimeout`	**Type** boolean **Properties** Create, Filter **Description** Determines whether an agent's status automatically changes to Away if the agent doesn't respond to a chat request within the specified push time-out limit. Available in API version 34.0 and later.
`SupervisorDefaultAgentStatus`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The default agent status by which to filter agents in the Agent Status list in the supervisor panel.
`SupervisorDefaultButtonId`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The default button ID by which to filter agents in the Agent Status list in the supervisor panel.
`SupervisorDefaultSkillId`	**Type** picklist

Field Name	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The default skill ID by which to filter agents in the Agent Status list in the supervisor panel.

Usage

Use this object to query and manage agent configurations in Chat.

LiveChatUserConfigProfile

Represents a join between LiveChatUserConfig and Profile. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`

Special Access Rules

As of Summer ’20 and later, only authenticated internal and external users can access this object.

Fields

Field Name	Details
`LiveChatUserConfigId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The record ID of the agent configuration
`ProfileId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The record ID of the profile

Usage

Use this object to assign specific agent configurations to specific user profiles.

LiveChatUserConfigUser

Represents a join between Live Chat User Config and User. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field Name	Details
`LiveChatUserConfigId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The record ID of the agent configuration
`UserId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The record ID of the user

Usage

Use this object to assign specific agent configurations to specific users.

LiveChatVisitor

Represents a website visitor who has started or tried to start a chat session. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`LastReferencedDate`	**Type** date **Properties** Filter, Nillable, Sort, Update **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** date **Properties** Filter, Nillable, Sort, Update **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort **Description** The name of the visitor
`SessionKey`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The session key used to uniquely identify the visitor.

Usage

Use this object to query and manage live chat visitors.

Location

Represents a warehouse, service vehicle, work site, or other element of the region where your team performs field service work. In API version 49.0 and later, you can associate activities with specific locations. Activities, such as the tasks and events related to a location, appear in the activities timeline when you view the location detail page. Also in API version 49.0 and later, Work.com users can view Employees as a related list on Location records. In API version 51.0 and later, this object is available for Omnichannel Inventory and represents physical locations where inventory is available for fulfilling orders.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

At least one of these features must be enabled:

- Commerce Store
- Contact Tracing for Employees
- Employee Experience
- Field Service
- Fulfillment Orders
- Health Cloud
- Industries Insurance
- Industries Visit
- Locations
- Omnichannel Inventory
- Public Sector
- Retail Execution
- Work.com

Fields

Field Name	Details
`AssignedFoCount`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of fulfillment orders assigned to the location. Confirming held fulfillment order capacity increments this value. To reset the location's capacity, set this value to 0.

Field Name	Details
	This field is available when Order Management is installed and configured. By default, it's hidden by field-level security. This field is available in API version 55.0 and later.
CloseDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Date the location closed or went out of service.
ConstructionEndDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Date construction ended at the location.
ConstructionStartDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Date construction began at the location.
Description	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A brief description of the location.
DrivingDirections	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** Directions to the location.
ExternalReference	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Identifier of a location.
`FoCapacity`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The maximum number of fulfillment orders that can be assigned to the location per time period. If this value is null, then this location's capacity isn't limited. This field is available when Order Management is installed and configured. By default, it's hidden by field-level security. This field is available in API version 55.0 and later.
`IsInventoryLocation`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the location stores parts. Note: This field must be selected if you want to associate the location with product items.
`IsMobile`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the location moves. For example, a truck or tool box.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the location was last modified. Its label in the user interface is `Last Modified Date`.

Field Name	Details
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date the location was last viewed.
Latitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The latitude of the location.
Location	**Type** location **Properties** Nillable **Description** The geographic location.
LocationLevel	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The location's position in a location hierarchy. If the location has no parent or child locations, its level is 1. Locations that belong to a hierarchy have a level of 1 for the root location, 2 for the child locations of the root location, 3 for their children, and so forth.
LocationType	**Type** picklist **Properties** Create, Filter, Group, Sort, Update **Description** Picklist of location types. It has no default values, so you must populate it before creating any location records.
LogoId	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** A ContentAsset representing a logo for the location. This field is available in API version 50.0 and later. This is a relationship field. **Relationship Name** Logo **Relationship Type** Lookup **Refers To** ContentAsset
`Longitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The longitude of the location.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the location. For example, Service Van #4.
`OpenDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Date the location opened or came into service.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The location’s owner or driver. This is a polymorphic relationship field.

Field Name	Details
	Relationship Name Owner **Relationship Type** Lookup **Refers To** Group, User
`ParentLocationId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The location’s parent location. For example, if vans are stored at a warehouse when not in service, the warehouse is the parent location. This is a relationship field. **Relationship Name** ParentLocation **Relationship Type** Lookup **Refers To** Location
`PossessionDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The date the location was purchased.
`Priority`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The priority of the location when routing orders. No default values are included. Add values to the picklist and reference them in your custom routing logic. This field is available when Order Management is installed and configured. By default, it’s hidden by field-level security. This field is available in API version 55.0 and later.

Field Name	Details
RemodelEndDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Date when remodel construction ended at the location.
RemodelStartDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Date when remodel construction started at the location.
RootLocationId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** (Read Only) The top-level location in the location's hierarchy. This is a relationship field. **Relationship Name** RootLocation **Relationship Type** Lookup **Refers To** Location
ShouldSyncWithOci	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the location should sync its data with Omnichannel Inventory. The default value is `false`. This field is available in API version 51.0 and later.
ShouldTrackFoCapacity	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description Indicates whether the location should track its fulfillment order capacity. The default value is `false`. This field is available when Order Management is installed and configured. By default, it's hidden by field-level security. This field is available in API version 55.0 and later.
`TimeZone`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Picklist of available time zones.
`VisitorAddressId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Lookup to an account's or client's address. This is a relationship field. **Relationship Name** VisitorAddress **Relationship Type** Lookup **Refers To** Address

Usage

Before creating any location records, add at least one value to the Location Type picklist. LocationType is a required field.

To track your inventory in Salesforce, create product items, which represent the stock of a particular product a particular location. For example, create a product item that represents the 500 bolts you have in stock at your Warehouse A location. Each product item must be associated with a location.

To get a more granular picture of your field service operation, associate locations with service territories. For example, if a warehouse is located in a particular service territory, add it as a service territory location.

Important: "Location" in Salesforce can also refer to the geolocation compound field found on many standard objects. When referencing the Location object in your Apex code, always use `Schema.Location` instead of `Location` to prevent confusion with the standard Location compound field. If referencing both the Location object and the Location field in the same snippet, you can differentiate between the two by using `System.Location` for the field and `Schema.Location` for the object.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

LocationChangeEvent (API version 48.0)
Change events are available for the object.

LocationFeed
Feed tracking is available for the object.

LocationHistory
History is available for tracked fields of the object.

LocationOwnerSharingRule
Sharing rules are available for the object.

LocationShare
Sharing is available for the object.

SEE ALSO:
LocationGroup
LocationGroupAssignment

LocationGroup

Represents a group of Omnichannel Inventory locations, providing an aggregate view of inventory availability across those locations. Omnichannel Inventory can create an inventory reservation for an order at the location group level, then assign the reservation to one or more locations in the group as needed. This object is available in API version 51.0 and later.

You can define location groups according to the logic of your business needs. For example, a location group can represent the warehouses in a geographic region, or it can include the fulfillment centers associated with a particular online storefront.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Omnichannel Inventory orgs.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update

Field	Details
	Description Description of the location group.
`ExternalReference`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Used when OCI is integrated with B2C Commerce to associate the location group with an inventory list in B2C Commerce. This value must match the inventory list ID in B2C Commerce.
`IsEnabled`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the location group is in use. If set to *`false`*, then inventory functions ignore this location group and its data isn't synchronized with OCI. The default value is *`true`*.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.
`LocationGroupName`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the location group.

Field	Details
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user who currently owns this location group. Default value is the API user that created the record.
ShouldSyncWithOci	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Specifies whether to synchronize inventory data for this location group with Omnichannel Inventory. The default value is *true*.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

LocationGroupFeed
Feed tracking is available for the object.

LocationGroupHistory
History is available for tracked fields of the object.

LocationGroupOwnerSharingRule
Sharing rules are available for the object.

LocationGroupShare
Sharing is available for the object.

SEE ALSO:

Location

LocationGroupAssignment

LocationGroupAssignment

Represents the assignment of a location to a location group. This object is available in API version 51.0 and later.

You can assign a location to multiple location groups, which associates it with one location group assignment for each location group that it's assigned to. Each location group assignment represents the relationship between one location and one location group, so a location or location group can be associated with multiple location group assignments.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Omnichannel Inventory orgs.

Fields

Field	Details
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.
`LocationExternalReference`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The external reference of the associated location.
`LocationGroupAssignment`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the location group assignment.
`LocationGroupExternalReference`	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The external reference of the associated location group.
`LocationGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** (Master-Detail) The associated location group.
`LocationGroupName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The location group name of the associated location group.
`LocationId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** (Master-Detail) The associated location.
`LocationName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the associated location.

Location

LocationGroup

LocationTrustMeasure

Represents the COVID safety protocols that your business follows. For example, enforcement of masks, social distancing, cleanliness, and capacity limits. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`Description`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** A brief description of the safety protocol. For example, "Employees and customers are required to wear a mask in the store."
`IconUrl`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A public image URL to display for the LocationTrustMeasure object.
`IsVisibleInPublic`	**Type** boolean **Properties** Create, defaulted on create, Filter, Group, Sort, Update **Description** If true, displays the LocationTrustMeasure object on your site. If false, hides the LocationTrustMeasure object on your site.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.

Field	Details
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date on which the record was last viewed.
LocationExternalReference	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** An ID assigned to the LocationTrustMeasure objects for a particular location.
LocationId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The unique ID for the location associated with the LocationTrustMeasure.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An auto-assigned name for the LocationTrustMeasure.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner for this record.
SortOrder	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The order in which to display LocationTrustMeasure objects on your site.

Field	Details
`Title`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The name of the safety protocol. For example, Enforcement of Masks.

LocWaitlistMsgTemplate

Represents a junction object connecting LocationWaitlist to MessagingTemplate. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date on which the record was last viewed.
`LocationWaitlistId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update

Field	Details
	Description Reference to the LocationWaitlist record.
`MessagingTemplateId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Reference to the MessagingTemplate record.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of this record.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner for this record.
`Type`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The status of the queue. Possible values are: • `approaching`—In Progress • `confirmation`—Confirmed • `inactive`—Inactive • `ready`—Ready • `removed`—Removed

LocationWaitlist

Represents a queue created for a specific location. Multiple queues can be created for a single location. For example, you can have a queue for each sales agent or a standard queue and a queue for vulnerable groups. The specific party of people in a queue is represented by LocationWaitlistedParty. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`BusinessHoursId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A reference to the BusinessHours record that contains the hours the business is open.
`ClosedDateTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The time a queue is closed.
`CumulativeGuestCount`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The total number of guests allowed.
`CumulativeGuestGroupCount`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The total number of groups allowed.

Field	Details
CurrentGuestCount	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The current number of guests.
Description	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A brief description of this record.
GuestCapacity	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The total capacity of guests.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date on which the record was last viewed.
MaxPartySize	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The maximum size of a group.
MessagingChannelId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The messaging channel ID.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the group.
OpenDateTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The time a queue is open.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner for this record.
PartyReminderDelayMinutes	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The number of minutes between when a party is notified and when they receive a reminder.
PlaceId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The location ID for this record.
ResourceCapacity	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The capacity for this resource.
ResourceOccupancyCount	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The occupancy count for this resource.
Status	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The status of the queue. Possible values are: • closed • open • paused

LocationWaitlistedParty

Represents a specific party of people waiting in a queue. This object is available in API version 50.0 and later.

Supported Calls

create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(), undelete(), update(), upsert()

Fields

Field	Details
Description	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A brief description of this queue.
EntryDateTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time a party is added to the queue.
EstimatedWaitHours	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The estimated hours of wait time for a party.
EstimatedWaitMinutes	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The estimated minutes of wait time for a party.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The date on which the record was last viewed.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the group.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner for this record.
PartySize	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The size of the queued party.
PartyStatus	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The state of a party in the queue. Possible values are: • canceled • entered • exited • ready • waiting
SignUpDateTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update

Field	Details
	Description The date and time when a party signed up for the queue.
`WaitlistId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID for the queue.

LoginEvent

The documentation has moved to LoginEvent in the *Platform Events Developer Guide*.

LoginGeo

Represents the geographic location of the user's IP address for a login event. Due to the nature of geolocation technology, the accuracy of geolocation fields (for example, country, city, postal code) may vary. This object is available in API version 34.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Only users with Manage Users permissions can access this object.

Fields

Field	Details
`City`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The city where the user's IP address is physically located. This value is not localized.
`Country`	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The country where the user's IP address is physically located. This value is not localized.
CountryIso	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ISO 3166 code for the country where the user's IP address is physically located. For more information, see Country Codes - ISO 3166
Latitude	**Type** double **Properties** Filter, Nillable, Sort **Description** The latitude where the user's IP address is physically located.
LoginTime	**Type** dateTime **Properties** Filter, Sort **Description** Time of the login attempt, in GMT time zone.
Longitude	**Type** double **Properties** Filter, Nillable, Sort **Description** The longitude where the user's IP address is physically located.
PostalCode	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The postal code where the user's IP address is physically located. This value is not localized.

Field	Details
`Subdivision`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the subdivision where the user's IP address is physically located. In the U.S., this value is usually the state name (for example, Pennsylvania). This value is not localized.

Usage

The API allows you to do many powerful queries. A few examples are:

Sample Query	Query String
Query showing the country for a login event, where `Id=LoginGeoId` from AuthSession	`SELECT Country FROM LoginGeo WHERE Id = '0LE###############'`
Query showing the city and postal code for a login event, where `Id=LoginGeoId` from LoginHistory	`SELECT City, PostalCode FROM LoginGeo WHERE Id = '0SO###############'`

LoginHistory

Represents the login history for all successful and failed login attempts for organizations and enabled portals. This object is available in API version 21.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Special Access Rules

With one exception, only users with Manage Users permissions can access this object. The exception is that, in API version 37.0 and later, all users can retrieve their own login history records.

Fields

Field	Details
`ApiType`	**Type** string

Field	Details
	Properties Group, Nillable, Sort **Description** Indicates the API type, for example `Soap Enterprise`. Label is **API Type**.
`ApiVersion`	**Type** string **Properties** Group, Nillable, Sort **Description** Displays the API version used by the client. Label is **API Version**.
`Application`	**Type** string **Properties** Group, Nillable, Sort **Description** The application used to access the organization. Label is **Application**.
`AuthMethodReference`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The authentication method used by a third-party identification provider for an OpenID Connect single sign-on protocol. This field is available in API version 51.0 and later. Label is **Authentication Method Reference**.
`AuthenticationServiceId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The 18-character ID for an authentication service for a login event. For example, you can use this field to identify the SAML or authentication provider configuration with which the user logged in. This field is available in API version 34.0 and later. Label is **Authentication Service Id**. This field is a polymorphic relationship field. **Relationship Name** AuthenticationService **Relationship Type** Lookup

Field	Details
	Refers To AuthProvider, SamlSsoConfig
`Browser`	**Type** string **Properties** Group, Nillable, Sort **Description** The current browser version. Label is **Browser**.
`CipherSuite`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The TLS cipher suite used for the login. Values are OpenSSL-style cipher suite names, with hyphen delimiters. For more information, see OpenSSL Cryptography and SSL/TLS Toolkit. This field is available in API version 37.0 and later.
`ClientVersion`	**Type** string **Properties** Group, Nillable, Sort **Description** Version of the API client. Label is **Client Version**.
`CountryIso`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ISO 3166 code for the country where the user's IP address is physically located. For more information, see Country Codes - ISO 3166. This field is available in API version 37.0 and later.
`LoginGeoId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The 18-character ID for the record of the geographic location of the user for a successful or unsuccessful login event. The accuracy of geolocation fields like country, city, or postal code

Field	Details
	can vary because of the nature of the technology. This field is available in API version 34.0 and later. This field is a relationship field. **Relationship Name** LoginGeo **Relationship Type** Lookup **Refers To** LoginGeo
`LoginSubType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of login flow used. • `OauthClientCredential–OAuth Client Credential` • `OauthHybridUserAgent–OAuth User-Agent for Hybrid Apps` • `OauthHybridWebServer–OAuth Web Server for Hybrid Apps` • `OauthUserAgent–OAuth User-Agent` • `OauthUserAgentIdToken–OAuth User-Agent with ID Token` • `OauthUsernamePassword–OAuth Username-Password` • `UsernamePasswordUiLogin–UI Username-Password` • `OauthWebServer–OAuth Web Server` Label is **Login Subtype**.
`LoginTime`	**Type** dateTime **Properties** Filter, Sort **Description** Time zone is based on GMT. Label is **Login Time**.
`LoginType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of login used to access the session. • `AppExchange–AppExchange`

Field	Details
	• `Application-Application` • `Certificate-Certificate-based login` • `ChatterCommunityPortalUnPwd-Chatter Communities External User` • `ChatterCommunityThirdPartySso-Chatter Communities External User Third Party SSO` • `EmployeeLoginToCommunity-Employee Login to Community` • `LightningLogin-Lightning Login` • `NetworksPortalApiOnly-Networks Portal API Only` • `Oauth, Remote Access Client-Remote Access Client` • `Oauth2, Remote Access 2.0-Remote Access 2.0` • `OtherApi-Other Apex API` • `Partner-Partner Product` • `PasswordlessLogin-Passwordless Login` • `Portal-Customer Service Portal` • `PrmPortalThirdPartySso-Partner Portal Third-Party SSO` • `PrmPortal-Partner Portal` • `Saml-SAML Idp Initiated SSO` • `SamlChatterNetworks-SAML Chatter Communities External User SSO` • `SamlCspPortal-SAML Customer Service Portal SSO` • `SamlPrmPortal-SAML Partner Portal SSO` • `SamlSite-SAML Site SSO` • `Saml2-SAML Sfdc Initiated SSO` • `SelfService-SelfService` • `ThirdPartySso-Third Party SSO` Label is **Login Type**.
`LoginUrl`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** URL from which the login request is coming. Label is **Login URL**.
`NetworkId`	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The ID of the Experience Cloud site that the user is logging in to. This field is available in API version 31.0 and later, if Salesforce Experience Cloud sites are enabled for your org.
`OptionsIsGet`	**Type** boolean **Properties** Filter **Description** The HTTP method used for the session login is a GET request.
`OptionsIsPost`	**Type** boolean **Properties** Filter **Description** The HTTP method used for the session login is a POST request.
`Platform`	**Type** string **Properties** Group, Nillable, Sort **Description** Operating system on the login machine. Label is **Platform**.
`SourceIp`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** IP address of the machine from which the login request is coming. The address can be an IPv4 or IPv6 address in API version 23.0 or later. In API version 22.0 or earlier, the address is an IPv4 address, and IPv6 addresses are null. Label is **Source IP**.
`Status`	**Type** string **Properties** Group, Nillable, Sort **Description** Displays the status of the attempted login. Status is either success or a reason for failure. Label is **Status**.

Field	Details
`TlsProtocol`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The TLS protocol used for the login. Possible values are: • `TLS 1.0` • `TLS 1.1` • `TLS 1.2` • `TLS 1.3` • `Unknown` This field is available in API version 37.0 and later.
`UserId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the user logging in. Label is **User ID**.

Usage

Not all fields are filterable. You can only filter on the following fields:

- `AuthenticationServiceId`
- `CipherSuite`
- `CountryIso`
- `Id`
- `LoginTime`
- `LoginType`
- `LoginUrl`
- `NetworkId`
- `OptionsIsGet`
- `OptionsIsPost`
- `TlsProtocol`
- `UserId`

The API allows you to do many powerful queries. A few examples are:

Sample Query	Query String
Simple query showing UserId & LoginTime for each user	`SELECT UserId, LoginTime from LoginHistory;`
Query showing logins only after a specified date and time	`SELECT UserId, LoginTime from LoginHistory WHERE LoginTime > 2010-09-20T22:16:30.000Z;`
Query showing logins for a specific time interval	`SELECT UserId, LoginTime from LoginHistory WHERE LoginTime > 2010-09-20T22:16:30.000Z AND LoginTime < 2010-09-21T22:16:30.000Z;`
Query showing the authentication service for a SAML login event, where `Id=AuthenticationServiceId` from LoginHistory	`SELECT name, issuer, samlVersion FROM SamlSsoConfig WHERE Id = '0LE###############'`
Query showing the authentication service for an authentication provider login event, where `Id=AuthenticationServiceId` from LoginHistory	`SELECT Type, DeveloperName FROM AuthProvider WHERE Id = '0SO###############'`

LoginIp

Represents a validated IP address. This object is available in version 28.0 and later.

Supported Calls

`describeSObjects()`, `delete()`, `query()`, `retrieve()`

Fields

Field	Details
`ChallengeMethod`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The challenge method used to confirm the user's identity. Possible values include the following. • `Email` • `SMS` • `TOTP_CHOICE`: The user chooses multi-factor authentication. • `TOTP_ONLY`: The user is required to use multi-factor authentication.
`ChallengeSentDate`	**Type** dateTime

Field	Details
	Properties Filter, Nillable, Sort **Description** The date and time that the user was authenticated.
`IsAuthenticated`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, the user has already been authenticated.
`SourceIp`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The IP address the user logged in from.
`UsersId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the user associated with this item. This is a relationship field. **Relationship Name** Users **Relationship Type** Lookup **Refers To** User

Usage

At every login, the IP address of the login request is checked against the validated IP addresses using LoginIp. A match means the login IP address is a known IP address. If there's no match, the address is unknown, and the user is asked to confirm their identity.

LogoutEventStream

The documentation has moved to LogoutEventStream in the *Platform Events Developer Guide*.

LookedUpFromActivity

This read-only object is displayed as a related list on an activity record (an event or a task); the list contains records that have custom lookup relationships from the activity to another object. This object is not queryable.

Supported Calls

`describeSObjects()`

Fields

Field Name	Details
`AccountId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Indicates the ID of the related account, which is determined as follows: • The account associated with the `WhatId`, if it exists; or • The account associated with the `WhoId`, if it exists; otherwise • `null` For information on IDs, see Field Types This is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
`ActivityDate`	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** Indicates one of the following: • The due date of a task

Field Name	Details
	• The date of an event if `IsAllDayEvent` is set to `true` This field has a time stamp that is always set to midnight in the Universal Time Coordinated (UTC) time zone. The time stamp doesn't represent the time of the activity; don't attempt to alter it to accommodate time zone differences. Label is `Date`.
`ActivityDateTime`	**Type** dateTime **Properties** Aggregate, Filter, Nillable, Sort **Description** Contains the event's due date if the `IsAllDayEvent` flag is set to `false`. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. Label is **Due Date Time**. The value for this field and `StartDateTime` must match, or one of them must be `null`.
`ActivitySubtype`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Provides standard subtypes to facilitate creating and searching for specific activity subtypes. This field isn't updateable. Possible values are: • Task • Email • Call • Event • LinkedIn —Available in API version 56.0 and later. • List Email
`ActivityType`	**Type** picklist **Properties** Filter, Group, Nillable, Sort **Description** Represents one of the following values: `Call`, `Email`, `Meeting`, or `Other`. Label is `Type`. These are default values, and can be changed.

Field Name	Details
	`ActivityType` is the union of `TaskType` and `EventType`. If the same activity appears in both dynamic picklists, duplicate activities appear. `TaskType` and `EventType` can each have a `Call` type. Internally, they are distinct from each other.
`CallDisposition`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Represents the result of a given call; for example, “we'll call back,” or “call unsuccessful.” Limit is 255 characters.
`CallDurationInSeconds`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Duration of the call in seconds.
`CallObject`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Name of a call center. Limit is 255 characters.
`CallType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of call being answered: Inbound, Internal, or Outbound.
`CompletedDateTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time the task was saved with a Closed status. • For insert, if the task is saved with a Closed status the field is set. If the task is saved with an Open status the field is set to NULL.

Field Name	Details
	• For update, if the task is saved with a new Closed status, the field is reset. If the task is saved with a new non-closed status, the field is reset to NULL. If the task is saved with the same closed status (that is, unchanged) there is no change to the field. Note: The status is a dynamic enum. If the Closed mapping is changed it won't cause an update of existing tasks. Only new insert/update operations are affected.
`Description`	**Type** textarea **Properties** Nillable **Description** Contains a description of the event or task. Limit is 32 KB.
`DurationInMinutes`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Indicates the duration of the event or task.
`EndDateTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Indicates the end date and time of the event or task. Available in versions 27.0 and later. This field is optional, depending on the following: • If `IsAllDayEvent` is true, you can supply a value for either `DurationInMinutes` or `EndDateTime`. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are `null`, the duration defaults to one day. • If `IsAllDayEvent` is false, a value must be supplied for either `DurationInMinutes` or `EndDateTime`. Supplying values in both fields is allowed if the values add up to the same amount of time.
`IsAllDayEvent`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description If the value of this field is set to `true`, then the activity is an event spanning a full day, and the `ActivityDate` defines the date of the event. If the value of this field is set to `false`, then the activity may be an event spanning less than a full day, or it may be a task. The default value of this field is `false`. Label is `All-Day Event`.
`IsClosed`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether a task is closed (`true`) or not closed (`false`). The default value of this field is `false`. This field is set indirectly by setting `Status` on the task—each picklist value has a corresponding `IsClosed` value. Label is `Closed`.
`IsHighPriority`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates a high-priority task. The default value of this field is `false`. This field is derived from the `Priority` field.
`IsReminderSet`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether a reminder is set for an activity (`true`) or not (`false`). The default value of this field is `false`.
`IsTask`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If the value of this field is set to `true`, then the activity is a task; if the value is set to `false`, then the activity is an event. The default value of this field is `false`. Label is `Task`.

Field Name	Details
IsVisibleInSelfService	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If the value of this field is set to `true`, then the activity can be viewed in the self-service portal. The default value of this field is `false`. Label is `Visible in Self-Service`.
Location	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** If the activity is an event, then this field represents the location of the event. If the activity is a task, then the value is `null`.
OwnerId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Indicates the ID of the user or group who owns the activity. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Calendar, Group, User
Priority	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** Indicates the priority of a task, such as high, normal, or low. The default value of this field is `Normal`.
ReminderDateTime	**Type** dateTime

Field Name	Details
	Properties Filter, Nillable, Sort **Description** Represents the time at which a reminder is scheduled to fire if `IsReminderSet` is set to `true`. If `IsReminderSet` is set to `false`, then either the user has deselected the reminder checkbox in the user interface or the reminder has already fired at the time indicated by the value.
`StartDateTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Indicates the start date and time of the event. Available in versions 13.0 and later. The `StartDateTime` field contains the event start date. However, if the event's `IsAllDayEvent` flag is set to `true` (indicating an all-day event), then the time stamp in the `StartDateTime` field is always set to midnight in the Coordinated Universal Time (UTC) time zone. Don't attempt to alter the time stamp to account for any time zone differences. If the event's `IsAllDayEvent` flag is set to `false`, then you must translate the time portion of the time stamp in the `StartDateTime` field to or from a local time zone for the user or the application, as appropriate, and the translation must be in the Coordinated Universal Time (UTC) time zone. If this field has a value, then `ActivityDate` and `ActivityDateTime` either must be `null` or must match the value of this field.
`Status`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** Indicates the current status of a task. The default value of this field is `Not Started`. Each predefined status field sets a value for `IsClosed`. Possible values are: • Completed • Deferred • In Progress • Not Started • Waiting on someone else

Field Name	Details
`Subject`	**Type** combobox **Properties** Filter, Nillable, Sort **Description** Contains the subject of the task or event.
`WhatId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The `WhatId` represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. `WhatId`s are polymorphic. Polymorphic means a `WhatId` is equivalent to the ID of a related object. The label is `Related To ID`. This is a polymorphic relationship field. **Relationship Name** What **Relationship Type** Lookup **Refers To** Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CommSubscriptionConsent, ContactEncounter, ContactEncounterParticipant, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, DelegatedAccount, DocumentChecklistItem, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, ListEmail, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PartyConsent, PersonLifeEvent,

Field Name	Details
	PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductItem, ProductRequest, ProductRequestLineItem, ProductTransfer, PurchaserPlan, ReceivedDocument, ResourceAbsence, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, Shift, Shipment, ShipmentItem, Solution, Visit, VisitedParty, VolunteerProject, WorkOrder, WorkOrderLineItem
`WhoId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The WhoId represents a human such as a lead or a contact. WhoIds are polymorphic. Polymorphic means a WhoId is equivalent to a contact's ID or a lead's ID. The label is `Name ID`. This is a polymorphic relationship field. **Relationship Name** Who **Relationship Type** Lookup **Refers To** Contact, Lead

Usage

Query activities related to an object

1. Optionally, issue a describe call against the object whose activities you wish to query, to get a suggestion of the correct SOQL to use.
2. Issue a SOQL relationship query with a main clause that references the object, and an inner clause that references the activity custom lookup relationship; for example:

```
SELECT id, name,
(SELECT id, subject from sponsoredact__r)
FROM Contact
```

   In this example *`sponsoredact__r`* is a user defined relationship list.

The user interface enforces sharing rules, filtering out related-list items that a user doesn't have permission to see.

The following restrictions on users who don't have "View All Data" permission help prevent performance issues:

- In the main clause of the relationship query, you can reference only one record. For example, you can't filter on all records where the account name starts with 'A'; instead, you must reference a single account record.
- In the inner clause of the query, you can't use `WHERE`.
- In the inner clause of the query, you must specify a limit of 500 or fewer on the number of rows that are returned in the list.

- You must sort on `ActivityDate` in descending order and `LastModifiedDate` in descending order; you can display nulls last. For example: `ORDER BY ActivityDate DESC NULLS LAST, LastModifiedDate DESC`.

Macro

Represents a macro, which is a set of instructions that tells the system to perform one or more tasks. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of what this macro does.
`FolderId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Returns the ID of the folder that contains the macro. Available in API version 44.0 and later.
`FolderName`	**Type** string **Properties** Filter, Nillable, Sort **Description** Name of the folder that contains the macro. Available in API version 44.0 and later.
`IsAlohaSupported`	**Type** boolean **Properties** Defaulted on create, Filter

Field	Details
	Description Specifies whether the macro is supported in Salesforce Classic.
IsLightningSupported	**Type** boolean **Properties** Defaulted on create, Filter **Description** Specifies whether the macro is supported in Lightning Experience.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the macro record was last referenced.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the macro record was last viewed.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the macro.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner of the session record.
StartingContext	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description The object the macro performs actions on. In Salesforce Classic, macros are supported on objects with both feed-based layouts and quick actions. In Lightning Experience, macros are supported on standard and custom objects that allow quick actions and have a customizable page layout.

Usage

A macro definition consists of a Macro object and several associated MacroInstruction objects.

First, create a Macro object. Then, create MacroInstructions that specify objects, operations, conditions, and targets for the macro.

A macro contains an ordered list of macro instructions whose index field, `sortOrder`, is 0-based. If there's an incorrect sequence of macro instructions, the macro doesn't execute.

If you update a macro definition or add or remove instructions from a macro, make sure that the `sortOrder` field that defines the execution order is correct. To delete an entire macro definition, invoke the delete operation on the Macro object.

The table describes the supported macro instruction targets and how they relate to each other.

Note: Strings indicated by `<brackets>` are variables. The variable description describes the required type. For example, `Tab.<EntityApiName>` requires the entity name. If your custom entity name is `MyCustomObject`, your target API is `Tab.MyCustomObject__c`.

If a macro instruction listed in the table supports an implicit operation, you can use that operation as a direct child instruction without explicitly specifying a target. The hyphens used in the table illustrate the hierarchical relationship between targets. A target isn't available if its parent isn't.

Table 1: Macro Instruction Target Grammar and Hierarchy

Target API Name	Supported Operations
`Tab.<EntityApiName>`	SELECT, CLOSE (implicit)
`- QuickAction.<EntityApiName>.<QuickActionName>`	SELECT, SUBMIT (implicit)
`- - Field.<QATargetEntityApiName>.<FieldApiName>`	SET
`- - Field.<QATargetEntityApiName>.<MultilineTextFieldApiName>.cursor`	INSERT
`- - Field.<QATargetEntityApiName>.<SinglelineTextFieldApiName>.end`	INSERT
`- QuickAction.Case.Email`	SELECT, SUBMIT (implicit)
`- - Field.EmailMessage.<FieldApiName>`	SET
`- - Field.EmailMessage.<MultilineTextFieldApiName>.cursor`	INSERT
`- - Field.EmailMessage.<SinglelineTextFieldApiName>.end`	INSERT
`- - Field.EmailTemplate`	SET
`- SidebarCmp.Knowledge`	SELECT

Target API Name	Supported Operations
`- - SearchAction.KnowledgeArticle`	SELECT
`- - - Field.SearchString`	SET, INSERT
`- - - Command.Search`	SUBMIT
`- - SearchResult.KnowledgeArticle.MostRecentItem`	SELECT
`- - - Command.AttachToRecord`	SUBMIT
`- - - Command.InsertToEmail`	SUBMIT
`- - - Command.AttachToEmailAsPDF`	SUBMIT

Example: This example describes a macro that opens a quick action, sets some fields in the quick action, and submits the quick action.

```
0. SELECT Tab.Case
1.   SELECT QuickAction.Case.Email
2.     SET Field.EmailMessage.Subject
3.     SET Field.EmailMessage.ToAddress
4.     INSERT Field.EmailMessage.HtmlBody.cursor
5.     SUBMIT
```

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MacroChangeEvent (API version 48.0)
Change events are available for the object.

MacroHistory
History is available for tracked fields of the object.

MacroOwnerSharingRule
Sharing rules are available for the object.

MacroShare
Sharing is available for the object.

MacroInstruction

Represents an instruction in a macro. An instruction can specify the object that the macro interacts with, the context or publisher that the macro works within, the operation or action that the macro performs, and the target of the macro's actions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
MacroId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the macro that contains this instruction.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort **Description** Name of the instruction.
Operation	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The action that the macro instruction performs. Valid values are: • Select • Set • Insert • Submit • Close To create macro instructions that execute conditionally, these values are available in API version 46.0 and later. • IF • ELSEIF • ELSE • ENDIF
SortOrder	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** Order of this instruction in the macro.

Field Name	Details
`Target`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The object that's the target of the operation. For example, the target for the active case tab (Tab.Case) or a quick action, like the Send Email action on the case object (QuickAction.Case.SendEmail). In Lightning Experience, macros are supported on standard and custom objects that allow quick actions and have a customizable page layout. In Salesforce Classic, macros are supported on objects with feed-based layouts and quick actions. You can specify relative dates and times for the following targets. • DateTime • Date • Time • DueDate • Birthday
`Value`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** Value of a field. If the operation is Select, then the value is null, because the operation selects the object on which the macro performs an action. An instruction can contain both a `Value` field and a `ValueRecord` field, but only one of these fields can have a value. The other field value must be null. To create relative dates and times, specify a valid Salesforce formula, prefaced by `MacroFormula`. For example, the following formula creates a date that is 1 day from now: `MacroFormula:NOW() + 1` You can't edit custom relative formulas in the Macro Builder.
`ValueRecord`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the value or record. The `ValueRecord` can be either a value or a record, but not both. An instruction can contain both a `Value` field and a

Field Name	Details
	`ValueRecord` field, but only one of these fields can have a value. The other field value must be null.

Usage

MacroInstructions can specify objects, operations, conditions, and targets. For example, a macro containing these instructions performs a quick action that sends an email.

```
      Select Email QuickAction
      Set Subject…
      Set To…
      Set Body…
      Submit
```

You can create conditional macros using `IF`, `ELSEIF`, `ELSE`, and `ENDIF` as operations. In a conditional statement, the ExpressionFilter and ExpressionFilterCriteria objects are used to control which instructions execute. The ExpressionFilter object lets you define a logical expression with one or more conditions. It uses a child object, ExpressionFilterCriteria, to represent each condition that is evaluated.

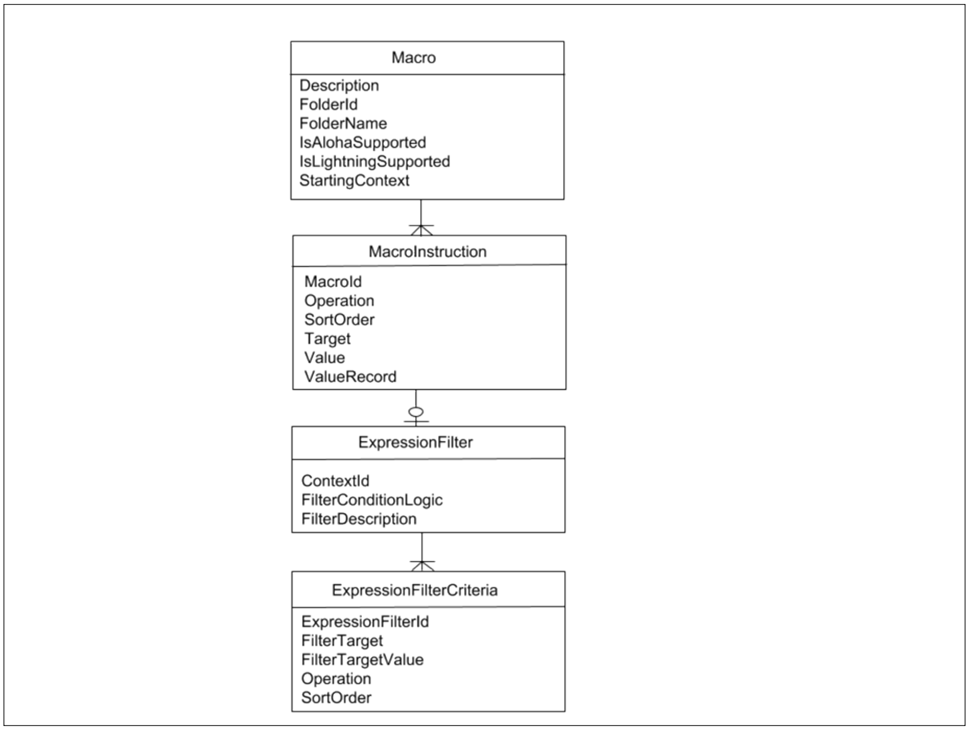
For example, consider the following conditional statement and macro instructions.

```
IF (Case.Status EQUALS New) AND (Case.Origin EQUALS Phone)
      Select Email QuickAction
      Set Subject…
      Set To…
      Set Body…
      Submit
ELSE
      Select Update Case Detail
      Update Case Description…
      Submit
ENDIF
```

The ExpressionFilter object includes a `FilterConditionLogic` field containing `1 AND 2`, where 1 and 2 are ExpressionFilterCriteria objects. The SortOrder field in the ExpressionFilterCriteria object maps condition 1 to `Case.Status EQUALS New`, and condition 2 to `Case.Origin EQUALS Phone`. If the conditional statement evaluates to true, then the instructions in the `IF` block are executed; otherwise, the instructions in the `ELSE` block are executed.

Any number of macro instructions can be present inside an `IF`, `ELSEIF`, or `ELSE` block. In addition, conditions can be nested.

Data Model



Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MacroInstructionChangeEvent (API version 48.0)
Change events are available for the object.

MacroUsage

Represents macro usage on a record, including which macro was used, who used it, and how they used it. This object is available in API version 47.0 and later.

Supported Calls

describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

delete() is supported in API version 55.0 and later.

Special Access Rules

This object is always read-only. Only users with "Modify All Data" permission can delete MacroUsage records.

Fields

Field	Details
AppContext	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Context in which the macro was run. Possible values are: • Aloha—Salesforce Classic • Lightning—Lightning Experience • Unknown
ConditionCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Number of conditional instructions contained in the macro at execution.
ContextRecord	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** ID of the record on which the macro was run.
DurationInMs	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The execution time, in milliseconds, for the macro.
ExecutedInstructionCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of macro instructions that ran successfully. If the macro completed successfully, this value is the same as InstructionCount.

Field	Details
ExecutionEndTime	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The time at which macro execution completed.
ExecutionState	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The end state of macro execution. Possible values are • SUCCESS • FAILURE • CANCELED
FailureReason	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** If ExecutionState is failure, this field stores the reason for the failure. Possible values are: • ACCESS • GENERIC • TIMEOUT • UNSUPPORTED
FolderId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the folder containing the macro at the time it was used.
InstructionCount	**Type** int **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The number of instructions in the macro at the start of execution.
IsFromBulk	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If true, the macro was run as a bulk macro. When a bulk macro is run on multiple records, usage is recorded per record.
MacroID	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the macro.
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Name of the macro.
OwnerId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the group or user that owns the macro.
UserId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the user that ran the macro.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

MacroUsageOwnerSharingRule
Sharing rules are available for the object.

MacroUsageShare
Sharing is available for the object.

MailmergeTemplate

Represents a mail merge template (a Microsoft Word document) used for performing mail merges for your organization.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- All users can view this object, but you need the "Customize Application" permission to modify it.
- Customer Portal users can't access this object.

Fields

Field	Details
`Body`	**Type** base64 **Properties** Create **Description** Required. Microsoft Word document to use as a mail merge template. Due to limitations with Microsoft Word mail merge templates, your client application can specify the Body field when creating these records, but not when updating them. Limit: 5 MB.
`BodyLength`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Length of the Microsoft Word document.

Field	Details
Description	**Type** string **Properties** Create, Filter,Group, Nillable, Sort, Update **Description** Required. Text description of this mail merge template. Limit: 255 characters.
Filename	**Type** string **Properties** Create, Filter, Group, Sort **Description** Required. File name of the Microsoft Word document that was uploaded as a mail merge template. Limit: 255 characters in length.
IsDeleted	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
LastUsedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date and time when this MailmergeTemplate was last used.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. Name of this mail merge template.
SecurityOptionsAttachmentHasFlash	**Type** boolean **Properties** Create, Filter, Update

Field	Details
	Description Required. True if Flash Injection was detected in the attachment.
SecurityOptionsAttachmentHasXSSThreat	**Type** boolean **Properties** Create, Filter, Update **Description** Required. True if a cross site scripting threat was detected in the attachment.
SecurityOptionsAttachmentScannedforFlash	**Type** boolean **Properties** Create, Filter, Update **Description** Required. True if the attachment has been scanned for Flash Injection.
SecurityOptionsAttachmentScannedForXSS	**Type** boolean **Properties** Create, Filter, Update **Description** Required. True if the attachment has been scanned for a cross site scripting threat.

Usage

Use this object to manage mail merge templates for your organization.

SEE ALSO:

Overview of Salesforce Objects and Fields

MaintenanceAsset

Represents an asset covered by a maintenance plan in field service. Assets can be associated with multiple maintenance plans.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
AssetId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The asset associated with the maintenance asset.
ContractLineItemId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Contract line item associated with the maintenance asset. This field can only list a contract line item that is associated with the asset, and whose parent service contract is associated with the parent maintenance plan.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the maintenance asset was last modified. Its label in the user interface is Last Modified Date.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the product request was last viewed.
MaintenanceAssetNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort

Field Name	Details
	Description An auto-assigned number that identifies the maintenance asset.
MaintenancePlanId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Maintenance plan associated with the maintenance asset.
NextSuggestedMaintenanceDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The suggested date of service for the maintenance asset's first work order (not the date the work order is created). This corresponds to the work order's SuggestedMaintenanceDate. If left blank when the maintenance asset is created, this field inherits its initial value from the related maintenance plan. This field auto-updates after each batch is generated. Its label in the user interface is Date of the first work order in the next batch.
WorkTypeId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Work type associated with the maintenance asset. Work orders generated from the maintenance plan inherit its work type's duration, required skills and products, and linked articles. Maintenance assets covered by the plan use the same work type, though you can update them to use a different one.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MaintenanceAssetChangeEvent (API version 48.0)
Change events are available for the object.

MaintenanceAssetFeed
Feed tracking is available for the object.

MaintenanceAssetHistory
History is available for tracked fields of the object.

MaintenancePlan

Represents a preventive maintenance schedule for one or more assets in field service.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
`AccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The associated account, which typically represents the customer receiving the maintenance service.
`ContactId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The associated contact.
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** A brief description of the plan.
`DoesAutoGenerateWorkOrders`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description Turns on auto-generation of work order batches for a maintenance plan and prohibits the manual generation of work orders via the Generate Work Orders action. If this option is selected, a new batch of work orders is generated for the maintenance plan on the `NextSuggestedMaintenanceDate` listed on each maintenance asset, or on the maintenance plan if no assets are included. If a `GenerationHorizon` is specified, the date of generation is that many days earlier.
`DoesGenerateUponCompletion`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** If both this option and `DoesAutoGenerateWorkOrders` are set to true, a new batch of work orders isn't generated until the last work order generated from the maintenance plan is completed. A work order is considered completed when its status falls into one of the following status categories: Cannot Complete, Canceled, Completed, or Closed. If a maintenance plan covers multiple assets, work orders are generated per asset. If a maintenance asset's final work order is completed late, its work order generation is delayed, which may cause a staggered generation schedule between maintenance assets.
`EndDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The last day the maintenance plan is valid.
`Frequency`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** (Optional) Amount of time between work orders. The unit is specified in the `FrequencyType` field.
`FrequencyType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update

Field Name	Details
	Description (Optional) The unit of frequency: • Days • Weeks • Months • Years For example, to perform monthly maintenance visits you need a work order for each visit, so enter 1 as the `Frequency` and select Months.
`GenerationHorizon`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Moves up the timing of batch generation if `DoesAutoGenerateWorkOrders` is set to true. A generation horizon of 5 means the new batch of work orders is generated 5 days before the maintenance asset's (or maintenance plan's, if there are no assets) `NextSuggestedMaintenanceDate`. The generation horizon must be a whole number.
`GenerationTimeframe`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** (Required) How far in advance work orders are generated in each batch. The unit is specified in the `GenerationTimeframeType` field.
`GenerationTimeframeType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** (Required) The generation timeframe unit: • Days • Weeks • Months • Years For example, if you need work orders for six months, enter 6 and select Months.

Field Name	Details
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it’s possible that the user only accessed this record or list view (LastReferencedDate), but not viewed it.
LocationId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Where the service takes place.
MaintenancePlanNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort **Description** (Read Only) An auto-assigned number that identifies the maintenance plan.
MaintenancePlanTitle	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A name for the maintenance plan.
MaintenanceWindowEndDays	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description Days after the suggested service date on the work order that its service appointment can be scheduled.
`MaintenanceWindowStartDays`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Days before the suggested service date on the work order that its service appointment can be scheduled. The maintenance window start and end fields affect the Earliest Start Permitted and Due Date fields on the maintenance plan's work orders' service appointments. For example, if you enter 3 for both the maintenance window start and end, the Earliest Start Permitted and the Due Date will be 3 days before and 3 days after, respectively, the Suggested Maintenance Date on each work order. If the maintenance window fields are left blank, the service appointment date fields list their work order's suggested maintenance date.
`NextSuggestedMaintenanceDate`	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** The suggested date of service for the first work order (not the date the work order is created). This corresponds to the work order's `SuggestedMaintenanceDate`. You can use this field to enforce a delay before the first maintenance visit (for example, if monthly maintenance should begin one year after the purchase date). Its label in the user interface is Date of the first work order in the next batch. For example, if you want the first maintenance visit to take place on May 1, enter May 1. When you generate work orders, the earliest work order will list a suggested maintenance date of May 1, and the dates on the later work orders will be based on the `GenerationTimeframe` and `Frequency`. **Important:** Maintenance assets also list a `NextSuggestedMaintenanceDate`, which is initially inherited from the maintenance plan. If the plan has maintenance assets, this date auto-updates on the maintenance assets after each batch is generated, but doesn't update on the maintenance plan itself because batch timing is calculated at the maintenance asset level. If the plan doesn't have maintenance assets, this date auto-updates on the maintenance plan after each batch is generated.

Field Name	Details
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The owner of the maintenance plan.
ServiceContractId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The service contract associated with the maintenance plan. The service contract can’t be updated if any child maintenance asset is associated with a contract line item from the service contract.
StartDate	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** The first day the maintenance plan is valid.
SvcApptGenerationMethod	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The service appointment generation method. • One service appointment per work order • One service appointment per work order line item If your existing maintenance plans have work orders or work order line items associated with them, you can’t change their generation methods. To change pre-existing maintenance plan generation methods, either delete the work orders and regenerate them or delete the maintenance plan and recreate it with the needed generation methods. If Work Order Generation Method is set to One work order per asset, you can’t set a Service Appointment Generation Method. If Work Order Generation Method is set to One work order line item per asset, you must select a Service Appointment Generation Method.

Field Name	Details
WorkOrderGenerationMethod	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The work order generation method. • One work order per asset • One work order line item per asset If your existing maintenance plans have work orders or work order line items associated with them, you can't change their generation methods. To change pre-existing maintenance plan generation methods, either delete the work orders and regenerate them or delete the maintenance plan and recreate it with the needed generation methods. If Work Order Generation Method is left as None, the generation is defaulted to one work order per asset. When One work order line item per asset is set, and all maintenance assets have the same Next Suggested Maintenance Date on the maintenance plan, they are grouped in one work order. However, if maintenance assets have different Next Suggested Maintenance Dates, multiple work orders are created for each date. If Work Order Generation Method is set to One work order per asset, you can't set a Service Appointment Generation Method.
WorkOrderGenerationStatus	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** (Read Only) Indicates the status of work order generation: • NotStarted—the default value, work order generation has not started • InProgress—work order generation is underway • Completed—work order generation is complete • Unsuccessful—it was not possible to generate work orders You can generate only one batch at a time.
WorkTypeId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The associated work type. Work orders generated from the maintenance plan inherit its work type's duration, required skills and products, and linked articles.

Field Name	Details
	Maintenance assets covered by the plan use the same work type, though you can update them to use a different one.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MaintenancePlanChangeEvent (API version 48.0)
Change events are available for the object.

MaintenancePlanFeed
Feed tracking is available for the object.

MaintenancePlanHistory
History is available for tracked fields of the object.

MaintenancePlanOwnerSharingRule
Sharing rules are available for the object.

MaintenancePlanShare
Sharing is available for the object.

MaintenanceWorkRule

Represents the recurrence pattern for a maintenance record. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`DoesFloatingWorkOrder`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates that the maintenance plan uses the floating work order adjustment. The default is false.
`LastReferencedDate`	**Type** dateTime

Field	Details
	Properties Filter, Nillable, Sort **Description** The date when the line item was last modified. Its label in the user interface is `Last Modified Date`.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the line item was last viewed.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Name of this maintenance work rule.
`NextSuggestedMaintenanceDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The next date on which this rule will generate maintenance items.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The assigned owner of the maintenance work rule.
`ParentMaintenancePlanId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The maintenance plan associated with the maintenance work rule.

Field	Details
ParentMaintenanceRecordId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The maintenance record this work rule applies to.
RecordsetFilterCriteriaId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the recordset filter criteria associated with this maintenance work rule. Available in API version 52.0 and later.
RecurrencePattern	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The RRULE that defines the pattern of recurrence for this work order rule.
SortOrder	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The sort order that applies to this work order rule.
Title	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The title of this work order rule.
Type	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description The type of maintenance work rule. Available values are: • `Criteria-based` • `Calendar-based` (default) Available in API version 52.0 and later.
`WorkTypeId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the work type that this work order rule generates.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

MaintenanceWorkRuleChangeEvent
Change events are available for the object.

MaintenanceWorkRuleFeed
Feed tracking is available for the object.

MaintenanceWorkRuleHistory
History is available for tracked fields of the object.

MaintenanceWorkRuleOwnerSharingRule
Sharing rules are available for the object.

MaintenanceWorkRuleShare
Sharing is available for the object.

ManagedContent

Represents managed content in a Salesforce CMS workspace for use in an Experience Cloud site or a channel. The ManagedContent object represents the complete instance of a managed content record. It provides a consistent identifier for the managed content so that variants of the content item can be created over time. This object is available in API version 56.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

`ManagedContent` is available when the Digital Experiences app is enabled.

Fields

Field	Details
AuthoredManagedContentSpaceId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The Salesforce CMS workspace ID where the content resides. This field is a relationship field. **Relationship Name** AuthoredManagedContentSpace **Relationship Type** Lookup **Refers To** ManagedContentSpace
ContentKey	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** Unique identifier of the content.
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the Salesforce CMS content. When you view this content in a CMS workspace, `Name` is the title of the latest content version. In an enhanced CMS workspace, `Name` is the title of the content in the workspace's default language. This field is available in API version 58.0 and later.
PrimaryLanguage	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The default language of the Salesforce CMS workspace where the content resides.

Usage

When you create or add content in a Salesforce CMS workspace, the content is uniquely identified by the Salesforce CMS workspace, a content key, and a default language. `ManagedContent` can be queried through the public sObject API. Use this object to create and retrieve information for a specific managed content.

ManagedContentChannel

Represents the details of a CMS channel. CMS channels correspond to managed content publishing endpoints. They deliver published content from your Salesforce CMS workspaces to an audience. This object is available in API version 55.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

`ManagedContentChannel` is available when the Digital Experiences app is enabled.

Fields

Field	Details
`CacheControlMaxAge`	**Type** long **Properties** Filter, Group, Nillable, Sort **Description** The amount of time, in seconds, it takes for a requested CMS content resource in the CMS channel to expire before a new request for the resource must be made.
`Domain`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The domain for a public channel. Only public channels can have an assigned domain. Possible value is: • mydomain.cdn.salesforce-experience.com Note: The `mydomain` value is specific to the domain of the channel.
`DomainHostName`	**Type** string

Field	Details
	Properties Filter, Nillable, Sort **Description** The hostname of the domain assigned to the CMS channel. Only public channels can have an assigned domain.
`MediaCacheControlMaxAge`	**Type** long **Properties** Filter, Group, Nillable, Sort **Description** The amount of time, in seconds, it takes for a requested CMS image or document content resource in the CMS channel to expire before a new request for the resource must be made. This field is available in API version 57.0 and later.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Name of the CMS channel.
`OptionsIsCacheControlPublic`	**Type** boolean **Properties** Filter **Description** When `true`, the CMS channel connection type is public. When `false`, the cache control is private. The default value is `false`.
`OptionsIsDomainLocked`	**Type** boolean **Properties** Filter **Description** When `true`, the domain set to the channel can’t be changed. Only public channels can have this field set to `true`. If the channel type is `COMMUNITY`, the default value is `true`. For all other channel types, the default value is `false`.
`OptionsIsSearchable`	**Type** boolean

Field	Details
	Properties Filter **Description** When `true`, users can search for all published CMS content types within the channel. The default value is `false`.
`Type`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The connection type of the CMS channel. The connection type determines which audience can access the CMS content delivered in the channel. Possible values are: • `COMMUNITY`: User access is controlled by the settings of the Experience Cloud site. • `CloudToCloud`: Connects Salesforce CMS to the B2C Commerce Page Designer. • `ConnectedApp`: User access to the channel is controlled by the connected application associated with the channel. • `PublicUnauthenticated`: No user authentication required, content can be cached on public CDNs. • `Record`: User access to the content is controlled by the user access to the associated record. Content is only accessible to users with access to the record. • `UserPermission`: This value is reserved for future use.

Usage

`ManagedContentChannel` can be queried through the public sObject API. Use this object to retrieve information for a specific CMS channel.

ManagedContentInfo

Allows the creation of relationship to Product using ProductMedia. This object is available in API version 49.0 to 57.0. In API version 58.0 and later, use the ManagedContent object.

Supported Calls

`describeSObjects()`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access a web store.

Usage

The CMS content import process returns a ManageContentInfo ID for each piece of content. The ManagedContentInfo entity has a 1:1 relationship with ProductMedia. To create this relationship, ProductMedia must be associated with a Product entity, for example, Product > ProductMedia > ManagedContentInfo. Use the ID to associate content uploaded through the API with the ProductMedia entity

ManagedContentSpace

Represents the complete instance of a Salesforce CMS workspace that stores managed content. Users and groups with designated permissions can access and manage the content in a CMS workspace. This object is available in API version 56.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

ManagedContentSpace is available when the Digital Experiences app is enabled.

Fields

Field	Details
`DefaultLanguage`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Default language for the Salesforce CMS workspace. Possible values are: • `da`—Danish • `de`—German • `en_US`—English • `es`—Spanish • `es_MX`—Spanish (Mexico) • `fi`—Finnish • `fr`—French • `it`—Italian • `ja`—Japanese • `ko`—Korean • `nl_NL`—Dutch • `no`—Norwegian

Field	Details
	• pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified) • zh_TW—Chinese (Traditional)
Description	**Type** textarea **Properties** Filter, Group, Nillable, Sort **Description** Description of the Salesforce CMS workspace.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Name of the Salesforce CMS workspace.

ManagedContentVariant

Represents a variant of a managed content item. This object is available in API version 56.0 and later.

Managed content variants are associated with a `ManagedContent` object. The managed content and variants are counted as one content record in your Salesforce org.

For example, say you have a managed content item of content type News and a default language of English. When you translate the News content into other languages such as Spanish, Japanese, and French, a managed content variant for each language is created.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Special Access Rules

`ManagedContentVariant` is available when the Digital Experiences app is enabled.

Fields

Field	Details
`IsPublished`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the managed content variant is published to a channel. The default value is `false`. This field is calculated.
`Language`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Language of the variant.
`ManagedContentId`	**Type** reference **Properties** Filter, Group, Sort **Description** Globally unique identifier for the managed content item. This field is a relationship field.

Field	Details
	Relationship Name ManagedContent **Relationship Type** Lookup **Refers To** ManagedContent
ManagedContentKey	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Globally unique identifier for managed content that associates with the managed content variant.
ManagedContentVariantStatus	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Publication status of the managed content. Possible values are: • Draft • Published • Revised
Name	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Name of the managed content variant.
UrlName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** URL name of the managed content variant.

Field	Details
VariantType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Type of variant. Possible value is: • Content

Usage

Managed content variants are associated with a ManagedContent object. The managed content and managed content variants are counted as one content record in your Salesforce org.

ManagedContentVariant can be queried through the public sObject API. Use this object to retrieve information for a specific content in a certain language and format of a managed content.

MarketingForm

Represents an Account Engagement marketing form that has been synched to Salesforce. Use forms on your website and landing pages to collect information about visitors and turn anonymous visitors into identified prospects. This object is available in API version 42.0 and later.

Supported Calls

describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(), search()

Special Access Rules

To access this object, your org must use Account Engagement and users need the CRM User or Sales User permission set.

Fields

Field Name	Details
CampaignId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the related campaign.

Field Name	Details
ErrorRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of views that led to an error.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp that indicates when the current user last viewed a record that is related to this form.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the current user last viewed this record. If this value is null, this record might only have been referenced (see `LastReferencedDate`) and not viewed.
Name	**Type** string **Properties** Filter, Group, Sort **Description** The name of the marketing form.
SubmissionRate	**Type** percent **Properties** Filter, Nillable, Sort **Description** The percentage of the views that led to a form submission.
TotalErrors	**Type** int

Field Name	Details
	Properties Defaulted on create, Filter, Group, Nillable, Sort **Description** The total number of times a form error prevented a submission.
`TotalSubmissions`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The total number of times the form was successfully submitted.
`TotalTrackedLinkClicks`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The total number of link clicks from your thank you page.
`TotalViews`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The total number of times your form has been viewed. Includes multiple views from the same visitor.
`Type`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Specifies the type of marketing form record, either a form or form handler.
`UniqueErrors`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The number of errors generated by separate visitors.

Field Name	Details
UniqueSubmissions	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The total number of unique submissions. Removes multiple submissions from the same prospect.
UniqueTrackedLinkClicks	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The total number of unique link clicks from your thank you page. Removes multiple clicks from the same prospect.
UniqueViews	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The number of form views by separate visitors.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MarketingFormEvent (API version 44.0)
Change events are available for the object.

MarketingFormFeed
Feed tracking is available for the object.

MarketingLink

Represents an Account Engagement marketing link record, either a custom redirect or a file, that has been synced to Salesforce. This object is available in API version 42.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Special Access Rules

To access this object, your org must use Account Engagement and users need the CRM User or Sales User permission set.

Fields

Field Name	Details
`CampaignId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the related campaign.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp that indicates when the current user last viewed a record that is related to this marketing link.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the current user last viewed this record. If this value is null, this record might only have been referenced (see `LastReferencedDate`) and not viewed.
`Name`	**Type** string **Properties** Filter, Group, Sort **Description** The name of the marketing link.
`TargetUrl`	**Type** url **Properties** Filter, Group, Sort

Field Name	Details
	Description The target URL of the marketing link.
`TotalTrackedLinkClicks`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The total number of clicks for the redirect. Includes clicks from visitors and identified prospects. When a person clicks the link multiple times, each click is counted in this number.
`Type`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Specifies the type of marketing link record, either a custom redirect or file.
`UniqueTrackedLinkClicks`	**Type** int **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** The number of unique clicks for the redirect. Includes clicks from visitors and identified prospects. Only the first click is counted in this number.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MarketingFormEvent (API version 44.0)
: Change events are available for the object.

MarketingLinkFeed
: Feed tracking is available for the object.

MatchingRule

Represents a matching rule that is used to identify duplicate records. This object is available in API version 33.0 and later.

A matching rule compares field values to determine whether a record is similar enough to existing records to be considered a duplicate. For example, a matching rule can specify that if the `Email` and `Phone` values of two records match exactly, the records are possible duplicates. Your organization uses matching rules with duplicate rules to define what happens when duplicates are identified.

If the rule is for a Person Account, `SobjectSubType` is automatically set to `PersonAccount`.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
`BooleanFilter`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Specifies filter logic conditions.
`Description`	**Type** textarea **Properties** Filter, Group, Nillable, Sort **Description** The description of the matching rule.
`DeveloperName`	**Type** string **Properties** Filter, Group, Sort **Description** The developer name for the matching rule. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`Language`	**Type** picklist

Field Name	Details
	Properties Filter, Group, Restricted picklist, Sort **Description** The language selected for your organization.
`MasterLabel`	**Type** string **Properties** Filter, Group, Sort **Description** The name of the matching rule.
`MatchEngine`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The match engine used by the matching rule.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix for matching rules for your organization.
`RuleStatus`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Required. The activation status of the matching rule. Values are: • *`Inactive`* • *`Deactivating`* • *`DeactivationFailed`* • *`Active`* • *`Activating`* • *`ActivationFailed`* Important: The only valid values you can declare when deploying a package are *`Active`* and *`Inactive`*.

Field Name	Details
SobjectSubtype	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Read-only. Indicates if the matching rule is defined for the `Person` subtype of `Account`. Valid values are: • `PersonAccount` • `None` If the rule is for a Person Account, `SobjectSubType` is automatically set to `PersonAccount`.
SobjectType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The object for the matching rule.

Usage

Use the Salesforce API to retrieve and view details about MatchingRule and MatchingRuleItem. Use the Salesforce Metadata API to create, update, or delete these objects.

SEE ALSO:

MatchingRuleItem
DuplicateRule
MatchingRule in the Salesforce Metadata API Developer's Guide

MatchingRuleItem

Represents criteria used by a matching rule to identify duplicate records. This object is available in API version 33.0 and later.

A matching rule item determines which field the matching rule uses to identify a duplicate record. It also determines the method used to compare value that two records have for the field. For example, a matching rule item might specify that the `Email` field values of two records must match exactly in order for the records to be considered duplicates.

When a matching rule has multiple matching rule items, it means that multiple fields must match in order for the records to be identified as dupcliates.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
`BlankValueBehavior`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Specifies how blank fields affect whether the fields being compared are considered matches. Valid values are: • *`MatchBlanks`* • *`NullNotAllowed`* (default)
`Field`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates which field to compare when determining if a record is similar enough to an existing record to be considered a match.
`MatchingMethod`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Defines how the fields are compared. Choose between the exact matching method and various fuzzy matching methods. Valid values are: • *`Exact`* • *`FirstName`* • *`LastName`* • *`CompanyName`* • *`Phone`* • *`City`*

Field Name	Details
	• *Street* • *Zip* • *Title* For details on each matching method, see "Matching Methods Used with Matching Rules" in the Salesforce Help.
MatchingRuleId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID for the matching rule. This is a relationship field. **Relationship Name** MatchingRule **Relationship Type** Lookup **Refers To** MatchingRule
SortOrder	**Type** int **Properties** Filter, Group, Sort **Description** The order of the matching rule items for a matching rule.

Usage

Use the Salesforce SOAP API to retrieve and view details about MatchingRule and MatchingRuleItem. Use the Salesforce Metadata API to create, update, or delete these objects.

SEE ALSO:

MatchingRule
DuplicateRule
MatchingRule in the Salesforce Metadata API Developer's Guide

MediaChannel

Defines a web page, a TV program, or a publication. A media channel may contain one to many Ad Spaces, into which Ad Servers can place or serve up ad creatives. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`AvailableLanguages`	**Type** multipicklist **Properties** Create, Filter, Nillable, Restricted picklist, Update **Description** Captures the language of the media contents hosted on the Media Channel. Possible values are: • `English` • `Hindi` • `German` • `Spanish` • `French`
`MediaType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the media type. Possible values are: • `Digital` • `Other` • `Outdoor` • `Print` • `Radio` • `TV`

Field	Details
PricingCategory	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Categorizes the Media Channel as Premium or Standard from an advertising pricing perspective. 'Premium' is an evaluation based on traffic, Nielsen ratings or Comscore rank. Possible values are: • Premium • Standard
PublicationFrequency	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Captures the frequency of the Media Channel publication Possible values are: • Daily • Monthly • Other • Quarterly • Weekly
PublisherId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Captures the Publisher field of the Media Channel record. This is a relationship field. **Relationship Name** PublisherId__r **Relationship Type** Lookup **Refers To** Account
PublisherPrimaryContactId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Captures the primary contact details of the publisher. This is a relationship field. **Relationship Name** PublisherPrimaryContactId__r **Relationship Type** Lookup **Refers To** Contact

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MediaChannelFeed on page 39
Feed tracking is available for the object.

MediaChannelHistory on page 47
History is available for tracked fields of the object.

MediaChannelOwnerSharingRule on page 48
Sharing rules are available for the object.

MediaChannelShare on page 50
Sharing is available for the object.

MediaContentTitle

Stores details about an event or show that may be broadcast on TV or radio channels. This object is available in API version 54.0 and later.

This is referenced while creating scheduled program records for the Channel Master setup.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AvailableLanguages	**Type** multipicklist **Properties** Create, Filter, Nillable, Restricted picklist, Update **Description** Captures the language of the Media content. Possible values are: • `English` • `Hindi` • `German` • `French` • `Spanish`
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** Description for the Media Content Title.
Genre	**Type** multipicklist **Properties** Create, Filter, Nillable, Restricted picklist, Update **Description** Specifies genre of the Media Content. Possible values are: • `Documentary` • `Soap Opera` • `Sitcom` • `Movie` • `News` • `Comedy` • `Sci-Fi` • `Thriller`
NumberOfEpisodes	**Type** double

Field	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** Each of the separate installments into which a serialized story or radio or television program is divided.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MediaContentTitleFeed on page 39
Feed tracking is available for the object.

MediaContentTitleHistory on page 47
History is available for tracked fields of the object.

MediaContentTitleOwnerSharingRule on page 48
Sharing rules are available for the object.

MediaContentTitleShare on page 50
Sharing is available for the object.

MediaPrintIssue

Represents the details of an issue with details such as issue name, date, advertising deadline about the publication. It is specific to Print media channels in Ad Sales and is available periodically based on publication frequency. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`AdvertisingDeadline`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Represents the date by which the user can request Ad products in the media plan for the selected issue.

Field	Details
IssueDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Represents the date of the issue made publicly available.
MediaChannelId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Represents the ID of the Media Channel. This field is a relationship field. **Relationship Name** MediaChannel **Relationship Type** Lookup **Refers To** MediaChannel
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Represents the name of the issue for the publication made publicly available based on the publication frequency.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MediaPrintIssueChangeEvent on page 52
Change events are available for the object.

MediaPrintIssueFeed on page 39
Feed tracking is available for the object.

MediaPrintIssueHistory on page 47
History is available for tracked fields of the object.

MediaPrintIssueOwnerSharingRule on page 48
Sharing rules are available for the object.

MediaPrintIssueShare on page 50
Sharing is available for the object.

MerchAccPaymentMethodSet

Allows Payment admins to configure an ordered list of payment methods that are available to a buyer during checkout. A payment admin can configure multiple MerchAccPaymentMethodSets each designated for a specific locale, payment region, or sale channel. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access MerchAccPaymentMethodSets, you must have a Salesforce Payments license with the Payments Administrator permission assigned to a specific user. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only for organizations with the multicurrency feature enabled. The ISO code for any currency allowed by the organization.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, idLookup, Nillable, Sort, Update **Description** Unique name for the object given by the Payments admin.
`MerchantAccountId`	**Type** reference **Properties** Create, Filter, Group, Sort

Field	Details
	Description Foreign key to the MerchantAccount. This field is a relationship field. **Relationship Name** MerchantAccount **Relationship Type** Lookup **Refers To** MerchantAccount
`PaymentMethodSetNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Auto-assigned ID for the `MerchAccPaymentMethodSet`.
`PaymentMethodSummary`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Summary field that is automatically populated with comma-separated values from MerchAccPaymentMethodType. This field is a calculated field.

MerchAccPaymentMethodType

Refers to payment methods that are available in a MerchAccPaymentMethodSet. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access MerchAccPaymentMethodType, you must have a Salesforce Payments license with the Payments Administrator permission assigned to a specific user. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only when the multicurrency feature is enabled. Contains the ISO code for any currency used by the org.
PaymentInstrumentType	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of instrument the payer can pay with. Possible values are: • `ach` • `afterpay_clearpay` • `applepay` • `u_becs_debit - BECS_DEBIT` • `bacs_debit - BACS_DEBIT` • `bancontact` • `card - credit card` • `eps` • `googlepay` • `ideal` • `klarna` • `paypal` • `sepa_debit` • `us_bank_account - ACH_DIRECT_DEBIT` • `venmo`
PaymentMethodSetId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the MerchAccPaymentMethodSet. This field is a relationship field.

Field	Details
	Relationship Name PaymentMethodSet **Relationship Type** Lookup **Refers To** MerchAccPaymentMethodSet
`PaymentMethodSetTypeNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Auto-assigned ID for the MerchAccPaymentMethodSet.
`SortOrder`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Sort order for the MechAccPaymentMethodType within the MerchAccPaymentMethodSetExperience.

Associated Objects

This object has the following associated object. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MerchAccPaymentMethodTypeHistory on page 47
History is available for tracked fields of the object.

MerchantAccount

Represents a business account at a payment provider that accepts payments in multiple ways, including credit or debit cards, or digital wallets. A Salesforce Payments merchant account is linked to an underlying payment gateway. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license and Payments must be enabled for your org. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
`AccountDescription`	**Type** textarea **Properties** Create, Nillable, Update **Description** Information about the merchant account.
`CountryIsoCode`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Country where the legal entity representing the account is.
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Contains the ISO code for any currency allowed by the organization. Available only for organizations with multi-currency enabled.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, the user can have accessed this record or list view but not viewed it.
`Mode`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The operational mode of the merchant account. This field determines the account's ability to accept payments. For production, the account must be in Live mode. Possible values are: • `Connected`– Merchant account is active but it can't accept payments. This option is only valid in production orgs. • `Live`– Merchant account is active and can accept payments. This option is only valid in production orgs. • `Test` –Merchant account is active but not able to accept payments. This option is only valid in sandbox orgs, and the account can accept only test transactions.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the merchant account.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Name of the individual or group assigned to the merchant account. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User

Field	Details
PaymentStatus	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Merchant account is active and can accept payments. Possible values are: • Disabled • Enabled The default value is Disabled.
PayoutStatus	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Money can be moved from the payment provider account to the designated merchant account. Possible values are: • Disabled • Enabled The default value is Disabled.
Status	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates the state of the merchant account. Possible values are: • Active - The merchant account can accept payments. • Complete - PaymentStatus and DepositStatus are enabled and all the required information is provided. • Enabled - PaymentStatus and PayoutStatus are enabled, but the payment provider requires more information later. If the merchant doesn't provide the information, then the account becomes restricted. The time limit that the merchant has to provide the information is longer than the RestrictedSoon state. • Pending - The merchant account exists but it can't accept payments. This option maintains backward compatibility for accounts that were created with API version 55.0 and earlier.

Field	Details
	• `Rejected` - The account is rejected and an explanation is provided. • `Restricted` - `PaymentStatus`, `PayoutStatus`, or both are disabled, so the merchant account's operation is limited. • `Restricted Soon` - `PaymentStatus` and `PayoutStatus` are enabled, but the payment provider requires more information. If the merchant doesn't provide the information in a specific time period, then the account becomes restricted.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MerchantAccountFeed
Feed tracking is available for the object.

MerchantAccountHistory
History is available for tracked fields of the object.

MerchantAccountOwnerSharingRule
Sharing rules are available for the object.

MerchantAccountShare
Sharing is available for the object.

MerchantAccountEvent

Represents a merchant account platform event. Subscribe to these events so you can listen and respond to them when they're published. For example, create a Salesforce Flow that is triggered when one of these events is published. This object is available in API version 59.0 and later.

For more information about platform events, see the Platform Events Developer Guide.

Supported Calls

`describeSObjects()`

Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license and Payments must be enabled for your org. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
`ChangeType`	**Type** picklist **Properties** Restricted picklist **Description** Type of merchant account event, which triggers an event notification. You can write code to listen to operate conditionally on the value of this field. For example, you can ignore a create change but get notified of updates. Possible values are: • `Create`—Merchant account is created. • `Disable`—The account is deactivated. For example, the payment provider or the merchant disables an account due to fraudulent activity. • `PaymentEnable`—The account is active and ready to receive payments. • `PayoutEnable`—The account is ready to receive payouts. • `Update`—Merchant account property change occurs.
`MerchantAccountId`	**Type** reference **Properties** Nillable **Description** Identifies the merchant account for which the event occurs. This field is a relationship field. **Relationship Name** MerchantAccount **Relationship Type** Lookup **Refers To** MerchantAccount

MessagingChannel

Represents a communication channel that an end user can use to send a message to an agent. A communication channel can be an SMS number, a Facebook page, or another supported messaging channel. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field Name	Details
BusinessHoursId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The operating hours for your business, when agents are available. Available only in orgs that use Einstein Bots. This is a relationship field. **Relationship Name** BusinessHours **Relationship Type** Lookup **Refers To** BusinessHours
ChannelAddressIdentifier	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** A UUID that identifies a deployed messaging channel. This identifier is unique across orgs, so a channel with the same MessagingPlatformKey in a sandbox and production will have a different ChannelAddressIdentifier for each. Available in API version 59.0 and later.
ConsentType	**Type** picklist **Properties** Create, defaultedOnCreate, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The type of consent, or opt-in, that is required to message users on this channel. This field is available in API version 48.0 and later. Possible values are: • `DoubleOptIn` • `ExplicitOptIn` • `ImplicitOptIn` (default value) The property `defaultedOnCreate` has been removed in API version 51.0 and later. Now the consent type is defaulted to `ImplicitOptIn` when the consent type isn't set on create only for channels that support consents.

Field Name	Details
ConversationEndResponse	**Type** textarea **Properties** Create, Nillable, Update **Description** Automated response to the customer when the agent ends the conversation. (Optional)
CriticalWaitTime	**Description** Reserved for future use. This field has been deprecated as of API version 52.0.
Description	**Description** Reserved for future use.
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The developer name for the messaging channel. This value is a concatenation of the messaging platform key and the message type.
DoubleOptInPrompt	**Type** textarea **Properties** Create, Nillable, Update **Description** Automated response to the end user to prompt them to doubly opt in to receiving messages.
EngagedResponse	**Type** textarea **Properties** Create, Nillable, Update **Description** Automated response to the customer when the conversation is accepted by the agent. (Optional)
InitialResponse	**Type** textarea **Properties** Create, Nillable, Update

Field Name	Details
	Description First automated response to the customer for a new conversation. (Optional)
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether a channel is active and can receive messages.
`IsAuthenticated`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether a user is authenticated to a voice assistant.
`IsoCountryCode`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** Two-letter ISO 3166-1 alpha-2 code for the country that the phone number is associated with. For example, the code for United States is `US`.
`IsRequireDoubleOptIn`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether double opt-in is required (`true`) or not (`false`) for this Messaging channel.
`IsRestrictedToBusinessHours`	**Description** Reserved for future use.
`IsUserMatchByExternalIdOnly`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description Indicates whether to restrict matching on customer by external ID only (and not use the full name). This field has been deprecated as of API version 52.0.
`Language`	**Description** Reserved for future use.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Unique name for the `MessagingChannel`.
`MessageType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Type of message. Possible values are: • `AppleBusinessChat`—Represents Apple Messages for Business. • `EmbeddedMessaging`—Available in API version 50.0 and later. • `Facebook` • `Phone` • `Text` • `Voice` • `WhatsApp`
`MessagingPlatformKey`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Unique key for a channel that the end user can message.
`OfflineAgentsResponse`	**Description** Reserved for future use.
`OptInPrompt`	**Type** textarea

Field Name	Details
	Properties Create, Nillable, Update **Description** Automated response to the end user to prompt them to explicitly opt in to receiving messages. Available in API version 49.0 and earlier.
`OptInResponse`	**Type** textarea **Properties** Create, Defaulted on create, Nillable, Update **Description** Automated response to the end user when they opt in to messaging. Available in API versions 48.0 and 49.0. Use the `OptInConfirmation` field of the MsgChannelLanguageKeyword on page 2762 object instead.
`OptOutResponse`	**Type** textarea **Properties** Create, Defaulted on create, Nillable, Update **Description** Automated response to the end user when they opt out of messaging. Available in API version 48.0 only. Use the `OptOutConfirmation` field of the MsgChannelLanguageKeyword object instead.
`OutsideBusinessHoursResponse`	**Description** Reserved for future use.
`RoutingConfigurationId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Specifies which Omni-Channel routing configuration to use. This field is required when `RoutingType` is `OmniSkills`. To learn more, see Create Routing Configurations.
`RoutingType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field Name	Details
	Description Type used to support Omni-Channel's different routing methods. • `OmniQueue` (queue-based routing) • `OmniSkills` (skills-based routing) When this value isn't set, `OmniQueue` is used.
`TargetQueueId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Queue in which incoming conversations are placed while waiting for an agent to accept. This is a relationship field. **Relationship Name** TargetQueue **Relationship Type** Lookup **Refers To** Group
`TargetUserId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Messaging User or agent for the conversation. Available in API version 50.0 and earlier.

Usage

While third-party messaging channels can be created via Apex, we recommend creating channels via the Messaging Settings page in Setup. Channels created via Apex may not work and can't be deleted.

The Platform Type field in the UI indicates whether a messaging channel is standard or enhanced. This field isn't accessible in the API.

MessagingChannelSkill

Junction object that represents an association between MessagingChannel and Skill. This object is available in API version 45.0 and later.

For example, when we want to use Omni-Channel skills-based routing in Live message, this object maintains the mapping between the messaging channel and the skill.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
`MessagingChannelId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the MessagingChannel on page 2693. This is a relationship field. **Relationship Name** MessagingChannel **Relationship Type** Lookup **Refers To** MessagingChannel
`SkillId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the Skill on page 4052. This is a relationship field. **Relationship Name** Skill **Relationship Type** Lookup **Refers To** Skill

MessagingConfiguration

Represents the details for a Messaging configuration. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
`DeveloperName`	**Type** string **Properties** Filter, Group, Sort **Description** The API name for this Messaging configuration. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`Language`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The language of this Messaging configuration.
`MasterLabel`	**Type** string **Properties** Filter, Group, Sort **Description** The label for the Messaging configuration.
`MessagingServiceUrl`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The URL for the Messaging service.
`ProvisioningServiceUrl`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The URL for the provisioning service.

MessagingDeliveryError

Represents a log of triggered outbound failures to verify when a triggered outbound has failed. This object is available in API version 44.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`CreatedById`	**Type** reference **Properties** Defaulted on createFilter, Group, Sort **Description** ID of the user who created the error.
`CreatedDate`	**Type** dateTime **Properties** Defaulted on create, Filter, Sort **Description** Date the error was created.
`DestinationPhoneNumber`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The recipient of the phone call.
`FailureReason`	**Type** textarea

Field	Details
	Properties Create, Nillable, Update **Description** The provided reason for why the message failed.
`FlowEntity`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The entity that triggered the flow to send the message.
`FullMessage`	**Type** textarea **Description** Plain error text.
`Id`	**Type** id **Properties** Defaulted on create, Filter, Group, idLookup, Sort **Description** Identifier of the error.
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the error has been deleted.
`LastModifiedById`	**Type** reference **Properties** Defaulted on create, Filter, Group, Sort **Description** The ID of the user who last modified the error log.
`LastModifiedDate`	**Type** dateTime **Properties** Defaulted on create, Filter, Sort

Field	Details
	Description Date when the Messaging error log was last modified.
MessagingChannelId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the MessagingChannel on page 2693. This is a relationship field. **Relationship Name** MessagingChannel **Relationship Type** Lookup **Refers To** MessagingChannel
MessagingEndUserId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Identifier for the Messaging user. This is a relationship field. **Relationship Name** MessagingEndUser **Relationship Type** Lookup **Refers To** MessagingEndUser
MessagingTemplateId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the Messaging template used. This is a relationship field. **Relationship Name** MessagingTemplate

Field	Details
	Relationship Type Lookup **Refers To** MessagingTemplate
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Namefield, Sort **Description** Name of the error. Maximum length is 80 characters.
SystemModstamp	**Type** dateTime **Properties** Defaulted on create, Filter, Sort **Description** System modification time for the Messaging delivery error log.
Type	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The kind of event that occurred. Possible values include: • `Error` (Default) • `Warning`

MessagingEndUser

Represents a single address—such as a phone number or Facebook page—communicating with a single Messaging channel. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`AccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the Account associated with this Messaging end user. This field is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
`ContactId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the associated Contact. This field is a relationship field. **Relationship Name** Contact **Relationship Type** Lookup **Refers To** Contact
`HasInitialResponseSent`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether an initial response has been sent to the Messaging end user (`true`) or not (`false`).
`IsFullyOptedIn`	**Type** boolean

Field	Details
	Properties Defaulted on create, Filter, Sort **Description** Indicates whether the Messaging end user has opted in to receiving messages (`true`) or not (`false`). This field compares the related messaging channel's consent requirement to the user's consent status; if the user's status meets the channel's required consent level, `IsFullyOptedIn` is set to `true`. Available in API version 48.0 and later.
`IsOptedOut`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the Messaging end user has opted out of receiving messages. Available in API version 48.0 and earlier. Use `MessagingConsentStatus` and `IsFullyOptedIn` instead.
`IsoCountryCode`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** The ISO country code associated with the Messaging end user.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
`LeadId`	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** ID of the associated Lead. This field is a relationship field. **Relationship Name** Lead **Relationship Type** Lookup **Refers To** Lead
`Locale`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort **Description** Reserved for future use.
`MessageType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** Type of message. Possible values are: • `EmbeddedMessaging`—Available in API version 54.0 and later. • `Facebook` • `Phone` • `Text` • `WhatsApp` • `Voice`
`MessagingChannelId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the Messaging channel associated with the Messaging end user. This is a relationship field.

Field	Details
	Relationship Name MessagingChannel **Relationship Type** Lookup **Refers To** MessagingChannel
MessagingConsentStatus	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The consent status of the messaging user. This field is available in API version 48.0 and later. Possible values are: • DoublyOptedIn • ExplicitlyOptedIn • ImplicitlyOptedIn • OptedOut
MessagingPlatformKey	**Type** string **Properties** Create, Filter, Group, Sort **Description** The phone number, Facebook page ID, or unique key associated with this Messaging end user.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the Messaging end user. Because this field is editable, we don’t recommend referencing it in automation. Instead, use the Messaging Platform Key.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the owner associated with this Messaging end user.

Field	Details
	This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`ProfilePictureUrl`	**Type** url **Properties** Create, Filter, Group, Nillable, Sort **Description** The URL of the Messaging end user's profile picture.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

MessagingEndUserHistory
History is available for tracked fields of the object.

MessagingEndUserOwnerSharingRule
Sharing rules are available for the object.

MessagingEndUserShare
Sharing is available for the object.

MessagingLink

Represents the link between a Messaging Channel and where it's shared. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`EntityType`	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update **Description** Possible values are: • `Account` • `Case` • `Contact` • `CustomEntityDefinition`—Custom Object Definition • `Lead` • `Opportunity`
`MessagingChannelId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The channel being shared. This is a relationship field. **Relationship Name** MessagingChannel **Relationship Type** Lookup **Refers To** MessagingChannel
`RecordTypeId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** This is a relationship field. **Relationship Name** RecordType **Relationship Type** Lookup **Refers To** RecordType
`ShouldAttemptAutoLink`	**Type** boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update **Description** No longer in use. Indicated that an incoming messaging session was auto-linked to a Salesforce contact or account based on information such as a phone number.
`ShouldPromptCreate`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** No longer in use. Indicated that a contact or account was created for the messaging user if none existed.

MessagingSession

Represents a session on a Messaging channel. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`AcceptTime`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The time when an agent accepts an incoming Messaging session.
`AgentMessageCount`	**Type** int **Properties** Nillable **Description** The number of messages sent by the agent during the session.

Field	Details
	This value isn't calculated in enhanced Messaging sessions. If you're trying to assess agent performance, consider calculating the messaging session length (`EndTime – AcceptTime`) instead.
`AgentType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of agent that is assigned to the Messaging session. Possible values are: • `Agent` • `Bot` • `BotToAgent`—Bot & Agent • `System`—Used for triggered outbound messages
`CaseId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the case associated with this Messaging session.
`ChannelEndUserFormula`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** A concatenation of the Messaging channel and Messaging user.
`ChannelGroup`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The group of the associated Messaging channel.
`ChannelIntent`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The intent of the associated Messaging channel.
ChannelKey	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The unique identifier for the associated Messaging channel.
ChannelLocale	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The locale of the associated Messaging channel.
ChannelName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the associated Messaging channel.
ChannelType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of the associated Messaging channel. Possible values are: • EmbeddedMessaging—Available in API version 55.0 and later. • Facebook • Phone • Text • Voice • WhatsApp
ConversationId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort

Field	Details
	Description The ID of the related conversation. Available in API version 55.0 and later. This field is a relationship field. **Relationship Name** Conversation **Relationship Type** Lookup **Refers To** Conversation
EndTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort **Description** The time when the Messaging session ended.
EndUserAccountId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the end user's account record. This is a relationship field. **Relationship Name** EndUserAccount **Relationship Type** Lookup **Refers To** Account
EndUserContactId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the end user's contact record. This is a relationship field. **Relationship Name** EndUserContact

Field	Details
	Relationship Type Lookup **Refers To** Contact
`EndUserMessageCount`	**Type** int **Properties** Nillable **Description** The number of messages sent by the Messaging end user. This value isn't calculated in enhanced Messaging sessions. If you're trying to assess agent performance, consider calculating the messaging session length (`EndTime – AcceptTime`) instead.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
`LeadId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the Lead associated with this Messaging session.
`MessagingChannelId`	**Type** reference **Properties** Create, Filter, Group, Sort

Field	Details
	Description The ID of the Messaging channel associated with this Messaging session. This is a relationship field. **Relationship Name** MessagingChannel **Relationship Type** Lookup **Refers To** MessagingChannel
`MessagingEndUserId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the Messaging end user associated with this Messaging session. This is a relationship field. **Relationship Name** MessagingEndUser **Relationship Type** Lookup **Refers To** MessagingEndUser
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of this Messaging session.
`OpportunityId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the opportunity record associated with this Messaging session.
`Origin`	**Type** picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The origin of this Messaging session. Possible values are: • `AgentInitiated` • `ConversationClose`—Messaging user deleted the conversation in Apple Messages • `ConversationControlLost`—Third-party bot resumes control from Salesforce bot or agent • `Help` • `InboundInitiated` • `OptIn`—Opt In Status Change • `OptOut`—Opt Out Status Change • `TriggeredOutbound` Messaging sessions can't be created using Apex code. They can be created only through customer initiation or by using Process Builder, flows, or the Start Conversation action.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the owner associated with this Messaging session. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`PreviewDetails`	**Type** string **Properties** Nillable **Description** The preview shown to an agent for this Messaging session.
`SessionKey`	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort **Description** The identifier for the Messaging session.
StartTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort **Description** The time when the Messaging session started.
Status	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The status of the Messaging session. Possible values are: • `New` (standard channels only) • `Active` • `Consent` (enhanced channels only) • `Waiting` • `Paused` (enhanced channels only) • `Inactive` (enhanced channels only) • `Ended` • `Error` (enhanced channels only) To learn more about these statuses, see Lifecycle of a Messaging Session in Salesforce Help.
TargetUserId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the target user associated with this Messaging session. This is a relationship field. **Relationship Name** TargetUser **Relationship Type** Lookup

Field	Details
	Refers To User

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

MessagingSessionFeed
Feed tracking is available for the object.

MessagingSessionHistory
History is available for tracked fields of the object.

MessagingSessionOwnerSharingRule
Sharing rules are available for the object.

MessagingSessionShare
Sharing is available for the object.

MessagingTemplate

Represents a Messaging template used to send pre-formatted messages. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** The description of the Messaging template.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update

Field	Details
	Description The API name for the Messaging template. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the Messaging template.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The label of the Messaging template.
`Message`	**Type** textarea **Properties** Create, Update **Description** The body text of the Messaging template.

MetadataPackage

Represents a package that has been developed in the org you're logged in to. Applies to unlocked, unmanaged, first-generation, and second-generation managed packages.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the package.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** For first-generation and second-generation managed packages, and unlocked packages with namespaces, this field is the namespace prefix assigned to the package. For unmanaged packages, or no-namespace unlocked packages, this field is blank.
`PackageCategory`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of package. Valid values are: • `Application` (internal use only) • `Module` (internal use only) • `Package`—Represents either an unmanaged package or a first-generation managed package. • `Package2`—Represents either an unlocked package or a second-generation managed package. The default value is Package. This field is available in API version 49.0 and later.

Usage

Here are examples of the types of API queries you can perform.

Query	String
Show all managed and unmanaged packages in the org	`SELECT Name, NamespacePrefix FROM MetadataPackage`
Show only managed packages in the org	`SELECT Name, NamespacePrefix FROM MetadataPackage WHERE NamespacePrefix <> ''`

MetadataPackageVersion

Represents a package version (managed or unmanaged) that has been uploaded from the org you're logged in to.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
`BuildNumber`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The build number of the version. For example, if you upload two beta versions, they have build numbers 1 and 2. Then, when you upload a non-beta version, the build number is 3. When you upload a new version, the build number resets to 1.
`IsDeprecated`	**Type** boolean **Properties** Filter, Group, Sort **Description** Indicates whether the package version is deprecated. Available in API version 46.0 and later.
`MajorVersion`	**Type** int **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description The first number in a package version number. A version number either has an `x.y` format or an `x.y.z` format. The `x` represents the major version, `y` the minor version, and `z` the patch version.
`MetadataPackageId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The 18-character package ID starting with `033`.
`MinorVersion`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The second number in a package version number. A version number either has an `x.y` format or an `x.y.z` format. The `x` represents the major version, `y` the minor version, and `z` the patch version.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** The name of the package version.
`PatchVersion`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The third number in a package version number, if present. A version number either has an `x.y` format or an `x.y.z` format. The `x` represents the major version, `y` the minor version, and `z` the patch version.
`ReleaseState`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort

Field Name	Details
	Description If the package version is a beta version, the value is `Beta`. Otherwise, the value is `Released`.

Usage

Here are examples of the types of API queries you can perform.

Query	String
Get all package versions for the package that has a `MetadataPackageID` of 033D00000001xQlIAI	`SELECT Id, Name, ReleaseState, MajorVersion, MinorVersion, PatchVersion FROM MetadataPackageVersion WHERE MetadataPackageId = '033D00000001xQlIAI'`
Get the package version for the package with a specific `MetadataPackageID` and a major version greater than 1	`SELECT Id FROM MetadataPackageVersion WHERE MetadataPackageId ='033D00000001xQlIAI' AND MajorVersion > 1`
Get released package versions for the package with a specific `MetadataPackageID`	`SELECT Id FROM MetadataPackageVersion WHERE MetadataPackageId = '033D00000001xQlIAI' AND ReleaseState = 'Released'`

Java Code Sample

Suppose you want to push version 3.4.6 of your package to all orgs. Let's write some code to identify the orgs eligible for the upgrade. This example demonstrates how to generate the list of subscriber orgs eligible to be upgraded to version 3.4.6 of a package.

This code sample uses the Web Services Connector (WSC).

```
// Finds all Active subscriber orgs that have the package installed
String PACKAGE_SUBSCRIBER_ORG_KEY_QUERY = "Select OrgKey from PackageSubscribers where
OrgStatus = 'Active' and InstalledStatus = 'I'";

// Finds all MetadataPackageVersions lower than the version given, including the list
// of subscribers for each version
String METADATA_PACKAGE_VERSION_QUERY = "Select Id, Name, ReleaseState, (%s) from"
 + " MetadataPackageVersion where MetadataPackageId = '%s' AND ReleaseState = 'Released'"

 + " AND (MajorVersion < 3 OR (MajorVersion = 3 and MinorVersion < 4)"
 + " OR (MajorVersion = 3 and MinorVersion = 4 and PatchVersion < 6))";

// conn is an EnterpriseConnection instance initialized with a ConnectionConfig object
// representing a connection to the developer org of the package
QueryResult results = conn.query(String.format(METADATA_PACKAGE_VERSION_QUERY,
PACKAGE_SUBSCRIBER_ORG_KEY_QUERY));

// This list will hold all of the PackageSubscriber objects that are eligible for upgrade
// to the given version
```

```
List<PackageSubscriber> subscribers = new ArrayList<>();
for (SObject mpvso : results.getRecords()) {

  // Cast the sObject to a MetadataPackageVersion
  MetadataPackageVersion mpv = (MetadataPackageVersion) mpvso;

  // Add subscribers to our list
  if (mpv.getPackageSubscribers() != null) {
   for (SObject psso : mpv.getPackageSubscribers().getRecords()) {
    subscribers.add((PackageSubscriber) psso);
   }
 }
}
```

Next Step

Create a push request using PackagePushRequest.

Metric

The Metric object represents the components of a goal metric such as its name, metric type, and current value.

Note: The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`CompletionDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The completion date of the metric.
`CurrentValue`	**Type** double **Properties** Create, Defaulted on create, Filter, Nillable, Sort, Update **Description** The current value of the metric.

Field Name	Details
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** The description of the metric. The maximum length is 65,535 characters.
DueDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The due date of the metric.
GoalId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the goal the metric is related to.
InitialValue	**Type** double **Properties** Create, Defaulted on create, Filter, Nillable, Sort, Update **Description** The initial value of the metric.
IsCompletionMetric	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Read only. If `true`, the metric measures whether or not the metric is finished. If `false`, the metric measures how much is finished compared to a targeted value.
LastComment	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description A comment that provides more context about the metric, such as its status or progress. The maximum length is 255 characters.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp that indicates when a user last viewed a record that is related to this metric.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp that indicates when a user last viewed this metric. If this value is null, this record might have been only referenced (LastReferencedDate) and not viewed.
Name	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The name of the metric.
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the user who owns the metric.
Progress	**Type** percent **Properties** Filter, Nillable, Sort **Description** Read only. The overall progress of the metric.

Field Name	Details
RecordTypeId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the related record type.
StartDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The start date of the metric.
Status	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The status of the metric. Possible values include: • Not Started • On Track • Behind • Critical • Completed • Postponed • Canceled • Not Completed
TargetValue	**Type** double **Properties** Create, Defaulted on create, Filter, Nillable, Sort, Update **Description** The target value of the metric.
Weight	**Type** double **Properties** Create, Filter, Nillable, Sort, Update

Field Name	Details
	Description The weight of the metric. The sum of the weights should equal 100%.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

MetricFeed
Feed tracking is available for the object.

MetricHistory
History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

MetricOwnerSharingRule
Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

MetricShare
Sharing is available for the object.

MetricDataLink

The link between the metric and the data source, such as a report.

Note: The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`DatasourceFieldName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The field name of the data source, such as a report summary field.

Field Name	Details
DataSourceId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the data source.
LastSynchronizationTime	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The last time the data was synchronized.
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort **Description** The name given to the data link record.
TargetId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the metric that the data is linked to.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

MetricDataLinkHistory

History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

MilestoneType

Represents a milestone (required step in a customer support process). This object is available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only Salesforce admins, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.

Fields

Field	Details
`Description`	**Type** textarea **Properties** Create, Filter, Nillable, Update **Description** A description of the milestone.
`Name`	**Type** string **Properties** Create, Filter, idLookup, Update **Description** The name of the milestone.
`RecurrenceType`	**Type** picklist **Properties** Create,Update **Description** The type of recurrence for the milestone.

Usage

Use this object to query and manage the milestone type for CaseMilestone records.

SEE ALSO:

CaseMilestone

SlaProcess

MLField

Represents a single field in a data definition. This object is available in API version 50.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
Entity	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The object that contains the field.
Field	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The name of the field.

MlIntentUtteranceSuggestion

Represents a customer input, used for training purposes in the feedback loop process of a conversation. Admins can add these inputs to the intent training model. This object is available in API version 51.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
ConfigId	**Type** reference

Field	Details
	Properties Filter, Group, Nillable, Sort
IntentSuggestion	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The recommended intent.
ReviewStatus	**Type** picklist **Properties** Filter, Group, Restricted Picklist, Sort **Description** Possible values are: Ignore, New
Utterance	**Type** string **Properties** Filter, Group, Sort **Description** The text input from the end user.
UtteranceCount	**Type** integer **Properties** Filter, Group, Sort **Description** A count of the Utterance field.

MLPredictionDefinition

Represents a prediction definition that specifies details about the prediction. This object is available in API version 50.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ApplicationId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The unique ID of the parent AI Application.
DeveloperName	**Type** string **Properties** Filter, Group, Sort **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The language of the prediction. Possible values are: • da—Danish • de—German • en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean • nl_NL—Dutch

Field	Details
	• `no`—Norwegian • `pt_BR`—Portuguese (Brazil) • `ru`—Russian • `sv`—Swedish • `th`—Thai • `zh_CN`—Chinese (Simplified) • `zh_TW`—Chinese (Traditional)
`MasterLabel`	**Type** string **Properties** Filter, Group, Sort **Description** Label that identifies the prediction throughout the Salesforce user interface.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Specifies the namespace of the prediction, if installed with a managed package.
`PredictionField`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Field that the prediction is based on.
`PushbackField`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Field that the prediction writes scores to.
`Status`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort

Field	Details
	Description The status of the prediction. Possible values are: • `Disabled` • `Draft` • `Enabled`
`Type`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of model that returns the prediction values. Possible values are: • `BinaryClassification` • `DeepLearningIntentClassification` • `DeepLearningNameEntityRecognition` • `GlobalDeepLearningIntentClassification` • `GlobalDeepLearningNameEntityRecognition` • `LanguageDetection` • `MulticlassClassification` • `Regression` • `ScoringSpecificOutcome`

MLModel

Represents an AI model that can be used in Einstein Prediction Builder, Einstein Recommendation Builder, and other Einstein features. This object is available in API version 53.0 and later.

This object contains information that represents many types of AI models. Some fields contain information for only a specific type of model.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Available with Einstein Prediction Builder and Einstein Recommendation Builder.

Fields

Field	Details
ApprovalStatus	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates whether the model is approved, pending approval, or rejected. Possible values are: • `Approved` • `Pending` • `Rejected` The default value is `Pending`.
Dataset	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The ID of the dataset used to create the model.
ModelType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates the type of model. Possible values are: • `BinaryClassification` • `DecisionTree` • `DeepLearningIntent` • `DeepLearningNER` • `GeneralizedLinearModels` • `GlobalDeepLearningIntent` • `GlobalDeepLearningNER` • `GlobalLanguageDetection` • `GradientBoostedTrees` • `LinearRegression` • `LinearSupportVectorClassifiers`

Field	Details
	• `LogisticRegression` • `MulticlassClassification` • `NaiveBayes` • `NeuralNet` • `PopularityCount` • `RandomForest` • `Regression` • `XGBoost`
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The automatically generated ID that uniquely identifies the model.
`PredictionDefinitionId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the related prediction definition. This field is a relationship field. **Relationship Name** PredictionDefinition **Relationship Type** Lookup **Refers To** MLPredictionDefinition
`RecommendationDefinitionId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the related recommendation definition. This field is a relationship field. **Relationship Name** RecommendationDefinition

Field	Details
	Relationship Type Lookup **Refers To** MLRecommendationDefinition
`ScoringStatus`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Indicates whether scoring is enabled or disabled. Possible values are: • `Disabled` • `Enabled`
`TrainingEndTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Indicates the date and time when the training ended.
`TrainingStartTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Indicates the date and time when the training started.

MLModelFactor

Represents a field value that has a positive or negative effect on the model's score. This object is available in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Available with Einstein Prediction Builder and Einstein Recommendation Builder.

Fields

Field	Details
`Correlation`	**Type** double **Properties** Filter, Nillable, Sort **Description** Shows the strength of association between the variable and the outcome. The higher the correlation, the greater the association.
`FactorType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of factor. Possible values are: • `ModelFactlet`—The field value strongly influences the outcome because the model determined that this field is always important. For example, the model can decide that the field `Industry` is always important to the outcome, regardless of its value. • `ModelFactor`—The field value is important to the outcome because the field's value is significant. For example, the model can decide that the `Annual Revenue` field value is important to the outcome because the value is above $1,000,000 or below $50,000.
`Importance`	**Type** double **Properties** Filter, Nillable, Sort **Description** Shows how much the variable influences the outcome. The higher the value, the greater the impact.
`ModelId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the related model. This field is a relationship field.

Field	Details
	Relationship Name Model **Relationship Type** Lookup **Refers To** MLModel
Name	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The automatically generated ID that uniquely identifies the model.
Type	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of model factor. Possible values are: • `And` • `Basic` • `Or`
Weight	**Type** double **Properties** Filter, Nillable, Sort **Description** Indicates how significant the field value is to the outcome or score. Model factlets tend to have higher weights than model factors.

MLModelFactorComponent

Represents information about the related MLModelFactor. For example, this object can represent a field value or a field range such as “Title = CEO” or “Annual Revenue >10000000”. This object is available in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Available with Einstein Prediction Builder and Einstein Recommendation Builder.

Fields

Field	Details
`FactorLabelKey`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Maps the model factor component to a label that can be displayed to the user.
`FeatureType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** `FeatureType` and `FeatureValue` indicate a feature that doesn't have a corresponding field. For example, to indicate the feature "Percent = 97%", the `FeatureType` is `Percent` and the `FeatureValue` is `97`. Possible values are: • `Binary` • `Combobox` • `Currency` • `Date` • `DateTime` • `Email` • `ID` • `Integral` • `MultiPicklist` • `Percent` • `Phone` • `Picklist` • `Real` • `Text`

Field	Details
	• `TextArea` • `URL`
`FeatureValue`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The feature's value. See `FeatureType`.
`LeftHandDerivedField`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** If the model factor component is an equation, this field represents the name of the field on the left side of the equation. For example, if the model factor component is `Title = CEO`, this value is `Title`.
`ModelFactorId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the related MLModelFactor. This field is a relationship field. **Relationship Name** ModelFactor **Relationship Type** Lookup **Refers To** MLModelFactor
`ModelId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the related MLModel. This field is a relationship field.

Field	Details
	Relationship Name Model **Relationship Type** Lookup **Refers To** MLModel
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The automatically generated ID that uniquely identifies the model.
`Operator`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** If the model factor component is an equation, this field represents the operator. For example, if the model factor component is `Title = CEO`, the operator is `Equals`. Possible values are: • `Contains` • `EndsWith` • `Equals` • `GreaterThan` • `IsNotNull` • `IsNull` • `LessThan` • `NotEquals` • `StartsWith`
`RightHandDerivedField`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** If the model factor component is an equation, this field represents the name of the field on the right side of the equation.

Field	Details
SortOrder	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** If the model factor has multiple model factor components, this field indicates the order in which this model factor component appears.
Value	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** If the model factor component specifies a value, this field represents the value. For example, if the model factor component is `Title = CEO`, this field is `CEO`.

MLModelMetric

Represents a metric or statistic about the related model, such as accuracy, precision, or RSquared. Use a model's metrics to learn about its performance and to compare it with other models. This object is available in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Available with Einstein Prediction Builder and Einstein Recommendation Builder.

Fields

Field	Details
BasicMetricValue	**Type** double **Properties** Filter, Nillable, Sort **Description** The value of a basic metric. A basic metric is a single number. For metrics that comprise a set of graph points, see `ComplexMetricValue` .

Field	Details
ComplexMetricValue	**Type** textarea **Properties** Nillable **Description** The X and Y values for a complex metric. A complex metric is a coordinate on a graph. For example, in classification models, you can use a line on a graph to create classification categories.
DataSetType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of dataset. Possible values are: • Baseline • HoldOut • Live • Model • Training
EndTime	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the model training finished.
GraphType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of graph. Possible values are: • ConfidencePlot • ConfusionMatrixPerThreshold • DiscountedCumulativeGainsGraph • HitRateGraph

Field	Details
	• `KBasedRankingGraph` • `LiftPlot` • `MeanReciprocalRankGraph` • `MultiClassConfusionMatrixPerThreshold` • `MultiClassMisclassifications` • `NormalizedDiscountedCumulativeGainsGraph` • `PrecisionGraph` • `RecallGraph` • `RegressionErrorBands`
`MetricType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of metric. Possible values are: • `Accuracy` • `AveragePrecision` • `BalancedAccuracy` • `DiscountedCumulativeGainAtK` • `ExpectedTopAbsoluteRank` • `ExpectedTopPercentileRank` • `F1Score` • `FMeasure` • `HitRateAtK` • `LiftBucket` • `MeanAbsoluteError` • `MeanAbsoluteRank` • `MeanAveragePrecisionAtK` • `MeanPercentileRank` • `MeanReciprocalRank` • `MeanReciprocalRankAtK` • `MeanTopReciprocalRank` • `NormalizedDiscountedCumulativeGainsAtK` • `Precision` • `PrecisionAtK` • `RSquared`

Field	Details
	- `Recall` - `RecallAtK` - `RootMeanSquaredError` - `auPR` - `auROC`
`ModelId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the related MLModel. This field is a polymorphic relationship field. **Relationship Name** Model **Relationship Type** Lookup **Refers To** MLModel
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An automatically generated ID that uniquely identifies the metric.
`RowCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of rows.
`Span`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The time span for the metric. Possible values are: - `Day`

Field	Details
	• `Hour` • `Month` • `SinceLastAction` • `Week`
`StartTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time when the model training started.

MLRecommendationDefinition

For internal use only.

MobileSecurityPolicy

Enables mobile security policies on the Salesforce mobile app with Enhanced Mobile Security. This object is available in API version 50.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Accessing this object requires the Enhanced Mobile App Security add-on subscriptions and the Enforce Enhanced Mobile App Security user permission.

Fields

Field	Details
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update

Field	Details
	Description The unique name of the object in the API. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
EffectiveDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date a mobile security policy is enforced.
IsEnabled	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** A value indicating whether a mobile security policy is enabled. The default value is 'false'.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The two-to five-character code that represents the language and locale ISO.
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The label of the mobile security policy.
MobilePlatform	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The mobile operating system. Possible values are:

Field	Details
	• `Android` • `iOS`
`MobileSecurityAssignmentId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the ID of the mobile security assignment. This is a relationship field. **Relationship Name** MobileSecurityAssignment **Relationship Type** Lookup **Refers To** MobileSecurityAssignment
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that aren't Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
`RuleValue`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Value of the mobile security policy rule.

Field	Details
RuleValueType	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of mobile security policy rule. Possible values are: • Boolean • Text • TextList
SeverityLevel	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The severity level of a mobile security policy. Possible values are: • Critical • Error • Info • Warn
Type	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of mobile security policy. Possible values are: • AllowedDeviceList—Allowed Device List • Block3dTouch—Block 3D Touch • BlockCalendar—Block Calendar • BlockCamera—Block Camera • BlockContacts—Block Contacts • BlockCustomKeyboard—Block Custom Keyboard • BlockFileBackup—Block File Backup • BlockMicrophone—Block Microphone • BlockOsSharing—Block OS Share Actions

Field	Details
	• `BlockedDeviceList`—Blocked Device List • `BrowserUriScheme`—Mobile Browser URI Scheme • `CheckBiometric`—Check Biometric Login Data • `DevicePasscode`—Require Device Passcode • `DisableUrlCaching`—Disable URL Caching • `JailbrokenDevice`—Block Jailbroken Device • `LogCertPin`—Log Certificate Pinning • `LogEmail`—Log Email • `LogPhonecall`—Log Phone Call • `LogPolicyResult`—Log Security Policy Evaluation Result • `LogScreenshot`—Log Screenshot • `LogTextmessage`—Log SMS • `LogoutAfterRestart`—Log Out User After Device Restart • `LogoutOnBiometricChange`—Log Out User After Changing Biometric Login Data • `MalwareDetection`—Malware Detection • `ManInMiddle`—Block Man In The Middle Attack • `MaxOffline`—Maximum Days Offline Without Policy Refresh • `MaximumAppVersion`—Maximum Application Version • `MaximumOsVersion`—Maximum OS Version • `MinimumAppVersion`—Minimum Application Version • `MinimumOsVersion`—Minimum OS Version • `MinimumSecurityPatchVersion`—Minimum Security Patch Version • `PhonecallUriScheme`—Phone Call Application Handler • `Screenshot`—Block Screenshot

MobileSecurityUserMetric

Represents the metrics for users who have Enhanced Mobile Security policies enforced. This object is available in API version 51.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Accessing this object requires the Enhanced Mobile App Security add-on subscriptions and the Enforce Enhanced Mobile App Security user permission.

Fields

Field	Details
MetricsDate	**Type** date **Properties** Filter, Group, Sort **Description** The date the metrics were collected.
UserCount	**Type** double **Properties** Filter, Nillable, Sort **Description** The number of users who have mobile security policies enforced.

Usage

A user with the Manage Enhanced Mobile App Security permission can run this SOQL query.

```
SELECT MetricsDate, UserCount
FROM MobileSecurityUserMetric
ORDER BY MetricsDate DESC
```

MobileSettingsAssignment

Represents the assignment of a particular field service mobile settings configuration to a user profile. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
FieldServiceMobileSettingsId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of a set of field service mobile settings.
ProfileId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the profile to associate with the set of field service mobile settings.

MobSecurityCertPinConfig

Configuration of mobile security certificate pinning on the Salesforce mobile app with Enhanced Mobile Security. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Accessing this object requires the Enhanced Mobile App Security add-on subscriptions and the Enforce Enhanced Mobile App Security user permission.

Fields

Field	Details
CertificateHash	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique identifier for the certificate.

Field	Details
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API.
DomainName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the domain.
IsEnabled	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The default value is False.
IsSubdomainIncluded	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The default value is False.
Language	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The two-to five-character code that represents the language and locale ISO.
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The master label of the mobile security pin.

Field	Details
`MobilePlatform`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The mobile operating system. Possible values are: • `Android` • `iOS`
`MobileSecurityAssignmentId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Indicates the ID of the mobile security assignment. This is a relationship field. **Relationship Name** MobileSecurityAssignment **Relationship Type** Lookup **Refers To** MobileSecurityAssignment
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.

Field	Details
	• In orgs that aren't Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
`SeverityLevel`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The severity level of a mobile security policy. Possible values are: • `Critical` • `Error` • `Info` • `Warn`
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of pin Possible values are: • `AuthServer`—Authentication Server • `Resource`—Resource

MobSecurityCertPinEvent

The event of mobile security certificate pinning on the Salesforce mobile app with Enhanced Mobile Security. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `describeSObjects()`

Special Access Rules

Accessing this object requires the Enhanced Mobile App Security add-on subscriptions and the Enforce Enhanced Mobile App Security user permission.

Fields

Field	Details
AppPackageIdentifier	**Type** string **Properties** Create **Description** The unique identifier for the certificate.
AppVersion	**Type** string **Properties** Create **Description** The version of the app.
CertPinResults	**Type** json **Properties** Create **Description** The results of certificate pinning.
DeviceIdentifier	**Type** string **Properties** Create **Description** The hardware IDs or IDs to uniquely identify a mobile device.
DeviceModel	**Type** string **Properties** Create **Description** The model of the mobile device.
EventDate	**Type** dateTime **Properties** Create, Nillable

Field	Details
	Description The date of the certificate pinning event.
EventDescription	**Type** string **Properties** Create, Nillable **Description** The description of the certificate pinning event.
EventIdentifier	**Type** string **Properties** Create, Nillable **Description** The ID of the certificate pinning event.
EventUuid	**Type** string **Properties** Nillable **Description** The universally unique identifier of the event.
OsName	**Type** string **Properties** Create **Description** The name of the operating system.
OsVersion	**Type** string **Properties** Create **Description** The version of the operating system.
ReplayId	**Type** string **Properties** Nillable

Field	Details
	Description The position of the event in the event stream.
`UserId`	**Type** reference **Properties** Create **Description** This is polymorphic relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User
`WebkitVersion`	**Type** string **Properties** Create, Nillable **Description** The version of the web browser engine developed by Apple.

MsgChannelLanguageKeyword

Represents the consent configuration for a Messaging channel. This object is available in API version 48.0 and later.

Supported Calls

`describeSObjects()`, `delete()`, `query()`, `retrieve()`, `search()`

Fields

Field	Details
`CustomKeywords`	**Type** textarea **Properties** Nillable

Field	Details
	Description The keywords a Messaging end user can send to receive the Custom Response.
`CustomResponse`	**Type** textarea **Properties** Nillable **Description** The automated response sent when a Messaging end user sends a Custom Keyword.
`DoubleOptInKeywords`	**Type** textarea **Properties** Nillable **Description** The keywords a Messaging end user can send to doubly opt in to receiving messages.
`HelpKeywords`	**Type** textarea **Properties** Nillable **Description** The keywords a Messaging end user can send to request help during a Messaging session.
`HelpResponse`	**Type** textarea **Properties** Nillable **Description** The automated response sent when a Messaging end user requests help.
`MasterLanguage`	**Type** textarea **Properties** **Description** The language used for this consent configuration.
`MessagingChannelId`	**Type** reference **Properties** Filter, Group, Sort

Field	Details
	Description The ID of the associated Messaging channel. This is a relationship field. **Relationship Name** MessagingChannel **Relationship Type** Lookup **Refers To** MessagingChannel
`OptInConfirmation`	**Type** textarea **Properties** Nillable **Description** The automated response sent when a Messaging end user opts in to receiving messages.
`OptInKeywords`	**Type** textarea **Properties** Nillable **Description** The keywords a Messaging end user can send to explicitly opt in to receiving messages.
`OptOutConfirmation`	**Type** textarea **Properties** Nillable **Description** The automated response sent when a Messaging end user opts out of receiving messages.
`OptOutKeywords`	**Type** textarea **Properties** Nillable **Description** The keywords a Messaging end user can send to opt out of receiving messages.

MyDomainDiscoverableLogin

Represents configuration settings when the My Domain login page type is Discovery. Login Discovery provides an identity-first login experience, where the login page contains the identifier field only. Based on the identifier entered, a handler determines how to authenticate the user. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
`ApexHandlerId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the Apex handler that contains the Discovery authentication logic. This is a relationship field. **Relationship Name** ApexHandler **Relationship Type** Lookup **Refers To** ApexClass
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.

Field Name	Details
ExecuteApexHandlerAsId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the user who is executing the handler. Requires Manage User permission. This is a relationship field. **Relationship Name** ExecuteApexHandlerAs **Relationship Type** Lookup **Refers To** User
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the MasterLabel. Possible values are: • da (Danish) • de (German) • en_US (English) • es (Spanish) • es_MX (Spanish - Mexican) • fi (Finnish) • fr (French) • it (Italian) • ja (Japanese) • ko (Korean) • nl_NL (Dutch) • no (Norwegian) • pt_BR (Portuguese - Brazilian) • ru (Russian) • sv (Swedish) • th (Thai) • zh_CN (Chinese - Simplified) • zh_TW (Chinese - Traditional)

Field Name	Details
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The name of the action link group template.
`UsernameLabel`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Login prompt on login page when the My Domain login page type is Discovery. It supports localization with custom labels.

Usage

Use this object to access the My Domain Login Discovery Page, which is a login page type that prompts users to identity themselves with an email address, phone number, or custom identifier. My Domain Login Discovery performs an interview-based login process, where users are first prompted to provide identity and then authenticated. For example, users receive a verification code that they enter to complete the login process.

MutingPermissionSet

Represents a set of disabled permissions and is used in conjunction with PermissionSetGroup. This object is available in API version 46.0 and later.

Use a muting permission set with a permission set group to mute certain permissions. For instance, you have a subscriber org using a managed package that contains a permission set group. To use the existing permission set group, the subscriber org can disable specific permissions with a muting permission set. Or, perhaps you have a permission set group that contains several permission sets managed by different departments. Use a muting permission set to disable specific permissions based on your organization's needs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Manage Session Permission Set Activations
- Assign Permission Sets

Fields

Field Name	Details
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance can slow while Salesforce generates one for each record. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the muting permission set. Possible values are: • da (Danish) • de (German) • en_US (English) • es (Spanish) • es_MX (Spanish - Mexican) • fi (Finnish) • fr (French) • it (Italian) • ja (Japanese) • ko (Korean) • nl_NL (Dutch) • no (Norwegian) • pt_BR (Portuguese - Brazilian) • ru (Russian)

Field Name	Details
	• `sv` (Swedish) • `th` (Thai) • `zh_CN` (Chinese - Simplified) • `zh_TW` (Chinese - Traditional)
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The muting permission set label for the aggregated, disabled permissions.
`Permissions`*`PermissionName`*	**Type** boolean **Properties** Create, Filter, Update **Description** One field for each permission. If `true`, the permission is disabled in the related permission set group. The number of fields varies depending on the permissions for the organization and license type. To get a list of available permissions, use `describeSObjects()`.

Usage

Use MutingPermissionSet to disable specified permissions within a permission set group.

Name

Non-queryable object that provides information about foreign key traversals when the foreign key has more than one parent.

This object is used to retrieve information from related records where the related record can be from more than one object type (a polymorphic foreign key). For example, the owner of a case can be either a user or a group (queue). This object allows retrieval of the owner name, whether the owner is a user or a group (queue). You can use a describe call to access the information about parents for an object, or you can use the `who`, `what`, or `owner` fields (depending on the object) in SOQL queries. This object can't be directly accessed.

Supported Calls

`describeSObjects()`

Fields

Field	Details
Alias	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The user alias. This field contains a value only if the related record is a user.
Email	**Type** email **Properties** Filter, Group, Nillable, Sort **Description** The email address of the user or group (queue).
FirstName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The first name of the user, contact, or lead.
IsActive	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the related record is an active user (`true`) or not (`false`). This field contains a value only if the related record is a user.
LastName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The last name of the user, contact, or lead.
LastReferencedDate	**Type** datetime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
`LastViewedDate`	**Type** datetime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it’s possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.
`MiddleName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The middle name of the user contact, or lead.
`Name`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name of the parent of the object queried. If the parent is a user, contact, or lead, the value is a concatenation of the `FirstName`, `MiddleName`, `LastName`, and `Suffix` fields of the related record.
`Phone`	**Type** phone **Properties** Filter, Group, Nillable, Sort **Description** The phone number of the user. This field contains a value only if the related record is a user.
`Profile`	**Type** reference **Properties** Filter, Nillable **Description** The Profile of the user. Only populated if the related record is a user.

Field	Details
ProfileId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the user's Profile. Only populated if the related record is a user. This field is a relationship field. **Relationship Name** Profile **Relationship Type** Lookup **Refers To** Profile
Suffix	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The name suffix of the user, contact, or lead.
Title	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The title of the user, for example CFO or CEO.
Type	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** A list of the types of sObject that can be an owner of this object. You can use this field to filter on a type of owner, for example, return only the leads owned by a user.
Username	**Type** string **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description Contains the name that a user enters to log into the API or the user interface. The value for this field is in the form of an email address, and is only populated if the related record is a user.
`UserRole`	**Type** picklist **Properties** Filter, Nillable **Description** Name of the `Role` played by the user. Only populated for user rows.
`UserRoleId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user role associated with this object. This field is a relationship field. **Relationship Name** UserRole **Relationship Type** Lookup **Refers To** UserRole

Usage

To query on relationships where the parent can be more than one type of object, use `who`, `what`, or `owner` relationship fields.

Overview of Salesforce Objects and Fields

NamedCredential

Represents a named credential, which specifies the URL of a callout endpoint and its required authentication parameters in one definition. A named credential can be specified as an endpoint to simplify the setup of authenticated callouts. This object is available in API version 33.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Note: All credentials stored within this entity are encrypted under a framework that is consistent with other encryption frameworks on the platform. Salesforce encrypts your credentials by auto-creating org-specific keys. Credentials encrypted using the previous encryption scheme have been migrated to the new framework.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
`AuthProviderId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Salesforce ID of the authentication provider, which defines the service that provides the login process and approves access to the external system. Only users with the "Customize Application" and "Manage AuthProviders" permissions can view this field. This field is a relationship field. This field is only valid for legacy named credentials. This field was first available in API version 39.0, this field is deprecated in API version 56.0. **Relationship Name** AuthProvider **Relationship Type** Lookup **Refers To** AuthProvider
`AuthTokenEndpointUrl`	**Type** textarea **Properties** Nillable

Field Name	Details
	Description The URL where SON Web Tokens (JWTs) are exchanged for access tokens. This field is only valid for legacy named credentials. This field was first available in API version 46.0, this field is deprecated in API version 56.0.
`CalloutOptionsAllowMergeFieldsInBody`	**Type** boolean **Properties** Filter **Description** For Apex callouts, indicates whether the code can use merge fields to populate HTTP request bodies with org data. This field is available in API version 35.0 and later.
`CalloutOptionsAllowMergeFieldsInHeader`	**Type** boolean **Properties** Filter **Description** For Apex callouts, indicates whether the code can use merge fields to populate HTTP headers with org data. This field is available in API version 35.0 and later.
`CalloutOptionsGenerateAuthorizationHeader`	**Type** boolean **Properties** Filter **Description** Indicates whether Salesforce automatically generates a standard authorization header for each callout to the named credential–defined endpoint. This field is available in API version 35.0 and later.
`DeveloperName`	**Type** string **Properties** Filter, Group, Sort

Field Name	Details
	Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`Endpoint`	**Type** textarea **Properties** Nillable **Description** The root URL of the endpoint. This field is only valid for legacy named credentials. This field is deprecated in API version 56.0.
`JwtAudience`	**Type** textarea **Properties** Nillable **Description** External service or other allowed recipients for the JSON Web Token. Written as JSON, with a quoted string for a single audience and an array of quoted strings for multiple audiences. Single audience example: `"aud1"`. Multiple audiences example: `["aud1", "aud2", "aud3"]`. This field is only valid for legacy named credentials. This field was first available in API version 46.0, this field is deprecated in API version 56.0.
`JwtFormulaSubject`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description Formula string calculating the JSON Web Token's subject. API names and constant strings, in single quotes, can be included. Allows a dynamic Subject unique per user requesting the token. For example, `'User='+$User.Id`. Use this field when `PrincipalType` is set to `PerUser`. Corresponds to Per User Subject in the user interface. This field is only valid for legacy named credentials. This field was first available in API version 46.0, this field is deprecated in API version 56.0.
`JwtIssuer`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Specify who issued the JSON Web Token using a case-sensitive string. This field is only valid for legacy named credentials. This field was first available in API version 46.0, this field is deprecated in API version 56.0.
`JwtTextSubject`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Static text, without quotes, that specifies the JSON Web Token subject. Use this field when `PrincipalType` is set to `NamedUser`. Corresponds to Named Principal Subject in the user interface. This field is only valid for legacy named credentials. This field was first available in API version 46.0, this field is deprecated in API version 56.0.
`JwtValidityPeriodSeconds`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of seconds that the JSON Web Token is valid. This field is only valid for legacy named credentials.

Field Name	Details
	This field was first available in API version 46.0, this field is deprecated in API version 56.0.
`Language`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The language of the `MasterLabel`.
`MasterLabel`	**Type** string **Properties** Filter, Group, Sort **Description** The label for the named credential. This display value is the internal label that doesn't get translated.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.
`PrincipalType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Tracks users who are accessing the external system. `Anonymous` implies that a user identity isn't specified for external system access. `Named Principal` uses one user identity for all users to access the external system. This field is only valid for legacy named credentials. This field is deprecated in API version 56.0.

Usage

Use the NamedCredential object to query named credentials in your organization.

> **Note:** Some named credential fields rely on per-user authentication to connect with an external system. If an admin edits one of these fields, then the previously authenticated credentials can get invalidated, requiring individual users to reauthenticate.

ExternalDataUserAuth

ExternalDataSource

NamespaceRegistry

Represents a namespace that you can link to scratch orgs that were created from your org's Dev Hub. You use the namespace when developing, packaging, and releasing an app. You can't create this object with the API. Use the **Link Namespace** action in the Dev Hub graphical interface to insert a `NamespaceRegistry` record. This object is available in API version 41.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Fields

Field Name	Details
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, Sort **Description** The name of this namespace registry entry.
`NamespaceOrg`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The org ID of the Developer Edition org where you've registered the namespace you want to link.
`NamespacePrefix`	**Type** string

Field Name	Details
	Properties Filter, Group, Sort **Description** The namespace prefix that you want to link to the scratch org.

Associated Objects

This object has these associated objects. Unless noted, they're available in the same API version as this object.

NamespaceRegistryFeed
Feed tracking is available for the object.

NamespaceRegistryHistory
History is available for tracked fields of the object.

ActiveScratchOrg
ScratchOrgInfo

NavigationLinkSet

Represents the navigation menu in an Experience Cloud site. A navigation menu consists of items that users can click to go to other parts of the site. This object is available in API version 35.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

`create()`, `delete()`, `update()`, and `upsert()` are available in API version 45.0 and later.

Special Access Rules

Navigation menus are available only in Experience Cloud sites created using Experience Builder templates. To use navigation menus in LWR templates, you must build a custom navigation menu component.

Fields

Field Name	Details
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update

Field Name	Details
	Create and Update are available in API version 45.0 and later. **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Create, Defaulted on create, Nillable, and Update are available in API version 45.0 and later. **Description** Language for the navigation menu. Valid values are: • Chinese (Simplified): `zh_CN` • Chinese (Traditional): `zh_TW` • Danish: `da` • Dutch: `nl_NL` • English: `en_US` • Finnish: `fi` • French: `fr` • German: `de` • Italian: `it` • Japanese: `ja` • Korean: `ko` • Norwegian: `no` • Portuguese (Brazil): `pt_BR` • Russian: `ru` • Spanish: `es` • Spanish (Mexico): `es_MX` Spanish (Mexico) defaults to Spanish for customer-defined translations. • Swedish: `sv` • Thai: `th` The Salesforce user interface is fully translated to Thai, but Help is in English.
`MasterLabel`	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Sort, Update Create and Update are available in API version 45.0 and later. **Description** Label for the navigation menu.
`NetworkId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort Create is available in API version 45.0 and later. Update is available in API versions 45.0 to 47.0. **Description** ID of the Experience Cloud site.

NavigationMenuItem

Represents a single menu item in a NavigationLinkSet. Use this object to create, delete, or update menu items in your Experience Cloud site's navigation menu. This object is available in API version 35.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Navigation menus are available only in Experience Cloud sites created using Experience Builder templates. To use navigation menus in LWR templates, you must build a custom navigation menu component.

Fields

Field Name	Details
`AccessRestriction`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Determines if the menu item is available to guest users who aren't required to log in to the Experience Cloud site.

Field Name	Details
DefaultListViewId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** If the value of the `Type` field is SalesforceObject, the value is the ID of the default list view for the object.
DraftRowID	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the draft navigation menu item. The ID is unique within your organization.
Label	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The text that appears in the navigation menu for this item.
NavigationLinkSetId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The navigation menu that this item is included in.
ParentId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The parent navigation menu.
Position	**Type** int **Properties** Create, Filter, Group, Sort, Update

Field Name	Details
	Description The location of the menu item in the navigation menu.
`Status`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** Represents if the navigation menu item is published or not. The values can only be DRAFT, LIVE, or null. In API versions 42 and earlier, if the Status field is not set, the field defaults to LIVE. When queried and Status is not part of the query filter, only the NavigationMenuItem objects with a status of LIVE return. In API versions 43 and later, if the Status field is not set, the field defaults to DRAFT. When queried and Status is not part of the query filter, all NavigationMenuItem objects return regardless of status.
`Target`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** If `Type` is ExternalLink or InternalLink, the target is the URL that the link points to. For ExternalLink, your entry looks like this: *`https://salesforce.com`*. For InternalLink, use a relative URL, such as *`/contactsupport`*.
`TargetPrefs`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** If `Type` is ExternalLink, determines whether a navigation menu item opens in the same tab.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of navigation menu item. The available values are: • SalesforceObject—Available objects include accounts, cases, contacts, and custom objects.

Field Name	Details
	• ExternalLink—Links to a URL outside of your Experience Cloud site. For example, *https://salesforce.com*. • Event—An event, such as logging in, logging out, or switching accounts. Event is internal only and can't be used in custom components. • GlobalAction—Enables users to create object records, but the new record has no relationship with other records. • InternalLink—Links to a relative URL inside your Experience Cloud site. For example, */contactsupport*. • NavigationalTopic—A dropdown list with links to the navigational topics in your Experience Cloud site. • SystemLink—A system link, such as a link to Experience Builder, Workspaces, or Salesforce setup.

Usage

You can add up to 20 navigation menu items. You can translate navigation menu items using the Translation Workbench.

NavigationMenuItemLocalization

Represents the translated value of a navigation menu item in an Experience Cloud site. This object is available in API version 36.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Navigation menus are available only in Experience Cloud sites created using Experience Builder templates. To use navigation menus in LWR templates, you must build a custom navigation menu component.

Fields

Field Name	Details
`Language`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort

Field Name	Details
	Description The language of the translated navigation menu item. The picklist contains the following supported languages: • Chinese (Simplified): `zh_CN` • Chinese (Traditional): `zh_TW` • Danish: `da` • Dutch: `nl_NL` • English: `en_US` • Finnish: `fi` • French: `fr` • German: `de` • Italian: `it` • Japanese: `ja` • Korean: `ko` • Norwegian: `no` • Portuguese (Brazil): `pt_BR` • Russian: `ru` • Spanish: `es` • Spanish (Mexico): `es_MX` Spanish (Mexico) defaults to Spanish for customer-defined translations. • Swedish: `sv` • Thai: `th` The Salesforce user interface is fully translated to Thai, but Help is in English.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.

Field Name	Details
	• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the navigation menu item that this translated value applies to.
`Value`	**Type** string **Properties** Create, Filter, Sort, Update **Description** The translated text for the navigation menu item. Label is **Translation Text**.

Network

Represents an Experience Cloud site. Salesforce Experience Cloud lets you create branded spaces for your employees, customers, and partners. You can customize and create experiences, whether they're communities, sites, or portals, to meet your business needs, then transition seamlessly between them. Experience Cloud sites let you share information, records, and files with coworkers and stakeholders all in one place. This object is available in API version 26.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

Special Access Rules

This object is available only when your org has digital experiences enabled.

Fields

Field Name	Details
`AllowedExtensions`	**Type** textarea **Properties** Filter, Nillable, Sort, Update

Field Name	Details
	Description Specifies the types of files allowed in your site. This list of file types lets you control what members upload and also prevents spammers from polluting your site with inappropriate files. Available in API version 36.0 and later. Separate file types with a comma (for example: *jpg,docx,txt*). You can enter lowercase and uppercase letters. You can enter up to 1,000 characters. To allow all file types, leave this field empty.
CaseCommentEmailTemplateId	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** ID of the email template used when submitting a comment on a case. This field is available in API version 28.0 and later.
ChangePasswordEmailTemplateId	**Type** reference **Properties** Filter, Group, Sort, Update **Description** ID of the email template used when notifying users that their password has been reset.
ChgEmailVerNewEmailTemplateId	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** ID of the email template used when notifying users that their email address has been changed. This email is sent to the user's new email address.
ChgEmailVerOldEmailTemplateId	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** ID of the email template used when notifying users that their email address has been changed. This email is sent to the user's old email address.
Description	**Type** string

Field Name	Details
	Properties Filter, Group, Nillable, Sort, Update **Description** Description of the site.
`DeviceActEmailTemplateId`	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** ID of the email template used when users log in from an unrecognized browser, app, or IP address. The email contains a one-time password that users enter to verify their identity. This field is available in API version 53.0 and later.
`EmailFooterLogoId`	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** ID of the Document object that displays as an image in the footer of Chatter emails.
`EmailFooterText`	**Type** string **Properties** Filter, Nillable, Sort, Update **Description** Text that displays in the footer of Chatter emails.
`EmailSenderAddress`	**Type** email **Properties** Filter, Group, Sort **Description** Read only. Email address from which emails are sent. Note: To change the `EmailSenderAddress` value, you must first specify `NewSenderAddress`, which triggers the sending of an address change verification email. After you complete the address verification process, `EmailSenderAddress` changes to the specified `NewSenderAddress`.

Field Name	Details
EmailSenderName	**Type** string **Properties** Filter, Group, Sort, Update **Description** Name from which emails are sent.
enableImageOptimizationCDN	**Type** boolean **Properties** Filter, Update **Description** The setting that optimizes cached images for guest users on all devices when a site uses Salesforce's CDN for Digital Experiences. This field is available in API version 56.0 and later.
FirstActivationDate	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** The date the site was first activated. This field is available in API version 34.0 and later. If the site was activated or inactive before the release of API version 34.0, this field returns the date that the site was first created.
ForgotPasswordEmailTemplateId	**Type** reference **Properties** Filter, Group, Sort, Update **Description** ID of the email template used when users forget their password.
HeadlessForgotPasswordTemplateId	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** ID of the email template to use with the Headless Forgot Password Flow. This field is available in API version 57.0 and later.

Field Name	Details
HeadlessRegistrationTemplateId	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** ID of the email template to use for identity verification during the Headless Registration Flow. This field is available in API version 59.0 and later.
LockoutEmailTemplateId	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** ID of the email template used when users try to reset their password after locking themselves out because of too many login attempts. This field is available in API version 43.0 and later.
MaxFileSizeKb	**Type** int **Properties** Filter, Group, Nillable, Sort, Update **Description** Specifies the maximum file size (in KBs) that members can upload in your site. Available in API version 36.0 and later. Enter a number between 3072 KB and your org's maximum file size. To use the default limit of 2 GB, leave this field empty.
Name	**Type** string **Properties** Filter, Group, idLookup, Sort, Update **Description** The name of the site.
NewSenderAddress	**Type** email **Properties** Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description Email address that has been entered as the new value for `EmailSenderAddress` but hasn't been verified yet. After a user has requested to change the sender email address and has successfully responded to the verification email, the `NewSenderAddress` value overwrites the value in `EmailSenderAddress`. This value becomes the email address from which emails are sent. Note: • If verification is pending for a new email address and you set `NewSenderAddress` to null, the verification request is canceled. • `NewSenderAddress` is automatically set to null after `EmailSenderAddress` has been set to the new verified address. • If verification is pending for a new email address, and you specify a different new address for this field, only the latest value is retained and used for verification.
`OptionsActionOverrideEnabled`	**Type** boolean **Properties** Filter, Update **Description** Override the action that occurs when users click a default button, like New or Edit, with a Lightning component. For example, show a custom window instead of the one that Salesforce provides. Assign action overrides in the Object Manager. In the UI, this setting is available in the Administration Workspace, under **Administration** > **Preferences** under Experience Management This field is available in API version 49.0 and later.
`OptionsAllowInternalUserLogin`	**Type** boolean **Properties** Filter, Update **Description** Specifies whether internal users can log in with their internal credentials on the site login page. This field is available in API version 37.0 and later.
`OptionsAllowMembersToFlag`	**Type** boolean **Properties** Filter, Update

Field Name	Details
	Description Determines whether users can flag posts, comments, or files as inappropriate. This field is available in API version 29.0 and later. The ability to flag files is available in version 30.0 and later.
`OptionsApexCDNCachingEnabled`	**Type** boolean **Properties** Filter, Update **Description** Determines whether public data from @wire calls to Apex methods is cached only for guest users. This setting applies only to sites using Salesforce's CDN for Digital Experiences. This field is available in API version 55.0 and later.
`OptionsDirectMessagesEnabled`	**Type** boolean **Properties** Filter, Update **Description** Controls the availability of direct messages in an Experience Builder site. This field is available in API version 39.0 and later.
`OptionsEnableTalkingAboutStats`	**Type** boolean **Properties** Filter, Update **Description** Determines whether site users see how many people are discussing a topic. The number of people discussing the topic appears as the user types the topic and the system gives topic suggestions. This field is available in API version 41.0 and later.
`OptionsEnableTopicAssignmentRules`	**Type** boolean **Properties** Filter, Update **Description** When true, displays knowledgeable people in key areas, for example, on Topic Detail pages.

Field Name	Details
OptionsExpFriendlyUrlsAsDefault	**Type** boolean **Properties** Filter, Update **Description** When true, URL slugs are on by default for Product and Category pages in LWR Commerce stores. Available in API version 59.0 and later.
OptionsExperienceBundleBasedSnaOverrideEnabled	**Type** boolean **Properties** Filter, Update **Description** When true, the Service Not Available Page is an auto-generated Experience Builder-based page. When false, the Service Not Available page uses a static resource page that is set in **Workspaces** > **Administration** > **Pages**. The default value is true. Available in API version 52.0 and later.
OptionsGatherCustomerSentimentData	**Type** boolean **Properties** Filter, Update **Description** When true, collects data about user likes, upvotes, and downvotes.
OptionsGuestChatterEnabled	**Type** boolean **Properties** Filter, Update **Description** Specifies whether guest users can access public Chatter groups in the site without logging in.
OptionsGuestFileAccessEnabled	**Type** boolean **Properties** Filter, Update **Description** When true, lets guest users view asset files and CMS content that's available to the site. Guest users can access shared asset files and published CMS content that's made for external use, even if it isn't used. Shared asset files include images that are associated with topics, recognition badges, branding, and account

Field Name	Details
	branding. This preference is automatically enabled if public access is enabled at the page or site level in Experience Builder.
`OptionsGuestMemberVisibility`	**Type** boolean **Properties** Filter, Update **Description** When true, lets guest users see who else is part of the site, including non-guest users. In the UI, this setting appears in the Administration Workspace under **Administration** > **Preferences** . Available in API version 47.0 and later.
`OptionsHeadlessFrgtPswEnabled`	**Type** boolean **Properties** Filter, Update **Description** When `true`, Headless Forgot Password Flow is enabled. This field is available in API version 57.0 and later.
`OptionsImageOptimizationCDNEnabled`	**Type** boolean **Properties** Filter, Update **Description** When `true`, cached images are optimized to suit any device that guest users use to access your site. This feature is available only for sites that use Salesforce's CDN for Digital Experiences. In the UI, this setting appears in the Administration Workspace under **Administration** > **Preferences**. Available in API version 56.0 and later.
`OptionsInvitationsEnabled`	**Type** boolean **Properties** Filter, Update **Description** Determines whether users can invite others to the site.
`OptionsKnowledgeableEnabled`	**Type** boolean

Field Name	Details
	Properties Filter, Update **Description** Determines whether users can see knowledgeable people for topics and endorse people for topics.
`OptionsLWRExperienceConnectedAppEnabled`	**Type** boolean **Properties** Filter, Update **Description** When true, enhances the performance and scalability of Connect API calls made from Lightning web components in an enhanced LWR site. This field is available in API version 58.0 and later. Note: This feature is a Beta Service. Customer may opt to try such Beta Service in its sole discretion. Any use of the Beta Service is subject to the applicable Beta Services Terms provided at Agreements and Terms.
`OptionsMemberVisibility`	**Type** boolean **Properties** Filter, Update **Description** Controls user visibility on a per-site basis. If true, the See other members of this site preference is enabled for the selected site. This field is available in API version 45.0 and later.
`OptionsMobileImageOptimizationEnabled`	**Type** boolean **Properties** Filter, Update **Description** If true, file asset images are optimized for mobile display. This field is available in API version 45.0 and later.
`OptionsNetworkSentimentAnalysis`	**Type** boolean **Properties** Filter, Update

Field Name	Details
	Description If true, enables sentiment analysis in a site. In the UI, this setting is available in the Administration Workspace, under **Administration** > **Preferences**. This field is available in API version 40.0 and later.
`OptionsNicknameDisplayEnabled`	**Type** boolean **Properties** Filter, Update **Description** Determines whether user nicknames display instead of their first and last names in most places in the site. A few restrictions to keep in mind about nickname display: • Records and user lookups on records show full names. Keep in mind, though, that you can control record and user visibility with sharing rules. • Mobile notifications in the Salesforce mobile app show full names. You can turn off mobile notifications in the app to avoid this display. • Searches by first, last, and full names aren't restricted and return matches, but the search results display only nicknames. Global search auto-complete recommendations show any first, last, and full names that the user has searched by or accessed via a record or another location. The recent items list also shows first, last, and full under the same conditions.
`OptionsPrivateMessagesEnabled`	**Type** boolean **Properties** Filter, Update **Description** Determines whether users can send and receive Chatter messages in the site.
`OptionsProfileBasedLayoutsForKnowledgeSearchEnabled`	**Type** boolean **Properties** Filter, Update **Description** When true, provides a grid layout for Knowledge search results. With grid layout in place, you can edit search profile layouts on the Knowledge object to show and hide different search result fields for different profiles. When you enable the standard grid layout, search-term highlighting isn't available. This field is available in API version 51.0 and later.
`OptionsRecognitionBadgingEnabled`	**Type** boolean

Field Name	Details
	Properties Filter, Update **Description** Determines whether Recognition Badges is enabled for the site.
`OptionsReputationEnabled`	**Type** boolean **Properties** Filter, Update **Description** Determines if reputation is calculated and displayed for members. This field is available in API version 31.0 and later.
`OptionsReputationRecordConversationsDisabled`	**Type** boolean **Properties** Filter, Update **Description** Disables the feed on reputation records.
`OptionsSelfRegistrationEnabled`	**Type** boolean **Properties** Filter, Update **Description** Determines whether customers and partners can self-register to join the site. Customers and partners are users with External Identity, Community, Customer Portal, or partner portal licenses. If `true`, displays a **Not a member?** link on the login page that points to the default self-registration page. This field is available in API version 28.0 and later.
`OptionsSendWelcomeEmail`	**Type** boolean **Properties** Filter, Update **Description** Determines whether a welcome email is sent when a new user is added to the site.
`OptionsShowAllNetworkSettings`	**Type** boolean

Field Name	Details
	Properties Filter, Update **Description** Determines whether settings in Experience Management that were hidden based on how you set up your site are visible or remain hidden. This field is available in API version 33.0 and later.
`OptionsSiteAsContainerEnabled`	**Type** boolean **Properties** Filter, Update **Description** Determines whether the site is an Experience Builder site (`true`) or a Salesforce Tabs + Visualforce site (`false`). This field is available in API version 29.0 and later.
`OptionsThreadedDiscussionsEnabled`	**Type** boolean **Properties** Filter, Update **Description** Indicates whether threaded discussions are enabled for the site. Available in API version 44.0 and later.
`OptionsTopicFilteringForKnowledgeSearchEnabled`	**Type** boolean **Properties** Filter, Update **Description** Determines whether topic filtering is enabled for Knowledge search. This field is available in API version 55.0 and later.
`OptionsTopicSuggestionsEnabled`	**Type** boolean **Properties** Filter, Update **Description** Enables topic suggestions when users write posts. This field is available in API version 41.0 and later.

Field Name	Details
OptionsUpDownVoteEnabled	**Type** boolean **Properties** Filter, Update **Description** Determines whether up and down voting is enabled for the site. This field is available in API version 41.0 and later.
SelfRegMicroBatchSubErrorEmailTemplateId	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** ID of the profile assigned to users who self-register using micro-batchng. Only applies if self-registration using micro-batching is enabled for the site. This field is available in API version 54.0 and later.
SelfRegProfileId	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** ID of the profile assigned to users who self-register. Only applies if self-registration is enabled for the site. This field is available in API version 29.0 and later.
Status	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Status of the site. Available values are: • `Live`—The site is online and members can access it. Label is `Published`. • `DownForMaintenance`—The site was previously published, but was taken offline. Members with the Create and Set Up Experiences permission can still access the setup for offline sites regardless of profile or membership. Members aren't able to access offline sites, but they still appear in the user interface dropdown menu as `SiteName (Offline)`. Label is `Offline`.

Field Name	Details
	• `UnderConstruction`—The site hasn't yet been published. When a user's profile is associated with the site, and they've Create and Set Up Experiences permission, they can access sites in this status. After a site is published, it can never be in this status again. Label is `Preview`.
`UrlPathPrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort, Update **Description** The UrlPathPrefix is a unique string at the end of the URL for the site. For example, in the site URL `MyDomainName.my.site.com/customers`, `customers` is the `UrlPathPrefix`.
`VerificationEmailTemplateId`	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** ID of the email template used when users must verify their identity, for example, when they log in without a password. This field is available in API version 44.0 and later.
`WelcomeEmailTemplateId`	**Type** reference **Properties** Filter, Group, Sort, Update **Description** ID of the email template used when sending welcome emails to new members.

Usage

Use this object to find, view, and update sites in your org. If you're assigned the Modify All Data, View All Data, or Create and Set Up Experiences permission, you can view all sites in the org. Users without these permissions see only the Preview or Published sites that they're members of. If you're assigned the Create and Set Up Experiences permission, you can customize site settings.

SEE ALSO:

WebStoreNetwork

NetworkActivityAudit

Represents an audit trail of moderation actions in Experience Cloud sites. This object is available in API version 30.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only when your org has digital experiences enabled.

Fields

Field Name	Details
`Action`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The moderation action a member performed on a post, comment, or file in an Experience Cloud site. Values are: • Flagged as Inappropriate—A member flagged a post, comment, or file as inappropriate. • Flagged as Spam - A member flagged a post, comment, or file as spam. • Unflagged—A member removed the flag from a post, comment, or file. • RemovedFlags—A moderator removed all flags from a post, comment, or file. • DeletedFlaggedItem—A moderator deleted a flagged post, comment, message, or file. • DeletedPendingReviewItem—A moderator deleted a post or comment with pending status. • ModerationRuleFlag—A moderation rule flagged member-generated content. • ModerationRuleBlock—A moderation rule blocked member-generated content. • ModerationRuleReplace—A moderation rule replaced member-generated content. • ModerationRuleReview—A moderation rule sent member-generated content to be reviewed and approved by a moderator.

Field Name	Details
	• ModerationRuleFreeze—A moderation rule froze a member because they created content too frequently within a specific time frame. • ModerationRuleNotify—A moderation rule notified moderators because a member created content too frequently within a specific time frame.
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Notes entered by the user. If the entity being tracked is a file, records the version number of the file when it was flagged.
`EntityCreatedById`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the user that created the entity being tracked.
`EntityId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the entity that is being tracked. The following entities are tracked: ChatterMessage, ContentDocument, ContentVersion, FeedComment, and FeedItem.
`EntityType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The key prefix of the entity being tracked.
`Name`	**Type** string **Properties** Create, Filter, Group, Sort, Update

Field Name	Details
	Description The ID of the item being tracked.
`NetworkId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the Experience Cloud site where the moderation action was performed.
`ParentEntityId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the parent of the entity on which an action was performed.
`ParentEntityType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The key prefix of the parent of the entity being audited.

Usage

Use this object to view an audit trail of moderation activity for your Experience Cloud sites. You must have the Modify All Data permission to access this object.

Users with Moderate Experiences Feeds, Moderate Experiences Files, or View All Data can view the audit trail using reports in the Salesforce user interface.

NetworkAffinity

Represents a junction object that associates a user profile with a Network object, that is, with an Experience Cloud site. Use NetworkAffinity to assign a default Experience Cloud site to a user profile. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To work with the NetworkAffinity object, you must have View Setup or Customize Application permission.

Fields

Field Name	Details
`NetworkId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the default Experience Cloud site associated with a user profile.
`ProfileId`	**Type** reference **Properties** CreateFilter, Group, Sort, Update **Description** ID of the user profile the default Experience Cloud site is assigned to.

Usage

The default Experience Cloud site allows you to stamp site-agnostic email notifications to all users with that profile with the selected site's branding. The default Experience Cloud site also becomes the target destination for email notification links. Site-agnostic email notifications include notifications about records, such as cases, accounts, and opportunities.

The `NetworkId` field is not updatable through the Apex, REST API, or SOAP API. If you want to change the value for `NetworkId`, you must delete the record and create one with the right value.

NetworkAuthApiSettings

Represents the settings that control enablement, access, and security for the Headless Registration Flow, Headless Forgot Password Flow, Headless Passwordless Login Flow, and their associated APIs. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Headless identity features are set up via Experience Cloud sites. You must have an Experience Cloud site to access Headless Identity APIs and store users, even if users never interact with the site directly.

Fields

Field	Details
DoesForgotPasswordRequireAuth	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Determines whether authentication is required to access Headless Forgot Password API when a password reset is requested. If `true`, an access token issued to an internal integration user in your initial POST request to the `/services/auth/headless/forgot_password` endpoint is required. The access token must include the `forgot_password` scope. The default value is `false`.
DoesPwdlessLoginRequireAuth	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Determines whether authentication is required to access Headless Passwordless Login API when user information is submitted to Salesforce. If `true`, an access token issued to an internal integration user is required in your initial POST request to the `/services/auth/headless/init/passwordless/login` endpoint. The access token must include the `pwdless_login_api` scope. The default value is `false`. This field is available in API version 59.0 and later.
DoesRegistrationRequireAuth	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Determines whether authentication is required to access Headless Registration API when user registration information is submitted to Salesforce. If `true`, an access token issued to an internal integration user in your initial POST request to the `/services/auth/headless/init/registration` endpoint is required. The access token must include the `user_registration_api` scope. The default value is `false`.
IsForgotPwdAllowed	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Determines whether the Headless Forgot Password Flow is enabled. The default value is `false`.
IsForgotPwdEmailTemplateAllowlistingEnabled	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Descriptions** Determines whether email template allowlisting is enabled for the Headless Registration Flow, Headless Passwordless Login Flow, and Headless Forgot Password Flow. If `true`, the initial request to the headless API must include an `emailtemplate` parameter that contains only allowlisted email templates. The default value is `false`.
IsHeadlessUserRegistrationAllowed	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Determines whether the Headless Registration Flow is enabled. The default value is `false`.
IsPwdlessLoginAllowed	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Determines whether the Headless Passwordless Login Flow is enabled (`true`) or not (`false`). The flow is disabled by default. This field is available in API version 59.0 and later.
IsRecaptchaRequiredForgotPwd	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Determines whether a reCAPTCHA token is required to access Headless Forgot Password API when a password reset is requested. If `true`, a reCAPTCHA token is required in your initial POST request to the `/services/auth/headless/forgot_password` endpoint.

Field	Details
	The default value is `false`.
`IsRecaptchaRequiredPwdlessLogin`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Determines whether a reCAPTCHA token is required to access Headless Passwordless Login API when user information is submitted to Salesforce. If `true`, a reCAPTCHA token is required in your initial POST request to the `/services/auth/headless/init/passwordless/login` endpoint. By default, a reCAPTCHA token isn't required (`false`). This field is available in API version 59.0 and later.
`IsRecaptchaRequiredRgstr`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Determines whether a reCAPTCHA token is required to access Headless Registration API when user registration information is submitted to Salesforce. If `true`, a reCAPTCHA token is required in your initial POST request to the `/services/auth/headless/init/registration` endpoint. The default value is `false`.
`IsUniversalClientRgstrAllowed`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Determines whether self-registration and passwordless login via Universal Registration API are enabled. The default value is `false`.
`MaxPasswordResetAttempts`	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The maximum number of password reset attempts you allow for the Headless Forgot Password Flow before the user must request a new one-time password (OTP).

Field	Details
NetworkId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of your Experience Cloud site. This ID is unique within your org. This field is a relationship field. **Relationship Name** Network **Relationship Type** Lookup **Refers To** Network
RecaptchaScoreThreshold	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The lowest reCAPTCHA score that is accepted before rejecting a request to access Headless Identity APIs. This value must be between 0.5 and 1. Scores closer to 0.5 are more likely to be bots, while scores closer to 1 are more likely to be valid users. You must set a score threshold if `DoesForgotPasswordRequireAuth` or `DoesRegistrationRequireAuth` fields are set to `true`. reCAPTCHA settings apply to both the Headless Registration Flow and the Headless Forgot Password Flow. Google issues a reCAPTCHA score only for reCAPTCHA v3 implementations. If you implement reCAPTCHA v2, this field doesn't apply.
RecaptchaSecretKey	**Type** encryptedstring **Properties** Create, Nillable, Update **Description** The reCAPTCHA secret key from your API key pair. You get the API key pair from Google when you set up reCAPTCHA. The secret key helps your app securely communicate with Google. You must enter a secret key if `DoesForgotPasswordRequireAuth` or `DoesRegistrationRequireAuth` are set to `true`. reCAPTCHA settings apply to both the Headless Registration Flow and the Headless Forgot Password Flow.
RegistrationExecutionUserId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the user who runs your headless registration Apex handler. This field is a relationship field. **Relationship Name** RegistrationExecutionUser **Relationship Type** Lookup **Refers To** User
RegistrationHandlerId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of your headless registration Apex handler. This field is a relationship field. **Relationship Name** RegistrationHandler **Relationship Type** Lookup **Refers To** ApexClass
RegistrationUserDefaultProfileId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the default profile that gets assigned to new users when they register. This field is a relationship field. **Relationship Name** RegistrationUserDefaultProfile **Relationship Type** Lookup **Refers To** Profile

NetworkDataCategory

Represents data categories in Lightning Web Runtime (LWR) Experience Cloud Sites. This object is available in API version 59.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object is available only when your org has Digital Experiences and Knowledge or Service Catalog enabled.

Fields

Field	Details
`DataCategoryGroupName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Name of the data category group that contains one or more data categories.
`DataCategoryName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Name of the data category.
`Description`	**Type** textarea **Properties** Nillable **Description** Description of the data category.
`ImageId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Image associated with the data category.

Field	Details
	This field is a relationship field. **Relationship Name** Image **Relationship Type** Lookup **Refers To** ManagedContent
`Label`	**Type** string **Properties** Filter, Group, Sort **Description** The name of the data category shown in the UI.
`NetworkId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the associated Experience site. This field is a relationship field. **Relationship Name** Network **Relationship Type** Lookup **Refers To** Network

NetworkDiscoverableLogin

Represents the Login Discoverable page from where customers and partners log in to an Experience Cloud site. Customers and partners are users with an External Identity license or any communities license for Experience Cloud. This object is available in API version 44.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
ApexHandlerId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the Apex handler created by the Login Discovery page type.
ExecuteApexHandlerAsId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the user who is executing the handler.
NetworkId	**Type** reference **Properties** Create, Filter, Group, Sort, Update Unique **Description** The ID of `NetworkId` is unique within your org.
UsernameLabel	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Log in prompt on login page when the login page type is Login Discovery.

Usage

Use this object to access the Login Discovery Page, which is a login page type that prompts users to identify themselves with an email address, phone number, or custom identifier. DiscoverableLogin performs an interview-based login process, where users are first prompted to provide identity and then authenticated. For example, users receive a verification code that they enter to complete the login process.

Note: The NetworkDiscoverableLogin object is created when **Login Discovery Page** is selected as the login page type on the Login & Registration (L&R) page. If you later switch to another login page type, such as a Visualforce Page or Experience Builder Page, the object isn't deleted. The object persistence means you can't delete the Apex class associated with the

NetworkDiscoverableLogin object. To delete the Apex class, return to the L&R page and change the login page type back to **Login Discovery page**. Select another Apex class, and then you can delete the first one.

NetworkEmailTmplAllowlist

Represents an allowlist for the one-time password (OTP) email templates that are sent to end users during the Headless Registration Flow, the Headless Passwordless Login Flow, and the Headless Forgot Password Flow. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`EmailTemplateId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The IDs of the allowlisted email templates that can be sent to users during the headless authorization flows for registration, passwordless login, and forgot password. You can list multiple template IDs. When your app sends its initial request to Headless Registration API or Headless Passwordless Login API, the `emailtemplate` parameter can include only an email template ID from the allowlist. For Headless Forgot Password API, it works the same way, but only if email template allowlisting is enabled. This field is a relationship field. **Relationship Name** EmailTemplate **Relationship Type** Lookup **Refers To** EmailTemplate
`NetworkId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the Experience Cloud site for which the allowlist is being configured. This field is a relationship field.

Field	Details
	Relationship Name Network **Relationship Type** Lookup **Refers To** Network

NetworkFeedResponseMetric

Represents an object that stores the date and time values of question posts. It captures information for question creation, answer creation, and when an answer is marked as best answer This object is available in API version 51.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

The NetworkFeedResponseMetric object is available only if both NetworksEnabled and ChatterEnabled org preferences are enabled.

Fields

Field	Details
`BestCommentDateTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Represents the date and time a user created an answer that was later marked as best answer.
`BestCommentId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Represents the comment that was marked as the best answer.
`FeedItemCreatedById`	**Type** reference

Field	Details
	Properties Filter, Group, Sort **Description** Represents the user who created the feed item.
FeedItemDateTime	**Type** dateTime **Properties** Filter, Sort **Description** Represents the date and time when the feed Item was created.
FeedItemId	**Type** reference **Properties** Filter, Group, Sort **Description** Represents the unique ID of the question post.
FirstCommentDateTime	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Represents the date and time when the first comment was created.
FirstCommentId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Represent the first comment on a feed Item.
MarkedAsBestCommentDateTime	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Represents the date and time the user marked the answer as best answer.
NetworkId	**Type** reference

Field	Details
	Properties Filter, Group, Sort **Description** Represents where the feed item was created.
`ParentRecordId`	**Type** reference **Properties** Filter, Group, Sort **Description** Represents the parent record. Parent records can include records like user, account, or group.

NetworkMember

Represents a member of an Experience Cloud site. Members can be either users in your company or external users with portal profiles. This object is available in API version 26.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

Special Access Rules

This object is available only when your org has digital experiences enabled.

Fields

Field Name	Details
`DefaultGroupNotificationFrequency`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. The default frequency for sending the member's group email notifications when the member joins groups in the Experience Cloud site. The valid values are: • `P`—Email on every post • `D`—Daily digests • `W`—Weekly digests

Field Name	Details
	• `N`—Never The default value is `W`. In sites, the `Email on every post` option is disabled once more than 10,000 members choose this setting for the group. All members who had this option selected are automatically switched to `Daily digests`. However, this field is not currently enabled. These values are reserved for future use.
`DigestFrequency`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Required. The frequency for sending the member's personal email digest for the Experience Cloud site. The valid values are: • `D`—Daily • `W`—Weekly • `N`—Never The default value is `D`. However, daily and weekly personal digests aren't currently available in sites. These values are reserved for future use.
`LastChatterActivityDate`	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** The last time the member posted or commented in the Experience Cloud site.
`MemberId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of a person who is a member of an Experience Cloud site.
`NetworkId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the Experience Cloud site that the member is part of.

Field Name	Details
`PreferencesDisableAllFeedsEmail`	**Type** boolean **Properties** Filter, Update **Description** When `false`, the member can automatically receive email for updates in the Experience Cloud site, based on the types of feed emails and digests the member has enabled.
`PreferencesDisableBestAnswerEmail`	**Type** boolean **Properties** Filter, Update **Description** When `false`, the member automatically receives email when someone selects their answer to a post as best. Available in API 46.0 and later.
`PreferencesDisableBookmarkEmail`	**Type** boolean **Properties** Filter, Update **Description** When `false`, the member automatically receives email every time someone comments on a feed item after the member has bookmarked it.
`PreferencesDisableChangeCommentEmail`	**Type** boolean **Properties** Filter, Update **Description** When `false`, the member automatically receives email every time someone comments on a change the member has made, such as an update to their profile.
`PreferencesDisableDirectMessageEmail`	**Type** boolean **Properties** Filter, Update

Field Name	Details
	Description When `false`, the member automatically receives email every time someone sends them a direct message in the Experience Cloud site.
`PreferencesDisableEndorsementEmail`	**Type** boolean **Properties** Filter, Update **Description** When `false`, the member automatically receives email every time someone endorses them for a topic.
`PreferencesDisableFollowersEmail`	**Type** boolean **Properties** Filter, Update **Description** When `false`, the member automatically receives email every time someone in the Experience Cloud site starts following the member.
`PreferencesDisableItemFlaggedEmail`	**Type** boolean **Properties** Filter, Update **Description** When `false`, the user automatically receives email every time a member flags a post or comment. This setting only applies for community moderators (with the Moderate Experiences Feeds permission) and group owners or managers. This field is available in API version 29.0 and later.
`PreferencesDisableLaterCommentEmail`	**Type** boolean **Properties** Filter, Update **Description** When `false`, the member automatically receives email every time someone comments on a feed item after the member has commented on the feed item.
`PreferencesDisableLikeEmail`	**Type** boolean

Field Name	Details
	Properties Filter, Update **Description** When `false`, the member automatically receives email every time someone comments on a feed item after the member has liked the feed item.
`PreferencesDisableMarketingCloudEmail`	**Type** boolean **Properties** Filter, Update **Description** When `false`, the member automatically receives marketing emails sent by Journey Builder. Available in API version 41.0 and later.
`PreferencesDisableMentionsPostEmail`	**Type** boolean **Properties** Filter, Update **Description** When `false`, the member automatically receives email every time the member is mentioned in posts.
`PreferencesDisableMessageEmail`	**Type** boolean **Properties** Filter, Update **Description** When `false`, the member automatically receives email every time the member is sent a Chatter message.
`PreferencesDisableProfilePostEmail`	**Type** boolean **Properties** Filter, Update **Description** When `false`, the member automatically receives email every time someone posts to the member's profile.
`PreferencesDisableSharePostEmail`	**Type** boolean

Field Name	Details
	Properties Filter, Update **Description** When `false`, the member automatically receives email every time the member's post is shared.
`PreferencesDisCommentAfterLikeEmail`	**Type** boolean **Properties** Filter, Update **Description** When `false`, the member automatically receives email every time someone comments on a post the member has liked.
`PreferencesDisMentionsCommentEmail`	**Type** boolean **Properties** Filter, Update **Description** When `false`, the member automatically receives email every time the member is mentioned in comments.
`PreferencesDisProfPostCommentEmail`	**Type** boolean **Properties** Filter, Update **Description** When `false`, the member automatically receives email every time someone comments on posts on the member's profile.
`ReputationPoints`	**Type** double **Properties** Filter, Sort, Update **Description** The number of reputation points the user has accumulated by performing actions in the Experience Cloud site.

Usage

Use this object to query members of a certain Experience Cloud site and to update their email notification settings. If you have Modify All Data, View All Data, or Create and Set Up Experiences, you can view all members of any Experience Cloud site, regardless of your own membership. If you have Modify All Data or Create and Set Up Experiences, you can also update any member's email settings. Users without these permissions can update their own email settings and can see members of the Experience Cloud sites that they're also members of.

Tip: You can directly update reputation points for a member via the Salesforce API. You can also use Apex triggers to send custom notifications based on changes to reputation points.

NetworkMemberGroup

Represents a group of members in an Experience Cloud site. Members can be either users in your internal org or external users assigned portal profiles. An administrator adds members to an Experience Cloud site by adding a profile or a permission set, and any user with the profile or permission set becomes a member of the site. This object is available in API version 26.0 and later.

Note: If a Chatter customer (from a customer group) is assigned a permission set that is also associated with an Experience Cloud site, the Chatter customer won't be added to the site.

Prior to API version 27.0, this object was called NetworkProfile.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

Note: The `upsert()` call is not supported for this object.

Special Access Rules

This object is available only when your org has digital experiences enabled.

Fields

Field Name	Details
`AssignmentStatus`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The status of a profile or permission set within an Experience Cloud site. Values are: • `Add Calculated`—The number of users that need to be added are calculated and the add operation is in progress. • `Added`—Users with this profile or permission set are members. • `Failed Add`—Users with this profile or permission set were not successfully made members. • `Failed Remove`—Users with this profile or permission set were not successfully removed from membership.

Field Name	Details
	• `Remove Calculated`—The number of users that need to be removed are calculated and the remove operation is in progress. • `Waiting for Add`—The profile or permission set was added to the Experience Cloud site, but the async process hasn't completed yet. After the process is complete, the status is updated to `Added`. • `Waiting for Remove`—Use this status to remove all the members belonging to a profile or permission set and remove a profile or permission set from an Experience Cloud site.
`NetworkId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the Experience Cloud site that this group of members is associated with.
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the profile or permission set associated with the Experience Cloud site.

Usage

Use this object to view the profiles or permission sets associated with a particular Experience Cloud site. Profiles and permission sets are added and removed asynchronously, so you can also check the status of a profile or permission set that was updated in a site.

If you have Modify All Data, View All Data, or Create and Set Up Experiences, you can view all profiles or permission sets for any Experience Cloud site in the org, regardless of your membership. If you have Modify All Data or Create and Set Up Experiences, you can also add profiles or permission sets. Users without these permissions can only find profiles and permission sets for Experience Cloud sites that they're members of.

Sample Code

```
// Create a new NetworkMemberGroup with a profile as the ParentId
NetworkMemberGroup nmgInsert = new NetworkMemberGroup();
nmgInsert.setNetworkId('{enter your network ID : ODB...}');
nmgInsert.setParentId('enter the profile or permission set ID : 00e... or 0PS...');
SaveResult[] results = connection.create(new SObject[] { nmgInsert });

// Update an existing NetworkMemberGroup to be removed from the Network
NetworkMemberGroup nmgUpdate = new NetworkMemberGroup();
nmgUpdate.setId('enter your NetworkMemberGroup ID : 0DL...');
```

```
nmgUpdate.setAssignmentStatus('WaitingForRemove');
SaveResult[] results = connection.update(new SObject[] { nmgUpdate });
```

NetworkModeration

Represents a flag on an item in a community. This object is available in API version 30.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object is available only when your org has digital experiences enabled.

Fields

Field Name	Details
`EntityId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the post, comment, or file that was flagged.
`ModerationType`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort **Description** Determines the type of flag applied to an item. Values are: • FlagAsInappropriate • FlagAsSpam
`NetworkId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the community in which the item was flagged.

Field Name	Details
`Visibility`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Nillable, Sort **Description** Determines visibility of a flagged item. Values are: • SelfAndModerators—The user who flagged the item and any moderators can see the flagged item. This is the default value. • ModeratorsOnly—Only moderators can see the flagged item. If ModeratorsOnly is selected, only moderators can set flags using the API.

Usage

Use this object to view the items flagged for moderation within a community. Additionally, users with “Moderate Feeds” and “Modify All Data” can remove flags.

Flags on items are created either when a member manually flags an item in a community (if flagging is enabled for that community), or when a trigger automatically flags an item because the item met the trigger criteria.

NetworkPageOverride

Represents information about custom pages used to override the default pages in Experience Cloud sites. You can create Experience Builder or Visualforce pages and override the default pages in a site. Using custom pages allows you to create a more personalized experience for your users. This object is available in API version 34.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Only users with the Create and Setup Experiences permission can update this object.
- You can't override the Change Password Page with a page created using Experience Builder. You can only override it with a Visualforce page.

Fields

Field Name	Details
`NetworkId`	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Sort **Description** The ID of the Experience Cloud site where a custom page is used to override a default page.
`OverrideSetting`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of the page used to override a default page in the Experience Cloud site. `OverrideSetting` can take the following values: • `Standard`—The standard page that comes by default with the site. • `Configurable`—The page created when the Configurable Self-Reg registration page type or the Login Discovery login page type is selected. • `Designer`—A custom page created using Experience Builder. • `Visualforce`—A custom page created using Visualforce.
`OverrideType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The name of the default page in the Experience Cloud site that you want to override with a custom page.`OverrideType` can take the following values: • `LoginRequired` • `ChangePassword` • `ForgotPassword` • `SelfReg` • `Home`

NetworkSelfRegistration

Represents the account that self-registering Experience Cloud users are associated with by default. Self-registering users in an Experience Cloud site are required to be associated with an account, which the admin must specify while setting up self-registration for the site. If an account isn't specified, Salesforce creates person accounts (when enabled) for self-registering users. This object is available in API version 34.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
AccountId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the account that self-registering users in the Experience Cloud site are associated with.
ApexHandlerId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the Apex handler created by Configurable Self-Reg registration page type.
ExecuteApexHandlerAsId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the user who is executing the configurable self-registration handler.
NetworkId	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of `NetworkId` is unique within your org. You can use only one account per Experience Cloud site to assign self-registering users.
OptionsDisableStandardRgstrComponent	**Type** boolean

Field Name	Details
	Properties Create, Filter, Update **Description** Determines whether you can use standard Aura and Lightning Web Runtime (LWR) components for self-registration. If this field is `true`, self-registration flows that use these components don't work. For more control over self-registration, set this field to `true` if you're not using the standard self-registration component.
`OptionsIncludePassword`	**Type** Boolean **Properties** Create, Filter, Update **Description** Option on Configurable Self-Reg registration page. If true, the Include Password field is selected.
`OptionsShowEmail`	**Type** Boolean **Properties** Create, Filter, Update **Description** Option on Configurable Self-Reg registration page. If true, the Email field appears on the self-registration form.
`OptionsShowFirstName`	**Type** Boolean **Properties** Create, Filter, Update **Description** Option on the Configurable Self-Reg registration page. If true, the First Name field appears on the self-registration form.
`OptionsShowLastName`	**Type** Boolean **Properties** Create, Filter, Update **Description** Option on the Configurable Self-Reg registration page. If true, the Last Name field appears on the self-registration form.

Field Name	Details
OptionsShowMobilePhone	**Type** Boolean **Properties** Create, Filter, Update **Description** Option on the Configurable Self-Reg registration page. If true, the Mobile field appears on the self-registration form.
OptionsShowNickname	**Type** Boolean **Properties** Create, Filter, Update **Description** Option on the Configurable Self-Reg registration page. If true, the Nickname field appears on the self-registration form.
OptionsShowUsername	**Type** Boolean **Properties** Create, Filter, Update **Description** Option on the Configurable Self-Reg registration page. If true, the Username field appears on the self-registration form.
VerificationMethod	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The type of verification method that a user must supply when registering, which can be: • `SyncEmail`—User must supply an email address to verify identity. • `SMS`—User must supply a phone number to verify identity.

NetworkUserHistoryRecent

Represents an Experience Cloud site user's history of accessed records. This object is available in API version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`,`query()`, `undelete()`

Special Access Rules

Only users with the Modify All Data permission can view and delete these data.

Fields

Field	Details
`AccessTimestamp`	**Type** datetime **Properties** Create, Filter, Sort **Description** The time at which the record was accessed.
`ActionType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates the action type taken by the user. The possible values are: • Read • Write
`DomainName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The domain used to access the record.
`FeedCommentId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Feed comment accessed by the user.
`FeedItemId`	**Type** reference

Field	Details
	Properties Create, Filter, Group,Sort, Update **Description** Feed item accessed by the user.
`NetworkId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of the Experience Cloud site used to access the record or comment.
`NetworkUserId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** User's Experience Cloud site user ID to access the record or comment.
`RecordId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The record that was accessed.
`RecordKeyPrefix`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Record's ID key prefix.
`Url`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The URL from which the user accessed the record.
`UserType`	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of user who accessed this record. The possible values include: • Standard • Partner • Customer Portal Manager • Customer Portal User • Guest • High Volume Portal • CSN Only • Self Service

Usage

Use the NetworkUserHistoryRecent object to delete comments, posts, or record access by Experience Cloud site users who would like all such activity to be removed.

Note

Represents a note, which is text associated with a custom object or a standard object, such as a Contact, Contract, or Opportunity.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
`Body`	**Type** textarea **Properties** Create, Nillable, Update **Description** Body of the note. Limited to 32 KB.
`IsDeleted`	**Type** boolean

Field	Details
	Properties Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
`IsPrivate`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** If `true`, only the note owner or a user with the "Modify All Data" permission can view the note or query it via the API. Note that if a user who does not have the "Modify All Data" permission sets this field to `true` on a note that they do not own, then they can no longer query, delete, or update the note. Label is **Private**.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the user who owns the note. This is a relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** User
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the object associated with the note. This is a polymorphic relationship field. **Relationship Name** Parent **Relationship Type** Lookup

Field	Details
	Refers To Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareMetricTarget, CareObservationComponent, CarePgmProvHealthcareProvider, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareTaxonomy, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, Contact, Contract, CreditMemo, DelegatedAccount, EngagementChannelType, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, Lead, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PersonEducation, PersonLifeEvent, Product2, ProductRequest, ProductRequestLineItem, PurchaserPlan, ReceivedDocument, ServiceAppointment, ServiceResource, Shift, SocialPost, Visit, VisitedParty, Visitor, VolunteerProject, WorkOrder, WorkOrderLineItem
`Title`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Title of the note.

Usage

Use this object to manage notes for an object.

Overview of Salesforce Objects and Fields

NoteAndAttachment

This read-only object contains all notes and attachments associated with an object.

Supported Calls

`describeSObjects()`

Fields

Field	Details
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
`IsNote`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the object contains a note (`true`) or an attachment (`false`).
`IsPrivate`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If `true`, only the note owner or a user with the “Modify All Data” permission can view the note or query it via the API. Note that if a regular user who does not have “Modify All Data” permission sets this field to `true` on a note that they do not own, then they can no longer query, delete, or update that note. Label is **Private**.
`OwnerId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the user who owns the note and attachment. This is a relationship field. **Relationship Name** Owner **Relationship Type** Lookup

Field	Details
	Refers To User
`ParentId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the parent object. This is a polymorphic relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareMetricTarget, CareObservationComponent, CarePgmProvHealthcareProvider, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareTaxonomy, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, Contact, Contract, CreditMemo, DelegatedAccount, EngagementChannelType, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, Lead, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PersonEducation, PersonLifeEvent, Product2, ProductRequest, ProductRequestLineItem, PurchaserPlan, ReceivedDocument, ServiceAppointment, ServiceResource, Shift, SocialPost, Visit, VisitedParty, Visitor, VolunteerProject, WorkOrder, WorkOrderLineItem
`Title`	**Type** string **Properties** Filter, Nillable, Group, Sort **Description** Title of the note.

Usage

Use this object to list all notes and attachments for an object.

To retrieve notes and attachments, issue a describe call on an object, which returns a query result for each activity since the record was created. You can't directly query this object.

SEE ALSO:

- Note
- Attachment

NoteTag

Associates a word or short phrase with a Note.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
`ItemId`	**Type** reference **Properties** Create, Filter **Description** ID of the tagged item.
`Name`	**Type** string **Properties** Create, Filter **Description** Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
`TagDefinitionId`	**Type** reference **Properties** Filter

Field Name	Details
	Description ID of the parent TagDefinition object that owns the tag.
`Type`	**Type** picklist **Properties** Create, Filter, Restricted picklist **Description** Defines the visibility of a tag. Valid values: • `Public`—The tag can be viewed and manipulated by all users in an organization. • `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`.

Usage

NoteTag stores the relationship between its parent TagDefinition and the Note being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

OauthCustomScope

Represents a permission defining the protected data that a connected app can access from an external entity when Salesforce is the OAuth authorization provider.

An OAuth custom scope tells an external entity about a connected app's permissions to access protected data. The OAuth custom scope that you create in your Salesforce org corresponds to the same custom scope defined in your external entity, and assigned to the resource.

For example, you define an Order Status custom scope in your external entity that allows access to customer order status data in your order system's API. In Salesforce, you create an OAuth custom scope that you also name Order Status. You assign this custom scope to the connected app requesting access to the order status API. When the external entity receives the connected app's request to access a customer's order status, it validates the connected app's access token and Order Status scope. With a successful validation, the app can access the customer order status information in the order system's API.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

You must have the "Manage Connected Apps" permission to access this object.

Fields

Field Name	Details
Description	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The description of the permission provided to the connected app by the scope. The custom scope's description must be unique, can only include alphanumeric characters, and can be up to 60 characters long. You can enter a custom label in place of a description. An advantage of using a custom label is that you can maintain reusable text in a single location and translate the text into multiple languages. See Custom Labels. Note: The description formatting requirements that apply to custom scopes also apply to custom labels.
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Use when referring to the OAuth custom scope from a program. This label must be unique, and can include only alphanumeric characters and underscores.
IsPublic	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the object is included in the connected app's OpenID Connect discovery endpoint. For more information, see OpenID Connect Discovery Endpoint.
Language	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the default language defined for the developing org.
MasterLabel	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Sort, Update **Description** The master label for the custom scope record. This label must be unique, and can include only alphanumeric characters and underscores.

OauthCustomScopeApp

Represents the name of the connected app to which the custom scope is assigned. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`OauthCustomScopeId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The name of the connected app to which the custom scope is assigned. If the connected app is part of a package, include the package's namespace prefix with the connected app's name. Use the following format: ***<namespace_prefix>__<connected_app>***. Use two underscores (__) between the namespace prefix and connected app's name. This is a relationship field. **Relationship Name** OauthCustomScope **Relationship Type** Lookup **Refers To** OauthCustomScope

OauthToken

Represents an OAuth access token for connected app authentication. Use this object to create a user interface for token management. This object is available in API version 32.0 and later.

A connected app integrates an application with Salesforce using APIs. Connected apps use standard SAML and OAuth protocols to authenticate, provide single sign-on, and provide tokens for use with Salesforce APIs. In addition to standard OAuth capabilities, connected apps allow Salesforce admins to set various security policies and have explicit control over who can use the corresponding apps. Each time that a user grants access to an application, the application obtains a new access token.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

Users with the Customize Application permission see all tokens for all users in the org. Otherwise, you see only your own tokens.

Fields

Field Name	Details
`AccessToken`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The refresh token for authorization.
`AppMenuItemId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The unique ID for the App Picker menu item that's associated with this OAuth token. This is a relationship field. **Relationship Name** AppMenuItem **Relationship Type** Lookup **Refers To** AppMenuItem
`AppName`	**Type** string **Properties** Filter, Group, Nillable, Sort

Field Name	Details
	Description The label for the connected app that's associated with this OAuth token.
`DeleteToken`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** A token that can be used at the revoke OAuth token endpoint to remove this token.
`Id`	**Type** ID **Properties** Defaulted on create, Filter, Group, idLookup, Sort **Description** Reserved for future use. Currently, the value is always `null`.
`LastUsedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The most recent date when the OAuth token was used.
`RequestToken`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The authorization code that was used to request the corresponding AccessToken. With this authorization code, you can revoke the corresponding AccessToken by passing the DeleteToken.
`UseCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** How often the token has been used.

Field Name	Details
`UserId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The owner of the token. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

Usage

To delete an AccessToken, send a request to the revoke OAuth token endpoint with the DeleteToken as the parameter. For example, the URL `https://`*`MyDomainName`*`.my.salesforce.com/services/oauth2/revoke?token=(the Delete Token)` causes the deletion of the token.

In API version 34.0 and later, this object was enhanced to help manage high instance counts. A `query()` call returns up to 500 rows. A `queryMore()` call returns 500 more, up to 2500 total. No more records are returned after 2500. To make sure that you don't miss any records, issue a `COUNT()` query in a SELECT clause for OauthToken. This query gives you the total number of records. If there are more than 2500 records, divide your query by filtering on fields, like `UserId`, to return subsets of less than 2500 records.

OauthTokenExchangeHandler

Represents a token exchange handler. The token exchange handler also consists of an Apex class. During the OAuth 2.0 token exchange flow, the token exchange handler is used to validate tokens from an external identity provider and to map users to Salesforce. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Fields

Field	Details
Description	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** A description for your token exchange handler.
DeveloperName	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The API name for the handler.
IsEnabled	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the handler is enabled for the token exchange flow. The default value is `false`.
IsUserCreationAllowed	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the handler can set up new users. During the token exchange flow, the Apex handler maps users from the identity provider to Salesforce. If the `IsUserCreationAllowed` field is `true`, the `canCreateUser` boolean in the `getUserForTokenSubject` method is `true`, and the user doesn't exist in Salesforce, the handler sets up a new User object, which Salesforce automatically inserts to finish creating the user. The default value is `false`.
Language	**Type** picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the language used in the org where the token exchange handler was created. Possible values are: • `da`—Danish • `de`—German • `en_US`—English • `es`—Spanish • `es_MX`—Spanish (Mexico) • `fi`—Finnish • `fr`—French • `it`—Italian • `ja`—Japanese • `ko`—Korean • `nl_NL`—Dutch • `no`—Norwegian • `pt_BR`—Portuguese (Brazil) • `ru`—Russian • `sv`—Swedish • `th`—Thai • `zh_CN`—Chinese (Simplified) • `zh_TW`—Chinese (Traditional)
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The label of the token exchange handler record.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the

Field	Details
	`namespacePrefix__componentName` notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
SupportedTokenTypesAccessToken	**Type** boolean **Properties** Create, Filter, Update **Description**
SupportedTokenTypesIdToken	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates whether the handler supports OpenID Connect ID tokens from the identity provider.
SupportedTokenTypesJwt	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates whether the handler supports tokens from the identity provider that are in JWT format, such as JWT-based access tokens.
SupportedTokenTypesRefreshToken	**Type** boolean **Properties** Create, Filter, Update **Description** Indicates whether the handler supports OAuth 2.0 refresh tokens from the identity provider.
SupportedTokenTypesSaml2	**Type** boolean

Field	Details
	Properties Create, Filter, Update **Description** Indicates whether the handler supports SAML 2.0 assertions from the identity provider.
`TokenHandlerApexId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The Apex class associated with the token exchange handler. The class contains methods to validate the token and map users to Salesforce. It must extend the `Oauth2TokenExchangeHandler` Apex class. This field is a relationship field. **Relationship Name** TokenHandlerApex **Relationship Type** Lookup **Refers To** ApexClass

OauthTokenExchHandlerApp

Represents the enablement settings for a specific Salesforce connected app or external client app that's enabled for the token exchange handler. A handler can be enabled for multiple apps. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Fields

Field	Details
`ApexExecutionUserId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update

Field	Details
	Description The ID of the user who runs the Apex token exchange handler. We recommend that you use an integration user. This field is a relationship field. **Relationship Name** ApexExecutionUser **Relationship Type** Lookup **Refers To** User
ConnectedApplicationId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The connected app that's being used to integrate with Salesforce. This field is a relationship field. **Relationship Name** ConnectedApplication **Relationship Type** Lookup **Refers To** ConnectedApplication
IsDefault	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the token exchange handler is the default handler for this app. During the token exchange flow, in the token request, you can optionally include a `token_handler` parameter with the name of a specific handler's Apex class. If you don't include this parameter, Salesforce defaults to the default handler. The default value is `false`.
OauthTokenExchangeHandlerId	**Type** reference **Properties** Create, Filter, Group, Sort, Update

Field	Details
	Description The `OauthTokenExchangeHandler` with which these enablement settings are associated. This field is a relationship field. **Relationship Name** OauthTokenExchangeHandler **Relationship Type** Lookup **Refers To** OauthTokenExchangeHandler

ObjectDataImport

Represents the data import status of one or more object records. This object is available in API version 57.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
`EndDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time (in UTC) when the data import finished.
`FileName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Optional. If the data import was from a comma-delimited file (CSV), the name of the file. The maximum length is 120 characters.
`ObjectDataImportNumber`	**Type** string

Field	Details
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** An auto-generated number identifying the data import.
OwnerId	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the user who owns the data import status record. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
PrimaryObject	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The name of the primary object being imported. For example, Lead. This value is usually provided programmatically. The maximum length is 120 characters.
Result	**Type** textarea **Properties** Nillable **Description** The JSON response of the data object import result, including error messages.
Status	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The processing status of the data object import. Possible values are:

Field	Details
	• `Completed` • `In Progress`
`Type`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of data import, such as from a comma-delimited file or through a connector. Possible values are: • `CSV Async` • `CSV Sync` • `One time Connector`

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ObjectDataImportOwnerSharingRule on page 48
Sharing rules are available for the object.

ObjectDataImportShare on page 50
Sharing is available for the object.

ObjectDataImportReference

Represents the relationships to the associated reference objects showing the source from which the data is imported. This object is available in API version 57.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

ObjectDataImportReference is read only and can only be queried.

Fields

Field	Details
`ObjectDataImportId`	**Type** reference **Properties** Filter, Group, Sort **Description** Foreign key to the ObjectDataImport object. This field is a relationship field. **Relationship Name** ObjectDataImport **Relationship Type** Lookup **Refers To** ObjectDataImport
`ObjectDataImportReferenceNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Foreign key to the reference object. For example, AsyncApiJob or DatasetImportRequest.

ObjectPermissions

Represents the enabled object permissions for the parent PermissionSet. This object is available in API version 24.0 and later.

To grant a user access to an object, associate an ObjectPermissions record with a PermissionSet that's assigned to a user. ObjectPermissions records are only supported in PermissionSet, not in Profile.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
ParentId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The Id of this object's parent PermissionSet. This is a relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** PermissionSet
PermissionsCreate	**Type** boolean **Properties** Create, Filter, Update **Description** If true, users assigned to the parent PermissionSet can create records for this object. Requires PermissionsRead for the same object to be true.
PermissionsDelete	**Type** boolean **Properties** Create, Filter, Update **Description** If true, users assigned to the parent PermissionSet can delete records for this object. Requires PermissionsRead and PermissionsEdit for the same object to be true.
PermissionsEdit	**Type** boolean **Properties** Create, Filter, Update **Description** If true, users assigned to the parent PermissionSet can edit records for this object. Requires PermissionsRead for the same object to be true.

Field Name	Details
PermissionsModifyAllRecords	**Type** boolean **Properties** Create, Filter, Update **Description** If true, users assigned to the parent PermissionSet can edit all records for this object, regardless of sharing settings. Requires PermissionsRead, PermissionsDelete, PermissionsEdit, and PermissionsViewAllRecords for the same object to be true.
PermissionsRead	**Type** boolean **Properties** Create, Filter, Update **Description** If true, users assigned to the parent PermissionSet can view records for this object.
PermissionsViewAllRecords	**Type** boolean **Properties** Create, Filter, Update **Description** If true, users assigned to the parent PermissionSet can view all records for this object, regardless of sharing settings. Requires PermissionsRead for the same object to be true.
SobjectType	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The object's API name. For example, Merchandise__c.

Permission Dependencies

Some user permissions have dependencies on object permissions. For example, if a permission set has the "Transfer Leads" permission, it also has "Read" and "Create" on the leads object.

You can query from ObjectPermissions up to the parent PermissionSet object. For example:

```
SELECT Parent.Name, Parent.PermissionsTransferAnyLead, PermissionsRead, PermissionsCreate
FROM ObjectPermissions
WHERE SobjectType = 'Lead'
```

Determining Object Access with "Modify All Data"

When using SOQL to query object permissions, be aware that some object permissions are enabled because a user permission requires them.

The exception to this rule is when "Modify All Data" is enabled. While it enables all object permissions, it doesn't physically store any object permission records in the database. As a result, unlike object permissions that are required by a user permission—such as "View All Data" or "Import Leads"—the query still returns permission sets with "Modify All Data," but the object permission record will contain an invalid ID that begins with "000". This ID indicates that the object has full access due to "Modify All Data" and the object permission record can't be updated or deleted. To remove full access from these objects, disable "Modify All Data" and then delete the resulting object permission record. This ensures that when using SOQL to find all the objects that have full access, it returns all objects that have this access regardless of whether it's due to "Modify All Data" or because an administrator set full access.

For example, the following will return all permission sets that have "Read" on the Merchandise__c object, regardless of whether it's explicitly defined on the object or implicitly defined through "Modify All Data."

```
SELECT Id, Parent.label, SobjectType, PermissionsRead,
   Parent.PermissionsModifyAllData, ParentId
FROM ObjectPermissions
WHERE PermissionsRead = true and SobjectType = 'Merchandise__c'
```

Nesting Object Permissions

You can nest ObjectPermissions in a PermissionSet query. For example, the following returns any permission sets where "Transfer Leads" is true. Additionally, the result set will include the "Read" object permission on leads. This is done by nesting the SOQL with an object permission query using the relationship name for object permissions: `ObjectPerms`.

```
SELECT Id,Name,PermissionsTransferAnyLead,
(SELECT Id, PermissionsRead from ObjectPerms where SobjectType='Lead')
FROM PermissionSet
WHERE PermissionsTransferAnyLead = true
```

As a result, it's possible to traverse the relationship between the PermissionSet and any child-related objects (in this case, ObjectPermissions). You can do this from the PermissionSet object by using the child relationship (`ObjectPerms`, `FieldPerms`, and so on) or from the child object by referencing the PermissionSet with `Parent.`***`permission_set_attribute`***.

It's important to consider when to use a conditional `WHERE` statement to restrict the result set. To query based on an attribute on the permission set object, nest the SOQL with the child relationship. However, to query based on an attribute on the child object, you must reference the permission set parent attribute in your query.

The following two queries return the same columns with different results, based on whether you use the child relationship or parent notation.

```
SELECT Id, Name, PermissionsModifyAllData,
(SELECT Id, SobjectType, PermissionsRead from Objectperms)
FROM PermissionSet
WHERE PermissionsModifyAllData=true
```

versus:

```
SELECT Id, SObjectType, PermissionsRead, Parent.Id, Parent.Name,
Parent.PermissionsModifyAllData
FROM ObjectPermissions
WHERE SObjectType='Merchandise__c'
```

SEE ALSO:

PermissionSet

FieldPermissions

ObjectRelatedUrl

Represents a URL slug for a Product or Category page on a B2B Commerce or D2C Commerce LWR site, or a custom object page on an enhanced LWR Experience Cloud site. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Your org must have B2B Commerce or D2C Commerce license enabled for commerce use cases. ObjectRelatedUrl is available for Product2 and ProductCategory records in Commerce, and on custom object record pages in enhanced LWR sites.

Fields

Field	Details
`LanguageCode`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. The combined language and locale ISO code, which controls the language of the object-related URL. The maximum length is 8 characters.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the object-related URL. This field isn't editable.

Field	Details
`ParentId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Required. The ID of the parent record that the `UrlName` refers to. `ParentId` can point only to Product2, ProductCategory, and custom object record pages. This field is a polymorphic relationship field. **Relationship Name** Parent **Relationship Type** Lookup **Refers To** Product2, ProductCategory, custom objects
`Scope`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. Helps ensure uniqueness of the UrlName field across all records with the same Scope and LanguageCode values. The maximum length is 18 characters.
`UniqueIndex`	**Type** string **Properties** Filter, idLookup, Nillable, Sort **Description** Ensures uniqueness for each record within your org and creates an index for lookup. This field isn't editable. This field is a calculated field.
`UrlName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. The URL slug for the record.

ObjectTerritory2AssignmentRule

Represents a territory assignment rule that's associated with an object, such as Account. ObjectTerritory2AssignmentRuleItem can only be created or deleted if the BooleanFilter field on its corresponding ObjectTerritory2AssignmentRule is `null`. Available only if Enterprise Territory Management has been enabled for your organization.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only standard users can access this object. If a territory model is in `Active` state, any standard user can view that model, including its territories, assignment rules, assigned records, and assigned users. Users cannot view territory models in other states (such as `Planning` or `Archived`).

Fields

Field Name	Details
`BooleanFilter`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Represents advanced filter conditions that were specified for the rule in the online application. For example, "(1 AND 2) OR 3."
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The field label in the user interface is `Unique Name`. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.

Field Name	Details
	Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the rule is active (true) or inactive (false). Via the API, active rules run automatically when object records are created and edited. The exception is when the value of the IsExcludedFromRealign field on an object record is `true`, which prevents record assignment rules from evaluating that record.
`Language`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language of the label in the user interface.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. The user interface label for the territory type.
`ObjectType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The object that the rule is defined for. For API version 31, Account only.
`Territory2ModelId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the territory model.

ObjectTerritory2AssignmentRuleItem

A single row of selection criteria for an ObjectTerritory2AssignmentRule object. ObjectTerritory2AssignmentRuleItem can only be created or deleted if the `BooleanFilter` field on its corresponding ObjectTerritory2AssignmentRule object is a `null` value. Available only if Enterprise Territory Management has been enabled for your organization.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only standard users can access this object. If a territory model is in `Active` state, any standard user can view that model, including its territories and assignment rules. For territories in an active model, any standard user can view assigned records and assigned users subject to your organization's sharing settings. Users cannot view territory models in other states (such as `Planning` or `Archived`).

Fields

Field Name	Details
`Field`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The standard or custom object field that the rule item will operate on.
`Operation`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The criterion to apply for the rule item. For example: *`equals`* or *`starts with`*.
`RuleId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the associated ObjectTerritory2AssignmentRule.

Field Name	Details
`SortOrder`	**Type** int **Properties** Create, Filter, Group, Sort, Update **Description** The order in which this row is evaluated in relation to other ObjectTerritoryAssignmentRuleItem objects for the given ObjectTerritoryAssignmentRule. This field is required for assignment rule items, which are used in the Boolean conditions in assignment rule formulas.
`Value`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** The field value or values to evaluate. For example: if the field is `Billing ZIP/Postal Code`, a value might be `94105.`.

ObjectTerritory2Association

Represents an association (by assignment) between a territory and an object record such as an account or a lead.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Available after enabling Enterprise Territory Management.

Beginning Summer '20, only standard and partner users can access this object. If a territory model is in `Active` state, any standard or partner user can view that model, including its territories and assignment rules. For territories in an active model, any standard or partner user can view assigned records and assigned users subject to your sharing settings.

If you delete associations, you can query them for up to 12 hours. Keep in mind that deleted associations bypass the recycle bin.

Fields

Field Name	Details
`AssociationCause`	**Type** picklist

Field Name	Details
	Properties Create, Filter, Group, Restricted picklist, Sort **Description** The means by which the record was associated with the territory. User interface field label is `Method`. Possible values are: • `Territory2AssignmentRule`—Territory assignment rule association • `Territory2Manual`—Manual association
`ObjectId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the object assigned to the territory. <table><tr><th>Object</th><th>Availability</th></tr><tr><td>Account</td><td>API version 30.0 and later</td></tr><tr><td>Lead</td><td>API version 55.0 and later</td></tr></table> This is a polymorphic relationship field. **Relationship Name** Object **Relationship Type** Lookup **Refers To** Account Lead
`SobjectType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of the object. Possible values are: • `Account` • `Lead`

Field Name	Details
Territory2Id	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the territory that the record is assigned to. This is a relationship field. **Relationship Name** Territory2 **Relationship Type** Lookup **Refers To** Territory2

OmniDataPack

For internal use only.

OmniDataTransform

For internal use only.

OmniDataTransformItem

For internal use only.

OmniESignature

For internal use only.

OmniExtTrackingDef

Represents a connection between an OmniTrackingGroup in OmniAnalytics and a third-party Analytics system such as Google Analytics. This object is available in API version 60.0 and later.

Note: This object is part of OmniStudio Standard, not OmniStudio for Vlocity.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Using OmniAnalytics requires having an OmniStudio license and enabling OmniAnalytics in Setup.

Fields

Field	Details
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A description of the OmniExtTrackingDef.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the OmniExtTrackingDef in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. Limit: 80 characters. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Specifies whether the OmniExtTrackingDef is active. The default value is `true`.
`Language`	**Type** picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language for the OmniExtTrackingDef.
MasterLabel	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique master label of the OmniExtTrackingDef. This internal label doesn't get translated.
OmniExtTrackingDefKey	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** A UUID generated internally by Salesforce to uniquely identify an OmniExtTrackingDef record across all orgs.
TrackingFrameworkInformation	**Type** textarea **Properties** Create, Update **Description** JSON data containing information about an external service, such as the API call and input parameter names.
TrackingServiceProvider	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** The third-party Analytics system to which user interaction data is sent. Possible values are: • Google The default value is Google.

OmniExtTrackingEventDef

Represents a format for FlexCard or OmniScript user interaction data that a third-party Analytics system such as Google Analytics can accept. This object is available in API version 60.0 and later.

Note: This object is part of OmniStudio Standard, not OmniStudio for Vlocity.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Using OmniAnalytics requires having an OmniStudio license and enabling OmniAnalytics in Setup.

Fields

Field	Details
`ComponentType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The type of component for which user interactions are tracked. Possible values are: • `Flexcard` • `Omniscript`
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A description of the OmniExtTrackingEventDef.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update

Field	Details
	Description The unique name of the OmniExtTrackingEventDef in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. Limit: 80 characters. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`InclusionRule`	**Type** textarea **Properties** Create, Nillable, Update **Description** A true-or-false condition that determines whether an event is sent to the third-party Analytics system.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language for the OmniExtTrackingEventDef.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique master label of the OmniExtTrackingEventDef. This internal label doesn't get translated.
`OmniExtTrackingDef`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the related OmniExtTrackingDef object. This field is a relationship field.

Field	Details
	Relationship Name OmniExtTrackingDef **Relationship Type** Lookup **Refers To** OmniExtTrackingDef
OmniExtTrackingEventDefKey	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** A UUID generated internally by Salesforce to uniquely identify an OmniExtTrackingEventDef record across all orgs.
PayloadTemplate	**Type** textarea **Properties** Create, Nillable, Update **Description** The payload template structure with placeholders for runtime data. This is used at runtime to generate the actual payload to be sent to the external Analytics service.

OmniInteractionConfig

For internal use only.

OmniInteractionAccessConfig

For internal use only.

OmniProcess

For internal use only.

OmniProcessCompilation

For internal use only.

OmniProcessElement

For internal use only.

OmniProcessTransientData

For internal use only.

OmniScriptSavedSession

For internal use only.

OmniSupervisorConfig

Represents the Omni-Channel supervisor configuration for an assigned group of supervisors. This object is available in API version 41.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()` `update()`, `upsert()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With

Field	Details
	this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
`IsTimelineHidden`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** If set to `true`, hides the agent timeline from the supervisors assigned to this supervisor configuration. The default value is `false`. This field is available in API version 53.0 and later.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort **Description** The language of this supervisor configuration.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort **Description** A unique label name for this supervisor configuration. The name must begin with a letter. The name can contain alphanumeric characters and underscores. The name can't contain spaces, two consecutive underscores, or end with an underscore. The name appears as Omni Supervisor Configuration Name in the UI.
`SkillVisibility`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Determines which work items based on skills are visible to the supervisors assigned to this supervisor configuration. Possible values are: • `AllSkills` — Show work items with all skill requirements selected in this supervisor configuration.

Field	Details
	• `AnySkill` — Show work items with at least one skill requirement selected in this supervisor configuration. This field is available in API version 53.0 and later.

OmniSupervisorConfigAction

Represents the actions available to the supervisors of an Omni-Channel supervisor configuration. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

Only authenticated internal and external users can access this object.

Fields

Field	Details
`DisplayOrder`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** The order in which the action is displayed.
`OmniSupervisorActionType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** An action that a supervisor can perform. Possible values are: • `AgentDetails.CustomAction` • `AllAgents.AWSDashboard`—All Agents - View Amazon Real-Time Metrics • `AllAgents.AssignLearning` • `AllAgents.ChangeQueues`

Field	Details
	• `AllAgents.ChangeSkills` • `AllAgents.CustomAction` • `AssignedWork.AWSDashboard`—Assigned Work - View Amazon Real-Time Metrics • `AssignedWork.CustomAction` • `AssignedWorkDetails.CustomAction` • `QueueDetails.CustomAction` • `QueuesBacklog.AWSDashboard`—Queues Backlog - View Amazon Real-Time Metrics • `QueuesBacklog.CustomAction` • `QueuesBacklog.ManageQueues`—Queues Backlog - Assign Agents to Queues • `SkillDetails.CustomAction` • `SkillsBacklog.AWSDashboard`—Skills Backlog - View Amazon Real-Time Metrics • `SkillsBacklog.CustomAction`
`OmniSupervisorConfigId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** A unique identifier for the Omni-Channel supervisor configuration. This field is a relationship field. **Relationship Name** OmniSupervisorConfig **Relationship Type** Lookup **Refers To** OmniSupervisorConfig

OmniSupervisorConfigGroup

Represents the group of agents who are visible to the supervisors of an Omni-Channel supervisor configuration. The group, if visible, appears in the Agents tab of Omni Supervisor. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
`GroupId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** A unique identifier for the group of agents that's made visible to the supervisors who are assigned to the Omni-Channel supervisor configuration. This is a relationship field. **Relationship Name** Group **Relationship Type** Lookup **Refers To** Group
`OmniSupervisorConfigId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** A unique identifier for the Omni-Channel supervisor configuration. This is a relationship field. **Relationship Name** OmniSupervisorConfig **Relationship Type** Lookup **Refers To** OmniSupervisorConfig

OmniSupervisorConfigProfile

Represents the supervisor profiles to which an Omni-Channel supervisor configuration applies. User-level configurations override profile-level configurations. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
`OmniSupervisorConfigId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** A unique identifier for the Omni-Channel supervisor configuration. This is a relationship field. **Relationship Name** OmniSupervisorConfig **Relationship Type** Lookup **Refers To** OmniSupervisorConfig
`ProfileId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** A unique identifier for the profile that's associated with this Omni-Channel supervisor configuration. A profile can be associated with only one Omni-Channel supervisor configuration. This field is unique within your org. This is a relationship field. **Relationship Name** Profile **Relationship Type** Lookup **Refers To** Profile

OmniSupervisorConfigQueue

Represents the queues that are visible to the supervisors of an Omni-Channel supervisor configuration. The queue, if visible, appears in the Queues Backlog and Assigned Work tabs of Omni Supervisor. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

Only authenticated internal and external users can access this object.

Fields

Field	Details
`OmniSupervisorConfigId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** om A unique identifier for the Omni-Channel supervisor configuration. This is a relationship field. **Relationship Name** OmniSupervisorConfig **Relationship Type** Lookup **Refers To** OmniSupervisorConfig
`QueueId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** A unique identifier for the queue that's made visible to the supervisors who are assigned to the Omni-Channel supervisor configuration. This is a relationship field.

Field	Details
	Relationship Name Queue **Relationship Type** Lookup **Refers To** Group

OmniSupervisorConfigSkill

Represents the skills that are visible to the supervisors of an Omni-Channel supervisor configuration. These skills, if visible, appear in the Skills Backlog tab of Omni Supervisor. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

Only authenticated internal and external users can access this object.

Fields

Field	Details
`OmniSupervisorConfigId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** A unique identifier for the Omni-Channel supervisor configuration. This is a relationship field. **Relationship Name** OmniSupervisorConfig **Relationship Type** Lookup **Refers To** OmniSupervisorConfig

Field	Details
SkillId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** A unique identifier for the skill that's made visible to the supervisors who are assigned to the Omni-Channel supervisor configuration. This is a relationship field. **Relationship Name** Skill **Relationship Type** Lookup **Refers To** Skill

OmniSupervisorConfigTab

Represents the visible tabs specified in an Omni Supervisor configuration. This object is available in API version 60.0 and later.

Supported Calls

create(), delete(), describeSObjects(), query(), retrieve(), update(), upsert()

Special Access Rules

To access this object, Omni-Channel must be enabled.

Only authenticated internal and external users can access this object.

Fields

Field	Details
DisplayOrder	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** The order in which tabs are displayed in Omni Supervisor.

Field	Details
`OmniSupervisorConfigId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** A unique identifier for the Omni-Channel supervisor configuration. This is a relationship field. **Relationship Name** OmniSupervisorConfig **Relationship Type** Lookup **Refers To** OmniSupervisorConfig
`OmniSupervisorTabType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort **Description** Tabs shown on the Omni Supervisor page. Possible values are: • `Agents` — the Agents tab • `AssignedWork` — the Assigned Work tab • `FlexiPageType` — A custom tab created using Lightning App Builder, with the `OmniSupervisorPageType` value of the `FlexiPage Type` field • `QueuesBacklog` — the Queues Backlog tab • `SkillsBacklog` — the Skills Backlog tab • `Wallboard` — the Wallboard tab

OmniSupervisorConfigUser

Represents the users to which an Omni-Channel supervisor configuration applies. User-level configurations override profile-level configurations. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
OmniSupervisorConfigId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** A unique identifier for the Omni-Channel supervisor configuration. This is a relationship field. **Relationship Name** OmniSupervisorConfig **Relationship Type** Lookup **Refers To** OmniSupervisorConfig
UserId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** A unique identifier for the user associated with this Omni-Channel supervisor configuration. A user can be associated with only one Omni-Channel supervisor configuration. This field is unique within your org. This is a relationship field. **Relationship Name** User **Relationship Type** Lookup **Refers To** User

OmniTrackingComponentDef

Represents a FlexCard or OmniScript that is a member of an OmniTrackingGroup, which tracks user interactions in OmniAnalytics. This object is available in API version 60.0 and later.

Note: This object is part of OmniStudio Standard, not OmniStudio for Vlocity.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Using OmniAnalytics requires having an OmniStudio license and enabling OmniAnalytics in Setup.

Fields

Field	Details
`ComponentType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The type of component for which user interactions are tracked. Possible values are: • `Flexcard` • `Omniscript`
`ComponentVersion`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The version of the FlexCard or OmniScript.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the OmniTrackingComponentDef in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. Limit: 80 characters.

Field	Details
	Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. **Note:** Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language for the OmniTrackingComponentDef.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique master label of the OmniTrackingComponentDef. This internal label doesn't get translated.
`OmniTrackingComponentDefKey`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** A UUID generated internally by Salesforce to uniquely identify an OmniTrackingComponentDef record across all orgs.
`OmniTrackingGroup`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the related OmniTrackingGroup object. This field is a relationship field. **Relationship Name** OmniTrackingGroup **Relationship Type** Lookup

Field	Details
	Refers To OmniTrackingGroup

OmniTrackingGroup

Represents a group of FlexCard and OmniScript components that have their user interactions tracked together in OmniAnalytics. This object is available in API version 60.0 and later.

Note: This object is part of OmniStudio Standard, not OmniStudio for Vlocity.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Using OmniAnalytics requires having an OmniStudio license and enabling OmniAnalytics in Setup.

Fields

Field	Details
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** A description of the OmniTrackingGroup.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The unique name of the OmniTrackingGroup in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. Limit: 80 characters.

Field	Details
	Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. **Note:** Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
`EndDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The date when the OmniTrackingGroup became inactive.
`GroupType`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Specifies whether this OmniTrackingGroup sends tracking data to a third-party Analytics system such as Google Analytics. Possible values are: • `External`—A third-party Analytics system is used. • `Internal`—No third-party Analytics system is used.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Specifies whether the OmniTrackingGroup is active. The default value is `false`.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The language for the OmniTrackingGroup.
`MasterLabel`	**Type** string

Field	Details
	Properties Create, Filter, Group, Sort, Update **Description** The unique master label of the OmniTrackingGroup. This internal label doesn't get translated.
`MaxAgeInDays`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The maximum number of days the group and its analytics data is active beyond which the data is deleted.
`OmniExtTrackingDef`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the related OmniExtTrackingDef object. Required if `GroupType` is set to `External`. This field is a relationship field. **Relationship Name** OmniExtTrackingDef **Relationship Type** Lookup **Refers To** OmniExtTrackingDef
`OmniTrackingGroupKey`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort **Description** A UUID generated internally by Salesforce to uniquely identify an OmniTrackingGroup record across all orgs.
`StartDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The date when the OmniTrackingGroup became active.

OmniUiCard

For internal use only.

OpenActivity

This read-only object is displayed in a related list of open activities—future events and open tasks—related to an object. It includes activities for all contacts related to the object. OpenActivity fields for phone calls are only available if your organization uses Salesforce CRM Call Center.

Supported Calls

`describeSObjects()`

Fields

Field	Details
`AccountId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Indicates the ID of the related account, which is determined as follows: • The account associated with the `WhatId`, if it exists; or • The account associated with the `WhoId`, if it exists; otherwise • `null` For information on IDs, see ID Field Type. This is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account

Field	Details
ActivityDate	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** Indicates one of the following: • The due date of a task • The date of an event if IsAllDayEvent is set to true This field has a time stamp that is always set to midnight in the Universal Time Coordinated (UTC) time zone. The time stamp doesn't represent the time of the activity; don't attempt to alter it to accommodate time zone differences. Label is Date.
ActivityDateTime	**Type** dateTime **Properties** Aggregate, Filter, Nillable, Sort **Description** Contains the event's due date if the IsAllDayEvent flag is set to false. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. Label is **Due Date Time**. The value for this field and StartDateTime must match, or one of them must be null.
ActivitySubtype	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Provides standard subtypes to facilitate creating and searching for specific activity subtypes. This field isn't updateable. Possible values are: • Task • Email • Call • Event • LinkedIn —Available in API version 56.0 and later. • List Email
ActivityType	**Type** picklist

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** Represents one of the following values: `Call`, `Email`, `Meeting`, or `Other`. Label is `Type`. These are default values, and can be changed. `ActivityType` is the union of `TaskType` and `EventType`. If the same activity appears in both dynamic picklists, duplicate activities appear. `TaskType` and `EventType` can each have a `Call` type. Internally, they are distinct from each other.
`AlternateDetailId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of a record the activity is related to which contains more details about the activity. For example, an activity can be related to an EmailMessage record. This is a relationship field. **Relationship Name** AlternateDetail **Relationship Type** Lookup **Refers To** EmailMessage
`CallDisposition`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Represents the result of a given call, for example, “we'll call back,” or “call unsuccessful.” Limit is 255 characters.
`CallDurationInSeconds`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Duration of the call in seconds.

Field	Details
`CallObject`	**Type** string **Properties** Filter, Group,Nillable, Sort **Description** Name of a call center. Limit is 255 characters.
`CallType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The type of call being answered: Inbound, Internal, or Outbound.
`CompletedDateTime`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time the task was saved with a Closed status. This value is always null.
`ConnectionReceivedId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Indicates the ID of the PartnerNetworkConnection that shared this record with your organization. This field is available only if your organization has enabled Salesforce to Salesforce and only in API versions 28.0 and later.
`ConnectionSentId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Indicates the ID of the PartnerNetworkConnection that your organization shared this record with. This field is available only if your organization has enabled Salesforce to Salesforce, and only in API versions 28.0 and later. The value is always `null`. You can use the PartnerNetworkRecordConnection object to forward records to connections.

Field	Details
Description	**Type** textarea **Properties** Nillable **Description** Contains a description of the event or task. Limit is 32 KB.
DurationInMinutes	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Indicates the duration of the event or task.
EndDateTime	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Indicates the end date and time of the event or task. Available in versions 27.0 and later. This field is optional, depending on the following: • If IsAllDayEvent is true, you can supply a value for either DurationInMinutes or EndDateTime. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are null, the duration defaults to one day. • If IsAllDayEvent is false, a value must be supplied for either DurationInMinutes or EndDateTime. Supplying values in both fields is allowed if the values add up to the same amount of time.
IsAllDayEvent	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If the value of this field is set to true, then the activity is an event spanning a full day, and the ActivityDate defines the date of the event. If the value of this field is set to false, then the activity may be an event spanning less than a full day, or it may be a task. The default value of this field is false. Label is All-Day Event.
IsClosed	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether a task is closed (`true`) or not closed (`false`). The default value of this field is `false`. This field is set indirectly by setting `Status` on the task—each picklist value has a corresponding `IsClosed` value. Label is `Closed`.
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the activity has been moved to the Recycle Bin (`true`) or not (`false`). Label is `Deleted`.
`IsHighPriority`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates a high-priority task. The default value of this field is `false`. This field is derived from the `Priority` field.
`IsReminderSet`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether a reminder is set for an activity (`true`) or not (`false`). The default value of this field is `false`.
`IsTask`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If the value of this field is set to `true`, then the activity is a task; if the value is set to `false`, then the activity is an event. The default value of this field is `false`. Label is `Task`.
`IsVisibleInSelfService`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort

Field	Details
	Description If the value of this field is set to `true`, then the activity can be viewed in the self-service portal. The default value of this field is `false`. Label is `Visible in Self-Service`.
`Location`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** If the activity is an event, then this field represents the location of the event. If the activity is a task, then the value is `null`.
`OwnerId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Indicates the ID of the user or group who owns the activity. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Calendar, Group, User
`PrimaryAccountId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Contains the `AccountId` value from the activity record. Available in API versions 30.0 and later to organizations that use Shared Activities.
`PrimaryWhoId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** Contains the `WhoId` value from the activity record. Available in API versions 30.0 and later to organizations that have enabled Shared Activities.

Field	Details
Priority	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** Indicates the priority of a task, such as high, normal, or low. The default value of this field is `Normal`.
ReminderDateTime	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Represents the time at which a reminder is scheduled to fire if `IsReminderSet` is set to `true`. If `IsReminderSet` is set to `false`, then either the user has deselected the reminder checkbox in the user interface or the reminder has already fired at the time indicated by the value.
Status	**Type** picklist **Properties** Defaulted on create, Filter, Group, Nillable, Sort **Description** Indicates the current status of a task. The default value of this field is `Not Started`. Each predefined status field sets a value for `IsClosed`. To obtain picklist values, query TaskStatus. Possible values are: • Completed • Deferred • In Progress • Not Started • Waiting on someone else
Subject	**Type** combobox **Properties** Filter, Nillable, Sort **Description** Contains the subject of the task or event.
WhatId	**Type** reference

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** The `WhatId` represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. `WhatIds` are polymorphic. Polymorphic means a `WhatId` is equivalent to the ID of a related object. The label is `Related To ID`. This is a polymorphic relationship field. **Relationship Name** What **Relationship Type** Lookup **Refers To** Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CommSubscriptionConsent, ContactEncounter, ContactEncounterParticipant, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, DelegatedAccount, DocumentChecklistItem, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, ListEmail, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PartyConsent, PersonLifeEvent, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductItem, ProductRequest, ProductRequestLineItem, ProductTransfer, PurchaserPlan, ReceivedDocument, ResourceAbsence, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, Shift, Shipment, ShipmentItem, Solution, Visit, VisitedParty, VolunteerProject, WorkOrder, WorkOrderLineItem
`WhoId`	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The WhoId represents a human such as a lead or a contact. WhoIds are polymorphic. Polymorphic means a WhoId is equivalent to a contact's ID or a lead's ID. The label is `Name ID`. If Shared Activities is enabled, the value of this field is the ID of the related lead or primary contact. If you add, update, or remove the WhoId field, you might encounter problems with triggers, workflows, and data validation rules that are associated with the record. The label is `Name ID`. This is a polymorphic relationship field. **Relationship Name** Who **Relationship Type** Lookup **Refers To** Contact, Lead

Usage

Query activities that are related to an object

1. Optionally, issue a describe call against the object whose activities you want to query, to get a suggestion of the correct SOQL query to use.
2. Issue a SOQL relationship query with a main clause that references the object and an inner clause that references the activity history. For example:

```
SELECT
   (SELECT ActivityDate, Description
    FROM OpenActivities)
FROM Account
WHERE Name Like 'XYZ%'
```

The user interface enforces sharing rules, filtering out related-list items that a user doesn't have permission to see.

The following constraints on users who don't have the "View All Data" permission help prevent performance issues.

- In the main clause of the relationship query, you can reference only one record. For example, you can't filter on all records where the account name starts with "A." Instead, you must reference a single account record.

```
SELECT
   (SELECT ActivityDate, Description
    FROM OpenActivities
    ORDER BY ActivityDate ASC NULLS LAST, LastModifiedDate DESC
    LIMIT 500)
FROM Account
WHERE Name = 'Acme'
LIMIT 1
```

- In the inner clause of the query, you can't use `WHERE`.

- In the inner clause of the query, you must specify a limit of 500 or fewer on the number of rows that are returned in the list.
- In the inner clause of the query, you must sort on `ActivityDate` in ascending order and `LastModifiedDate` in descending order. You can optionally display nulls last. For example: `ORDER BY ActivityDate ASC NULLS LAST, LastModifiedDate DESC`.

SEE ALSO:
Task

OperatingHours

Represents the hours in which a service territory, service resource, or account is available for work in Field Service, Salesforce Scheduler, Salesforce Meetings, Sales Engagement, or Workforce Engagement. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** The description of the operating hours. Add any details that aren't included in the name.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the operating hours record was last modified. Its label in the user interface is `Last Modified Date`.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field Name	Details
	Description The date when the operating hours record was last viewed.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The name of the operating hours. For example, *`Summer Hours`*, *`Winter Hours`*, or *`Peak Season Hours`*.
`TimeZone`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The time zone that the operating hours fall within.

Usage

By default, only System Administrators can view, create, and assign operating hours.

Service territory members—which are service resources who can work in the territory—automatically use their service territory's operating hours. If a resource needs different operating hours than their territory, create separate operating hours for them from the Operating Hours tab. Then, select the desired hours in the `Operating Hours` lookup field on the service territory member detail page.

To view a service resource's operating hours for a particular territory, navigate to their Service Territories related list and click the Member Number for the territory. You reach the service territory member detail page, which lists the member's operating hours and dates during which they belong to the territory.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

OperatingHoursFeed
Feed tracking is available for the object.

OperatingHoursChangeEvent (API version 54.0)
Change events are available for the object.

OperatingHoursHistory

Represents the history of changes made to tracked fields on an operating hours record. This object is available in API version 38.0 and later.

Supported Calls

`getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Special Access Rules

Field Service must be enabled in your organization, and field tracking for operating hours fields must be configured.

Fields

Field Name	Details
`DataType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Data type of the field that was changed.
`Field`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The name of the field that was changed.
`NewValue`	**Type** anyType **Properties** Nillable, Sort **Description** The new value of the field that was changed.
`OldValue`	**Type** anyType **Properties** Nillable, Sort **Description** The value of the field before it was changed.
`TimeSlotId`	**Type** reference

Field Name	Details
	Properties Filter, Group, Sort **Description** ID of the operating hours record being tracked. The history is displayed on the detail page for this record.

OperatingHoursHoliday

Represents the day or hours for which a service territory and service resources exclusive to the service territory are unavailable in Salesforce Scheduler. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Salesforce Scheduler must be enabled.

Fields

Field	Details
`DateAndTime`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** (Read-Only) The date or time for the holiday.
`HolidayId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** The ID of the holiday that's related to the operating hours indicated in the OperatingHoursId field. This is a relationship field. **Relationship Name** Holiday

Field	Details
	Relationship Type Lookup **Refers To** Holiday
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date and time that the current user last viewed a record related to this object.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this object.
`OperatingHoursHolidayNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** (Read-Only) An auto-generated number identifying the operating hours holiday.
`OperatingHoursId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID of the operating hours that's related to the holiday indicated in the HolidayId field. This is a relationship field. **Relationship Name** OperatingHours **Relationship Type** Lookup **Refers To** OperatingHours

Opportunity

Represents an opportunity, which is a sale or pending deal.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Field Type
`AccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the account associated with this opportunity. This is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
`AgeInDays`	**Type** int **Properties** Aggregate, Filter, Group, Nillable, Sort **Description** The number of days since the opportunity was created, calculated by the current date minus the `created_date` field. This field is available in API version 52.0 and later if you enabled Pipeline Inspection.
`Amount`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** Estimated total sale amount. For opportunities with products, the amount is the sum of the related products. Any attempt to update this field, if the record has products, will be ignored.

Field	Field Type
	The update call will not be rejected, and other fields will be updated as specified, but the Amount will be unchanged.
`CampaignId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of a related Campaign. This field is defined only for those organizations that have the campaign feature Campaigns enabled. The User must have read access rights to the cross-referenced Campaign object in order to create or update that campaign into this field on the opportunity. This is a relationship field. **Relationship Name** Campaign **Relationship Type** Lookup **Refers To** Campaign
`CloseDate`	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** Required. Date when the opportunity is expected to close.
`ConnectionReceivedId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.
`ConnectionSentId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than

Field	Field Type
	15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.
ContactId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the contact associated with this opportunity, set as the primary contact. Read-only field that is derived from the opportunity contact role, which is created at the same time the opportunity is created. This field can only be populated when it's created, and can't be updated. To update the value in this field, change the `IsPrimary` flag on the OpportunityContactRole associated with this opportunity. Available in API version 46.0 and later.
ContractId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the contract that's associated with this opportunity.
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. If the organization has multicurrency and a Pricebook2 is specified on the opportunity (i.e., the `Pricebook2Id` field is not blank), then the currency value of this field must match the currency of the PricebookEntry records that are associated with any opportunity line items it has.
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** Text description of the opportunity. Limit: 32,000 characters.
ExpectedRevenue	**Type** currency

Field	Field Type
	Properties Filter, Nillable, Sort **Description** Read-only field that is equal to the product of the opportunity `Amount` field and the `Probability`. You can't directly set this field, but you can indirectly set it by setting the `Amount` or `Probability` fields.
`Fiscal`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** If fiscal years are not enabled, the name of the fiscal quarter or period in which the opportunity `CloseDate` falls. Value should be in YYY Q format, for example, '2006 1' for first quarter of 2006.
`FiscalQuarter`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Represents the fiscal quarter. Valid values are 1, 2, 3, or 4.
`FiscalYear`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Represents the fiscal year, for example, 2006.
`ForecastCategory`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Restricted picklist field. It is implied, but not directly controlled, by the `StageName` field. You can override this field to a different value than is implied by the `StageName` value. The values of this field are fixed enumerated values. The field labels are localized to the language of the user performing the operation, if localized versions of those labels are available for that language in the user interface.

Field	Field Type
	In API version 12.0 and later, the value of this field is automatically set based on the value of the `ForecastCategoryName` and can't be updated any other way. The field properties Create, Defaulted on create, Nillable, and Update are not available in version 12.0. Possible values are: • `BestCase` • `Closed` • `Forecast` • `MostLikely` • `Omitted` • `Pipeline`
`ForecastCategoryName`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The name of the forecast category. It is implied, but not directly controlled, by the `StageName` field. You can override this field to a different value than is implied by the `StageName` value. Available in API version 12.0 and later. Possible values are: • `Best Case` • `Closed` • `Commit` • `Most Likely` • `Omitted` • `Pipeline`
`HasOpenActivity`	**Type** boolean **Properties** Defaulted on create, Group, **Description** Indicates whether an opportunity has an open event or task (`true`) or not (`false`). Available in API version 35.0 and later.
`HasOpportunityLineItem`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort

Field	Field Type
	Description Read-only field that indicates whether the opportunity has associated line items. A value of `true` means that Opportunity line items have been created for the opportunity. An opportunity can have opportunity line items only if the opportunity has a price book. The opportunity line items must correspond to PricebookEntry objects that are listed in the opportunity Pricebook2. However, you can insert opportunity line items on an opportunity that does not have an associated Pricebook2. For the first opportunity line item that you insert on an opportunity without a Pricebook2, the API automatically sets the `Pricebook2Id` field, if the opportunity line item corresponds to a PricebookEntry in an active Pricebook2 that has a `CurrencyIsoCode` field that matches the `CurrencyIsoCode` field of the opportunity. If the Pricebook2 is not active or the `CurrencyIsoCode` fields do not match, then the API returns an error. You can't update the `Pricebook2Id` or `PricebookId` fields if opportunity line items exist on the Opportunity. You must delete the line items before attempting to update the `PricebookId` field.
`HasOverdueTask`	**Type** boolean **Properties** Defaulted on create, Group, **Description** Indicates whether an opportunity has an overdue task (`true`) or not (`false`). Available in API version 35.0 and later.
`IqScore`	**Type** int **Properties** Aggregate, Filter, Group, Nillable, Sort **Description** The likelihood, measured on a scale of 1 to 99, that an opportunity will be won. Einstein Opportunity Scoring must be enabled. Available in API version 41.0 and later. Label is **Opportunity Score**.
`IsClosed`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Directly controlled by `StageName`. You can query and filter on this field, but you can't directly set it in a create, upsert, or update request. It can only be set via `StageName`. Label is **Closed**.
`IsDeleted`	**Type** boolean

Field	Field Type
	Properties Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
`IsExcludedFromTerritory2Filter`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Used for Filter-Based Opportunity Territory Assignment (Pilot in Spring '15 / API version 33). Indicates whether the opportunity is excluded (*`True`*) or included (*`False`*) each time the APEX filter is executed.
`IsPriorityRecord`	**Type** boolean **Properties** Defaulted on create, Group **Description** Shows whether the user has marked the opportunity as important (*`True`*) or not (*`False`*). The default value is `false`. Available in API version 53.0 and later.
`IsSplit`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Read-only field that indicates whether credit for the opportunity is split between opportunity team members. Label is `IsSplit`. This field is available in versions 14.0 and later for organizations that enabled Opportunity Splits during the pilot period. Warning: This field should not be used. However, it's documented for the benefit of pilot customers who find references to `IsSplit` in code.
`IsWon`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Directly controlled by `StageName`. You can query and filter on this field, but you can't directly set the value. It can only be set via `StageName`. Label is **Won**.

Field	Field Type
LastActivityDate	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** Value is one of the following, whichever is the most recent: • Due date of the most recent event logged against the record. • Due date of the most recently closed task associated with the record.
LastActivityInDays	**Type** int **Properties** Aggregate, Filter, Group, Nillable, Sort **Description** The number of days since the last completed event or task for the record, calculated by the current date minus the `last_activity` field. If the `last_activity` field is null, this field is null. This field is available in API version 52.0 and later if you enabled Pipeline Inspection.
LastAmountChangedHistoryId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the OpportunityHistory record that contains information about when the opportunity Amount field was last updated in Winter '21 or later. Information includes the date and time of the change and the user who made the change. Available in API version 50.0 and later. This is a relationship field. **Relationship Name** LastAmountChangedHistory **Relationship Type** Lookup **Refers To** OpportunityHistory
LastCloseDateChangedHistoryId	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field	Field Type
	Description ID of the OpportunityHistory record that contains information about when the opportunity Close Date field was last updated in Winter '21 or later. Information includes the date and time of the change and the user who made the change. Available in API version 50.0 and later. This is a relationship field. **Relationship Name** LastCloseDateChangedHistory **Relationship Type** Lookup **Refers To** OpportunityHistory
`LastReferencedDate`	**Type** datetime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record, a record related to this record, or a list view.
`LastStageChangeDate`	**Type** datetime **Properties** Aggregate, Filter, Nillable, Sort **Description** The date of the last change made to the `Stage` field on this opportunity record. This field is available in API version 52.0 and later.
`LastStageChangeInDays`	**Type** **int** **Properties** Aggregate, Filter, Group, Nillable, Sort **Description** The number of days since the last change was made to the `Stage` field on the opportunity record, calculated by the current date minus the `last_stage_change_date` field. If the `last_stage_change_date` is null, then this field contains the value for `AgeInDays`. This field is available in API version 52.0 and later if you enabled Pipeline Inspection.
`LastViewedDate`	**Type** datetime

Field	Field Type
	Properties Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it.
`LeadSource`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Source of this opportunity, such as Advertisement or Trade Show.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. A name for this opportunity. Limit: 120 characters.
`NextStep`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of next task in closing opportunity. Limit: 255 characters.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the User who has been assigned to work this opportunity. If you update this field, the previous owner's access becomes Read Only or the access specified in your organization-wide default for opportunities, whichever is greater. If you have set up opportunity teams in your organization, updating this field has different consequences depending on your version of the API: • For API version 12.0 and later, sharing records are kept, as they are for all objects. • For API version before 12.0, sharing records are deleted.

Field	Field Type
	• For API version 16.0 and later, users must have the "Transfer Record" permission in order to update (transfer) account ownership using this field. This is a relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** User
PartnerAccountId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the partner account for the partner user that owns this opportunity. Available if Partner Relationship Management is enabled or if digital experiences is enabled and you have partner portal licenses. Note: If you are uploading opportunities using API version 15.0 or earlier, and one of the opportunities in the batch has a partner user as the owner, the `Partner Account` field on all opportunities in the batch is set to that partner user's account regardless of whether the partner user is the owner. In version 16.0, the `Partner Account` field is set to the appropriate account for the partner user that owns the opportunity. If the owner of the opportunity is not a partner user, this field remains empty.
Pricebook2Id	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** ID of a related Pricebook2 object. The `Pricebook2Id` field indicates which Pricebook2 applies to this opportunity. The `Pricebook2Id` field is defined only for those organizations that have products enabled as a feature. You can specify values for only one field (`Pricebook2Id` or `PricebookId`)—not both fields. For this reason, both fields are declared nillable. This is a relationship field. **Relationship Name** Pricebook2 **Relationship Type** Lookup

Field	Field Type
	Refers To Pricebook2
`PricebookId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Nillable, Update **Description** Unavailable as of version 3.0. As of version 8.0, the Pricebook object is no longer available. Use the `Pricebook2Id` field instead, specifying the ID of the Pricebook2 record.
`Probability`	**Type** percent **Properties** Create, Defaulted on create, Filter, Nillable, Sort, Update **Description** Percentage of estimated confidence in closing the opportunity. It is implied, but not directly controlled, by the `StageName` field. You can override this field to a different value than what is implied by the `StageName`. Note: If you're changing the `Probability` field through the API using a partner WSDL call, or an Apex `before` trigger, and the value may have several decimal places, we recommend rounding the value to a whole number. For example, the following Apex in a `before` trigger uses the `round` method to change the field value: `o.probability = o.probability.round();`
`PushCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of times an opportunity’s close date has been pushed out by one calendar month. For example, moving a close date from April to May counts as one push, but moving from April 1 to April 30 doesn't count. The total is not decreased when the close date is moved in. Available in API version 53.0 and later.
`RecordTypeId`	**Type** reference **Properties** Create, Filter, Nillable, Update **Description** ID of the record type assigned to this object.

Field	Field Type
StageName	**Type** picklist **Properties** Create, Filter, Group, Sort, Update **Description** Required. Current stage of this record. The StageName field controls several other fields on an opportunity. Each of the fields can be directly set or implied by changing the StageName field. In addition, the StageName field is a picklist, so it has additional members in the returned describeSObjectResult to indicate how it affects the other fields. To obtain the stage name values in the picklist, query the OpportunityStage object. If the StageName is updated, then the ForecastCategoryName, IsClosed, IsWon, and Probability are automatically updated based on the stage-category mapping.
SyncedQuoteID	**Type** reference **Properties** Create, Filter, Nillable, Update **Description** Read only in an Apex trigger. The ID of the Quote that syncs with the opportunity. Setting this field lets you start and stop syncing between the opportunity and a quote. The ID has to be for a quote that is a child of the opportunity.
Territory2Id	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the territory that is assigned to the opportunity. Available only if Enterprise Territory Management has been enabled for your organization. Note: Users who have full access to an opportunity's account can assign any territory from the active model to the opportunity. Users who do *not* can assign only a territory that is also assigned to the opportunity's account. The same restriction applies to territory assignments made via Apex in system mode.
TotalOpportunityQuantity	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Number of items included in this opportunity. Used in quantity-based forecasting.

Field	Field Type
Type	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Type of opportunity. For example, Existing Business or New Business. Label is **Opportunity Type**.

Note: If you are importing Opportunity data and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself..

Usage

Use the Opportunity object to manage information about a sale or pending deal. You can also sync this object with a child Quote. To update an Opportunity, your client application needs "Edit" permission on opportunities. You can create, update, delete, and query Attachment records associated with an opportunity via the API. To split credit for an opportunity among multiple opportunity team members, use the OpportunitySplit object.

Client applications can also create or update opportunity objects by converting a Lead with `convertLead()`.

Note: On opportunities and opportunity products, the workflow rules, validation rules, and Apex triggers fire when an update to a child opportunity product or schedule causes an update to the parent record. This means your custom application logic is enforced when there are updates to the parent record, ensuring higher data quality and compliance with your organization's business policies.

Sample Code—Java

This code starts the sync between an object and a child quote.

```
public void startQuoteSync() {
         Opportunity opp = new Opportunity();
         opp.setId(new ID("006D000000CpOSy"));
         opp.setSyncedQuoteId(new ID("0Q0D000000002OZ"));
   // Invoke the update call and save the results
   try {
      SaveResult[] saveResults = binding.update(new SObject[] {opp});
      // check results and do more processing after the update call ...
   }
   catch (Exception ex) {
      System.out.println("An unexpected error has occurred." + ex.getMessage());
      return;
  }
}
```

This code stops the sync between an object and a child quote.

```
public void stopQuoteSync() {
         Opportunity opp = new Opportunity();
```

```
        opp.setId(new ID("006D000000CpOSy"));
        opp.setFieldsToNull(new String[]  {"SyncedQuoteId"} );
   // Invoke the update call and save the results
   try {
      SaveResult[] saveResults = binding.update(new SObject[] {opp});
      // check results and do more processing after the update call ...
   }
   catch (Exception ex) {
      System.out.println("An unexpected error has occurred." + ex.getMessage());
      return;
 }
}
```

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

OpportunityChangeEvent (API version 44.0)
Change events are available for the object.

OpportunityFeed (API version 18.0)
Feed tracking is available for the object.

OpportunityHistory
History is available for tracked fields of the object.

OpportunityOwnerSharingRule
Sharing rules are available for the object.

OpportunityShare
Sharing is available for the object.

Additional Considerations

If you are using `before` triggers to set `Stage` and `Forecast Category` for an opportunity record, the behavior is as follows:

- If you set `Stage` and `Forecast Category`, the opportunity record contains those exact values.
- If you set `Stage` but not `Forecast Category`, the `Forecast Category` value on the opportunity record defaults to the one associated with trigger `Stage`.
- If you reset `Stage` to a value specified in an API call or incoming from the user interface, the `Forecast Category` value should also come from the API call or user interface. If no value for `Forecast Category` is specified and the incoming `Stage` is different than the trigger `Stage`, the `Forecast Category` defaults to the one associated with trigger `Stage`. If the trigger `Stage` and incoming `Stage` are the same, the `Forecast Category` is not defaulted.

If you are cloning an opportunity with products, the following events occur in order:

1. The parent opportunity is saved according to the order of execution.
2. The opportunity products are saved according to the order of execution.

Note: If errors occur on an opportunity product, you must return to the opportunity and fix the errors before cloning.

If any opportunity products contain unique custom fields, you must null them out before cloning the opportunity.

QuoteLineItem
PartnerNetworkConnection

OpportunityCompetitor

Represents a competitor on an Opportunity.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`CompetitorName`	**Type** combobox **Properties** Create, Filter, Nillable, Sort, Update **Description** Name of the competitor.
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.

Field	Details
`OpportunityId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the associated Opportunity. This is a relationship field. **Relationship Name** Opportunity **Relationship Type** Lookup **Refers To** Opportunity
`Strengths`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** Description of the competitor's strengths. Limit: 1,000 characters.
`Weaknesses`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** Description of the competitor's weaknesses. Limit: 1,000 characters.

Usage

Use this object to manage competitors on an Opportunity, associating multiple competitors on a opportunity and specifying the strengths and weaknesses of each competitor.

SEE ALSO:

Opportunity

OpportunityContactRole

Represents the role that a Contact plays on an Opportunity.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`ContactId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** ID of an associated Contact. The API applies user access rights to the associated Opportunity for this object, but not to the associated Contact. The API may return rows from a query on this object that include this field's values for contacts to which the user does not have sufficient access rights. It may also return values for this field for contacts that have been deleted. In either case, the client must perform a query on the contact table for this field's value to determine whether the Contact is accessible to the user and has not been deleted. This is a relationship field. **Relationship Name** Contact **Relationship Type** Lookup **Refers To** Contact
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the org. This field is available in API version 47.0.
`Division`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North

Field	Details
	America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.
IsDeleted	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the record has been moved to the Recycle Bin (`true`) or not (`false`). The `IsDeleted` flag is usable only when the parent record is deleted to the recycle bin, and not when the `OpportunityContactRole` record is deleted directly. Label is **Deleted**.
IsPrimary	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the associated Contact plays the primary role on the Opportunity (`true`) or not (`false`). Each Opportunity has only one primary contact. Label is **Primary**.
OpportunityId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of an associated Opportunity. This field is non-nullable, and it cannot be updated. You must provide a value for this field when creating new records. You can't change it after it has been created. This is a relationship field. **Relationship Name** Opportunity **Relationship Type** Lookup **Refers To** Opportunity
Role	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Name of the role played by the associated Contact on the Opportunity, such as Business User or Decision Maker.

Usage

Use the Opportunity Contact Role object to manage information about contacts and roles related to opportunities. Records of this type appear in the user interface in the Opportunity Contact Role related list and on the Opportunity detail page.

Although allowed, we do not recommend that you create multiple relationships between the same Opportunity and a Contact.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OpportunityContactRoleChangeEvent (API version 45.0)
Change events are available for the object.

SEE ALSO:

Overview of Salesforce Objects and Fields

OpportunityContactRoleSuggestionInsight

Represents a suggestion for a new opportunity contact role. Available in API versions 45.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getDeleted()`, `query()`, `retrieve()`

Special Access Rules

To add or decline opportunity contact role suggestions, users need a Sales Cloud Einstein license, edit access on opportunities, and read or edit access on contacts. As of the Spring '20 release, Pardot and Sales Engagement users no longer have access to this object.

Fields

Field Name	Details
`ContactId`	**Type** reference **Properties** Filter, Group, Sort

Field Name	Details
	Description The ID of the related contact record.
CreatedRecordId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the created opportunity contact role record.
CurrencyIsoCode	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
Division	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The division of the suggested opportunity contact role.
LastOperationUserId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the user who last performed a related operation.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	**Type** dateTime

Field Name	Details
	Properties Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it’s possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.
`OpportunityId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the related opportunity.
`RationaleLabel`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The reason why this is a suggested opportunity contact role.
`Role`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The role of the suggested opportunity contact role.
`Status`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The status of the suggested contact. Possible values include: • New • Pending • Added • Declined

Usage

This object is read-only and isn't supported in workflows, triggers, or process builder.

OpportunityFieldHistory

Represents the history of changes to the values in the fields of an opportunity. This object is available in versions 13.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Fields

Field	Details
`DataType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Data type of the field that was changed.
`Field`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The name of the field that was changed.
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
`OpportunityId`	**Type** reference **Properties** Filter, Group, Sort

Field	Details
	Description ID of the Opportunity. Label is **Opportunity ID**. This is a relationship field. **Relationship Name** Opportunity **Relationship Type** Lookup **Refers To** Opportunity
`NewValue`	**Type** anyType **Properties** Nillable, Sort **Description** The new value of the field that was changed.
`OldValue`	**Type** anyType **Properties** Nillable, Sort **Description** The latest value of the field before it was changed.

Usage

Use this object to identify changes to any fields on an Opportunity. The OpportunityHistory object represents the history of a change to the `Amount`, `Probability`, `Stage`, or `Close Date` fields of an Opportunity.

This object respects field level security on the parent object.

SEE ALSO:

Opportunity

OpportunityHistory

Represents the stage history of an opportunity.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
`Amount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Estimated total sale amount.
`CloseDate`	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** Date when the opportunity is expected to close.
`ExpectedRevenue`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Calculated revenue based on the `Amount` and `Probability` fields.
`ForecastCategory`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Category that determines the column in which an opportunity is totaled in a forecast. Label is **To ForecastCategory**. • `BestCase` • `Closed` • `Forecast` • `MostLikely` • `Omitted` • `Pipeline`
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter

Field	Details
	Description Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
`OpportunityId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the associated Opportunity. This is a relationship field. **Relationship Name** Opportunity **Relationship Type** Lookup **Refers To** Opportunity
`PrevAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The value in the opportunity's Amount field before the update of the opportunity. Note: In OpportunityHistory records created before Winter '21, the value is null. Available in API version 50.0 and later.
`PrevCloseDate`	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** The value in the opportunity's Close Date field before the update of the opportunity. Note: In OpportunityHistory records created before Winter '21, the value is null. Available in API version 50.0 and later.
`Probability`	**Type** percent

Field	Details
	Properties Filter, Nillable, Sort **Description** Percentage of estimated confidence in closing the opportunity.
`StageName`	**Type** picklist **Properties** Filter, Group, Sort **Description** Name of the current stage of the opportunity (for example, Prospect or Proposal).

Usage

This object represents the history of a change to the `Amount`, `Probability`, `Stage`, or `Close Date` fields of an Opportunity. The OpportunityFieldHistory object represents the history of a change to any of the fields of an Opportunity. To obtain information about how a particular opportunity is progressing, query the OpportunityHistory records associated with a given Opportunity. Please note that if an opportunity's `Amount`, `Probability`, `Stage`, or `Close Date` fields have not changed, nothing will be returned in the OpportunityHistory objects. In this case, query the OpportunityFieldHistory records associated with a given Opportunity to get more information about changes to the opportunity.

This object is read-only. The system generates a new record whenever a user or client application changes the value of any of the above fields; the then-current values of all of these major fields are saved in the newly-generated object.

This object respects field-level security on the parent object.

Note: The record is automatically deleted if its parent Opportunity is deleted.

SEE ALSO:

Opportunity

OpportunityInsight

Represents an individual insight (deal prediction, follow-up reminder, or key moment) related to an opportunity record.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `query()`, `retrieve()`

Special Access Rules

To see an insight related to a specific opportunity, users need a Sales Cloud Einstein license and access to the opportunity record. As of the Spring '20 release, Pardot and Sales Engagement users no longer have access to this object.

Fields

Field Name	Details
ActualHeardWithinDays	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The number of days it has been since a prospect has responded for insights of type `Prospect has not responded` and `No communication`.
CloseDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The close date of the related opportunity for insights of type `Opportunity is overdue` and `Opportunity is unlikely to close in time`.
CompetitorName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** This field has been deprecated as of API version 45.0.
ContactName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** This field is not in use as of API version 46.0.
ContactTitle	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** This field is not in use as of API version 46.0.
CurrencyIsoCode	**Type** picklist

Field Name	Details
	Properties Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
`Division`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The division of the related record.
`ExpectedHeardWithinDays`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The expected number of days it takes to hear back from a prospect for insights of type `Prospect has not responded` and `No communication`.
`LastHeard`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date when the related prospect was last heard from for insights of type `Prospect has not responded`.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort

Field Name	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it.
`OpportunityId`	**Type** reference **Properties** Filter, Group, Sort **Description** The ID of the related opportunity record.
`Rationale`	**Type** string **Properties** Filter, Group, Nillable **Description** The explanation for an insight, providing more background information and details that are specific to the org.
`Reason`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The reason why a specific insight type is appearing. Relevant to the following insights: • Opportunity is unlikely to close in time • Opportunity slowing • Opportunity boosting • Time-consuming opportunity
`TaskDue`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The date that a task associated with the related opportunity record is due.
`Title`	**Type** string

Field Name	Details
	Properties Filter, Group, Nillable **Description** The title of the insight.
`TrendType`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The trend type of the insight. Possible values include: • Negative • Positive • Informational
`Type`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The type of insight. Possible values include: • Opportunity is unlikely to close in time • Prospect has not responded • Opportunity slowing • Opportunity boosting • Time-consuming opportunity • No communication • Re-engaged opportunity • Opportunity has an overdue task • Opportunity is overdue • Opportunity has no open activity • Unusual opportunity amount

Usage

This object is read-only and isn't supported in workflows, triggers, or process builder.

OpportunityLineItem

Represents an opportunity line item, which is a member of the list of Product2 products associated with an Opportunity.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The user must have the “Edit” permission on Opportunity records to create or update opportunity line items on an opportunity.

Fields

Field	Details
`CanUseQuantitySchedule`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the opportunity product can have a quantity schedule (`true`) or not (`false`). This field is read-only.
`CanUseRevenueSchedule`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the opportunity product can have a revenue schedule (`true`) or not (`false`). This field is read-only.
`ConnectionReceivedId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.
`ConnectionSentId`	**Type** reference

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.
`CurrencyIsoCode`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. If the organization has multicurrency enabled, and a Pricebook2 is specified on the parent opportunity (that is, the `Pricebook2Id` field is not blank on the opportunity referenced by this object's `OpportunityId`), then the value of this field must match the currency of the `CurrencyIsoCode` field on the PricebookEntry records that are associated with this object.
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Text description of the opportunity line item. Limit: 255 characters.
`Discount`	**Type** percent **Properties** Create, Filter, Nillable, Sort, Update **Description** Discount for the product as a percentage. When updating these records: • If you specify `Discount` without specifying `TotalPrice`, the `TotalPrice` is adjusted to accommodate the new `Discount` value, and the `UnitPrice` is held constant. • If you specify both `Discount` and `Quantity`, you must also specify either `TotalPrice` or `UnitPrice` so the system knows which one to automatically adjust.

Field	Details
`HasQuantitySchedule`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Read-only. Indicates whether a quantity schedule has been created for this object (`true`) or not (`false`).
`HasRevenueSchedule`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether a revenue schedule has been created for this object (`true`) or not (`false`). If this object has a revenue schedule, the `Quantity` and `TotalPrice` fields can't be updated. In addition, the `Quantity` field can't be updated if this object has a quantity schedule. Update requests aren't rejected but the updated values are ignored.
`HasSchedule`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** If either `HasQuantitySchedule` or `HasRevenueSchedule` is `true`, this field is also `true`.
`LastReferencedDate`	**Type** datetime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record. Available in API version 50.0 and later.
`LastViewedDate`	**Type** datetime **Properties** Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. Available in API version 50.0 and later.
`ListPrice`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Corresponds to the `UnitPrice` on the PricebookEntry that is associated with this line item, which can be in the standard price book or a custom price book. A client application can use this information to show whether the unit price (or sales price) of the line item differs from the price book entry list price.
`Name`	**Type** string **Properties** Filter, Nillable, Sort **Description** The opportunity line item name (known as "Opportunity Product" in the user interface). This read-only field is available in API version 30.0 and later.
`OpportunityId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the associated Opportunity. This is a relationship field. **Relationship Name** Opportunity **Relationship Type** Lookup **Refers To** Opportunity
`PricebookEntryId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort

Field	Details
	Description Required. ID of the associated PricebookEntry. Exists only for those organizations that have Products enabled as a feature. In API versions 1.0 and 2.0, you can specify values for either this field or `ProductId`, but not both. For this reason, both fields are declared nillable. In API version 3.0 and later, you must specify values for this field instead of `ProductId`. This is a relationship field. **Relationship Name** PricebookEntry **Relationship Type** Lookup **Refers To** PricebookEntry
`ProductId`	**Type** reference **Properties** Create, Filter, Nillable **Description** ID of the related Product record. This field is unavailable as of version 3.0 and is only provided for backward compatibility. The Product object is unavailable beginning with version 8.0. Use the `PricebookEntryId` field instead, specifying the ID of the PricebookEntry record. This is a relationship field. **Relationship Name** Product2 **Relationship Type** Lookup **Refers To** Product2
`Product2Id`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The ID of the related Product2 record. This is a read-only field available in API version 30.0 and later. Use the `PricebookEntryId` field instead, specifying the ID of the PricebookEntry record.
`ProductCode`	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** This read-only field is available in API version 30.0 and later. It references the value in the ProductCode field of the related Product2 record.
`Quantity`	**Type** double **Properties** Create, Filter, Sort, Update **Description** Read-only if this record has a quantity schedule, a revenue schedule, or both a quantity and a revenue schedule. When updating these records: • If you specify `Quantity` without specifying the `UnitPrice`, the `UnitPrice` value will be adjusted to accommodate the new `Quantity` value, and the `TotalPrice` will be held constant. • If you specify both `Discount` and Quantity, you must also specify either `TotalPrice` or `UnitPrice` so the system can determine which one to automatically adjust.
`RecalculateTotalPrice`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Changes behavior of OpportunityLineItem calculations when a line item has child schedule rows for the `Quantity` value. When enabled, if the rollup quantity changes, then the quantity rollup value is multiplied against the sales price to change the total price. Product2 flag must be set to true.
`ServiceDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Date when the product revenue will be recognized and the product quantity will be shipped. • Opportunity Close Date—`ServiceDate` is ignored. • Product Date—`ServiceDate` is used if not `null`. • Schedule Date—`ServiceDate` is used if not `null` and there are no revenue schedules present for this line item, that is, there are no OpportunityLineItemSchedule records with a field `Type` value of Revenue that are children of this record.

Field	Details
SortOrder	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Number indicating the sort order selected by the user. Client applications can use this to match the sort order in Salesforce.
Subtotal	**Type** currency **Properties** Filter, Nillable, Sort **Description** Difference between standard and discounted pricing. Converted currency amounts when the opportunity's currency is different from the user's currency.
TotalPrice	**Type** currency **Properties** Create, Defaulted on create, Filter, Nillable, Sort, Update **Description** This field is available only for backward compatibility. It represents the total price of the OpportunityLineItem. If you do not specify `UnitPrice`, this field is required. If you specify `Discount` and `Quantity`, this field or `UnitPrice` is required. When updating these records, you can change either this value or the `UnitPrice`, but not both at the same time. This field is nillable, but you can't set both `TotalPrice` and `UnitPrice` to null in the same update request. To insert the `TotalPrice` via the API (given only a unit price and the quantity), calculate this field as the unit price multiplied by the quantity. This field is read-only if the opportunity line item has a revenue schedule. If the opportunity line item does not have a schedule or only has quantity schedule, this field can be updated.
UnitPrice	**Type** currency **Properties** Create, Defaulted on create, Filter, Nillable, Sort, Update **Description** The unit price for the opportunity line item. In the Salesforce user interface, this field's value is calculated by dividing the total price of the opportunity line item by the quantity listed for that line item. Label is **Sales Price**. This field or `TotalPrice` is required. You can't specify both. If you specify `Discount` and `Quantity`, this field or `TotalPrice` is required.

Usage

An Opportunity can have associated OpportunityLineItem records only if the Opportunity has a Pricebook2. An OpportunityLineItem must correspond to a Product2 that is listed in the opportunity's Pricebook2. For information about inserting OpportunityLineItem for an opportunity that does not have an associated Pricebook2 or any existing line items, see Effects on Opportunities.

This object is defined only for orgs with products enabled as a feature. If the products feature isn't enabled, this object doesn't appear in the `describeGlobal()` call, and you can't use `describeSObjects()` or query the OpportunityLineItem object.

For a visual diagram of the relationships between OpportunityLineItem and other objects, see Product and Schedule Objects.

Note:

- If the multicurrency option is enabled, the `CurrencyIsoCode` field is present. It can't be modified, and is always set to the value of the `CurrencyIsoCode` of the parent Opportunity.
- If customizable product schedules are enabled, you can use custom fields in default schedules and customize their layout. But if you've applied validation rules or Apex triggers, they're bypassed when they're first inserted.

Effects on Opportunities

Opportunities with associated OpportunityLineItem records are affected in the following ways:

- Creating an OpportunityLineItem increments the Opportunity `Amount` value by the `TotalPrice` of the OpportunityLineItem. Additionally, inserting an OpportunityLineItem increments the `ExpectedRevenue` on the opportunity by the `TotalPrice` times the opportunity `Probability`.
- The Opportunity `Amount` becomes a read-only field when the opportunity has line items. The API ignores any attempt to update this field on an opportunity with line items. Update requests are not rejected, but the updated value is ignored.
- You can't update the `PricebookId` field or the `CurrencyIsoCode` field on the opportunity if line items exist. The API rejects any attempt to update these fields on an opportunity with line items.
- When you create or update an OpportunityLineItem, the API verifies that the line item corresponds to a PricebookEntry in the Pricebook2 that is associated with the opportunity. If the opportunity does not have an associated Pricebook2, the API automatically sets the price book on the opportunity if the line item corresponds to a PricebookEntry in an active Pricebook2, and if the PricebookEntry has a `CurrencyIsoCode` field that matches the `CurrencyIsoCode` field of the opportunity. If the Pricebook2 is not active or the `CurrencyIsoCode` fields do not match, an error is returned.
- The Opportunity `HasOpportunityLineItem` field is set to `true` when an OpportunityLineItem is inserted for that Opportunity.
- When OpportunityLineItem records are directly deleted, they aren't sent to the recycle bin and can't be undeleted. The `getDeleted()` call shows deleted OpportunityLineItem records until they are purged, which is usually within the same day or the next day.
- In Lightning, the `ListPrice`, `Name`, and `ProductCode` fields aren't populated before insert because their values are computed after the OpportunityLineItem.Product2Id value is saved. To access a value from these fields, use an After Insert trigger.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OpportunityLineItemChangeEvent on page 52 (API version 60.0)
Change events are available for the object.

SEE ALSO:
OpportunityLineItemSchedule

OpportunityLineItemSchedule

Represents information about the quantity, revenue distribution, and delivery dates for a particular `OpportunityLineItem`.

In API version 38.0 and later, when an OpportunityLineItem record is created for a product with a previously established schedule, an OpportunityLineItemSchedule record is also created.

In API version 46.0 and later, this object supports custom fields, validation rules, and Apex triggers. Deleting a schedule now also invokes delete triggers. If customizable product schedules are enabled, you can use custom fields in default schedules and customize their layout. But if you've applied validation rules or Apex triggers, they're bypassed when they're first inserted.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Nillable, Restricted picklist, Update **Description** Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. This field is available in version 10.0 and later.
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Text description of the opportunity line item schedule. Limit: 80 characters. Label is **Comments**.
`OpportunityLineItemId`	**Type** reference

Field	Details
	Properties Create, Filter **Description** Required. ID of the associated `OpportunityLineItem`.
`Quantity`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Required. The total number of units to be scheduled in a quantity schedule.
`Revenue`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** The revenue that should be recognized, or the quantity that should be shipped, or both - depending upon the value of `Type`.
`ScheduleDate`	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** Required. The date the associated `OpportunityLineItem` is to be scheduled for an event: delivery, shipping, or any other date you wish to track.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The type of the schedule. Required when inserting an OpportunityLineItemSchedule. Valid values include `Quantity`, `Revenue`, or `Both`.

Allowed Type Field Values

The allowed `Type` values for an `OpportunityLineItemSchedule` depend on the product-level schedule preferences and whether the line item has any existing schedules. The following criteria must be met:

- The Product2 on which the `OpportunityLineItem` is based must have the appropriate `CanUseRevenueSchedule` or `CanUseQuantitySchedule` fields (or both) set to `true`.
- When you create a schedule for a line item that does not have any existing schedules, you can specify any valid value.
- If you create a schedule for a line item that already has existing schedules, the new schedule must be consistent with the existing schedules. The following matrix outlines the allowable values:

Value of HasRevenueSchedule on line item	Value of HasQuantitySchedule on line item	Allowable Type Values
false	false	`Revenue`, `Quantity`, both
false	true	`Quantity`
true	false	`Revenue`
true	true	both

Allowed Quantity and Revenue Field Values

The allowable `Quantity` and `Revenue` field values depend on the value of the `Type` field:

Type Value	Allowable Quantity Value	Allowable Revenue Value
`Revenue`	Null	Non-null
`Quantity`	Non-null	Null
both	Non-null	Non-null

The `Quantity` and `Revenue` fields have the following restrictions when this object is updated:

- For a schedule of `Type Quantity`, you can't update a null `Revenue` value to non-null. Likewise for a schedule of `Type Revenue`, you can't update a null `Quantity` value to non-null.
- You can't null out the `Quantity` field for a schedule of `Type Quantity`. Likewise you can't null out the `Revenue` field for a schedule of `Type Revenue`.
- You can't null out either the `Revenue` or `Quantity` fields for a schedule of type `Both`.

Usage

`OpportunityLineItemSchedule` supports two types of schedules:

- `Quantity` schedules
- `Revenue` schedules

The user must have edit access rights on the Opportunity in order to create or update line item schedules on that opportunity.

Products and Schedules Must Be Enabled

The `OpportunityLineItemSchedule` object is defined only for those organizations that have the products and schedules features enabled. If the organization does not have the products and schedules features, the `OpportunityLineItemSchedule` object is not returned in a describe, and you can't describe or query `OpportunityLineItemSchedule` records.

Effects on Opportunities and Opportunity Line Items

`OpportunityLineItemSchedule` records affect opportunities and opportunity line items in the following ways:

- Inserting an `OpportunityLineItemSchedule` of `Type` "Revenue" or "Quantity" increments the `TotalPrice` field on the `OpportunityLineItem` by the `OpportunityLineItemSchedule` `Revenue` amount. Inserting an `OpportunityLineItemSchedule` of `Type` `Quantity` or `Both` increments the `Quantity` field on the `OpportunityLineItem` by the `OpportunityLineItemSchedule` `Quantity` amount.
- Creating an OpportunityLineItemSchedule record affects the original opportunity:
  1. The Opportunity `Amount` is incremented the by `OpportunityLineItemSchedule` revenue amount
  2. The Opportunity `ExpectedRevenue` is incremented by the line item schedule amount multiplied by the Opportunity `Probability`
- Deleting an `OpportunityLineItemSchedule` has a similar effect on the related `OpportunityLineItem`and Opportunity. Deleting an `OpportunityLineItemSchedule` decrements the `OpportunityLineItem` `TotalPrice` by the deleted `OpportunityLineItemSchedule` `Quantity` or `Revenue` amount. The Opportunity `Amount` is also decremented by the `OpportunityLineItemSchedule` `Quantity` or `Revenue` amount, and the Opportunity `ExpectedRevenue` is reduced by `OpportunityLineItemSchedule` `Quantity` or `Revenue` amount multiplied by the Opportunity `Probability`.

Deleting an Opportunity Line Item Schedule

Deleting the last remaining schedule will set the corresponding `HasQuantitySchedule` or `HasRevenueSchedule` flags (or both) to `false` on the parent line item.

SEE ALSO:

OpportunityLineItem

Product2

OpportunityLineItemSplit

Represents information about an opportunity product split, including percentages, amounts, and owner. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Before creating OpportunityLineItemSplit records, enable Team Selling, set up opportunity splits, and enable product splits on at least one opportunity split type in Setup.

Fields

Field	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. If the organization has multicurrency enabled, and a Pricebook2 is specified on the opportunity (that is, the Pricebook2Id field isn't blank on the opportunity referenced by this object's OpportunityId), then the value of this field must match the currency of the CurrencyIsoCode field on the PricebookEntry records that are associated with this object. Possible values are: • `BRL`—Brazilian Real • `CAD`—Canadian Dollar • `EUR`—Euro • `USD`—U.S. Dollar The default value is `USD`.
`OpportunityLineItemId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the associated parent OpportunityLineItem. This field is a relationship field. **Relationship Name** OpportunityLineItem **Relationship Type** Lookup **Refers To** OpportunityLineItem
`Split`	**Type** string

Field	Details
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Read-only. Automatically generated number identifying the split within the opportunity.
SplitAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** The amount or value of the split.
SplitNote	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Optional text about the split.
SplitOwnerId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the user who is the owner of the split. This field is a relationship field. **Relationship Name** SplitOwner **Relationship Type** Lookup **Refers To** User
SplitPercentage	**Type** percent **Properties** Create, Filter, Sort, Update **Description** The percentage of the OpportunityLineItem's value that the split represents.
SplitTypeId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Sort **Description** ID of the associated OpptyLineItemSplitType. This field is a relationship field. **Relationship Name** SplitType **Relationship Type** Lookup **Refers To** OpptyLineItemSplitType

Usage

Use the OpportunityLineItemSplit object to manage opportunity product splits for an opportunity.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OpportunityLineItemSplitHistory on page 47 (API version 59.0)
History is available for tracked fields of the object.

OpportunityOwnerSharingRule

Represents a rule for sharing an opportunity with users other than the owner.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The SharingRules Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`Description`	**Type** textarea

Field	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.
`DeveloperName`	**Type** string **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface. This field is available in API version 24.0 and later. Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
`GroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID representing the source group. Opportunities owned by users in the source group trigger the rule to give access.
`Name`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface.
`OpportunityAccessLevel`	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update **Description** A value that represents the type of sharing being allowed. The possible values are: • `Read` • `Edit`
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The ID representing the target user or group. The target user or group is being given access.

Usage

Use this object to manage the sharing rules for opportunities. General sharing and Territory-related sharing use this object.

Note: The original territory management feature is now unavailable. For more information, see The Original Territory Management Module Will Be Retired in the Summer '21 Release. The information in this topic applies to the original territory management feature only, and not to Enterprise Territory Management.

Metadata API Developer Guide: SharingRules

OpportunityPartner

This object represents a partner relationship between an Account and an Opportunity. An OpportunityPartner record is created automatically when a Partner record is created for a partner relationship between an account and an opportunity.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
`AccountToId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the partner Account in the partner relationship. This is a relationship field. **Relationship Name** AccountTo **Relationship Type** Lookup **Refers To** Account
`IsPrimary`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Indicates whether the account is the opportunity's primary partner (`true`) or not (`false`). Label is **Primary**.
`OpportunityId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the Opportunity that is in the partner relationship. This is a relationship field. **Relationship Name** Opportunity **Relationship Type** Lookup **Refers To** Opportunity
`ReversePartnerId`	**Type** reference

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** ID of the account in a partner relationship.
`Role`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort **Description** The UserRole that the Account has on the Opportunity. For example, `Reseller` or `Manufacturer`.

Creating an Account-Opportunity Partner Relationship

When you create a partner relationship between an account and an opportunity (when you create a Partner record and specify the `OpportunityId` field), the API automatically creates an OpportunityPartner record with the corresponding values:

- The value of the Partner field `AccountToId` maps to the value of the OpportunityPartner field `AccountToId`.
- The values of the `OpportunityId`, `Role`, and `IsPrimary` fields in both records are the same.
- If you set the `IsPrimary` value to 1 (`true`) upon insert of a new OpportunityPartner, the `IsPrimary` value is automatically set to 0 (`false`) for any existing primary partners for that opportunity.

This mapping allows the API to manage the records and their relationships efficiently.

Partner

AccountPartner

OpportunityRelatedDeleteLog

Represents an audit log of the deletion of opportunity-related child records, such as opportunity team members, product splits, or opportunity splits. This object is available in API version 59.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
CurrencyIsoCode	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Available only when the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization. When multicurrency is enabled, and a Pricebook2 is specified on the parent opportunity (that is, the `Pricebook2Id` field isn't blank on the opportunity record referenced by this object's `OpportunityId`), then the value must match the currency of the `CurrencyIsoCode` field on the PricebookEntry records that are associated with this object. Possible values are: • `AED`—UAE Dirham • `CAD`—Canadian Dollar • `INR`—Indian Rupee • `USD`—U.S. Dollar The default value is `USD`.
DataType	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Data type of the field that was deleted. Possible values are: • `Double` • `DynamicEnum` • `EntityId` • `StaticEnum` • `Text`
DeleteLog	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
`FieldName`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The name of the field that was deleted. Possible values are: • `OpportunityLineItemSplit.SplitOwnerId` • `OpportunityLineItemSplit.SplitPercentage` • `OpportunityLineItemSplit.SplitTypeId` • `OpportunitySplit.SplitOwnerId` • `OpportunitySplit.SplitPercentage` • `OpportunitySplit.SplitTypeId` • `OpportunityTeamMember.TeamMemberRole` • `OpportunityTeamMember.UserId` • `Product2.Name`
`OpportunityId`	**Type** reference **Properties** Filter, Group, Sort **Description** Required. ID of the associated opportunity. This field is a relationship field. **Relationship Name** Opportunity **Relationship Type** Lookup **Refers To** Opportunity
`Parent`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** ID of the record that was deleted. Records with the same Parent text indicate that the value shown in the Value field came from the same record that was previously deleted. Refer to the FieldName field to see which field is being tracked.

Field	Details
`SobjectType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The object that's being recorded for this row of data. Possible values are: • `OpportunityLineItemSplit` • `OpportunitySplit` • `OpportunityTeamMember`
`Value`	**Type** anyType **Properties** Nillable, Sort **Description** The value of the field that was deleted.

OpportunityShare

Represents a sharing entry on an Opportunity.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`describeSObjects()`, `create()`, `delete()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users with access to the Opportunity object can access this object.

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field	Details
IsDeleted	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.
OpportunityAccessLevel	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Level of access that the user or group has to the opportunity. The possible values are: • `Read` • `Edit` • `All`—This value is not valid when creating, updating, or deleting records. This field must be set to an access level that's higher than the org's default access level for opportunities.
OpportunityId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the opportunity associated with this sharing entry. This field can't be updated. This is a relationship field. **Relationship Name** Opportunity **Relationship Type** Lookup **Refers To** Opportunity
RowCause	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited. Valid values include: • `Owner`—The User is the owner of the opportunity. • `Manual`—The User or Group has access because a user with "All" access manually shared the opportunity with the user or group. • `Rule`—The User or Group has access via an opportunity sharing rule. • `GuestRule`—The User or Group has access via an opportunity guest user sharing rule. • `ImplicitChild`—The User or Group has access to the opportunity on the account associated with this opportunity. After faster account sharing recalculation is enabled, sharing entries with this value aren't returned in queries. Instead of storing implicit child shares, record access is determined dynamically. • `LpuImplicit`—The User has access to records owned by high-volume Experience Cloud site users via a share group. • `ARImplicit`—The User, who belongs to a partner or customer account, has access to the opportunity via an account relationship data sharing rule. • `Sales Team`—The User has access to the opportunity because the user is on the opportunity sales team for the opportunity. The OpportunityTeamMember object sets the access level. See OpportunityTeamMember for more information. • `Territory`—The forecast manager has access because they are assigned to a territory above the territory that is assigned the opportunity.
`UserOrGroupId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the user or group that has been given access to the opportunity. This field can't be updated. This is a polymorphic relationship field. **Relationship Name** UserOrGroup **Relationship Type** Lookup **Refers To** Group, User

Usage

This object allows you to determine which users and groups can view or edit opportunities owned by other users.

> Note: After faster account sharing recalculation is enabled for your org, we no longer store implicit share records between accounts and their child opportunity records. Sharing entries that have a value of `ImplicitChild` in the `RowCause` field aren't returned when you query this object. Instead, the system dynamically determines whether users can access child opportunity records when they try to access them. This change speeds up ownership and sharing recalculation for accounts.
>
> For more information, see the Faster Account Sharing Recalculation knowledge article.

If you attempt to create a record that matches an existing record, any modified fields are updated, the system returns the existing record.

If an opportunity is shared in multiple ways with a user, you don't always see multiple sharing records. If a user has access to an opportunity for one or more of the following RowCause values, the records in the OpportunityShare object are compressed into one record with the highest level of access.

- `Manual`
- `Owner`

SEE ALSO:

Overview of Salesforce Objects and Fields

OpportunitySplit

OpportunitySplit credits one or more opportunity team members with a portion of the opportunity amount. This object is available in API version 16.0 and later for pilot customers, and version 28.0 and later for others.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`HasOpportunityLineItemSplit`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Read-only. Indicates whether the opportunity split has a split on the opportunity line item level (`true`) or not (`false`). The default value is `false`. This field is available in API version 58.0 and later.

Field	Details
OpportunityId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the opportunity for which the split is being created. This field is a relationship field. **Relationship Name** Opportunity **Relationship Type** Lookup **Refers To** Opportunity
Split	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Read-only. Automatically generated number identifying the split within the opportunity.
SplitAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Monetary amount of the split. Label is `Split Amount`.
SplitNote	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Enter any notes or comments about the split. The character limit is 255. Label is `Split Note`.
SplitOwnerId	**Type** reference

Field	Details
	Properties Create, Filter, Group, Sort **Description** The opportunity owner. This field is a relationship field. **Relationship Name** SplitOwner **Relationship Type** Lookup **Refers To** User
`SplitPercentage`	**Type** percent **Properties** Create, Filter, Sort, Update **Description** Split percentage that this team member receives. If the split type is validated to a 100% total, this number can range from 0 to 100. If the total isn't validated, this number can range from 0 to 1,000. Label is `Split (%)`.
`SplitTypeId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Auto-generated, numeric ID for the split type defined by the OpportunitySplitType object. This field is available in API version 28 and later. If this field is blank, the system automatically specifies the default split type for the opportunity amount, which is validated to 100%. This field is a relationship field. **Relationship Name** SplitType **Relationship Type** Lookup **Refers To** OpportunitySplitType

Usage

Use the OpportunitySplit object to manage splits for an opportunity.

If you change the opportunity owner using the API, the old owner remains on the opportunity team with either Read-only access, or the level of access specified in your organization-wide defaults.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OpportunitySplitChangeEvent (API version 48.0)
Change events are available for the object.

OpportunitySplitHistory on page 47 (API version 59.0)
History is available for tracked fields of the object.

OpportunitySplitType

OpportunitySplitType provides unique labels and behavior for each split type. This object is available in API version 28.0 and later.

There are two default split types: revenue splits, which must total 100%, and overlay splits, which can total any percentage.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

Fields

Field Name	Details
`Description`	**Type** textarea **Properties** Create, Filter, Group, Sort, Update **Description** Describes the purpose of the split type, providing context to future developers.
`DeveloperName`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** Required. The unique name of the object in the API. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.

Field Name	Details
	Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.
`IsActive`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Enables or disables the split type.
`IsTotalValidated`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** If `true`, the split must total 100%. If `false`, the split can total any percentage.
`Language`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates language of split labels in the user interface.
`ManageableState`	**Type** ManageableState enumerated list **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates the manageable state of the specified component that is contained in a package: • `beta` • `deleted` • `deprecated` • `deprecatedEditable` • `installed` • `installedEditable` • `released` • `unmanaged`

Field Name	Details
	This field is available in API version 38.0 and later.
`MasterLabel`	**Type** string **Properties** Create, Filter, Group, Sort, Update **Description** The user-interface label for the split type.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. This field can't be accessed unless the logged-in user has the Customize Application permission.
`SplitEntity`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort **Description** The containing record type, such as an opportunity. Available in API version 30 and later.
`SplitField`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort

Field Name	Details
	Description Indicates which currency field of the opportunity object is split. Available in API version 30 and later.
SplitDataStatus	**Type** picklist **Properties** Filter, Group, Nillable,Restricted picklist, Sort,Update **Description** Indicates the status of the split type. Available in API version 30 and later.

OpportunityStage

Represents the stage of an Opportunity in the sales pipeline, such as New Lead, Negotiating, Pending, Closed, and so on.

Supported Calls

describeSObjects(), query(), retrieve()

Fields

Field	Details
ApiName	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Uniquely identifies a picklist value so it can be retrieved without using an id or master label.
DefaultProbability	**Type** percent **Properties** Filter, Nillable, Sort, **Description** The default percentage estimate of the confidence in closing a specific opportunity for this opportunity stage value. Label is **Probability (%)**.
Description	**Type** string

Field	Details
	Properties Filter, Group, Nillable, Sort **Description** Description of this opportunity stage value. Limit: 255 characters.
ForecastCategory	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The default forecast category for this opportunity stage value. The forecast category automatically determines how opportunities are tracked and totaled in a forecast. Possible values are: • BestCase • Closed • Forecast • MostLikely • Omitted • Pipeline
ForecastCategoryName	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Available in API version 12.0 and later. The default forecast category value for this opportunity stage value. Possible values are: • Best Case • Closed • Commit • Most Likely • Omitted • Pipeline
IsActive	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether this opportunity stage value is active (`true`) or not (`false`). Inactive opportunity stage values are not available in the picklist and are retained for historical purposes only.
`IsClosed`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether this opportunity stage value represents a closed opportunity (`true`) or not (`false`). Multiple opportunity stage values can represent a closed opportunity. Label is **Closed**.
`IsWon`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether this opportunity stage value represents a won opportunity (`true`) or not (`false`). Multiple opportunity stage values can represent a won opportunity. Label is **Won**.
`MasterLabel`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Master label for this opportunity stage value. This display value is the internal label that does not get translated. Limit: 255 characters.
`SortOrder`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Number used to sort this value in the opportunity stage picklist. These numbers are not guaranteed to be sequential, as some previous opportunity stage values might have been deleted.

Usage

This object represents a value in the opportunity stage picklist, which provides additional information about the stage of an Opportunity, such as its probability or forecast category. Query this object to retrieve the set of values in the opportunity stage picklist, and then use that information while processing Opportunity records to determine more information about a given opportunity. For example, the application could test whether a given opportunity is won or not based on its `StageName` value and the value of the `IsWon` property in the associated OpportunityStage object.

This object is read-only via the API.

SEE ALSO:

Overview of Salesforce Objects and Fields

OpportunityTag

Associates a word or short phrase with an Opportunity.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
`ItemId`	**Type** reference **Properties** Create, Filter **Description** ID of the tagged item.
`Name`	**Type** string **Properties** Create, Filter **Description** Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
`TagDefinitionId`	**Type** reference **Properties** Filter

Field Name	Details
	Description ID of the parent TagDefinition object that owns the tag.
`Type`	**Type** picklist **Properties** Create, Filter, Restricted picklist **Description** Defines the visibility of a tag. Valid values: • `Public`—The tag can be viewed and manipulated by all users in an organization. • `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`.

Usage

OpportunityTag stores the relationship between its parent TagDefinition and the Opportunity being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

OpportunityTeamMember

Represents a User on the opportunity team of an Opportunity.

See also UserTeamMember, which represents a User who is on the default Opportunity team of another user.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
`CurrencyIsoCode`	**Type** picklist **Properties** Filter, Restricted picklist

Field	Details
	Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the org.
`IsDeleted`	**Type** boolean **Properties** Defaulted on create, Filter **Description** Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. Note: An OpportunityTeamMember that is deleted isn't moved to the Recycle Bin and can't be undeleted, unless the record was cascade-deleted when deleting a related Opportunity. For directly deleted OpportunityTeamMember records, don't use the `isDeleted` field to detect deleted records in SOQL queries. Instead, use `getDeleted()`.
`Name`	**Type** string **Properties** Filter, Nillable, Sort **Description** The team member name. This read-only field is available in API version 30.0 and later.
`OpportunityAccessLevel`	**Type** picklist **Properties** Filter, Nillable, Restricted picklist **Description** Opportunity access level for this team member. Valid values: • `Read` • `Edit` • `All` This field is supported in triggers, but not in workflows or validation rules. It's editable in API version 36.0 and later.
`OpportunityId`	**Type** reference **Properties** Create, Filter

Field	Details
	Description Required. ID of the Opportunity associated with this opportunity team. This field can't be updated.
`PhotoURL`	**Type** URL **Properties** Filter, Nillable, Sort, Group **Description** Read only. Retrieves the users Chatter photo URL. This field is available in API version 32.0 and later.
`TeamMemberRole`	**Type** picklist **Properties** Create, Filter, Nillable, Update **Description** Role that the team member has on the opportunity. The org's admin sets the valid values in the Opportunity Team Roles picklist. Label is **Team Role**.
`Title`	**Type** string **Properties** Filter, Nillable, Sort, Group **Description** Read only. Retrieves the user's title. This field is available in API version 36.0 and later.
`UserId`	**Type** reference **Properties** Create, Filter **Description** Required. ID of the User who is a member of the opportunity team. This field can't be updated.

Usage

If you create a record for this object and it matches an existing record, the system updates any modified fields and returns the existing record.

In the user interface, users can set up an opportunity team for the opportunities they own. The opportunity team includes other users that are working on the opportunity with them. This object is available only in organizations that have enabled team selling.

Note: The behavior for changing ownership of opportunities is different using the user interface when the previous owner is on an opportunity team. For example, when you change the owner of an opportunity using the API, the previous owner's access becomes Read Only or the access specified in your organization-wide default for opportunities, whichever is greater. However, performing this same action in the user interface allows you to select the access level for the previous owner when the previous owner is on an opportunity team.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OpportunityTeamMemberHistory on page 47 (API version 59.0)
History is available for tracked fields of the object.

SEE ALSO:

UserTeamMember

OpptyLineItemSplitType

Represents an opportunity product split type. This object is available in API version 58.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
Description	**Type** textarea **Properties** Filter, Group, Sort **Description** Text description of the opportunity line item split type. Limit: 80 characters.
DeveloperName	**Type** string **Properties** Filter, Group, Sort **Description** The developer (API) name of the opportunity line item split type.

Field	Details
`IsActive`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the opportunity line item split type is active (`true`) or not (`false`). The value of this field is inherited from the `IsActive` field of the parent OpportunitySplitType record.
`IsTotalValidated`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the OpportunityLineItemSplit records associated with the OpportunityLineItem must have SplitPercent values that aggregate to 100% (`true`) or not (`false`). The value of this field is inherited from the `IsTotalValidated` field of the parent OpportunitySplitType record.
`Language`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** The language of the opportunity line item split type.
`MasterLabel`	**Type** string **Properties** Filter, Group, Sort **Description** The opportunity line item split type label.
`NamespacePrefix`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The namespace prefix that is associated with this object.
`OpportunitySplitTypeId`	**Type** reference

Field	Details
	Properties Filter, Group, Sort **Description** The ID of the parent OpportunitySplitType. Every OpptyLineItemSplitType must have a parent OpportunitySplitType. This field is a relationship field. **Relationship Name** OpportunitySplitType **Relationship Type** Lookup **Refers To** OpportunitySplitType
`SplitDataStatus`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The state of the asynchronous job to delete OpportunityLineItemSplit records when the associated OpptyLineItemSplitType record is deleted. Possible values are: • `DeletionFailed`—The job failed the last time it ran. • `Ready`—The job hasn't run or isn't running. OpportunityLineItemSplit records associated with the OpptyLineItemSplitType can be interacted with. • `ToBeDeleted`—The job is running.
`SplitEntity`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Name or ID of the entity that contains the field being split. In API version 58.0, this value is always OpportunityLineItem.
`SplitField`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Name or ID of the field on OpportunityLineItem that is being split. If it's a standard field, then the value is the API name of the field. If it’s a custom field, the value is the custom field definition ID.

Usage

When an OpportunitySplitType has product splits enabled in Setup, then an OpptyLineItemSplitType record is created. For example, if there is an OpportunitySplitType record with a SplitField of `Amount` and product splits is enabled in Setup, then there is an OpptyLineItemSplitType record with a SplitField of `TotalPrice` (since the TotalPrice field rolls up to Amount).

Order

Represents an order associated with a contract or an account.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
`AccountId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Required. ID of the Account associated with this order. Can only be updated when the order's `StatusCode` value is *`Draft`*. This is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
`ActivatedById`	**Type** reference **Properties** Filter, Group, Nillable, Sort, Update **Description** ID of the User who activated this order. This is a relationship field. **Relationship Name** ActivatedBy

Field Name	Details
	Relationship Type Lookup **Refers To** User
ActivatedDate	**Type** dateTime **Properties** Filter, Nillable, Sort, Update **Description** Date and time when the order was activated.
BillingAddress	**Type** address **Properties** Filter, Nillable **Description**
BillingCity	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** City for the billing address for this order. Maximum size is 40 characters.
BillingCountry	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Country for the billing address for this order. Maximum size is 80 characters.
BillingCountryCode	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ISO country code for the billing address for this order.
BillingEmailAddress	**Type** email

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Email address for this order's billing address. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v48.0 and later.
`BillingGeocodeAccuracy`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Accuracy level of the geocode of the address.
`BillingLatitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `BillingLongitude` to specify the precise geolocation of a billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
`BillingLongitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `BillingLatitude` to specify the precise geolocation of a billing address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.
`BillingPhoneNumber`	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Phone number for this order's billing address. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License.

Field Name	Details
	This field is available in API v48.0 and later.
BillingPostalCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Postal code for the billing address for this order. Maximum size is 20 characters.
BillingState	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** State for the billing address for this order. Maximum size is 80 characters.
BillingStateCode	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ISO state code for the order's billing address.
BillingStreet	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Street address for the billing address.
BillToContactId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the contact that the order is billed to.
CompanyAuthorizedById	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description ID of the user who authorized the account associated with the order. This is a relationship field. **Relationship Name** CompanyAuthorizedBy **Relationship Type** Lookup **Refers To** User
`CompanyAuthorizedDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The date on which your organization authorized the order.
`ContractId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the contract associated with this order. Can only be updated when the order's `StatusCode` value is *`Draft`*. This is a relationship field. **Relationship Name** Contract **Relationship Type** Lookup **Refers To** Contract
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update **Description** Three-letter ISO 4217 currency code.
`CustomerAuthorizedById`	**Type** reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** ID of the contact who authorized the order. This is a relationship field. **Relationship Name** CustomerAuthorizedBy **Relationship Type** Lookup **Refers To** Contact
CustomerAuthorizedDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Date on which the contact authorized the order.
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the order.
EffectiveDate	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** Date at which the order becomes effective. Label is **Order Start Date**.
EndDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Date at which the order ends. Label is **Order End Date**.

Field Name	Details
GrandTotalAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Sum of TotalAmount and TotalTaxAmount. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v48.0 and later.
IsReductionOrder	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort **Description** Read-only. Determines whether an order is a reduction order. Label is **Reduction Order**.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp when the current user last viewed this record or list view. If this value is null, it’s possible that the user only accessed this record or list view (LastReferencedDate), but not viewed it.
Name	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Name for this order.

Field Name	Details
OpportunityId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID for the opportunity that's associated with this order.
OrderedDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** The date and time that the order was placed. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v48.0 and later.
OrderManagementReferenceIdentifier	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** This field is used by Order Management to store the external reference Identifier for B2C Commerce orders. On creation, the B2C Integration sets this value to `B2C realm ID` + "_" + `B2C instance ID` + "@" + `B2C Commerce catalog/domain ID` + "@" + `B2C Commerce order number`. Otherwise, it isn't set. When you create an OrderSummary, if you don't specify an ExternalReferenceIdentifier value, it's set to this value. If this value is null, then the system generates a value for ExternalReferenceIdentifier. This value isn't required to be unique in an organization, but the OrderSummary ExternalReferenceIdentifier is. This field is available in API version 56.0 and later.
OrderNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Order number assigned to this order (not the unique, system-generated ID assigned during creation). Maximum size is 30 characters.

Field Name	Details
OrderReferenceNumber	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Order reference number assigned to this order. Maximum size is 80 characters.
OriginalOrderId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort **Description** Optional. ID of the original order that a reduction order is reducing, if the reduction order is reducing a single order. Label is **Original Order**. Editable only if `isReductionOrder` is *true*. If the reduction order is reducing more than one order, leave blank. This is a relationship field. **Relationship Name** OriginalOrder **Relationship Type** Lookup **Refers To** Order
OwnerId	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Required. ID of the User or queue that owns this order. This is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
PaymentTermId	**Type** reference

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Sort **Description** The ID of the related payment term. This field is available in API version 55.0 and later. This field is available if Subscription Management is enabled in your org. This is a relationship field. **Relationship Name** PaymentTerm **Relationship Type** Lookup **Refers To** PaymentTerm
`PoDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Date of the purchase order.
`PoNumber`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Number identifying the purchase order. Maximum is 80.
`Pricebook2Id`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Required. ID of the price book associated with this order. This is a relationship field. **Relationship Name** Pricebook2 **Relationship Type** Lookup **Refers To** Pricebook2

Field Name	Details
QuoteId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the quote that's associated with this order. If you set QuoteId to null, QuoteLineItemId on all of the order's child order products is set to null.
RecordTypeId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the record type assigned to this order.
RelatedOrderId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The original order that a change order was created from. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v48.0 and later. This field is a relationship field. **Relationship Name** RelatedOrder **Relationship Type** Lookup **Refers To** Order
SalesChannelId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Reference to a sales channel entity. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License.

Field Name	Details
	This field is available in API v48.0 and later.
SalesStoreId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the RetailStore or WebStore associated with this Order. This field is a polymorphic relationship field. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v46.0 and later. **Relationship Name** SalesStore **Relationship Type** Lookup **Refers To** WebStore
ShippingAddress	**Type** address **Properties** Filter, Nillable **Description** Shipping address for the order.
ShippingCity	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** City of the shipping address. Maximum size is 40 characters.
ShippingCountry	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Country of the shipping address. Maximum size is 80 characters.

Field Name	Details
ShippingCountryCode	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ISO country code for the order's shipping address.
ShippingGeocodeAccuracy	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Accuracy level of the geocode of the shipping address.
ShippingLatitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `ShippingLongitude` to specify the precise geolocation of a shipping address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
ShippingLongitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with `ShippingLatitude` to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.
ShippingPostalCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Postal code of the shipping address. Maximum size is 20 characters.
ShippingState	**Type** string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** State of the shipping address. Maximum size is 80 characters.
`ShippingStateCode`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ISO state code for the order's shipping address.
`ShippingStreet`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Street address of the shipping address. Maximum of 255 characters.
`ShipToContactId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** ID of the contact that the order is shipped to.
`Status`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Picklist of values that indicate order status. Each value is within one of two status categories defined in `StatusCode`. For example, the status picklist might contain *`Draft`*, *`Ready for Review`*, and *`Ready for Activation`* values with a `StatusCode` of *`Draft`*.
`StatusCode`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort, Update

Field Name	Details
	Description The status category for the order. An order can be either *Draft* or *Activated*. Label is **Status Category**.
TaxLocaleType	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The type of tax calculation that Salesforce uses for the order's order items. VAT regions use gross tax, which includes tax in all sale amounts. US regions use net tax, which calculates tax separately from the initial sale amount and then adds the sale and tax amounts together in a total. Use TaxLocaleType to determine which types of tax fields to show on your order. If TaxLocaleType is null, the order shows all tax fields. **Gross Tax Fields** TotalAdjDeliveryAmtWithTax TotalAdjProductAmtWithTax TotalProductAdjDistAmtWithTax TotalDeliveryAdjDistAmtWithTax To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v49.0 and later.
TotalAdjDeliveryAmtWithTax	**Type** currency **Properties** Filter, Nillable, Sort **Description** Sum of delivery line amounts, delivery line adjustments, and tax. Order products with null Type fields aren't included. This is a gross tax field. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v49.0 and later.
TotalAdjProductAmtWithTax	**Type** currency **Properties** Filter, Nillable, Sort

Field Name	Details
	Description Sum of product line amounts, line adjustments, and tax. Order products with null Type fields aren't included. This is a gross tax field. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v49.0 and later.
`TotalAdjustedDeliveryAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Sum of delivery line amounts and delivery line adjustments. Order products with null Type fields aren't included. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v48.0 and later.
`TotalAdjustedDeliveryTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Sum of delivery line tax amounts and delivery line tax adjustments. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v48.0 and later.
`TotalAdjustedProductAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Sum of product line amounts and line adjustments. Order products with null Type fields aren't included. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v48.0 and later.

Field Name	Details
TotalAdjustedProductTaxAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Sum of line tax amounts and line tax adjustments. Order products with null Type fields aren’t included. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v48.0 and later.
TotalAmount	**Type** currency **Properties** Filter, Sort **Description** The net total amount for the order products associated with this order. This field is available in API v48.0 and later.
TotalDeliveryAdjDistAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Roll-up of the order’s delivery adjustment distributed amounts. Used only when the Order Adjustment Group has a Type value of Header. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v48.0 and later.
TotalDeliveryAdjDistAmtWithTax	**Type** currency **Properties** Filter, Nillable, Sort **Description** Roll-up of the order’s delivery adjustment distributed amounts and tax. Used only when the Order Adjustment Group has a Type value of Header. This is a gross tax field. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v49.0 and later.

Field Name	Details
`TotalDeliveryAdjDistTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Roll-up of the order's delivery adjustment distributed tax amounts. Used only when the Order Adjustment Group has a Type value of Header. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v48.0 and later.
`TotalProductAdjDistAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Roll-up of the order's product adjustment distributed amounts. Order products with null Type fields aren't included. Used only when the Order Adjustment Group has a Type value of Header. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v48.0 and later.
`TotalProductAdjDistAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Roll-up of the order's product adjustment distributed amounts. Order products with null Type fields aren't included. Used only when the Order Adjustment Group has a Type value of Header. This is a gross tax field. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v49.0 and later.
`TotalProductAdjDistTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort

Field Name	Details
	Description Roll-up of the order's product adjustment distributed tax amounts. Order products with null Type fields aren't included. Used only when the Order Adjustment Group has a Type value of Header. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v48.0 and later.
`TotalTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Roll up of all tax on the order. Includes delivery taxes, price adjustment taxes, and product taxes. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License. This field is available in API v48.0 and later.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** If you want to show more information about your order, you can add custom values to the `Type` picklist. By default, the `Type` field doesn't perform any actions or show any values.

Usage

The `Status` field specifies the current state of an order. Status strings represent its current state (*`Draft`* or *`Activated`*).

When a client application creates an order, the `Status Code` must be *`Draft`* and the `Status` must be any value that corresponds to a `Status Code` of *`Draft`*. The application can then activate an order by updating it and setting the value in its `Status` field to an *`Activated`* state; however, the `Status` field is the only field you can update when activating the order.

After an order is activated, your client application can change the `Status` back to the *`Draft`* state—but only if the order doesn't have any child reduction order products. Your client application can delete orders when the `Status` is *`Draft`* but not when its `Status` is *`Activated`*.

Client applications can use the API to create, update, delete, and query any Attachment associated with an order.

Orders Without Price Books

If your organization manages products and Price books in an external platform, you can use Salesforce API to create orders and order items without values for their Price book and Price book entry fields. This feature is available only for Salesforce orgs with the B2B Commerce, B2B Commerce Starter, B2B Commerce Growth, or B2B Commerce Plus packages. Admins enable orders without Price books by going to Salesforce Order Settings and selecting the Optional Price Book setting.

In a standard order, Salesforce prompts the sales rep to select a Price book when they add the first order product to the order. The sales rep can then add order products that have price book entries in the selected price book. In an order without a Price book, Salesforce hides the order's Add Products button and Edit Products button so that sales reps must manage their products and price books using their external system.

You can create orders without Price books only by creating an order with Salesforce API and leaving the `Pricebook2Id` field null. Orders without Price books follow several different guidelines compared to standard orders.

- Orders without price books don't support reduction orders or change orders.
- Order products without price book entries require list prices.
- Orders without price books support only order items without price book entries. Orders with price books support only order items with price book entries.
- Important: Orders without Price books are supported with B2B licenses only. Salesforce Order Management requires price books for orders and price book entries for order products.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OrderChangeEvent (API version 44.0)
Change events are available for the object.

OrderFeed (API version 29.0)
Feed tracking is available for the object.

OrderHistory
History is available for tracked fields of the object.

OrderOwnerSharingRule
Sharing rules are available for the object.

SEE ALSO:

OrderHistory

OrderItem

OrderSummary

SalesChannel

OrderAction

Indicates the type of order, such as a new sale or a cancellation. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is available if Subscription Management is enabled in your org.

Fields

Field	Details
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name given to the order action.
`OffsetOrderItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the previous order item that is being modified by the business action. For example, the order that is being canceled. This is a relationship field. **Relationship Name** OffsetOrderItem **Relationship Type** Lookup **Refers To** OrderItem
`OrderId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The order containing the order item that implements the business action. This is a relationship field.

Field	Details
	Relationship Name Order **Relationship Type** Lookup **Refers To** Order
`SourceAssetId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The asset that is changed as a result of the business action. For example, the asset that is being canceled. This is a relationship field. **Relationship Name** SourceAsset **Relationship Type** Lookup **Refers To** Asset
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** The business action that created the order product. Possible values are: • `Cancellation` • `New Sale` • `No Change`—A child product was added to the bundle, but the top-level product in the bundle was otherwise unchanged. • `Quantity Amendment` • `Renewal`

OrderAdjustmentGroup

Group containing a set of adjustments applied to an order. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

Fields

Field	Details
`AdjustmentBasisReferenceId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** References the specific coupon applied. This is a polymorphic relationship field. **Relationship Name** AdjustmentBasisReference **Relationship Type** Lookup **Refers To** Coupon This field is available in API version 54.0 and later. This field can only refer to Coupon when B2B Commerce is enabled.
`AdjustmentCauseId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** References the specific promotions applied. This field is a polymorphic relationship field. **Relationship Name** AdjustmentCause **Relationship Type** Lookup **Refers To** PriceAdjustmentTier, Promotion

Field	Details
	This field is available in API version 52.0 and later. This field can only refer to Promotion when B2B Commerce is enabled.
`AdjustmentSource`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the origin of the adjustment. Possible values are: • `Discretionary`—The adjustment originates from a decision made by an individual, for example, a manager's discount granted to a client. • `Promotion`—The adjustment originates from a promotion, for example, a holiday sale discount. • `Rule`—Reserved for future use. • `System`—The adjustment originates from the system, for example, a volume discount after the amount of items reaches a specific number. This field is available in API version 57.0 and later.
`AdjustmentType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the type of mathematical adjustment to be applied to the order. Possible values are: • `AdjustmentAmount`—The adjustment is a numerical amount, for example, a cash discount of 20. • `AdjustmentPercentage`—The adjustment is a percentage amount, for example, a 10% discount. • `OverrideAmount`—The adjustment is a manual price override. This field is available in API version 57.0 and later.
`AdjustmentValue`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The specified `AdjustmentType`'s amount to be applied to the order.

Field	Details
	For example, when the `AdjustmentType` value is `AdjustmentAmount`, the `AdjustmentValue` is expected to equal the value of the `TotalAmount` field. When the `AdjustmentType` value is `AdjustmentPercentage`, the `AdjustmentValue` represents the percentage number, and the `TotalAmount` field's value will show the calculated adjustment amount. This field is available in API version 57.0 and later.
`CurrencyIsoCode`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** The currency used for the checkout session. Default value is `USD`. Possible values are: • `USD`—U.S. Dollar
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** User-entered information about the order adjustment group.
`GrandTotalAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of all total amounts of all adjustments in this group, including tax.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** The user-defined name of the order adjustment group.
`OrderId`	**Type** reference **Properties** Create, Filter, Group, Sort

Field	Details
	Description The unique identifier of the order related to the adjustments in this order adjustment group. This field is a relationship field. **Relationship Name** Order **Relationship Type** Lookup **Refers To** Order
`Priority`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** A numeric value that represents the order of precedence of the order adjustment group. It can also represent the order of precedence when applying the `AdjustmentType` values. For example, an order can have two adjustments: a $100 discount and a 10% discount. This field will tell the pricing engine which adjustment needs to be applied first. This field is available in API version 57.0 and later.
`RelatedAdjustmentGroupId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The unique identifier of the original order's adjustment group. This field is a useful reference in change order scenarios. This field is a relationship field. **Relationship Name** RelatedAdjustmentGroup **Relationship Type** Lookup **Refers To** OrderAdjustmentGroup
`TotalAmount`	**Type** currency **Properties** Filter, Nillable, Sort

Field	Details
	Description The total of all order adjustments in this order adjustment group, excluding tax.
`TotalTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The total tax for all order adjustments in this order adjustment group.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Indicates how the adjustment was applied to the order. Possible values are: • `Header:` — The adjustment was applied to the order's balance, and then distributed among the order products in the adjustment group. • `SplitLine`— The adjustment was applied to order product balances for the order products in the adjustment group.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OrderAdjustmentGroupChangeEvent on page 52
Change events are available for the object.

OrderAdjustmentGroupFeed on page 39
Feed tracking is available for the object.

OrderAdjustmentGroupHistory on page 47
History is available for tracked fields of the object.

OrderAdjustmentGroupOwnerSharingRule on page 48
Sharing rules are available for the object.

OrderAdjustmentGroupShare on page 50
Sharing is available for the object.

OrderAdjustmentGroupSummary

Represents the current properties and state of a group of related price adjustments. Associated with a set of OrderItemAdjustmentLineSummaries that apply to OrderItemSummaries belonging to one OrderSummary. Corresponds to one or more order adjustment group objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

An OrderAdjustmentGroupSummary can represent an adjustment to an entire order as a group of adjustments to each of its products. For example, representing "10% off the order" as a set of 10% off adjustments to each product on the order. It can also represent an adjustment that applies to a subset of the products on an order. For example, representing "buy one, get one 50% off" as a 25% off adjustment to each of two products.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

Fields

Field	Details
`AdjustmentBasisReferenceId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** References the specific coupon applied. This is a polymorphic relationship field. **Relationship Name** AdjustmentBasisReference **Relationship Type** Lookup **Refers To** Coupon This field is available in API version 54.0 and later.
`AdjustmentCauseId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description References the specific promotions applied. This is a polymorphic relationship field. **Relationship Name** AdjustmentCause **Relationship Type** Lookup **Refers To** Promotion This field is available in API version 52.0 and later.
CurrencyIsoCode	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** ISO code for the currency of the OrderSummary associated with the adjustments in the group. The default value is USD. Possible values are: • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar This field is available in API version 49.0 and later.
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the OrderAdjustmentGroupSummary. This field can be edited.
GrandTotalAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total, including tax, of the associated OrderItemAdjustmentLineSummaries.

Field	Details
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the OrderAdjustmentGroupSummary.
`OrderSummaryId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the OrderSummary associated with the OrderAdjustmentGroupSummary.
`OriginalOrderAdjGroupId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the original OrderAdjustmentGroup associated with this summary object. Nillable=true only if the associated order summary is unmanaged. For managed order summaries, nillable=false.
`TotalAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total, not including tax, of the associated OrderItemAdjustmentlineSummaries.
`TotalTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalAmount.
`Type`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort

Field	Details
	Description Type of the OrderAdjustmentGroupSummary. Header represents an order-level adjustment with an OrderItemAdjustmentLineSummary for each OrderItemSummary on the OrderSummary. SplitLine represents any other related set of OrderItemAdjustmentLineSummaries. Possible values are: • `Header` • `SplitLine` If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.

OrderItemAdjustmentLineSummary

OrderDeliveryGroup

A group of order items that share a delivery method and address. The delivery method and address are used during the fulfillment process, such as shipping as a gift, downloading, picking up in store, or shipping to a standard address This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

Fields

Field	Details
`DeliverToAddress`	**Type** address **Properties** Filter, Nillable

Field	Details
	Description The delivery group's order items are delivered to this address. Created based on the values of the other `DeliverTo` fields.
`DeliverToCity`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** City address value. Sent to `DeliverToAddress`.
`DeliverToCompanyName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description**
`DeliverToCountry`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Country address value. Sent to `DeliverToAddress`
`DeliverToFullFirstName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description**
`DeliverToFullLastName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description**
`DeliverToFullName`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description**

Field	Details
DeliverToFullSalutation	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Possible values are: • Dr. • Mr. • Mrs. • Ms. • Prof.
DeliverToGeocodeAccuracy	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Geocode accuracy address value. Sent to DeliverToAddress.
DeliverToLatitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Latitude address value. Sent to DeliverToAddress.
DeliverToLongitude	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Longitude address value. Sent to DeliverToAddress.
DeliverToName	**Type** string **Properties** Create, Filter, Nillable, Group, Sort, Update **Description** Name of the delivery recipient. Sent to DeliverToAddress.

Field	Details
DeliverToPostalCode	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Postal Code address value. Sent to `DeliverToAddress`.
DeliverToState	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** State address value. Sent to `DeliverToAddress`.
DeliverToStreet	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Street address value. Sent to `DeliverToAddress`.
DeliveryInstructions	**Type** textarea **Properties** Create, Nillable, Update **Description** Text field for users to add other delivery instructions.
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** User-defined description for this delivery group.
DesiredDeliveryDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The buyer’s target delivery date for the order items included in the delivery group.

Field	Details
EmailAddress	**Type** email **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The buyer's email address.
GiftMessage	**Type** textarea **Properties** Create, Nillable, Update **Description** An optional gift message that the buyer can define if they're sending the order items as a gift to another recipient. Applies to all order items in the delivery group.
GrandTotalAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of the group's total delivery amount and total tax amount.
IsGift	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** All items in the delivery group are gifts.
OrderDeliveryGroupNumber	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Unique number used for referencing this order delivery group.
OrderDeliveryMethodId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description ID of the order delivery method related to this order delivery group.
OrderId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the parent order for this order delivery group. An order can have multiple order delivery groups.
PhoneNumber	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Phone number of the buyer.
PromisedDeliveryDate	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Merchant-defined date that the items in this group will be delivered to the customer. Usually defined based on an estimated date from the shipping provider.
RelatedDeliveryGroupId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The original delivery group. Used for reference in change order scenarios.
TotalAdjustmentAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of all adjustments made to order items in the order delivery group.
TotalAdjustmentAmtWithTax	**Type** currency

Field	Details
	Properties Filter, Nillable, Sort **Description** The sum of all adjustments made to order items in the order delivery group, including tax. This is a gross tax field. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v49.0 and later.
`TotalAdjustmentTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of all adjustments made to tax lines for order items in the order delivery group.
`TotalAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of all Total Amount fields on order items within this delivery group. On an order item, the total amount equals the quantity multiplied by the unit price, including adjustments and tax.
`TotalLineAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of order items of the delivery type. On an order item, the total line amount equals the quantity multiplied by the unit price, before adjustments or tax.
`TotalLineAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of all `TotalLineAmtWithTax` fields on order items within this delivery group. On an order item, the total line amount with tax equals the quantity multiplied by the unit price, plus tax, before adjustments.

Field	Details
	This is a gross tax field. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v49.0 and later.
`TotalLineTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of all Total Line Tax Amount fields on order items within this delivery group. On an order item, the total line tax amount equals the total tax for that line.
`TotalTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The sum of all Total Tax Amount fields on order items within this order delivery group.

OrderDeliveryGroupSummary

Represents the current properties and state of a group of OrderItemSummaries, belonging to one OrderSummary, to be fulfilled using the same delivery method and delivered to the same address. A single shipment can include them all, but that isn't guaranteed. Corresponds to one or more order delivery group objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

Fields

Field	Details
CurrencyIsoCode	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** ISO code for the currency of the OrderSummary associated with the OrderDeliveryGroupSummary. The default value is USD. Possible values are: • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar This field is available in API version 49.0 and later.
DeliverToAddress	**Type** address **Properties** Filter, Nillable **Description** Address of the recipient. Users with the Edit Delivery Information user permission can modify this field. If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
DeliverToCity	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Recipient address city.
DeliverToCompanyName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description**

Field	Details
DeliverToCountry	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Recipient address country.
DeliverToFullFirstName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description**
DeliverToFullLastName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description**
DeliverToFullName	**Type** string **Properties** Filter, Group, Nillable, Sort **Description**
DeliverToFullSalutation	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Possible values are: • Dr. • Mr. • Mrs. • Ms. • Prof.
DeliverTo GeocodeAccuracy	**Type** picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Accuracy of the geocode for the recipient address. Possible values are: • `Address` • `Block` • `City` • `County` • `ExtendedZip` • `NearAddress` • `Neighborhood` • `State` • `Street` • `Unknown` • `Zip`
`DeliverToLatitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with FulfilledToLongitude to specify the precise geolocation of the recipient address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
`DeliverToLongitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with FulfilledToLatitude to specify the precise geolocation of the recipient address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
`DeliverToName`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Name on the recipient address. Users with the Edit Delivery Information user permission can modify this field.

Field	Details
	If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`DeliverToPostalCode`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Recipient address postal code.
`DeliverToState`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Recipient address state.
`DeliverToStreet`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Recipient address street.
`DeliveryInstructions`	**Type** textarea **Properties** Create, Nillable, Update **Description** Special instructions for the delivery. Users with the Edit Delivery Information user permission can modify this field. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the OrderDeliveryGroupSummary.

Field	Details
	This field can be edited.
`DesiredDeliveryDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Desired date for delivery. This field is informational, available for customizations. Users with the Edit Delivery Information user permission can modify this field. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`EmailAddress`	**Type** email **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Email address of the recipient. Users with the Edit Delivery Information user permission can modify this field. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`GiftMessage`	**Type** textarea **Properties** Create, Nillable, Update **Description** Gift message to include. Users with the Edit Delivery Information user permission can modify this field. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`GrandTotalAmount`	**Type** currency **Properties** Filter, Nillable, Sort

Field	Details
	Description Total, including adjustments and tax, of the delivery charges associated with the OrderDeliveryGroupSummary. This value only includes OrderItemSummaries of type code Charge.
`IsGift`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the OrderDeliveryGroupSummary represents a gift. Users with the Edit Delivery Information user permission can modify this field. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`OrderDeliveryGroupSummaryNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** ID of the OrderDeliveryGroupSummary.
`OrderDeliveryMethodId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the order delivery method specified for the OrderDeliveryGroupSummary. Users with the Edit Delivery Information user permission can modify this field. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`OrderSummaryId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the OrderSummary associated with the OrderDeliveryGroupSummary.

Field	Details
OriginalOrderDeliveryGroupId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the original order delivery group associated with this summary object. Nillable=true only if the associated order summary is unmanaged. For managed order summaries, nillable=false.
PhoneNumber	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Phone number of the recipient. Users with the Edit Delivery Information user permission can modify this field. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
PromisedDeliveryDate	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Promised date for delivery. This field is informational, available for customizations. Users with the Edit Delivery Information user permission can modify this field. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
TotalAdjustmentAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total price adjustments applied to delivery charges associated with the OrderDeliveryGroupSummary. This value only includes adjustments to OrderItemSummaries of type code Charge.
TotalAdjustmentAmtWithTax	**Type** currency

Field	Details
	Properties Filter, Nillable, Sort **Description** Total amount of the price adjustments applied to the delivery charges associated with the OrderDeliveryGroupSummary, inclusive of tax. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount. This field is available in API version 49.0 and later.
`TotalAdjustmentTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalAdjustmentAmount.
`TotalAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total, including adjustments but not tax, of the delivery charges associated with the OrderDeliveryGroupSummary. This value only includes adjustments to OrderItemSummaries of type code Charge.
`TotalLineAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total, not including adjustments or tax, of the delivery charges associated with the OrderDeliveryGroupSummary.
`TotalLineAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of the delivery charges associated with the OrderDeliveryGroupSummary, inclusive of tax. This amount is equal to TotalLineAmount + TotalLineTaxAmount. This field is available in API version 49.0 and later.

Field	Details
`TotalLineTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalLineAmount.
`TotalTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalAmount.

SEE ALSO:

OrderDeliveryGroup

OrderItemSummary

OrderDeliveryMethod

Shows the customizations and options that a buyer selected for their delivery method. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

Fields

Field	Details
`Carrier`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The carrier that the buyer chose for their delivery method. Developers must add values to this field.
ClassOfService	**Type** picklist **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The carrier class of service that the buyer chose for their delivery method. Developers must add values to this field.
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the delivery method.
IsActive	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Assign new delivery groups to active delivery methods.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.

Field	Details
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Required. Default name of this record.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The user who owns an order delivery method record.
`ProductId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Optional. This product represents a delivery charge order product for a delivery using this delivery method. For example, you could create a product that represents an overnight express charge and assign it to an overnight express delivery method.
`ReferenceNumber`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Reference number for an external delivery method.

OrderHistory

Represents historical information about changes that have been made to the standard fields of the associated order, or to any custom fields with history tracking enabled.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

Fields

Field Name	Details
`DataType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Data type of the field that was changed.
`Field`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Name of the order field that was modified, or a special value to indicate some other modification to the order.
`NewValue`	**Type** anyType **Properties** Nillable, Sort **Description** New value of the modified order field. Maximum of 255 characters.
`OldValue`	**Type** anyType **Properties** Nillable, Sort **Description** Previous value of the modified order field. Maximum of 255 characters.
`OrderId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the order associated with this record. This is a relationship field. **Relationship Name** Order

Field Name	Details
	Relationship Type Lookup **Refers To** Order

Usage

Order history entries are automatically created each time an order is modified.

Two rows are added to this record when foreign key fields change. One row contains the foreign key object names that display in the online application. For example, `Jane Doe` is recorded as the name of a Contact. The other row contains the actual foreign key ID that is only returned to and visible from the API.

This object respects field-level security on the parent object.

SEE ALSO:

Order

OrderItem

Represents an order product that your organization sells.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The user must have Edit permission on Order records to create or update order products on an order. The user must have Edit permission on Order records to delete an order product.

Fields

Field Name	Details
`AdjustedLineAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Line amount following line adjustments, excluding tax.

Field Name	Details
	To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.
AdjustedLineAmtWithTax	**Type** currency **Properties** Filter, Nillable, Sort **Description** Line amount following line adjustments, including tax. This field is a gross tax field. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v49.0 and later.
AvailableQuantity	**Type** double **Properties** Filter, Nillable, Sort **Description** Amount of an order product that is available to be reduced. Value must be greater than or equal to 0. An order product is reducible only if `AvailableQuantity` is greater than 0. Value is always 0 if the order product's parent order is a reduction order.
BillingFrequency2	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The time period that indicates how often the order item is billed. This field is available in API version 55.0 and later. This field is available with Subscription Management. Possible values are: • `Annual` • `Monthly`
CurrencyIsoCode	**Type** picklist

Field Name	Details
	Properties Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Available only for orgs with the multicurrency feature enabled. Contains the ISO code for the currency of the original Order associated with the OrderItem. Possible values are: • `DKK`—Danish Krone • `EUR`—Euro • `GBP`—British Pound • `USD`—U.S. Dollar The default value is `USD`. This field is available in API version 49.0 and later.
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Text description of this object. For Commerce stores, during checkout, this field is populated with the value of a product name. The product name is copied from the `CartItem.Name` field of a cart item that corresponds to the `OrderItem`.
`EndDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Optional. Last day the order product is available.
`GrossUnitPrice`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** Unit price including tax. This field is a VAT field that includes tax. Salesforce populates it on order creation only when `Order.TaxLocaleType` has a value of Gross.
`LineNumber`	**Type** int

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort **Description** Used to organize lines on the order. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.
`ListPrice`	**Type** currency **Properties** Create, Filter, Nillable, Sort **Description** List price for the order product. Value is inherited from the associated `PriceBookEntry` upon order product creation.
`ListPriceTotal`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** The `ListPrice` times the `Quantity`. This field is a calculated field. This field is available in API version 55.0 and later. This field is available with Subscription Management.
`NetUnitPrice`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** The unit price after all price adjustments are applied. This field is available in API version 55.0 and later. This field is available with Subscription Management.
`OrderActionId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The ID of the related order action. The order action indicates the type of order; for example, a new sale or a cancellation. This field is available in API version 55.0 and later. This field is available with Subscription Management. This field is a relationship field. **Relationship Name** OrderAction **Relationship Type** Lookup **Refers To** OrderAction
`OrderDeliveryGroupId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The delivery group for the order product. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later. This field is a relationship field. **Relationship Name** OrderDeliveryGroup **Relationship Type** Lookup **Refers To** OrderDeliveryGroup
`OrderId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** Required. ID of the order that this order product is a child of. This field is a relationship field. **Relationship Name** Order

Field Name	Details
	Relationship Type Lookup **Refers To** Order
`OrderItemNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** Automatically generated number that identifies the order product.
`OriginalOrderItemId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** Required if `isReductionOrder` on the parent order is *`true`*. ID of the original order product being reduced. This field is a relationship field. **Relationship Name** OriginalOrderItem **Relationship Type** Lookup **Refers To** OrderItem
`PeriodBoundary`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The period boundary helps determine the start and end date of the billing periods. This field is available in API version 55.0 and later. This field is available with Subscription Management. Possible values are: • `AlignToCalendar`—the period starts on the first day of the term unit; for example, the first day of the month. • `Anniversary`—The start date determines the boundary. For example, if a monthly subscription starts on September 13, the subscription starts on the 13th day of each month.

Field Name	Details
	• `DayOfPeriod`—the period starts on the day indicated by `PeriodBoundaryDay`. • `EndOfPeriod`—the period starts on the last day of the pricing term unit.
`PeriodBoundaryDay`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Required when `PeriodBoundary` is `DayOfPeriod`. Indicates day of the week or month that marks the period boundary. Must be an integer from 1 through 31. This field is available in API version 55.0 and later. This field is available with Subscription Management.
`PeriodBoundaryStartMonth`	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Nillable, Sort, Update **Description** Field is populated based on input in the StartDate, PeriodBoundary, and PeriodBoundaryDay when BillingFrequency2 is Annual or by manual user entry. Possible values are: • `1-January` • `2-February` • `3-March` • `4-April` • `5-May` • `6-June` • `7-July` • `8-August` • `9-September` • `10-October` • `11-November` • `12-December`
`PricebookEntryId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort

Field Name	Details
	Description Required. ID of the associated PricebookEntry. This field must be specified when creating OrderItem records. It can't be changed in an update. If they have a B2B Commerce, B2B Commerce Starter, B2B Commerce Growth, or B2B Commerce Plus license, Salesforce users can create orders without price books and order items without price book entries. This field is a relationship field. **Relationship Name** PricebookEntry **Relationship Type** Lookup **Refers To** PricebookEntry
`PricingTermCount`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** A calculated field indicating the number of pricing terms in the subscription. This field is available in API version 55.0 and later. This field is available with Subscription Management.
`ProFormaBillingPeriodAmount`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** The initial amount for the billing period. The final amount for the billing period can include subsequent amendments, discounts, or charges. This field is available in API version 55.0 and later. This field is available with Subscription Management.
`Product2Id`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the Product2 associated with this OrderItem. This field is a relationship field.

Field Name	Details
	Relationship Name Product2 **Relationship Type** Lookup **Refers To** Product2
ProductSellingModelId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the related product selling model. The product selling model defines one method by which a product can be sold; for example, as a one-time sale, an evergreen subscription, or a termed subscription. This field is available in API version 55.0 and later. This field is available with Subscription Management. This field is a relationship field. **Relationship Name** ProductSellingModel **Relationship Type** Lookup **Refers To** ProductSellingModel
ProrationPolicyId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The ID of the related proration policy. The proration policy defines how the price is calculated for each subscription period; for example, whether partial periods are allowed, and how remainder amounts are handled. This field is available in API version 55.0 and later. This field is available with Subscription Management. This field is a relationship field. **Relationship Name** ProrationPolicy **Relationship Type** Lookup

Field Name	Details
	Refers To ProrationPolicy
`Quantity`	**Type** double **Properties** Create, Filter, Sort, Update **Description** Required. Number of units of this order product.
`QuoteLineItemId`	**Type** reference **Properties** Create, Filter, Group, Sort, Update **Description** Required. ID of the associated quote line item. If this field is specified, the quote line item's QuoteId must match the QuoteId for the order product's parent order.
`RelatedOrderItemID`	**Type** reference **Properties** Filter, Sort, Group **Description** Required for change orders, shows the original order product. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.
`RoundedLineAmount`	**Type** currency **Properties** Filter, Sort **Description** The rounded line amount, before tax and adjustments. Currency with decimal values of 0.5 and higher are rounded to the next-highest whole unit of currency. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.

Field Name	Details
`RoundedLineAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The rounded line amount, including tax. Currency with decimal values of 0.5 and higher are rounded to the next-highest whole unit of currency. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v49.0 and later.
`ServiceDate`	**Type** date **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Start date for the order product. Label is **Start Date**.
`StartingPriceTotal`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** The starting unit price times the quantity. This field is available in API version 55.0 and later. This field is available with Subscription Management.
`StartingUnitPriceSource`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates whether the starting unit price was entered manually or calculated. This field is available in API version 55.0 and later. This field is available with Subscription Management. Possible values are: • `Manual` • `System`

Field Name	Details
TaxTreatmentId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The ID of the related tax treatment. This field is available in API version 55.0 and later. This field is available with Subscription Management. This field is a relationship field. **Relationship Name** TaxTreatment **Relationship Type** Lookup **Refers To** TaxTreatment
TotalAdjustedLineTaxAmount	**Type** currency **Properties** Filter, Sort **Description** Sum of line tax amount and line adjustment tax amounts. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.
TotalAdjustmentAmount	**Type** currency **Properties** Filter, Sort **Description** Roll-up of all the order product's price adjustments. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.
TotalAdjustmentAmtWithTax	**Type** currency

Field Name	Details
	Properties Filter, Sort **Description** Roll-up of all the order product's price adjustments, including tax. This field is a gross tax field. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v49.0 and later.
`TotalAdjustmentDistAmount`	**Type** currency **Properties** Filter, Sort **Description** Roll-up of all adjustments on the order. Used only if the OrderAdjustmentGroup has a Type value of Header. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.
`TotalAdjustmentDistTaxAmount`	**Type** currency **Properties** Filter, Sort **Description** Roll-up of all adjustment tax amounts on the order. Used only if the OrderAdjustmentGroup has a Type value of Header. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.
`TotalAdjustmentDistAmtWithTax`	**Type** currency **Properties** Filter, Sort **Description** Roll-up of all adjustment tax amounts on the order, including tax. Used only if the OrderAdjustmentGroup has a Type value of Header.

Field Name	Details
	This field is a gross tax field. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v49.0 and later.
`TotalAdjustmentTaxAmount`	**Type** currency **Properties** Filter, Sort **Description** Sum of all the order product's tax adjustments. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.
`TotalAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Equals `TotalPrice` + `TotalTaxAmount` for the order item. This field is a gross tax field. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v49.0 and later.
`TotalLineAdjustmentAmount`	**Type** currency **Properties** Filter, Sort **Description** The sum of line-level adjustments for the order product. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.

Field Name	Details
`TotalLineAdjustmentAmtWithTax`	**Type** currency **Properties** Filter, Sort **Description** The sum of line-level adjustments for the order product, including tax. This field is a gross tax field. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v49.0 and later.
`TotalLineAdjustmentTaxAmount`	**Type** currency **Properties** Filter, Sort **Description** Total tax amount for adjustments made to the order product. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.
`TotalLineAmount`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** The net total price of the order product, before price adjustments, inclusive of quantity. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.
`TotalLineTaxAmount`	**Type** currency **Properties** Filter, Sort **Description** Total tax amount for this order product, excluding tax on adjustments.

Field Name	Details
	To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.
`TotalPrice`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total price for this order product. The calculations for this field's value are different if Commerce Orders are enabled. **Default Value** `TotalPrice` = (`UnitPrice` * `Quantity`) **Commerce Orders** If `TotalLineAmount` is null, (`UnitPrice` * `Quantity`) is sent to `RoundedLineAmount` and rounded. It's then sent to `Total Price`. Otherwise, `TotalLineAmount` is sent to `RoundedLineAmount`, rounded, and then sent to `TotalPrice`. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.
`TotalTaxAmount`	**Type** currency **Properties** Filter, Sort **Description** Sum of the order product's tax and any adjustments. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.
`Type`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Describes what the order item represents. Each value is associated with one type code, shown here in parentheses.

Field Name	Details
	Possible values are: • `Delivery Charge (Charge)` — A charge, such as a delivery fee. • `Fee (Charge)` — A charge, such as a return fee. This value is available in API v56.0 and later. • `Order Product (Product)` — An item that can be ordered. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.
`TypeCode`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The category associated with the type. A type code can be associated with one or more types. Possible values are: • `Charge` • `Product` To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.
`UnitPrice`	**Type** currency **Properties** Create, Filter, Nillable, Sort, Update **Description** Unit price for the order product.

Usage

An order can have associated order product records only if the order has a price book associated with it. An order product must correspond to a product that is listed in the order's price book.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OrderItemChangeEvent (API version 44.0)
Change events are available for the object.

OrderItemFeed (API version 29.0)
Feed tracking is available for the object.

OrderItemHistory
History is available for tracked fields of the object.

SEE ALSO:
Order
OrderItemSummary

OrderItemAdjustmentLineItem

An adjustment that has been made to an order item. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

Fields

Field	Details
`AdjustmentAmountScope`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Used with `AdjustmentValue` to determine the amount of the adjustment. Possible values are: • `Total`—The adjustment scope is the total price. • `Unit`—The adjustment scope is the unit price. • `UnproratedTotal`—The adjustment scope is the unprorated total price.
`AdjustmentBasisReferenceId`	**Type** reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** References the specific coupon applied. This is a polymorphic relationship field. **Relationship Name** AdjustmentBasisReference **Relationship Type** Lookup **Refers To** Coupon This field is available in API version 54.0 and later.
`AdjustmentCauseId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** References the specific promotions applied. This is a polymorphic relationship field. **Relationship Name** AdjustmentCause **Relationship Type** Lookup **Refers To** Promotion This field is available in API version 52.0 and later.
`AdjustmentSource`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the origin of the adjustment. Possible values are: • `Discretionary`—The adjustment originates from a decision made by an individual, for example, a manager's discount granted to a client. • `Promotion`—The adjustment originates from a promotion, for example, a holiday sale discount. • `Rule`—Reserved for future use.

Field	Details
	• `System`—The adjustment originates from the system, for example, a volume discount after the amount of items reaches a specific number. This field is available in API version 57.0 and later.
`AdjustmentType`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates the type of mathematical adjustment to be applied to the order. Possible values are: • `AdjustmentAmount`—The adjustment is a numerical amount, for example, a cash discount of 20. • `AdjustmentPercentage`—The adjustment is a percentage amount, for example, a 10% discount. • `OverrideAmount`—The adjustment is a manual price override. This field is available in API version 57.0 and later.
`AdjustmentValue`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** The specified `AdjustmentType`'s amount to be applied to the order item. For example, when the `AdjustmentType` value is `AdjustmentAmount`, the `AdjustmentValue` is expected to equal the value of the `Amount` field. When the `AdjustmentType` value is `AdjustmentPercentage`, the `AdjustmentValue` represents the percentage number, and the `Amount` field's value will show the calculated adjustment amount. This field is available in API version 57.0 and later.
`Amount`	**Type** currency **Properties** Create, Filter, Sort, Update **Description** The net total value of the adjustment line.
`CurrencyIsoCode`	**Type** picklist

Field	Details
	Properties Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. Default value is `USD`. Possible values are: • `USD`—U.S. Dollar
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** Users can add a custom description to the record to provide additional detail.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the adjustment line.
`OrderAdjustmentGroupId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The order adjustment group that contains the order item adjustment line item.
`OrderId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The parent order of the order item related to the adjustment line.
`OrderItemId`	**Type** reference **Properties** Create, Filter, Group, Sort

Field	Details
	Description The order item that the adjustment line applies to.
`Priority`	**Type** int **Properties** Create, Filter, Group, Nillable, Sort **Description** A numeric value that represents the order of precedence of the order adjustment group. It can also represent the order of precedence when applying the `AdjustmentType` values. For example, an order can have two adjustments: a $100 discount and a 10% discount. This field will tell the pricing engine which adjustment needs to be applied first. This field is available in API version 57.0 and later.
`RelatedAdjustmentLineItemId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The original order item adjustment line. Useful for reference in change order scenarios.
`TotalAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Equals the order item's price plus `TotalTaxAmount` for the order item adjustment line item. This is a gross tax field. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v49.0 and later.
`TotalTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** The total amount of tax applied to the adjustment line.

OrderItemAdjustmentLineSummary

Represents the current properties and state of price adjustments on an OrderItemSummary. Corresponds to one or more order item adjustment line item objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

Fields

Field	Details
`AdjustmentBasisReferenceId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** References the specific coupon applied. This is a polymorphic relationship field. **Relationship Name** AdjustmentBasisReference **Relationship Type** Lookup **Refers To** Coupon This field is available in API version 54.0 and later.
`AdjustmentCauseId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** References the specific promotions applied. This is a polymorphic relationship field. **Relationship Name** AdjustmentCause

Field	Details
	Relationship Type Lookup **Refers To** Promotion This field is available in API version 52.0 and later.
Amount	**Type** currency **Properties** Filter, Sort **Description** Amount, not including tax, of the OrderItemAdjustmentLineSummary. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
CurrencyIsoCode	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** ISO code for the currency of the OrderItemSummary to which the adjustment applies. The default value is USD. Possible values are: • `DKK`—Danish Krone • `EUR`—Euro • `GBP`—British Pound • `USD`—U.S. Dollar This field is available in API version 49.0 and later.
Description	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the OrderItemAdjustmentLineSummary. This field can be edited.
Name	**Type** string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update **Description** Name of the OrderItemAdjustmentLineSummary.
`OrderAdjustmentGroupSummaryId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** If this object belongs to an OrderAdjustmentGroupSummary, this value is the ID of that OrderAdjustmentGroupSummary.
`OrderItemSummaryId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the OrderItemSummary to which the OrderItemAdjustmentLineSummary applies.
`OrderSummaryId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the OrderSummary associated with the OrderItemSummary to which this OrderItemAdjustmentLineSummary applies.
`OriginalOrderItemAdjustmentLineItemId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the original OrderItemAdjustmentLine associated with this summary object. Nillable=true only if the associated order summary is unmanaged. For managed order summaries, nillable=false.
`Priority`	**Type** integer **Properties** Create, Nillable

Field	Details
	Description Numerical rank used to apply promotions in the correct order. This field is available in API version 52.0 and later.
`TotalAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the adjustment, inclusive of tax. This amount is equal to Amount + TotalTaxAmount. This field is available in API version 49.0 and later.
`TotalTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the Amount.

SEE ALSO:

OrderItemAdjustmentLineItem

OrderItemSummary

OrderItemTaxLineItemSummary

OrderItemRelationship

Describes a relationship between order products. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is available when Subscription Management is enabled.

Fields

Field	Details
AssociatedOrderItemId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** The unique identifier of the associated order product. This field is a relationship field. In a bundle relationship, this order product is the bundle component. **Relationship Name** AssociatedOrderItem **Relationship Type** Lookup **Refers To** OrderItem
AssociatedOrderItemPricing	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Indicates how the associated order product is priced relative to the main order product. The value is informative; the system doesn't check whether the associated order product is included in the bundle price. Possible values are: • `IncludedInBundlePrice`—The associated order product's cost is $0 because it's included in the bundle's price. • `NotIncludedInBundlePrice`—The associated order product has a cost because it's not included in the bundle's price.
AssociatedOrderItemRole	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Describes the position of the associated order product in the relationship. Possible values are: • `BundleComponent`—The associated order product is part of a bundle. • `SetComponent`—The associated order product is part of a set.

Field	Details
AssociatedQuantScaleMethod	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** How the quantity of the associated order product scales, relative to the main order product. The value is informative; the system doesn't check whether the scaled quantities are correct. Possible values are: • `Constant`— The associated order's product quantity remains the same in relation to the main order product's quantity. For example, the main order product has a quantity of one and the associated order product has a quantity of one. • `Proportional`— The associated order's product quantity increases or decreases based on the main order product's quantity. For example, the main order product has a quantity of one and the associated order product has a quantity of two. In other words, there are two associated order products for every one main order product. The default value is `Proportional`.
MainOrderItemId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The main order product's unique identifier. This field is a relationship field. In a bundle relationship, this order product is the bundle parent. **Relationship Name** MainOrderItem **Relationship Type** Lookup **Refers To** OrderItem
MainOrderItemRole	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Indicates the role of the main order product in the relationship. Possible values are: • `Bundle`— The main order product is the bundle parent. • `Set`— The main order product is the set parent.

Field	Details
	Note: Subscription Management doesn't support the `Set` value.
`Name`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** The name of the order product relationship.
`OrderId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** The unique identifier of the related order. This field is a relationship field. **Relationship Name** Order **Relationship Type** Lookup **Refers To** Order
`ProductRelationshipTypeId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The unique identifier of the record that describes the relationship between the main and associated order products. This field is a relationship field. **Relationship Name** ProductRelationshipType **Relationship Type** Lookup **Refers To** ProductRelationshipType

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OrderItemRelationshipChangeEvent
Change events are available for the object.

OrderItemRelationshipFeed
Feed tracking is available for the object.

OrderItemRelationshipHistory
History is available for tracked fields of the object.

OrderItemRelationshipOwnerSharingRule
Sharing rules are available for the object.

OrderItemRelationshipShare
Sharing is available for the object.

OrderItemSummary

Represents the current properties and state of a product or charge on an OrderSummary. Corresponds to one or more order item objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

Fields

Field	Details
`AdjustedLineAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total, including adjustments but not tax, of the OrderItemSummary. This is a calculated field.
`AdjustedLineAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort

Field	Details
	Description Total price of the OrderItemSummary, inclusive of adjustments and tax. This amount is equal to AdjustedLineAmount + TotalAdjustedLineTaxAmount. This is a calculated field. This field is available in API version 49.0 and later.
`CurrencyIsoCode`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Available only for orgs with the multicurrency feature enabled. ISO code for the currency of the OrderSummary associated with the OrderItemSummary. Possible values are: • `DKK`—Danish Krone • `EUR`—Euro • `GBP`—British Pound • `USD`—U.S. Dollar The default value is `USD`. This field is available in API version 49.0 and later.
`Description`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Description of the OrderItemSummary. This field can be edited.
`EndDate`	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** End date of the OrderItemSummary. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`GrossUnitPrice`	**Type** currency

Field	Details
	Properties Filter, Nillable, Sort **Description** Unit price, including tax, of the OrderItemSummary. This value is equal to UnitPrice + the amount of tax on the UnitPrice. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. This field is available in API version 49.0 and later.
`LineNumber`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** The order line number assigned to this OrderItemSummary. For example, if this object is the third in the displayed list of OrderItemSummaries belonging to the OrderSummary, this value is 3. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`ListPrice`	**Type** currency **Properties** Filter, Nillable, Sort **Description** List price of the product represented by this OrderItemSummary. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`Name`	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the OrderItemSummary.
`OrderDeliveryGroupSummaryId`	**Type** reference

Field	Details
	Properties Filter, Group, Sort **Description** ID of the OrderDeliveryGroupSummary to which this object belongs. This field is a relationship field. **Relationship Name** OrderDeliveryGroupSummary **Relationship Type** Lookup **Refers To** OrderDeliveryGroupSummary
`OrderSummaryId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the OrderSummary to which this object belongs. This field is a relationship field. **Relationship Name** OrderSummary **Relationship Type** Lookup **Refers To** OrderSummary
`OriginalOrderItemId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the original order item associated with this summary object. Nillable=true only if the associated order summary is unmanaged. For managed order summaries, nillable=false. This field is a relationship field. **Relationship Name** OriginalOrderItem **Relationship Type** Lookup **Refers To** OrderItem

Field	Details
PricebookEntryId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the pricebook entry associated with this OrderItemSummary. This field is available in API version 54.0 and later. This field is a relationship field. **Relationship Name** PricebookEntry **Relationship Type** Lookup **Refers To** PricebookEntry
Product2Id	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the product represented by this OrderItemSummary. This field is a relationship field. **Relationship Name** Product2 **Relationship Type** Lookup **Refers To** Product2
ProductCode	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Product code of the product represented by this OrderItemSummary.
Quantity	**Type** double **Properties** Filter, Sort

Field	Details
	Description Current total quantity of products represented by this order item summary. Equal to QuantityOrdered minus (QuantityCanceled and QuantityReturned). If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`QuantityAllocated`	**Type** double **Properties** Filter, Sort **Description** Allocated quantity on this order item summary. This quantity is associated with one or more FulfillmentOrderLineItems. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`QuantityAvailableToCancel`	**Type** double **Properties** Filter, Nillable, Sort **Description** Quantity that can still be canceled on this OrderItemSummary. Equal to QuantityOrdered minus (QuantityCanceled and QuantityAllocated). This value duplicates QuantityAvailableToFulfill. This is a calculated field.
`QuantityAvailableToFulfill`	**Type** double **Properties** Filter, Nillable, Sort **Description** Quantity available to be fulfilled on this OrderItemSummary. Equal to QuantityOrdered minus (QuantityCanceled and QuantityAllocated). This value duplicates QuantityAvailableToCancel. This is a calculated field.
`QuantityAvailableToReship`	**Type** double **Properties** Filter, Nillable, Sort

Field	Details
	Description Quantity available to be reshipped on this OrderItemSummary. Equal to QuantityFulfilled minus (QuantityReshipped and QuantityReturnInitiated). This field is available in API version 53.0 and later. This is a calculated field.
`QuantityAvailableToReturn`	**Type** double **Properties** Filter, Nillable, Sort **Description** Quantity available to be returned on this OrderItemSummary. Equal to QuantityFulfilled minus QuantityReturnInitiated. This is a calculated field.
`QuantityCanceled`	**Type** double **Properties** Filter, Sort **Description** Canceled quantity on this OrderItemSummary. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`QuantityFulfilled`	**Type** double **Properties** Filter, Sort **Description** Fulfilled quantity on this OrderItemSummary. This quantity can no longer be canceled. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`QuantityNetOrdered`	**Type** double **Properties** Filter, Nillable, Sort **Description** Quantity available to be allocated on this OrderItemSummary. Equal to QuantityOrdered minus QuantityCanceled.

Field	Details
QuantityOrdered	**Type** double **Properties** Filter, Sort **Description** Ordered quantity on this OrderItemSummary. It includes the originally ordered quantity plus any quantity added to the order later. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
QuantityReshipped	**Type** double **Properties** Filter, Nillable, Sort **Description** Reshipped quantity on this OrderItemSummary. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. This field is available in API version 53.0 and later.
QuantityReturned	**Type** double **Properties** Filter, Sort **Description** Returned quantity on this OrderItemSummary. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
QuantityReturnInitiated	**Type** double **Properties** Filter, Sort **Description** Quantity returned or pending return on this OrderItemSummary. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.

Field	Details
QuantityShipped	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Quantity shipped on this OrderItemSummary. This field is available in API version 52.0 and later.
ReservedAtLocationId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Reserved for future use.
ServiceDate	**Type** date **Properties** Filter, Group, Nillable, Sort **Description** Service or start date of the OrderItemSummary. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
Status	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** Status of the OrderItemSummary. The default value is ORDERED. When a quantity value changes, each status formula is evaluated in order. If a formula is true, no more evaluations are performed for that change. Possible values and their formulas, in the order of evaluation, are: • `RETURNINITIATED`—Return Initiated — (Quantity > 0) & (QuantityReturnInitiated = QuantityFulfilled) & (QuantityReturned < QuantityReturnInitiated) • `RESHIPPED`—Reshipped — (QuantityReshipped = QuantityFullfilled) & (QuantityFullfilled > 0) & (QuantityReturnInitiated = 0) & (QuantityFulfilled = QuantityOrdered) • `RETURNED`—Returned — (Quantity = 0) & (QuantityReturned > 0)

Field	Details
	• `CANCELED`—Canceled — (Quantity = 0) & (QuantityCancelled > 0) & (QuantityReturned = 0) • `FULFILLED`—Fulfilled — (Quantity > 0) & ((QuantityOrdered - QuantityCancelled) <= QuantityFulfilled) • `PARTIALLYFULFILLED`—Partially Fulfilled — (QuantityFulfilled > 0) & (QuantityFulfilled < (QuantityOrdered - QuantityCancelled)) • `ALLOCATED`—Allocated — (Quantity > 0) & (Quantity <= QuantityAllocated) • `PARTIALLYALLOCATED`—Partially Allocated — (QuantityAllocated > 0) & (QuantityAllocated < Quantity) • `ORDERED`—Ordered — None of the other formulas apply • `PAID`—Paid — N/A
`StockKeepingUnit`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** The stock keeping unit (SKU) of the Product2 associated with the OrderItemSummary. This field is available in API version 49.0 and later.
`TotalAdjustedLineTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the AdjustedLineAmount. This is a calculated field.
`TotalAdjustmentAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of all price adjustments applied to this OrderItemSummary. This is a calculated field.
`TotalAdjustmentAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of all price adjustments applied to this OrderItemSummary, inclusive of tax. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount.

Field	Details
	This field is available in API version 49.0 and later. This is a calculated field.
TotalAdjustmentDistAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of all order-level price adjustments applied to this OrderItemSummary. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header. This is a calculated field.
TotalAdjustmentDistAmtWithTax	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of the order-level price adjustments applied to this OrderItemSummary, inclusive of tax. This amount is equal to TotalAdjustmentDistAmount + TotalAdjustmentDistTaxAmount. This field is available in API version 49.0 and later. This is a calculated field.
TotalAdjustmentDistTaxAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalAdjustmentDistAmount. This is a calculated field.
TotalAdjustmentTaxAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalAdjustmentAmount. This is a calculated field.
TotalAmtWithTax	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total price of the OrderItemSummary, inclusive of tax. This amount is equal to TotalPrice + TotalTaxAmount.

Field	Details
	This field is available in API version 49.0 and later. This is a calculated field.
`TotalLineAdjustmentAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of all non-order-level price adjustments applied to this OrderItemSummary. This value includes OrderItemAdjustmentLineSummaries that don't belong to an OrderAdjustmentGroupSummary, or that belong to an OrderAdjustmentGroupSummary of type SplitLine. This is a calculated field.
`TotalLineAdjustmentAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of all non-order-level price adjustments applied to this OrderItemSummary, inclusive of tax. This amount is equal to TotalLineAdjustmentAmount + TotalLineAdjustmentTaxAmount. This field is available in API version 49.0 and later. This is a calculated field.
`TotalLineAdjustmentTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalLineAdjustmentAmount. This is a calculated field.
`TotalLineAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total, not including adjustments or tax, of the OrderItemSummary. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`TotalLineAmountWithTax`	**Type** currency

Field	Details
	Properties Filter, Nillable, Sort **Description** Total unadjusted amount of the OrderItemSummary, inclusive of tax. This amount is equal to TotalLineAmount + TotalLineTaxAmount. This field is available in API version 49.0 and later. This is a calculated field.
`TotalLineTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalLineAmount. This is a calculated field.
`TotalPrice`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total, including adjustments but not tax, of the OrderItemSummary. This is a calculated field.
`TotalTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalPrice. This is a calculated field.
`Type`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Type of the OrderItemSummary. Delivery Charge indicates that the OrderItemSummary represents a delivery charge. Fee indicates that it represents another type of fee, such as a return fee. Order Product indicates that it represents any other type of product, service, or charge. Each type corresponds to one type code, shown here in parentheses. Possible values are: • `Delivery Charge (Charge)` • `Fee (Charge)` This value is available in API v56.0 and later. • `Order Product (Product)`

Field	Details
	If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`TypeCode`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Type code of the OrderItemSummary. Charge indicates that the OrderItemSummary represents a charge or fee. Product indicates that it represents any other type of product, service, or charge. A type code can be associated with one or more types. Possible values are: • `Charge` • `Product` If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`UnitPrice`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Unit price of the product represented by the OrderItemSummary. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.

OrderItemTaxLineItemSummary

OrderSummary

OrderItemSummaryChange

Represents a change to an OrderItemSummary, usually a reduction in quantity due to a cancel or return. Corresponds to a change order item. This object is available in API version 48.0 and later.

This object is used for calculations and doesn't have a default record page.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is only available in Salesforce Order Management orgs.

Fields

Field	Details
ChangeOrderItemId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the associated change order item.
ChangeType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Type of change represented by the OrderItemSummaryChange. Possible values are: • Add (available in API version 54.0 and later) • Cancel • DeliveryChargeAdjustment • ProductAdjustment • Return
CurrencyIsoCode	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** ISO code for the currency of the OrderSummary associated with the OrderItemSummaryChange. The default value is USD. Possible values are: • DKK—Danish Krone

Field	Details
	• `EUR`—Euro • `GBP`—British Pound • `USD`—U.S. Dollar This field is available in API version 49.0 and later.
`IsPreFulfillment`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether the change occurs before the OrderItemSummary has been fulfilled.
`OrderItemSummaryChangeNumber`	**Type** string **Properties** Autonumber, Defaulted on create, Filter, idLookup, Sort **Description** ID of the OrderItemSummaryChange.
`OrderItemSummaryId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the OrderItemSummary to which the change applies.
`OrderSummaryId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the OrderSummary to which the associated OrderItemSummary belongs.
`Reason`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Sort **Description** Reason for the change. You can customize this list. The list has one default value: • `Unknown`

Field	Details
ReasonText	**Type** string **Properties** Filter, Group, Sort **Description** Details about the reason for change.

SEE ALSO:
OrderItem
OrderItemSummary

OrderItemTaxLineItem

The tax amount that has been applied to an order item. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

Fields

Field	Details
Amount	**Type** currency **Properties** Create, Filter, Sort, Update **Description** The total amount of the tax line.
Description	**Type** textarea **Properties** Create, Nillable, Update

Field	Details
	Description Users can add a custom description to the record to provide additional detail.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the tax line.
OrderId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the parent order for the order item related to the tax line
OrderItemAdjustmentLineItemId	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The order item adjustment line item that the tax line applies to.
OrderItemId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** The order item that the tax line applies to.
Rate	**Type** percent **Properties** Create, Filter, Nillable, Sort, Update **Description** The percentage value of the tax. Null if the tax is a flat amount.
RelatedTaxLineItemId	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description The original order item tax line. Useful for reference in change order scenarios.
TaxEffectiveDate	**Type** date **Properties** Create, Filter, Group, Sort, Update **Description** The date used to calculate the effective tax rate. This field may require an update to accommodate different buyer time zones.
Type	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Shows whether the amount on the tax line is an estimate or the final calculated amount. Doesn't set a value by default. Users can define automation to set and change the value as needed. Possible values are: • `Actual` • `Estimated`

OrderItemTaxLineItemSummary

Represents the current tax on an OrderItemSummary or OrderItemAdjustmentLineSummary. Corresponds to one or more order item tax line items, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

Fields

Field	Details
`Amount`	**Type** currency **Properties** Filter, Sort **Description** Amount of tax represented by the OrderItemTaxLineItemSummary. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`CurrencyIsoCode`	**Type** picklist **Properties** Defaulted on create, Filter, Group, Restricted picklist, Sort **Description** ISO code for the currency of the OrderSummary associated with the OrderItemTaxLineItemSummary. The default value is USD. Possible values are: • `DKK`—Danish Krone • `EUR`—Euro • `GBP`—British Pound • `USD`—U.S. Dollar This field is available in API version 49.0 and later.
`Description`	**Type** textarea **Properties** Nillable, Update **Description** Description of the OrderItemTaxLineItemSummary. This field can be edited.
`Name`	**Type** string **Properties** Filter, Group, idLookup, Sort, Update **Description** Name of the OrderItemTaxLineItemSummary.

Field	Details
OrderItemAdjustmentLineSummaryId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** If this object represents tax on an adjustment, this value is the ID of the OrderItemAdjustmentLineSummary to which the tax applies. If this value is null, the adjustment applies to an OrderItemSummary.
OrderItemSummaryId	**Type** reference **Properties** Filter, Group, Sort **Description** If this object represents tax on an OrderItemSummary, this value is the ID of that OrderItemSummary. If this object represents tax on an adjustment, this value is the ID of the OrderItemSummary to which the adjustment applies.
OrderSummaryId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the OrderSummary that the associated OrderItemSummary or OrderItemAdjustmentLineSummary belongs to.
OriginalOrderItemTaxLineItemId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the original order item tax line item associated with this summary object. Nillable=true only if the associated order summary is unmanaged. For managed order summaries, nillable=false.
Rate	**Type** percent **Properties** Filter, Nillable, Sort **Description** Tax rate used to calculate the Amount.

Field	Details
	If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`TaxEffectiveDate`	**Type** date **Properties** Filter, Group, Sort **Description** Date on which the Amount was calculated. Important due to tax rate changes over time. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`Type`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Indicates whether the Amount is actual or estimated. Possible values are: • `Actual` • `Estimated` If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.

SEE ALSO:
FulfillmentOrderItemTax
OrderItemAdjustmentLineSummary
OrderItemSummary
OrderItemTaxLineItem

OrderItemType

Shows whether the order product is a product line or charge line. This object is available in API version 48.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
`ApiName`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Uniquely identifies a picklist value so it can be retrieved without using an id or primary label.
`IsDefault`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether this is the default order item type status value `(true)` or not `(false)` in the picklist.
`MasterLabel`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Master label for this order item type status value. This display value is the internal label that doesn't get translated.
`SortOrder`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Number used to sort this value in the order item status picklist. These numbers aren't guaranteed to be sequential, as some previous contract status values might have been deleted.
`TypeCode`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Code indicating the type of order item. Possible values are:

Field	Details
	• `Charge`—API Name DeliveryCharge. • `Product`—For API Name Product.

OrderOwnerSharingRule

Represents a rule which determines order sharing access for the order's owners.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The SharingRules Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
`CreatedById`	**Type** reference **Properties** Defaulted on create, Filter, Group, Sort **Description** ID of the creator of the order owner sharing rule.
`CreatedDate`	**Type** dateTime **Properties** Defaulted on create, Filter, Sort **Description** Date when the order owner sharing rule was created.
`Description`	**Type** string **Properties** Create, Filter, Nillable, Sort, Update

Field	Details
	Description Description of the order owner sharing rule. Maximum length is 1,000 characters.
DeveloperName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Name of the developer of the order owner sharing rule.
GroupId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the group whose orders are shared.
Id	**Type** ID **Properties** Defaulted on create, Filter, Group, idLookup, Sort **Description** ID of the order owner sharing rule.
LastModifiedById	**Type** reference **Properties** Defaulted on create, Filter, Group, Sort **Description** ID of the user who last modified the order owner sharing rule.
LastModifiedDate	**Type** dateTime **Properties** Defaulted on create, Filter, Sort **Description** Date when the order owner sharing rule was last modified.
Name	**Type** string **Properties** Create, Filter, Group, idLookup, Namefield, Sort, Update

Field	Details
	Description Name of the order owner sharing rule. Maximum length is 80 characters.
OrderAccessLevel	**Type** picklist **Properties** Create, Filter, Group, Restricted picklist, Sort, Update **Description** Access level for the order owner sharing rule.
SystemModstamp	**Type** dateTime **Properties** Defaulted on create, Filter, Sort **Description** System modification time for the order owner sharing rule.
UserOrGroupId	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the user or group with whom order access is shared.

Usage

Use this object to manage the sharing rules for orders. For example, the following code creates an order owner sharing rule between two public groups, which can also contain portal users.

```
OrderOwnerSharingRule rule = new OrderOwnerSharingRule();
rule.setName("RuleName"); // Set the sharing rule name
rule.setDeveloperName("RuleDeveloperName"); // Set the sharing rule developer name
rule.setGroupId("00Gx00000000000"); // Set the group of users to share records from
rule.setUserOrGroupId("00Gx00000000001"); // Set the group of users to share records to
rule.setOrderAccessLevel("Edit");
connection.create(rule);
```

Metadata API Developer Guide: SharingRules

OrderPaymentSummary

Represents the current properties and state of payments using a single payment method that are applied to one OrderSummary. This object is available in API version 48.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Unlike most summary objects, an OrderPaymentSummary isn't related to a similarly named order payment object. Instead, it combines values from multiple payment objects that use the same payment method and apply to the same OrderSummary.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

Fields

Field	Details
`AuthorizationAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Amount of the OrderPaymentSummary that has been authorized.
`AuthorizationReversalAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Amount of the AuthorizationAmount that has been reversed.
`AvailableToCaptureAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Amount of the OrderPaymentSummary that's available to be captured. Equal to AuthorizationAmount minus (CapturedAmount and PendingCaptureAmount and

Field	Details
	AuthorizationReversalAmount and PendingReverseAuthAmount). However, if the calculated amount is a negative number, this value is 0.
AvailableToRefundAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Amount of the OrderPaymentSummary that's available to be refunded. Equal to CapturedAmount plus PendingCaptureAmount minus (RefundedAmount and PendingRefundAmount). However, if the calculated amount is a negative number, this value is 0.
BalanceAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total balance of all payments associated with this summary object.
CapturedAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Amount of the OrderPaymentSummary that has been captured.
CurrencyIsoCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only for orgs with the multicurrency feature enabled. Contains the ISO code for the currency of the OrderSummary associated with the OrderPaymentSummary. Order Management APIs and actions that create an OrderPaymentSummary for an OrderSummary set this value. The default value is USD. Possible values are: • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar This field is available in API version 49.0 and later.

Field	Details
FullName	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** The full name of the payment method user.
LastPaymentGatewayLogId	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the most recent payment gateway log associated with the OrderPaymentSummary.
LastPaymentGatewayMessage	**Type** string **Properties** Create, Filter, Nillable, Sort, Update **Description** The most recent message received from the payment gateway associated with the OrderPaymentSummary.
LastReferencedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Timestamp when the current user last viewed a record related to this record. This field is available in API version 49.0 and later.
LastViewedDate	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Timestamp when the current user last viewed this record. A null value can mean that this record was only referenced (LastReferencedDate) and not viewed. This field is available in API version 49.0 and later.
Method	**Type** string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update **Description** Name of the OrderPaymentSummary.
`OrderSummaryId`	**Type** reference **Properties** Create, Filter, Group, Sort **Description** ID of the OrderSummary associated with the OrderPaymentSummary.
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** ID of the user who currently owns this OrderPaymentSummary. Default value is the user logged in to the API to perform the create.
`PaymentMethodId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the payment method associated with this OrderPaymentSummary.
`PendingAuthorizationAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Amount of the OrderPaymentSummary that's pending authorization.
`PendingCaptureAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Amount of the OrderPaymentSummary that's pending capture.

Field	Details
PendingRefundAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Amount of the OrderPaymentSummary that's pending refund.
PendingReverseAuthAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Amount of the AuthorizationAmount that's pending reversal.
RefundedAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Amount of the OrderPaymentSummary that was refunded.
Type	**Type** string **Properties** Create, Filter, Group, Sort **Description** The payment method type associated with the OrderPaymentSummary. For example, `visa`, `mastercard`, `check`, or `giftcard`.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

OrderPaymentSummaryFeed
Feed tracking is available for the object.

OrderPaymentSummaryOwnerSharingRule
Sharing rules are available for the object.

OrderPaymentSummaryShare
Sharing is available for the object.

SEE ALSO:
- OrderSummary
- Payment
- PaymentAuthorization
- PaymentMethod

OrderShare

Represents a sharing entry on an Order. This object is available in API version 48.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
`OrderAccessLevel`	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Level of access that the user or group has to the order. Possible values are: • `All`—Owner. This value isn't valid when creating, updating, or deleting records. • `Edit`—Read/Write • `Read`—Read Only
`OrderId`	**Type** reference **Properties** Filter, Group, Sort

Field	Details
	Description ID of the order associated with this sharing entry. This field can't be updated. This is a relationship field. **Relationship Name** Order **Relationship Type** Lookup **Refers To** Order
`RowCause`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited.
`UserOrGroupId`	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the user or group that has been given access to the order. This field can't be updated. This is a polymorphic relationship field. **Relationship Name** UserOrGroup **Relationship Type** Lookup **Refers To** Group, User

Usage

This object allows you to determine which users and groups can view or edit orders owned by other users.

If you attempt to create a record that matches an existing record, any modified fields are updated, the system returns the existing record.

OrderStatus

Represents the status of the order entity. This object is available in API version 48.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
`ApiName`	**Type** string **Properties** Filter, Group, idLookup, Sort **Description** Uniquely identifies a picklist value so it can be retrieved without using an id or primary label.
`IsDefault`	**Type** boolean **Properties** Defaulted on create, Filter, Group, Sort **Description** Indicates whether this is the default order status value (`true`) or not (`false`) in the picklist.
`MasterLabel`	**Type** string **Properties** Filter, Group, Nillable, Sort **Description** Master label for this order status value. This display value is the internal label that doesn't get translated.
`SortOrder`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Number used to sort this value in the order status picklist. These numbers aren't guaranteed to be sequential, as some previous contract status values might have been deleted.

Field	Details
`StatusCode`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Status of the order. Possible values are: • `Activated` • `Draft`

Usage

This object represents a value in the order status picklist. The order status picklist provides additional information about the status of an Order, such as its current state (`Draft` or `Activated`). You can query these records to retrieve the set of values in the order status picklist, and then use that information while processing Order objects to determine more information about a given order. For example, the application could test whether a given order is activated based on its Status value and the value of the StatusCode property in the associated OrderStatus object.

OrderSummary

Represents the current properties and state of an order. Corresponds to one or more order objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

For performance and data integrity reasons, CRUD operations on OrderSummary records don't fire Apex triggers.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

Fields

Field	Details
`AccountId`	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description ID of the account or person account associated with the OrderSummary. It represents the shopper in the storefront. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. This field is a relationship field. **Relationship Name** Account **Relationship Type** Lookup **Refers To** Account
`ActiveProcessExceptionCount`	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Total number of active process exceptions on the OrderSummary. This field is available in API version 50.0 and later.
`BillingAddress`	**Type** address **Properties** Filter, Nillable **Description** Billing address associated with the OrderSummary. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`BillingCity`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Billing address city.
`BillingCountry`	**Type** string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update **Description** Billing address country.
BillingCountryCode	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The ISO country code for the billing address. The default value is `US`.
BillingEmailAddress	**Type** email **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Email address on the billing address.
BillingGeocodeAccuracy	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The accuracy of the geocode for the billing address. Possible values are: • `Address` • `Block` • `City` • `County` • `ExtendedZip` • `NearAddress` • `Neighborhood` • `State` • `Street` • `Unknown` • `Zip`
BillingLatitude	**Type** double

Field	Details
	Properties Create, Filter, Nillable, Sort, Update **Description** Used with BillingLongitude to specify the precise geolocation of the billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
`BillingLongitude`	**Type** double **Properties** Create, Filter, Nillable, Sort, Update **Description** Used with BillingLatitude to specify the precise geolocation of the billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
`BillingPhoneNumber`	**Type** phone **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Phone number of the billing address.
`BillingPostalCode`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Billing address postal code.
`BillingState`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Billing address state.
`BillingStateCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The ISO state or province code for the billing address.

Field	Details
`BillingStreet`	**Type** textarea **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Billing address street.
`BillToContactId`	**Type** reference **Properties** Create, Filter, Group, Nillable, Sort **Description** ID of the Contact associated with the OrderSummary. It represents the shopper in the storefront when not using person accounts. If the `OrderLifeCycleType` field is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. This field is available in API version 49.0 and later. **Relationship Name** BillToContact **Relationship Type** Lookup **Refers To** Contact
`BusinessModel`	**Type** picklist **Properties** Create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** The business model of the OrderSummary. Possible values are: • `B2B` • `B2C` This field is available in API version 53.0 and later.
`ChangeOrderId`	**Type** reference **Properties** Filter, Group, Nillable, Sort

Field	Details
	Description Reserved for future use.
`CurrencyIsoCode`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update **Description** Available only with the multicurrency feature enabled. Contains the ISO code for the currency of the original Order associated with the OrderSummary. Possible values are: • `DKK`—Danish Krone • `EUR`—Euro • `GBP`—British Pound • `USD`—U.S. Dollar The default value is `USD`. This field is available in API version 49.0 and later.
`Description`	**Type** textarea **Properties** Create, Nillable, Update **Description** Description of the OrderSummary. This field can be edited.
`ExternalReferenceIdentifier`	**Type** string **Properties** Filter, Group, idLookup, Nillable, Sort, Update **Description** Used internally to prevent duplicate records. This value is case-sensitive. In API version 56.0 and later, for orders ingested from B2C Commerce, this value is set to *`B2C realm ID`* + "_" + *`B2C instance ID`* + "@" + *`B2C Commerce catalog/domain ID`* + "@" + *`B2C Commerce order number`*. In API version 55.0, the standard B2C Commerce integration set this value to "SFDC" + "@" + *`nanotime`* + "@" + *`UUID`* and High Scale Orders set it to the value used in later versions. This field is available in API version 54.0 and later.

Field	Details
`GrandTotalAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount, including adjustments and tax, of the OrderSummary.
`IsSuspended`	**Type** boolean **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** Indicates whether the OrderSummary is suspended. The default value is false. This field is available in API version 50.0 and later.
`LastReferencedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed a record related to this record.
`LastViewedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** The timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.
`OrderedDate`	**Type** dateTime **Properties** Filter, Nillable, Sort **Description** Date of the original order associated with this OrderSummary. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.

Field	Details
OrderLifeCycleType	**Type** picklist **Properties** Filter, Group, Restricted picklist, Sort **Description** Specifies whether the OrderSummary is managed by Salesforce Order Management (MANAGED) or by an external system (UNMANAGED). An unmanaged OrderSummary is stored in Salesforce for reference purposes. • Some Order Management APIs reject input records that are associated with unmanaged OrderSummaries. • Order Management does not update financial bucket fields on some records that are associated with unmanaged OrderSummaries. • A user with the EditUnmanagedOrderSummaries or B2BCommerceIntegrator permission can edit certain fields on objects related to unmanaged OrderSummaries that are normally only accessible via APIs. Possible values are: • `MANAGED`—Managed • `UNMANAGED`—Unmanaged This field is available in API version 49.0 and later.
OrderNumber	**Type** string **Properties** Create, Filter, Group, idLookup, Sort, Update **Description** Name of the OrderSummary.
OrderProductLineCount	**Type** int **Properties** Filter, Group, Nillable, Sort **Description** Total number of unique products ordered on this Order Summary. This field is available in API version 52.0 and later.
OriginalOrderId	**Type** reference **Properties** Filter, Group, Sort **Description** ID of the original order associated with this OrderSummary.

Field	Details
	This field is a relationship field. **Relationship Name** OriginalOrder **Relationship Type** Lookup **Refers To** Order
`OwnerId`	**Type** reference **Properties** Create, Defaulted on create, Filter, Group, Sort, Update **Description** The ID of the user who currently owns this OrderSummary. Default value is the ID of the user who created the record. This field is a polymorphic relationship field. **Relationship Name** Owner **Relationship Type** Lookup **Refers To** Group, User
`PoDate`	**Type** dateTime **Properties** Create, Filter, Nillable, Sort, Update **Description** Purchase order date associated with this OrderSummary. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. This field is available in API version 52.0 and later.
`PoNumber`	**Type** string **Properties** Create, Filter, Group, Nillable, Sort, Update **Description** Purchase order number associated with this OrderSummary.

Field	Details
	If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
`Pricebook2Id`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the pricebook associated with this OrderSummary. This field is available in API version 54.0 and later. This field is a relationship field. **Relationship Name** Pricebook2 **Relationship Type** Lookup **Refers To** Pricebook2
`RoutingAttempts`	**Type** int **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** The number of attempts that have been made to route the order summary to inventory locations. This field is available in API version 51.0 and later.
`SalesChannelId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the SalesChannel associated with this OrderSummary. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. This field is a relationship field. **Relationship Name** SalesChannel

Field	Details
	Relationship Type Lookup **Refers To** SalesChannel
`SalesStoreId`	**Type** reference **Properties** Filter, Group, Nillable, Sort **Description** ID of the RetailStore or WebStore associated with this OrderSummary. If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. This field is a relationship field. **Relationship Name** SalesStore **Relationship Type** Lookup **Refers To** WebStore
`SourceProcess`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** Describes the order process that created the OrderSummary. Possible values are: • `OrderOnBehalf` The OrderSummary was created by an Order on Behalf Of process • `Standard` The OrderSummary was not created by an Order on Behalf Of process This field is available in API version 57.0 and later.
`Status`	**Type** picklist **Properties** Create, Defaulted on create, Filter, Group, Nillable, Sort, Update **Description** Status of the order summary. Unlike the Status and Status Category fields on the order and FulfillmentOrder objects, this field is optional.

Field	Details
	We recommend that you use the same values in this picklist that you use in the Status picklist for the order object.
`TaxLocaleType`	**Type** picklist **Properties** Filter, Group, Nillable, Restricted picklist, Sort **Description** The system used to handle tax on the original Order associated with the OrderSummary. Gross usually applies to taxes like value-added tax (VAT), and Net usually applies to taxes like sales tax. Possible values are: • `Gross` (displays most prices and taxes as combined values) • `Net` (displays most prices and taxes as separate values) If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. This field is available in API version 49.0 and later.
`TotalAdjDeliveryAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of all OrderItemSummaries of type Delivery Charge belonging to this OrderSummary, inclusive of item-level adjustments and tax. This amount is equal to TotalAdjustedDeliveryAmount + TotalAdjustedDeliveryTaxAmount. This field is available in API version 49.0 and later.
`TotalAdjDistAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total of distributed adjustments applied to OrderItemSummaries belonging to this OrderSummary. This amount is equal to TotalProductAdjDistAmount plus TotalDeliveryAdjDistAmount.
`TotalAdjDistAmountWithTax`	**Type** currency **Properties** Filter, Nillable, Sort

Field	Details
	Description Total of distributed adjustments applied to OrderItemSummaries belonging to this OrderSummary, inclusive of tax. This amount is equal to TotalAdjDistAmount plus TotalAdjDistTaxAmount. This field is available in API version 49.0 and later.
`TotalAdjDistTaxAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalAdjDistAmount.
`TotalAdjFeeAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of all OrderItemSummaries of type Fee belonging to this OrderSummary, inclusive of item-level adjustments and tax. This amount is equal to TotalAdjustedFeeAmount plus TotalAdjustedFeeTaxAmount. This field is available in API version 56.0 and later.
`TotalAdjProductAmtWithTax`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total amount of all OrderItemSummaries of type code Product belonging to this OrderSummary, inclusive of item-level adjustments and tax. This amount is equal to TotalAdjustedProductAmount plus TotalAdjustedProductTaxAmount. This field is available in API version 49.0 and later.
`TotalAdjustedDeliveryAmount`	**Type** currency **Properties** Filter, Nillable, Sort **Description** Total, including item-level adjustments but not order-level adjustments or tax, of all OrderItemSummaries of type Delivery Charge belonging to this OrderSummary.

Field	Details
TotalAdjusted DeliveryTaxAmount	**Type** currency **Properties** Filter, Nillable, Sort **Description** Tax on the TotalAdjustedDeliveryAmount.
